CLERGY ORPHAN CORPORATION.—On Tuesday a quarterly court of the Governors of the Incorporated Society for Maintaining and Educating Poor Orphan Children of the Clergy was held at the offices of the society, 79, Pall-mall, R. Dr Russell in the chair. The report stated that, as the schools in St. John's wood were inadequate to the objects of the charity, it had been resolved to appropriate them to the sole use of the girls, and to increase their number from 70 to 100, and to raise another suitable for 50 boys. To carry out these purposes, they required an increase of funds and a proper site. Under these circumstances, the Rev. Dr. Warrington contributed £1000 to purchase a site (St. Thomas's Hill, Canonbury), and £1000 towards the building, and £3000 to found six new elections. The scheme, however, could not be carried out without a building fund amounting to £5000, and an increase of £3000 in the annual income. It was then moved that a special committee was appointed to the charitable and humane object to contribute their support. A vote of thanks to the chairman terminated the proceedings.

THE DECIMAL COINAGE.—The report of the select committee of the House of Commons has been laid before the House. It commences by stating that the committee are many of opinion that it is expedient to alter the present system, on numerous grounds. The report concludes by recommending that the Queen be humbly requested to direct the necessary steps to be taken to bring the matter before Parliament, and that a bill be introduced for the purpose of carrying into effect the recommendations of the committee. The report was adopted with a view to prepare the way for further changes, and to create in the public mind a desire for its completion. Your committee believe that no necessary evil would attend the introduction of the proposed system, and that the advantages to be derived from it would be very great. Mr. Cardwell and Mr. Lowe objected to the report, and Mr. Muntz moved

LATEST INTELLIGENCE.

HOUSE OF LORDS.—FRIDAY.

Their Lordships met at five o'clock.

The Hackney Carriage Duties (No. 2) Bill was read a second time, and the Standing Orders having been suspended, was then passed through all its stages.

The following bills were read a third time, and passed—viz, the Militia Pay Bill, Land tax Redemption Act Amendment Bill, South Sea and other Annuities (provision for payment, &c.) Bill, Apprehension of Offenders Act Amendment Bill, Betting House Bill, Commons Inclosure (No. 3) Bill, Female Convicts Bill, Loan Societies Bill; Marylebone, Holy Trinity Church, Hulme, Validity Bill; Friendly Societies Bill, Copyhold, &c., Commissioners Continuance Bill, Metropolitan Sewers Acts Continuance Bill, Customs Consolidation Acts Bill, and the Ecclesiastical Jurisdiction Bill Adjourned.

HOUSE OF COMMONS.—FRIDAY.

The House met at three o'clock

Mr. LYTTELTON took the oaths and his seat for South Staffordshire, in the room of General ANSON, appointed to the office of Commander-in-Chief of Her Majesty's forces in Bengal.

In reply to Mr Aglionby, Lord PALMERSTON said that he had seen the numerous cases of bruises in human shape committing violent assaults upon women. He hoped that when the law in respect to such offences, enacted this session, became generally known, they would become much less frequent. If this should not be the case it might become necessary in the next session of Parliament to add corporal punishment to imprisonment with hard labour for such offences.

In reply to Mr. A. Pellatt, on the subject of the vote for Public Education, Lord J. RUSSELL said that when new schools were established where there were no Town-councils, they would receive an advance, on application to the Privy Council.

In reply to a question from Mr. Kinnaird on the subject of a late decree said to have been passed by the Queen of Portugal, and sanctioned by the Cortes, condemning to fine and imprisonment any person that was supposed to cast an insult upon any of the dogmas of the Roman Catholic religion—Lord J. RUSSELL said the attention of the Government was called to the decree in question, but the entire of it had never been sent to this country. No complaint had, however, ever been made that the treaty of July, 1842, which guaranteed to the subjects of Queen Victoria residing that country the right of building and maintaining their places of public worship and the free exercise of their religion, has ever been violated.

In reply to Mr Spooner, Lord J. RUSSELL said that the Commission for investigating into the state of education at Maynooth would be appointed without delay.

In reply to Lord D Stuart, Lord J. RUSSELL said that repeated applications had been made to the Papal Government for a mitigation of the punishment to which Edward Murray was condemned, but without success.

In reply to Lord D. Stuart, Lord PALMERSTON said, in reference to the cabman Phillips, who had been imprisoned for not having 3s. to pay for measuring the distance which he had charged a gentleman who had summoned him—that he had caused an investigation to be made by the police, and the distance to be measured. The result was, that the cabman had not made any overcharge, and he (Lord Palmerston) therefore directed that the fine of 40s. should be returned to him, and that another 40s should be given to him for the loss of time and annoyance, to which he had been subjected.

Some formal business was then disposed of, and the House adjourned.

THE QUEEN COMMANDING THE SCREW FLEET.

Her Majesty embarked at Cowes on Thursday morning at ten o'clock, on board the *Victoria and Albert*, and steamed up to spithead. On nearing the anchorage, the *Baltic* led off a general Royal salute by the whole of the fleet, which had a most imposing effect from the shore. Her Majesty left her yacht, and went on board the *Duke of Wellington*, Capt. H. S. Martin, C.B., and the fleet was signalled to prepare for weighing.

The signal was then made to proceed to sea under the command of the Queen in person consisted of the *Duke of Wellington*, *Agamemnon*, *Impérieuse*, *Arrogant*, *Highflyer*, *Desperate*, and *Ruscander*, accompanied by the *Victoria and Albert*, *Black Eagle*, *Fairy Queen*, *Scourge*, and *Sprightly*.

Steam being up, the *Duke of Wellington* signalled to weigh, herself being the first to move on. She got away in sight and a half minutes; and all the vessels which followed closely, and also taken their stations as allotted to her, the squadron proceeded towards the Channel in two divisions. They stood out to sea, and were soon lost to sight from land. No one but Her Majesty's authorities were aware of the intention of the Royal visit to the fleet, and civilians were even merely unable to understand the day's cruise. At four o'clock the Royal squadron was seen again, brought to a short distance from the shore, and the Royal yacht left the fleet which it was left at Spithead—the *Queen*, *Prince Regent*, *London*, *Cambrian*, *Edinburgh*, *Ajax*, *Leander*, *Conqueror*, *Amazone*, *Arrogant*, *Immortalité*, *Tribune*, *Dauntless*, *Vengeance*, *Valorous*, *Medea*, *Magicienne*, *Barracouta*, *Racehorse*, &c.—fired a general Royal salute to greet the Queen's return. And, as soon as the smoke cleared away, the crews were discovered on the yards, and the vessels passed through the line hearing.

Her Majesty left the *Duke of Wellington* at 5.45, and returned to her yacht for Osborne.

PROROGATION OF PARLIAMENT.—The prorogation will take place this day at two o'clock, by commission.

COMBINED METEOROLOGICAL OBSERVATIONS.—At a public meeting of merchants, shipowners, and others interested in navigation, held at Liverpool on Thursday, Lieutenant Maury, of the United States navy, delivered a most valuable lecture, illustrated by numerous charts of various creeds, tending to prove that the great length of almost all voyages made by following the proposed new routes, shortened, in most instances a third, and, in some, half, the time now occupied. Resolutions—thanking the Government of the United States for their liberal offers to furnish copies of charts and sailing directions—calling on our Government to cordially co-operate in so desirable a project, and also requesting our mercantile men to give all the assistance in their power were passed. Thanks were also given to Lieutenant Maury, and to Lloyd's, and the meeting separated.

CORN REAPERS.—The adjourned trial of the reaping machines, at the recent meeting at Gloucester, took place on Wednesday at Mr Busby's farm, Berkeley. The following is an extract from the judges' award:—"After carefully testing the merits of the different machines, they unanimously award the society's prize of £20 to Mr. Crosskill's Beverley reaper; they also highly recommend Messrs. Burgess and Key's reaper, upon M'Cormick's principle, and they commend Messrs. Dray and Co.'s reaper, upon Hussey's principle."

WESTMINSTER COUNTY COURT.—On Thursday a most painful and distressing, but exciting, case was heard at this court. It was an action brought by Messrs. Thrupp, the coach-makers, of Oxford street, against the Hon G. C. Norton, for £40 0s. 6d., for work and labour supplied by them to the Hon Mrs. Norton, the wife of the defendant. Many debts, made known to the public years ago, were again disclosed; correspondence between the Duchess, Mrs. Norton and Lord Melbourne was put in; the lady was examined and cross-examined, to show from whence she derived her income, the Hon. Mr. Norton wished to be examined himself but was not permitted, and many painful personal occurrences were again revived. During the hearing the crowd frequently cheered the lady. In the end, the Judge (Mr. Payley) said "That the plaintiff's case must necessarily fail, and that it was his duty to stop the proceedings." He also remarked, that stolen rents had been made which the defendant had had no opportunity of answering, and therefore they must go forth to the public as they stood. The plaintiffs were then nonsuited, and required to pay the costs.

SUDDEN DEATH.—That most estimable surgeon, Mr. Bransby Cooper, F.R.S., expired very suddenly on Thursday afternoon, at the Aldermen's Club. Mr. Cooper was the nephew of Sir Astley Cooper, and was born on the 3rd September, 1792. He has left a widow and large family to deplore his loss.

DEATH OF LADY SALE.—By the arrival of the *Harbinger*, screw-steamer, last from the Cape of Good Hope, we learn the death of Lady Sale (the wife of the celebrated Sir Robert Sale) who died at Cape Town on the 6th July. Lieut.-Col. Burns, of the 2nd Royals, also late at Graham's Town, on the 30th June, from general debility.

FOREIGN.

THE EASTERN QUESTION.

We have news from the East of later date than that published in our first impression, but no fact has transpired tending to confirm the rumour that the Porte had agreed to the arrangement accepted. Indeed, some of the accounts are of a tone which would warrant some doubts as to its doing so. They announce that the Porte is as resolute as ever in its determination not to make any concessions to Russia, in addition to those comprised in its ultimatum, and not to accept anything which does not include the evacuation of the Danubian Principalities "as soon as possible." Public opinion at Constantinople continued decidedly in favour of the policy of resistance.

We have important intelligence from Servia. The Austrian Consul-General at Belgrade had formally applied to Prince Alexander, in the name of the Austrian Government, for authority for an Austrian army of 25,000 men to occupy Servia, in order to check any disturbances which might break out in that country by reason of the occupation of Wallachia and Moldavia by the Russians, and, on being point blank refused, had declared that the exigencies of the times would compel Austria to turn a deaf ear to such refusal, and to carry out its determination as a matter of urgent necessity. Prince Alexander had thereupon ordered a general arming of his people. This intelligence has given rise to several Cabinet Councils of the Ottoman Ministers, as well as of conferences with the representat ves of foreign powers, and meetings of the ss latter among themselves. Redschid Pacha, the Minister for Foreign Affairs, has had a long interview and conference with the Austrian internuncio at the Ottoman Porte; but though the result has not been made public, it is rumoured that the internuncio was very full of pacific assurances; and some pretend that the Austrian Consul at Belgrade has been represented as having misunderstood his instructions, and exceeded the same. It is stated, however, on the other hand, that the Porte is preparing troops to march in the direction of Servia.

It appears that the approach of the Russian troops caused a violent excitement in Bosnia. Kmeyim has been appointed Commander-in-Chief of the Servian forces, and the Chiefs of the various districts have been placed under his orders. The Russians bear a rough wooden cross, and declare their desire to make war for "the cross and the faith."

From Beika Bay we have dates to the 6th of August, on which day the combined fleets continued therein; that of England having been joined by the *Inflexible* and the *Sampson*. On the 30th of July the Egyptian Admiral, with seven sail from Alexandria, passed Rhodes; and on the 3rd of August they remained at anchor, with several transports with troops, in the Bay o. Marmarice, the very same spot occupied by the Russians when they were so ready to protect the Porte against the Pacha of Egypt!

FRANCE.—The journey of the Emperor and Empress to Dieppe has been suddenly countermanded.

THE CAPE OF GOOD HOPE.—By the *Harbinger*, Captain Lane, we have Cape of Good Hope papers to the 7th of July, inclusive. The Governor was still on the frontier, completing his arrangements for defence and the improvement of internal order and obedience to the laws. The Constitution was legally promulgated on the 1st of July, and steps had been taken in all parts of the colony for carrying the measure into successful operation. The public and the Government are completely reconciled. The Kaffirs are gradually settling down into the territory assigned to them by General Cathcart. Some unwillingness was at first reported on the part of the younger and inferior chiefs, but Saudilli and Macomo having surrendered the arms demanded of them, and given the "word" for peace, hostilities have ceased as suddenly as they commenced; and the Gaika tribes, lately so formidable, are now spoken of as excellent customers to the traders in their neighbourhood.

PROVINCIAL INTELLIGENCE.

UNIVERSITY AND KING'S COLLEGE, ABERDEEN.—The following gentlemen at the above university had the degree of Doctor of Medicine conferred on them on the 5th inst.:—Messrs. C. Dickson, Ashby-de-la-Zouch; C. C. Hayman, West Malling; W. Smith, Weyhill, Hants; J. S. Taylor, Liverpool; J. Nash, Box, Wiltshire; C. G. Hewson, Topsham, Devon; and H. Callaway, E. H. Greenhow, J. R. Hannon, A. Richardson, W. Smart, R.E., R.N.; J. Campbell, H.E.I.C.S.; J. Kidd, J. H. Vincent, and C. B. Payne, of London.

THE NEW HALL, LEEDS.—The ceremony of laying the foundation stone of a new Town-hall at Leeds took place on Wednesday, and was attended by the Mayor, the magistrates, the vicar (the Rev Dr. Hook), the representatives of the Borough, and the members of various local societies. Appropriate addresses were delivered by the Mayor, Mr. E. Baines, and other gentlemen. The architect is Mr. Broderick, late of Hull. The principal room will not be so spacious as Westminster-hall, but larger than St. George's-hall, Liverpool, the Birmingham Town-hall, or Exeter-hall. The building will accommodate 8,000 persons.

THE LORD HIGH ADMIRAL OF THE PRUSSIAN NAVY AT SPITHEAD.—On Tuesday evening his Royal Highness Prince Albert of Prussia, Lord High Admiral of the Prussian navy, arrived at Spithead in her Majesty's yacht *Victoria and Albert*, and immediately proceeded on board the frigate during the visit. Wednesday morning his Royal Highness was saluted by the corvette *Amazone* with nineteen guns, the Admiral's flag being hoisted at the main of the frigate.

GREAT WESTERN RAILWAY.—On Thursday the half-yearly meeting of the shareholders of this company was held at Bristol; C. Russell, Esq., in the chair, when a dividend at the rate of four per cent per annum was declared, leaving a balance, in arrear of calls forfeited—and the interest thereupon—to create a fund for preferential stock, in pursuance of the powers of their act of the present session, not exceeding £3,000,000, to replace the debenture debt, and to bear an interest not exceeding four per cent.

THE ARCTIC EXPEDITION. By the arrival at Portsmouth, on Wednesday, of the transport *Dutyeen*, which accompanied Commander Englefield to the Arctic seas, with provisions for the other expeditions, in search for the long lost Sir John Franklin, we have intelligence of the safe arrival of her Majesty's ship *Phœnix* and her tenders at the island of Disco, where she picked up the crew of a whaler, the *Rose*, of Hull, in deep distress, their ship being wrecked and abandoned in the ice in Melville Bay. Commander Englefield has sent home the men in the *Dutyeen*, in charge of Lieut Marryatt, and they have been landed at Portsmouth. Commander Englefield, with the other transport, pushed on for Beechy Island, on the 13th of July last; on the 20th of which month the *Diligence* sailed from Disco homewards.

NATIONAL SPORTS.

YORK RACES.—WEDNESDAY.

Tyndall Stakes.—Antigone, 1. Captain Cornish, 2.
Yorkshire Oaks.—Mayfair, 1. Mistletoe, 2.
Convivial Stakes.—Meteora, 1. Cossack, 2.
Eleventh Earl Stanley.—Ellington, 1. Ring of Trumps, 2.
Chesterfield Handicap.—Snowdon Dunhill, 1. Brouchton, 2.
Two Year Olds' Stakes of 10l each.—Ellington, 1. King of Trumps, 2.
Queen's Plate.—Torrent, 1. Si savrogue, 2.
Selling Stakes.—Polyman, 1 Blameless filly, 2.

THURSDAY.

Colt Sapphy Stakes.—Fyas walked over.
Prince of Wales' stakes.—Dervish, 1. Alas, 2.
Ebor Handicap.—Pensionine, 1. Abbot, 2.
Hoyal Oak Stakes.—Faversham, 1. Grapeshot, 2.
County Plate.—King of Trumps, 1. Wild Huntsman, 2.
Lottery Plate.—Cossack, 1. Luxurious, 2.
Fulbeck Stakes.—Exeter, 1. Barrel, 2.
Sweepstakes of 100 sovs.—North Pole walked over.

FRIDAY.

Filly Sapling Stakes.—Ranee, 1. Vixen, 2.
Consolation Scramble.—Cossack, 1. Billy Richardson, 2.
Great Yorkshire Stakes. Unbeat, 1. Faversham, 2.
Sweepstakes of 50 sovs.—Astolfo, 1. Rally, 2.
Gimcrack Stakes. Barrel, 1. Canute, 2.
Ashe Produce Stakes. Orvilons, 1. Fyas, 2.
York Cup.—Torment, 1.
Members' Plate.—Polyman, 1. Fairthorn, 2.
Tyro Stakes.—Merry Maid 1 Hotchpot, 2.

ROYAL YACHT SQUADRON REGATTA.—The race for his Royal Highness Prince Albert's Cup terminated late on Monday evening, and was won by the *Mosquito*, beating the *Arrow* (by 2m.), *Julia* (by 4m. 45s.), *Arrow* (by 10m. 15.), and *Osprey* (by 12m.).—On Tuesday, the annual regatta dinner of the members of the Club took place at the Club-house—the Earl of Wilton presiding.—On Wednesday, the cup presented by her Majesty was sailed for by the *Glorinna*, *Shark*, *Vistor*, and *Irene*. This was won by the *Glorinna*. On Thursday, a match took place for 200 sovs. between the *Rosalind* and *Glorinna*, the particulars of which have not come to hand; and on Friday, the Royal Yacht Squadron Cup, was to be contested for by a full entry of the crack yachts.

ROYAL SOUTHERN YACHT CLUB.—The annual general meeting of this club was held at Southampton, on Saturday. Lord Cardigan, Commodore, was in the chair. On Tuesday evening the annual ball took place, which passed off in the usual agreeable style.

CRICKET.—The great match of the week.—Kent v. England—took place at Canterbury, beginning on Monday, and closing on Wednesday. England in their first innings scored 234 runs; Kent in first innings 47, and in the second 88; leaving England the victor by one innings and 199 runs.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, AUGUST 18.

Month and Day.	Corrected Reading of Barometer at 32° F.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.

Note.—The sign — denotes below the average.

The reading of the barometer decreased from 30.25 inches, at the beginning of the week, to 29.59 inches by 8h. a.m., on the 17th, and increased to 29.97 inches by the end of the week. The mean reading for the week, at the height of 82 feet above the level of the sea, was 29.914 inches. The mean daily temperatures were below their averages on every day, from the 12th to the 18th, the mean daily defect being 2·8°. The mean temperature of the week was 58·7°, being 2·8° below the average of the corresponding week during 38 years. The highest reading of the thermometer was 71·4° (on the 13th), and the lowest 44·5° (on the 18th); their difference, 26·9°, shows the range of temperature during the week. The mean daily range of temperature during the week was 17·4°. Rain fell during the week to the depth of 0.28 inch.

J. GLAISHER
Lewisham, August 19th, 1853.

HEALTH OF LONDON.—During the week ending Saturday, August 13, the number of births registered in the metropolitan districts was 1461, of these, 709 were boys and 752 were girls. The average numbers in the eight corresponding weeks of the eight preceding years, was 1,431. The number of deaths registered in the week was 881; the average of the last five weeks was 971. The causes of deaths are thus distributed:—To zymotic diseases, 320 deaths are attributed (their average is 426). of these, 3 are due to small-pox (its average is 17); to measles, 13 (its average is 28); to scarlatina, 7 (its average is 37); to hooping-cough, 26 (its average is 49); to croup, 13 (its average is 11); to cholera, 19; to ague, 1 (its average is 6); typhus 60 (its average is 41). To dropsy, cancer, &c., 33 (their average is 43). To uncertain diseases, 101 deaths are attributed (their average is 113). of these, 135 are due to consumption. To diseases of the nerves, brain, and senses, 89 (their average is 112). To diseases of the heart and blood-vessels, 39 (their average is 27) To diseases of the lungs and the other organs of respiration, 77 (their average is 74); of these, 37 are due to bronchitis (its average is 20), to pneumo. ia, 27 (its average is 36), and to asthma 4, (which is its average number) To intemperance no deaths are attributed during this week; to violence, 23 (its average is 33) In comparing the above results with those of the past week, it will be seen that, while intercurrent diseases and diseases of the heart continue of the same an ount, diseases of the nervous system have decreased, together with those of the respiratory organs; while the epidemic cause has risen from 272 to 320. In the aggregate, the mortality of the metropolis exhibits little variation this week from that exhibited during the preceding three weeks

NEW METROPOLITAN MEDICAL COLLEGE.—A medical college, in connection with the Royal Free Hospital, is to be opened for the reception of students on the 1st of October next. The buildings necessary for the purposes are now in progress, and will be speedily completed, and the formation of an extensive museum has been determined upon

POST-OFFICE NOTICE.—For the accommodation of the residents in Belgrave and Eaton squares, in Pimlico, and in the neighbourhood, the Lords of her General Post Office have been pleased to fix that the office at No 5, Lyall place, Eaton-square, shall remain open on seven o'clock a.m., for the receipt of letters to be forwarded by the morning mails The regulations will be continued to unpaid and stamped letters, and will not include newspapers.

NEW SMITHFIELD MARKET.—The Corporation of London are actively engaged forming the New Smithfield in Copenhagen-fields. The ground has been purchased for £90,000, and the carriage-roads and grounds are entirely gone. The sewerage has been contracted for, and the cattle-market is already erected. The entire cost of the erection will be £ 42,221, the market will contain large fire-proof warehouses, and game for 4,000 cattle. The income is put down at £18,000; the annual cost at £4,450—leaving a clear annual income of £13,000 to the Corporation. It is expected that the new market will be ready for opening at Midsummer, 1854.

FIRES.—On Wednesday morning, at seven o'clock, a fire of a destructive character, and one attended with considerable damage, broke out in the premises of Mr. I. M. L. Lloyd, wax, wax candle, and Staffordshire warehouseman, at No. 47, St. Martin's-lane. The contents were insured in the Phœnix Office, and the buildings in the Westminster Office. The dwelling-house of Mr. G. A. Backhurst, in Lop. gardens, were also slightly damaged on the occasion by water. On Tuesday night a fire occurred in Regent-street, which broke out in the premises of Mr. Vining, auctioneer, No. 125, Regent street, St. James's, and was not extinguished until the entire of fixtures and plate glass front were destroyed, and the valuable stock in trade extensively damaged. The premises were insured in the Royal Exchange, and the contents in the Sun, Fire-offices. —A third fire happened the same day, on the premises of Mr. Lovell, Commercial-place, East-lane, Walworth, which was so rapid in its progress that the residents had the greatest difficulty in effecting a safe retreat from the building; and the flames were not subdued until the premises and their contents were destroyed—unfortunately the sufferer was not insured for a single penny.

OLD BAILEY.—On Tuesday, at the Central Criminal Court, Edward Rayland, aged thirty-six, a diminutive Frenchman, described as a tailor, was indicted for having unlawfully solicited the Prince de Joinville to conspire in a conspiracy to assassinate Louis Napoleon, the Emperor of the French. The particulars of the case were given to recollection, they need not be repeated. The Prince de Joinville and another witnesses were examined. Mr. Byron Platt summed up, and the jury returned to consider their verdict. Upon their return, in twenty minutes, they gave a verdict of "Not guilty." The foreman added that they were of opinion that the only object the prisoner had in writing the letter was to extort money from the Prince.

HACKNEY CARRIAGE PROPRIETORS.—A meeting of proprietors was held on Monday, at St. Martin's-hall, and adjourned to Thursday, when the following resolution was unanimously carried:—"That this meeting, having learned that the original clause in the Hackney Carriage Bill (No. 2, 1853) need no longer exist, that the said bill is being proceeded with as speedily as possible, and that the alarm which was occasioned by the trade (in consequence of the proceedings in the House of Lords on Monday night last) need no longer exist." The meeting then separated.

THE CRYSTAL PALACE ACCIDENT.—At three o'clock on Thursday, the bodies of the ten men unfortunately killed on Monday, were interred in Sydenham parish church-yard; the whole of the arrangements being under the direction of Messrs. Jackson by Messrs. Fox and Henderson. The whole of the workmen employed on the works followed their unfortunate brethren to their grave; the coffins presented a very mournful sight. On the 25th a day is appointed for the inquest on the bodies of two other of the victims, who died shortly after their removal to Guy's Hospital; and the jury, having visited the site of the catastrophe, and heard a mass of evidence from the Fox and other, returned a unanimous verdict of "Accidental Death." Mr. Carter, the coroner, yesterday resumed the inquiry into the cause of death of the ten unfortunate men killed by the falling in of the transept on the transept of the Crystal Palace. The jury, a second time, with the Coroner, Sir Joseph Paxton, Sir Charles Fox, Mr. Fuller, Mr. Farquharson, and other directors, again viewed the building. Mr. Fuller again gave evidence which was read, which was conclusive as to the fact that the scaffold had been erected upon true mathematical principles, and upon such situation it was impossible to account for the cause of the accident The jury without hesitation, returned a verdict of "Accidental Death." It may not be out of place here to mention that the contractors, Messrs. Fox and Henderson, in a handsome manner, have made provision for workmen who lose their lives in their service by a weekly subscription of from 10s to 12s., continued over a period of not less than twelve months, and what is, perhaps, more important and beneficial to them, the first benefit will be in charge of the orphan children, and introduce them to habits of industry in their own service.

THE NEWLY-DISCOVERED GUANO.—Professor Way, of London, and Professor Anderson, of Glasgow, have analysed the guano, &c., on the newly-discovered islands, which are most valuable, and active measures are being taken to secure the guanos for the British farmer.

EXTRAORDINARY ROWING MATCH.—The Paris regatta came off with great *eclat* on Monday, a great number of boats being entered. Rouen and Havre sent some of their best crews. The English Amateur Rowing Club also entered the lists, but broke two of their rowlocks when starting in their French four-oared boat built according to the required size: however, to the surprise of everybody, the English boat started with two instead of four oars, and a most exciting race ensued, the English taking the lead and keeping it, beating fifteen four-oared boats, and winning the silver medal! The ship mate was most enthusiastic. In the second race the Paris Amateur Club carried off the first prize—a gold medal.—*Gallignani.*

MUSIC.

THE MUSICAL FESTIVALS. The new Music Hall at Bradford, in Yorkshire, will be opened on Wednesday, August 31. The festival to celebrate this event will commence on the 2nd of September, the programme consisting of three morning and three evening performances —The e will be an Eisteddvod, or gathering of Welsh bards, at Abergavenny next month.—On the 13th of September the meeting of the three Choirs of Hereford, Worcester, and Gloucester will take place in the last mentioned town.

ENGLISH OPERA.—At the Lyceum Theatre, on Wednesday, Auber's "Fra Diavolo" and Gay's "Beggars' Opera" were performed: the principal characters sustained by Mr. and Mrs. Sims Reeves, Miss Julia Harland; Messrs. Manvers, Weiss, T. Jones, H. Corri, G. Tedder, &c.

OPERA AT DRURY-LANE THEATRE.—It is announced that this establishment is to be opened for twelve nights, with foreign opera.

ORGAN FOR THE CITY HALL, GLASGOW. This great instrument, built by Gray and Davison, was played upon last Thursday, at the manufactory, in the New-road, by Mr. Henry Smart, the composer.

THE THEATRES.

ROYAL ITALIAN OPERA.

One of the largest audiences ever assembled within the walls of Covent-garden, greeted the farewell performance of Grisi and Mario, in Donizetti's "Lucrezia Borgia," last Monday, the ordinary subscription having been enlarged, as their engagement ended on the 15th inst., and they were anxious to visit Italy, prior to a tour with Mr. Beale, in the provinces, next month; at the conclusion of which, if a large sum of money be forthcoming from American speculators, they will leave this country for the United States. It is, therefore, not altogether certain that Grisi and Mario will take a Transatlantic trip. The engagement is so large, and the deposit thereon exacted by the two artistes for pre-payment is so great, that doubts are reasonably entertained whether the undertaking will be persevered with. Admitting, however, that they do depart, it is next a question whether they may not be expected in due course for the season of 1854 at the Royal Italian Opera. No official announcement has been given of their retirement from the stage; and it is so usual for great actors and great singers to repeat their "farewell seasons" so long as they can find a public willing to receive them, that we take less or to disbelieve altogether the rumours of the final exit of Grisi and Mario for the present. It is a melancholy truth that nobody, in the world, is indispensable, and the lyric stage cannot be kept empty, whatever celebrity may vanish, after "treating" the usual hour thereon; but there is no occasion for Grisi, and as it less so for Mario, to retire for some time to come. Even if the "Diva" be not in the possession of the executive faculty and precision of her younger days, her voice still of surpassing power and richness. She is not, in the winter of her career, nor is she yet past the glorious meridian. Her vocal and personal attractions still suffice for the *Norma*, the *Lucrezia*, the *Donna Anna*, the *Valentina*, the *Anne Boleyn*, &c. Her face still beams with intelligence—her eyes are undimmed in the lustre of a gifted soul; her histrionic energy is still unrivalled. In dramatic intensity, last Monday, she proved that she had in no way deteriorated; and she awakened an applause equaling that of her most palmy moments. It was a grand, a brilliant, and a certain performance: her genius asserted its supremacy unmistakeably; her defiance of the taunting nobles was as daring, her despair at the poisoning of *Gennaro* as deep, her attitude after his exempe through the secret panel as commanding, and the mother's agony at his death as acute as when Madame Grisi was wont some fifteen or fifteen years ago, to excite the connoisseurs of the defunct Haymarket Opera House. And as for Mario, it is evident that the more he works, in the better condition is his voice; his career is only commencing; it is only since he has been at the Royal Italian Opera that he has developed his acting powers. Who could recognise in the energetic Mario of last Monday the tame tenor who walked through *Count Ory* and *Roberto* at the Paristan Grisi and Mario in 1839, and the inanimate specimen of humanity who entered the lists in London, as the successor of Rubini? Never has there been progress more surprising that that of Mario of late years. He elicited signs of rapture at each phrase, and was recalled enthusiastically after the closing scene of *Gennaro*. His luscious, flutty tones; his exquisitely perfect style of phrasing, the delicacy and refinement of his execution, were distinctly marked on this occasion. The passion and pathos of the two distinguished artists in the final scene, caused the audience to rise amid vociferous cheering, and the ovations bestowed at the end of each act were renewed with a *furore* almost rivalling that displayed by audiences of the southern sky. Amidst all this excitement—all these demonstrations—there was still one person who could equally vie admiringly of his auditory, and this was Ronconi, who was never more subtle, who never exhibited more finesse, and who was never more masterly in his admirable creation of the *Duke*. Each of the concerted lyrical performances within Covent-garden walls, it may be questioned whether the trio in the second act ever approached in perfection to that of last Monday night. It was a night to remember—one of those matchless displays of art to be treasured in every note-book.

Of the representation of Thursday's "Prophète," and of to-night's (Saturday) "Guglielmo Tell," we shall report progress in our next week's publication. The seventh campaign will be ended this evening, and, until 1854, the Royal Italian Opera portals will be closed.

THE AZTEC CHILDREN.—These strange little creatures seem to have established themselves effectually in the favour of the public. The Adelphi Gallery is nightly crowded. The reduction in the price of admission has shown that the removal of the former somewhat extravagant charge was all that was wanted for their popularity.

"RATIONAL AMUSEMENTS FOR THE INDUSTRIOUS CLASSES."

Such is the heading of a hand-bill, distributed freely last week in the neighbourhood of Fitzroy-square, and which contained the programme of a selection of music to be given at the Hall of Association, in Castle-street, with prices of admission low enough to meet the pockets of those to whom it was addressed.

This title—"The Hall of Association"—is given to a good-sized irregularly-shaped room, underneath the workshops of the "Working Tailors' Association"—one of the few societies of working men, which have succeeded in taking deep root in the London soil, and that chiefly owing to the zeal and business-like qualifications of its manager. To this gentleman must also, in a great measure, be given the credit of having encouraged by means of these evenings of "rational amusement," to entice the working classes away from irrational amusements, or rather distractions, which to a large number of them are found irresistible, in the shape of "Harmonic meetings," "Concerts for the million," with acceptable accompaniments of beer and tobacco, at flash taverns in almost every street in London; not to speak of the lower kind of entertainments—the penny concerts, &c., at which the rising generation amuses itself by inhaling laughing gas, slang, and obscene jokes—where immorality and heartbreaking are inculcated as not only praiseworthy occupations, but the chief delights of existence. How this teaching succeeds is but too apparent in our every-day police reports; and while we are speaking about the various differences, and seemingly hindrances to the introduction of a national scheme, this education of the people amongst themselves progresses rapidly enough. But to return to our "rational amusement." The programme consisted some four and twenty pieces—too long by one-half out of which five or six songs, the rest concerted vocal pieces, with a solitary fantasia for the pianoforte. No names were given of the singers, but it was understood that they were amateurs from that very working class they are gone, succeeded, (after their own day's labour at an end) to give an innocent and cheerful evening's amusement to, without the extraneous excitement of pipe and bottle, the regalia of the gin-palace. The room was crowded to excess by working men, their wives, and children, and past eight o'clock eighteen well-dressed choristers took their seats on the platform; an energetic conductor, with the customary white kids, raised his baton, and the concert commenced with the harmonised version of "The Last Rose of Summer." Song after song, glee after glee, succeeded, with more or less applause from the delighted audience, who showed a better appreciation of the music than one sometimes finds at a more fashionable concert. The part-music was especially enjoyed, and with good reason; for the various glees and choruses went with a precision and attention to the *nuances* which gave evident proof of the enjoyment of the executants in the music itself, and of care and ability in the conductor. The solo singing displayed some good qualities of voice; in all cases a good pronunciation of the words was observable, and the vocalisation was sometimes more than respectable.

To those who have at heart the social improvement of the people, and the better cultivation of taste in the masses, it would be worth a serious consideration whether like entertainments could not be established, not only in various parts of London, but in every good sized town in the provinces.

With a little preliminary aid it would be possible to make them self-supporting, by interesting the industrious classes themselves in their continuance; and in this movement the best professional talent should not be ashamed to associate itself. As a question of feeling, it would be a noble employment of the heavenly gift of rare talent to bestow it occasionally on those whose opportunities of enjoyment are so limited; as a matter of business, it could not fail in after years to produce the most striking results from the increased practice and cultivation of taste in the divine art of music.

IRELAND.

The *Dublin Evening Post* contains the following:—"We are enabled to announce, with certainty, that her Majesty is sufficiently recovered from her recent illness to fulfil her intention of visiting Ireland. Her Majesty and his Royal Highness Prince Albert are to arrive in Dublin on the 29th inst., accompanied by their Royal Highnesses the Prince of Wales and Prince Alfred, and attended by Earl Granville and the Marquis of Breadalbane.

THE LORD-LIEUTENANT is to visit Limerick in September, when the new docks are to be opened, and the first sod of the two railways, the Kanis and Kildare, and the Limerick and Foynes, are to be raised.

NOTWITHSTANDING that it rained during the entire of Tuesday, the Ballsbridge presented a comparatively full appearance, no less than 7962 persons having paid for admission. Amongst the distinguished visitors were the Comte de Paris, Prince Robert of Orleans, Count Paul of Aegon, and Mr. Justice Ballantine. The total number of visitors to the Ballsbridge, from the 11th inst. to the 18th inst. inclusive, was 27,702.

MR. EDMOND O'FLAHERTY has been appointed, conjointly with Mr. Godley, Commissioner of Income tax for Ireland.

FROM all parts of the country the reports of the crops are highly favourable. A good deal of wheat, oats, and barley, has already been reaped. There is every prospect of a great abundance.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Notwithstanding that the imports of bullion this week have been on a very extensive scale—they having amounted to about £1,500,000, chiefly in gold from Australia—the market for Consols, arising from a great measure, from the increased demand for money, and the steadily increasing rates of discount, has been rather inactive. However, prices have been fairly steady, and Exchequer Bills there has been little or no variation.

In most portions of the investments in London, from the commencement of the year to the 1st of the present month, has been noticed, and from which we learn that in the period above referred to, we imported in gold, not less than £29,000,000, of silver £5,462,407. On the 1st of January, 1852, the stock of gold in the Bank of England was £17,000,000; whilst it is now £17,450,000. Assuming that our circulation to remain has increased by £3,452,407, we have had shipments quite equal to thirty millions sterling. Here is a decided proof that we were wrong, that an overabundant supply of gold in the Bank cannot be apprehended.

On Monday, the value of Canada, owing to several large speculative sales, had a downward tendency. The Three per Cents were quoted at 93 to 93⅞; Bank Stock was 227½ to 228. The Three per Cents Reduced were 93⅛; New Three-and-a-Quarter per Cents, 101 to 101⅛; Annuities, 15-16; India Bonds, 1¾ to 1¾ pr. premium, Exchequer Bills, 1 discount to par. India Stock was 257 to 259. There was rather more business in the market for National securities, both on Tuesday and Wednesday, and the Three per Cents were done at 93—Exchequer Bills remaining at 3s. discount to par. On Thursday, when it became known that the Bank Court had agreed, without any change in the rates of discount being announced, the demand for Consols increased, and the quotations improved one quarter per cent, the Three per Cents were done at 93⅜, and the New Three-and-a-Quarter per Cents, 101⅜. The Three per Cents Reduced were 93⅜, and the New Three-and-a-Quarter per Cents, 101⅜. Bank Stock, 228. Exchequer Bills, 3s. discount to par.

The last account of the Bank of France show an increase in the stock of bullion of £1,000. In the bills discounted there has been a further augmentation of £2,000. The advances on securities and Railway shares have decreased by £40 000.

On the whole, the foreign House has ruled at ——, and we have no material change to mention. The Spanish Bonds, which, last week, have been done at 10½; the Four-and-a-Half per Cents, New, 89½; Buenos Ayres, 69 and 67; Chilian Three per Cents, 87; Ecuador, 5; Grenada, 6; Mexican Three per Cents, 20½; Peruvian Three per Cents, 26⅜; Portuguese Four per Cents, 42½ to 44; the Four per Cents, ex all overdue coupons, 41, the Three per Cents, 37; Russian Four-and-a-Half per Cents, 103½; Dutch Two-and-a-Half per Cents, 56¾; Spanish Three per Cents, 47½; the New Deferred, 23⅛; Spanish Certificates, 9⅜ per cent; and Dutch, Four per Cents, 98¾ and ⅞. We understand that Messrs. Gibbs and Co. have been over as the agents of the Peruvian Government here £210,000, as the produce of the guano sales. There are now sufficient funds in hand to pay the dividends due in September and October, next, £1,450 to be engaged in the purchase of Stock.

There has been a moderate business done in Miscellaneous Securities, as follows:—Australasia Bank Shares, 81; British North America, 47; Chartered Bank of India, Australia, and China, 2⅜; English, Scottish, and Australian Chartered, 10⅛; London Joint Stock, 26⅞; Oriental, 51; Union of Australia, 72; Union of London, 19; Australian Agricultural, 34; British American Land, 65; Crystal Palace, 6⅛; General Steam Ship Company, 1; London Dock, 124; Netherland Land, 2 to 2⅛; North of Europe Steam, 2⅛ to 2¼; Peel River Land and Mineral, ¼ to 6; Van Diemen's Land, 16⅛; Albion Insurance, 95; County, 125; Globe, 150 ex div.; Imperial Fire, 270; Law Life, 56; Pelican, 46; Phœnix, 185; Royal Exchange, 242; Sun Life, ——; Berlin Waterworks, 2½; East London, 105; South Essex, 60; Kandahar, 8; West Middlesex, 149; London Gas, 98; Phœnix, 60; Navigation Bonds, 94; Hudson's Bay, 21; Peninsular and Oriental Steam, 93⅛; Royal Mail Steam, 7.

The account in the Railway Share Market has been adjusted; but it has proved rather a heavy affair, as the supply of stock has considerably increased. Prices have been rather drooping. The following are the closing quotations on Thursday:—

ORDINARY SHARES AND STOCKS.—Ambergate, Nottingham, and Boston Junction, 8; Caledonian, 75; Cork and Bandon, ——; Eastern Counties, 10; Eastern Union, 8 pm.; East Lancashire, 25; Edinburgh, Perth, and Dundee, 29; Great Northern, 84; Ditto A Stock, 1; Ditto B Stock, 133; Great Western, 89; Lancashire and Yorkshire, 76½; Ditto Fifths, 11; London, Tilbury, and Southend, 4½; London and North-Western, 112½ ex div.; Ditto Eighths, 2½ ex div.; London and South-Western, 85¾ ex div.; Manchester, Sheffield, and Lincolnshire, 28; Midland, 71⅞; North Staffordshire, 12; Scottish Central, 93; Shrewsbury and Birmingham, 64; Taff Vale, Preference No. 1, 103; Waterford and Kilkenny, 5½; Waterford and Limerick, 33; York, Newcastle, and Berwick, 49½; Ditto, 5 per Cent Preference, 108; York and North Midland, 20.

LINES LEASED AT FIXED RENTALS.—Northern and Eastern, 68; Royston and Hitchin, 148 ex div.

PREFERENCE SHARES.—Eastern Union, Six per Cent, 20⅜; Edinburgh, Perth, and Dundee, 3½; Great Northern, Five per Cent, 113½; Great Southern and Western (Ireland) Eighths, 8⅞; Great Western Redeemable Four-and-a-Half per Cent, 103; Irish Midland, Five per Cent, 10⅜; Lancashire and Yorkshire Six per Cent Stock, 160½; North Staffordshire, 25½; York, Newcastle, and Berwick, Four per Cent, 10.4.

FOREIGN.—East Indian, 85½; Grand Trunk of Canada, 7⅞; Great Central of France, 10½; Luxembourg, 7⅞; Ditto, Guarantee, 8⅞; Madras, ——; Northern of France, 41; Paris and Lyons, 29½; Paris and Orleans, ——; Paris and Rouen, 12⅞; Paris and Strasbourg, 40½; Rouen and Havre, 29; Sambre and Meuse, 8; Upper India Scrip, 1 prem.; West Flanders, 2.

MINING SHARES have changed hands to a moderate extent. On Thursday, Agua Fria were 3; Anglo Californian, 3; Imperial Brazilian, 4½; St John del Rey, 20¾; Copiago, 10½; English and Australian Copper Smelting Company, 2¾; Great Nugget Vein, Scrip, 2½; Linares, 9⅜; Souvenu Monde, 1½; United Mexican, 4⅜.

MELBOURNE, 7th June, 1853.—Our market for the last six weeks has undergone considerable fluctuations; not so much as any depression of prices, but in the quantities of goods to dispose of which the market had become quite bare; and the supplies of which, on arrival, were eagerly snatched up at almost any price the importers asked. We have now had an immense supply of goods, and although nearly all are got, yet these have had no very serious effect, as our prices current denote, the goods being unable to come into the market all at once owing to the extreme difficulty of landing. The business of the city is greatly impeded, owing to the want of lighters and the blockaded state of the river; and the wharf is so deep in mud, that goods are sometimes entirely lost in it; notwithstanding all this, the Government is sitting idly by, to the great detriment of the commerce and well-being of the country. It is, however, worthy of note and publicity, that the Government have erected two very large buildings (and pronounced good for twenty years) in seven days for the ball, whilst they have positively been seven months in erecting a wooden shed of about the same size on the wharf. Land, especially in the city, commands incredible prices; whilst buildings of every description are let for rents per annum that would suffice to build them and more at home. *From Messrs. Todd and Browne's Reports on the Australian Markets.*

Friday Evening.

Consols have been firmer to-day, and prices have been on the advance. The Three per Cents have marked 93⅜; the Three per Cents Reduced, 93, and the New Three and-a-Quarter per Cents, 101⅛; Bank Stock, 228½; India Bonds, 1¾ pm.; Exchequer Bills, 3s dis. to par. Foreign Bonds and Railway Shares have ruled steady.

THE MARKETS.

[illegible] circuit of London this week have been modera[illegible] were comparatively small, whilst the show of oats [illegible] was by no means good [illegible] there was a slight improvement in the beef trade, on Monday's prices were rather exceeded. Upwards of 27,000 quarters of foreign wheat have arrived into the port of London, there was a better feeling in the trade [illegible] The arrival of fresh up-rivers from the western [illegible] this week, comprise 1,000 sacks of flour, 1,000 sacks of wheat, 2,000 barrels of oats, 200 quarters of barley, and 1,000 quarters of beans.

Beef.—Since Monday, the supply of beef has been moderate, and the trade has been very heavy, at Friday's quotations. Prime Scots, 4s to 4s 4d; other breeds, 3s 8d to 4s; and inferior beasts, 3s 4d to 3s 8d per 8lbs. to sink the offal.

Mutton.—The supply of sheep has been moderate, and the demand has been steady, at Monday's prices. Prime Downs, 4s 4d to 4s 8d; prime Southdown, 4s 4d to 4s 8d; other breeds, 3s 8d to 4s per 8lbs. to sink the offal.

Lamb.—The supply of lambs has been moderate, and the demand has been steady, at Monday's prices. Prime Southdown, 5s to 5s 4d; other breeds, 4s 8d to 5s per 8lbs. to sink the offal.

Veal.—The supply of calves has been moderate, and the demand has been steady, at Monday's prices. Prime calves, 4s 4d to 4s 8d; other breeds, 3s 8d to 4s per 8lbs. to sink the offal.

Pork.—The supply of pigs has been moderate, and the demand has been steady, at Monday's prices. Prime pigs, 4s 4d to 4s 8d; other breeds, 3s 8d to 4s per 8lbs. to sink the offal.

Newgate and Leadenhall Markets.—Beef, 3s 8d to 4s 4d; mutton, 4s to 4s 8d; veal, 4s to 4s 8d; pork, 3s 8d to 4s 4d per 8lbs. to sink the offal.

Corn Exchange.—Mark-lane, Friday.—[illegible] prime samples, [illegible] per qr. [illegible] per qr. [illegible] per qr.

No. 640.—VOL. XXIII.] SATURDAY, AUGUST 20, 1853. [TWO NUMBERS, WITH SUPPLEMENT, 1s.

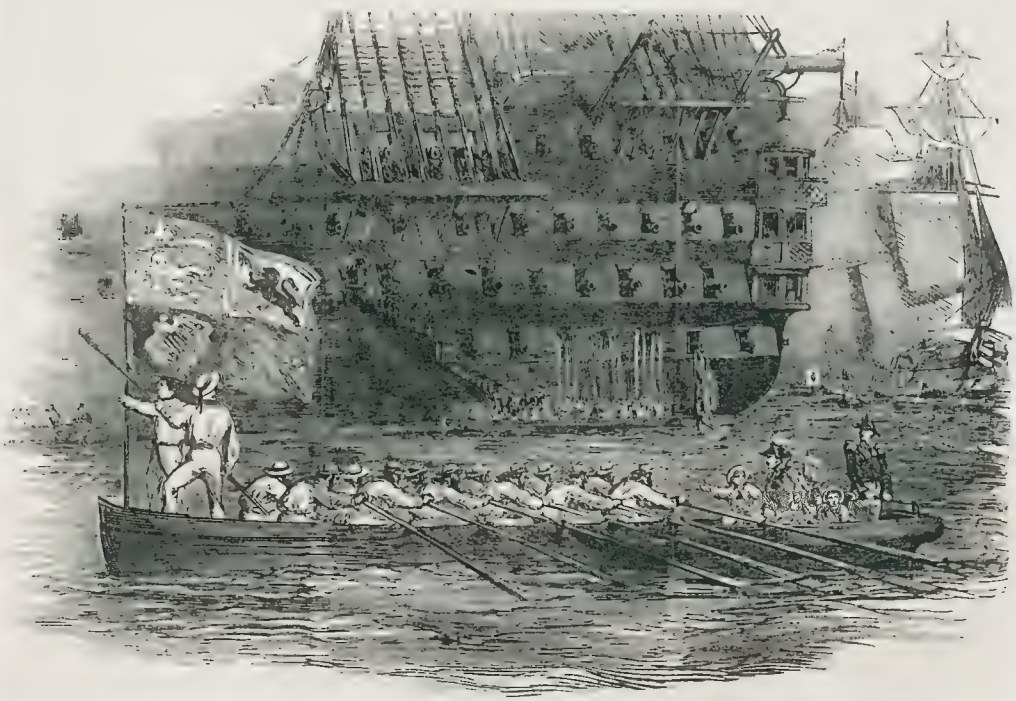
THE REVIEW AT SPITHEAD.

THE APPLICATION OF STEAM TO NAVAL WARFARE.

The power displayed on Thursday at the great Naval Review must have convinced the most doubting, and assured the most timid—whatever may be the effects of steam applied to navigation—that its advantages are on our side. Any power or any facilities it has conferred on others, it has conferred on us in a much greater degree. They have them all only through us, and after we are served. A conspicuous feature, accordingly, of the show—more impressive, perhaps, than the gay and imposing men-of-war, or than the roar of their unabotted guns, or the dense blue smoke that enveloped them while engaged in the mimic combat—was the "thick black ground of *coal* smoke resting on the horizon," the result of the innumerable applications of the giant power of steam to the purposes of navigation. The peculiarity and real wonder of the Review was the 14,420-horse power—if the reader can conceive from these numbers the force of so many rushing steeds concentrated in the holds of the Royal ships—impelling these mountain masses with as much ease as a child drags its little boat across a tiny pond; and the very much larger, but unenumerated horse power that spread the dense cloud of its exuvim over the wide horizon, and gave actual life to thousands of steamers bearing the spectators of the show. All the reporters agree in saying that no other country ever did or could exhibit a spectacle of this kind, so grand and imposing; and they all agree, we believe, in referring the grandeur to the innumerable persons and steamers gathered around the Queen and the fleet. It was a national show. The hearts of the people, even more than their eyes, were interested in it. The snowy white sails and the newly-painted hulls of the great war vessels were pleasing to behold; but the long list of naval victories present to every man's mind, the age of security conferred on this empire by its navy, permitting the growth of the arts, the cultivation of the sciences, the slow but sure improvement of the people, and securing the liberties of the world, were the great facts which gave an unsurpassed interest and moral grandeur to the scene.

The whole nation was present in spirit, as all its representatives were in the body, delighting in the recollection or past achievements, and confident in future safety. In free states we are told the military force can only be strong by rising from popular foundations; and it is the popularity of the navy, its incorporation with our amusements and our business, and it is our general familiarity with the new power of steam, also associated with our voyages, our journeys, and almost all our daily toils, which make the application of steam to navigation the complete guarantee of the national safety. It combines for us, into one overwhelming force the elements of art, science, and popular power. To trace one or two of the consequences, accordingly, of the application of steam to naval warfare as one of the most important subjects suggested by the great Review, is the object of our present remarks.

The most remarkable fact bearing on this point, was the celerity and the ease with which the *Duke of Wellington*, the greatest of all the ships, the *Agamemnon*, and the *Impérieuse*, every one of them steam-impelled, performed their evolutions. "The chase," when each ship put forth all her powers, "was just continued long enough to establish the superiority of these ships, and prove that they would have beaten all the rest." They are moved by screw propellers, and all the steam machinery in such large ships is, or may be, placed below the water line, and below the reach of shot. A power of moving and of managing the largest floating batteries, completely under the command of the Admiral, is thus obtained. The ships can steam at pleasure against wind or tide; they can take up any position; they can assail or retreat from any of the forts that



HER MAJESTY IN THE ADMIRAL'S BARGE.

guard naval harbours. Being so completely under command, and moved with so much greater swiftness than sailing ships, the power of every single ship is largely increased; and a steam fleet of 1100 guns, like that collected at Portsmouth, is much more formidable than a sailing fleet of an equal number of guns. If the application of steam to navigation add very much to the chances of success in attacking either sailing ships or stationary forts, it increases, in like proportion, our means of repelling an invading enemy. Like railroads, it enables us to concentrate our whole orce, or any portion of it we please, on any one point of the coast, and thus to render almost every point unassailable.

Till now, to know how to manage ships under sail, to tack and to veer, to fill and to back, to increase or to lessen the sails, as the moving power, so as to occupy an advantageous position in the moving power, so as to occupy an advantageous position in the attack or defence, was one great part of the business of skilful seamen. One particular officer, called the Master, had the especial charge of this department—the very best seamen were appointed to it as their highest reward; and the readers of naval history will remember that Lord Howe's Master, Mr. Bowen, was promoted (an unusual proceeding) to be a Captain, for his eminent services in managing Lord Howe's ship in the great battle of the 1st June, 1794. All that part of naval tactics must be entirely changed, and new skill—skill more prompt, because the instruments are more completely under command; resolution more vigorous and ready, if possible, than of old, must henceforth be the distinguishing characteristics of naval tactics. The officers will have fewer difficulties to encounter—their power will be greater—circumstances will be more under their control—the success will depend less on accidents—contests will be decided more by vigour and skill, and less by wind and weather; and those who are successfully to wield so enormous an engine cannot be brought into the service by chance, or by birth or connexion, but must be trained to their duties. Peculiar weather will no longer save the shattered remains of a defeated fleet, as at Trafalgar; nor drive a chasing Nelson from his course, so as to allow the escape of an enemy. In proportion to the efficiency of the instrument, let us insist on the fact that the responsibility of officers will be increased; and henceforth, in naval warfare, as on railroads, there ought to be no accidents, as there can be no defeats but those which arise from deficiency of power or of skill. The nation, the Admiralty, will be responsible, if our steam navy be inadequate for national purposes; the officers of the fleet will be responsible, if it be not always successful.

Ships of war, let us repeat, are floating batteries, and the two great points of all tactics will be to place them in a proper position and to work their guns well. In the latter branch England was for a long period without any well-devised scheme of training, either for officers or men. At present the subject is much attended to, and if the crews of the Royal navy be not expert gunners, the system must be bad. We only advert, however, to gunnery as an essential part of the whole, not to discuss it; our business being with the moving power applied to bring the batteries in their proper places. As the rule, the whole of the crews of men-of-war—though not strictly necessary for the purpose—were formerly employed in navigating the ships—heaving up anchors, trimming sails, stowing holds, and performing all the duties of seamen in merchant-ships, as well as the duties of artillery-men. The huge and numerous sails, exposed to winds varying in direction and intensity, required occasionally almost as many men to handle them as was necessary to work the guns. Comparatively few persons are required to manage steam-machinery and screw-propellers. The battery of the *Wellington* requires 1000 men, the moving force will be amply served by 50. The substitution of steam for wind, then, as the moving power will make even a greater change in the internal economy of our men-of-war than in naval tactics.

It seems likely to change the whole character of the ships. They will require fewer sailors, and more gunners, engineers, and stokers. Their service will be more peculiar, and their crews must be especially trained. The separation for some time in progress between the merchant and the Royal service—the carriers of goods by sea, and bearers of arms—will become greater and more distinct. The men bred up in the merchant service will almost cease to have any peculiar aptitude for the national service; and impressment, no longer of use, must, with all its consequences, be as completely swept even out of the recollections of the navy, as it is universally condemned. With that must go the cruel discipline that grew from it; and the use of steam, therefore, will promote the moral improvement of the naval service. The total separation, however, of the Royal navy from the merchant service will throw the former exclusively on its own resources. The efficiency of its officers will no longer have any connection with the skill and hardihood that were acquired in the management of merchant vessels. It must depend entirely on the regulations made for them, and the system adopted. On this point, other Governments can do quite as well as our Government; and, indeed, the influence to which our representative system subjects the Executive, makes the latter, in many matters of detail, a most imperfect instrument. It is notorious that, hitherto, the navy has been crowded with officers of aristocratic or party connections, and injured by such influence trampling under foot—as was the case under the Derby Administration—the public service, in order to reward Parliamentary corruption, and gain or secure Parliamentary power. Now that the efficiency of the navy will depend exclusively upon the habits formed in the navy itself, and that the responsibilities have become greater and clearer, it must be governed on different principles, or the vast expense the nation incurs to support it will only lead to ruin.

Another point worthy of consideration, arising from the more complete separation of the two services, may possibly be to make it less national. The Royal navy grew from the mercantile marine, was always considered to be connected with it, relied on it for the larger portion of its crews and for some of the most important of its officers; and the mercantile marine, being connected with every part and port of the empire—with the whole maritime population—was completely national. It will now be more than it was, a mere branch of the executive Government. It will approximate to the army or to the police. It will be a special service. Except the little source of popular life it may have in engineers and persons of that description brought up in private establishments, its total vitality will be derived from the Government. Now, it happens—and we know this as certainly of the navy as of any other branch of society—that great social improvements seldom or never begin in Government departments. As far as we know, not one; and certainly very few of the inventions and improvements that have brought the marine steam-engine and screw-propeller to their present efficient condition, took their rise amongst the officers of the Royal Dockyards or Royal Navy. Like all other useful contrivances, they originated in the great body of society not immediately under the control of the Executive Government. The cause of the difference, too, is obvious. Inventions are novelties picked up in nature; to find which, the faculties must be free; and Governments prescribing and regulating the duties of all their servants, necessarily shut out that freedom and that discursive use of the faculties which leads to invention and improvements. They stifle all energy out of the sphere of prescribed duty. Though, from a similar cause—namely, the rules prescribed by our Navigation-laws and the laws for registering shipping—the progress of our mercantile marine was for a considerable period very much retarded; since steam and Free-trade have, in a manner, emancipated it, its progress has been very rapid; and at present our steam and sailing-ships are second to none. We are somewhat apprehensive, therefore—though such apprehensions will be, perhaps, ridiculed by many servants of the Government, and especially by naval officers—that the entire separation of the Royal navy from the mercantile marine—except by the common but narrow filament of steam power—may tend to throw the navy, in moral and mechanical improvement, behind the rapid advances of society. This circumstance very much increases the responsibility of the Admiralty, and makes it more than ever necessary to regulate the whole naval service on the principle exclusively of providing for its efficiency, regardless of all other influences whatsoever.

With the Royal navy the greatest of all modern inventions is now fully incorporated; but the subject is yet too new to enable us to form an opinion of its many effects both on the tactics of fleets and the internal economy of ships. We can only express our hope that it will lead—as most of the other applications of mechanical power to warfare have led—to make battles less fierce and sanguinary, and to enable nations to settle their disputes by disabling an engine rather than destroying a life. We may, too, express a hope—now that science and art have become more necessary to naval management—that the characters both of officers and men will be improved. Looking at what the Sea Kings did of old, and what the shipowners of the world are now doing—carrying all kinds of goods between the most diverse and distant nations—we are taught that the great utility and powerful effects of the maritime part of mankind as an element of civilisation have been much underrated. We may, therefore, further express a hope that the present application of steam to navigation and naval warfare will raise the maritime population to the high place which it deserves to occupy in public estimation.

THE GRAND REVIEW
OF THE
BRITISH FLEET AT SPITHEAD.

The great national demonstration at Spithead, on the 11th instant, which we this week Illustrate in its principal scenes, was the most magnificent spectacle of its class which it has ever been the lot of artist to picture, or historic chronicle to record. As the stately representatives of the imperial greatness of Britain, and of the humanising influence of science in warfare, the interest of this grand display possesses a double force; approaching that supernal character with which one of our illustrious poets has invested a fleet of ships:—

> As far as I could cast my eyes
> Upon the sea, something methought did rise,
> Like bluish mists, which still appearing more,
> Took dreadful shapes, and thus mov'd towards the shore
> The object I could first distinctly view,
> Was tall straight trees, which on the waters flew.
> Wings on their sides, instead of leaves, did grow,
> Which gathered all the breath the winds could blow;
> And at their roots grew floating palaces,
> Whose outblow'd bellies out the yielding seas.
> * * * * *
> All turn'd their sides, and to each other spoke—
> I saw their words break out in fire and smoke. DRYDEN.

Of this poetic picture the spectacle at Spithead presented a perfect realisation, with an accession of might which it never entered the imagination of poet to conceive—if we except Darwin's lines, of seventy years since, prophetic of "unconquer'd steam," and embellishing its triumph from classic story:—

> So, mighty Hercules, o'er many a clime,
> Wav'd his huge mace in Virtue's cause sublime;
> Unmeasured strength with early art combin'd,
> Awed, served, protected, and amaz'd mankind.

The spectacle at Spithead had of itself enough both of novelty and attraction to recommend it. Few of the present generation have seen a regular naval review, as the last of any importance took place on the 24th of June, 1814, when the Prince Regent entertained the Allied Sovereigns with a demonstration at Spithead, in which fifteen sail of the line and as many frigates, manœuvred for the entertainment of the distinguished visitors. But the evolutions on that occasion were few and unimportant; as the absence of wind rendered the men of war as helpless as so many logs upon the water; while on the 11th inst. each immense vessel was as manageable as a Thames wherry, and did her allotted work with the precision of an automaton.

During the forty years that had elapsed between the two reviews, a new element had been evoked—a new power had been discovered; and British coal and iron had come to share in the duty of national defence, which British oak had previously monopolised.

It should, however, be mentioned, that, although there has been no review of an English fleet of any magnitude at Spithead since 1814, there was a grand review of the combined fleets of England, France and Russia at Spithead, in 1827, previous to the battle of Navarino, when his Royal Highness the Duke of Clarence, afterwards King William IV., was Commander-in-Chief. The vessels employed consisted of 15 Russian, 9 English, and 9 French ships. Again, on the Queen's visit to Spithead in 1845, the squadron consisted of the *St. Vincent*, *Trafalgar*, *Queen*, *Rodney*, *Albion*, *Canopus*, *Vanguard*, *Superb*, and *Rattler*. Of these, one—just one—(the *Rattler*)—was a screw steamer. This vessel, of 880 tons and 200-horse power, built by Sir W. Symonds, and by no means deserving of her name so far as speed was concerned, then represented our steam navy; the rest of the squadron being sailing-vessels.

GENERAL DIRECTIONS.

The following order was issued by the Port-Admiral for the guidance of the public:—

NAVAL REVIEW NOTICE

Sailing vessels and boats are requested not to attempt to cross the line of the ships of war about to be reviewed on the 11th instant, or on any account to pass between the columns.

The steamers should keep to leeward of the columns or ships in order of sailing, as the smoke might prevent signals being quickly noticed, thereby causing accident. Masters of vessels must be aware that the evolutions of so large a number of ships of war require a considerable space They are, therefore, requested to steer accordingly, and not close in to interrupt these evolutions that may be ordered, as they themselves will alone be answerable should any accident occur.

THOMAS COCHRANE, Vice-Admiral, Commander-in-Chief.
Victory, in Portsmouth Harbour, Aug. 8.

The following were the signals issued for the guidance of the Fleet:—

For Review.—Weigh. The compass course will be made from the Royal yacht to the Admiral; on passing the Nab.

Form line abreast. Clear for action. Use sails and steam. Chase. Recall, and form line of battle. Head to the north-east. Wear in succession, and pass to leeward of the Royal yacht. Form two columns and return to Spithead. Use sails instead of steam. All boats carrying guns to assemble round the Royal yacht, the boats of the starboard division on the starboard side, port division on the port side. Another in two columns, leading ships first, the others passing them and anchoring in succession north-west of the Admiral's at a very short stay, till signal is made to moor or veer. Anchor in two columns, according to the order of sailing in two columns. After course together on the bearing indicated. The port column to become the starboard column. On this signal being made the port column will keep steerage way only until the leading ship can pass close astern of the rear of the starboard division, when they will put on all steam to regain their stations, the starboard column checking speed until they have done so.

When the Queen approaches Spithead a general Royal salute will be fired by all the ships of the fleet. This will be repeated when the Royal standard is hoisted on board the *Duke of Wellington*, that ship not joining in the salute in consequence of her Majesty's presence on board On her Majesty leaving the *Duke of Wellington* and re-embarking in the *Victoria and Albert*, previous to the commencement of the review, another general salute will be fired, the *Duke* joining therein; and the captains of all the ships are cautioned not to fire when the Royal yacht is close at hand. A final salute will take place at the close of the review, when the Queen leaves the fleet.

THE FLEET.

Compared with the present, how inefficient was the last fleet which was reviewed at Spithead! dependent upon wind and tide for its movements, and, by turns obeying—

Th' imperious tempest and impetuous seas;

it was a mere shadow, in comparison with the power of the present one. And if, passing beyond the period of 1814, when the last review took place, that noble vessel, the *Duke of Wellington*, should be compared with the *Great Harry*, or the *Sovereign of the Seas*, or that huckleberry ship, the *Mary Rose*, which, by a little sway of the ship in casting about, sank at Spithead in the presence of King William III., during the review, its ports not being more than sixteen inches above water—some idea might be formed of the immense progress which has been made in naval architecture, and the proud position which science now holds in the world. It was only in 1845 that the *Rattler* was first fitted with screws, and the success of this application of steam power placed beyond dispute. The *Rattler*, supplied with this mechanical arrangement, is now fitted not merely for the purpose of a block ship, but has been transferred into an excellent sea-going vessel; while the *Blenheim*, *Le Hogue*, and the *Ajax* possess now in their old age powers considerably exceeding anything which they possessed in their more youthful days as sailing vessels.

The fleet was essentially a *steam fleet*, the first exhibition of that mighty power as a general application to our men-of-war, which up to this time has been only looked upon as an auxiliary, or as the "cavalry," of our *sailing* fleet. Hitherto, in all fleets or squadrons the heaviest portion of the force composing them has been *sailing* men-of-war, i. e., three-deckers, two-deckers, and 50-gun frigates; the smaller vessels only having been propelled by steam power, and the means of propulsion has been the "paddle-wheel;" but the fleet was a force of a very different character. The largest, the heaviest armed, the most powerful ship in her Majesty's fleet, and indeed in the whole world, was a three-decker—most appropriately named after the great Duke of Wellington—propelled by screw steam machinery; and the component parts of that force were ships of the same description, of 90 guns, 60 guns, 58 guns, 50 guns, 46 guns, &c., all possessing a power within themselves superior to the effects of the elements and the aid of mere canvas.

This fleet, then, was a *model* fleet—in fact, the new fleet; for whereas even now, on all our stations round the globe, ships propelled by steam machinery are few and small in comparison with *sailing* ships, this great fleet at Spithead, numbering twenty-five men-of-war of all sizes and classes, has actually more sailing-ships out of the whole force. The fleet is also a model fleet, inasmuch as it is composed of the new classes that are in future to be our men-of-war—the specimens being the three-decker of 131 guns, the two-decker of 91 guns, the frigate of 51 guns (can mount 60), the corvette of 31 guns, and the sloop of 21 guns (a classification of five of the maximum rates repeatedly proposed for the last thirty years by Captain, now Admiral, Ryder Burton); and not only is it a model fleet as regards the ships, but it as an experimental fleet as respects the propelling machinery, and the proportion of horse-power to tonnage.

We have, however, separated it into three divisions—the Screw fleet, the Paddle-wheel squadron, and the Sailing squadron; and the following is the correct list in name, number of guns, men, horse-power, and tonnage, of what may be termed

THE GREAT CHANNEL FLEET,
THE SCREW FLEET.

	Guns.	Men.	H. pow	Tons	Commanders
LINE-OF BATTLE SHIPS.					Captains
Duke of Wellington	131	1100	780	3700	H. B. Martin, C B.
Agamemnon	91	850	600	3074	Sir T. Bladland.
Blenheim	60	600	450	1747	W. H. Henderson, C B
Hogue	60	600	450	1750	W. Ramsay.
Ajax	58	500	450	1772	M. Quin.
Edinburgh	58	444	350	1761	Hewlett
FRIGATES AND CORVETES.					
Impérieuse	51	630	350	2247	R. B. Watson, C B
Arrogant	47	450	320	1872	S. Frematitle.
Amphion	34	300	300	1474	A. C. Key.
Tribune	31	300	320	1370	Hon. S. T. Carnegie.
Highflyer	21	226	250	1153	W. Moore.
Encounter	14	180	300	806	O'Callaghan.
Desperate	8	175	400	1160	W. W. Chambers.
Total, 13 ships.	664	6085	5450	24,226	

THE PADDLE-WHEEL SQUADRON.

Frigates, &c.	Guns	Men.	H.-p.	Tons.	Commanders.
Terrible	21	300	800	1,847	Captain M'Cleverty.
Sidon	22	300	560	1,329	,, Goldsmith.
Leopard	18	300	660	1,412	,, Gifford.

Total, 9	127	2180	4330	11,626	

THE SAILING SQUADRON.

Ships of the Line.	Guns.	Men.	Tons.	Commanders.
Queen	116	970	3083	Capt. E. C. Mitchell.
London	90	820	2613	,, C. Eden.
Prince Regent ..	90	820	2578	,, F. Hutton (flag)
Total, 3	296	2610	8274	

SUMMARY

The summary of the above imposing force will stand thus:—

Ships.	No.	Guns.	Men.	Horse-pr.	Tons
Screw	13	694	6,085	5490	24,226
Paddle	9	127	2,180	4330	11,626
Sailing	3	296	2,610	..	8,274
Grand Total	25	1087	10,825	9780	44,146

Regarding the above as the actual combatant force, we may considerably add to the numerical strength of the Navy at this Review by giving all the ships attendant on the spectacle. But we will limit ourselves first to those ships that are permanently in commission. They are as follow:—

YACHTS.

	Guns.	Men.	H.-power.	Tons.	Commanders.
Victoria and Albert	2	118	430	1036	Captain Crispin.
Fairy	..	..	128	313	Master D. Welch.
Elfin	..	..	40	98	,, Balliston
Black Eagle	2	88	260	486	,, Petley.
Total, 4	4	256	858	1933	

STEAM-TENDERS AND DISPATCH-BOATS, &c.

	Guns	Men.	H.-power.	Tons.	Commanders.
Banshee	2	66	656	850	Lieut. Hosken.
Vivid	1	19	160	382	Master L. Smithett.
Ayre Queen ..	1	18	120	312	Master Paul.
Lightning	3	38	100	296	Master Smith.
Avon	2	20	171	370	
Undine	1	17	110	284	Master E. Lyne.
Sprightly	2	29	100	350	
Total, 7	12	196	1417	2834	

And, in addition to these, we have the *Rolla*, 6, apprentices' tender, Lieut. Commander Fenwick; *Fanny*, Admiralty tender, Master Commander Scarlett; *Echo*, steam-tug, of 140-horse power; with other smaller craft.

The following men-of-war steamers were also present, manned from the various ships in ordinary:—

	Guns.	Men.	H.-pow	Tons.	
Conflict, screw	8	50	400	1013	Appropriated to the service of the House of Commons. House of Peers, Reporters, Admiralty clerks, Naval officers, &c.
Bulldog, paddle ..	6	50	300	1193	
Growler, ditto	6	50	280	1058	
Driver, ditto	6	50	280	1058	
Gorgon, ditto	6	40	320	1111	
Hecla, ditto	6	50	220	817	
Lucifer, ditto	2	20	180	337	
Zephyr, ditto	..	20	100	300	
Lizard, ditto	3	20	150	283	
Total, 9	43	350	2430	7339	

Taking the above, then, as all the men-of-war engaged and present in this grand spectacle, the numbers will be as detailed:—

GRAND SUMMARY OF MEN-OF-WAR AT SPITHEAD.

	Ships	Guns	Men	H.-pow	Tons
Service Fleet	25	1087	10,825	9780	44,146
Yachts	4	4	256	858	1,933
Tenders and Dispatch Boats ..	7	7	148	1146	1,648
Accommodation Squadron ..	9	43	350	2430	7,339
Miscellaneous	5	10	80	200	1,000
Grand total of the whole Force ..	50	1151	11,699	14,420	56,071

It may be interesting to place this mighty naval power in contrast with military force. Thus, the fleet comprised about the same number of men as are encamped at Chobham; only that, instead of being distributed in tents stretching over two miles of heath, they are cooped up in 25 ships of war; 13 of which are screw-steamers, 9 paddle-wheel, and 3 sailing ships-of-the-line. The total steam-power employed, being stated at about half its actual value, probably represents a larger horse-power than all the cavalry regiments in the service put together; and when the nature of this modern agent is considered, and its adaptability for the purposes of naval warfare, the contrast which it illustrates becomes still more formidable.

If, however, the fleet in its crews and steam-power had such a grand significance; when the number and calibre of its guns are taken into the reckoning, the result is truly astounding. There were no less than 1,076 guns, the smallest 32-pounders, and as large as the largest used in the great sea-fights by which our ancestors won the sovereignty of the seas. The largest throw 84-lb shells, which would be 104-pounders if solid shot were used; and the frightful destructiveness of these missiles may be imagined, exploding on concussion, according to Captain Moorsom's recent invention. The great feature, however, of the armament of the present fleet is its 68-pounders, which produced, when fired, a prodigious effect both upon the imagination and the tympanum of all who witnessed the review. Thus, by its floating batteries of the heaviest description, and by the power of steam to move them rapidly into any position that may be required, the British navy has now become the grandest concentration of force for destructive purposes that can well be conceived.

THE MORNING.

The morning broke most auspiciously, with a sky only slightly clouded, and a light royal sail breeze. From dawn, all Portsmouth was astir, and crowding down to the harbour, where fleets of small local steamers of every size lay panting with their steam up; and from whence, at a very early hour, every conceivable species of boat, which had been engaged at outrageous prices, was proceeding out to sea as soon as the hirers appeared. Besides the boats and wherries, a vast fleet of cutters, luggers, sloops, and yachts were leaving the harbour; and presently the landward portion of the space between the shore and the ships was perfectly crowded with craft of all descriptions, apparently anxious to keep the weather-gauge, and crawl down along the Hampshire coast. The larger class of yachts, cutters, and schooners—amongst the last of which was the famous clipper *America*—came boldly out amongst the fleet; while steam-boats beeling from starboard to port with their multitude of passengers, threaded their way among the ships, which lay with their anchors apeak, and the greater number with their steam up. A large Southampton boat, the *Thames*, neatly dressed, as were several other private steamers. From "the Island," a number of cutter and schooner yachts made their appearance, dodging about, and apparently waiting for her Majesty's yacht, between Osborne and the Solent. There were also many pilot boats about the vessels, which, from their appearance, might be mistaken for cutter yachts.

At half-past nine o'clock the Lords of the Admiralty embarked in the *Black Eagle*, Admiralty yacht, on board of which a brilliant party of the aristocracy had already assembled. Among the distinguished personages in this vessel were his Serene Highness Prince Edward of Saxe-Weimar, the Duke of Newcastle, the Duke and Duchess of Argyll, the Marquis of Abercorn, and the Ladies Hamilton and Lady Rachel Russell; the Marchioness of Aldesbury, the Earl of Clanwilliam, the Earl Granville, the Earl and Countess Bruce, the Earl of Wilton, the Earl of Dundonald, the Countess of Clarendon, and the Ladies Hyde, Viscount Hardinge, Viscount and Viscountess Newport, Viscount and Viscountess Canning, Viscount Sydney, Lord Charles Wellesley, Lord Dufferin, Lord Stanley of Alderley, Lord Raglan, Mr. Ralph Osborne, M.P., Lord Henry Gordon Lennox, M.P., the Right Hon. Sir Charles Wood, M.P., Hon. Mrs. Anson and Miss Anson, the Right Hon. E. Cardwell, M.P., and Mrs. Cardwell, the Right Hon. Sidney Herbert, M.P., and Mrs. Herbert, Hon. Mrs. Norton, Mr. Monsell, M.P., and Lady Maria Monsell, Mr. and Mrs. John Stanley, &c.

The members of the Admiralty Board were present without an exception, headed by the First Lord, Sir James Graham; and accompanied by Sir Byam Martin, Admiral of the Fleet, and several other distinguished naval officers. As soon as the Lords had embarked, the Lord High Admiral's flag was hoisted at the main, and, the steam being up, she proceeded rapidly in the direction of Osborne. As the yacht left the harbour, the Board of Admiralty were saluted from the platform Battery.

The sailing yachts now began to go to sea in rapid succession, a fresh breeze from the north-east helping them out very agreeably.

The other steamers appointed by the Government to convey spectators now began to drop out of the harbour. The *Hecla* and the *Lizard* were among the earliest to get under way; and shortly after ten o'clock the *Stromboli* and *Bulldog*, having embarked the members of both Houses of the Legislature from the Clarence Victualling-yard (where they had arrived by a special train which left town at half-past six o'clock), proceeded steadily out to Spithead.

The *Stromboli* had the honour of conveying the first portion of the collective wisdom of the nation; and the *Bulldog* bore to sea a goodly muster of members of the Lower House.

Among the members of the Peerage present were—the Marquis of Breadalbane, the Marquis of Ely, the Marquis of Westminster, the Marquis of Bath, the Earl Fortescue, the Earl of Euston, the Earl of Powis, the Earl of Malmesbury, the Earl Delawarr, the Bishop of London, Viscount Mailstone, Viscount Palmerston, Viscount Jocelyn, Lord de Manley, Lord Claude Hamilton, Lord George Gordon Lennox, Lord Alexander Gordon Lennox, Lord Ernest Bruce, Lord Cranborne, Lord Milford, Viscount Gough, Lord Monteagle, Lord Camoys, Lord Redesdale, Lord Drumlanrig, Lord Bateman, Lord Stanley, Hon. G. Ponsonby, &c.

The members of the Lower House were headed by the Speaker; and included, among others, the Right Hon. C. P. Villiers, Right Hon. Sir W. Molesworth, Right Hon. W. E. Gladstone, the Lord Mayor, Sir Robert G. Booth, Sir Benjamin Hall, Sir James Weir Hogg, Mr. Cobbold, Mr. Monckton Milnes, Mr. Emanuel, Mr. E. French, Mr. Smith, Mr. M'Cann, Mr. Fagan, Mr. Maguire, Mr. J. A. Smith, Mr. Brotherton, Mr. Layard, Mr. Portal, Mr. Kerr Seymer, Mr. Phinn, Mr. Ouseley Higgins, Mr. Milner, Mr. D. O'Connell, Mr. Keogh, Mr. Sadleir, Colonel Percival, Colonel Rose, Rear-Admiral Walcott, &c. The last-named, instead of embarking in the steamer appointed for the accommodation of the members of the Lower House, went on board the *Desperate* steam-sloop, for the purpose of seeing the working of the screw.

The *Vivid*, Government mail-packet, Captain Smithett, having on board the members of the *corps diplomatique*, left the harbour at a quarter past ten o'clock. Among the foreign Ministers present were remarked his Excellency the Swedish Minister, his Excellency the Persian Minister and Major Malcolm, his Excellency the Bavarian Minister, his Excellency the Turkish Minister, Prince Vogorides and the Turkish Secretary of Legation, his Excellency the Sicilian Minister, his Excellency the Sardinian Minister, his Excellency the Prussian Minister and Mr. Ernest Bunsen, his Excellency the Greek Minister, his Excellency the Austrian Minister, his Excellency the Spanish Minister, M. de Sarz, M. Baudin, Colonel F. B. Lawrence, Count Louis Corti, Count Alfred Reventlow Criminil, M. de Soveral, &c.

The French Ambassador was, it is understood, prevented being present, though represented by the Secretaries and Attachés of the Embassy. The Russian Minister was also absent.

The little *Fairy*, attendant on the Royal yacht, which had remained lying at the Clarence Stairs ready for the reception of her Imperial Highness the Duchess Olga of Russia, was the last to leave her moorings, which she did at the precise moment the *Duke of Wellington*, flag-ship, and the other vessels composing the fleet, thundered forth a Royal salute, indicating the approach of the *Victoria and Albert* with her Majesty and her illustrious visitors on board. The *Fairy* carried the Austrian eagle at the main, which was saluted on passing the fort Battery, and it was only later in the day it was ascertained her Imperial Highness the Grand Duchess was not on board, that her Royal consort, the Crown Prince of Wurtemberg, was alone present.

Spithead was crowded with vessels of every character, including some of the most ordinary, as well as the finest in the merchant service of Great Britain. It was impossible to ascertain the names of all the private steamers and the parties on board them; but amongst them were the Peninsular and Oriental Company's steamer *Tagus*, with a large party of officers from Chobham Camp; the *Cadiz*, with the directors of the same company on board; the Royal West Indian Mail steamer *Thames*, with the directors of that company; the screw ship *Alar*, with the directors of the General Screw Steam Shipping Company; the *Courier*, *Wonder*, and *South-Western*, belonging to the South-Western Railway Company; the *Waves*, *Queen*, and *Collier*, belonging to the Brighton and South Coast Company; the *Brilliant*, Madeira packet; the French steam trader *Colibri*; the *Lord Warden*, from Folkestone; the *Father Thames*, from London; and a vast number of other vessels.

The *coup d'œil* was of extraordinary magnificence. The Royal yacht, with her staff of attendant vessels—the multitude of smaller yachts, and vessels public and private, of every class, under steam and sail—the blue sea, sparkling in the sunshine, and the fleet just ready to weigh in review order, composed a picture of superb beauty. The vessels of the Royal Yacht Squadron and the numerous private yachts formed a conspicuous portion of the spectacle, as they flew off to the right and left, or careered in and about the larger vessels, or lay together in small bodies.

ARRIVAL OF HER MAJESTY

Precisely at ten minutes to eleven o'clock, the *Victoria and Albert*, with the Royal standard at the main, was observed running up the Solent at reduced speed, and steering in the direction of the flag-ship, with the *Black Eagle* following in her wake. The salute was then fired. From the firing of the first gun not more than three minutes elapsed before the salute was completed. The precision and effect was wonderful, and as the wreaths of white smoke in which the ships became enveloped cleared away, fresh beauty was added to a scene of almost romantic beauty. As her Majesty approached Spithead, the Prussian frigate and corvette lying there manned yards, and saluted the Royal flag.

The *Undine*, Government mail-boat, had been appointed by the Lords of the Admiralty as a tender to the *Black Eagle*. Here was a member of the Blood Royal of Spain, the Prince Don Juan, accompanied by his Aide-de-camp, some few members of the aristocracy, an ex-Mayor of London, several naval officers, &c. The *Undine* having received her orders, followed the *Fairy* out of the harbour, and ran down in the direction of the flag-ship, arriving just in time to observe the *Fairy*, with the Crown Prince of Wurtemberg, meet the Royal yacht, which by easing her speed, she allowed to pass, falling immediately in her wake.

As her Majesty approached the fleet, the engines of the Royal yacht, which had been previously eased, were stopped, and the vessel was allowed to glide along with the tide only. The Queen and the Prince now mounted the bridge, and with the Prince of Wales and Prince Alfred—both attired as sailors, in white duck trousers and jackets—surveyed the scene before them with great apparent interest. Her Majesty wore a pink dress and blue bonnet. Prince Albert wore a field-marshal's uniform. Some foreign uniforms were distinguishable on the deck of the *Wellington*.

HER MAJESTY'S VISIT TO THE FLAG-SHIP.

The *Victoria and Albert* having approached the flag-ship, the Queen prepared to disembark, with the intention of honouring the Admiral of the Fleet, Sir Thomas Cochrane, with her presence. The Royal barge having been lowered, her Majesty and the Prince Consort, with the young Princes, descended the companion, and in a very few moments were brought alongside the *Duke of Wellington*. A second boat was despatched to the *Fairy*, inviting the presence of the Crown Prince of Wurtemberg—an invitation which was readily accepted.

The Lords of the Admiralty left the *Black Eagle* at the same moment, and accompanied her Majesty on board the *Duke of Wellington*—the Royal standard floating at the main giving notice that her Majesty was on board. Immediately, another salute broke the sunny air; but the third, which had been intended to be fired when her Majesty returned to her yacht, was happily omitted. The *Duke of Wellington*, which carries 131 guns, was intended to be of the same size as the ship *Queen*; but circumstances occurred which prompted her separation into halves, and her lengthening by thirty feet, with the addition of a steam-engine and screw. Thus lengthened and equipped, the *Duke of Wellington* has been found a very successful, steady, and for her vast bulk, fast ship. Her Majesty's inspection of the vessel occupied fully half an hour.

On board the *Duke of Wellington* a most graceful act of condescension was performed by her Majesty towards the Admiral of the Fleet, Sir Thomas Byam Martin, G.C.B. On meeting the gallant veteran on the upper deck, her Majesty shook him heartily by the hand, and invited him to return with her to the *Victoria and Albert*, where his flag (the Union Jack) was flying from the mizen.

On board the *Duke* her Majesty was graciously pleased to command that the Senior-Lieutenant of the Fleet in commission, and the Senior Mate of the Fleet, be promoted: the former is Lieutenant George Mason (1827), First of the *Victory*; and the latter is Mr. H. E. Bacon, of the *Prince Regent*. But the eventful 11th of August, 1853, it is said, is still further to be commemorated by an Admiralty brevet.

Her Majesty expressed her "great satisfaction" on board the *Duke*, to Capt. H. B. Martin, C.B., commanding that ship, at the state and efficiency of that ship.

Her Majesty having been received on board by Sir Thomas Cochrane, was accompanied over the ship by the Prince Consort and the Crown Prince of Wurtemberg.

THE FLEET AT SEA.

At fifteen minutes after twelve, the *Victoria and Albert* moved off to the eastward, followed by the *Fairy*, which, having lost her Royal freight, now hoisted the Commodore's flag at the main.

After the *Fairy* followed the *Elfin* yacht-boat; and then came the pretty little Trinity yacht, with the Elder Brethren of that ancient Corporation on board.

After running half a mile to the eastward, the Royal yacht again slackened speed, and it was now that the grandeur of the flotilla was first fully developed and understood. All the ships of the fleet were blowing off steam, and lying—

Like greyhounds in the slips,
Straining upon the start,

it having been arranged that the signal to make sail should be given from the Royal yacht.

It wanted only twenty minutes to one o'clock when the signal to sail was given from the Royal yacht. At this time the greater part of the sailing yachts were already standing out to the eastward, with a smart breeze, just sufficient to fill the canvas

The squadron left Spithead in the following order:—

Victoria and Albert
Elfin
Trinity Yacht

Magicienne Repeating Ship.	Duke of Wellington	Agamemnon	Conflict. Repeating Ship.
	Hogue	Blenheim	
	Ajax	Edinburgh	
	Arrogant	Impérieuse	
	Tribune	Highflyer	
	Desperate	Odin	
	Encounter	Leopard	
	Sidon	Valorous	
	Vesuvius	Terrible	

Against wind and tide, without a stich of canvas, this magnificent fleet steamed to the eastward at a rate of speed not less than nine knots, each vessel keeping its appointed position with the accuracy of a cutter.

And so the majestic procession moved steadily on its way, keeping exact pace each with the other, and advancing in such direct lines that the wake of a predecessor rippled against the bows of the successor. More consummate nicety in steering was never exhibited. The *Victoria and Albert* led the way between the divisions, tending generally towards the port side. The yachts and sailing vessels now began to lag astern; though, when the motion of the fleet was now and then temporarily slackened, they managed to creep up again. The steamers, however, kept up well with the fleet; and when the time came for the squadron to form one grand line—which was when the Nab had been long passed, and the back of the Isle of Wight loomed in a golden haze astern—full speed was put on, with a view of ridding the fleet of these troublesome supernumeraries. The desired effect being to some degree attained, the beautiful manœuvre of forming into line was performed. First the two Admiral ships, the *Duke of Wellington* and the *Agamemnon*, came to a stop and signalled, when immediately all the ships in the starboard and larboard divisions simultaneously diverged to the right and the left of their respective flag-ships, each ship preserving the same distance apart as they had done in line. The effect was very fine, and symmetrical to a degree.

THE ATTACK.

After a few moments' pause, the enemy's squadron being now plainly seen, the signal was made to move, and the fleet advanced at that degree of speed, or about it, which all the ships could keep up. There was only one decided exception, that of the *Ajax*. The *Blenheim* was slow, but the signal to stop was obliged to be given more than once, when the *Ajax*, the third ship in the port division, lagged decidedly behind remaining one of Pope's couplet, slightly altered for the occasion—

When Ajax struggles hard ahead to go,
The squadron labours, and the fleet moves slow.

But by this time the enemy the *Prince Regent*, the *Queen*, the *London*, and the *Amphion*—had ranged themselves in line of battle to port of the port division, and to windward. The two leading ships hauled up their courses, but kept their topsails, topgallant-sails, and royals. The *London* stripped to its three topsails and jib; and the *Amphion* dropped behind with its topsails set, and topgallant-sails dropping over them. After firing a gun or two of defiance, the three foremost ships resolutely advanced; upon which the two divisions closed into one grand line; and, upon the signal-gun of the *Duke of Wellington*, followed by the tremendous roar of her whole broadside, rapidly discharged from stem to stern, the rattling thunder ran along the line, traversing it, as it were, in a minute, and again beginning at the other end, main and deck guns—eighteens, and thirty-twos, and sixty fours—banging and thundering for nearly a quarter of an hour without intermission. From the moment of the first discharge, the clouds of white choking smoke hid everything. Now the breeze for an instant

Aside the shroud of battle cast,

and again the sun for a moment illumined it, as though it had been a morning's mist. It was a most impressive sight to see, pleasant-like, through the haze, the figures of the crews of the nearest guns, lugging and struggling at their work, tearing at the tackles, ramming in the sponges, hoisting the mast with levers—all this lasting but for a moment; and then the shivering bang, which seemed to clear the very ship. But these bangs came thick and threefold, from bow to stern on both decks, and on bow and stern from fourteen other vessels of three and two decks, and heavy frigates. When at length, however, the roar of battle ceased, and it might have been expected that the enemy would have been discovered shattered and done for—their topmasts gone, their rigging cut to pieces, their sails rags—lo! they were sailing gaily along, closing with our line, and with an evident intention of imitating Lord Nelson's favourite device of breaking the enemy's line; but instead of being raked in their advance and broadsided as they passed instead of being run alongside and boarded, for four men to each gun were carlasses, and there were, too, boarding pikes—an opening was obligingly made and they passed through the line, the sun shining upon their canvas, and forming a very beautiful sight.

The mimic battle was kept up with great spirit for a period of twelve minutes.

THE CHASE.

The enemy being thus repulsed, it became necessary to chase, not him, but some imaginary enemy lurking in Spithead; so the heads of the vessels were put round, and the whole squadron started off homewards at the best of each ship's speed. Wind and tide favoured them, and the race home was about the merriest proceeding of the day. The fleet had been fairly out of sight of land, but presently the high ground at the back of the Isle of Wight began to appear like a blue line in the horizon to the left—and then, in brief time afterwards, the low line of the Hampshire coast, stretching to the right. Hereabout the ships fell in with the now returning fleet of yachts and steamers, and it was all one race against one another. The *Agamemnon* led the way. This vessel, considering her bulk, is exceedingly fast, as is the *Duke of Wellington*. These, then, led the race, followed by the *Tribune*, the *Desperate*, and the *Arrogant*. The magnificent screw frigate, the *Impérieuse*, which bore a conspicuous part in the fleet, excited universal admiration for her perfection of form and the stately symmetry of her rig

The signal for a general chase was given, and in a very short time the sailing ships were overhauled by the steam squadron and closed in. This (says the *Hampshire Telegraph*) was the grandest feature of the day, and an appropriate termination to this portion of the proceedings.

The whole fleet then steered south-east till 4.25, when a "race" home-

HER MAJESTY PROCEEDING TO "THE DUKE OF WELLINGTON" FLAG-SHIP.—DRAWN BY J. W. CARMICHAEL.

FLEET FORMING LINE ABREAST.—DRAWN BY E. WEEDON.

wards took place, in which the *Duke of Wellington* and the *Agamemnon* greatly distinguished themselves, and gave the Royal yacht as much as she could do to diminish her distance from them. The quiet smoothness and celerity with which the *Duke* moved through the water astonished every beholder, but in the end she was passed by the *Agamemnon*. At 4.45 the Bembridge Light was passed, and the fleet proceeded to their former moorings; the Review being terminated by

THE BOAT ATTACK.

After the ships had anchored, at half-past six o'clock the Admiral made signal for the boats of the squadron to attack an enemy to leeward. The hostile force was represented by the *Magicienne* and the *Conflict* steamers, which took up a position within a mile of Southsea Beach. They lay "broadside on" to the shore; and, as soon as the boats were hoisted over the side, they prepared their batteries to give them a warm reception. The utmost activity prevailed among the vessels of the attacking squadron, which were now anchored at the moorings they had left in the morning, in a line from Spithead all along the coast of the Isle of Wight. The rapidity with which the huge launches were cleared away, hoisted over the side, and lowered into the water, must have surprised those who had not witnessed the admirable perfection to which the boat service of the country has been brought. In a few minutes each vessel had its launch floating by its side, a carronade (a short, serviceable gun, of heavy metal) on its slide in the bow, and then poured into her its stream of seamen, marines, and marine artillery. With twenty-four oars, double-banked, the Marines seated aft, the officers in command standing pole-up in the stern-sheets with the yoke-lines in his hands, and the jack floating from the tall flag-staff in the stern, each boat was a beautiful object in itself, and formed an engine of war, so to speak, by no means despicable, having all the appliances of attack, defence, and retreat concentrated in a very small compass. A few minutes more, and the words "give way" sent from the sides of the squadron a flotilla of enormous force and power. The boats might be seen advancing with great velocity from the line of ships, swept along by the long powerful pull of the stalwart oarsmen, and converging as they neared in two divisions—one for each of the devoted enemy. The Royal yacht moved slowly up towards the steamers, and the immense multitude of yachts and tenders, wherries, steam-vessels, great and small, swarmed astern of her, or dodged about here and there to find an opening in the thronged masses of hull, and spar, and rigging through which this exciting portion of the spectacle could be witnessed.

Meanwhile the launches drew rapidly ahead, and as soon as the leading boat had cleared the vessels of the spectators, a flash from the bows of the *Conflict*, followed by a gush of white smoke, showed that the fight had commenced. In an instant more the line of boats vomited forth a flood of fire and smoke. The carronades of the launches, served with great quickness, sounded a rolling bass of thunder to the smart sharp rattle of the musketry; and the irregular nature of the firing, at one time bursting into a simultaneous roar as the metal of boats and ships spoke in awful unison together, and now subsiding into the discharge of a single gun, diversified the tumult of the uproar. And now one could understand the formidable character of a boat attack; for, as the flotilla drew near the broadsides of the men-of-war had got into range, they divided and steered away, so that one division made for the bows and the other for the sterns of the ships at bay, thus escaping to a great extent the fire of the strongest portion of their batteries, and assailing them in their weakest points. The smoke blew away to leeward in advance of the boats, but as they drew nearer to the steamers it became so dense that the boats were altogether enveloped in it, and nothing could be seen but the wreaths of the snowy vapour rising in jets on pile and hiding from view the animated work which it seemed as if anxious to conceal. The heavier metal of the frigates was heard at frequent intervals through the din of the carronades and firelocks; and at length the rapid rattling volleys of the Marines on board, delivering their fire as the launches drew up alongside to board, were distinctly audible. Still more launches kept coming from the fleet, and opened fire as they formed their divisions, the Marines all loading and firing as if for life, and the sailors pulling with the regularity of machinery, till a loud ringing cheer—such a joyous burst of exultation, that one might imagine the gallant fellows had won a new Trafalgar—proclaimed their victory, and the firing was over.

As the wind slowly rolled the clouds to leeward of the flotilla, bringing into view boat after boat and the hulls of the steamers, the *coup d'œil* was one which no language can convey, for it was instinct with motion—teeming with energetic life. The boats were returning to their respective ships, from which the signal of recall had been made, and were at with oars aloft, were lying-to off the late "enemy;" on the white beach at Southsea, as far as the eye could reach, thousands of people were gathered, in the full enjoyment of the spectacle; every mound,—every hillock—the ramparts of the fortifications, the tops of houses—any and every place, in fact, from which a view of Spithead could be had, were black with a swarm of human beings. On the other side, with the aid of a glass, it could be perceived that the whole population had poured down to the shores of the Isle of Wight, and the pier at Ryde, and the hills towards the seaside were covered with men, women, and children. Everything that could float and move by sail or oar—and wonderful it was to see occasionally what feats, contrary to all appearances, were performed in this way—collected from all parts of the neighbouring shores, was on the waters flitting about, so as to shut out the face of the waves beneath a shifting veil of rope, and wood, and canvas. The Royal yacht, beset with them like a queen bee by its loving subjects, floated tranquilly, the centre of innumerable *lorgnettes* and prying eyes. At intervals some very dirty and very loyal steamer came waddling along close to the *Victoria and Albert*, and discharged a volume of hearty cheers from its living cargo, as the well-known figure of their Sovereign was seen on the deck of her floating palace; and gentlemanly yachts veiled their topsails as they came near, and ungentlemanly ones stood too close in and became objects of universal abhorrence, for the time being, to many thousands of people. Far away to the east a thick black background of coal-smoke, left behind by the steamers, rested on the horizon, and brought out in fine relief the snowy canvas of the hundreds of yachts which were stealing up to their moorings. The slower steamers and many of the yacht company on board, came bustling through them, each with a long black trail in the air behind it, and, in the centre of the picture, Admiral Fanshawe's squadron, with every stitch of canvas that could be set, except studdingsails, bore down majestically in line ahead and starboard division, to take up its late assailants, towering above the pigmy craft as the pillars of some ruined Eastern temple over the Arab tents at their base. No other country ever exhibited a spectacle so grand and so impressive. It was a great Peace Congress, headed by the Queen.

Her Majesty remained afloat, until all was over, at seven o'clock, and then returned to Osborne.

Thus terminated a spectacle unprecedented in this country, and that could be produced only in peace—a spectacle which well accords with our national sympathies, and which is doubly gratifying from the light in which it places the efficiency of our navy. If it restores our confidence in that surest and greatest arm of defence for this island kingdom of ours, it will not have been held in vain.

On Saturday evening, a signal was made to the fleet, ordering a Lieutenant of each ship to repair to the office of the Commander-in-Chief to take copies of the following memoranda:—

Victory, in Portsmouth Harbour, Aug. 13th, 1853.

The Commander-in-Chief has particular satisfaction in communicating to the Flag Officers, Captains, Commanders, Officers, and ship's companies of the ships under his command, the accompanying despatch from the Secretary to the Admiralty:

"Admiralty, Aug. 12, 1853.

"Sir, The Board of Admiralty has received the command of Her Majesty to notify to you, and to the Flag Officers, Captains, and Officers under your orders at the Naval Review, on Thursday last, her Majesty's approbation of their exemplary conduct on that occasion.

"The respective station was anxious to do his duty well, and [illegible] certain consequence

"Her Majesty [illegible] great satisfaction these [illegible] discipline, [illegible] on the honour of the Br[illegible] afford pledges of [illegible]

"[illegible] goodwill [illegible] family, which [illegible] they added happiness to [illegible] of such a fleet, ready to defend the [illegible] pendence of the nation.

"The Admiralty directs you to make known this order to all officers and men on board the fleet now assembled at Spithead.

(Signed) "B. R. Osborne.

"To Vice-Admiral Sir T. J. Cochrane, K.C.B., Commander-in-Chief at Portsmouth."

"secretary to the Admiralty.

THE ILLUSTRATED LONDON NEWS

THE BRITISH FLEET:

WITH AN ACCOUNT OF THE SEVERAL VESSELS EMPLOYED IN THE SPITHEAD REVIEW.

Proud, indeed, must every Englishman present have felt of the mighty spectacle which was passed in review before him on Thursday week; and not only every Englishman who was present, but every Englishman who has read or who has heard of the splendid manifestation which was on that day made to the world of the internal resources and the external power, the strength, development, and the advanced civilisation—synonymous expressions—of his beloved country. The sight of that magnificent fleet, illustrating in so marked a manner a union of the greatest physical and the greatest moral strength which the world has yet known, must, indeed, have impressed every beholder with a well-assured confidence in the invulnerability of his island home, and a dignified consciousness of the security and respect in which, protected by the influence of her flag, he may roam at his pleasure the wide world over, exclaiming, in the exuberance of his heart, and in the words of the household song:—

"Tis a glorious charter, deny it who can,
That's breathed in the words, "I'm an Englishman!"

On an occasion such as the present, when we have had an opportunity of witnessing the huge force that can be arrayed in active defence of our own shores, it has occurred to us that we might possibly render the uninitiated portion of our readers an acceptable service in presenting them, in the first place, with a rapid summary of the fleets and squadrons which represent our power, protect our commerce, and are employed in the pursuit of science in every quarter of the globe*:

In the MEDITERRANEAN we possess a fleet consisting of six sail-of-the-line—the *Britannia*, 120; *Trafalgar*, 120; *Albion*, 90; *Rodney*, 90; *Vengeance*, 84; and *Hindostan*, 78: one frigate—the *Arethusa*, 50: one sloop—the *Mæander*, 18: one receiving-ship—the *Cyclops*, 2: three screw-steamers—the *Sanspareil*, of 70 guns and 350-horse power; the *Niger*, of 14 guns and 400-horse power; and the *Wasp*, of 14 guns and 100-horse power; and twelve paddle-wheel steamers—the *Fury*, of 6 guns and 515-horse power; the *Spaniard*, of 6 guns and 400-horse power; the *Firebrand*, of 6 guns and 410-horse power; the *Furious*, of 16 guns and 400-horse power; the *Retribution*, of 28 guns and 400-horse power, the *Tiger*, of 16 guns and 460-horse power; the *Inflexible*, of 6 guns and 378-horse power; the *Cormorant*, of 6 guns and 350-horse power; the *Triton*, of 3 guns and 260-horse power; the *Ardent*, of 5 guns and 200-horse power; the *Sharpshooter*, of 8 guns and 160-horse power; and the *Spitfire*, of 5 guns and 140-horse power. Total, 24 vessels, carrying 557 guns, and measuring 34,096 tons; the steamers representing 4730-horse power.

On the NORTH AMERICA and WEST INDIA station, we have two ships of the line—the *Centurion*, 70, and *Ivanhoe*, 72: one frigate—the *Vestal*, 26: three sloops—the *Calypso*, 18; *Daring*, 12; and *Espiègle*, 12: one cutter—the *Netley*, 8: one schooner—the *Bermuda*: one screw-steamer—the *Megæra*, of 6 guns, and 350-horse power; and eight paddle-wheel steamers—the *Basilisk*, of 6 guns, and 400-horse power; the *Devastation*, of 6 guns, and 400-horse power; the *Medea*, of 6 guns, and 350-horse power; the *Buzzard*, of 6 guns, and 300-horse power; the *Argus*, of 6 guns, and 300-horse power; the *Kite*, of 3 guns, and 170-horse power; the *Columbia*, of 6 guns, and 128-horse power; and the *Alecto*, of 4 guns, and 100-horse power. Total: 17 vessels, carrying 267 guns, and measuring 13,886 tons; the steamers representing 2490-horse power.

In the PACIFIC there are the following vessels:—One 50-gun ship—the *Portland*: three frigates—the *Thetis*, 48; *Amphitrite*, 24; and *Pricomalee*, 24: one 20-gun ship—the *Dædalus*; the *Dido*, 18; the *Herald*, 8; the *Cockatrice*, 4: two store-depôts—the *Naiad* and *Nereus*: and two paddle-wheel steamers—the *Virago*, of 6 guns and 300-horse power; and *Torch*, of 150 horse power. Total: 13 vessels, carrying 192 guns, and measuring 11,148 tons; the steamers representing 450-horse power.

On the WEST COAST of AFRICA the following vessels are stationed:—Three sloops—the *Herlequin*, 12; *Waterwitch*, 8; and *Ferret*, 8. Three brigs—the *Lancer*, *Britomart*, and *Crane*, 6. Two store-ships—the *Tortoise*, 12; and *Atholl*, 12. One brigantine—the *Spy*, 3: one screw-steam gun-vessel, the *Teazer*, 3; and seven paddle-wheel steamers the *Pearless*, of 16 guns and 450-horse power; the *Polyphemus*, of 6 guns and 500-horse power; the *Alecto*, of 5 guns and 200-horse power; the *Bloodhound* and *Myrmidon*, of 160-horse power each; the *Volcano*, of 4 guns and 140-horse power; and the *Pluto*, of 4 guns and 100-horse power. Total: 17 vessels, carrying 71 guns, and measuring 3292 tons; the steamers representing 2140-horse power.

The following are the vessels stationed at the CAPE OF GOOD HOPE:—One frigate the *Meander*, 44; two brigs—the *Nebudda*, 12, and *Penguin*, 6: one brigantine—the *Racer*, 6: and two steamers—the *Devastation*—the *Styx*, of 6 guns and 280-horse power; the *Hydra*, of 6 guns and 220-horse power; and the *Dee*, of 4 guns and 200-horse power. Total: 7 vessels, carrying 81 guns, and measuring 3319 tons; the steamers representing 1700-horse power.

The following vessels are stationed on the SOUTH-EAST COAST of AMERICA:—One sloop—the *Star*, 8; one brig—the *Express*, 6; one brigantine—the *Bonetta*, 3; one receiving ship—the *Crescent*, 42; one screw steam gun-vessel—the *Sharpshooter*, of 8 guns and 202-horse power; and four paddlewheel-steamers the *Centaur*, of 6 guns and 540-horse power; the *Trident*, of 6 guns and 350-horse power; the *Vixen*, of 6 guns and 280-horse power; and the *Locust*, of 3 guns and 100-horse power. Total, 23 vessels, carrying 346 guns, and measuring about 21 [illegible], the steamers representing 900-horse power.

The following vessels are now absent upon ARCTIC EXPEDITIONS:—The *Assistance*, 9; *Enterprise*, of 4 guns and 530 tons; *Investigator*, of 6 guns and 480 tons; *Resolute*, 16; *Intrepid*, 9; *Lady Franklin*, 4; *Sophia*, of 8 guns and 593 tons; and the *Resolute*, 2. Also the screw-steamers *Erebus*, of 3 guns, 30-horse power, and 378 tons; *Intrepid*, of 2 guns and 60-horse power; *Phœnix*, of 8 guns, 260-horse power, and 809 tons; *Pioneer*, of 2 guns and 60-horse power; and *Terror*, of 4 guns, 30-horse power, and 326 tons. Total: 12 vessels, carrying 42 guns, and measuring, as near as can be computed, 3527 tons; the steamers representing 410-horse power.

The following vessels are employed on "particular service":—One 50-gun ship—the *Leander*; *Hercules*, 2; *Resistance*, 10; *Tyne*, 4: four screw steamers—the *Simoom*, of 18 guns, and 350-horse power; *Archer*, of 14 guns, and 292-horse power, the *Vulcan*, of 6 guns, and 350-horse power; and *Cruiser*, of 980-horse power: and three paddle-whee steamers—the *Rhadamanthus*, of 4 guns, and 220-horse power; the *Porcupine*, of 3 guns, and 130-horse power; and the *Dasher*, of 2 guns, and 100-horse power. Total 11 vessels, carrying 113 guns, and measuring 12,841 tons; the steamers, representing 1414-horse power.

Having thus taken a general view of the Royal navy in its disposition throughout the world, we shall proceed to annex, what may not be thought inappropriate, an historical sketch of the vessels which figured in the late Review; tracing the career of each of its predecessors in name since that name first made its appearance in the lists of the Navy.

H.M.S. "AGAMEMNON."

We first meet with the name of this famous ship—famous on account of its intimate association with the glories of Nelson—in 1781, when she appears to have been launched at Bucklersheard. From this period to 1793 she served in the Channel and West Indies, being present on the 9th and 12th of April, 1782, in Admiral Rodney's actions with the French fleet, under Count de Grasse, off Dominique. In 1793 she was commissioned by Captain Nelson, under whom she served for the next three years in the Channel and Mediterranean fleets. Previous to his appointment to the ship, Nelson fully believed that a prejudice existed against him at the Admiralty, for which, however, he was quite unable to account; and had it not been for the advice and remonstrance of Lord Hood it is probable he would have retired from the service. His ardent wish for active employment, however, was gratified on the 30th of January, 1793, when he was commissioned to this vessel, of which, he says, writing to his brother on the occasion, "I have the pleasure of telling you that my ship is, without exception, the finest sixty-four in the service, and has the character of sailing most remarkably well." Under her illustrious commander, the *Agamemnon* was present at the surrender of Toulon; and, in 1794, assisted in the capture of Bastia, and at the siege of Calvi—at which last place Nelson lost his eye. In Admiral Hotham's action with the French fleet, 13th July, 1795, the *Agamemnon* engaged the *Ca Ira*, a vessel large enough to take the former into her hold. The *Ca Ira*, however, together with the *Censeur*, struck to her on the following day. The vessels mentioned fought more bravely than any others in the French fleet, and the valour of their seamen is conjectured to have arisen from an impression entertained by them, that in the event of being taken, no quarter would be given, as they fired red-hot shot, and employed also a combustible material furnished to them by the Convention of Paris, in its nature corresponding to the ancient Greek fire, which, when once ignited, could not be quenched by water. Towards the close of 1795, the *Agamemnon*, in consequence of the severe duty she had performed, was obliged to go into Leghorn to refit. To give some idea of the service she had gone through, it is only necessary to remark that when she came into dock, there was not a mast, yard, sail, nor any part of the rigging, but was obliged to be repaired, owing to the shot she had received. Her hull had long been secured by cables served round.

About this time Nelson received an offer of the *St. George*, of 90 guns, or of the *Zealous*, of 74: which he declined at the time, on account of his attachment to his old vessel. He was, however, compelled to quit her on the 11th of June, 1796, in consequence of her being sent home with a convoy, in a most dilapidated condition.

From 1797 to 1802, the *Agamemnon* was employed in the North Sea and Channel, engaging, 2nd April, 1801, in the attack upon the line of defence and batteries at Copenhagen. On the 22nd and 23rd of July, 1805, she took part in Sir Robert Calder's action with the combined French and Spanish fleets, off Ferrol, on which occasion she had several of her men wounded, besides being much cut up in her spars and rigging. On the 21st of October of the same year, she once more signalised herself in the ever-memorable battle of Trafalgar, having previously, by the most masterly manœuvres of her captain, Sir Edward Berry, escaped from a French squadron, consisting of five sail of the line, two frigates, and a brig.

On the 6th of February, 1806, we find her assisting at the discomfiture of a French squadron, at St. Domingo, by Sir John T. Duckworth; for her conduct on which occasion her captain was presented by the Committee of the Patriotic Fund at Lloyd's with a sword, value £100. In September, 1807, the *Agamemnon* took part in the bombardment of Copenhagen.

The glorious career of this fine old ship, which we have but faintly traced, was brought to a premature close on the 20th of June, 1809, when she ran on shore in Maldonado Bay, Rio de la Plata, and was lost. Such are the antecedents of the splendid 91-gun screw steamship *Agamemnon*, that breasted the waters so nobly on the occasion of the recent Review, and which, as if nerved into action by the memory of its former greatness, singled out the *Wellington* as the only worthy antagonist to compete with, in the race which concluded the memorable events of that day. She has been only very recently launched.

H.M.S. "AJAX."

The first British man-of-war bearing the name of *Ajax* was built at Portsmouth, in 1767. She was armed with 74 guns; and, in 1779, was placed under the command of Captain Samuel Uvedale. Soon after this she accompanied Sir George Rodney to the West Indies; and, on the 17th of January, 1780, she took a French force under the same distinguished Admiral, when he defeated the fleet under Don Juan de Langara, off Cape St. Vincent—making prize of six, and destroying one sail of the line. The *Ajax*, on this occasion, lost her foretop-mast, and had four guns dismounted; although the casualties among her crew were but trivial, amounting to not more than six wounded. In the engagement, however, fought between Rodney and the Comte de Guichen, near Martinique, on the 17th of April following, she sustained a loss of 4 men killed and 13 wounded. For captain distinguished himself so greatly during the battle, that he was sent home with the despatches of Sir George Rodney, who had reason to lament that other ships in his fleet had not more emulated the conduct of the *Ajax*. Continuing her career of service, she took a distinguished part of Captain Nicholas Charrington, in Hood's encounter with the Comte de Grasse, off Martinique, in April, 1781; had 7 of her people killed and 16 wounded in the following September, when Sir Thomas Graves, with 19 sail of the line, was defeated by the Comte de Grasse, with 24 sail of the line, off the Chesapeake; and was again with Hood when, outwitting the French Admiral, he induced him, in January, 1782, to quit the coast of Saint-Domingo, in the belief that he was out of danger, making good his position, although the enemy's force was far superior, until the surrender of the island, when he put to sea, and by a bold manœuvre passed undiscovered within five miles of the French fleet. In the glorious action of the 12th, between Rodney and De Grasse, and on the glorious 12th, when the latter was at length completely vanquished, the *Ajax* had also the honour of being present, and by doing service—the nature of which may be estimated when it is remembered that nine of her crew were killed and thirty wounded. Hostilities having terminated, and her services being no longer required, the *Ajax* was sold, in February, 1785, from which period her name does not recur on the lists of the navy until 1798; when a new ship, the same in rating, but larger in dimensions, was launched at the same name. She was not destined, however, as will be seen, to adorn the service for the period even of her gallant predecessor; although it was ordained that during that short period she was to figure in scenes hardly less momentous. Placed at first under the command of the Hon. Captain Cochrane, farther of the present gallant Commander-in-Chief at Portsmouth, who, about this period was serving on board of her as a midshipman; she joined in the expeditions sent in the summer of 1800, to Quiberon, Belleisle, and Ferrol, and also in the attack made on the French in Egypt in the following year. In July, 1805, she assisted, under the command of Captain William Brown, in Sir Robert Calder's action with the combined squadrons of France and Spain; and in the following October it was her good fortune to participate in the laurels won at Trafalgar; where the loss she sustained, however, amounted to only two killed and nine wounded. On the latter occasion she was under the temporary command of Lieut. John Pilfold. The next service of importance upon which the *Ajax* was employed, was in the expedition under Sir John Duckworth, to the Dardanelles; at the entrance of which her career was brought, as we are about to relate, to a most unfortunate close. On a misty morning, in the morning, on the 14th of February, 1807, while the squadron was lying at anchor near the island of Tenedos, waiting for a fair wind, to enable them to run through the Channel of the Dardanelles, an alarm of fire was given in the after-part of the ship. The captain, the Hon. Henry Blackwood, and officers, went down to the cockpit, whence the smoke issued. They threw down a great quantity of water; but in three minutes found it impossible for any person to remain below—the men, with buckets of water in their hands, falling down from suffocation. The lower-deck ports were then ordered to be hauled up, to give vent to them; but this adding to the force and fury of the flames, they were closed again, and the hatchways covered over in order to gain time for hoisting out the boats—a measure which was not re-

---

* The varied duties of the Scientific Branch of the Naval Service, together with the cost of their performance for the current year, may be shortly summed up under the following heads:—The Royal Observatory, £3685; the Observatory at the Cape of Good Hope, £1486; the Compilation of the *Nautical Almanack*, £3200; the purchase, repairs, &c., of chronometers, £600. The Hydrographical Department is carried on at an expense to the country of upwards of £60,000 annually, of which for the present year £4000 has been voted for the purchase of charts, £5894 for the hire of vessels, £40,562 for the pay of officers, seamen, and pilots, and parchase of stores, &c.

The surveys now carrying on are:—

In England—The south-east coast, the coast of Dorset and Devonshire, the entrances of the Humber up to Goole, Milford Haven, and Bristol Channel, and the coast of Cornwall.

In Scotland—The Firth of Forth, the coast of Argyleshire, the coast of Ross-shire, and the Hebrides.

In Ireland—The coast of Sligo, the coast of Donegal, Kenmare river, the west coast of Kerry; the coasts of Louth and Dublin.

Abroad—Our vessels are surveying Nova Scotia and Breton Island, the Gulf of Fundy, the Chinese Seas, the West Indies, New Zealand, the Island of Candia, Fejee and Friendly Islands, and the coast of the Cape of Good Hope.

In furtherance of the cause of science, the country has placed annually at the disposal of the Admiralty, in addition to the foregoing sums, £1000 for purposes of reward, and for defraying the cost of experiments; also, £100 for an annual outlay on books and specimens for the libraries and museums at Haslar and Plymouth Hospitals; £2241 for the prosecution of scientific education at the Royal Naval College at Portsmouth; and £468 for the School of Mathematics and Naval Construction at Portsmouth

sorted to until the destruction of the ship had become inevitable. The carpenter had been ordered to scuttle the after part of the ship; but this, in ten minutes after the first alarm, was found to be impracticable. So dense, too, was the smoke on deck, that though it was moonlight, the officers could not see each other. From this cause the jolly-boat was the only boat that could be got into the water, and she was soon filled with those who had jumped overboard, and others who could get into her. On the flames bursting up the main hatchway, and thus dividing the fore from the after part of the ship, Captain Brookes contrived to call the people to go forward and save themselves as fast as they could. He had no sooner reached the forecastle himself, than all parts of the vessel, from the centre of the booms to the taffrail, were in a raging flame. After exhorting the officers and men, to the number of 400, who were assembled about him, to be calm and collected, and to depend upon the boats of the squadron, finding that he could be no longer of any service to them, he jumped overboard from the spritsail-yard; and after being half an hour in the water, was picked up by a boat of the *Georgina*, and taken on board that ship much exhausted. The *Ajax* continued to burn all night, and drifted on the island of Tenedos, where she blew up at five o'clock the next morning with a terrific explosion. Three hundred and eighty-four of those who were saved. Connected with this dreadful disaster, the exact origin of which has never been ascertained, there is an anecdote which is deserving of record as well for its intrinsic interest as for the additional trait it affords of that heroic intrepidity which characterises the British sailor. At the commencement of the fire, the *Ajax* was lying at anchor close to the flagship, the *Royal George*, which, the cable of the former being soon burnt, was —to use a nautical, and not a slang expression—compelled to "sheer off and run." The moment the alarm reached the *Royal George*, a lieutenant of that ship, the late distinguished Rear-Admiral Sir Nesbit Willoughby, hastening into a cutter, dashed to the assistance of the unfortunate crew, as many of whom as his boat could possibly hold he quickly rescued from a watery grave. Numbers, however, were still surrounding him—some swimming, others clinging to various buoyant articles, and many on the point of sinking for want of that aid which it was impossible to render them. The Admiral was then so far off that, was impossible to render them. The Admiral was then so far off that, to reach the *Royal George*, or indeed any other ship, was quite impracticable; but at length some launches and barges arrived, and continued to receive the poor fellows saved by the light boats of the squadron, until they also were crowded. The *Ajax* all this time was drifting towards the island of Tenedos, with her stern and broadside alternately presented to the wind. Lieutenant Willoughby had picked up and discharged a second boat-load, and was again nearly filled with people, who had been so long in the water that they were nearly insensible, when he observed the *Ajax* round to, and at the same time several men hanging by ropes directly under her head. Hoping to be able to rescue these, and to get clear of the ship before she again fell off, the lieutenant dashed towards her, and succeeded in the first part of his object; but not until the burning fabric was once more right before the wind, with the cutter across her hawse, and the flames issuing from every part of her hull and rigging. To extricate himself from this awful position without the intervention of Heaven was an impossibility: every moment the velocity with which the *Ajax* was going through the water increased, the water she threw up at her bows threatening the little boat with instant destruction; while, to add to the horror of the situation, the men who had been lying at the bottom of the cutter, apparently half dead, endeavoured to get upon their legs, thus adding confusion to the scene. Dreadful as matters now were, a circumstance occurred to appalling as to render them yet worse. While the *Ajax* was thus propelling the cutter in the manner we have described, the flames reached the shank-painter and stopper of her remaining bower anchor, which fell from the bows, nearly effecting the destruction of the boat as it plunged into the water. The cable caught the outer gunwale, and ran over it, a complete sheet of fire. Orders, exertion, presence of mind were now out of the question—death appeared inevitable. The only alternative left was to be burnt or drowned, for every one was too much exhausted to swim. The scene was altogether indescribable. At at distance the boats of the squadron saw the cutter enveloped in a mass of flame, and gave her up for lost, beyond the power of human aid. All that the gallant Willoughby and his companions could do, while the boat was running over, and binding them yet more firmly to the ship, was to keep the fire and sparks as much as they could from the uncovered parts of their persons. Providentially, however, and to their joy, although the inner part of the cable had been burnt through, the anchor did not ground, and gave the ship's head a check to windward before the less-consumed part had entirely left the tier. The alteration produced in the ship's position enabled the boat to get clear; and thus was the very event, which seemed at first to fix her doom, the cause, under Providence, of her preservation.

Having, as our readers will admit, stuck to the last to this our *Ajax* the second, we have now to introduce to them the third of the name, which was launched into the world in 1809, and employed in the early period until July, 1816, under the successive commands of Captain Robert Waller Otway and George Mundy. At first we find her cruising with a squadron off Sardinia, where she made a large number of captures. She next formed part of the in-shore squadron off Toulon; and on July 20, 1813, was of great distinction by the manner in which she interposed between the *Shearwater* brig and a pursuing French force, consisting of six sail of the line and four frigates, whom the bold frank maintained for herself and her consorts—the *Conqueror* and *Warspite* (74's), and *Euryalus* frigate—induced to fall back. On the 31st of March, 1811, being then in company with the *Unité* frigate, she made prize, off the island of Elba, of *Le Dromédaire*, a store ship, of 800 tons and 20 guns, laden with 1,200 shot and shells, and ninety tons of gunpowder. In the autumn of 1812, she was employed in covering the siege of St Sebastian, and in March, 1814, she captured, near Scilly, a French corvette *Colibri*, of sixteen guns and 120 men, after which she conveyed a quantity of transports from Bordeaux to Quebec, having on board 1,800 troops, destined to reinforce the English army in Canada During the War of 1, Hundred Days she was despatched to Marseilles, where Lord Captain Mundy had the honour to present to him a congratulatory address from the inhabitants. In March, 1815, she received Lord Exmouth in a visit to Algiers, Tunis, and Tripoli, for purposes connected with the abolition of Christian slavery She was soon afterwards put out of commission, nor does she again attract observation until 1831, when, unable or unwilling whether from age or some other cause to resist the inroads of science even so far as her internal arrangements, we find her receiving a screw propeller, and allowing herself to be converted into a steam guard-ship at Portsmouth Honoured, however, by the alteration in her system, she betook herself, in 1850, to Cork, and there hoisted in succession the flags of two Commanders-in-Chief—Rear-Admirals Dixon and Purvis. Recently, our readers are aware, she has returned to Portsmouth, and has there convinced the world that although long laid up in ordinary, she has in no way degenerated from her former self.

H.M.S. "AMPHION."

The original vessel (132 guns, 236 men) bearing this name was built at Chatham, in 1780; and was blown up by accident in 1796. The facts attending this catastrophe are of sufficient interest to be given in detail.

About four o'clock in the afternoon of the 22nd September, 1796, the fire magazine of the *Amphion*—then lying along the sheer hulk in Hamoaze, refitting—by some accident took fire, and blew up; which had such an effect as to rip up the upper works in the fore part of the ship to atoms, and she almost immediately sunk in ten fathoms water. The number of the ship's company and visitors—at which latter there were several unfortunately on board at the time—was nearly 300; not more than forty of whom were saved, several of these being severely wounded. Captain Pellew, her commander, and some other officers, who were in the cabin at dinner, hearing a kind of rumbling noise immediately preceding the blowing-up, ran into the quarter-gallery over the sheer hulk, on whose deck Captain Pellew was instantaneously thrown. At the moment of the explosion, the sentinel at the cabin-door was looking at his watch, when it was dashed from his hands, and he was stunned; he knew nothing more until he found himself on his shore, and comparatively unhurt. The escape of the boatswain was also very remarkable; he was standing on the cat-head, directing the men in rigging out the jib-boom, when he felt himself suddenly carried off his feet into the air; he then fell into the sea senseless, and on recovering his consciousness, he found that he had got entangled amongst the rigging, and that his arm was broken. He contrived to extricate himself, though with some difficulty, and he was soon picked up by a boat without further injury. The preservation of a child was no less singular: in the terror of the moment, the mother had grasped it in her arms, but, horrible to relate, the lower part of her body was blown to pieces, whilst the upper part remained unhurt, and it was discovered with the arms still clasping the living child to the lifeless bosom. The cause of this unfortunate event was never clearly known, but it was conjectured that the gunner might have let fall some powder near the fore-magazine, which, accidentally igniting, had communicated with the magazine itself.

The *Amphion* was rebuilt in 1798 at Mistley Thorn, when she was pierced for 32 guns. She captured, in 1799, the Spanish privateer *Asturiana*, of 24 guns, 180 men, richly laden; and in 1806 took part in a severe action with the Spanish frigates *Medea*, *La Fama*, and *La Clara*, off Cape St. Mary. In this affair the *Mercedes*, 36, while engaging the *Amphion*, blew up with a tremendous explosion; shortly after which the enemy surrendered. The *Amphion* had three men wounded, one or two of them by the splinters which fell upon her decks when her unfortunate antagonist blew up. A melancholy circumstance attended this transaction: a gentleman, a Captain Alvear, of the Spanish navy, with his wife, four daughters, and five sons grown up to manhood, had embarked in the *Mercedes*, carrying with him a fortune, estimated at about £30,000 sterling, the gradual savings of thirty years' industry as a merchant in South America. Not many minutes before the engagement, the captain and his eldest son had gone on board the *Medea*, and there, in a very little while, did he witness the catastrophe that buried his wife, his daughters, and his remaining sons to destruction, and sent that treasure, which was mere dross in the comparison, to the bottomless deep. We must not omit to state, however, that the British Government restored to Captain Alvear, out of the proceeds of the three cargoes, the £30,000 which he had lost in the *Mercedes*.

We next meet with the *Amphion* as assisting, through the medium of her boats, in the capture (28th June, 1810) of twenty-five vessels, at Gaeta. The affair, however, which sheds most lustre on her name, was her capture, in company with the *Active*, *Cerberus*, and *Volage*, of the frigates off Lissa, 13th March, 1811. This most gallant action, which lasted six hours, was fought against a squadron of the enemy, proceeding from Ancona to Lissa, and terminated in the capture of two of his frigates and the destruction of another. The enemy's squadron consisted of five frigates, one corvette, one brig, two schooners, one gunboat, and one Xebec—total, 361 guns, and manned with 2022 men, opposed to which were 124 guns and 879 men. Fifty British seamen were killed, and 150 wounded.

The *Amphion*, having been sold in 1823, her name was restored in 1846, in the present steam-frigate of 34 guns, 500-horse power, and 1474 tons, which was built by Sir Robert Sepping, at Woolwich.

H.M.S. "ARROGANT."

The *Arrogant* was originally built at Harwich, 1761, by Sir Thomas Slade, and commenced her career by serving in the Channel and Mediterranean stations. On the 12th of April, 1782, she was engaged in Admiral Rodney's action with the French fleet off Dominique, having four of her crew killed and eleven wounded. From this period to 1803, she severally served in the Channel, Cape of Good Hope, and East Indian stations; taking part, September 9, 1796—in company with the *Victorious*, 74—in an attack on six large French frigates, of which one was totally, and three others very much disabled. It being calm, the vessels had to sustain the raking broadsides of three heavy frigates for some time, without the power of returning anything more than their stern chasers. The *Arrogant* had one midshipman and six seamen killed, and twenty-seven men wounded.

This vessel was sold in 1810; and replaced by another, which was purchased from the East India Company in 1809. The present screw-frigate *Arrogant* of 47 guns, 860-horse power, and 1872 tons, was built at Portsmouth in 1848

H.M.S. "BARRACOUTA."

The *Barracouta*, which was built in 1804, was shipwrecked in the following year, on the south side of the island of Cuba, when all her crew, though saved, were made prisoners of. She was rebuilt in 1807, at Deptford, and subsequently distinguished herself (Aug. 9, 1810) at the capture of Banda Neira; and, in August and September, 1811, at the reduction of Java. In the former affair, the fortress of Banda Neira, which was generally supposed impregnable, surrendered to a handful of British seamen and marines. The *Barracouta* was sold in 1815. The present vessel, a steam sloop of 6 guns, 300-horse power, and 1018 tons, was built at Pembroke, in 1851.

H.M.S. "BLENHEIM."

This vessel, formerly a 74-gun ship, with a complement of 590 men, first appears on the roll of the navy in 1761, at which period she was built, by Sir Thomas Slade, at Woolwich. In the beginning of 1782, the famous Lord Duncan (as that time Captain Duncan) was appointed to the *Blenheim*, continuing in the same command during nearly the whole of the remainder of the war. During this period the *Blenheim* was constantly employed in the Channel Fleet. Accompanying Lord Howe, in the September of 1790, to Gibraltar, she was stationed to look the larboard division of the centre squadron, and was very distinguished employed in the encounter with the combined fleets of France and Spain, which took place off the entrance of the Straits. On the 13th July, 1795, she engaged in Vice-Admiral Hotham's action with the French fleet off Cape Roux; and on the 14th of February, 1797, took part in the Battle of St. Vincent, in which she figured most conspicuously, being chiefly instrumental in capturing the *San Ysidro*. Her loss on this memorable occasion was forty killed and forty-five wounded. From 1801 to 1804 the *Blenheim* served in the Baltic and West Indies. In April, 1805, Rear-Admiral Sir Thomas Troubridge was appointed to the vessel, in which he proceeded to take the command of the Indian Seas. On the 11th of July in this year she was attacked, while protecting ten East Indiamen, by a French 74-gun ship and a large frigate, which she beat off after half an hour's action. In 1807 the *Blenheim* foundered off the island of Rodrigue, Indian Ocean. Of this unfortunate event the only intelligence at all bearing upon the subject that was ever received was from a letter from an officer on board the *Harrier* sloop, dated the 30th of March, 1807. This communication stated that the *Harrier* lost sight of the *Blenheim* on the afternoon of the 1st of March, during a hard gale off the Mauritius. "The night," says the writer, "was dreadful beyond description; it blew a perfect hurricane, with a most tremendous sea."

The *Blenheim* was rebuilt in 1813 at Deptford, and has recently been provided with a screw. In 1841 she engaged under her Captain, Sir H. Fleming Senhouse, in the capture and destruction of the forts Charapee and Tycoljetaw, and the other forts and batteries of the Bona Ilgina. On the 23rd to the 30th of May of the same year, she was occupied in the attack upon Canton, and the defeat of the Chinese forces in front of that city. On the 26th of August following the *Blenheim* engaged with the fleet, under Admiral Sir William Parker, in the attack upon the batteries and defences of Amoy, and the capture of the island of Golongso. She was also engaged with the same fleet, in co-operation with the army, under Lieutenant-General Sir Hugh Gough, at the capture and re-occupation of Chusan, and at the reduction of Chinghae. On the latter occasion, Sir Thomas Bremer, after the necessary breachings had been accomplished, landed, in command of the light column of attack, consisting of a body of upwards of 700 seamen, marines, and troops, and stormed and carried the citadel.

H.M.S. "DESPERATE."

The *Desperate* was first entered on the roll of the navy in 1804, in which year she was built, at Broadstairs. She was subsequently sold in 1815, and her name restored in 1846, when the present screw-steamer, *Desperate*, of 8 guns, 400-horse power, and 1100 tons, was launched at Pembroke.

H.M.S. "DRIVER."

The *Driver*, of 16 guns, was built in 1797, at Bermuda. She captured, in 1799, the French privateer *Le Revenu*; and, in 1809, in company with other vessels, the French frigate *Turon*, of 44 guns. The present steam-vessel of this name was built at Portsmouth in 1844. She carries 6 guns, has 280-horse power, and a tonnage of 1056 tons. She is the first steamer that circumnavigated the globe. Leaving England in 1842, she was absent for five years and nine months, during which period she travelled 75,696 miles.

H.M.S. "DUKE OF WELLINGTON."

This gigantic vessel having been only recently launched, her history is yet unwritten. Should time, however, ever show that it be call her into the active service of war, it is scarcely too much to presume that the greatness of her deeds will be in character with the illustrious name she bears.

H.M.S. "EDINBURGH."

Of all the vessels which figured in the late Review, the name of the *Edinburgh* is the oldest on the *Navy List*, her antecedents going as far back as 1721, when she was built at Chatham, by Benjamin Rosewell. In 1741 she was taken to pieces, and rebuilt as a 64 at the same yard, in 1744, by Mr. Ward, and immediately afterwards commissioned as the flag-ship of Vice-Admiral Martin, the Commander-in-Chief of the Channel Squadron, on which station she continued till 1748; engaging on the 14th October, 1747, in Rear-Admiral Hawke's action with a French squadron off Cape Finisterre. From 1755 to 1760 we find her serving in North America, the Channel, and the West Indies. During this period she signalised herself (October 21, 1757) in company with the *Dreadnought* and *Augusta*, of 80 guns each, under the command of Commodore Forrest, in an action of two and a half hours' duration, with three French sail of the line, one 50-gun ship, and three frigates. The French ships retreated in confusion, with a loss of nearly 600 killed and wounded The British loss was 23 killed and 89 wounded. In 1771, the *Edinburgh* was again taken to pieces, and not rebuilt till 1811, when she was launched as a 58-gun ship, from Rotherhithe. In the months of March and April, 1814, she was employed in the reduction of Spezzia and Genoa. We next find her employed, in 1840, in the combined British Austrian, and Turkish fleet, in the bombardment of St. Jean d'Acre.

H.M.S. "ENCOUNTER."

The *Encounter* was first built in 1805, at Southampton, when she was pierced for 12 guns. She was present, in 1809, at the destruction of the ships in the Basque Roads. In 1812 she was lost while attempting to cut out some vessels on the coast of Spain. Her name was not restored till 1846 when the present screw-steamer, of 560-horse power, 14 guns, and 906 tons, was built at Pembroke, by Sir William Symonds.

H.M.S. "HIGHFLYER."

The *Highflyer* was originally built in 1822, at Woolwich; and again in 1851, at Blackwall, when she was fitted with a screw of 250-horse power and pierced for 21 guns. Her tonnage is 1153 tons.

H.M.S. "HOGUE."

The *Hogue*, originally a 72, and now a screw-steamer of 60 guns, was built at Deptford in 1811. She served from 1812 to 1814 off Brest, and on the Halifax station. Her boats were present, April 8, 1814, at the destruction of twenty-seven American vessels in the Connecticut.

H.M.S. "IMPERIEUSE."

This 44-gun vessel, built in 1783, was taken from the Spaniards in 1805. Assuming the command of the *Imperieuse*, August 23, 1806, Lord Cochrane (the present Earl Dundonald), in the short period of one month took and destroyed fifteen vessels. This ship was afterwards sent to co-operate with the patriots on the coast of Catalonia, and compelled the Castle of Mongat to surrender. In 1808 she was engaged in operations against the Semaphores on the coast of France, her efforts being in this respect most successful; and, in 1809, took a prominent part in the destruction of the French fleet in the Basque Roads.

H.M.S. "LEOPARD."

We first meet with this vessel on the Navy Roll in 1790, when she was built at Sheerness. In 1797 she captured *Le Victorieux*; in 1798 the *Apollon*, 16 guns; and, in 1800, *La Chaise*, of 18 guns. In 1814 she was wrecked near the island of Anticosti, Gulf of St. Lawrence. The present vessel, a steam-frigate of 560-horse power, and 1412 tons, was built by Mr. Fincham, at Deptford, in 1850.

H.M.S. "LONDON."

The *London* was originally built as a 98-gun ship at Chatham, in 1766, by Sir Thomas Slade. From 1778 to 1782 she served in North America as the flag-ship of Rear-Admiral Graves, being engaged on the 16th of March, 1781, in Vice-Admiral Arbuthnot's action with a French squadron off Cape Henry; and on the 5th of September of the same year, in the fleet of 29 sail of the line under Admiral Graves, in an action with the French fleet of 24 sail of the line off the Chesapeake The British loss was 90 killed and 230 wounded. The *London* successively became the flag-ship of Sir Alexander Wood, in 1790; of Rear-Admiral Goodall, in 1791; of Admiral Montagu, from 1793 to 1797; and of Sir John Colpoys, from the latter period to 1799—being present on the 23rd June, 1795, in Lord Bridport's action with the French fleet. The *London* served, in 1801, as the flag-ship of Sir Hyde Parker, the Commander-in-Chief in the Baltic. On the 13th of March, 1806, the *London* fell in with a French line-of-battle ship of 80 guns, and a frigate of 40 guns; and after a running fight, which continued from before daylight until forty-three minutes after nine, compelled them to strike. These ships proved to be the remainder of the French squadron that had committed so much depredation upon British commerce in the Eastern hemisphere. In this desperate action the *London* lost 10 men killed, and 22 wounded. The loss sustained by the enemy amounted to 65 slain, and 300 wounded. Among the latter was the French Admiral Linois. In April, 1811, the *London* was taken to pieces. Her name does not recur on the Navy List till 1840 when she was rebuilt, as a 90 gun ship, at Chatham, by Sir Robert Seppings.

H.M.S. "MAGICIENNE."

The *Magicienne* of 32 guns, 254 men, was taken, in 1781, from the French. She captured, in 1796, the French corvette of 18 guns, *La Coquille Volante*, and was present, February, 1806, at the battle of St. Domingo, and capture and destruction of four sail of the line. In 1810 she grounded in attempting to run alongside a French squadron off the Isle of France, and was destroyed by all their crews. Rebuilt in 1812, as a 36-gun ship, she took (1813) the American schooner privateer *Thrasher*, of 14 guns and 80 men; and subsequently assisted at the reduction of St. Sebastian. In 1840, the *Magicienne* was present at the capture of St. Jean d'Acre, and throughout the whole of the Syrian operations. She was rebuilt in 1849, as a steam-frigate of 400-horse power, 16 guns, and 1255 tons.

H.M.S. "ODIN."

Built at Denmark, in 1787, the *Odin* was captured from the Danes, in 1807, and sold in 1826. The present *Odin*, which is a steam-frigate of 560-horse power, 16 guns, and 1310 tons, was built at Deptford, in 1846.

H.M.S. "PRINCE REGENT."

The *Prince Regent*, of 90 guns, was built at Chatham, in 1823. She measures 2613 tons, and has been mostly in commission as a flag-ship on the home station.

H.M.S. "QUEEN."

The *Queen*, whose veteran name carries us so far back as 1693, when she first appears on our Navy-roll, was built in that year, at Woolwich, and was for some time the flag-ship of Sir Cloudesley Shovell. From 1777 to 1783 she served as flag-ship of Sir H. Garland, and of Rear-Admiral Hood, in the Channel and at Gibraltar. During this period she was engaged in Admiral Keppel's action, with the French fleet off Brest (July 27th, 1778), and in Lord Howe's partial action with the combined French and Spanish fleets, near Gibraltar. From 1783 to 1796 she bore the flags severally of Rear-Admiral Hood, Admiral Montague, and Admiral Gardner; and was present on the glorious 1st June, when Captain Hutt, her gallant commander lost his leg; also in Lord Bridport's action with the French fleet, off L'Orient (June 23rd, 1795). From 1796 to 1808 she successively became flag-ship to Sir Hyde Parker, Sir John Knight, and Lord Collingwood; and served up to the time of her being taken to pieces in April, 1821, at Spithead, in the Channel and Mediterranean stations. She was rebuilt in 1833, at Portsmouth, by Sir William Symonds, when she was pierced for 116 guns, her measurement being 3086 tons. In 1841, Sir E. Codrington hoisted his flag on board her; and, in 1842, Sir E. W. le R. Owen.

H.M.S. "SIDON."

This vessel was built by Sir Charles Napier, at Deptford, in 1846; and so named in honour of that gallant officer's achievements in Syria. She is a steam-frigate of 560-horse power, carries 22 guns, and measures 1328 tons.

H.M.S. "TERRIBLE."

The *Terrible* was originally built in 1755 in the river Thames, and pierced for 74 guns. She was present 14 March, 1795, in Vice-Admiral Hotham's action with the French fleet off the coast of Genoa. The present *Terrible* is a steam-frigate of 800-horse power, 21 guns, and 1847 tons, and was built at Deptford in 1845, by the late Mr. Lang.

H.M.S. "TRIBUNE."

A frigate of this name was lost by shipwreck in 1797, and her name restored in 1803. In 1804 she captured two French gun-brigs of 2 guns each. In 1809 she was again lost. The present frigate, which is a screw-steamer of 800 horse power, 30 guns, and 1570 tons, was built this year at Sheerness, by Sir William Symonds.

H.M.S. "VALOROUS."

This steam-frigate, of 18 guns and 400-horse power, was built at Pembroke last year. She appears to have had a predecessor who was taken to pieces in 1829.

H.M.S. "VESUVIUS."

The *Vesuvius* was first built in 1776, in the river Thames, by Slade; and was present, 17th March, 1794, at the boarding and capture of the French frigate *Blonvenue* and other vessels in Fort Royal Bay. She was rebuilt in 1813, at Topsham, and sold in 1819; and again rebuilt in 1840, at Sheerness, as a steam sloop of 350-horse power, 6 guns, and 976 tons.

H.M.S. "VULTURE."

The *Vulture* was purchased in 1803, and sold in 1814. Her name was restored in 1842, when the present steam-frigate, of 470-horse power, and 1190 tons, was built at Pembroke, by Sir William Symonds.

CONFLICT.

GRAND REVIEW AT SPITHEAD:—THE

MAGICIENNE.

AT ATTACK.—DRAWN BY E. DUNCAN.

NAVAL REVIEWS IN FORMER TIMES.

It is interesting at the present moment, when public attention is so much excited by the splendid spectacle at Spithead on Thursday, the 11th inst., to turn back to the files of old newspapers for particulars of similar events in a bygone age. The two most important were the Great Naval Review at Spithead, by George III., in June, 1773; and the Naval Review before the Allied Sovereigns in 1814. We subjoin a few particulars of each:-

THE GREAT NAVAL REVIEW AT SPITHEAD BY GEORGE III., JUNE, 1773.

EARLY in the morning of Tuesday, the 22nd of June, the King set out from Kew for Portsmouth, and having arrived at Portsmouth-bridge between ten and eleven the same morning, was received by a Royal salute of twenty-one guns. His Majesty then proceeded to the first barrier, where Major-General Parker, who commanded the garrison during the Royal residence at Portsmouth, delivered the keys of the garrison to the King, who was pleased to return them. On his Majesty entering the Land Port-gate, he was saluted by a triple discharge of 232 pieces of cannon, mounted on the ramparts of Portsmouth, at Blockhouse Fort, and at South Sea Castle.

His Majesty proceeded through the town out at the Water-gate to the Dockyard, and arrived at the Commissioners' house ten minutes before eleven o'clock; where he was received by the President of his Majesty's Most Honourable Privy Council, the Lord Privy Seal, the Lord Chamberlain of his Majesty's Household, the First Lord Commissioner of the Treasury, the Secretaries of State, the Lords Commissioners of the Admiralty, the Treasury, and Commissioners of the Navy, the three Admirals of the squadron at Spithead, and the Master and Lieutenant-General of the Ordnance. The artificers and workmen belonging to the yard, being all assembled before the house, gave three cheers as his Majesty entered, and then immediately dispersed, and returned to their several employments.

After his Majesty had taken some refreshment, he went to the Governor's house in the town, attended by the nobility and persons of distinction, and had a public levee; at which a great number of the officers of the navy and army were present, as also many gentlemen of the country, who on this occasion came in to pay their duty to his Majesty.

The Mayor, Recorder, Aldermen, and burgesses of the town, waited on his Majesty, and presented a loyal address. They were all received very graciously, and had the honour to kiss the King's hand; after which his Majesty was pleased to confer the honour of knighthood on John Carter, Esq., the Mayor of Portsmouth.

When the levee was over, his Majesty returned to the Dockyard, and at half an hour after one o'clock embarked in a barge, in which his Royal standard was immediately hoisted. The Earl of Sandwich, First Commissioner of the Admiralty; the Earl Delawarr, Gold Stick; and Lord Robert Bertie, Lord of the Bed-chamber in Waiting, embarked in the same boat with the King.

His Majesty then proceeded to Spithead, attended by the barge of the Board of Admiralty, with the flag of their office, the three Admirals with their flags, and all the captains of the fleet with their pendants in their barges.

As his Majesty passed the garrison, he was saluted by a Royal salute of twenty-one guns from the Blockhouse Fort, Saluting Platform, and South-sea Castle.

When the Royal standard was seen from the fleet at Spithead, which consisted of twenty ships of the line, two frigates, and three sloops, moored in two lines abreast each other, the whole manned ship, and saluted with twenty-one guns each.

The King went on board the *Barfleur*, of 90 guns, where he was received by the Board of Admiralty, the Captain being at the head of the accommodation-ladder, and the sides manned by the lieutenants of the ships. As soon as his Majesty passed the guard of Marines on the quarter-deck, the flag of the Lord High Admiral, which was then flying, was struck, and the Royal standard hoisted at the maintopmast head, the Lord High Admiral's flag at the foretopmast head, and the union flag at the mizenmast head; on the sight of which all the ships, except the *Barfleur*, saluted with twenty-one guns each. The ship being cleared the same as for action, and the officers and men at their respective quarters, his Majesty (after the nobility, who came off upon this occasion, and the flag officers had paid their duty to him on the quarter-deck) walked fore and aft on the lower gun-deck, and took a view of the whole.

At half-past three o'clock his Majesty sat down to a table of thirty covers, at which many of the nobility and persons of distinction, as well as officers of the navy and army, of the rank of colonel and upwards, were admitted to the honour of dining. After dinner, the Queen's health being drunk, the whole fleet saluted with twenty-one guns; and, upon his Majesty rising from table, the King's health was likewise drunk with the like salute; and the same was repeated every day during his Majesty's continuance at Portsmouth.

At six o'clock his Majesty went into his barge, attended by the Board of Admiralty, the flag-officers and captains, in the same order as they came, and passed along both the lines of ships, each ship (being again manned) giving three cheers, and saluting separately with twenty-one guns, as the King passed by them.

His Majesty then went on board the *Augusta* yacht, where he was again received by the Board of Admiralty. The Royal standard, with the Lord High Admiral's flag and union flag, were immediately hoisted, as they had been on board the *Barfleur*; and his Majesty sailed into the harbour; the ships at Spithead and the fortifications saluting, as upon his Majesty's coming out, and the Admirals and Captains attending him to the harbour's mouth, after which they returned to their respective ships. His Majesty landed at the dock a quarter before nine, and returned to the Commissioners' house, where he resided the whole time of his stay at Portsmouth.

At eight o'clock on Wednesday morning his Majesty began to view the Dockyard, the ships building and repairing, and magazines.

At eleven, his Majesty went into his barge, attended by the Commissioners of the Admiralty and Navy in their barges, with the flags of their respective offices, and many of the nobility in another barge, and proceeded up the harbour to view the ships lying in ordinary.

His Majesty went on board three of those ships, viz., the *Britannia*, a first-rate, of 100 guns; the *Royal William*, a second-rate, of 84 guns; and the *Defiance*, a third-rate, of 64 guns; and, at half past two went off to Spithead to dine on board the *Barfleur*, attended by the Commissioners of the Admiralty, the flag-officers and captains in their barges as before.

At six o'clock in the afternoon his Majesty went from the *Barfleur* on board the *Augusta* yacht, and sailed towards St. Helen's till near eight. and then stood in for the harbour; but, it falling calm, his Majesty left the yacht, and was rowed to the dock in his barge, where he arrived at half-past nine, the ships and fortifications saluting, and the flag-officers and captains attending him to the mouth of the harbour, as they had done the day before.

His Majesty went to the gun-wharf at six o'clock on Thursday morning, where he was received by the Master-General of the Ordnance, the Lieutenant-General, and principal officers of that department, and minutely reviewed the magazines, artillery, and stores.

His Majesty returned to the Dockyard at seven, and viewed such part of the yard, magazines, and works carrying on, as he had not seen before. At half-past ten his Majesty, attended as before by the nobility and Commissioners of the Admiralty and Navy, went in his barge on board the *Venus*, a frigate of 36 guns, lying in ordinary, and from thence to Weevil; where he was received by Captain Pitt, one of the Commissioners for victualling the Royal navy, and the officers of that department, a Royal salute of 21 guns being given from the lines at Gesport; and, having viewed the brewery, cooperage, and magazines, returned to the dock.

After his Majesty had changed his dress, he went to the Governor's house, and had another public levee.

At two o'clock his Majesty went off to Spithead, in the same state as on the preceding days, to dine on board the *Barfleur*.

Vice-Admiral Pye having, in pursuance of the King's pleasure, been this day promoted to the rank of Admiral of the Blue, kissed his Majesty's hand on the quarter-deck, and, hoisting his flag immediately on board the *Royal Oak*, was by the King's permission saluted by all the ships present except the *Barfleur*. The Admiral, in acknowledgment of the honour conferred upon him, saluted the Royal standard with all the guns on board the *Royal Oak*.

His Majesty was at the same time pleased to confer the honour of knighthood on Admiral Pye, as also on Richard Spry, Esq., Rear-Admiral of the White; Captain Joseph Knight, of the *Ocean*, senior captain in the fleet at Spithead; Captain Edward Vernon, of the *Barfleur*, and Captain Richard Bickerton, of the *Augusta* yacht, who had the honour each day to steer the King's barge; and they had severally the honour to kiss his Majesty's hand upon the quarter-deck under the Royal standard.

At half-past five o'clock, his Majesty went from the *Barfleur* on board the *Augusta* yacht, attended as before, and, having sailed through part of the line of ships, stood into the harbour, and landed at the dock at half-past seven, the flag-officers and captains attending his Majesty in their barges to the mouth of the harbour, and the fortifications saluting as on the former days.

On Friday his Majesty went from the Dockyard at half-past five in the morning, to view the new works and fortifications of Portsmouth, beginning from the furthest part of the Common round to the Saluting Platform.

At seven his Majesty returned to the Dock, embarked immediately on board the *Augusta* yacht, and sailed out of the harbour, the fortifications saluting as he passed. When the yacht arrived at Spithead, Lord Edgcumbe, Vice-Admiral of the Blue, with his division, got under sail and followed his Majesty. When the yacht and men of war had passed the buoys, the Vice-Admiral came on board; and having, by his Majesty's command, been promoted to be Vice-Admiral of the White, had the honour to kiss his Majesty's hand under the Royal standard, and then, shifting his flag, was, by his Majesty's permission, saluted by all the ships of his division.

His Majesty proceeded as far as Sandown Bay, where the standard was saluted by the Castle. The wind then freshening, and the tide being spent, the yacht, with the Vice-Admiral's division, returned to St. Helen's and anchored.

At a quarter to five the ship got under way, and, the wind still blowing fresh, worked up to Spithead, leaving the Vice-Admiral and his division to proceed to Plymouth, according to the orders he had received. After the King had sailed along the line of ships remaining at Spithead, he stood towards the harbour, and came to anchor about half a mile within Southsea Castle where his Majesty was attended by the Admiral, the Rear-Admiral, and all the captains and lieutenants of the fleet, at Spithead, who had severally the honour of kissing his Majesty's hand. While the yacht was at anchor, the ramparts of the town being lined with land-forces and marines, fired a *feu de joie* at ten o'clock, by a triple discharge of cannon and musketry all round the works, immediately after which the yacht weighed, proceeded into the harbour, and landed his Majesty at the dock at half-past ten o'clock.

The King was this day pleased to grant the dignity of a Baronet of Great Britain unto Hugh Palliser, Esq., Comptroller of his Majesty's Navy, and also unto Richard Hughes, Esq., Commissioner of his Majesty's Navy, residing at Portsmouth; and also to direct that the commanders of the *Wasp*, *Speedwell*, and *Hazard* sloops, at Spithead, be promoted to the rank of post-captains of his Majesty's fleet; the lieutenants commanding the *Greyhound* and *Anson* cutters in Portsmouth harbour, the first-lieutenant of the *Barfleur*, and lieutenant of the *Augusta* yacht, where the Royal standard had been hoisted; and the first lieutenant of the flag officers' ships, viz., the *Royal Oak*, *Dunkirk*, and *Ocean*, to be promoted to the rank of commanders; and two midshipmen from each of those ships and yacht to be made lieutenants.

His Majesty set out from the Commissioners' house on his return to Kew at a quarter to eight o'clock on Saturday, the 26th, having been graciously pleased to order the following sums to be distributed, viz.: To the artificers, workmen, and labourers of the dockyard, victualling-office, and gun-wharf, £1,500; to the companies of the *Barfleur* and *Augusta* yachts, and the crew of his Majesty's barge, £350; to the poor of Portsmouth, Portsea, and Gosport, £250. His Majesty was also pleased to make some other smaller gratuities, and to release the prisoners confined in Portsmouth jail for debt.

THE GREAT NAVAL REVIEW OF 1814.

AFTER participating in the splendid shows and entertainments of the metropolis, and witnessing the martial reviews of Hyde-park, the Allied Sovereigns expressed a wish to see one of those tremendous naval armaments which had swept from the ocean the hostile fleets of France and Spain, and secured to Britain the dominion of the seas.

These wishes were made known to the Admiralty at half-past six a.m. enabled nobles and commoners to leave the metropolis, witness the pageant of a sea-fight, and return to the performance of their senatorial duties the same night. For two or three days previous to the Grand Naval Review at Portsmouth in 1814, the line of road from London was alive with vehicles. At all the villages along the road, booths, tents, and waggons—decorated with laurel, and containing all the feminine beauty of the neighbourhood—testified to the general desire existing to see the Prince Regent and his Imperial and Royal Visitors. The Prince Regent, attended by an escort of dragoons and hussars, made a public entry into Portsmouth on Wednesday (June 22, 1814). His arrival at the Landport was followed by the discharge of every piece of artillery on the fortifications and ramparts. The Prince Regent passed the night at the Government House, where he entertained a brilliant party at dinner. Fifteen men-of-war and all the frigates in the roads were moored in a long line for the grand review of the morrow, which was the theme of every discourse. The line extended from the south-east to the north-west of the anchorage. The fleets abroad, which were expected to take part in the great spectacle, had not returned, and it was feared that the great nautical exhibition would be less impressive and magnificent than had been expected. But the illumination was brilliant and splendidly illuminated. There are Portsmouthians living who still remember with pleasure the beautiful appearance presented from the Point by the illuminations at Gosport across the harbour, the festooning of a ship or two, and the lighting up of the Dock. The Emperor of Russia and his sister, the Duchess of Oldenburg, passed the night at the house of Commissioner Grey, in the Dockyard; the King of Prussia and the Princes of Prussia were the guests of the Lieutenant-Governor, General Houston.

Early on the following morning (Thursday), the note of preparation was heard in the streets, the harbours, the forts, and the Government establishments; Royal standards floated in the air at a dozen points. Troops were drawn up in front of the Government House, and at half-past nine the Prince Regent, accompanied by the Duke of York, got into his carriage and drove to the residence of the Russian Emperor, where he was shortly after joined by the King and Princes of Prussia, the Duke of Saxe-Weimar, &c. About eleven o'clock the illustrious assemblage walked to the Royal place of embarkation, where the whole naval procession, headed by the Duke of Clarence, as Admiral of the Fleet, was in readiness to receive them. The harbour was filled with vessels of every description—wherries, pleasure yachts, sailing-boats of all kinds, transports, &c. In front of the stairs were two vessels adorned with an infinite variety of ensigns and lights of colours; and on the Gosport shore, opposite, were three others, decorated in the same manner. We were then at war with the United States; and one of the vessels last named had the American flag reversed, and the Union Jack flying over it. Some ships' yards were manned. The marine procession arranged by the Duke of Clarence was of picturesque and imposing beauty. It commenced by men-of-wars' barges, commanded by Captains, to clear the way. The Royal barge, with the Royal standard, came first, and was accompanied by two barges with the Imperial and Royal strangers, one hoisting the Russian flag of yellow, with the Black Spread Eagle; the other the Prussian flag of white, with the sable Eagle of Prussia. The two latter barges were rowed by the King's watermen in their uniforms, with their gold lace caps; they kept a little abaft the beam of the Royal barge—one on each side of it, at the distance of two boat's-lengths. The Prince Regent, it was observed, wore a full dress naval uniform, with his various stars, and a large gold-laced hat and half-boots; the Emperor of Russia, his uniform of deep green, faced with scarlet; and the King of Prussia, blue regimentals. The ladies remarked that the Duchess of Oldenburg wore a straw-coloured pelisse. The Royal barges were followed by the Admiralty barge, the barge of the Admiral of the Fleet, and a swarm of boats containing Ministers of State, great public officers and foreign warriors. The rear was brought up by an innumerable array of small boats containing a number of un-official persons of distinction, and other sight-seers.

The shores were lined with a concourse of spectators; and the gay display of flags, the merry peal of bells, the acclamations of the multitude, the British fleet ranged in line in front, the white-winged vessels in every part of the harbour, the distant ocean, and the beautiful hills and woods of the Isle of Wight, made up a magnificent picture, which has not vanished from the recollection of those who are yet alive to recount the incidents of this proud day in our annals. The men-of-war had been reinforced during the night by some additions, and the splendid aquatic procession pursued its trackless course all along the line amid a general salute of forty-two guns from each ship. Having traversed the line, the procession turned back again, and stopped at the *Impregnable*, which was in the centre of the line, and was commanded by Captain, afterwards Admiral Sir Charles Adam, K.C.B., and now the much esteemed Governor of Greenwich Hospital. The Prince Regent, the Emperor of Russia and his sister, the King of Prussia and his family, ascended the ship's side, and passed from the deck into the cabin. The ship's yards were all fully manned, and the loud huzzas of the crew and of the countless company in the surrounding boats, emulated the roar of the cannon. The Prince Regent and his illustrious visitors were loudly called for by turns, and graciously appeared and bowed to the multitude. The Royal party proceeded to explore the ship. The Emperor Alexander drank grog with the crew, and sat down to mess with the marines. By-and-by a grand collation was prepared in the cabin of the *Impregnable*, where a superb display of the Regent's plate decorated the tables. Admiral Blackwood, Captain of the Fleet, and Captain Adam did the honours of the table to the exalted party. When the Royal party re-appeared on deck, they were struck with admiration at the panorama which presented itself The gallant ship was encircled with innumerable vessels, which covered the waters, and whose expanded sails and streaming ensigns excluded all distant prospect, while myriads of spectators were seen as far as the eye could reach, mingling their exclamations of delight with the voices of the 10,000 sturdy British tars, and the repeated discharges of the guns, which now and then, involving all in smoke, admitted by intervals new glimpses of the surprising effect of the *coup d'œil*. The Prince Regent had probably never felt himself more truly the Sovereign of the greatest maritime nation that ever existed than when he thus beheld his country's greatness witnessed by foreign monarchs upon his country's own element. He declared it to be "the grandest sight he ever saw;" and probably Queen Victoria made the same declaration, and felt the same thrill of patriotic pride forty years afterwards. The Duchess of Oldenburg vividly expressed her delight. The Emperor was in ecstacy. The meditative Frederic was wrapped up in the sublimity of the spectacle. The young German princes were quite enraptured. The veteran leaders of hosts contemplated with the firmness becoming their martial character, an exhibition to them of so novel a kind; but probably felt an inward misgiving that they would be found very helpless animals in an English naval engagement.

On leaving the *Impregnable* salutes were again fired for the Regent, the Emperor, and the King, followed by a general salute, in which the fleet poured forth all its deafening thunder. The Royal party repaired to their several residences, and in the evening again met at the Government House, where a grand banquet was given by the Prince Regent. Covers were laid for 150 persons. Blucher arrived in the evening, and appeared several times at the window of his residence, at the Bank, on the Parade.

On the following day (Friday) the illustrious visitors inspected Portsmouth Dockyard; and, at two o'clock, the Royal barges and the rest of the grand aquatic procession left the King's Stairs in the same order as on the 22nd, to pay another and a longer visit to the fleet in the Roads. Royal salutes were fired from all the batteries. Upon reaching the fleet, the Prince Regent, the King and Princes of Prussia, and many other foreigners, went on board the *Royal Sovereign* yacht, which immediately hoisted the Royal standard. The Emperor Alexander left the rest of the Royal party to accompany the Duke of Clarence on board the *Impregnable*. The fleet, consisting of fifteen sail of the line, and about the same number of frigates, formed a line of about seven or eight miles in extent, in front of the Isle of Wight. They passed the Royal visitors with a general salute; after which they slipped their cables, and immediately stood out to sea under sail, with a brisk north-east wind. The *Royal Sovereign*, like the *Victoria and Albert*, led the van. The yachts and barges of the Admiralty, the Naval Commissioners, the Ordnance, and other public offices, and above 200 vessels of all descriptions sailed out, keeping at various distances from the fleet. About five o'clock, when the leading ships were about twelve miles from Spithead, the whole line-of-battle ships hove to by signal, when the Prince Regent, the King of Prussia, the Prussian and other Princes, left the *Royal Sovereign* yacht, and went to join the Emperor of Russia and his party on board the *Impregnable*, to which the Royal standard was accordingly shifted. After partaking of some refreshment in the cabin of the *Impregnable*, the signal was made for the return of all the ships of war to their anchorage. The wind was not so favourable for sailing back; but the fleet, on their return, performed with amazing accuracy some of the manœuvres of an engagement, and continued their firing so as to afford in some respects the idea of a naval battle. The frequent repetitions of signals in both directions along the line, the general effect of so many vessels of war and pleasure boats turning to windward through a narrow channel, and the precision with which the movements of the fleet were made, powerfully interested the Allied Sovereigns. The day was more like one in October than the "leafy month of June," but it was not forbidding, and gleams of sunshine occasionally lit up the ocean, or brought to view the undulating beauties or umbrageous richness of the Isle of Wight, or brought out the gay colours of the various emblems and ensigns of the vessels—one of which, the *Prince*, a 98-gun ship, was then decorated with innumerable flags, and was at night splendidly illuminated.

As the fleet returned into the harbour they were met by all the boats and vessels that could be collected together. The whole line were at their anchorage off Spithead by half-past seven, and when the Emperor, King, Regent, and Princes quitted the *Impregnable*, and got into their respective barges, the oldest boatmen in the harbour declared that they never saw before so great a number of vessels moving together, or so fine a sight at Portsmouth. The thunders of the fleet were again evoked to do honour to the Regent and the Allied Sovereigns. On shore and in the harbour the discharge of all the artillery round the works of Portsmouth and Portsea, on the Block-houses, Cumberland, and Southsea forts, and on the different batteries at Haslar and elsewhere, was followed by ten *feux de joie* from the many thousands of military drawn up. Under this tremendous and deafening concussion the Sovereigns retired to their several residences.

When the Prince Regent arrived at the Government-house, he experienced an unwonted and unexpected gratification. He had been accompanying and entertaining at sea foreign Sovereigns, his august allies, and their brave officers; and displaying to them the character of those armaments with the great names of whose heroes—the Hawkes, Rodneys, Dunoans, St. Vincents, and Nelsons—the histories of the past and the events of present times had made them all familiar,—and when he stepped into his house, he found his own great military commander, the Duke of Wellington, waiting his approach. However exalted the feelings of the Regent had been amid the splendid group of foreign Crowns, we may be sure that his emotions of pride at this brilliant moment were raised to their climax by the appearance of the Marlborough of modern times—a warrior whom he could present to his august compeers as the liberator of the Continent, and the Great Captain of modern times.

The Duke of Wellington had been received with the utmost enthusiasm by the populace, who took the horses from his carriage, and drew him to the portico of the Regent's abode. A few minutes afterwards, his Grace, who wore his British uniform, with several orders, appeared publicly on the balcony, and bowed repeatedly.

Between eight and nine o'clock, the streets being lined with hussars, dragoons, and infantry, the Allied Sovereigns again dined with the Prince Regent. The Duke of Wellington dined with the illustrious party, and at half-past nine appeared on the balcony again, accompanied by the Regent, Emperor, King, and Princes—a brilliant party of about a dozen in number. The whole town was again illuminated.

On the following morning, the visit of the crowned heads was brought to a close by a grand review of troops on Portsdown Hill. And thus ended a series of imposing spectacles calculated to impress the illustrious foreigners with the most lively ideas of the national power and greatness, and which were described by those who witnessed them as the grandest scenes ever beheld in this or any other country.

MANNING THE ROYAL NAVY

THE Board of Admiralty, of which the Duke of Northumberland was at the head, having taken under their consideration the mode of manning the Royal Navy, appointed a committee of naval officers to investigate the subject. The committee, which was presided over by Sir W. Parker, G.C.B., consisted of the following officers:—Rear-Admiral Fanshawe, C.B.; Captain the Hon. R. S. Dundas, C.B.; Captain Peter Richards, C.B.; and Captain J. Shepherd. The committee examined several public functionaries, naval officers of the Royal Navy, shipowners, and others connected with the mercantile marine. The committee unanimously came to the conclusion that the mode of entering seamen in the Royal Navy for short terms of service, and then discharging them, was highly objectionable, averaging the efficiency of the service. The system heretofore existing, which appears to have been coeval with the first formation of a Royal navy, consisted in entering men for three years' service, in ships selected by themselves. After much expense, time, and labour in training them, and when they had probably been brought to the highest point of discipline and efficiency, the ship was paid off, and the men were disbanded. Whilst the public service has suffered by the loss of these highly-trained seamen, they have themselves, when discharged suffered much hardship and distress from being unable to procure another ship, and have thus been driven to the mercantile service or compelled to seek employment under foreign flags.

The committee of naval officers were unanimously of opinion that it would be desirable to extend the term of service, and to enter boys and seamen for a period of not less than ten years' continuous service, with such arrangements as to increased pay, pensions, and rewards for good conduct, as should enable the Government to compete with the merchant service in procuring the most efficient seamen. The report of the Committee of Naval Officers having been made to the present Board of Admiralty, many of their recommendations were adopted; and Sir James Graham determined to apply to Parliament, if necessary, for a vote to cover the proposed increase of pay to the warrant officers, petty officers, and seamen of the fleet. It appeared, however, that the increased sum probably required for the ensuing year (£56,000) would be covered by a surplus in the Navy Estimates already voted.

The new measures having been carefully considered, at length received the sanction of her Majesty in Council. We append a copy of the Order in Council:—

At the Court at Buckingham Palace, the 1st day of April, 1853. Present the Queen's Most Excellent Majesty in Council.

Whereas there was this day read at the Board a Memorial from the Right Honourable the Lords Commissioners of the Admiralty, dated the 31st of March, 1853, in the words following, viz.:—

"We beg leave most humbly to represent to your Majesty that we have had under our consideration the important subject of the Manning of the Royal Navy.

"The difficulties attaching to the present system of manning your Majesty's ships have engaged the attention of different Boards of Admiralty, and various regulations have from time to time been adopted with the objects of improving the condition of the seamen, and of inducing them voluntarily to enter for longer periods of continuous service. Hitherto, however, so far as the latter object is concerned, no satisfactory results have been produced.

"The difficulties are inherent in the system itself, which consists in entering men for particular ships selected by themselves, nominally for five years, but practically, according to immemorial usage, for the period during which a ship is commissioned, averaging from three to four years, and then after much expense, time, and labour bestowed in training them, they are disbanded. A certain portion of the men thus discharged never return to the navy; some carry the fruits of their training to foreign flags; the larger number return at periods dictated by their own inclination or convenience, and not by any regard to the wants of the service. This desultory mode of proceeding is a cause of great embarrassment and expense in conducting the ordinary duties of the naval service. It creates uncertainty as to the period when ships may be expected to be ready for sea; and the evil becomes one of great magnitude, and a serious danger, when political considerations suddenly demand the rapid equipment of your Majesty's ships.

"These circumstances induced the late Board of Admiralty to appoint a committee of naval officers to inquire into the expediency and practicability of engaging men and boys for longer terms of continuous service. The committee, having fully investigated the subject, and taken much evidence thereon as they deemed proper, arrived 'unanimously at the conclusion that it was expedient to place your Majesty's navy on a more permanent basis, upon a similar principle to that established in the army and marines, and that solid advantages both to the Crown and to the seamen would result therefrom.' We submit for your Majesty's consideration a copy of the report in question.

"We fully concur in the view above expressed, and we are of opinion that it is essential to give to the Royal navy a permanent constitution, and in order that it may be brought to a higher point of organisation, efficiency and disciplne, and thus be enabled, at critical junctures to fulfil the expectations of your Majesty with this object in view, we propose to bring under your Majesty's gracious consideration such measures, after full consideration, we confidently believe it is the real interest of the country to adopt, immediately, in effect.

"We humbly submit that all boys who hereafter enter the navy be required to engage for a period of ten years continuous and general service, from the age of eighteen, in addition to the period of training necessary until they attain that age; and that when advanced to any of the under-mentioned ratings they be allowed the rates of pay of that specified against each, in addition to the present rates of pay of the Royal navy.

Second-class ordinary seaman	1d. a day.
Ordinary seaman	2d. "
Petty officer and able seaman	3d. "

"We further submit that the above increased rates of pay be likewise granted to men who hereafter enter your Majesty's navy for the first time, and who volunteer for ten years' continuous and general service; and also to seamen who have served or who are now serving in the Royal navy, and who volunteer to re-enter or to continue therein, under the conditions of continuous and general service, certain portions of their present service, as may be hereafter determined, being allowed to count towards such ten years.

"In carrying out the foregoing proposition we recommend that the change from the present to the proposed system should be effected wholly by voluntary means. With this view we submit that men be permitted, as heretofore, to volunteer for the customary period of service, and for particular ships; but by the future entry of boys for longer terms of continuous and general service, and by holding out the inducement of increased pay to men who volunteer to serve under the like conditions, we contemplate that a gradual and beneficial change will be introduced in the existing system of manning your Majesty's ships.

"As an inducement to seamen to render themselves proficient in all branches of their duties we propose that a class of leading seamen be established, with 2d. a day in addition to any other pay to which they may be entitled; a portion of the carpenter's crew to be composed of shipwrights, who should also be granted 2d. a day additional. The proportionate number of leading seamen and shipwrights to be borne in your Majesty's ships we submit should be left to our discretion.

"Men and boys to be permitted to purchase their discharge upon a principle and a graduated scale, similar to that in force in the army and Royal Marines.

"The pay and duties of second-class ordinary seamen and landmen being identical, we recommend that the latter rating be abolished.

"We consider that it would be beneficial to your Majesty's service to establish a class of chief petty officers, to consist of the under-mentioned Master-at-arms, Chief Gunner's Mate, Chief Boatswain's Mate, Chief Captain of the Forecastle, Corporal of Marines, Chief Quartermaster, Chief Carpenter's Mate, Sailmaker's Mate, Coxswain of the Launch, Ship's Steward, Ship's Cook; and that the Chief Gunner's Mate, the Chief Captain of the Forecastle, and the Chief Quartermaster should be allowed 2d. a day each in addition to any pay to which they may be otherwise entitled. Men holding the post.on of chief petty officers to be borne in such rates of ships as we may deem proper.

"We beg leave to subjoin a table showing the classes and denominations of petty officers, seamen, and others borne in your Majesty's ships, and the order in which we submit the funds may be formed, and from which those ratings being distinguished where command should not be assumed in the event of the charge of your Majesty's ships devolving on petty officers.

"As an encouragement to deserving pe.ty officers, we propose that an increase should be made, as follows, in the number who are eligible to be recommended for good-conduct gratuities when ships are paid off.

Rates	Petty officer 1st Class £7	Petty Officers 2nd Class, £5	
	Present No.	Proposed No.	Present No.	Proposed No.
1st and 2nd	4	6	3	4
3rd	4	6	3	4
4th	3	5	2	3
5th	2	4	1	2
6th	2	4	1	2
Steamers, 1st & 2nd Class	2	4	1	2
Steamers, 3rd Class ..	1	3	1	1
Sloops	1	3	1	1
Small Vessels	1	1	1	1

"The long-service medal gratuities to second-class petty officers to be increased from £7 to £10. An increase to this amount has been granted to the army, in similar cases, by your Majesty's warrant of the 19th December, 1845.

"Men who have completed twenty years' service to be awarded, when pensioned, the increased allowance for time served as petty officers, to which non-commissioned officers of the Royal Marines (who enlisted after the 1st August, 1847) are entitled under the authority of your Majesty's order in Council of the 15th January, 1849, provided that such seamen shall have entered and served for one continuous period of not less than ten years.

"All men who enter for continuous and general service to be allowed to count time for pension from the age of eighteen (as in the army and Royal Marines), instead of from the age of twenty, as is at present the case in the naval service.

"We propose that pensions be hereafter awarded to continuous and general service men after twenty years' service, instead of twenty-one, as at present; a discretionary power to be vested in the Board of Admiralty as regards the application of this, and the foregoing rule, to men who have served, or who are serving in the navy under the present system.

"In the event of an armament being required, we consider it important that this department should have the command of the services of a certain number of trained seamen, in addition to those borne on the peace establishment. For this purpose, we humbly recommend that seamen who have served ten years in the navy, reckoning from the age of eighteen, be eligible, at our discretion, to be granted pensions of 1d. a day each, and men with fifteen years' service, pensions of 3d. a day each. The allowance for time served as petty officer, and the amount thereof, according to the present or proposed new scale, being awarded, as we may deem fit, to men with ten or fifteen years' service; both classes to be held liable, under the conditions contained in the 13th clause of the Pension Regulations (dated the 1st January, 1846), to give further service, if called upon, in the event of an armament, or of war; it being, however, distinctly understood that no man shall be entitled to claim the above short-term pension as a matter of right. The number chosen in the receipt of such pensions to be limited, for the present, to a maximum of 10,000. At a future time, when the efficacy and policy of the measure shall have been tested by experience, it may be thought prudent to increase their number, but the decision will be open to the deliberation and judgment of your Majesty's Government, and be subject to your Majesty's approval.

"We further recommend that men and boys who shall hereafter enter the service for the first time, and who shall be granted pensions for twenty or twenty-one years' service, be also held liable, under the thirteenth clause of the said pension regulations, to give further service, if required, to meet the exigencies of an armament or of war.

"We do not propose to grant short term pensions at present, but to reserve to the Board of Admiralty a discretionary power for this purpose whenever the state of the force in commission shall lead them to think that such step may be taken with advantage.

"We are of opinion that the system under which seamen-gunners are now entered for your Majesty's service should be modified. These men engage at present for a term of five years' service, during which period they are entitled to an additional pay of 1d. a day; if, then, volunteer for another period of five years, they receive 2d. a day; and for a further quinquennial term 3d. a day. We propose, that for the future, seamen-gunners be divided into two classes; those of the first class to be entitled to an additional pay of 2d. a day, and the second class to an additional pay of 1d a day; the pay in question to be granted according to their qualifications, and irrespective of length of service. The first class to be eligible to be promoted to the situation of gunners'-mates and gunners; the second class should be held qualified to perform the duty of captains of guns. The foregoing proposition to be applicable, as our discretion, to men already in the service, or who may hereafter enter therein.

"The importance of the duties performed by the warrant officers of the fleet cannot be exaggerated; the situations held by them are the highest to which the seamen and petty officers of the fleet can at present expect to attain; and it is important in a corresponding degree that they should be sought after, and filled by the most active and deserving men. Considering, also, that the warrant officers' widows' pension was withdrawn without any equivalent, we have to bestow a favourable recommendation to your Majesty that the pay of the warrant officers should be increased as follows; it being distinctly understood that such increase is awarded partly for the special purpose of enabling them to make provision, by insurance, for their widows:—

SEA PAY.

	Per Day.	Per Annum	Increase
	s. d.	£ s. d.	£ s. d.
First Class ..	6 7	121 7 11	27 17 1

Third Class ..	4 9	86 18 9	22 16 3

HARBOUR PAY.

		Per Day.	Per Annum	
		s. d.	£ s. d.	
First Class ..	1st Rate ..	5 7	101 17 11	
	This pay to be eventually that of the First Class			
	2d Rate ..	5 2	94 5 10	
	3d Rate ..	4 9	86 18 9	
	4th Rate ..	4 4	79 1 8	
Second Class ..	This pay to be eventually that of the Second Class.			
	5th Rate ..	3 11	71 9 7	
	6th Rate ..	3 6	63 17 6	
Third Class ..	This pay to be eventually that of the Third Class.			

"In the cases of Warrant-officers of long service and of exemplary character and conduct, we recommend that two years' further service should, in awarding pensions, be considered as equal to one year's sea service, in lieu of the proportion of three to one, as at present.

"Your Majesty having been graciously pleased to direct that non-commissioned officers of the army and Royal Marines who distinguish themselves by gallant conduct be eligible to be promoted to the rank of commissioned officers, and that all persons so promoted be granted, respectively, a sum of £100 as an outfit, we are of opinion that it would operate as an encouragement to a like deserving class of officers if the same boon were extended to Gunners, Boatswains, and Carpenters; we therefore submit, that Warrant-officers of the Royal Navy of exemplary conduct who have distinguished themselves by acts of gallantry and daring in the service, be considered eligible to hold commissions in your Majesty's fleet in such rank or position as we may deem them entitled to receive and competent to fill, after undergoing such examination as we may think fit; and that all warrant-officers so promoted be granted, respectively, the sum of £100 as an outfit.

"Having regard to the responsibility attaching to the situations of chief and commissioned boatmen, we recommend that time served in the former capacity should count as first class, and in the latter as second class petty officer's service, with the proviso in awarding pensions; and whereas coastguard men from the navy service are now entitled to higher gratuities than seamen, it appears desirable that the former should be placed on the same footing as the latter.

"We beg leave to transmit herewith an estimate from the Accountant-General of the Navy, showing the total expense that will eventually be incurred by the proposed increase of pay to warrant officers, petty officers, and seamen of the fleet. The sum that will be required for the ensuing financial year will not, probably, exceed £56,000, and it is estimated that provision under Vote No. 1 of the Naval Estimates will be sufficient, at the close of the next financial year, to meet this additional expense. A large portion of the increased pay is contingent on the voluntary adoption by the seamen of the altered terms of entry and of service.

"Considering the national importance of the objects to be attained by the proposed measures, and the vast

THE LATE NAVAL REVIEW, AS SEEN FROM BEMBRIDGE DOWN, ISLE OF WIGHT.

THE Isle of Wight, the Solent, the Hampshire hills, Portsmouth, and the coast stretching away towards Brighton, never probably appeared more lovely than they did on the 11th of August.

Whilst some embarked in steamers, and others in yachts to see the great sight of the day, I resolved, for the same purpose, to seek Bembridge Down. A finer prospect point can hardly be well conceived. It looks over a very large portion of the Isle of Wight: the Solent, Portsmouth, Spithead, are full in view to the north—the Hampshire hills forming a beautiful back-ground; eastward, as far as the eye can reach, the coast is seen stretching away towards Brighton; to the south, the sea bounds the horizon; to the south-west, Sandown Bay forms a beautiful half-circle, fringed with precipitous cliffs, and backed by Shanklin Down. Immediately below us is the spit of land on which the town of Bembridge is built; beyond this, to the north, is Brading Haven, on the opposite side of which is the wooded hill whereon stands St. Helen's; beyond this is Spithead and its shipping; and beyond this again, we look direct into Portsmouth Harbour.

At eight o'clock in the morning, I reached Lord Yarborough's monument on the summit of the Down. At this time the squadron which was to form the supposed enemy was proceeding to sea; it consisted of four large ships and two war steamers. For many hours their motions and different courses were an object of intense interest to the spectators on the Down, whose numbers rapidly increased. Never perhaps since their invention were so many telescopes brought into action at the same time. At three o'clock in the afternoon, probably not less than twenty thousand spectators were looking intently in the same direction.

At a quarter before eleven we heard a Royal salute fired, announcing, as we supposed, that her Majesty had joined the Fleet. At this period the enemy were in the offing, to the south, hull down, and presented a very beautiful sight; they were arranged in line of battle, stretching from east to west, the war-steamers being to the windward. By this time we began to be apprehensive that they would be too far out at sea for us to see the way in which our ships would deal with them.

With anxious eye, therefore, we pointed our glasses to Spithead. But there was no sign of motion. Even the *Duke of Wellington* lay as still as if there were no enemy near; and the great *Agamemnon* seemed unconscious of the vicinity of the faithless Trojans. Quarter-of-an-hour after quarter-of an hour passed away, each seeming treble that length of time, and the enemy still increased his distance.

It was now half-past twelve. The British fleet was in motion. The enemy were hardly in sight. In what order they sailed, and who commanded each ship of war, I must leave to other chroniclers to tell. But the great *Duke* and the *Agamemnon* were above all others conspicuous. Still, a fleet like this, when some miles distant, must be seen with the eye of the mind rather than the organ of sight. On they went to the eastward. The steamer on which flew the Royal standard was more carefully watched and traced than any other vessel in the fleet.

Though the day was very beautiful, there was a very slight haziness, often characteristic of hot and nearly cloudless days. The smoke from the war steamers also rendered the atmosphere somewhat murky about the fleet. With every passing half-hour the fleet increased her distance, and about three we lost sight of it. At this moment great was the disappointment experienced by the thousands on the Down. Another half hour passed away, during which all eyes and glasses were directed to the hazy cloud that was suspended over the offing to the eastward. Suddenly that dark grey which enveloped the horizon changed colour, and white cloudy pillars took its place. A few moments were passed in wonder at the sudden change, when crashing thunder filled the air. The battle had begun; the discharge of every broadside communicated an impulse to the atmosphere, which was felt as well as seen. Imagination supplied the picture which the eye could not behold; and a feeling of deep thankfulness arose, as the thunder roared—each peal louder than the last—that it was mimic and not real warfare to which we were listening. But as it was, we could not dissociate those hurtling peals from the destruction that attends upon them in a real battle: and the heart sickens at the thought, and the prayer involuntarily arises, that the necessity may never occur for the employment of these fearful instruments of destruction. The engagement did not last many minutes, and, in its very brevity, it was, probably, a closer imitation of what a naval conflict will be, than if the firing had continued much longer. The time is past away when vessels can for hours discharge their broadsides at each other, and draw off mutually crippled. The motions of the ships are now independent of the wind; and their heavy artillery can discharge their iron showers almost with the accuracy of the rifle. Fearful and utterly destructive, therefore, must be the effect when the concentrated fire of sixty guns strikes an opponent amidships.

The smoke now rose higher, and spread itself in every direction, like a mist. The gentle breeze bore it this way; it was long, however, in reaching us; a few minutes after four we were enveloped in it, as in a fog; and for half an-hour the bright daylight was dimmed, as though the sun were undergoing an eclipse. When it had passed over, the late commotion seemed to have cleared the atmosphere, and the most glorious sight of the day presented itself—the fleet returning to port. It was a noble sight! It is a happy thought that the power there concentrated had not been collected for any purpose of national aggrandisement; but to secure that England shall continue a place of refuge for the persecuted; and to enable her to defend the weak against aggression.

THE ILLUSTRATED LONDON NEWS

No. 641.—VOL. XXIII.] SATURDAY, AUGUST 27, 1853. [PRICE, WITH A SUPPLEMENT, SIXPENCE.

THE PARLIAMENTARY SESSION.

"LABORIOUS" and "protracted" are the epithets which the Queen—speaking through the Ministers—has applied to characterise the Session of Parliament which was closed on Saturday last. There can be no doubt that it was both of these; or that a third epithet might have been added to express the usefulness and wisdom of most, if not of all, the measures which it passed or originated. The time at which its labours have been brought to a termination is a remarkable and extraordinary one. At home the country is in the enjoyment of an amount of prosperity unexampled in the recollection of living men, and unparalleled in the records of history. Abroad the political horizon is dark, clouded, and ominous of storm. But throughout the world there is but one feeling with regard to Englishmen and their Government. The nations look upon Great Britain not only as the brighest example, but the surest safeguard of popular freedom; while Governments, however despotic, are compelled to admit that without her consent there can be no unsettlement of treaties, and no derangement of the public law, or the territorial boundaries of Europe. Within the last few years, the ignorance, and the impatience of various nations, have brought representative and popular government into some degree of disfavour. Earnest men have despaired of freedom, and have tolerated despotism, rather than incur the risks and the penalties of anarchy. Great Britain has remained the last, as she was the first, of constitutional states. She has held her even course amid the troubles and perplexities of the world. The machinery of her Government has neither stood still, nor worked in a manner unforeseen or dangerous. With darkness or convulsion on every side, these islands have been the cynosure of the struggling and the oppressed; an oasis in the wilderness;—the chosen spot where men were free to think, to speak, and to act; where intellect had room to expand, and enterprise to flourish; where the democracy were not wild, and the aristocracy not supercilious; and where the monarchy was popular, both for its own sake, and for that of the person who represented it.

It was once the custom to declare that all Royal Speeches were vague and unmeaning, and to disparage the labours of law-makers who talked so inordinately as the members of the British Parliament. But that day has gone by. It is seen that Royal Speeches at the opening of a Session must not make large promises, because their fulfilment does not depend so much upon the Crown, or its Ministers, as upon the great deliberative body to whom they are spoken. It is also confessed that such Speeches at the close of a Session must of necessity have no novelty with which to startle the public ear; and that the utmost they can do is to recapitulate the past, and to set the seal of approval upon the principles which have been affirmed, and upon the acts which have been their result. Comparing the customary address with which Ministers opened the Session to that with which they closed it, we may find one or two omissions to regret, but no discrepancies to complain of. Some things that it was desirable to do, have doubtless been left undone; but the fault in these cases does not lie with the intentions of the Ministers, or with the goodwill of Parliament, but with the sheer impossibility of exhausting public business in one session.

Let us first speak of the measures either promised in the Royal Speech at the opening of the Session, or by the Ministers in explanation of their policy, and which it has been found impossible to carry. Among these, the bill for the admission of Jews to Parliament is the most prominent. Repeatedly affirmed by the House of Commons, it has been again rejected by the House of Lords. Yet the partisans of that measure are nothing daunted by the repulse: they will ultimately so weary the Peers by their importunity, that their Lordships will pass the bill, if only to get rid of them. It is not a question of national importance; but, as religious equality is the rule, and disqualification on the ground of opinion the exception, and as the exclusion of the Jews is a result not anticipated by the framers of the oath which shuts them out of that Legislature which they may, nevertheless, help in electing—they will, assuredly, carry their point sooner or later—as other Englishmen do whenever they have a practical object before them, and are determined to succeed in it.

The next question is a more pressing one. The education of the people is a subject that urgently demands the attention which it has never yet received. The want of an effective system cries aloud in the public streets—it shames us in our prisons and in our workhouses—it meets us at every turn—it is an opprobrium and a sin, and, what some minds might grieve at still more, it is a heavy and incessant expense to us. Yet such is the war of rival sects, and so uncertain is the state of public opinion, that no Ministry can safely touch the question. All that can be done is to give it an impetus whenever opportunity serves, either by a paragraph in a Royal Speech, or by a flourish in a ministerial programme. To debate it in the last Session of Parliament, would only have stopped the way of practical legislation upon matters on which there were no such bitter disputes. We are not therefore surprised, that Lord John Russell found it expedient to postpone for another year, his long-promised, and greatly-needed bill. Ultimately the law will affirm the right of every British child to its education as well as to its life: but in the meantime the friends of that great cause can but "labour and wait"—certain that success will crown their efforts at the appointed time, when rival sects shall learn to imitate the example of their Divine Master, and love the "little children" as He loved them. It may be long to wait, but good men engaged in a good cause know no such thing as despair; and the question will triumph, as others apparently quite as hopeless have done before it. Connected with this measure are two others, which, though not

THE SUBMARINE MAGNETO-ELECTRIC TELEGRAPH BETWEEN GREAT BRITAIN AND IRELAND.—TERMINUS NEAR DONAGHADEE.—(SEE NEXT PAGE.)

ntroduced by the Government, have been sanctioned by it, and which have shared the same fate. The one is Lord Shaftesbury's Juvenile Mendicancy Bill; and the other, Mr. Adderley's Bill for the Reformation of Juvenile Offenders. It is much to be regretted that neither of these useful bills received adequate support. The principle of both was fully admitted by the House of Commons; but from the lateness of the period at which they were introduced, the non-official character of the men who brought them forward, and the imperative pressure of financial and other routine business, it was found impossible to proceed with them. But such questions have an inherent vitality that will not allow them to rest. They clamour for a settlement, and will force their own way to it.

But the Session is not to be fairly judged of by its omissions. Had it produced no other measure than the wise and statesmanlike Budget of Mr. Gladstone, it would have earned a high character, and stood out in bold relief from the five or six Sessions which preceded it. The Royal Speech truly says, that "by the further remission and reduction of taxes which tended to cramp the operation of trade and industry, Parliament gave fresh extension to a system of beneficent legislation." It might also have stated, with equal truth, that by the re-adjustment of other fiscal burdens, it removed an invidious distinction between the aristocratic and the other classes of the community, and deprived the Income and Property-tax of a great portion of its injustice, and a still larger portion of its unpopularity. The act for the better administration of Charitable Trusts is another measure on which the Parliament and the Government may well be congratulated. Eminently useful and urgently necessary as legislation was, the intricacy of the subject, as well as the magnitude and diversity of the interests involved, rendered its solution by no means easy. To have achieved success in such an object is no small triumph, and the Parliament, no less than the Ministers, is fairly entitled to claim the merit of it. We cannot say that the Bill for the future Government of India, which ranks third among the measures of the Session, is entitled to the same favourable mention. If, however, it shall prove to be useful as a temporary expedient—if it shall serve as a stop-gap, or a wooden bridge till a stone one be erected—the country will have no reason to complain that so little was attempted. The Parliament was humble and cautious in dealing with so mighty a subject. To have done no harm in meddling with it, and to have prepared the way for future legislation, are merits—not very brilliant ones, it is true—but sufficiently solid to be appreciated by a nation which loves the practical far more than the theoretical, and which, in public as well as in private affairs, likes to make the first step sure before taking the second.

Two wars that were carried on at remote corners of our Empire when Parliament commenced its labours, were so far ended at the period of its prorogation, as to justify a congratulatory paragraph in the Royal Speech. The Kaffirs have been conquered, and the King of Ava has sued for peace; yet the country is not very sanguine of any permanent tranquillity either upon our extended frontiers at the Cape, or at our new acquisition on the banks of the Irrawaddy. It may even be doubted whether the Burmese war is actually at an end, though there is every reason to believe that it cannot be much longer protracted. The sooner we are out of it the better for our honour as well as for our resources. It is a war in which there is no glory to be gained, and in which a trifling advantage is dearly purchased from an enemy whom it would have been far better for our credit had we never touched.

The country could have wished that Parliament had not separated without expressing an opinion upon the Russian aggression against the Ottoman Empire. As a body, it has not uttered a syllable upon a matter that involves the peace of all Europe. The ministerial explanations have been scanty and feeble at the best; and, were it not that Lord Palmerston spoke boldly out as became a British statesman, an opinion might have gone forth, that the cold shadow of Russia had fallen upon the minds of our foremost men, and paralysed the tongues of our best orators. Fortunately, Lord Palmerston, with characteristic nerve and spirit, has done much to prevent or remove such an impression; and it is not improbable, that before Parliament again assembles, the publication of the despatches addressed by Lord Clarendon to our representatives in Vienna and Constantinople, and especially in St. Petersburg, may prove still more emphatically—that our Government has not been secondary in energy and "pluck" to that of the French Emperor. This country owes the world a document as able and as strong as that addressed by M. Drouyn de l'Huys to the Ambassadors of France at foreign Courts; and now that Parliament is no longer sitting to express its opinion, it becomes the more urgent that the English Ministry should take the opportunity of vindicating themselves and their country from all possibility of suspicion either of pusillanimity or indifference to the most important question of our time.

THE SUBMARINE MAGNETO-ELECTRIC TELEGRAPH BETWEEN GREAT BRITAIN AND IRELAND.

It was once the uncharitable wish of a certain member of the Legislature, that Ireland could be still more removed from the mother country, by driving the Green Isle further out into the Atlantic Ocean. The wish now excites a smile by its oddity; but, it is pleasanter to record that science has of late devised the means of bringing the two countries into instant communication.

Since the afternoon of Sunday, the 22nd May, the Submarine Telegraph has been extended from the Scotch to the Irish coast, the termini being a point near the harbour of Portpatrick, in Scotland, and a small bay at Templepatrick churchyard, a mile or so to the south of Donaghadee, in Ireland. We have engraved the latter terminus.

This great undertaking has been accomplished by the English and Irish Magneto-Electric Company. It was formerly essayed by another company, but without success: some miles' length of the cable, after having been submerged and buoyed, were hauled up by the crew of a little coasting schooner from Larne, who mistook the hempen-covered wires for hawser, and bore off as much as they could pull up as a treasure trove. The cable, which is now submerged, was manufactured by the eminent firm of Messrs. R. S. Newell and Co., and consists of six strongly-covered and perfectly-insulated wires, wound round a centre of hemp and iron.

The first intercommunication (on May 22)—a message to the Lord-Lieutenant of Ireland, and the reply—has already been detailed. From the period to the present, the Cable has been most effectively worked; although, of course, not being as yet linked with any of the great lines in the empire, it is useless. The Company are making strenuous efforts to complete that portion of their lines which lie between Portpatrick and Carlisle; and we perceive by the files of the *Northern Whig* that on the Irish side of the Channel the Magneto-Electric Company have entered into contracts for the Dublin and Drogheda Railway, 32 miles; the Navan branch, 15½ miles; the Kells branch, 8½ miles; the Dublin and Belfast Junction, 56 miles; the Ulster Railway, 35 miles, Portadown to Belfast; and Portadown to Armagh, 11 miles; the County Down Railways to Newtownards and Holywood; the Great Southern and Western; the Killiare and Carlow; the Killarney Branch, &c., &c. They have, also, for some months past, had a telegraph in communication between Dublin and Galway.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday

The attraction which last week's fête gave to Paris having ceased to exist, *tout le monde*—it is the accepted word—have taken, or are taking, wing for *les eaux*; and Havre, Dieppe, Trouville, Dinnet, and half-a-dozen other known and unknown bathing quarters, are filling with a rapidity that persuades them that Paris cannot possibly have anybody left in it, but the *portiers* that remain to keep the houses of the bathers. If the verb to die admitted of degrees of comparison, we should say that this month and the next were the *deadest* of the year; for, at this period, to the usual attractions of the country, are added the excursions to the seaside, and the *ouverture de la chasse*, which is to take place, over nearly all the departments, in the first week in September.

Dieppe is, of course, the grand centre of attraction at this moment, from the presence of the Emperor and Empress, who, owing to the indisposition of the latter, have made an excursion thither, with the intention of remaining about three weeks. Grand preparations were made for their reception; the Municipal Council, in the first instance, accorded 100,000 francs (£4000) for this object, but afterwards decided on permitting the *Maire* to open an unlimited credit, in order that nothing should be wanting to complete the arrangements in a becoming manner. The Hôtel de Ville, under the *surveillance* of M. Visconti—whose success in the illuminations has rendered his reputation even more popular and extended than before—was, in a few days, transformed into a palace of the utmost perfection of taste, style, beauty, and comfort; and such was the *satisfaction* of the Dieppois at the aspect it thus assumed, that, de-rous not to change it, they, on the arrival of the Chef de l'Etat, waited on him to offer it as a gift *en perpetuité*, to remain as an Imperial residence for the future. Both he and the Empress assume the incognito as much as possible, live quietly, and do not appear in public, but take excursions in the neighbourhood; the fact of their being on the spot, however, is of course sufficient to extract extra crowds to this already favourite bathing place, and lodgings are hardly to be obtained for love or money. The Princess Mathilde is also at Dieppe. Several companies of the Chasseurs de Vincennes and the band of the Guides, have been despatched, to remain there during the stay of the imperial party.

The examination into the two conspiracies—of the Hippodrome, and the Opéra Comique—which are now confounded together, is being pursued with no less activity than secrecy. M. Brot, the *Juge Instructeur*, goes every day to the prison of Mazas, and not one of the accused has yet been permitted to communicate even with his legal advisers.

It is said that several persons of the *entourage* at St. Cloud have fallen into disgrace for having spread, if not false, at least premature statements relative to the *question d'Orient*, and calculated to act on the Bourse, of the same nature as those which have drawn down the practical reproof of an *avertissement* on the *Patrie*. Be this as it may, we are assured, on good authority, that Louis Napoleon expressed himself with marked severity on the subject of such proceedings.

The *Moniteur* has published a note, according the authorisation of a trial of the scheme we mentioned some time since, for the establishment of a railroad through Paris, on which are to run monster omnibuses, each drawn by a single horse. The plan will, as soon as possible, be put in execution, beginning on the Cour-la-Reine and the Quai de Billy.

The theatres are making active preparations for the winter campaign, which promises to be most brilliant.

At the Porte St. Martin is to appear, at the conclusion of the representations of "L'Honneur de la Maison," a *féerie*, entitled "Les Sept Merveilles du Monde," which promises to be *la première* of its race. Upwards of a year has elapsed since the preparations for this piece commenced, and they have been carried on unceasingly ever since. The first scene-painters in Paris have all been employed on the decorations, not only the most skilful *costumiers* have been occupied with the dresses, but the aid of various well-known artists has been called in to make drawings for their guidance, and no less than twelve hundred costumes are being prepared for the occasion. The theatre is to be closed for ten days or a fortnight, previous to the first representation, in order to give time for the carpenters, machinists, &c., to place and arrange all the immense and complicated machinery requisite to produce the extraordinary and magnificent scenes and effects proposed in this marvellous spectacle.

The Vaudeville Lyrique, the Variétés, and the Gymnase are also completing preparations for new works; and no doubt we shall have the same fact to announce of the more important ones in the course of next week. Meanwhile, there is nothing new of merit or interest appearing.

An event, which cannot fail to have much interest in the theatrical and artistic world here, is the approaching sale of the hôtel of Mdlle. Rachel, furnished; and, with the exception of the library, and a few articles of vertu, souvenirs, &c., which she has decided on retaining, all the rest will be offered for public competition in the state in which she inhabited it. This habitation, situated in the Rue Trudon—a street not otherwise known than because it contains the hôtel in question—was, a few years since, purchased by the great tragedian, and rebuilt, arranged, and furnished, with a taste and luxury the most remarkable, the most varied, and the most complete—the details of which we regret that our space forbids our giving. Suffice it to say, that, in this single mansion are contained specimens of the architecture, decoration, and style, of nearly every epoch and every country; that the taste of the *artiste*, the *grande dame*, and the *petite maitresse*, are every where united with a skill and an adaptation perfectly marvellous: the severe, the classic, the elegant, the luxurious, the simple—all find places, blended with such perfect harmony that nothing in the strange *melange* can offend the most fastidious eye; and every taste finds wherewith to satisfy itself. And why does Mdlle. Rachel—having spent an amount of pains, time, and money almost inconceivable on this *chef-d'œuvre*; having perfectly succeeded in its completion and completeness—resolve thus to throw away all but the last item? Dear readers, were we to enumerate all the reports afloat, given as responses to this question, our *courrier* would extend to a length far beyond its permitted limits. Content yourselves, as we are obliged to do, with the fact; and, if your purse and leisure permit, come over to Paris to visit this *bijou* as soon as the *affiche* shall announce to you that you and the public are at liberty to penetrate the sanctuary.

The Emperor and Empress left St. Cloud for Dieppe on Saturday, and arrived in the evening. They were well received by the people and the municipal authorities. The inhabitants of Dieppe illuminated their houses on the occasion of the Emperor's visit. On Sunday morning, at half past eleven, their Majesties went to church to hear mass. An immense crowd assembled on the way, and greeted their Majesties with loud acclamations. During the interview with the authorities, the Emperor received from the Mayor the legal deeds by which the Municipal Council made over the Hôtel de Ville to the Emperor as a gift. It was expected that the Emperor would return to Paris alone in three or four days, and set out almost immediately afterwards for Lille and the camp at Helfaut. After his excursion in the northern departments, his Majesty will rejoin the Empress at Dieppe

The last races at Dieppe have succeeded so well that it has been decided that two steeple-chases shall take place there on the 8th of next month; and there is reason to believe that the Emperor and Empress will be present at them. Upwards of 10,000f of public money will be given for the purpose. Sunday is the day on which these amusements usually take place in France; but the stewards (one of whom is M. Charles Laffitte, of Paris) have had it fixed for Thursday, the 8th September, in order to give an opportunity of attending to those whose religious scruples would prevent them on the Sabbath.

By Imperial decree in the *Moniteur*, all corn and flour, however imported into France before the 1st of January next, is to pay the minimum duty fixed by the law of the 15th of April, 1832. Rice, meal, and pulse will, during the said period, pay a fixed duty of 25 centimes per 100 kilogrammes.

The questions of the day in France are the state of the crops, the measures taken by the Government to provide against any deficiency in the food of the people; and the vast commercial speculations which are on the *tapis*. There is an increasing probability of a change in the commercial policy of France; and, though radical changes may not be easy to effect in a country in which public opinion is not yet prepared for them, yet there can be little doubt that important modifications are in contemplation. There is every reason to believe that the Emperor himself is a Free trader; in the Cabinet there is a difference of opinion. The movement in favour of Free-trade has already commenced, and it is probable that we shall, before long, see it assume greater proportions.

DENMARK.

The reports of a treaty of neutrality between Denmark and Sweden, in case of a war between Russia and the Western Powers, are destitute of all foundation. The Danish Government is not in a position to espouse a Scandinavian line of policy, if opposed to any of the great powers. Those of the Ministers who attach chief weight to the consolidation of the kingdom, to be cemented by the recent law arranging the succession to the Throne, lean towards Russia, while those who expect most advantages from trade and commerce are most disposed to side with England. The interests on the two sides cross each other constantly; and the difficulties in the way of the English railroad in Jutland, which still exist in spite of the Parliamentary act of the law passed, the grant of the concession, arise chiefly from the apprehensions of the increased political influence, due to so extensive an undertaking, likely to be gained by the English.

The cholera is dying out at Copenhagen. The total number of cases have been nearly 7000, of whom 3697 have died. Amongst the contributors to the voluntary cholera fund we observe the name of Mr. Peto mentioned for 3000 marks banco.

HOLLAND.

We hear from the Hague that the discussion of M. Van Hall's law on religious liberty still continues in the Second Chamber of the States-General. The Catholic party affect great confidence as to the ultimate rejection of the law.

PRUSSIA.

The King of Prussia is staying at Putbus, in the island of Rugen, for the benefit of sea-bathing. His health may has derived every advantage to his health that was expected from his trip, and has conferred unbounded pleasure on the inhabitants of the island and the neighbouring province of Pomerania, by his affable participation in the various amusements of the watering-place, as well as by his condescending, unrestrained intercourse with the visitors there. Among the last arrivals in Putbus are the Baron Von Manteuffel and the Herr Von Bodelschwing, the Minister of Finance; the former of whom was received and treated with the most flattering distinction by his Majesty. Shortly before the Minister-President left Berlin for Putbus, an address was presented to him by a Conservative Association of Berlin, the contents of which have excited attention, as a gratifying acknowledgment to Baron von Manteuffel on the part of the country in his hitherto successful struggle against a Russian-loving *coterie*. The concluding phrase runs thus:—

Our object is, with every feeling of respect, to express to your Excellency our conviction, which is certainly that also of the whole manufacturing and commercial class in Berlin, that it is the reverse of expedient to throw the weight of Prussia's support in that direction which has always shown itself as most dangerous and opposed to our whole progress and development.

With a feeling of satisfaction at this manifestation of public opinion, moderate as it is, the Berlin correspondent of a Hamburg paper adds, with excusable patriotic complacency:—

It is not without importance to Europe at large, that opinion in Prussia should manifest itself as anti-Russian.

AUSTRIA.

The youthful Emperor of Austria, on the 19th inst., celebrated his *fiançailles* at Ischl with the Princess Elizabeth Amelia Eugenia, daughter of Duke Max, the *chef* of the ducal side line of the present Royal family of Bavaria. The Princess, who has not yet completed her 16th year, is just now staying at Ischl in company with her mother, who is a sister of the Queen of Prussia. The youthful Princess was born on the 24th December, 1837. Her Royal Highness is the second daughter of Maxie Iilian Joseph Duke of Bavaria and of Ludovica Wilhemina Princess of Bavaria; she has three brothers and four sisters. She is grand-daughter of the late King Maximilian Joseph of Bavaria, cousin of the Emperor of Austria, and nearly related to the Queen of Prussia.

It has been officially announced that the state of siege will cease in Vienna, Prague, and in the Bohemian fortresses of Koniggratz, Theresienstadt, and Josephstadt, on the 1st of September next, when the civil authorities and courts will fully enter into their natural sphere of action. As the political and judicial reorganization of the empire will be completed by the end of the year, the public begins to look forward with considerable impatience to the meeting of the Reichsrath on the 24, 25, and 26 of the Imperial Patent of December 31, 1851, by means of which the Constitution of March was abolished. The first paragraph relates to certain statutes for the *staatsrechen* or hereditary nobility possessing landed property: the second treats of consultative assemblies to be formed of hereditary nobles, plebeians possessing great or small landed property, and representatives of the commercial and manufacturing interests: the third stipulates that from time to time the great landed proprietors or their representatives shall be summoned to consult with the authorities of their respective districts. The future peace and welfare of Austria must much depend on the way in which these difficult matters are settled.

ITALY.

The failure of the harvest in Italy is exciting the apprehensions of the Italian Government. A letter from Florence announces that fifty-eight vessels, laden with wheat, entered the port of Leghorn, from the 1st to the 14th August. Nearly one half of them were Greek vessels. On the 14th and 15th twenty vessels, coming from the Black Sea, entered the harbour. There were eight more in sight.

The quantity of specie which is now leaving Piedmont for purchases of corn in foreign markets has, says one of the journals, caused the National Bank of Turin and its branch establishments to raise their rate of discount from four to five per cent.

SPAIN.

Great rejoicings have taken place in both Castiles, in consequence of the appearance of the Royal decree confirming the railway concessions. Addresses had been forwarded from Cadiz, Valladolid, Burgos, Segovia, Bilboa, &c., thanking the Government for having solved that great question in the interest of the country. M. Salamanca has arrived in Paris, the object: it is stated, of bringing out the project for making a railroad from Madrid to Bayonne. Monied men in France and England are advised to be cautious how they advance funds to make railways in Spain until the Cortes have given their sanction to the projects which foreign capitalists are called upon to execute. Foreign capitalists have before them, as a warning, the difficulties that have been experienced in Catalonia, Aranjuez, Santander, and Asturias, in consequence of proceeding without the due sanction of the Cortes. Any one acquainted with Spain knows the value of such "Royal orders;" and nothing is more common than to see decrees, promulgated on the advice of one set of Ministers, modified, or even cancelled, by their successors. The railway concessions are expected to lead to a violent struggle at the next meeting of the Cortes.

RUSSIA.

A recent letter from St. Petersburg says that, after instructing and exercising the Guard and the Grenadier corps, together with the artillery and cavalry, the Emperor held a grand field-day at Zarsko-Selo. He was so perfectly satisfied with the result, that the Emperor expressed to all the commanders his highest thanks, and ordered a gratuity of a rouble a-piece to every private. The gratuities of this year at the camp near St. Petersburg alone, amount to 400,000 roubles.

The Emperor has, on the representation of the Chief of the Marine, ordered the full complement of men for the fleet to be made up, and designated the governments that are to contribute recruits to it, as well as the number of Christians and Jews to be drawn from Poland.

On the 30th inst., the Russian fleet of Cronstadt practised gunnery in the presence of the Emperor. On the following day the division of the White returned, with the usual honours, into port, to be laid up in ordinary; the two other divisions of the fleet are still going through their evolutions in the Bay of Finland.

A letter from Taganrog, dated the 3rd inst., says:—"The result of the harvest is most favourable. Large purchases of grain and breadstuffs have been made here and at Rostoff for exportation; and the transactions would have been still more extensive but for the want of vessels.

We learn from Tiflis, under date July 15th, that the Russian Government is preparing for another campaign against the tribes of the Caucasus. The operations will commence in the latter part of August. A flotilla is being armed in the Sea of Azoff to support the movements of the army.

THE EASTERN QUESTION.

No authoritative news, tending further to solve the differences between Russia and Turkey, has come to hand, although rumours have been rife in all the capitals of Europe that the Porte has accepted the Vienna note. The Russian troops still hold possession of the Principalities, and the combined fleets are in the Bay of Besika.

All accounts agree in attesting the excellent condition of the Turkish army under Omer Pachs; they speak of the discipline, the abundance and goodness of provisions, and the health of the troops, who are burning to be led against the enemy. The camp at Erzeroum consists of fifteen battalions of infantry, three regiments of cavalry, and one of artillery. The General in-Chief is Abdi Pacha, an officer who has received a European education, but who as yet is untried. Hussein Pacha, who commands the cavalry, has been educated in the field, and gone through the last Russian campaign. Selim Pacha, who commands 18,000 regulars at Batoom, is also one who has fought the Russians. Abdul Kerim Pacha, a Kurdish veteran of seventy, commands the troops at Trebizond. Omer Pacha has advanced his outposts to points on the right bank of the Danube, where an actual collision may chance to take place. The Turkish Commander has intimated that he shall lire on any armed vessels under the Russian flag which attempt to ascend the Danube above the confluence of the Pruth, to which point they are permitted by treaty to advance. Four gunboats which had arrived as high as Galatz have been summoned to descend the stream. One of the long flat islands near Ismail, which are by treaty neutral territory, has been partly fortified by the Russians, and connected with the shore of Bessarabia by a wooden bridge. On this point, also, the Turks are said to have raised works opposite to those of their antagonists. The Turkish reports from the camps state that the most untiring assiduity and invincible courage are to be met with every where. Troops are flock.ng in on all sides to offer their services to the Sultan; even the Kurds were come. A Correspondent of the *Trieste Zeitung* writes from Constantinople:—

Nobody will believe that the proposals sent from Vienna to the Czar have met with his approval. Everybody here speaks of nothing but war; and some enthusiastic Turks go so far as to talk of giving the Russians a mortal wound on their own ground, and so reconquering all the territory Turkey has lately lost.

A letter from Bucharest of the 10th says:—

A great agitation prevailed here lately amongst the Boyards, on the occasion of the Sultan's firman dismissing the Prince Hospodar, for having favourably received the Russian troops. On the 9th, this firman having been read in the Assembly of the Boyards, the latter requested the Prince not to abandon the Government in the present critical circumstances, and the Prince consented to their request. M. Mons, the Secretary of State, and M. Voandes, the Director of the Ministry of the Interior, were requested to proceed to Constantinople; but as they have no confidence in the maintenance of tranquillity and order, they will not go. In consequence of this determination of the Prince the Consul of France took down his flag, and placed his countrymen under the protection of Greece. The Consul of England declared to his countrymen that he could not protect them any longer, since the Prince had resisted the orders of his Sovereign; he would, he said, ask for instructions. The scarcity of provisions is so great in the fortresses of Bulgaria that the troops suffer exceedingly. The Hospodar of Moldavia intends contracting a loan to meet extraordinary expenses. It is supposed that he will apply to the Russian banks.

The Austrian post office authorities have given notice that—the mouth of the Danube being impassable—the Constantinople mail will be forwarded by way of Trieste. Letters for Jassy will be sent by way of Galatz. Thirty Austrian vessels laden with corn are to be towed up the river from the Sulina. No dredging will be done this summer, notwithstanding the recent pacific communications of the St. Petersburg Cabinet. Whether the sand will be completely removed at some future time is another question. It is said that the Russians may possibly be saved the trouble of dredging, as the idea of restoring the Trajan's Canal from Chernavoda to Kostendsche has been revived. The expense is described as comparatively small; and the canal would render the communication between the Danube and the Levant independent of the good or bad will of Russia. A hope is expressed that the realisation of the plan will be one of the first fruits of peace. A Russian Commissien, which is examining the Sulina mouth of the Danube, is said to have received orders to draw up a plan for its improvement. Haid Pacha is mentioned as the future Turkish Envoy to St. Petersburg

A conspiracy has been discovered at Aleppo. The conspirators are Mussulman fanatics. Their object was to plunder and kill the Christian inhabitants of the towns. The ringleaders had been arrested and transported to Rhodes.

CALIFORNIA

(From our own Correspondent.)

SAN FRANCISCO, July 15th, 1853.

SINCE our last date, the most important topic of conversation in this community has been the information brought from China by the English barque *Raleigh*, relative to the progress of the rebellion in that country. Her late accounts are confirmatory, in a remarkable degree of the rumours hereafore circulated, that the revolution was set in motion by a religious principle approximating to Protestantism, coupled with a determination to drive from the Chinese throne the Tartar dynasty. The attack made by the rebels on the house of H.M.S. *Hermes*, in relation to the destruction of the Joss houses and the idols, which marks the track of the rebels, and their possession of the ten commandments, would seem to prove beyond a doubt, that the Bible had been a powerful agent, by some means, in exciting and sustaining the flame of a revolution which threatens to overthrow the present order of things in China. The revolutionists received the officers of the *Hermes* with kindness, courtesy, and respect, and addressed them as their "brothers." These are indications that, if they succeed, the doors of China will be freely opened to the commerce and representatives of European and American nations. Should this anticipation be realised, who can estimate the effect upon the Chinese as a nation, as well as its influence in shaping the destiny of other portions of Asia? It is felt here that no portion of the world is more deeply interested in the final result of this Chinese revolution than the people of the United States, and particularly those of California. When the projected Pacific Railroad, which is to join us to the eastern states, is completed and by many it is confidently believed this will be the case before the expiration of the next five years—no country will be so favourably situated as California to take advantage of a free and liberal commerce with China.

By recent arrivals from the Sandwich Islands, the intelligence has been received here that the small-pox is making fearful ravages among the natives of Oahu. The authorities have appointed a board of health, and they have taken measures to ensure, if possible, a general vaccination through the Islands; but, from the violence of the epidemic, it is much feared that the Islands will be decimated. In consequence of the alarming spread of this scourge, the King has issued the following proclamation:—

Whereas, it has pleased Almighty God, the Ruler of Nations, and in whose hands are the destinies of all men, to send among our people a malignant and infectious disease called the small pox, which is rapidly increasing, and threatening to spread throughout our Islands and destroy the population; and whereas no human efforts can prove successful in arresting the progress of this fearful disease without the Divine interposition

Therefore, We, by and with the advice and consent of our Privy Council of State, hereby issue our Proclamation, calling upon all pastors of churches and Christian people on the Island of Oahu, to observe Wednesday next, the 15th inst, as a day of fasting, humiliation, and prayer to God, that He will be pleased to remove from us the threatening calamity, and grant us, as a people, life, health, and prosperity. In like manner we call upon all pastors of churches, and good people on our other Islands, to observe such a day at their earliest convenience after the receipt of this notice.

Done at our Palace in Honolulu, this 9th day of June, A.D., 1853

KEONI ANA. KAMEHAMEHA

The general accounts from the mines continue good. The agricultural prospects of an abundant harvest are promising; and, notwithstanding the large amount of goods of every description that is arriving by clipper ships from the eastern states, the trade in the city is improving.

Lola Montes has made herself still more notorious since her short residence in California, by having married a Mr. P. Hull, one of the proprietors of the *San Francisco Whig*. The ceremony was performed at the Roman Catholic Church at the Mission Dolores, about three miles from San Francisco, by one of the Padres attached to the Mission, who gave the bridal party a repast after the ceremony. In the afternoon the "happy pair" took passage in one of the up-river steamers for Sacramento City, where Madame Lola Montes Hull—Countess of Landsfeli, as she styles herself—had an engagement to dance.

When Lola, after her marriage, appeared on the boards and commenced her first dance, some persons in the pit laughed loud enough to be heard over the house. The lady immediately stopped, walked forward to the footlights, and said, "Ladies and gentlemen, if my dancing does not please you, I had better retire;" and she did retire, amid the hisses of a portion of the audience. Great confusion and noise then ensued, until the manager came forward and said, "Ladies and gentlemen, Madame Lola Montes supposed some persons were turning her dancing into ridicule, and, being very sensitive, she felt herself insulted. But, perhaps, it only came from one. With your permission she will go on." After several minutes had elapsed, Miska Hauser was announced. He played on the violin his "Bird on the Tree." The piece was admirably performed, that he called forth an encore, and almost put the audience in a good humour. Mdme. Lola then came forward and danced for a minute and a half, and left the audience then rose almost en masse, and left the house. Many demanded their money at the box-office, but were not successful. They then returned to the body of the house and called for the manager he, however, did not appear; but Miska Hauser did, and then Chenal, and then Lola Montez danced her Spider dance—which wound up the performance.

About twelve o'clock the same night a large number of persons appeared before the Orleans Hotel where she was staying, with old kettles, bells, drums, &c., to *charivari* Madame Lola. A few minutes after they commenced, she placed a lamp in her window, and bowed in acknowledgment; but some person soon blew it out, and she was left in darkness. When the noise ceased, she, still in darkness, said:—"I am a woman, and an honest woman; and any man, or set of men, calling themselves *men*, and wishing to maintain the position of men, to come here and make such a dirty, mean, low, idle exposition of their ignorance"——Here her voice was drowned by the groans of the crowd; so she retired, and, after they had tired themselves, they retired too

On the next evening of her performance she made a kind of apologetic speech; and now she is on the best terms with the Sacramentans: the lovers' quarrel is made up, and she is mightly dancing, and they applauding.

M.

PEACE WITH AVA.

The *London Gazette* of Tuesday contained a despatch received at the India House on that day from Lord Dalhousie. This document narrates the course of the negotiations and events in the Burmese empire to the termination of hostilities.

It appears that after the King of Ava was dethroned, messengers bore the submission of his successor, the Mengdoon Prince, to the British camp, and begged for peace. The only objection raised by the envoy was, that the frontier should be at Meaday. Upon this the concession of Meaday was offered; when the Burmese envoy refused to sign the treaty and withdrew. As a consequence, "the British frontier was finally fixed to the north-west of Meaday and Toungboo." The King of Ava did not sustain his envoy; but, still desiring peace, he ordered the Burmese troops not to attack Meaday and Toungboo; set at liberty British subjects imprisoned in Ava, and expressed his wish that "the merchants and people of both countries should be allowed, in accordance with former friendship, to pass up and down the river for the purpose of trading." The response was not less amicable:—

The Governor-General in Council is willing to accept these specific declarations and acts of the King as substantial proof of his acquiescence in the proposed conditions of peace, although a formal treaty has not been concluded. Wherefore, the Governor-General in Council permits the raising of the river blockade; consents to the renewal of former intercourse with Ava, and now proclaims the restoration of peace. The army of Ava will no longer be maintained on a war establishment. At the same time, a force will be permanently retained at Pegu, amply adequate for its defence, and fully prepared for the event of war.

Lord Dalhousie returns thanks to all the officers and men engaged in the war: Commodore Lambert, Sir John Cheape, and Captain Lynch, are especially mentioned.

INDIA AND CHINA.

The following telegraphic despatch has been received, dated Trieste, August 22:—

The India mail arrived with dates from Calcutta, July 16; Bombay, July 20; Hong-Kong, July 7.

The King of Ava, being starved into submission, has sued for peace, set the British prisoners at liberty, and requested that the river blockade may cease. The Governor-General has assented, and proclaimed peace, although a formal treaty has not been concluded. Trade in India is dull, with no easy.

In China, the Imperialist forces had attempted to regain Ching-Kiang-Foo, but without success, notwithstanding foreign aid. The markets were dull.

THE CIVIL WAR IN CHINA.

Some interesting despatches and documents relating to the rebellion in China have just been published, by order of the House of Commons. They were presented to the House by command of her Majesty, in pursuance of their address of August 5, 1853.

The first despatch is from Sir G. Bonham, her Majesty's Plenipotentiary in China, dated Shanghae, March 28, 1853. It announces his arrival at that port in the *Hermes*, with the view of ascertaining personally the progress of the rebellion. Adverting to the rumour of the capture of Nankin, Sir G. Bonham says:—

As soon as that event takes place, the Imperial Government will have received the severest blow since the rebellion commenced; for, leaving aside all considerations of prestige and Sacred associations connected with the ancient capital of China (considerations, nevertheless, as your Lordsh p knows, of much weight on the Chinese mind), the fact of a strong body of armed men being in possession of so large and important a city on the banks of the Yang tsze-Keang, in the very heart of the Empire, close to the Grand Canal, with means of intercepting all communications, and stopping the conveyance of grain to the capital, is not one to be easily overlooked nor carelessly glossed over; and to the Chinese, as well as to ourselves, the next move of these forces becomes an interesting subject for speculation. But whatever that move may be, and whatever direction it may take, I have determined, pending the instructions of her Majesty's Government, not to interfere in any shape in favour of the Chinese Government, as I feel confident that any such interference on my part would only prolong the struggle, though in the first place it might appear to have a totally different result.

The Earl of Clarendon, in reply, approves of Sir G. Bonham's determination not to interfere in any shape in favour of the Chinese Government.

Sir G. Bonham's next despatch is dated Shanghae, April 20, 1853. It announces the successes of the insurgent force in the vicinity of Nanking and along the banks of the Yang-tsze-Keang; in consequence of which the British and other foreign residents in Shanghai, formed themselves into a volunteer local corps, for the protection of their persons and property. In a despatch, dated April 22nd, Sir G. Bonham announces the fall of Nanking and of Chin-keang. Mr. Meadows, the Interpreter, offered to go into the interior in quest of information, and proceed from Shanghae to Soochow, Changchow, on the Grand Canal, and Tangyang (twenty three miles distant from Chin-Keang-foo). Mr. Meadows collected some information relative to the insurgents, a portion of which is quoted by Sir G. Bonham:

Teen Tih, long the chief of the insurrection, died some months ago, and his successor is known by the name of Tae Ping. The chief military leader of the force is called Yang-sew-tsing, and is reported to be a relation of the Governor-General of the Two Keang, Luh-kien-yung, said to have been slain at the capture of Nanking, but now reported to have joined the ranks of the insurgents.

The accounts received from Mr Meadows describe these insurgents as puritanical, and even fanatic. The whole army pray regularly before meals. They punish opium-smoking with death, and tobacco-smoking with the bamboo. The women captured in battle are lodged in separate buildings, as well as the children, who are at the same time clothed and educated.

The Chinese Governor of Shanghae having spared no pains to spread false rumours among the insurgents to the effect that the British forces were to take the part of the Imperialists against them. Sir G. Bonham determined to go up the river Yang-tsze-Keang, in the *Hermes*. Sir George appends translations of articles from the *Peking Gazette*, which announce the degradation of the Governor-General of these provinces, Luh-kien-ying; of Saesiangsh, late Prime Minister; and lastly, but not least, of Yih-shan, the Governor of Canton, whose property and estates have been confiscated by the Emperor. The latter decree of confiscation was immediately carried into effect by the Canton authorities.

The next despatch from Sir G. Bonham is dated Shanghae, May 6, and was written immediately after his return from his expedition in the *Hermes*

On the arrival of the *Hermes* off Nanking, Mr. Meadows, the interpreter, went on shore, and was introduced to two officers, who, it was subsequently ascertained, held the position of princes amongst the disaffected; it being part of the new hierarchy to have a prince for each quarter of the compass, in addition to a fifth prince, called assistant-prince. Sir G. Bonham says

I found the insurgents had established a kind of Government at Nanking, consisting, in the first place, of Tae Ping, the Sovereign Ruler, who is supposed by the believers of the new sect (if such do really exist) to hold the position of rank, either spiritually or in a corporeal sense, of younger brother of our Saviour. There was little attempt at mystery as to Tae Ping's origin on the part of the insurgents it was admitted by several parties that he was a literary graduate of the Canton province, who, being disappointed in his literary honours, took to what the Chinese are in the habit of calling "strange doctrine;" that is, he studied the missionary tracts, copies of which were procured, there can be little doubt, from the late Dr. Gutzlaff's Union. Tae Ping and his small nucleus of adherents then embarked in this insurrection, and after three years' perseverance and general success, they ended by capturing Nanking and Chinkeang, where we found them in full force. Under this Sovereign ruler are the five Princes above alluded to, first and second ministers, and a host of so-called Mandarins—most of whom are Cantonese. I should not estimate their force, of real fighting men, at less than 25,000—though I believe that of the original number who started from Kwangsee, of more than 7000 are now with Tae Ping. As I stated already, they have established a new religion, which may be called a kind of spurious revelation. The base of this structure is supposed to be founded upon the Old Testament and religious tracts, but they have superadded thereto a large dose of superstition and nonsense which makes an unprejudiced party almost doubt whether there is any real sincerity in their faith, or whether it is not used merely as a political engine of power by the chiefs to sway the minds of those whom they are anxious to attach to their cause. For instance, he is stated to have been taken up to heaven by God, who descended upon earth for that purpose, and from whom he received orders to rule the world by subverting the present Government and propagating the new doctrines. He is now possessing this duty. Tae Ping's followers further alleged that 25,000 Tartars—men, women, and even children at the breast—were put to death at the capture of Nanking; and that he was only waiting for a mandate from heaven before taking his departure for Peking.

Mr. Interpreter Meadows furnishes an interesting account of his conversations with the insurgent chiefs at Nanking and Chin-keang. This conversation with the Northern and Eastern Princes is so remarkable that we quote it with little abbreviation:—

About an hour or two after the *Hermes* dropped anchor at Nanking, on the 27th April, 1853, I, in conformity with instructions, landed, accompanied by Lieutenant Spratt, and requested to be conducted to the highest authority to whom immediate access could be obtained. After about half an hour's walk, led by one or two volunteer guides, and surrounded by numbers of the insurgent troops, we were stopped in front of a house in the northern suburb. Two persons clothed in yellow silk gowns and hoods then appeared at the threshold, and the soldiers about called on me to kneel. This I refused to do, but, advancing and uncovering, told the two persons that I had been sent by her Majesty's Plenipotentiary to make inquiries and arrangements respecting a meeting between him and the chief authorities at Nanking. One of the chiefs, whom I subsequently ascertained to be known as the Northern Prince, then asked if I worshipped "God the Heavenly Father?" I replied that the English had done so for eight or nine hundred years. On this he exchanged a glance of consultation with his companion (the Assistant Prince), and then ordered seats to be brought. After I and my companion had seated ourselves, a conversation of considerable length ensued between myself and the Northern Prince, the first in rank of the two. The conversation, in so far as directed by him, consisting mainly of inquiries as to our religious beliefs, and expositions of their own. He stated that as children and worshippers of one God we were all brethren and, after receiving my assurance that such had long been our view also, inquired if I knew the "Heavenly Ruler" (Teen tsze tsang). I replied that I was most likely acquainted with them, though unable to recognise them under that name, and, after a moment's thought, asked if they were ten in number. He answered eagerly in the affirmative. I then began repeating the substance of the first of the Ten Commandments, but had not proceeded far before he had laid his hand on my shoulder in a friendly way, and exclaimed, "The same as ourselves! the same as ourselves!" while the simply observant expression on the face of his companion disappeared for one of satisfaction as the two exchanged glances. He then stated, with reference to my previous inquiry as to their feelings and intentions towards the British, that not merely might peace exist between us, but that we might be intimate friends. He added, we might now, at Nanking, land and walk about where we pleased. He spoke repeatedly of a foreigner at Canton, whom he named Lo Ho Sun, as being a "good man." He described the person as one who had cured the sick without remuneration, and as having been recently home for a short period (Dr Hobson, medical missionary?). He recurred again and again, with the appearance of much gratitude, to the acquaintance that he and his companions in arms had enjoyed the special protection and aid of God, without which they could never have been able to do what they had done against superior numbers and resources; and, alluding to our declaration of neutrality and non-assistance to the Manchoos, said, with a quiet air of thorough conviction, "It would be wrong for you to help them; and, what is more, it would be of no use. Our Heavenly Father helps us, and no one can fight with him."

In reply to the inquiries respecting the Tae Ping Wong, the Prince of Peace, the Northern Prince explained in writing that he was the "True Lord," or Sovereign; that "the Lord of China is the Lord of the whole world; he is the second Son of God, and all the people in the whole world must obey and follow him." As I read this without remark, he said, looking at me interrogatively, "The True Lord is not merely the Lord of China; he is not only our Lord, he is your Lord also." As I still made no remark, he next kept looking at him. he did not think fit to insist on an answer, and, after a while, turned his head, and began talking of other matters. His conversation gave great reason to conclude that though his religious beliefs were derived from the writings, or it might even be the teachings, of foreigners, still he was quite ignorant of the relative positions of foreign countries, and had probably not most of his notions of internatical dealings from the Chinese records of periods when the territory of the present empire was divided into several states.

The interview in question did not take place. Sir G. Bonham having declined, at the last moment, to go on shore to meet the Northern and Eastern Princes. On the 29th April, a communication, on yellow silk, was brought from the Princes of the East and West to Sir G. Bonham, on board H M S. *Hermes*. They begin their despatch in the following terms:—

The Prince of the East and Prince of the West, both subjects of the Celestial dynasty, now under the sway of Tae Ping, truly commissioned by Heaven to rule, hereby issue a decree to the distant Eng lish, who have long recognised the duty of worshipping Heaven (God), and who have recently come into the views of our Royal master, especially enjoining upon them to set their minds at rest, and harbour no unworthy suspicions.

The document contains the following passage:—

Happily, our Heavenly Father and Celestial Elder Brother, have, from an early date, displayed their miraculous power amongst the English; and you have long acknowledged the duty of worshipping God the Heavenly Father and Jesus our Celestial Brother, so that the truth has been preserved entire, and the Gospel maintained.

After an admixture of superstitious error, in which the insurgents claim divine honours for their leader, they formally give permission to the English to come in or go out of the empire, whether to and them in exterminating their foes or to carry on their commercial operations as usual

Sir G. Bonham, in reply, repelled the assumption that the English were subordinate to their Sovereign; and gave them notice that, if they presumed to injure the persons or property of British subjects, the injuries would be resented, as similar injuries were resented ten years ago.

THE ADMIRALTY.—ST. PETERSBURG.

THE gilded dome of the Isaac Church and the spire of the Admiralty are the first objects described by the traveller who approaches the city of the Czar. The long façade of the Admiralty is seen to great advantage from the English quay. The front of this vast edifice is nearly half an English mile in length, and is two stories at right angles to it, and running down to the river, are 650 English feet in length. One of these sides faces the Winter Palace; the other, the Isaac Place and the Senate House. The effect of the light and graceful spire is very pleasing; but the gallery at its base is greatly disfigured by some emblematic figures in plaster, which are clustered thick about it. Near the principal entrance are some gigantic figures, also in brick and plaster, emblems of Russia's power and strength. The subject of one of the groups is Peter the Great receiving a trident from the hands of Neptune

A considerable portion of the Admiralty is devoted to school-rooms and dormitories, many of whose windows look upon the parade in all the youthful pride of cocked hats, swords, spurs, and tight waists. The model room is well worthy of inspection. From the tower, the eye looks down upon the dockyards below, in which lie prostrate the pride of the Volga and Kostroma forests, and mighty ships are performing into form and beauty under the busy hands of swarms of workmen. When a ship is launched, the pageant seen from this tower is highly interesting.

The chief buildings of the capital are grouped round the noble Admiralty square An admirable view of the city is obtained by ascending the tower of the Admiralty; since, from this building the principal streets of St. Petersburg diverge. The tower stands immediately in the centre of the Admiralty façade; and its tapering gilded spire and glittering vane are visible from the most distant parts of the city.

The Russian Admiralty is under the direction of the Minister of

THE ADMIRALTY, ST. PETERSBURG.

Marine, who receives his orders from the Emperor. The Grand Duke Constantine is Grand Admiral of Russia. The Russian fleet consists of five divisions, of which three are stationed in the Baltic, and two in the Black Sea. In the last war with Turkey, Russia had 32 vessels of the line, 25 frigates, 20 corvettes and brigs, 7 brigantines, 6 cutters, 84 schooners, 20 galleys, 25 floating batteries, 121 gunboats; making a total of 464 sail, and carrying 6000 guns. Since that time a great activity has prevailed in the Russian docks; and the result is that at the present day the Russian fleet consists of 60 vessels of the line, of from 70 to 120 guns; 37 frigates, of from 40 to 60 guns; 70 corvettes, brigs, and brigantines; 40 steamers; 200 gunboats and galleys: the whole manned by 42,000 sailors and 20,000 marines, with 9000 guns.

The administration of naval affairs in Russia is in excellent order, according to the books and records of the Admiralty of St. Petersburg; but English naval officers and impartial travellers do not consider the Russian navy very formidable. It is currently believed that Russian men-of-war are ill-supplied with stores in consequence of the peculation and dishonesty of the official authorities. It is undeniable that the Russian Government have lately bestowed much care and money on the navy, and they will probably, ere long, insist that the stores shall be well supplied.

NEW CHAPEL-SCHOOL, AT ARDERLEY, HERTS.

This neat structure has just been opened at Wood End, in the parish of Arderley, Herts, six miles from the Stevenage station, on the Great Northern Railway. This "Chapel-School," as its name fully implies, is intended to serve as a complete house of prayer on Sunday; and also for the simple religious education that poor children can only receive, on account of the early age at which they go to work. No secular things are allowed to intrude, so as to offend those who come to worship, a heavy curtain separating the sacrarium from the rest of the building. It is considered that a structure upon this plan might be advantageously applied to numerous outlying places, where the clergy might repair to meet their parishioners, and teach them the Gospel.

The entire cost of the building and its fittings has been £575, of which a portion remains to be raised. As this provison will be the means of bringing religious teaching to the homes of the poor, it is confidently hoped that liberal offerings will be forthcoming to help the Vicar of Arderley in his good work, as the net value of his living is only £200 per annum.

CHAPEL-SCHOOL JUST ERECTED AT WOOD-END, ARDERLEY, HERTS.

THE "GAUNTLET," CLIPPER SHIP.

This beautiful specimen of naval architecture, has just been built in the Clyde, to compete with the screw steamers and clipper ships in the Australian and Indian trades; and, from her fine model and rig, bids fair to be a formidable competitor to the swiftest of them.

The *Gauntlet* is considered the most perfect clipper ship ever launched on the Clyde, and appears more like a yacht of large tonnage than a private merchant ship. Her saloons on deck are very elegantly fitted up, and the sleeping accommodations are entirely below, the lighting and ventilation of which are upon the principles adopted in the Cunard line of steamers, and the completeness of which will be apparent on inspection. The after saloon is fifteen feet in width; the sides are paneled and divided by narrow pilasters. The roof is coved at the sides, and is painted white and gilded; the coving being filled with pierced brass-work, which adds much to the beauty of the saloon, and assists its ventilation. The panels of this saloon are of painted glass, having circular compartments in them, surrounded by very handsome arabesque ornaments; and within these circles are medallion views of Bamborough Castle, in England; Castle Howard, in Scotland; Phoul a Huca, in Ireland; and Llanberis, in Wales; besides subjects illustrative of chivalry, such as a knight arming for battle, going to battle, the return, &c.; the ground-colour of the panels being deep blue, with a damasked pattern in a lighter tint of blue. The pilasters are maple and gold, with panels of glass, on which are painted groups of weapons and shields of arms of the ancient nobility of Great Britain. The seats are covered with crimson velvet, and a rich carpet adds to the luxurious appearance of the whole; a fine-toned pianoforte completing the elegancies for the use and comfort of the passengers. The fore-saloon is much plainer in its decoration, but is very nicely and appropriately furnished. Indeed, in every respect, no expense has been spared in making provision for the comfort of the passengers; shower and plunging-baths and also an ice-house being fitted.

The *Gauntlet* is built of iron, double riveted; and her plates and framing are of much greater thickness and strength than any other iron vessel yet built of the same dimensions; and yet her appearance is remarkably light and symmetrical. She is divided into five water-tight compartments, by strong iron bulkheads reaching from the lower hold to the upper deck. A powerful fire-engine is provided. The riveting was the object of the most especial care of the owners, who employed an experienced superintendent to inspect and test every rivet put into the ship. The measurements of this vessel are:—Length of keel and fore-rake, 183 feet; length over all, 194 feet; breadth of beam, 30 feet 6 inches; depth of hold, 19 feet; rise of floor at the quarter-deck, 3 feet 9 inches. Her tonnage is 784 tons old measurement, 693 tons new measurement, or about 1200 tons burthen. Her stern, which is elliptic, with quarter galleries, looks remarkably light and elegant; and her bow terminates in a pointed scroll figure-h ad.

"THE GAUNTLET" CLIPPER SHIP.

OBITUARY OF EMINENT PERSONS.

BRANSBY COOPER, F.R.S.

This able and distinguished surgeon was the fourth son of the Rev. Samuel Cooper, elder brother of the eminent Sir Astley Cooper, and the grandson of Dr. Cooper, for many years Vicar of Great Yarmouth. Bransby Cooper was born on the 2nd September, 1792, at Great Yarmouth, and there received the elements of his general education. Young Cooper at an early age entered the British service as a midshipman in the *Stately*, a 64-gun ship, under the especial care and instruction of the First Lieutenant, afterwards Admiral Fisher. The sea not agreeing with his delicate health, he consented to return again to school, under the care of the Rev. Mr. Spurdens, of North Walsham, Norfolk. Having finished his education he visited his uncle, Astley Cooper, who was then rising rapidly in public estimation; at his suggestion young Cooper repaired to the Norwich Hospital, where he remained for two years, and then came to London, and entered the house of Mr. Hodgson, of the City, who subsequently attained considerable fame as an operating surgeon in Birmingham and the midland counties, and to whose high professional attainments Bransby Cooper was to a great extent indebted for his surgical acquirements. In the year 1812 Cooper went into the army as assistant-surgeon in the Royal Artillery, and immediately repaired to the Peninsula, then in the midst of war. He was present at the battles of Vittoria, the Pyrenees, Nivelle, Orthes, the siege of St. Sebastian, and the battle of Toulouse. Mr. Cooper was admitted a member of the Royal College of Surgeons of England on the 5th of December, 1823, having for three years previously acted as Demonstrator of Anatomy at St. Thomas's Hospital, and having already published his valuable treatise on the ligaments. In 1843 he was elected an honorary fellow of the college, and in 1848 became a member of the council. Bransby Cooper has made some valuable contributions to the advancement of surgical knowledge, especially in the *Guy's Hospital Reports*. He was also the author of Surgical Essays, on the growth and formation of bone, and on fractures in general; and he wrote another volume on fractures and dislocations; he also edited the biography of Sir Astley Cooper.

THE LATE MR. BRANSBY COOPER, F.R.S.—FROM A PHOTOGRAPH BY MAYALL.

Mr. Cooper died on the 19th inst. He was a kind and amiable man, and was much beloved and respected. He leaves a widow and large family to deplore his loss.

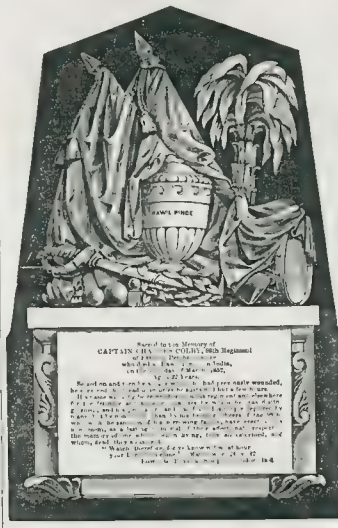
THE RIGHT HON. SIR GEORGE COCKBURN, BART., G.C.B., ADMIRAL OF THE FLEET, AND MAJOR-GENERAL OF MARINES.

This gallant officer—one of the oldest, ablest, and most distinguished in the British service—died on the 19th inst., at Leamington, in the eighty-second year of his age. His professional career, dating back from 1786, when he first went to sea, ranged over the most important and brilliant period of our naval annals, and would, in its narration, involve the history of nearly all our maritime contests during the last wars. Mr. O'Byrne, in his excellent "Naval Biography," where four columns and a half of closely-printed pages are devoted to Sir George Cockburn's life, expresses a regret that his confined limits preclude the possibility of his rendering full justice to the services of the subject of his memoir. How much more difficult, then, is our task, with less than a third of the Naval Biographer's space!

Sir George Cockburn was born April 22nd, 1772, the second son of Sir James Cockburn, sixth Baronet of Langton (M.P. for Peebles in 1762), by Augusta Anne, his second wife, daughter of the Rev. Francis Ayscough, D.D., Dean of Bristol, and niece of George Lord Lyttleton. His ancestors—the Cockburns, of Langton—were of very ancient standing in Berwickshire, and obtained a Nova Scotia Baronetcy in 1627.

THE LATE ADMIRAL SIR GEORGE COCKBURN, BART., G.C.B.

Passing over his earlier years, we find Mr. Cockburn appointed, in 1792, Acting Lieutenant of the *Pearl*; and, in 1793, confirmed in the *Orestes*. Not long after, he was removed to the *Victory*, 100, the flagship off Toulon, of his patron, Lord Hood; from which, on attaining the port of First Lieutenant, he was promoted to the command of the *Speedy* sloop. "As a reward for his skill and perseverance (we quote from O'Byrne) in maintaining the blockade of Genoa, during a gale which dispersed every other ship of a squadron stationed off that port, Captain Cockburn was appointed, January 20, 1794, Acting Captain of the *Inconstant*, 36; and, on the 20th of the following month, was officially posted into the *Meleager*, 32, which latter frigate he commanded in the hostilities against Corsica; and, as one of Hotham's repeaters in the actions of March 14 and July 13, 1795. He was afterwards employed for twelve months in vigorous co-operation with the Austrian troops in Piedmont; and during that period obtained the hearty acknowledgments of the immortal Nelson for his conspicuous zeal, ability, and courage on various occasions; but more especially for the great support and assistance he afforded that hero in running in under the batteries of Larms, on May 31, 1796, and capturing six of the enemy's armed vessels. Being transferred, August 19 following, to the command of the *Minerve*, of 42 guns and 286 men, Captain Cockburn, who remained in that ship until paid off in February, 1802, continued to pursue his gallant career with intense ardour, either conducting in person or assuming a prominent part in a train of the most important achievements. He was first employed in blockading Leghorn; and, on next hoisting the broad pendant of Commodore Nelson, again acquired the admiration of the



MONUMENT TO CAPTAIN COLBY, 98TH REGIMENT, JUST ERECTED IN MANORDIVY CHURCH, CARDIGAN.

The above interesting Monument has just been erected in Manordivy, Cardigan: the sculptor is Mr. E. Gustavus Physick, of Gloucester-place, New-road. The material is fine marble. It is 5 feet 3 inches high, and 2 ft. 6 in. wide: the design consisting of military trophies, is executed in the best style of art, in very bold relief, on a black marble ground.

FUNERAL OF THE LATE EARL OF WARWICK, ST. MARY'S CHURCH, WARWICK.—(SEE NEXT PAGE.)

latter for his conduct at the capture and defeat, while proceeding from Gibraltar to Elba, and in presence of the Spanish fleet, of the *Soliman*, of 40, and the *Mutine*, of 34 guns, December 20, 1796. The former ship struck her colours after a combat of three hours, and a loss out of 7 men, of 14 killed and 44 wounded; the other was compelled to wear and haul off at the close of a sharp action of half an hour: the collective loss of the *Minerve* on both occasions amounting to 7 men killed and 44 wounded. Captain Cockburn also found our corvette captain mounting the [illegible] national corvette, of 18 guns, next took the privateer *Maria* of 8 guns and 68 men; and, after witnessing the evacuation of Porto Ferrajo, bore a very active part in the battle off Cape St. Vincent, February 14 1797. He also brought out, under the severe fire of two strong batteries on Grand Canary Island, the *Marseillaise*, a French letter-of-marque, of 24 guns. On the night of November 5, in the same year, while the *Minerve* was lying stripped in the mole of the Gut, her captain, together with four other officers, effected the capture of the [illegible] privateers by a signal exploit he performed in putting off with only three gunboats to the protection of a convoy which had been observed to be hailed by light and contrary winds near the Spanish shore, whence it was threatened by a flotilla of thirty of the enemy's gunboats. By pulling directly between the inshore part of the convoy and the position occupied by the Spaniards, he successfully checked their career, and, by this spirited exertion, kept them at bay during the whole night, and until the merchantmen had reached their anchorage. In April, 1798, the *Minerve* returned to England to refit, but towards the close of the year she again sailed for the Mediterranean, where Captain Cockburn continued to be employed on various important services, frequently in command of a small squadron, until the conclusion of the war. Among other operations, he joined in the hostilities against Malta—was in company with the *Emerald* at the taking of *La Caroline* privateer of 16 guns and 90 men: witnessed Lord Keith's capture of those frigates and two brigs under Rear-Admiral Perree, June 19, 1799—took, during the year 1800, the three privateers, *Le Furet*, *La Mouche*, and *La Vengeance*, carrying altogether 49 guns and 350 men—made prize, February 11, 1801, of a Danish man-of-war brig: and in September following, captured and destroyed the *Success*, of 32 and *Bracoure*, of 42 guns."

Without dwelling further on the gallant seaman's services during the next few years (among which was his co-operation, as Commodore, in the reduction of Martinique), we come to the expedition to the Scheldt. In this important, but unfortunate affair, Commodore Cockburn took the command of a division of the British Flotilla, bombarded Flushing; and, in the retreat, had the post of honour and formed the rear-guard.

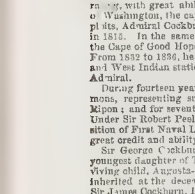
In 1810, he assisted, effectually, at the defence of Cadiz; and, in 1813, having previously attained the rank of Rear-Admiral, proceeded to North America, where war had broken out with the United States. This was the most brilliant epoch and the most important achievement of Sir George Cockburn's naval career. We have not space to enter on the minute description of his exploits. Suffice it to say that the admiral rendered the most effective aid to the land forces, destroying several sea-coast towns, spreading consternation into the heart of the enemy's country, and finally co-operating, with great ability and judgment, in the capture and destruction of Washington, the capital of the United States. For these gallant exploits, Admiral Cockburn was made a Knight Commander of the Bath, in 1815. In the same year, he was appointed Commander-in-Chief at the Cape of Good Hope, and selected to convey Napoleon to St. Helena. From 1832 to 1836, he was Commander-in-Chief on the North American and West Indian station, and in 1837 was advanced to the rank of full Admiral.

During fourteen years Sir George Cockburn sat in the House of Commons, representing successively Portsmouth, Weobly, Plymouth, and Ripon; and for seventeen years was one of the Lords of the Admiralty Under Sir Robert Peel's last Administration, he held the responsible position of First Naval Lord, and acquitted himself in Parliament with great credit and ability.

Sir George Cockburn married, November 28, 1809, his cousin, Mary, youngest daughter of Thomas Cockburn, Esq.; and leaves an only surviving child, Augusta-Harriet-Mary. The baronetcy, which Sir George so inherited at the decease, in 1839, of his elder brother, Major-General Sir James Cockburn, Bart., G.C.H., now devolves on the Very Rev. William Cockburn, Dean of York, the Admiral's next brother.

Sir Alexander Cockburn, Her Majesty's Attorney-General, is nephew of the deceased Admiral.

ALEXANDER GEORGE FRASER, SIXTEENTH LORD SALTOUN, K.T., K.C.B., G.C.H.



This nobleman, who died on the 18th inst., at Auchinruth, Elginshire was, at the period of his decease, a Lieutenant-General in the army, Colonel of the 2nd Foot, Knight of the Thistle, Knight Commander of the Bath, Knight Grand Cross of Hanover, and a Knight of the Foreign Orders of St. George of Russia, and of Maria Theresa of Austria. These several honours attest his Lordship's military reputation. He entered the army in 1793, was engaged in Sicily in 1806-7, fought at Corunna, and served with distinction in the Peninsular War—being present at Nivelle, Nive, and Bayonne. He was also at Waterloo, and gained unperishable fame by the part he took as second in command to Sir John Macdonell, in the gallant defence of Hougomont. During the war in China, Lord Saltoun was employed, and received the insignia of a K.C.B.; and the thanks of both Houses of Parliament for "the energy, ability, and gallantry" then displayed. The Duke of Wellington, on one occasion, described his Lordship as a pattern to the army "both as a man and a soldier."

Lord Saltoun was born 22nd April, 1785, and married, 6th March, 1815, Miss Catherine Thurlow, illegitimate daughter of Edward Lord Thurlow, Lord Chancellor: but by her (who died 9th July, 1826) had no issue. The family honours devolve, consequently, on his nephew, Major Alexander Fraser, who is now seventeenth Baron Saltoun.

The deceased Lord sat in Parliament as one of the Representative Peers for Scotland. Of most of the musical institutions of the metropolis, his Lordship was a stanch patron: and he acted as President of the Madrigal Society, and Chairman of the Musical Union.

LORD SUFFIELD

EDWARD VENNON HARBORD, 4th Baron Suffield, of Suffield, in the county of Norfolk, was the eldest son of Edward, the third Baron, by his first marriage, with Georgiana, daughter and heiress of George, second Lord Vernon. Edward, 4th Baron Suffield, was born the 16th of June, 1818, and succeeded his father the 6th July, 1835. He married, on the 1st September of that year, Charlotte Susannah, only daughter of Alan Hyde, second Lord Gardner. Lord Suffield died on the 22nd instant, without issue; he is, therefore, succeeded by his eldest half-brother, the Hon Charles Harbord, an officer in the 7th Hussars, now 5th Baron Suffield.

LADY SALE

FLORENTIA, Lady Sale, was the daughter of George Wynch, Esq., and the wife of Major-General Sir Robert Sale, G.C.B., whom she married in 1809. Lady Sale's career, as well as that of her gallant and distinguished husband, is a matter of history. As the faithful companion of her heart. In the 13th Light Infantry, in which Sale rose, and of which he died the Colonel, she was much respected: the officers and men to this hour remember her surviving kindness. Since her return to India, after paying a visit to her family on her release from captivity, Lady Sale resided on the hill in a state of comfort—her Majesty having granted her a pension of £500 a year as a mark of her approbation of her own and her gallant husband's conduct. Her ladyship died at Cape Town on the 6th of July last.

WILL.—The will of the late Earl of Wemyss and March—limited to his estates and property in England, and dated in August, 1827—was proved in London on the 16th of August last, and was granted to the present Earl. Lord Elcho (late Lord Elcho), to whom his Lordship has bequeathed the whole of his estates and possessions in England (the personal estate being estimated at £300,000), having previously made provision for the Countess and younger children from his estates in Scotland.

FUNERAL OF THE EARL OF WARWICK.

YESTERDAY week, the 19th, the remains of this much esteemed and excellent nobleman (whose death we recorded last week) were interred in the family vault, at St. Mary's Church, Warwick, amidst universal demonstrations of respect for the memory of the deceased Peer. The arrangements of the funeral were of the most unostentatious character.

As the time for the starting of the funeral cortège drew nigh, the approaches to the church were thronged with spectators. From an early hour in the morning, the minute bell was solemnly tolled; and as the day advanced, muffled peals from the tower of St. Mary's deepened the mournful impression of the anticipated ceremonial. The presence of about thirty of the Militia Staff in the funeral cortège, and the closing of the trading establishments, alone indicated that one of distinguished rank was about to be consigned to the tomb of his ancestors.

In the morning the coffin, containing the remains, was placed in the private chapel of Warwick Castle, whence the funeral procession was formed, and moved towards the church, headed by the Warwick tenantry, 150 in number, two and two; then, the clergy, the medical attendants, a plume of feathers, the deceased Earl's coronet and cushion, carried by David Miles, principal woodman; the body, in a hearse drawn by four horses; eight under bearers, and the militia staff, on each side; followed by seven mourning coaches and four, containing the Earl of Warwick, Lord Aylesford, Lord Mexborough, Lord Wemyss, Lord Guernsey, Lord Lewisham, Hon. Colonel Scott, Hon. D. Finch, Hon. C. B. Percy, Mr. George Repton, M.P., Rev. J. Wynter, Rev. J. Boudier, Mr. K. Greenway, Mr. Gregory, and Mr. Hillis: the family carriage; three carriages belonging to the Hon. C. B. Percy, the Earl of Aylesford, and Lord Guernsey.

St. Mary's Church was hung with black cloth. The galleries were filled with persons; the seats in the chancel and nave being reserved for the clergy, pall-bearers, tenantry, &c. The procession having reached the church, the coffin, surmounted by the feathers, and the Earl's coronet at the head, was placed upon trestels in the centre of the nave, the mourners of the Militia having ranged on each side. The chief mourner, the present Earl of Warwick, was supported by the Earl of Aylesford and the Earl of Mexborough, and the Earl of Wemyss, the father of the Countess of Warwick. The pall-bearers, eight in number, were Lord Guernsey, M.P., Lord Lewisham, M.P., the Hon Charles Bertie Percy, the Hon. Colonel Scott, the Hon. D Finch, Mr. G. W. Repton, M.P., the Rev. J. Wynter, and the Rev. J Boudier.

The service was read by the Rev. Albert Boudier. The vault was lighted; and, after the mourners and those who formed the procession had retired, great numbers of persons availed themselves of the opportunity to inspect this resting-place of the noble family of Warwick.

The coffin was covered with rich crimson velvet, a coronet being placed over each handle, and the insignia of the Order of the Thistle, to which the noble Earl belonged, was placed at the foot. The coffin-plate bore the following inscription:—

The Right Honourable HENRY RICHARD GREVILLE, Earl Brooke and Earl of Warwick, K.T., Lord-Lieutenant and Custos Rotulorum of the County of Warwick. Born, March 29th, A.D. 1779; died, August 10th, A.D. 1853.

NAVAL AND MILITARY INTELLIGENCE.

THE CHANNEL FLEET.—A division of the fleet at Spithead, under Rear-Admiral Corry, with his blue at the mizen of the *Prince Regent*, 90, left that anchorage on Monday morning: the squadron consisting of *Prince Regent*, 90, Captain Hatton, *Queen*, 116, Captain T. T. Mitchell; *Amphion*, 34 (screw), Captain Key; *Melon*, 22 (paddle), Captain Goldsmith; *Polyphemus*, 18 (paddle), Captain C. H. M. Buckley; *Leopard*, 18 (paddle), Captain G. Gifford; *Vulture*, 6 (paddle), Captain T. H. H. Glasse. The whole squadron left under canvas the wind being off the land, or about N.N.E.

THE QUEEN'S CONTENANCE OF THE NAVY.—Another Royal Princess is intended as a sailor, if we may draw any favourable inference from the fact of her Majesty having ordered a sailor boy's outfit for her Royal Highness Prince Alfred. The infamous Prince (who is now four years and three months old, and godson of the late Duke of Wellington) will be equipped by Mr. Watson, naval outfitter, of Gosport, who had the honour of furnishing the sea-going outfits to his Royal Highness the Prince of Wales.—*Hampshire Advertiser*.

THE NEW ACT FOR MANNING THE ROYAL NAVY.—This act concerning the entry and service of seamen, and otherwise to amend the laws concerning her Majesty's navy, has immediate operation, and is subject is to extend the service of men and boys, and to amend the manning and discipline of the navy. Former provisions amended are extended to men entering for ten years or for any other term of continuous service Boys under eighteen are to be liable to serve till twenty-one; and when eighteen or upwards, to serve for ten years, &c. Extra pay is to be granted to men detained after the expiration of the period of service. Persons entering the navy are to be entitled to bounty. The act is not to affect the right of the Admiralty to enter seamen for any periods, and to discharge them. Men entering for continuous and general service and boys to be entitled to pay while in sick quarters under certain regulations. Spirituous liquors are not to be bought on board without the commander's consent. No allotment of wages to be made to relatives or others as a forfeit on their pay during absence. Power is given to try and punish summarily persons guilty of desertion. Imprisonment may be either with or without hard labour. Persons making fraudulent representations on entering the navy are to be punished as rogues and vagabonds. Railway companies are required to convey naval forces upon the same terms as the military and police force.

PASSING REGULATIONS FOR THE NAVY.—Young naval officers will do well to take heed to the regulations now in force at the Royal Naval College at Portsmouth. Midshipmen, or master's assistants, on being examined for the rank of lieutenant or master, if passed back at their first trial will lose three months' time; for the second rejection, six months; for the third, nine months; and if at the fourth trial they are again unsuccessful they will be dismissed from the service with disgrace.—*United Service Gazette*.

APPOINTMENT.—Captain Henry Byam Martin, C.B. (1827), is promoted to be a Commodore of the Second Class, as a mark of her Majesty's approbation of the distinguished part so ably performed at the recent review of the fleet.

DUBLIN GARRISON.—The following constitute the military force now in Dublin. Cavalry—1st King's Dragoon Guards, 2nd Queen's Bays, 11th Hussars, 16th Lancers. Infantry—63rd, 81st, 85th, 21st, 17th, and 90th Regiments, besides the artillery. There will be a grand review of the troops in Phœnix Park, on Wednesday next.

THE VACANT COLONELCIES.—The colonelcies of two regiments are now vacant: that of the 21st Foot, by the sudden death of General Sir Frederick Adam, in a railway carriage, on Wednesday last; and that of the 2nd Foot, by the death of General Lord Saltoun.

THE Master-General of the Ordnance (Lieutenant-General Lord Raglan) returned to Stanhope-street, on Saturday, from inspecting the forts and entrances to the Medway and Thames.

LIEUT.-GENERAL SIR C. NAPIER.—This gallant veteran has been exceedingly ill for the last two or three months, and during nearly the whole of that period was confined to his bed in Hobart-place, Eaton-square; whence, however, he was conveyed, last Saturday week, in an easy carriage to his country mansion, at Oaklands, Hants, near Portsmouth. We understand that his ultimate recovery is despaired of by his friends and medical attendants, who, indeed, almost hourly expect his decease.

THE Life Guards are to have a pistol served out to them, and the cuirass taken away, as at present the cuirass is useless, the men not being able to put the butt end with any degree of firmness against the polished cuirass. Moreover, the cuirass so hampers the freedom of the arms that a sword arm is almost useless.

SCOTCH AGRICULTURAL STATISTICS.—It appears by a parliamentary return, that in the county of Haddington the steam and water power of engines applied to agricultural purposes is equal to 1988 horse-

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—SATURDAY.

Parliament was this day prorogued by Commission. The Lords Commissioners were—the Lord Chancellor, Earl Granville, the Duke of Newcastle, the Duke of Argyll, and the Marquis of Breadalbane.

A number of ladies were admitted to the body of the house, and to the strangers' gallery, to witness the proceedings.

Soon after two o'clock, Sir Augustus Clifford, the Usher of the Black Rod, was directed to summon the House of Commons to hear the Royal Commission read. The Speaker, attended by a number of members of the Lower House, having appeared at the bar, the Commission was read by the clerk at the table: after which, the Royal Assent was given, in the usual form, to a great number of bills, among which were the following: Liberated Africans (Sierra Leone), Government of India, Transportation, Thames Embankment, Universities (Scotland), Employment of Children in Factories, Charitable Trusts, Defacing the Coin, Smoke Nuisances Abatement (Metropolis), South Sea and other Annuities (provision for payment, &c.), Betting Houses, Commons Enclosure (No 3), Female Convicts, Loan Societies, Friendly Societies, Ecclesiastical Jurisdiction, Westminster Improvement (Dwellings of the Working Classes), South Sea Company's Arrangement and Trusts

The LORD CHANCELLOR then read the following speech:

"MY LORDS AND GENTLEMEN:

"We are commanded by her Majesty to release you from your attendances in Parliament, and at the same time to express her Majesty's cordial approbation of the zeal and assiduity with which, during a protracted and laborious session, you have applied yourselves to the consideration of many subjects of great importance to the public welfare

"Her Majesty has seen with much satisfaction that, by the remission and reduction of taxes which tended to cramp the operations of trade and industry, you have given fresh extension to a system of beneficent legislation, and have largely increased the means of obtaining the necessaries of life.

"The provision which you have made for meeting the demands of the public service, not only in the present but also in future years, is of a nature to give permanent stability to our finances, and thereby to aid in consolidating the strength and resources of the empire.

"The buoyant state of the revenue, and the steady progress of our foreign trade, are proofs of the wisdom of the commercial policy now firmly established; while the prosperity which pervades the great trading and producing classes, happily, without even a partial exception, affords continued and increasing evidence of the enlarged comforts of the people.

"The measure which you have passed for the future government of India has been readily sanctioned by her Majesty, in the persuasion that it will prove to have been wisely framed, and that it is well calculated to promote the improvement and welfare of her Majesty's Eastern dominions.

"Her Majesty regards with peculiar satisfaction the provision you have made for the better administration of charitable trusts. The obstacles which existed to the just and beneficial use of property set apart for the purposes of charity and of education, have been a serious public evil, to which her Majesty is persuaded that in your wisdom you have now applied an efficient remedy.

"GENTLEMEN OF THE HOUSE OF COMMONS:

"We are commanded by her Majesty to thank you for the supplies which you have granted for the service of the present year, and for the provision which you have made for the defence of the country both by sea and land. Her Majesty will apply them with a due regard to economy, and consistently with that spirit which has at all times made our national security the chief object of her care.

"MY LORDS AND GENTLEMEN:

"Her Majesty commands us to inform you that she continues to receive from her allies the assurance of their unabated desire to cultivate the most friendly relations with this country.

"It is with deep interest and concern that her Majesty has viewed the serious misunderstanding which has recently arisen between Russia and the Ottoman Porte.

"The Emperor of the French has united with her Majesty in earnest endeavours to reconcile differences, the continuance of which might involve Europe in war.

"Acting in concert with her allies, and relying on the exertions of the Conference now assembled at Vienna, her Majesty has good reason to hope that an honourable arrangement will speedily be accomplished

"Her Majesty rejoices in being able to announce to you the termination of the war on the frontiers of the settlement of the Cape of Good Hope, and she trusts that the establishment of representative Government in that colony may lead to the development of its resources, and enable it to make efficient provision for its future defence.

"We are also commanded to congratulate you, that, by the united exertions of the naval and military forces of her Majesty and of the East India Company, the war in Burmah has been brought to an honourable and successful issue. The objects of the war having been fully attained, and due submission made by the Burmese Government peace has been proclaimed.

"Her Majesty contemplates with grateful satisfaction and thankfulness to Almighty God, the tranquility which prevails throughout her dominions; together with that peaceful industry and obedience to the laws, which ensure the welfare of all classes of her subjects. It is the first desire of her Majesty to promote the advance of every social improvement, and, with the aid of your wisdom, still further to extend the prosperity and happiness of her people"

HOUSE OF COMMONS.—SATURDAY.

After some unimportant business, and some notices for next session,

LORD PALMERSTON, in answer to Mr. Monckton Milnes, expressed his confident opinion that the Queen of Russia would evacuate the Principalities at the earliest possible opportunity.

Lord Palmerston's remarks were followed by the appearance of the Black Rod, and the Speaker and members proceeded to the House of Lords.

After hearing the Royal Speech, and the declaration that Parliament was prorogued, the Speaker and the members returned to their own House; and the right honourable gentleman, having made the customary announcement that the apartments in the palace, on the Terrace, should, bands with war cus members; and so ended the protracted and extremely laborious session of 1852-53, during which the House of Commons has sat 159 days, and has divided 260 times.

THE NEW HOUSES OF PARLIAMENT.—The front of this building, facing New Palace-yard, is nearly completed as far as the entrance to New Palace-yard hill. The apartments in this part of the building are to be appropriated to the use of the Speaker. In Old Palace yard great progress has taken place in completing that portion of the great building from the Victoria tower a façade is in course of erection to the entrance to the central hall, opposite Westminster Abbey, and where the new entrance to the House of Commons was before the commencement of the alterations consisted of the most mean of the worst character with the new palace. When completed, the façade will entirely hide from view the exterior of the House of Lords, and the entrance at the end of the Speaker in New Palace yard will be the exterior of the new House of Commons which runs parallel with Westminster-hall.

ACTIVITY IN THE ROYAL ARSENAL.—Although the question of war with Turkey and Russia is believed to be settled in the minds of the people, the activity displayed in every department of this establishment argues to the contrary. There have been almost daily additions of men and boys, and orders have been received for further extractions during the ensuing week. For some time past it has been the practice to pay the hammer-men employed in the establishment wages varying from 14s. to 18s. per week; but, in future, the uniform rate of wages for the class of workmen is to be raised to 19s per week.

CHURCH, UNIVERSITIES, &c

PREFERMENTS AND APPOINTMENTS.—*Minor Canonries*: The Rev. H. H. Westmore, to Manchester Cathedral; the Rev. [illegible] F. Clements, to the church of Durham *Rectories*: The Rev. [illegible] to Barwell, Leicestershire; the Rev. B. M. Hogg, to Cranford St. John, Northampton-shire; the Rev. J. Jerram, to Fleet, Lincolnshire; the Rev. I. Jones, to Allhallows, London; the Rev. P. A. L. Wood, clerk, to Devizes, with St. Mary's, Potterne; the Rev. W. J. Arrowsmith, to Byton, Hereford; the Rev. Dr. W. Holdsworth, to Dutton, near Northingham; the Hon. and Rev. J. H. Nevison, to Great Mary, Suffolk; the Rev. E. Whitehead, to Godmanstone, Dorset; the Rev. R. K. Killick, to Grondwater; the Rev. F. Gipps, to Corbridge, Northumberland. *Vicarages*: the Rev. E. Hanson, to Thaxted, Essex; the Rev. H. C. Hubbersty, to Helpstone, Northamptonshire, the Rev. E. Ruff, to Little Cawthorpe, Lincolnshire; the Rev. R. Lowe, to Kittoon, Roscommon; the Rev. H. Milner, to Horncastle, Lincolnshire; the Rev. J. F. Pizey, to Horsey, with the rectory of Sirston annexed, near Wellingborough; the Rev. W. S. Prout, to Lakenheath, near Brandon Ferry, Suffolk; the Rev. A. H. Bellman, to Henham, Essex; the Rev. W. Callendar, to Blackmore, Essex; the Rev. J. Serrenat, to North Petherwin, near Launceston; the Rev. J. W. Wemm, to Wickhambrook, Suffolk

PROROGATION OF CONVOCATION.—The day to which Convocation has been prorogued is Saturday, the 10th of September, and not Saturday, the 10th of November, as in the Gazette of September Convocation will be further prorogued to Friday, the 28th of October.

THE MARRIAGE OF THE DUKE DE BRABANT.

No event of recent date in the history of Belgium has caused so much excitement in Brussels as the marriage of the heir-apparent of the throne with the Archduchess Maria of Austria, daughter of that Archduke Joseph, Palatine of Hungary, who for so many years represented his brother Francis and nephew Ferdinand in the sister cities. The dynasty of Leopold, already consolidated by his consummate wisdom and all-conciliating benevolence, receives a corroborative guarantee in a union with the ancient House of Hapsburgh, and a renewal of closer relations with the powerful Confederation which includes the land of his own birth and education.

The youthful bride was born on the 23rd of August, 1836. Her father, the Archduke Joseph, was son of the Emperor Leopold II. He had already attained the age of fifty-seven when he married her mother, the Princess Marie, daughter of Louis, Duke of Wurtemberg. The Archduke Joseph died in 1847, at the advanced age of seventy-one. When his daughter—now the Duchess de Brabant—was in her eleventh year.

His Royal Highness the Duke de Brabant, eldest son of the King of the Belgians and of Queen Louise, daughter of Louis Philippe, was born April 9, 1835; and attained his eighteenth year and his political majority together in April last. The auspicious event was celebrated with great rejoicing at Brussels, and our Sketches of the fêtes were accompanied by a Portrait of the young Duke (*Vide* ILLUSTRATED LONDON NEWS, April 16, 1853, page 288).

The marriage of the Archduchess Marie with the heir apparent to the Crown of Belgium was performed by proxy in the Cathedral Church of Vienna on the 15th. The marriage ceremony was performed by the newly-appointed Archbishop of Vienna. On the 18th the Archduchess left Vienna, attended by the German Archer Noble Guard, who wore their rich scarlet and gold uniforms, and accompanied by some of the highest nobles of Austria. The Duchess de Brabant arrived at the station of Aix-la-Chapelle on Friday, at half past four, having quitted Cologne at ten minutes to three. The Prince of Prussia, who intended to pay his respects to the Duchess at Aix-la-Chapelle, was prevented from doing so by indisposition, and sent word of the fact by telegraph. All the authorities of the province and town, as well as the officers of the garrison, were in waiting at the station to receive the Duchess. As soon as the train arrived, her Imperial Highness proceeded to the cathedral, accompanied by her suite and all the authorities. The crowd was immense in the streets and at the cathedral. The young Archduchess wore a grey silk dress, and look very well. She alighted at the Hôtel Dremel, where apartments had been prepared for her. She left Aix-la-Chapelle at eight the next morning (Saturday), and arrived at Verviers at nine. She proceeded at once to the Hôtel Biollis. Her Imperial Highness and all her suite were in plain travelling dresses. The august traveller appeared in high spirits, and was exceedingly curious in examining all the striking objects which met her gaze in her new country. The station of Dolhain was dressed out with the national colours, and the moment the train entered the Belgian territory, a salvo of artillery announced the event. All along the way, enthusiastic crowds from the population accompanied the progress of her Imperial Highness.

[illegible] arrived at Brussels. The proceedings commenced [illegible] soon after six o'clock a.m., of a crowd of civil and military functionaries, by a Royal train, from Brussels, who were about to take a part in the ceremony of the day. It was arranged that the train should stop for the King at a short distance from Brussels. Punctuality is the politeness of kings, and just as seven o'clock was striking a carriage and-four, with outriders, was seen to emerge from the alley of Laeken, from which Leopold and his sons and daughter alighted, and gave a kindly greeting to the Ministers and Generals who had got out of their railway-carriages to salute him.

Sixty-four years have passed over the head of this scion of the illustrious House of Coburg; time has dealt tenderly with him, and he does not appear more than between fifty and sixty. That moderation which is an essential part of his character has been as conservative of his health as of his good fortune. The Duke de Brabant is still very young—only eighteen years of age, but of tall stature, with quite a Bourbon face—not the rounded contour of a Louis XVI. or a Duke de Bordeaux, but nearer the older and more elongated type of a Louis Quatorze, or his own ancestor the first Duke d'Orleans. His manners are prevalent, as is usually the case with plants of a Royal conservatory—the coolness, the *aplomb*, and the knowledge of persons which he has belonging rather to a man of thirty. The train stopped some time at Liege, in order to inquire by telegraph if the Archduchess had come; and, at length passing the station of Verviers, went onwards to the extremity of the town, where the villa and grounds of Viscount Bolay had been officially declared as neutral ground for the delivery of the Archduchess by the Imperial Commissioner, Prince Adolf Schwarzenburg, to the Belgian Commissioner, Count O'Sullivan de Grace. A pavilion had been erected close to the railway, and the configuration of the grounds proved well suited to the occasion: the space between the railway and the house being filled up with very pretty garden-ground, and the villa or château being, according to Continental custom, close on the town. Between festoons of flowers and over a carpet the King and those permitted to form part of the train proceeded to the house in which the Archduchess awaited her bridegroom and father-in-law.

The interview between the bride and bridegroom having taken place in a private apartment, the two households assembled in the grand drawing-room of the château for reciprocal presentation. The Archduchess Maria is of middle height, of moderate *embonpoint*, of a fine healthy complexion, and of a most pleasing expression of countenance. She wore a costume of blue and white.

The commission and suite of her highness were then presented to the King: they belong to the highest aristocracy of Austria—Prince Schwarzenburg, Prince Richard Metternich, eldest son of the Metternich, the Countess Clam-Martinitz, and other names less known. In addition to these persons were Count O'Sullivan de Grace, the Belgian Commissioner, Baron Vrintz, the Austrian Minister in Belgium, &c.

When the presentations and recognitions had taken place, the King turned round, and the windows of the drawing-room being open, a large space was seen to be cleared, and a square held by troops, in which the band played. Leading forward the Duchess de Brabant, the King stepped on the balcony; and the moment he appeared the densely-assembled mass of people who had crowded from all the eastern part of Belgium into Verviers, burst into one spontaneous shout of "Vive le Roi!" "Vive la Duchesse de Brabant!" and the band striking up "Oh peut on être mieux qu'au sein de sa famille," affectionate and significant glances were exchanged by the Royal group.

The Royal family and the commission then partook of déjeûner, and the train started for the station of Verviers, leaving behind the German Archer Noble Guard, who had accompanied the Archduchess from Vienna, and who received the affecting adieux of the Archduchess's own commandant, Field Marshal Pirquet, going on to Brussels, entered the Royal train.

Arrived at the station of Verviers, there were the usual addresses and felicitations of the authorities, with a profusion of garlands and flags—and the same at other stations along the route—all of which need not be described in detail, from the uniformity of their character. The Duke de Brabant wore on the return journey the ribbon of the Golden Fleece, which had been presented to him by Prince Schwarzenburg, in the name of the Emperor of Austria; his wealthy aunt, Viscount Biolay, at Verviers, having also been a Knight of the Golden Fleece. He made a colossal fortune by the cloth manufactures of that thriving place.

The progress to Liege is through the beautiful valley of the Vesdre. This is the Birmingham and Wolverhampton of Belgium; but the long furnace chimneys, instead of rising from a Staffordshire *inferno* of unvarying grim blackness, are mingled with vast forests hanging on mountain slopes, verdant champagnes, and clear rushing rills. Every fire was put out; the atmosphere was cool; and returning the Royal family of this city having been the ancient capital of Belgium

At Mechlin—where there was the same display of a pavilion, throne, flags, and flowers—the principal spokesman was the Cardinal Archbishop, clad in crimson from head to foot. This marriage with a daughter of the first Catholic power of Germany has been very acceptable to the clergy, which is so influential in Belgium. The King is too well aware of the power they wielded against the House of Orange, and of their great influence over the people in this semi-Catholic country, not to conciliate them; but he gives no encouragement whatever to the recently-revived Ultramontane impetus which would place the Church altogether above the State, the discussion of which is the sole and exclusive subject of party politics in Belgium

THE ENTRY OF THE ROYAL PARTY INTO BRUSSELS.

At Brussels, the whole of the vast railway station was thronged with the leading persons of the town, the state, and the army, awaiting the arrival of the Royal train. At six o'clock the cannon announces that the train was close to Brussels; and, in a minute or two after, the Royal party entered the station. As soon as the train appeared, the music of the regiment of Chasseurs played the Brabançonne, and afterwards the Austrian national air. The King alighted first, and was saluted by an immense acclamation. The young Duchess then appeared, and a murmur of admiration burst out on every side at her countenance, glowing with youth, health, and beauty. The next moment an irresistible movement of enthusiasm arose, and a universal cry of "Vive la Duchesse de Brabant!" was heard from every quarter, mingled with cries of "Vive le Roi!" At the same moment, the Duke de Brabant, the Princess Charlotte, and the Count de Flandres appeared, and were just as warmly received. M. Guillon, Burgomaster of the commune of St. Josse-ten-Noode, on the territory of which is situated the station, then advanced, and read the following address:—

Sire,—The administration of St. Josse-ten-Noode requests your Majesty to receive the expression of the joy which animates it in beholding your Majesty bringing to your capital, the august Princess who has come to join her destiny to that of the heir to the throne, and to bring new pledges of happiness to her adopted country. May Heaven grant, as to regard the [illegible] years the nations cry which springs from every heart—"Vive le Roi! Vivent leurs Altesses Royales!"

His Majesty bowed low, and the cries thus uttered were re-echoed from the thousands present. The Burgomaster of Brussels then stepped forward. This remarkable person, consecrated by all Belgium as a great citizen, is somewhat past the middle age, and, with grey moustaches, and a clear, liquid intelligent eye, has in his bearing all the signs of nature's aristocracy. Possessed of a handsome private fortune, he devotes a powerful intellect and an energetic will solely and entirely to the public service, and is, in fact, made of the very stuff that in days of yore rendered Antwerp and the cities of Flanders the Venice and Genoa of the north—a man, who under Alva would have been sent to the scaffold, but under Leopold the Prudent is the rampart of the throne against democratic ambition. Instead of the mere flattery of the day, he reminded the Duchess that she was come not merely to be the wife of the heir of the throne, but worthily to fill the place of that departed Princess who had so endeared herself by her virtues to the Belgians.

The following is a copy of his address:

Sire,—The representatives of the capital seize with new zeal the opportunity of presenting their most respectful and most devoted homage to your Majesty. Every time they approach the King, they can thank him for a benefit for the community. And on what more solemn occasion? To-day your Majesty realises a promise which all Belgium hearts had accepted with happiness, and you cannot doubt of our lively gratitude.

Madam,—Your arrival in the midst of us is greeted with the most sympathetic acclamations. They are addressed to the Princess whose life will henceforth be united to that of this son of Brussels, who, by his qualities of courage and heart, has acquired the right to be called the Prince Royal. You, Madam, will follow the footsteps of the august mother of the Duke of Brabant, we will endeavour to make you love both your new country and your new residence. May the King and the Royal family accept with favour our wishes and our congratulation.

The King, who was visibly affected, replied, "I thank, Mr. Burgomaster," but was prevented from proceeding further by the enthusiastic acclamations which arose. The King then offered his arm to the Duchess de Brabant, who also appeared profoundly touched by the address of the Burgomaster. The Princess Charlotte took the arm of the Duke de Brabant, and the Count de Flandres was by their side. The Royal party then retired, amidst the waving of handkerchiefs and enthusiastic shouts. In the latter the people outside joined heartily. The illustrious party having entered the court carriages, a cortége was formed in this order:—

Two squadrons of the regiment of guides, with the band; four outriders on horseback; two two-horse carriages, then three carriages, each drawn by six horses, containing the great dignitaries; afterwards the military household of the King and the Duke of Brabant, on horseback; next, the Royal carriage, which was open, and drawn by six horses, containing the Duchess de Brabant and her mother-in-law, the Princess Charlotte on one seat, and the King and the Duke de Brabant on the other—the latter opposite the Princess. General Chazal and Lieutenant-General Brialmont, aides-de-camp to the King, rode one on each side of the carriage; then came all the general officers present at Brussels, and all the military staff of the city, on horseback; then the carriage of his Royal Highness the Count de Flandre, drawn by six horses; and, lastly, two squadrons of guides.

The appearance of the cortége was brilliant in the extreme.

It is impossible to describe the enthusiasm and acclamations which greeted the King and their Royal Highnesses throughout the whole progress of the cortége. It was not only on the Boulevards, in the Rue Royale and on the Place des Palais that the crowd was immense, it was also in the houses. Not a balcony, not a window, not a roof but was densely crowded with spectators. Handkerchiefs were waved, hands applauded, and thousands of voices raised one continued cry of "Vive le Roi! Vive la Duchesse de Brabant! Vive le Duc de Brabant! Vive la famille Royale!" but any description of the scene must fall far short of the reality. In the Rue Royale, a poor woman pushed by the crowd almost under the very wheels of the Royal carriage, stretched out her arms in despair towards the young Princess, who for the first time passed through the population of Brussels. Her Royal Highness perceived her, rose up in the carriage, and the crowd giving way, the supplicant was enabled to approach and deliver into the hands of the Princess a petition, which her Royal Highness received with a smile full of hope and consolation. On the cortége entering on the Place des Palais, the crowd was more compact than on any other part of the road; there was no escort, and nothing to keep the people back, and they surrounded the Royal carriage, on the august travellers alighting, in such a manner, that it might be almost said that they entered the Palace on the arms of the population. In a few minutes afterwards the King, the young Archduchess, the Duke de Brabant, the Princess Charlotte, and the Count de Flandres appeared on the balcony, and were saluted with the loudest acclamations. The bells of the churches were at this time ringing their merriest peals, and the cannon firing salutes in honour of the occasion; and the long day closed, as the last rays of the sun shed a golden lustre on the alleys of the park, with repeated acclamations.

THE CIVIL MARRIAGE.

The ceremony of the civil marriage was to have taken place on Sunday morning; but the indisposition of the Duchess de Brabant, caused by the fatigue and the emotions of her journey from Vienna to Brussels, in the midst of the official receptions, compelled its postponement. This announcement spread uneasiness among the public, who had already been much interested by the youth, grace, and affability of the Archduchess on the day of her arrival. Happily this indisposition was not serious; and on Monday morning the sound of the large bells of Collegiate Church of St. Gudule, and salvos of artillery, announced to the inhabitants of the capital that, in spite of the bride's indisposition of the previous day, the marriage of the Royal pair was to take place that morning. The weather was not propitious; a mist, with occasional showers of rain, boded that the masses who were to see the procession only would have their pleasure marred; but this, of course, made no difference as regards the marriage pomp within the church

The civil marriage took place in a hall of the Palace at ten o'clock, the bride looking rather pale and agitated, but magnificently attired in white and diamonds. The bridegroom wore the uniform of his military rank, a Major of Grenadiers, to which he has been recently promoted—a pastimony of advancement in the heir of a crown which smacks of that citizen kingship which has been in vogue since 1830. The King himself wore the costume of a General, with the red ribband of his own Order of Leopold; and all the great officers of State wore their official costumes and orders. Prominent among them was the Prince de Ligne, President of the Senate or Upper Chamber, who was one of the witnesses for the Archduchess Marie, and who may be remembered as the sumptuously-equipped representative of King Leopold at the coronation of our own Queen. The other witnesses for the Archduchess—were the President of the Court of Appeal; M. Henri de Brouckère, the Minister of Foreign Affairs, brother of the Burgomaster; and Count O'Sullivan de Grass, a gentleman of Irish family, settled for some generations in Belgium, who in various Legations, and as Belgian representative at Vienna, has made a very creditable career, gaining the respect of good sense and energy, with a penchant for the Muses, which on this occasion has manifested itself by an epithalamium to Marie—*nom bien sur terre et en ciel*. By reciprocal courtesy Prince Schwarzenburg and the Austrian Minister at this Court were the witnesses for the Duke of Brabant, the formalities being exactly the same as those of a citizen's marriage at the Hôtel de Ville

In the large hall in which the marriage took place, a gilt table, covered with a cloth of crimson velvet, magnificently embroidered with gold, occupied the middle of the part nearest the [illegible] and this table, and fronting the hall, were five fauteuils placed in [illegible], behind them was a row of chairs destined for the ladies of the suite of the Duchess of Brabant and of the Princess Charlotte. On the other side of the table, fronting the windows, and consequently with their backs towards the persons present, were two chairs, one for the Burgomaster of Brussels, acting as officer of the Etat Civil and the other for the Secretary of the City, assisting the Burgomaster. On the table were the registers of the Etat Civil in which the contract of marriage was inscribed, and which were bound in red morocco velvet. At a quarter past ten all the persons officially appointed to be present at the ceremony had assembled. Presently at half-past ten the door leading from the private apartments opened, and his Majesty appeared, having on his arm the Duchess de Brabant, and followed by the Duke de Brabant, leading the Princess Charlotte; the Count de Flandres, the officers composing the military household of the King and of the Duke de Brabant, and the persons of the suite of the Duchess. His Majesty took his seat in the centre fauteuil near the table, having on his right the Duchess de Brabant and the Count de Flandres, and on his left the Duke of Brabant and the Princess Charlotte. The ladies of the suites of the Duchess and the young Princess stood before the chairs prepared for them behind the fauteuils of the King and the Royal family. The officers of the two military households occupied the extremity of the hall near the windows of the balcony. On the left side of the table stood the four witnesses for the Duchess de Brabant. On the left were the Baron de Vrients de Trewenfels, Envoy Extraordinary and Minister Plenipotentiary of the Emperor of Austria at the Court of Belgium; M. DeFoss, President of the Chamber of Representatives; M. Faider, Minister of Justice; and Baron de Gerlache, First President of the Court of Cassation, witnesses of the Duke de Brabant. The Duchess de Brabant wore a dress of antique white satin, richly embroidered with silver, and with a train. A magnificent diadem in brilliants, from which some orange-flowers were suspended on either side, was placed on her head with much taste. The dress of the Princess Charlotte was of the same rich description as that worn by the Duchess. The Duke de Brabant wore the grand cordon of the Order of Leopold, the collar of the Golden Fleece (Austrian), and the insignia of the Black Eagle of Prussia.

As soon as the King and their Royal Highnesses had taken their places, the Burgomaster of Brussels requested the Secretary to read the marriage contract; and whilst he was doing so from one of the registers, the Burgomaster followed him in the other. The reading of the contract of the Etat Civil, with the names and qualities of the parties and of the witnesses, occupied nearly a quarter of an hour. When it was concluded, the Burgomaster read, according to the terms of the law, the articles of the Civil Code, which determine the rights and duties of the married couple, and then, rising, addressed to the Duke of Brabant the usual question—"Do you consent to take for wife," &c. His Royal Highness rose, and turning towards the King, for his consent, replied in a low voice, but in a very distinct manner—"Yes, Monsieur le Bourgmestre." The same question was afterwards addressed by M. de Brouckère to the Duchess. A slight emotion marked her countenance; she then turned towards his Majesty, but without quitting her seat, and, addressing the Burgomaster, replied, "Yes, Sir." Cries of "Vive le Roi!" "Vivent le Duc et la Duchesse de Brabant!" here burst out, and continued for some time. The marriage being over, the Burgomaster of Brussels came forward, and addressed the Royal couple as follows:—

Monseigneur, Madame—It is the custom for the civil officer to congratulate the persons whose marriage he enregisters. Your Royal Highnesses will permit me not to derogate from that custom, and to congratulate myself on being the organ of the law in so solemn a conjuncture. I have had the pleasure to speak to your Royal Highnesses of the duties of your position, for you are well aware that the virtues of princes, as the rays of the sun enlighten the earth, diffuse their beneficial effects over all society. I confine myself to being the echo of the wishes of our populations. This union, to which the Church will give its benediction in a few minutes, consolidates for ever our independence, and will be, I am convinced, a productive of happiness to your Royal Highnesses as useful to a nation, at the same time attached to its institutions and devoted to its King; to a nation which from the moment comprises in the same affection the Duke and Duchess de Brabant.

Loud acclamations followed these words. The King and their Royal Highnesses then quitted their seats and approached the table. The Burgomaster presented a pen to his Majesty, who first signed the act of marriage on the two registers, then the Duke de Brabant, the Duchess de Brabant, the Princess Charlotte, and the Count de Flandres signed in their turn, and after them the eight witnesses.

Whilst this formality was being accomplished, the King and the Duke de Brabant conversed with the Burgomaster of Brussels. When all the signatures were given, the King again offered his arm to the Duchess de Brabant, the Duke gave his arm to the Princess Charlotte, and the Royal family, followed by the same personages as on their arrival, left by the great door leading to the private apartments, to take some repose before proceeding to the religious ceremony.

THE RELIGIOUS SOLEMNISATION IN THE CHURCH OF ST. GUDULE.

For the ceremonial marriage the Collegiate Church had been long under repair and decoration, and here the Roman Catholic Church, so potent in Belgium, put forth all that pomp and splendour which is so essential a part of her character. St. Gudule is not a cathedral by title, Mechlin being the ecclesiastical metropole of Belgium; but, both in dimension and in the beautiful proportions of the interior, St. Gudule surpasses many a cathedral. Belgium is one of the most favoured natal soils of pointed architecture; in fact, it was just after the twelfth and thirteenth centuries, when the style was introduced, that Bruges, Louvain, and other cities rose to opulence, that the arts began to flourish, that the country was drained, and in the lapse of 260 years more was covered with edifices that show most varied and original applications of the pointed principle

At half-past ten o'clock the doors of the church were opened to persons supplied with cards. The gallantry of

MARRIAGE OF THE DUKE DE BRABANT WITH THE ARCHDUCHESS MARIE OF AUSTRIA.

Lines of Grenadiers of the *regiment d'élite* kept the passage clear in the body of the church. A great number of officers, in Russian, Prussian, Austrian, and English uniforms, occupied a special place.

At eleven o'clock precisely the clergy of Saint Gudule, attended by more than 200 choristers, with albs of lace over red gowns, went, preceded by the cross, to the square of the cathedral, to receive his Eminence the Cardinal Archbishop of Malines, Primate of Belgium; and all the other prelates of the kingdom. Shortly after, amidst the pealing of the organ and the ringing of the great bell, the sacred cortège entered the church. The Bishops were respectively attended by the Vicars-General and Chapters. The Cardinal was nearly the last in the procession. The great ecclesiastical dignitaries took their places in the choir, and then put on their episcopal robes and took the episcopal cross. The singing-boys threw incense on them as they did so.

Soon after, the Swiss of the Royal Household, in splendid uniforms of red and gold, and carrying large halberds, took up their places at the angles of the transept. The doors of the side naves were then opened, and as many of the public as could be accommodated were admitted.

In the centre of the lofty nave rose a *baldaquin*, which seemed nearly a hundred feet in height; huge old tapestries, half faded with the lapse of centuries, enclosed the space in front of the altar. A dim religious light was all that the antique painted windows allowed to penetrate from the dull, unfriendly outer air; but a long array of massive candelabra poured the light of thousands and thousands of wax-lights on whole legions of priests, clad in white, who thronged, in perfect order, the high ascending gradations of the altar, in front of which sat the Cardinal Archbishop of Mechlin, Primate of the kingdom, on a gorgeous throne, surrounded by his suffragan bishops, with their high golden crosiers rising over their heads. In the centre space, under the *baldaquin*, were the chair of the King and kneeling cushions for the Royal pair—all as rich as gold, velvet, and embroidery could make them; while on each side the diplomatic corps, the Senate, the Court, the camp, the city, were all represented by endless tiers of dignitaries, in stars, ribbons, feathers, laces, and brilliants.

As mid-day approached, low distant huzzas were heard from time to time, louder again, and louder still, till the noise from without reached the echoes of the grandly pillared aisles and vaulted roofs The acclamations of the crowd announced the arrival of the King and the august couple. The great bell again began ringing, and the organ pealed anew. The Cardinal Archbishop and the Bishops advanced to the great door to receive his Majesty and their Royal Highnesses. (*Vide* Illustration.) A prolonged blast of trumpets of fine intonation, without a single flat note, announced the entry of the bridal procession; and the King, the Duchess (with long held train of silver cloth), and the Princes, moved up the living avenue to their places under the canopy.

THE BRIDAL PROCESSION ENTERING THE CATHEDRAL OF ST. GUDULE, BRUSSELS.

The Royal cortège advanced up the church in the following order —The Clergy of Brussels with the crucifix, the Dominicans, the Canons, the Bishops, the Cardinal, the King leading the Princess, the Duke de Brabant conducting the Princess Charlotte, the Count de Flandres, and a brilliant staff. On arriving at the entrance to the choir, the Cardinal indicated to the august couple the places they were to occupy. The Duke de Brabant took the right hand side of the Duchess. The King seated himself between the Princess Charlotte and the Count de Flandres. The Duchess was very pale, and appeared greatly affected, and it was with an uncertain step that she advanced towards the prie-Dieu. The Princess appeared to all to be fully aware of the importance of the grave and holy act she was about to accomplish. The emotion of her Imperial and Royal Highness was shared by all present.

The bride and bridegroom then knelt, and the ceremony commenced with a prayer. The Cardinal Archbishop, when all were seated, himself seated on his throne, and wearing his mitre, and surrounded by all the Bishops, then read a discourse to the Royal pair, monitory of things needful in their new state and highly responsible position, which was listened to with all the decorum requisite on such an occasion. Their Royal Highnesses then knelt on velvet cushions, and the nuptial benediction was given to them. Whilst they were still kneeling, and absorbed in prayer, the celebration of the mass commenced. When the host was raised, all the troops presented at arms. The spectacle at that moment was most imposing. The marriage service was then read, and the nuptial benediction pronounced by the Cardinal, after which the deep peals of the organ were heard, and a subdued but sublime mass choral swelled on the ear, the incense curled on high; and at intervals a salute of 101 guns measured the progress of the scene. A solemn *Te Deum* was sung with thrilling power by a grand orchestra; the Cardinal Archbishop, assisted by the bishops, officiating at the altar. Appropriate *morceaux* by Cherubini, Palestrina, and Mozart, were also performed. The ceremony terminated at half-past one o'clock, and the Royal party then retired. They were attended to the door of the church by the Cardinal, the bishops, and the clergy. On their return through the streets to the palace, the Royal party was greeted with the most enthusiastic acclamations

THE BRIDAL CORTEGE PROCEEDING TO ST. GUDULE.

HISTORICAL PROCESSION, AT BRUSSELS, IN CELEBRATION OF THE MARRIAGE OF THE DUKE DE BRABANT WITH THE ARCHDUCHESS MARIE OF AUSTRIA.

THE THEATRES.

ROYAL ITALIAN OPERA.

The seventh season was completed on Saturday the 20th—Tuesday, April 2, having been the opening representation. There have been sixty four performances and eighteen operas, thus subdivided:—Rossini's "Guglielmo Tell" seven times, "Il Barbiere" twice, and Otello" once; Donizetti's "Favorita" four times, "Lucrezia Borgia" eight times, "Maria de Rohan" three times, and the "Elisir d'Amore" once; Bellini's "Norma" thrice, and "Puritani" four times; Verdi's "Rigoletto" six times, and "Ernani" once; Auber's "Masaniello" thrice; Spohr's "Jessonda" twice; Bertios's "Benvenuto Cellini" once; Mozart's "Don Giovanni" once; Meyerbeer's "Huguenots" eight times, "Le Prophète" five times, and "Roberto," four times. In addition to these entire works, it must be added that the first act of "Norma" has been given four times, the last act of "Il Barbiere" twice, the cavern act of "Roberto" once; and the last act of "La Favorita" once, in order to strengthen the night's bill, by the combination of all "the talents." The ballets and divertissements have been "La Fille Mal Gardée," "Le Diable à Quatre," and "Fleurette." There have been forty-six subscription nights; and eighteen extra, or non-subscription nights—some of which have been given on Mondays and Fridays, instead of the ordinary opera evenings—Tuesday, Thursday, and Saturday. The only morning concert of the season has been that of Mrs. Anderson.

The artistes who have sustained the lyric works have been Grisi, Madame Castellan, Madame Bosio, Madame Jullienne, Madame Tedesco, Madame Medori, Mdlle. Albini, Mdlle. Didiée, Mdlle. Cotti, Mdlle. Ronconi (basse and baryitones).

The chief dancers have been Mdlle. Plunkett, Mdlle. Yelva, Mdlle. Besson, Mdlle. Marmet, Mdlle. Kolemberg, and M. Desplaces

On reference to the pledges of the prospectus, it will be found that the directors have kept faith with their subscribers. Mdlle. Donzelli, it is true, was promised, but in her place Madame Tedesco appeared; and of the six novelties—the management having only pledged itself to three for "positive production"—Spohr's "Jessonda," Verdi's "Rigoletto," and Berlioz's "Benvenuto Cellini," were selected and brought out.

Although there has been some really very grand specimens of executive skill during the past campaign, and there is sufficient evidence of good intention on the part of the direction, it is impossible to conceal the fact that the theatre can scarcely be stated to have sustained the fame of former years. It is not to be believed that this falling off has arisen, as some persons have suggested, from the want of competition. It must be ascribed to the fashionable influences of a London season, in no small degree. The number of private concerts has been immense, and for these the Italian singers have been engaged, not only to the great inconvenience of the regular service of the theatre, but to the absolute damage of the establishment—inasmuch as any attempt to introduce the "stars" to study new parts was found an impossibility Moreover, the musical director and conductor, Mr. Costa, having on his hands the Philharmonic Society and the Sacred Harmonic Society, besides concerts at the Palace, &c., is physically unable to give that time and attention to the production of new works which they absolutely require. Hence it is that so many careless and slovenly executions of even old operas have been remarked. Then, again, there is a determined resolution on the part of the Italian artistes to put down, if they can—fortunately for art they cannot—every school of composition except their own. This suicidal policy has already destroyed several great European lyric establishments. Music in Italy died with Bellini and Donizetti. Verdi has dramatic power and fancy, but he is not strong enough to be their successor; and it is, therefore, to the French, German, and English composers, past and present, that managers must look for operas to vary the repertory. There are still productions of Mozart not yet essayed—there are inspirations of Gluck not yet attempted—there are compositions of Spontini Mercadante, Weber, Auber, yet untried. Fashion may pronounce for certain masters, but the only solid foundation of a well-ordered lyric theatre must be based on the principle of producing works of every school, without distinction of country. The culture of the most elevated art may be slow in gaining ground, but its progress is sure; there is yearly an increasing aptitude amongst the selected classes of English society for works of the highest order of merit, alike appealing to the heart and understanding. The humanizing influence of musical art in the minds of an intellectual auditory is undeniable The true test of the greatness of an opera is in its durability—that which is truly original and suggestive—no matter in what style—must be essentially irresistible. But it is not alone the wonder and admiration of the learned musician which must be provoked, there must be melody and effect to fascinate the most ignorant auditor susceptible of emotion. It is not by abuse of acknowledged masterpieces of the modern Italian school—such as "Lucia," "Norma," "Sonnambula," &c.—that amateurs will be convinced of the beauties of a Mozartian score—of its florid accompaniments; of its delicate and nervous counterpoint; of its exquisite vocal form; and of its endless charms of ingenious and fanciful instrumentation. The great drawbacks for art-progress in London are bigotry and intolerance. It seems to be a fixed resolve of professional minds of a certain class not to look at the operatic repertory as they would glance at a picture-gallery—in order to admire the force of contrast, and taste the delights of variety.

Our returns will almost suffice to explain the doings of the past campaign. Of the new artists—Madame Tedesco, Mdme. Medori, Mdlle. Albini, and Mdlle. Didiée—not one has advanced beyond a *succès d'estime*. A great contralto is yet a want; and it is a patent fact that there is no singer who can enter the lists with Grisi but Viardot, Mdlle.

Wagner is still looming in the distance; but, however great her Teutonic fame, she has yet to be tried by the London standard, which so remorselessly destroys artistic celebrities. In fact, until the Continental reputation be now confirmed here, foreign celebrities are of no value in our market.

The reasons of the failures of the "Jessonda" and "Benvenuto Cellini," have been so recently explained in our columns, that it would be useless to touch again on such unmeaning events. If Verdi's "Rigoletto" had been the last, instead of the first, of novelties, its doom would have been certain after the Italian cabal against the French composer. As it was, Bosio's charming vocalisation, Mario's delicious singing, and Ronconi's sublime acting, saved the work from remorseless condemnation.

DRURY LANE THEATRE.

This establishment, which seems destined to such singular vicissitudes, was re-opened with an operatic company, composed, apparently, of all nations, including, perhaps, the unknown tongues. It is impossible to notice seriously such a strange performance as that of Weber's "Der Freyschutz," even although the cast included Herr Formès' *Caspar* and Herr Reichardt's *Max*. Madame Caradori and Madame Zimmermann, the *Agatha* and *Anna*, have certain pretensions, but not of a nature to satisfy the cravings of a London audience. This has been an ill advised undertaking, which must end unfavourably, and already has the theatre been closed for a "night dress rehearsal," as the bills explained, for "Lucrezia Borgia." Handel's "Acis and Galatea," is promised for to-night (Saturday).

The new decimal coinage is to be based on the *mil*, one thousand of which will make the present pound; 100, one florin; 50, one shilling; and 10, one cent; the sixpence will be 25 mils; and the present crown, 250 mils. The cent and two-cent pieces will be of silver; while pieces of 1, 2, and 5 mils will be of copper.

Some thieves broke into a house at Garstang, last week, and robbed it. A pill-box, wh ch had written on the lid, "To be taken three times a day," but which really contained some sovereigns, was left by the thieves were not aware of the value of the "pills," or they would have gladly "taken them," if not exactly according to the directions.

A company has been formed at St. Petersburg, with the sanction of the Government for making a railroad between Riga and Dunaburg. The capital of the company is to be 48,000,000 fr. The Government guarantees 4½ per cent, but in fifty ten years the road is to become the property of the state

Literature.

THE ILLUSTRATED LONDON ASTRONOMY. For the use of Schools and Students. By J. R. HIND, F.R.A.S.—ELEMENTS OF EXPERIMENTAL AND NATURAL PHILOSOPHY, &c. Edited by JABEZ HOGG, M.R.C.S. —ELECTRIC SCIENCE: ITS HISTORY, PHENOMENA, AND APPLICATIONS. By F. C. BAKEWELL.—THE ILLUSTRATED LONDON ARCHITECTURAL, ENGINEERING, AND MECHANICAL DRAWING BOOK. For the use of Schools, Students, and Artizans. By ROBERT SCOTT BURN. —Ingram, Cooke, and Co

The desire for information in all those branches of science which have, even in the remotest degree, a practical bearing, is the distinguishing characteristic of the present age. This has manifested itself more especially since the Great Exhibition than it did previously; because it then became apparent to every reflecting visitor that the only certain road to maintain superior excellence in the arts, or to advance our manufactures, was an exact knowledge of all those laws by which nature regulates her works.

With a view to meet the growing demand for scientific knowledge, the works above-named have been published by the proprietors of the "Illustrated Library," as the first portion of a series which is to embrace the entire circle of the Natural Sciences, and those auxiliary arts which the study of them requires.

These works derive considerable advantages from the immense number of illustrations which adorn and explain the text. It is at all times difficult to render scientific truths, which have been arrived at by a system of research scarcely understood by the ordinary student, intelligible in common language. Beyond this, with new truths there naturally must arise new ideas; and both the truths and the deductions from them require the creation of a new system of signs—a fresh order of words. These, consequently, increase the difficulties of study in any of those branches which are the most valuable from the numerous discoveries to which they have led. In the same way as it would lead to great confusion to call a newly-discovered animal or plant by an epithet which had already been applied to a familiar object, it becomes injudicious—and it is indeed, in many cases, impossible—to express a new truth by an old name. On this account particularly our scientific works cannot be too profusely illustrated—if they are intended to carry conviction, or even to be understood by the popular mind. Popular treatises are commonly misunderstood. It is not necessary that a popular book should be a superficial book, or that it should be devoid of imagination and examples of presumptuous ignorance, than of that exactness which all philosophy demands. It is satisfactory, therefore, to know that a series of works, intended for instructing those who have not yet acquired the rudiments of science, are in progress of preparation, which can be relied upon for their exact character; and which, by their *illustrations*, promise to render every truth familiar. The amount of false science that is exceedingly large, and hence it is that we find the unwary and ill-educated public open to deception on every hand. It is only necessary for some charlatan to attach the word electricity to any scheme, and he may make sure of a profitable game; it is the *Open Sesame* for the speculator's pocket—of which we have at the present moment more than one glaring example in this metropolis.

Wisely the Government have established a department of science, and they appear resolved to give the same advantages in the establishment of local schools of science as have been afforded in local schools of design. The people, by their own advancing intelligence, have impelled their governors to this. Let the people still be true to themselves—self-reliant and independent; and since state coaches are ever tardy vehicles, do that for themselves which the Government offers to do for them, and advance industrial instruction throughout the length and breadth of the land, while the *Department* is determining the path which it may pursue.

The books before us are aids to such a movement; but we must hasten to a more detailed examination of their contents.

The first on our list is Astronomy, written by the "planet-finder," Hind, whose powers and unwearying industry have been so successful as to add no fewer than eight planets to our knowledge of the solar system. Mr. Hind has already written several works of much value on astronomical science; and he has proved that he has lucid character and its strict and guarded exactness, forms really a valuable contribution to the literature of astronomy. This may be shown by a short extract, explaining the views which led to the discovery of the *minor planets* alluded to, which are now twenty-four in number, revolving round the sun between Mars and Jupiter

> Towards the end of the last century, Professor Bode, of Berlin, had pointed out a singular relation between the mean distance of the planets then known, including Uranus, from which it was conjectured that a planet probably existed between Mars and Jupiter; and it was mainly owing to the strong impression created among astronomers by the publication of Bode's relation of distances that a diligent search was made for the form it devised and speedily put in execution. This so-called "law" has, consequently, acquired great celebrity; but has failed—partially at least, in the case of Neptune, which was unknown when Bode's rule was first made form it is expressed as follows:—To the numbers 0, 3, 6, 12, 24, 48, 96, 192 (in which series, it will be observed, each number after the second is double the preceding one), add the number 4 to each expression, and the sums will represent approximatively the relative mean distances of the planets, including Uranus—that of the Earth being 10. Thus:—
>
> | | | | | |
> |---|---|---|---|---|
> | Adding | 4 to | 0 the sum is | 4 | nearly the distance of Mercury |
> | " | 4 to | 3 | 7 | " Venus |
> | " | 4 to | 6 | 10 | which is the distance of Earth |
> | " | 4 to | 12 | 16 | nearly the distance of Mars |
> | " | 4 to | 24 | 28 | " |
> | " | 4 to | 48 | 52 | " Jupiter |
> | " | 4 to | 96 | 100 | " Saturn |
> | " | 4 to | 192 | 196 | " Uranus |
>
> This relation indicates a planet between Mars and Jupiter, at a mean distance from the Sun of about 28; and it is curious enough that Ceres, the first of the new planets in order of discovery, was found to be situated almost precisely at this distance. The subsequent discovery of Pallas and Juno in the same region led Dr. Olbers to suspect that these small planets are in fact parts of a much larger one, which moved as a remote period in the same orbit, but was broken by some great convulsion had been shattered in fragments. This idea has received considerable weight from the more recent discovery of so many small bodies belonging to the same group, and the mutual intersection of their orbits in about 180° of longitude, or in the sign Virgo, which has induced some astronomers to think a great planet may have met with some fearful catastrophe in that part of space

The "Elements of Natural Philosophy" is written in the best possible spirit. The editor's desire being, as he expresses it, "to aid the progress of our countrymen to that mental position their unliring industry merits, to fertilise the seeds of genius, to promote sound education, to give that elevating tone to the popular mind so productive of happiness, to implant a love of knowledge in the minds of youth, with a full appreciation of the wonders of the works of God." This compact volume exhibits the powers of condensation in the editor; and, as far as we have examined the volume, is a careful selection of all the more striking applications of science. The woodcut illustrations are exceedingly good, and peculiarly instructive

In immediate connection with this volume is Mr. Bakewell's "Electric Science." Mr. Bakewell is well known as the inventor of a beautiful electro-chemical printing telegraph; and hence, as may be inferred, has a perfect knowledge of the science he has undertaken to describe. The best authorities have evidently been consulted; and great care taken in the descriptions of the experiments, and their results. By a careful study of this book, a good practical knowledge of electricity may be obtained. All the applications of this power, in particular, are described in a peculiarly happy manner. We cannot but regret that the author has thought it necessary to combat the absurd idea that electricity has anything to do with table-moving the necessity for including this in a scientific treatise is sad satire upon the intelligence of Englishmen in 1853. As in all the other works, the illustrations here are exceedingly good and instructive. One of the larger prints, however—Franklin's Kite Experiment requires a remark. The artist has not observed the author's description, and he may lead some young electrician into danger. Franklin is represented as holding the string of his kite: the consequence of this would be, that all the electricity would pass through his body and that of his son—he leans on the boy's shoulder. Franklin knew better than this: he attached the hempen thread of his kite by a silk line to an upright pole stuck in the ground; and, as Mr. Bakewell describes it—

> Having raised the kite in the air, he looked anxiously for the results, as some thunder clouds passed over it, but for some time without any sign of electricity. At length, as he was about despairing of success, he perceived some fibres of the hempen string to stand erect, and to avoid one another, just as they would have done if electrified. *He then presented his knuckle to a key attached to the string, and to his unutterable delight received a spark.*

The "Illustrated Mechanical Drawing Book" is a valuable contribution in a line too much neglected as a branch of education. There is much simplicity in the mode of instruction adopted; and any young man following the several lessons in the order they are laid down, may teach himself most readily all the principles of that variety of drawing, which is broadly distinguished from art, and which is purely mechanical in its details. We could almost have desired that Mr Burn had made the distinction broader than he has, but we find a work on "Civil and Mechanical Engineering" is contemplated in the series; and this will, no doubt, exemplify the full value of the purely mechanical appliances of plan and engineering drawing. If the other works of this series are equal in their character to those now issued, a valuable library of educational works on science will be placed in the hands of the public.

THE PRACTICE OF PHOTOGRAPHY. By PHILIP H. DELAMOTTE. Illustrated with a Calotype Portrait, taken by the Collodion Process. Cundall, Bond street.

A year only has elapsed since, by the exertions of a few scientific men, aided by the press, the patentee of the Calotype process surrendered his right, which had for thirteen years remained almost dormant and useless: from that day up to the present, the rapid strides made towards perfecting this beautiful process have been truly surprising. The most important of the improvements effected was that by Mr. Scott Archer, who, in August, 1851, discovered that, by spreading a film of collodion over a surface of glass, we possessed a medium capable of producing pictures with a rapidity and detail never before seen. This gave an impetus to the scientific inquiries of others; and the result has been, that we now have pictures produced with surprising beauty and marvellous finish. Investigators, by publishing the results of their individual labours, have aided in effecting this; and in the manual before us we have presented to us all the recent improvements put forth in a collected form with so much clearness, that a person before unacquainted with the art, might, in a very short time, work with success the Collodion or paper process. The author has appended what we have never before seen attempted in books of the kind—a well-arranged chapter upon the chemicals employed, with their composition and especial characters At page 98 a grave error occurs with regard to the *ammonia nitrate of silver*: this has evidently been confounded with the *ammonia chloride*, and is stated to be dangerous and explosive. A much stronger solution than that required for photogenic purposes has been long used as a marking ink for linen, and we have never heard of an accident occurring, nor do we think it at all liable to lead to one, although, by being kept in accumbined state, it loses much of its useful qualities, and is not so susceptible to the action of light in the camera We would, moreover, remark that he has no authority for the alteration of the word albumen into *albumin*; nor can we believe the inferior specimen of the process, given as a frontispiece, any recommendation to the art, although it is an attempt in the right direction for the purposes of art illustration.

THE CROOK AND THE SWORD, THE HEIR OF LORN, and other POEMS. By FRANCIS FITZHUGH. Edinburgh: Johnstone and Hunter.

The two principal poems in this volume are very different in subject and style, but both have their distinctive merits, and, from the contrast, display to great advantage the versatility of the author. The miscellaneous pieces are characterised by genuine piety—pathetic without any tinge of querulousness, and impressive without the cant of morbid infidelism.

"The Crook and the Sword" is a domestic tale of humble life, the moral aim of which is to denounce drunkenness, to praise the virtues of married life, to paint the pangs of remorse, and to describe the consolations of the Gospel to the penitent. If we may hazard a conjecture, based on the internal evidence of this poem, we should give Mr. Fitzhugh credit for a special admiration of Crabbe and Goldsmith; for we recognize the minute pencillings of the "Tales of the Hall," and the plaintive sweetness of the "Deserted Village." There is no imitation in the sense of plagiarism, but there is that resemblance which the study of a particular model always imparts, when the mind of the reader is so constituted as to appreciate his author, and sympathise with his inner feelings. This happy combination of the styles of the two poets to whom we have referred, appears to us blended together at page nine, commencing with the line

> Down in the valley, where the silver stream
>
> and terminating with
>
> On Passion's tide, neath Life's inclement skies

We might refer to other passages of similar sweetness and clearness, but these cannot escape even the careless reader; and we will only add that the smoothness of the versification is almost equal to that of Rogers, in the "Pleasures of Memory."

The "Heir of Lorn" is an older strain. The scene is laid in the Mull of Kintyre, and "the period chosen for the story is about the beginning of the thirteenth century, long after the arrival of St. Columbe on these shores." This poem is, in texture, of a romantic cast, full of the mythology and demonology in which Walter Scott delighted. The poem, like the preceding one, is written in hexameter verse; but there are some spirited songs, of various metres, introduced. Perhaps Mr. Fitzhugh would win higher favour were he more implusive in the structure of his verse. A little abruptness would break down the sense of sameness. The finest scenery in the world is diverse in its features. If Mr. Fitzhugh would be a little less ornate, he would, in all probability, become a greater favourite.

TEMPLE-BAR THE CITY GOLGOTHA. By A MEMBER of the INNER TEMPLE. Bogue.

Although this small quarto bears the name of the only survivor of the City bars and gates, this must be considered as the peg, or spike, whereon the writer has placed his subject, rather than bespeaking the actual contents of his book. The awful question of capital punishments of past ages associated with the present bar, is here roughly to be illustrated rather than discussed; and the garniture of our public buildings with the heads of the victims of sanguinary laws is here referred to as the examples upon Temple-bar, which was the last place of these horrible displays of legal vengeance, and ineffectual terrors to evil-doers. London-bridge and Westminster-hall bore traitors' heads, until the building of the present Temple-bar, which from 1684 to 1772 was "the City Golgotha." The last head was swept by the wind from the top of the Bar about 1772, and the criminal events which led to the grim tenure through the intervening century, narrated in chronological order, have supplied the staple of the Author's volume, which is agreeably condensed with a few suggestions for the better rendering of our criminal proceedings conducive to the great end of all legislation—the repression of crime, and the reformation of the criminal. The book is not, therefore, merely a historical or antiquarian interest, but aims at a higher import. It has a pair of characteristic illustrations: one showing the Bar at the commencement of the eighteenth century; and the other, from a scarce print in the author's possession, shows the heads of Townly and Fletcher, the rebels, executed, and exposed on the Bar in 1746. By the way, the late J. T. Smith, in 1826, conversed with a person who remembered that when the above heads were so exposed, a man stood in Leicester-fields with a telescope, to give the boys a sight of them for a halfpenny each—so thinly were the streets built at that time.

A YOUNG TRAVELLER'S JOURNAL OF A TOUR IN NORTH AND SOUTH AMERICA, DURING THE YEAR 1850. With numerous Illustrations by the Authoress; Engraved by T. Bolton. London: T. Bosworth.

We learn from the preface to this amusing, and, in many points, instructive, volume, that the authoress had only attained her twelfth year a week before starting for America; and that the work was sent to press when she was only thirteen. She professes not to be "a candidate for the honours of books of travels in general," and only writes for children of her own age. This is very modest, and, no doubt very sincere; but we can assure our youthful authoress that she need not on a comparison with some more matured writers who have paid a flying visit to the United States, and returned utterly ignorant of the people, though saturated with prejudice. She evinces an amiable and kindly spirit, and does justice to the virtues of our Transatlantic brethren. With some slight errors, her style is correct, and frequently elegant.

MEMORIALS OF THEOPHILUS TRIVIAL. By THOMAS T. LYNCH. Longman and Co.

This volume addresses itself to thoughtful piety. It is aphoristic in manner and style. He who reads it carefully will read it often. There is an air of freshness in its prose and poetry; while the earnestness of the writer is visible in every page. It is eminently suggestive, and well calculated to kindle meditation in the indifferent We can commend it heartily to old and young, and to religionists of every denomination.

LITERARY MISCELLANIES.—No. V.

AN INVETERATE PLAY-GOER.

Mr. Britton, in his "Autobiography," relates:—"Amongst human eccentricities and singularities of character may be mentioned one of an old friend of mine, James Peller Malcolm, author of "Londinium Redivivum" who, after sitting all day in the reading-room of the British Museum, or at his house in Somers-town, regularly spent his evening in the gallery of Sadler's Wells. Purchasing a season ticket, he made it a practice to go *every night*, to witness repetitions of the same burlettas, pan omimes and other performances, by the same performers. In the same theatre, on the same seat, and witnessing the same routine of objects, I often met my plodding friend, whose conversation partook of the same monotonous character as his daily and nightly practice."

NIGHT ON MONT BLANC, BY ALBERT SMITH.

The stars had come out, and, looking over the plateau, I soon saw the moonlight lying cold and silvery on the summit, stealing slowly down the very track by which the sunset glories had passed upward and away. But it came so tardily, that I knew it would be hours before we derived any actual benefit from the light. One after another the guides fell asleep, until only three or four remained round the embers of the fire, thoughtfully smoking their pipes. And then silence, impressive beyond expression, reigned over our isolated world. Often and often, from Chamouni, I had looked up at evening towards the darkening position of the Grands Mulets, and thought, almost with shuddering, how awful it must be for man to pass the night in such a remote, eternal, and frozen wilderness. And now I was lying there—in the very heart of its ice-bound and appalling solitude. In such close communion with nature in her grandest aspect, with no trace of the actual living world beyond the mere speck that our little party formed, the mind was carried far away from its ordinary trains of thought: a solemn emotion of mingled awe and delight, and yet self-perception of abject nothingness, alone rose above every other feeling. A vast untrodden region of cold, and silence, and death, stretched out far and away from us on every side; but above, heaven, with its countless watchful eyes, was over all!

AN APPLICANT FOR THE POET LAUREATESHIP.

When Cibber felt that he was no longer young, he wrote to the Lord Chamberlain (or some one at Wilite's) and for him—asking to have the laurel given, at his death to a certain Mr. Jones. Here is the letter (the then Lord Chamberlain was the Duke of Grafton):—

May it please your Grace,—I know no nearer way of repaying your favours for these last twenty years than by recommending the bearer, Mr. Henry Jones, for the vacant laurel: Lord Chesterfield will tell you more of him. I don't know the day of my death, but while I live I shall not cease to be, Your Grace's, &c. COLLEY CIBBER

—When Walpole asked Lord Chesterfield who this Mr. Jones was, he replied, "that a better poet would not take the post, and a worse ought not to have it."—*Athenæum.*

AUTHORSHIP OF "JUNIUS'S LETTERS."

In the last number of the "North British Review," an article on Junius, attributed to Sir David Brewster, brings forward anew the claims of the Rev. Lochlan Macleau to the authorship. Macleau was a literary man in London at that period, and is known to have written able political papers. Through Earl Temple's influence he was recommended to a church living in Ireland, where he disappeared after the Junius commotion. The statements of Sir David Brewster form an interesting chapter in the history of the controversy. In the *Witness* newspaper, the editor, Mr. Hugh Miller, has some able and ingenious comments on the article in the *North British*, and on the question generally. Mr. Miller agrees with those who think that the claims of Lord Temple, and even of Sir Philip Francis, are finally disposed of, while more inquiry must be made as to Mr Macleau and Lord Lyttelton. Mr Miller seems to have a strong impression that Lord Lyttelton was the man, and says he has seen no satisfactory reply to the article in the *Quarterly Review* in which his claims were urged.—*Literary Gazette.*

ASSYRIAN ANTIQUITIES.

It would appear from a statement made by Mr. Layard, that since the publication of his second work, remains have been found of a much earlier period than any previously taken from the Assyrian mounds. From an inscription interpreted by Dr. Hincks, it would even seem that temples existed of the nineteenth or twentieth century before Christ—ascending almost to the earliest known Egyptian period. The annals of those Assyrian kings who are mentioned in Scripture, and who were closely connected with the Jewish people, have not yet been fully completed, and the chronicles of the wars with Samaria, and of the destruction of that city, are as yet, unfortunately, not entire, although reference to them has been met with on several fragments. It is believed that diligent research will speedily supply the missing information.—*Prospectus of the Assyrian Society.*

PORTRAIT OF LINNÆUS.

At a late meeting of the Linnean Society, the secretary announced the donation, on the part of the retiring president Mr Brown, of a valuable addition to the society's collection of paintings, being a portrait of Linnæus, copied by Professor Pasch from the original painting by Roslin, in the possession of the Royal Academy of Stockholm; described in Maton's general view of the writings of Linnæus as the most striking and characteristic likeness ever executed. The copy now presented to the society was originally painted for Archbishop von Troil, by whom it was sent as a present to the late Sir Joseph Banks.

BATTLE OF BUNKER'S HILL, AND GENERAL BURGOYNE.

I remember (says Gardiner, in his "Music and Friends,") the plan of the Battle of Bunker's hill, fought June 17th, 1775, being published in the *Leicester Journal*, and how interested the Dissenters were in the struggle, as friends to civil and religious liberty. The capture of General Burgoyne and the whole of his army, early in the contest, was an event that raised the enthusiasm of the Americans, and promised them ultimate success. How that General must have blushed when compelled to lay down his arms to a foe whom he had treated with such gross contempt. Poets and musicians have nothing to do with arms. Though Burgoyne did not shine in the field, yet, as a bard, he was pre-eminent. See his beautiful song—

> Why will Maria, when I gaze,
> My ravished eyes reprove,
> And chide them from the only face,
> They can behold with love.

THE TIMES OF THE CRUSADERS.

Rude were the manners then: man and wife ate off the same trencher; a few wooden handled knives, with blades of rugged iron, were a luxury for the great; candles unknown. A servant-girl held a torch at supper, one, or at most two, mugs of coarse brown earthenware, formed all the drinking apparatus in a house. Rich gentlemen wore clothes of unlined leather. Ordinary persons scarcely ever touched flesh meat. Noble mansions drunk little or no wine in summer—a little corn seemed wealth. Women had trivial marriage-portions; even ladies dressed extremely plain. The chief part of a family's expense was what the males spent in arms and horses, none of which, however, were either very good or very showy: and grandees had to lay out money on their lofty towers. In Dante's comparatively polished times, ladies began to paint their cheeks by way of finery, going to the theatre; and to use less assiduity in spinning and plying their distaff.—SIR JOHN FAAFE'S *History of the Order of St. John of Jerusalem.*

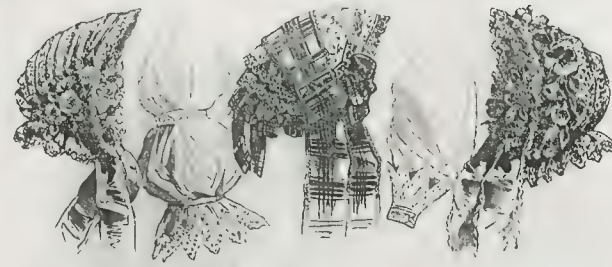
HISTORICAL PROPHECY.

We quote the following remarkable sentences from Gibbon, relating to the predicted rule of Russia in Constantinople. They occur in chapter lv. of his history:—"The memory of these Arctic fleets that seemed to descend from the polar circle, left a deep impression of terror on the Imperial city. By the vulgar of every rank, it was asserted and believed, that an equestrian statue in the square of Taurus was secretly inscribed with a prophecy, how the Russians, in the last days should become masters of Constantinople. In our own time, a Russian armament, the sad of sailing from the Borysthenes, has circumnavigated the continent of Europe! and the Turkish capital has been threatened by a squadron of strong and lofty ships of war, each of which, with its naval science and thundering artillery, could have sunk or scattered a hundred canoes such as those of their ancestors. Perhaps the present generation may yet behold the accomplishment of the prediction—of a rare prediction, of which the style is unambiguous and the date unquestionable."

SIR JOSHUA REYNOLDS'S SITTERS.

How very few of Sir Joshua's sitters are now alive—not, we suspect, more than three. The present Lord Fitzwilliam, now in his sixty-eighth year, stood to Sir Joshua; and one of the treasures of Wentworth-house, in Yorkshire, is a well-preserved full-length of his Lordship when a boy of five years old painted in Sir Joshua's best manner Lord Fitzwilliam just recollects sitting to the great painter." *Athenæum.*

PARIS FASHIONS FOR SEPTEMBER.



ALTHOUGH we have already fully illustrated the Summer Fashions, and although the majority of our ladies have left Paris for the country and the watering-places, and the Parisian dressmakers and fashionable modistes have little to do, there are still a few noteworthy points. The colour red is particularly sought after, principally for bonnets, and their trimmings; but it is a trying and difficult colour for wearers. Persons of pale complexions, for whom it is little suitable, modify it by nets (*Tulles*) and white blondes, or green foliage.

Evening Caps.—Head-dresses for balls are red, mixed with black velvet, or lace. A great many head-dresses are worn of service-berries (*Sorbier*); their red tufts admit of being disposed and adjusted in the most agreeable manner for evening dress.

We have also to record the return, a little late, it is true, of a fashion laid aside a few years since—namely, the material *paille tisse* for bonnets, which reappears, however, of an improved description, fine, light tissue, and of white colour, which gives it (at a little distance) the appearance of *paille-de-soie*. It is made up and ornamented in the same manner as the open and worked straw which has been worn for the last four years. Bands of straw are placed alternately with black velvet, on which are embroidered red flowers, assorting with the flower which is placed on the bonnet: the red poppy, the service-berries, and red carnations, are the flowers most worn. It is probable that this mixture of red and black is a fashion imported from Spain, worn at St. Cloud, and thence imitated in Paris. All dresses are now made to protect the wearer as much as possible from the rays of the sun; consequently, nearly all the bodies are made high, *à basques*, with pagoda sleeves, and under sleeves of jaconet, closed at the wrist; worn with gloves of Swedish leather, of the shape called *manchettes*. Add to this a *capuche*, or hood-shaped bonnet, in white jaconet, lined with pink; to which is adjusted a large *brodel*, or curtain, which hangs low, and thus protects the neck; place in the hand an *ombrelle*, and you have a person perfectly protected against the ardour of the sun.

The stuffs worn are still the piqué blanc, nankeen, trimmed with coloured lastings or braidings, white ticks or tickets (*coutille*), printed with light-coloured patterns; the same materials in stripes of white and grey, or yellowish thread, printed foulards, without volants; and white jaconets, plain or printed, with or without volants, or with a pattern on the volant to match that of the dress. *Bottines* of stuff are worn, with small heels, laced on the side: buttons have gone out of fashion, and are now only used for the stout leather or kid *bottines* for winter wear. In the evening, the *bottines* are replaced by shoes of coloured stuff, or of black taffetas, upon which are placed a rather large bow of taffetas, serving to make the foot appear smaller; the shoes being worn with or without strings or sandals.

For pardessus, there is nothing new since the last information we gave. Pelisses, rounds, and somewhat short, which it was attempted to bring again into fashion, have not succeeded. Shawls and mantelets, or mantillas of black lace, are the most in vogue.

A fashionable occupation for ladies in the country is worth mention. A few years ago, all the spare time was devoted to worsted-work (*tapisserie*); then came the open embroidering work, called English embroidery, which was quite the rage. Now the ladies are occupied with embroidering or braiding in patterns on mantillas (mantelets) and small pardessus of silk or of woollen cloth; which assures us that this fashion will continue for autumn and winter until the end of the year.

Fashion for Gentlemen.—The sleeves and collars are worn wider than hitherto; and the skirts of coats continue to be rather short and narrow.

WRECK CHART OF THE BRITISH ISLES.

A VERY interesting return to an order of the House of Commons has just been made by the Hydrographic Department of the Admiralty. We find in it an abstract of all collisions, accidents, and wrecks of vessels, and the number of lives lost on the shores of the United Kingdom during the year 1850; all of which are most strikingly illustrated on a Wreck Chart. The register is sufficiently dry and bald, and sentiment appears to be sacrificed to statistics. It is painful to think of the apathy which permits notorious evils to exist, for a protracted period, unchecked, because they are everybody's business, but no one's in particular. Bridges totter to their fall, roads remain for years dangerous or impassable, and our shores are strewn with wrecks, yet the reign of indifference is not determined until public attention is attracted by the occurrence of some calamity of surpassing horror, in which the destruction, peradventure, of some illustrious individual is involved. Then the bridge and the road are repaired, the light-house is reared, and the life-boat is built and stationed. It would not be difficult to spend a page upon the cause of this strange state of things, and it would be easy, perhaps, to trace them to certain idiosyncrasies of the Anglo-Saxon race; but it will suffice our present purpose to glance at a few facts revealed in the Wreck Return. That there is a loss of property by shipwreck on our coasts to the extent of about a million and a half every year, we leave to be discussed at "Lloyd's." The public is accustomed to regard all this as matter for insurance calculations; but we doubt whether the most stolid individual can hear unmoved, that there is a loss of life, on our coasts, amounting to between 700 and 800 human beings every year, most of whom leave behind them widows, mothers, sisters, and orphans. This immense sacrifice of human life on our shores is not on account of the want of exertion to lessen it. The promptitude with which our brave fishermen and seamen peril their lives to save those of others is above all praise. The very women are animated by the same daring and devoted spirit—as witness Grace Darling. The fact is, the unprovided state of our coasts, in regard to life-boats, mortars, and rockets, is disgraceful, and little better than utterly neglected.

It appears that in the year 1850 no less than 681 vessels were wrecked on the coasts and within the seas of the British Isles. Of these 270 were total wrecks; 84 were sunk, by leaks or collisions; 18 were abandoned and 304 were stranded and damaged, so as to require them to discharge cargo. As nearly as can be ascertained, 780 lives were lost from these casualties. We also learn from the reports of the Royal National Institution for the Preservation of Life from Shipwreck, that, during the year 1851, 701 vessels were wrecked on our coasts, and the number of lives lost, as far as could be ascertained, was 740; and the same documents inform us that the past year (1852) far exceeded the two former periods, as respected shipwrecks, in amount and fatality—no less than 1100 vessels having been wrecked, accompanied by the fearful loss of 900 lives. It is gratifying to add that this old and valuable institution has contributed, through the instrumentality of its life-boats and other means, to the saving of nearly 9000 lives since its first establishment, in 1824. If, however, there is a real spirit of humanity in the land—if the old sympathies of Englishmen for their brave seamen are not dead within us, we trust that those who have wealth and influence will better themselves in providing our coasts with more adequate means than at present exist for the preservation of life from shipwreck, before the dark and stormy season of winter, when the mariner is most in need of the aid of the life-boat and her brave crew.

BREAK-UP OF THE CAMP AT CHOBHAM.

THE CAMP AT CHOBHAM—THE FINALE

With early dawn on Friday and Saturday morning all were astir at Chobham, and the various detachments [illegible] and beating and being treated at the canteens. The [illegible] These left these cantonments on [illegible] early in the morning. All the men [illegible] greet them as [illegible] and when they [illegible] and return[illegible] commenced [illegible] the day two troops [illegible] Greys, set out f[illegible] of the regiments accompa[illegible] companies of the [illegible] for [illegible]

The accompanying [illegible] ng-up of the Camp, sketched on Saturday morning. [illegible] four regiments were drawn up in front of the Queen's pavilion: the Blues, the 4th Light Dragoons and the Hussars and [illegible]. In the Engraving the Hussars are leaving the ground and the Scots Greys are returning their cheers.

On the breaking up of the Camp, the following Memorandum and Orders were issued:—

Memorandum

Horse Guards, August 12, 1853.

The General Commanding-in-Chief has [illegible] the honour to convey to Lieut.-[illegible] [illegible] and to the [illegible] during the summer, the [illegible] of their [illegible] Lord [illegible] Commanding-in-Chief.

By direction of the [illegible] Commanding-in-Chief. Signed G. Brown, A.

DAYLESFORD HOUSE, WORCESTERSHIRE, THE SEAT OF THE RIGHT HON. WARREN HASTINGS.

Divisional Order.

On the eve of the departure of the regiments placed under the command of Lord Seaton for their respective quarters, he is desirous of expressing his satisfaction at the perfect state of discipline of the [illegible] and the general [illegible] which [illegible] men [illegible] of [illegible] reflecting [illegible] very [illegible] that he [illegible] Royal Highness [illegible] Major-General [illegible], and Colonel Lockyer, K.H., [illegible] having the [illegible] accept his thanks for [illegible] and the [illegible] ant manner in the which the duties of [illegible] departments have been carried on during the whole period of the encampment.

By command,

E. B. Wood, Lieut.-Colonel, A.A.G.

DAYLESFORD HOUSE, THE SEAT OF THE RIGHT HON. WARREN HASTINGS.

During the past week the contents of Daylesford House, celebrated as the seat of Warren Hastings, have been dispersed by sale by Messrs. Farebrother, Clark, and Lye. This estate was purchased by Mr. Hastings; it had formerly been in the possession of his family, and here he completely retired from [illegible]. The property comprises the entire parish of Daylesford (except about five acres), and is situated about four miles from Chipping Norton and Stow, and about half a mile from the station on the Oxford and Worcester Railway. The mansion was built for Mr. Hastings, and is delightfully [illegible] wooded park, and [illegible] The property was sold for [illegible] of the trustees under the will of the late Mrs. Hastings.

[illegible] architectural beauty; but appears to have been fitted and furnished [illegible] in the best Indian taste. Thus the [illegible] suite consisted [illegible] and tables; and one of the curious items was an Oriental fly-flap, mounted [illegible] set with rubies and emeralds. The arms included Persian guns, daggers, and a [illegible] chain-mail armour, inlaid with gold. Among the drawings was an oval portrait of Warren Hastings in crayons, by Sir Thomas Lawrence, who had written behind it "Be pleased to [illegible] lamp and from the sun. T. Lawrence." Mr. Hastings appears to have been a collector, there being several of rare character and exquisite beauty. Among the pictures were [illegible] was in India, painted by Mr. Hodges, R.A.; and Zoffany's celebrated picture of Col. Mordaunt [illegible] a fight at [illegible] been finely engraved by Erdlloom.

[illegible] the annals of British India, Daylesford House will ever possess an historic interest [illegible] the dispersion of the luxurious items with which the ex-Governor-general sought as it were to gild his retirement, and the close of a troubled public life.

"JULIA." "ARROW." "SYLVIE."

COWES REGATTA.—"THE JULIA," WINNER OF THE ROYAL YACHT SQUADRON CUP.

ROYAL YACHT SQUADRON REGATTA, AND CUP RACE.

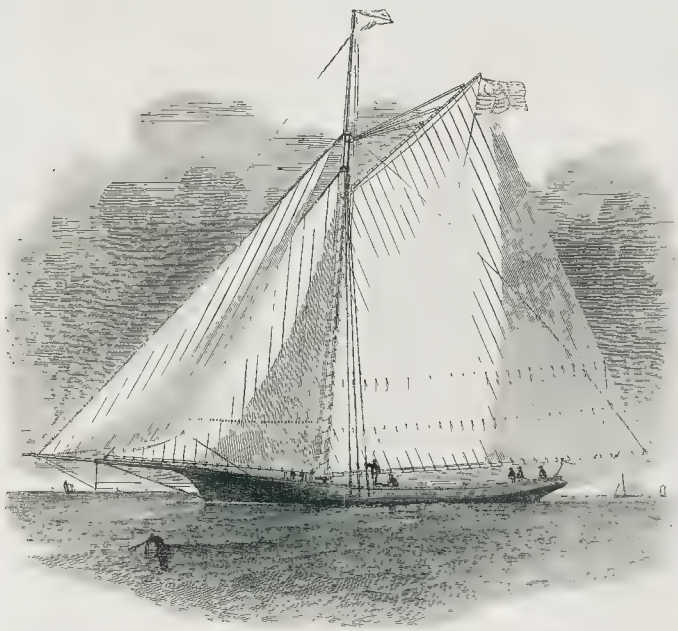
THE Cup presented by the Royal Yacht Squadron, open to yachts of all nations, was sailed for on Friday last, at Cowes, and the interest which was excited on this occasion almost surpassed that evinced when the celebrated clipper, the *America*, bore away the palm in such style from all competitors.

On this occasion two foreign vessels were induced to enter—the *Sylvie*, an American clipper, which is stated to have beaten everything in her waters, including a conqueror of the far-famed *America*; and the *Aurora Borealis*, a Swedish craft, from which great exploits were anticipated. The *Sverige* having become the property of an English gentleman not a member of a Royal Club, was disqualified entered :—

	Tons.	
Aurora Borealis (Swede) ..	259	Capt. Beckman.
Alarm	248	Mr. J. Weld
Sylvie (American) ..	205	Mr. L. A. Depau
Julia	111	Mr. W. Peareth.
Arrow	102	Mr. T. Chamberlayne.
Aurora	60	Mr. T. Le Marchant.
Osprey	59	Lieut.-Col. R. W. Huey.

The course was from the Club-house to the Nab Light, and from thence fifteen miles to sea, round a steamer, and back to the starting-post.

The *Julia* took a lead on the first of the ebb-tide. The *Sylvie* soon set her mainsail, and was well under way, taking slightly the lead of the *Aurora Borealis*, *Arrow*, *Julia*, and *Aurora*. At 11h. 23m., when nearly abreast of Osborne House, the *Aurora Borealis*, who had been holding a good wind, challenged the *Sylvie*, and an exciting race ensued between them. Shortly after passing Osborne, the *Aurora* met with a most unfortunate accident, by carrying away her topmast which had the effect of at once putting her at considerable odds against her rivals. The *Arrow*, *Julia*, and *Sylvie* were well up together off Ryde; but the wind now freshening, the *Alarm* emerged from the position she had



THE NEW AMERICAN CLIPPER, "SYLVIE."

THE ROYAL YACHT SQUADRON PRIZE VASE, THE GIFT OF HER MAJESTY.

hitherto been in, and took the lead. But little change of position took place in the course to the Nab Light, which was passed as under:—

						ft	m	s
Alarm	..	..	..	..	..	12	33	34
Julia	..	..	..	..	..	12	34	34½
Aurora Borealis	..	..	..	..	..	12	35	55
Sylvia	..	..	..	..	..	12	37	7
Arrow	..	..	.	..	..	12	38	32½
Osprey	..	..	..	..	..	12	39	12

From this point the whole squadron were close-hauled, and it was now supposed that the *Sylvia* would at any rate exhibit those extraordinary powers report had assigned to her. At 1h. 6m. she set her jibtopsail: but when off White Cliff, at 1h. 10m. 13 sec. the *Julia* weathered her in gallant style, the *Arrow* and *Alarm* being well together. A series of fine manœuvring now followed between the Swede and the American, for at 1h. 20m., when off Sandown, the Swede weathered the American. The wind that had been blowing fresh from the time of passing the Norman Rock now dropped; and when off Shanklin Bay, at 1h. 31m., a fine trial of skill took place; for in coming about from her tack, the *Sylvia* weathered the *Aurora Borealis* in a style to at excited admiration, and it was even now thought she might turn out to be worthy of her fame.

At seven minutes past three o'clock, the required distance of eighteen miles from the Nab Light to sea having been run, the steam-vessel, on board of which were the committee of the squadron, was brought to anchor, the bearings by compass being St. Catherine's Light-house, N. by E. ½ E., and the Needles Rock, N. and W. In the progress to the steamer, in consequence of the very great drop in the wind, the *Alarm* had fallen considerably astern, the *Julia* maintaining the lead against the *Sylvia*, who made a desperate effort to overhaul her, but all in vain. The two vessels containing the latest embodiments in science and modern improvements of England and America were now fairly pitted against each other. When it is known that Nicholls, the captain of the *Mosquito*, had charge of the *Julia* for the day, with some of the crew of that successful yacht, no doubt whatever could exist that the advantage of his superior handling would tell fearfully against her American opponent. She had it all her own way, running away from her, as did the old *Arrow*. Off Culver Cliff, at two minutes past six, the wind freshening from the south-east, the *Arrow*, with her immense balloon jib, began sensibly to draw upon the *Julia*, who, throughout the entire race, was sailing under her ordinary going sails. From the time that the American had been observed so far as ern, but little attention was paid to her, and her chances of obtaining the prize, or even a second place, were never for a moment entertained. Great was the surprise, as the steamer was waiting at the Nab (which was to be the winning post of the race), watching the progress of the *Julia* to it, when the *Sylvia* was observed so near abreast of the *Arrow* as made it a question of very great doubt which of them had the lead. The light wind that had for some time prevailed had been turned by her to good account; and, although it was not ascertained at the time, she most likely then took advantage of her novel construction by hoisting up her keel, and leaving nothing but what has been aptly termed her "skimming dish" upon the water. Thus drawing but three feet at the fore and six feet aft, she was able to appear in the extraordinary manner here described. The *Julia* could, however, never be overhauled, and on her appearance at the conclusion of the race she was greeted with loud and hearty cheering.

The following statements of the time of the arrival of the respective vessels given below are those taken by the sailing committee, on board Nab Light ship, and by those persons who remained on the steamer, the difference mainly arising from the variation of watches:—

	Committee's Time. H. M. S.	On board the Steam-boat. H. M. S.
Julia	.. 7 7 3½	.. 7 5 12
Sylvia	.. 7 13 42	.. 7 11 40
Arrow	.. 7 14 23½	.. 7 12 34
Osprey	.. 7 18 36	.. 7 16 45
Aurora Borealis ..	.. 7 19 6	.. 7 17 32

This concluded a very interesting and beautiful match. The cup was thus won by the *Julia*, and the smaller prize by the *Sylvia*.

The American yacht was subjected to no restrictions, and did as she liked: she sailed her best, and was fairly beaten by a genuine English yacht.

The *Julia*, the winner of the first prize, is a new vessel, built by Ratsey, of Cowes; she is a noble cutter, of 111 tons, and of the following dimensions:

	ft.	in.
Length over all	81	6
Length on keel	71	7
Beam	18	7
Depth of hold	10	0
Draught	10	0 aft.
Ditto	6	6 forward.
Lower mast	70	0
Topmast	44	0
Boom	60	0
Gaff	41	0
Bowsprit	33	0

We also engrave the *Sylvia*, from a sketch by Mr. Thomas S. Robins. Her hull, in a great measure, resembles her prototype, the noted *America*; but is unlike her in other respects, being cutter-rigged, with an immense breadth of beam, and carries a false or dropping keel. This enables her in light weather to draw very little water; but, if occasion requires her to stand under a very heavy press of canvas, then she can drop her keel for the time, and gain all the advantages which it will effect. This keel can be lowered about fifteen feet. Her tonnage is 105 tons:—

	ft	in.
Length over all	78	0
Beam	24	9
Mast	82	0
Boom	71	0

Draught of water, 6½ feet aft, and 3½ feet at the fore.

THE PRIZE VASE.

HER Majesty's gift to the Royal Yacht Squadron, is an extremely beautiful Silver Vase, of the Cinque-Cento period, beautifully executed in silver by Messrs Hunt and Roskell, from a design by Mr. H. H. Armstead, whose artistic skill and good taste in the composition are highly commendable. The embellishments of the Vase embody the story of the loves of Acis and Galatea. The panel on the body is devoted to a composition in low relief, showing the lovers wrapt in their tender passion, innocent of danger.

ACIS

Not showers to lark so pleasing,
Not sunshine to the bee,
Not sleep to toil so easing
As those dear smiles to me.

On the cover, and crowning the entire design, is represented Polyphemus, in jealous wrath, preparing for the destruction of his unconscious rival below.

POLYPHEMUS.

Fly swift! thou massy pile, fly!
Die, presumptuous Acis, die!

The junctions of the handles with the shoulders of the Vase, is admirably composed by the introduction of children, who assist to give fullness of expression to the story, by the one symbolizing jealousy in reference to Polyphemus, and the other bewailing the impending fate of Acis.

Much has been gained in the effect of the work, by a judicious use of oxidization, which, by producing a warm tone, and reducing the glitter of the metal, gives that fine play to light and shade, which only can develop the delicacies of such workmanship and design. This Vase stands prominently from among the many beautiful works produced by Messrs. Hunt and Roskell.

NO. 1. FOUNTAIN OF VENUS, AT OSBORNE.

NO. 2. FOUNTAIN OF ANDROMEDA, AT OSBORNE.

FOUNTAINS AT OSBORNE, ISLE OF WIGHT.

TWO Fountains, of classic design, have just been added to the sculptural embellishments of her Majesty's marine residence, Osborne.

These Fountains are placed upon the terraces of the grounds. The Fountain of Venus, upon the upper terrace, has been designed by L. Gruner, and modelled by Trentanove. The height of the Fountain from its granite bed is 16 feet; the diameter, 36 feet. The dolphins and ornamental stems are of fine cast bronze; as is also the statue, taken from the antique "Venus accroupie," and the work of M. Barbedienne, of Paris. The two large basins are of red polished granite, executed by Messrs. M'Donald and Leslie, of Aberdeen. The lining of the Fountain, designed by L. Gruner, has been executed by Orsi and Armani, of Guildhall Chambers, with their ornamental lava, and consists of a green band, whence rise 36 thin green leaves, between which is ornamental *traliti*, in buff, bordered with a base of rich blue, which reaches up to the brim of the Fountain.

The Fountain of Andromeda, on the lower terrace, also designed by L. Gruner, has a solid base of red granite. The statue is of bronze, and, with its ornamental base, is by John Bell. The first height from the base to the statue is 18 feet; and the diameter 42 feet. The lining of lava is in the form of a star, of brilliant colours, beginning and ending with a vermilion Greek key on a green ground. The fringe forming the star begins towards the centre with white, of which, also, are the rays; the vermilion, yellow, green, &c., radiating from the centre, and gradually becoming lighter towards the extremity—the water adding to their brilliancy with magnificent effect representing an immense basin of variegated colours, *en porcelaine*. The whole is a remarkably fine specimen of Messrs. Orsi and Armani's ornamental metallic lava.

With this beautiful material are also floored the paths on the terraces and in the gardens. The ground at Osborne is sandy; hence it became necessary to find some material that would make a strong level paving impervious to damp, and preserve the appearance of a garden walk. As the metallic lava possesses these requisites, combining admirably with colours, it was adopted, and all the paths on the terraces, garden, &c., round the house, are laid with this material. A coat of their Seyssel asphalte, one inch thick, is first laid down, and covered with 1½ inch of lava, in buff colour, mixed with Ventnor sea pebbles; and the wear bringing these pebbles to the surface, the floor presents a natural and pleasing appearance. This description of paving for gardens, &c., is very advantageous, as it only requires sweeping to be kept clean, and prevents the vegetation of the ground or herbs to grow upon it. Neither does this gravel lava require the continual addition of new gravel, or constantly rolling; so that the improvement is an economical one.

NO. 1 SECTION OF BASIN.

NO. 2. SECTION OF BASIN.

ASCENT OF THE HADDINGTON STEEPLE.

THE Weathercock on the spire of the steeple at Haddington, in the south of Scotland, having been immovable for a considerable time, the Town-council lately resolved, if they could get a person to make the ascent, to have the defective instrument rectified. A young tar from Leith, who had been on the shoals, as far as purse and property were concerned, last month undertook the task; and, after several days perseverance, he succeeded in getting a rope fixed to the spire by means of a kite. The ascent was then made by the tar, who was pulled to the top by a block and tackle; and the weathercock was brought down and adjusted. The Sketch represents Jack in the act of descending, after having completed the feat, amidst the applause of a large concourse of the inhabitants. Jack (besides being maintained during the time he was employed at the job) received £5 from the Town-council; and a subscription was also raised, through Mr. Allan, which has enabled the steeple-climber to get rigged out and weathertight again.

ASCENT OF HADDINGTON STEEPLE.

ROYAL COMMISSIONS.—The Queen has appointed Sir John Romilly, Sir William Erle, Sir Charles Crompton, the Hon. Henry Fitzroy, H. S. Keating, Esq., Q.C.; J. H. Rue, Esq., Q.C., Serjeant A. S. Dowling, Esq.; J. F. Taylor, Esq., and J. E. Mullins, Esq., Commissioners for inquiring into the state and practice of County Courts.—Also the Right Hon. S. H. Walpole, Sir G. Rose, Knt.; C. T. Swanston, Esq., Q.C.; H. D. Hill, Esq., Q.C.; J. Bacon, Esq., Q.C.; E. Holroyd, Esq., of the Court of Bankruptcy; E. Cooke, Esq., Barrister-at-law; and G. C. Glyn, Esq., Commissioners for inquiring into the Law of Bankruptcy. Also W. N. Welby, Esq., Barrister-at-law; W. J. Williams, Esq., Inspector of Prisons; and W. Baly, M.D., Medical Superintendent of Millbank Prison, Commissioners for inquiring into Birmingham Borough Prison.

NEWSPAPER STAMP DUTIES.—The Act to amend the law relating to the stamp duties on newspapers has just been printed. The schedule to the Act 6th and 7th William IV., chap. 76, is repealed, and it is now enacted that no paper containing news, &c., is to be deemed to be a newspaper within the said Act, or any Act relating to stamp duties on newspapers, unless the same shall be published periodically, or in parts or numbers at intervals not exceeding twenty-six days between the publication of any two such parts or numbers.

AFRICAN COTTON.—A sample of cotton grown near Abbeokuta, on the Gold Coast, has been recently shown to us (*Manchester Guardian*), from which it appears that the green seed variety of the cotton plant—similar to that which produces Upland and New Orleans cotton—grows wild on the coast of Africa, as well as the black seed variety, from which the African cotton previously received in this country appears to have been produced. The sample in question is of remarkably strong staple, and the cotton would be very useful if it could be procured in quantity. If the plant is said not to produce largely, but that fact would probably be amended by culture.

GENERAL ASSEMBLY'S EDUCATION SCHEME.—The number of persons, upwards of six years of age, in the Highlands and islands unable to read, was ascertained in 1843 to be 83,397; the number betwixt six and twenty years of age being 28,073. By the operation of this scheme, at least 220 schools have been added in the Highlands and Islands; and the number of persons unable to read has been greatly diminished. Seventy-two of the Highland schools are in parishes fifteen miles or upwards in length, forty-eight of these being in parishes the length of which varies from twenty to seventy miles. During last year, between 16,000 and 17,000 children received instruction at the 177 Assembly schools, which are as nearly as possible on the pattern of the parish schools.

TUBULAR BRIDGE FOR THE NILE.—An iron tubular bridge is being prepared at the manufactory of Messrs. R. Stephenson and Co., for the Nile at Benha. The trains will pass along the top of the tube. A footpath will be made on each side of the rails. The bridge will be 20 feet above the ordinary level of the water, and the centre portion of it is constructed to swing on a pivot, so that the boat traffic may be secured during the risings of the Nile. The different pieces will only meet at the point of their destination.

PAINTING BUCKINGHAM PALACE.—On account of the rapidly-decaying nature of the stonework in the new front of Buckingham Palace, which has just been extensively repaired, further examination has determined the authorities that the only efficient protection for it in future will be a coating of paint, on the outside. A new scaffolding has, therefore, been erected, and the work was commenced on Saturday last.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

Meetings to promote the Dargan Testimonial are now general in all the principal towns in Ire and.

Three pairs of jet bracelets have been made at Whitby, for the Empress of France, and are said to be the finest jet ornaments ever made in the town.

The King of Naples has issued a decree, dated Ischia, the 5th inst., taking off all duty on foreign corn, barley, oats, pulse, and flour, until the end of December.

The rotation of Irish bishops in the next Session of Parliament will be the Lord Primate, the Bishops of Down and Connor, Osnory, and Cork.

Mr. Rowland Elliott, who for nine years held an appointment in the National Provincial Bank of England has recently been appointed corresponding secretary to the Weekly Trust Society.

A letter from Surinam (Dutch Guiana) of July 16 states that African slavery is soon to be abolished in that Colony, and that Chinese coolies are to be introduced instead.

The first Talbot exhibition at the Charter-house has been awarded by the examiners (Dr. Hawtrey and Dr. Russell) to Mr. O. R. Newmarch, postmaster of Merton College, Oxford.

On Friday week a committee of the House of Lords passed the Eastern Union Railway Bill, with a proviso in favour of the preference holders, that the arrears of interest should be paid.

The Grand Duke of Saxe-Weimar has authorised the establishment at Weimar of a bank, with a capital of a million of thalers, for loans and advances in favour of trade and manufactures.

The mail which arrived from Australia by the *Harbinger* last week, consisted of nearly 450,000 letters—making a Post-office revenue of nearly £20,000.

A letter from Copenhagen says:—"The French Ambassador, M. de Dotezac, taking into consideration our melancholy situation, in consequence of the ravages of the cholera, has decided on not celebrating this year the fête of Napoleon. He has given 300 rix-dollars to the poor."

The Emigration Commissioners have advertised for two vessels to carry emigrants to Victoria. One is to be ready for Melbourne on the 17th, the other for Geelong on the 20th of October.

Amongst the many arrangements for ensuring the more efficient defence of our coast, the Government has ordered that a tower shall be at once erected in the split of the Isle of Grain, opposite Sheerness.

Twelve men have been killed and a number wounded, by a train on the Delaware and Belvidere Railway (U.S.) getting off the rails. The accident was caused by a cow jumping in front of the train.

On Saturday, the first vessel built for the Magdalena Steam Navigation Company, the *Estrella*, was launched from the building-yard at Blackwall. Her tonnage is 573, and her engines are to be of 120-horse power.

George T. Spiller, Esq., of Lislinnaghan, has been appointed to the commission of the peace for the county Tyrone, on the recommendation of the Earl of Charlemont, Lord-Lieutenant of the county.

The British ship *Panama*, of Glasgow, from New Orleans for Liverpool, with 1624 bales of cotton, went ashore on the 26th ult., on Kurdverry breakers, took fire, and was burned to the water's edge

The 1st of December next is the day on which the Act for the suppression of Betting-houses will take effect.

The Chamber of Commerce at Stockholm have declared Hamburg, Altona, Dantzic, and Archangel infected with cholera; and all the ports of the White Sea, and those of the north of Germany, suspected.

It is stated that the Board of Trade has at length decided upon granting charters to the Bank of Asia and the Bank of India and Australia

The Hon. James Buchanan, the new American Minister to the Court of St. James's, has arrived at the Clarendon Hotel, from Liverpool.

A boat was capsized off Ventnor, Isle of Wight, on Friday week, by which two watermen and a gentleman lost their lives.

The Empress of France has sent 3000 francs to St. Valéry, for the benefit of the widows and orphans left destitute by the shipwreck of the *Caiman*, a vessel engaged in the cod fishery of Newfoundland.

The new act on transportation will take effect on the 12th of September next.

The President of the New Grenada Republic proposes to redeem the Foreign Debt by a lottery scheme. Two million fanegados of waste land (equal to about four million English acres) are to be disposed of. There are to be 100,000 tickets at £10 each

The British Association for the Advancement of Science intends commencing its sittings for the present year at Kingston upon-Hull, on Wednesday, the 7th September.

A shark, seven feet in length, and weighing about forty pounds, was caught last week off the Eddystone, by R. Sherlock, Esq.

An Act of Parliament has just been printed abolishing "Masters Extraordinary in Chancery," and giving them the new title of "Commissioners to administer oaths in Chancery in England."

A letter from Frankfort states that, notwithstanding the favourable season, corn is still rising in that market, and large quantities are being exported to the Rhine than for many years past; the greater portion to Holland.

On Monday next, the Insolvent Debtors' Court will sit for bail cases and motions; and, on the 12th of September, the hearing of cases will be resumed. It is understood that Mr. Commissioner Murphy will take his seat during the September sittings.

A list of journal states that the number of nunneries in Spain is 803, and the number of nuns in them 20,618.

The shipments to Australia still continue to be extensive, and principally consist of liquids. Freight is generally range at from £4 to £6 per ton, according to the quality of vessel.

The Chairmanship of the London and North-Western, declined by Lord Lonsdale, has been accepted by Mr. Benson, who occupies it in lieu of General Anson, resigned.

The great mole, or breakwater, of the port of Catania, Sicily—a gigantic undertaking which has been in hand severa. years—is on the eve of completion, only one coffer-dam more remaining to be sunk.

A splendid tablet has been erected to the memory of the late Sir John Webb, Director-General of the Ordnance Medical Department, in Trinity Churchyard, Woolwich.

Intelligence has been received at Lloyd's, that a bottle had been picked up with a paper in it, on which the following was written:—" 1st of August, *Jane and Susanne*, of London, for Quebec, in a dreadful gale—pump choked—leak increasing.—(Signed) John Hobbs."

Arrangements are in progress for holding a great public meeting, to be presided over by the Earl of Eglinton, in the course of November next, under the auspices of the Scottish National Association

Major-General Sir Joseph Thackwell, G.C.B., has accepted an invitation to a public dinner in Gloucester, which is to take place on Tuesday, the 6th of September.

The Prince of Prussia has purchased for two millions and a half of thalers, the fine estate of Putbus, in the island of Rugen; but he is not to take possession of it until after the death of the present proprietor.

The Emperor of the French wishing to testify the interest which he feels in the monument raised by subscription to the memory of Ouvrard berres, has sent 3000 francs towards the completion of the work.

On the eve of the Queen's last visit to the Chobham Camp, the demand for roadsters so far exceeded the supply, that the agent outler at an hotel in Chertsey observed, in accents of reproach, 'Blest if I don't think that people fancies post oxes grows on happle-trees

Mr. Roebuck's health is so greatly improved as to enable him to accept the invitation to the next Cutlers' feast at Sheffield.

Sir Frederick Thesiger, it is understood, is going to give the public "a full, true, and particular account" of the great Smyth fraud.—*Morning Post.*

The hippopotamus from Egypt has arrived in Paris. Thirty goats, which supply him with milk, arrived with him. He does not live exclusively on milk, but eats melons and other vegetables. He is exceedingly tame, and allows himself to be handled by strangers.

Nine millions sterling of gold were coined by the Mint during the last half-year. In the year 1850 the amount was £66,000; in 1851, £4,000,000; and the same amount in 1852

The commander of the American frigate *Cumberland*, gave a splendid ba l on board his vessel to the Queen of Piedmont, at Spezzia, on the 19th. The captain of the corvette *St Louis* was also present.

The result of the harvest in Russia is most favourable. Large purchases of grain and breadstuffs have been made at Taganrog and at Rostoff for exportation, and the transactions would have been still more extensive but for the want of vessels.

The Peace Congress is to hold its next meeting this year at Edinburgh, on the 12th and 13th October, and a very large attendance is expected both from the Old and New World.

General Montholon, who shared the Emperor Napoleon's captivity at St. Helena, died re ently in Paris

"Sir Richard Hugh Smyth" is confined in a separate cell in Gloucester County prison. He declines to receive the prison diet, and his meals are supplied to him by his wife, or, as he calls her, "Lady Smyth." His trial will take place in April next.

CHESS.

**** Our customary N otices to Correspondents are deferred for a short time

SOLUTION OF PROBLEM No. 495.

WHITE.	BLACK.
1. R to K 8th	B takes Kt (dis ch); or (a)
2. K to Q2nd (disch)	R takes Q
(If K to B 4th or K 5th, the B checks at K 2 6th, or K 5th, and the B skop mates next move)	
3. R to K 6th (ch, and White mates next move with one of the Bishops).	

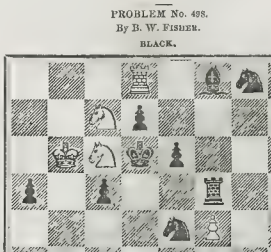
(a) 1 B to Q 8th (double ch); or, *
2. K to Q 2nd B to K 8th
3. K to K 3rd, and Black cannot move without check

*1. B to K 6th (disch
2 B interposing B to Q 5th(ch)
3. K to Q 2nd, and mate follows next move.

In the fine problem, Black has other modes of play, but none to delay the mate.

PROBLEM No. 498.
By B. W. FISHER.

BLACK.



WHITE.

White to move, and mate in six moves.

CHESS BY CORRESPONDENCE.

The following very interesting Game has just terminated between HERR LOWENTHAL and MR. RALLI, a highly-talented amateur in Manchester.

(Scotch Gambit.)

WHITE (Mr. R.)	BLACK (Herr L.)	WHITE (Mr. R.)	BLACK (Herr L.)
1. P to K 4th	P to K 4th	17. Kt takes Q	Kt takes Q
2. Kt to K B 3rd	Kt to Q B 3rd	18. Kt takes Q B P	Q R to Q Kt 2nd
3. P to Q 4th	P takes P	19. Kt to Q Kt 4th	R to Q 4 (*l*)
4. B to Q B 4th	B to Q B 4th	20. P to K Kt 3rd (*i*)	Kt to K R 6th
5. P to Q B 3rd	Kt to K B 3rd	21. P to K B 4th	R takes Q Kt P
6. P to K 5th	P to Q 4th	22. Q R to Q Kt sq	P to Q 8th (*k*)
7. B to Q Kt 5th	Kt to K 5th	23. Q R takes B	B takes K R
8. B tks Q Kt (ch)	P takes B	24. Kt to Q B 6th	R to Q B sq
9. Q B P takes P	B to Q R 3rd	25. Kt to Q B 5th	P to K Kt 4th
10. Kt to Q B 3rd	Castles (*a*)	26. P to K R 5th	P to K 6th
11. Q B to K 3rd (*b*)	P to K B 4th	27. R to Q Kt 4th	Kt to K Kt 4th
12. Kt to Q B sq (*c*)	Q B to Q R 3rd (*d*)	28. P to K 6th	R to K 2nd
13. K Kt to his 5th	P to K B 5th (*e*)	29. R takes Q P (*l*)	Kt takes Kt
14. B takes P	R takes B (*f*)	30. R takes P (ch)	K to B sq
15. K Kt to K 6th	Kt tks Q Kt (*g*)	31. P to K Kt 4th	B to K B 6th
16. Q takes R (*h*)	Kt to K 7th	32. P to K B 6th	R to Q Kt sq

And Black wins

(a) Many now play P to K B 4th, but it stilling appears to be equally good
(b) Mr. Ralli plays by speeding up to this point very brilliant.
(c) Better, perhaps, to have Castled.
(d) This prevents White from Castling, and hampers him sadly.
(e) A fine move. Mr. L plays very cleverly.
(f) If he takes with Kt, Black can win
(g) A coup d'etat
(h) His best play, apparently, under the circumstances. If he had taken the Queen, the following very striking variation would most probably have occurred:—

16. Kt takes Q	R to K 8th (ch.)
17. K to Q 2nd	R to K 7th
18. Q to her Kt square (best)	

If 18. Q to her B 2nd, Black plays to win 19 to Q R 4th (ch), and wins easily. If 18. Q takes Q R P, Black also answers with R to Q R 4th (ch), winning the Queen in a move or two afterwards, and having an excellent position.

18.	R takes Q P (ch)
19. K to his square	R to Q R 4th (ch)
20. P to Q Kt 4th	R takes Q Kt P, and wins

If White at move 20 play K to K B square Black equally win by playing Kt to Q B 4th (discovering check)

(i) Well conceived
(k) It would have been better for him to have played B to Q B 6th (ch), and then P to Q 8th.
(l) Very desperation. The game is past hope

CHESS IN RUSSIA.

Well-fought *partie* between Messrs. TCHEPOFF and SCHUMOFF.

IRELAND.

THE ROYAL VISIT.—At a meeting of the Dublin corporation just held, the Lord Mayor stated, in reference to Her Majesty's intended visit, that on Monday next the Queen would be received at the Westland-row terminus of the Kingstown Railway by the corporate authorities, &c., and that her Majesty and carriage would proceed to the Viceregal-lodge through Westland row, Grafton-street, Leinster-street, Nassau-street, Grafton-street, Westmoreland-street, Carlisle-bridge, Sackville-street, and the line of quays, north side, to Lark-gate entrance of the Phœnix park. It was also agreed, at the meeting, that there shall be no illumination of private houses, but that all large establishments and public places shall illuminate in such a manner as they may think most suitable. The concourse of visitors has been daily increasing since the announcement of the intended arrival of the Queen on Monday next. The hotels and lodging-houses are crowded, and all branches of trade have received a very decided impulse. Active preparations for the reception of her Majesty are continued.

THE MAYNOOTH COMMISSIONERS.—The *Daily Express*, in noticing the appointment of the Earl of Harrowby, Mr. Justice Patteson, Chief Baron Pigott, Dr. Longfield, and Mr. James O'Ferrall, as Commissioners to inquire into Maynooth College, says:—"Of these five, three are Protestants and two Roman Catholics, but it would be difficult to say whether the preponderating spirit of the commission is favourable or unfavourable to the Maynooth endowment."

THE INDUSTRIAL EXHIBITION.—A considerable number o persons have attended the building daily, many of whom were evidently tourists and provincial visitors. The total number admitted in one day was 11,216

THE DARGAN INDUSTRIAL INSTITUTE.—The committee have received £100 each from Mr. Peto, M.P., Mr. Jackson, M.P., Mr. Brassey Mr. Bath, and Mr. M'Cormack, towards the Dargan Industrial Institute

THE *Hogue*, screw-steamer, 60 guns, Captain Ramsay, arrived in Kingstown Harbour on Sunday evening. It is stated that she will remain until after the termination of her Majesty's visit.

THE IRISH LAND COMPANY.

The first annual meeting of this company was held last week at Manchester; Mr George Wilson in the chair. Among the proprietors present were John Sadlier, M.P.; Messrs. Brogden, Bradford, Roberts and Rawson, of Manchester; Brogden and Pope, of Birmingham; Buckley, of Ashton; Swanwick, of Wilmington, Howard, of Rochdale; and Whitehead, of Haresteastall

The report was read by the secretary—from which we learn that the directors have purchased, at different periods, the following properties:—Part of the Kingston estate, in the counties of Tipperary, Limerick, and Cork, consisting of 20,884 acres; the Lane and Cooke estates, in Tipperary and Kilkenny, 8713 acres; part of the Thunder estate, in Wexford, 304 acres; part of the Oranmore estate, in Galway, 355 acres. The company have sixty proprietors of above 27,208 acres of land, at a total cost of £115,094 18s. 8d. The estates comprise every variety of pasture, mountain, bog, and arable land. Some of the latter has been exhausted by the former occupiers; but the directors are of opinion that the estates generally, by a judicious expenditure in reclamation and improvements, will be very materially increased in value. The report concludes:—"The directors have pleasure in stating that the amount of rent received and due is sufficient to pay all interest up to that date, including four per cent interest to the shareholders for the money advanced by them, and will leave a balance of £1622 18s. 4d. to be placed at the credit of the company. The directors, in asking the shareholders to ratify and adopt the purchases they have made, have great satisfaction in referring to the increased value of landed property in Ireland, and in expressing their belief that the above properties could not be obtained, at the present time, except at a very considerable advance upon the prices paid for them. The directors could now dispose of the lands already purchased, and realise a very handsome profit for the shareholders; but they feel confident that the ultimate improvement, now in course of execution, will add largely to the value."

The chairman, in moving the adoption of the report, said the details given in these documents all had interest for the remark; and he had no doubt that four per cent interest upon their capital would be held to be a very satisfactory commencement of business (Hear, hear). He was mainly induced to become a member of the company by his friend Mr. Sadlier, without whose knowledge and valuable assistance it would have been impossible they could have made the progress they had. Immediately after the formation of the company Mr. Sadlier and Mr. T. Roberts, two of the directors, proceeded to Ireland, and at their own cost made a purchase in the Encumbered Estates Court, which they thought would be very advantageous to the company. Indeed not say that in saying so, they had to make a large advance of money, at their own risk, before the estates so purchased could be transferred to this company; and these estates they had handed over, although they were to realise a handsome profit by their re-sale. He rejoiced in the establishment of this company, for two reasons—first, because, by introducing into Ireland additional English capital, they would be able to realise a fair return for the investment of the company; and, secondly, because they would be conferring a lasting benefit upon the district in which it was invested. With the people in the country, the public must be allowed on indisputable that the cash received from the company was £77,707 18s. 3d. in March last; and that up to that date they had received as an advance from the directors' large balance £1,937 2s. 3d. The total receipts were £10,264 9s. 7d. The money paid for the purchase of properties would be found on the other side, with the amounts paid for interest to the Encumbered Estates Court, amounting to £2,875. In the revenue account the first item was £2633 17s. 2d. received for rents. The rents due to the 25th March (excluding bad or doubtful,), now in process of collection, were £4400, which, he might appear a large sum to be due, but he had the pleasure of stating that of this £2400 had since been received, leaving on y a balance of £1600, portions of which were coming to hand from day to day. They proposed, then, to pay interest at four per cent per annum; and all this had been made out of the clear earnings of the company in the shape of rent; and, as compared with any other company, he thought they had much reason to be satisfied (Applause). As to future prospects, he would not say much, because he did not like to hold out too sanguine hopes; but they were no doubt in the possession of properties that might now, at once, be sold at a large increase on the cost price. The company were in the possession of an estate consisting of 27,208 acres, at a cost of £115,119; and some portions of the land had been seen by shareholders, who expressed high approval of the purchase; and of these most sanguine hopes of the investment. (Applause).

Mr. Alexander Brogden seconded the motion, expressing his belief that their investments were of as solid and true a character as had been entered into by a public company for a long time past.

Some conversation took place relative to minerals in the purchased estates; and Mr. Sadlier gave an interesting statement with respect to Portstown estate, which, he said, was in the middle of a large field of anthracite coal, some portions of which were already working under lease With regard to the bog, he had always been held to be reclaimable, and there could be no doubt of it; but mere surface-drainage would render it available for pasturage purposes.

The report was carried unanimously.

The retiring directors were also re-elected; and the Chairman having moved their re-election at the rate of four per cent to the 25th of March, payable on the 26th instant, he paid to the shareholders, it was also unanimously agreed to.

Mr. Henry M.P., said, as the ormal business was now at an end, he would take the opportunity of saying that he was deeply sensible of the obligations they were under to the board of directors for the manner in which they had carried out the objects of the company. From the first he thought that a project of this kind was not only a safe and sound speculation to capitalists, but adapted to the circumstances and condition of Ireland; and was one of those investments by which the character and habits of the people might be rapidly improved. He was, therefore, delighted to find so many gentlemen of knowledge and position in the company so fully prepared to join in the undertaking. The chairman had kindly in acquiring possession of property for the company before their organisation was effected. He (Mr. Roberts) and himself had rendered that task lawful and birthen opposed facilities to the easy transfer of land were undergoing a great change, and that this would give an impulse to competition. Looking at the course taken by private individuals investing money in Irish estates, there was no reason for discouragement, for they appeared to be steadily holding on, and were not at all anxious to sell, and he did not see why this company should feel less confidence than individuals in their investments. The honourable gentleman briefly adverted to the advantages which might be expected to arise from farming some portion of their lands as it they were in a position, from improvements, to let at higher rents, and concluded by moving a vote of thanks to the chairman and directors, which was carried by acclamation

The Chairman acknowledged the compliment, and took advantage of the opportunity to say that the board did not propose to sell the shareholders together to ase leave to extend their purchases within the limits of their present capital, but only in the event of requiring power to increase it beyond the amount already consented to.—The meeting then adjourned.

EXHIBITION OF PAINTINGS BY MODERN GERMAN ARTISTS.

We have already noticed this very interesting collection, which, we understand, proved highly attractive as an Exhibition, at 168, New Bond-street. We now engrave two of the Pictures, and add the following remarks, for which we are indebted to a German Correspondent, whose English, slightly tinctured by a German idiom, we leave as we received it: —

These two Pictures show, in a different degree, the charming peculiarities of the Dusseldorf school—its sentimentality and softness of manner, refinement of feeling, and delicate colouring. At the same time, it cannot be denied that these advantages are not always combined with the necessary strength and vigour of style; and the *lyrical* manner of the school, when adapted to objects of history, very often induces the artist to give us more his own ideas on historical events than the true historical reality.

There is a striking connection between the modern lyrical poetry of Germany and the Dusseldorf School of Painting. The latter school distinguishes itself by representing in the most accomplished manner the peculiar charm of nature. The strength of the school, no doubt, consists in landscape; and its painters, like the poets of the Romantic school in Germany, aim at inspiring landscape-scenery with what we have called the lyrical and sentimental spirit. A hero among the artists of the Dusseldorf school, and a true genius in style and conception, is A. Achenbach, the famous master in sea-pieces, by whom we have here the Swedish landscape (No. 30). Another famous head of the school is Professor Lessing, the author of "Huss before the Council of Costnitz," and of "Ezzelino da Romano."

The character of the school is well represented in the two pictures here Engraved; at the same time that they show the new field which modern German landscape-painters have of late chosen, leaving their beaten track of the Swiss and the Tyrolese Alps and Italy. The landscape charms of the far-off North of Europe, especially the mountain scenery of Norway, are the Dorado of modern German landscape-painters. There the lyrical and romantic Dusseldorf artists find no cloudless sky, it is true, as in Italy, but that ever-changing light which affords the most ample opportunity for expressing that mystical connection between the character of landscape and the human frame of mind—now merry, now gloomy, now serene, and again cloudy, which constitutes the mysterious charm of the Dusseldorf painter, and of the lyrical poetry of Germany, from Goethe and the Romanticists, to the more modern, as Heine, Uhland, Lenau, Geibel.

"NORWEGIAN PEASANT CHILDREN."—PAINTED BY ADOLPHE TIEDMAND.

It is remarkable that almost all the pictures of Norwegian or Swedish scenery surpass the representations of Swiss and Italian scenery which we find in this Exhibition. The sky of the north has not for its peculiar beauty that insipid, blue clearness, that thoughtless absence of every cloud, that monotony," which is peculiar to landscape subjects taken from Italy; equivocal advantages which are to be found again, here, in the Italian landscapes by A. Flamm, and partly, too, in those by Oswald Achenbach. Clouds, with their various interesting formations, are the poesy; they are like the dramatical life of the sky, and variety of light—not mere clearness and cloudlessness; and from the former results one of the first conditions of an interesting landscape. A landscape painting must be more than a mere copy or fragment of nature; it should excite some feeling in the observer, and we should feel in it the livin g pulse of nature. Such we find in the Swedish landscape by A. Achenbach, and in the Norwegian scenery, painted by Gade and Bodom, and in that masterly conception of moonshiny "Wald Einsamkeit" (No 41), by Professor Schirmer, we have the very impression of a beautiful lyrical poem; but we do not find any trace of poetical conception in the "Mont Blanc," by A. Calame, nor in the "Lake of the Four Cantons," by W. Lindlar. These are mere copies, thoughtless copies, of nature.

The pictures which we have introduced by these few remarks are the works of an artist (Mr. Tidemand) who, we have been told, is a Norwegian by birth; but a thoroughbred German, we are taught by our eyes, in style, manner, and conception. His two pictures illustrate chiefly the great peculiarity of the Dusseldorf school, which constitutes the affinity of that school with the modern lyrical poetry of Germany—that magical and mystical relation between the character of the landscape and the actions and persons who appear in it.

We meet again with these characteristics in the "Peasant's Funeral at the Logne Fjords," in Norway. This is what is called a *genre*-painting; but a great deal of its interest consists in the skilful and delicate manner of treating the landscape-scenery, into which the artist introduces his incident taken from the life of the Norwegian peasantry. How happily the very ground-tone of the painting corresponds with the subject treated by the artist. It is far superior to the other painting, "The two Peasant Boys." The greyish, pale tone of the northern mountain-landscape tells us beforehand that we shall meet here with no scene of mirth and happiness. Here all speaks a tale of poverty: from the mountainous and sterile character of the country, and the probable occupation of the persons attending the funeral (probably fishermen), to the torn coloured cloth covering the coffin in the boat. The groups are admirably arranged. Our sympathy is chiefly concentrated on the figure of the old peasant in the foreground, who is led by his grandson and his grand-daughter. The expression of

"A PEASANT'S FUNERAL AT THE LOGNE FJORD."—PAINTED BY ADOLPHE TIEDMAND AND HANS GUDE.

grief and pain in the old man's features is deep and touching. There is a sort of gradation of affliction in the threefold group of the convoy. Affliction and sorrow are expressed most deeply in the old peasant's figure; while they are modified in the features of the young man, who is last of the mourners, and looks after the convoy with that sort of dreamy and sorrowful reflection which proves that he is only "a friend of the family," less struck by the loss of which the coffin speaks, than sympathising with his neighbour's misfortune. The painter appears to be most skilful in representing scenes of pleasant life. His figures, though happily individualised, are types of true peasants, from the figure of the old man in the foreground, led by the amiable little peasant girl, to the old blind woman sitting behind on the ground. We believe we have already seen those persons among the German peasantry. Again, what happy variety of expression is there in the different individuals and their ages. It is truly touching to see the simple, and innocent children of nature struck by the deepest affliction. There, in the coffin which the man in the boat is about to carry to the churchyard, across the Fjord, lies the happiness of that poor family; perhaps it is the father or the mother, the little children whom we see so ably presented on the painting have lost. Charity to the infant on the mournful scene is ably managed. The sky is gloomy, but there is light enough to show in a masterly way the reflection of the two boats in the water.

"Norwegian Peasant Children" is the title of the other painting, by Tidemand. The subject is treated in the same soft, tender, and delicate manner as the painting we have just described. The two peasant boys are amiable and interesting figures, but, unhappily, there is one thing wanting in the picture—a definite idea. Murillo has painted peasant-boys, who seem to say, with all their poverty, they are more free and happy than the kings of the earth. But what do Tidemand's peasant-boys mean? Do they "express the happy carelessness" of children, or our heavy misery or poverty? No! But there is in their expression a tone of dreamy sentimentality, which is, we are sorry to state, a very common fault with the modern German painters; and, after we have admired the two fine hero boys, and bestowed our admiration on the tender and delicate style of treating the subject, we search in vain for the very *purpose* of such a beautiful work of art.

THE LOSS OF THE "MAHOMMED SHAH."

(To the Editor of the ILLUSTRATED LONDON NEWS *)*

SIR,—I forward to you a copy of a letter, written by my brother, Mr, Oswald Curtis, on the day after landing at Hobart Town, giving an account of the loss of the *Mahommed Shah*.—I am, Sir, your obedient servant, J. LEWELYN CURTIS.

9, Aldermanbury, 24th August, 1853.

Hobart Town, Van Dieman's Land, 6th May, 1853.

You will be surprised to read Hobart Town in place of Nel.on. We arrived here safe and well last night, and are glad enough to be on land anywhere, after the narrow escape of which I have to tell you. We had fine weather and a pleasant voyage till the 18th April, on which day, between four and five in the morning, we were awakened by an alarm of fire. We dressed hastily, and on coming out into the cabin found the second cabin and steerage passengers rushing up from between decks, and clouds of smoke coming up the hatchway. As soon as they were all out, the powder-magazine was got up with some difficulty, owing to the smoke, the hatches battened down to prevent the fire from getting vent as long as possible, and the boats cleared for lowering at a moment's notice. The wind's head was turned towards the nearest land, which was about St. George's Sound, on the south-west coast of Australia—a distance of about 680 miles nearly direct north.

The fire continued to gain ground gradually throughout the day, which was spent in fitting out the boats, and drawing lots for choice of the four—crew and passengers having an equal chance. I cared little which boat we went in, as I was satisfied that not one of them would live in such a sea as was running, and that our only chance lay in smothering the fire till we could run to land or fall in with a ship. One attempt was made, in the first instance, by the captain and carpenter to get down into the fore-hold, in which the fire originated, with a hose, but they were obliged to retreat immediately, and came up quite exhausted.

The forecastle deck and the hatches were kept constantly wet through the day and night; all hands, of course, prepared to take to the boats at a moment's notice. The decks forward got so hot, that, from sheer weakness, was greatly in our favour, and gave us hopes that the flames might be kept down till we ran to shore. In the meantime, the part of the deck over the fire got gradually hot, the wheel-ropes did up almost as soon it was pumped on, and the pitch in the seams got soft.

About four o'clock in the afternoon of the second day (Tuesday, the 19th) there was a cry of "Sail, ho!" from the look-out at the mast-head, but the vessel was at too great a distance for us to attract her attention, or to come up with her. Not ten minutes afterwards, however, "Sail, ho!" again! Some one must have had enlivened at once more. We hoisted a flag of distress, fired guns, and took a course to out her off if possible, and had soon the satisfaction to see her bearing down upon us. She proved to be the *Ellen*, of London, bound for this port with a cargo of sugar from the Mauritius. The master (Captain Faddon) at once consented to take us all on board. We passengers were immediately taken off in three trips of our whale-boat, without accident, although it was a dreadful sea, very heavy, and both ships knocking about very much. We brought off our gold in a box, and also a little clean linen. The crew remained on board the *Mahommed Shah* till four o'clock next morning, when they came off in a hurry in three boats, the foremast having sunk five feet (the part below decks having burnt away), and expected to fall every minute. As soon as day broke, Captain Minter and four volunteers made an attempt to board the barque again, to see if anything could be done with her, and if not, to bring off some more provisions, with which the *Ellen*, a brig of 170 tons, was not provided for so large a number, her complement being twelve men in all, and one passenger, and we numbering 62. The boat was, however, unable to fetch the *Mahommed*, and we were obliged to abandon her in latitude 40° south, and longitude 118° east. After a run of six teen days on decidedly short commons, both of water and provisions, and without once taking off our clothes, or getting a good night's rest, we were glad enough to get on shore; and as the post goes out this afternoon, I am not able to write much, but will write again by the next, more at length, particularly as to business matters. I believe both you and ourselves are fully insured, but nearly all the second cabin and steerage passengers have lost everything—there will be a vessel to New Zealand in a week or two, by which we shall no doubt take a passage—we saved our deeds for the land, and our letters of introduction. Mr Jeffries and ourselves have joined in doing something for all the destitute passengers and officers of the barque. The governor is going to charter a vessel to take them on. Of the generosity and kindness of Captain Faddon, too much cannot be said. He put himself and crew on equal allowance with ourselves, and shared his clothes among those who were in need of them. The Hails, Jeffries, and we have put up at an excellent boarding house, terms two guineas a week each, which is very moderate, considering the price of things here—fresh better 3s. a lb., and every thing at the same rate.

SIR JOHN FRANKLIN.—A correspondent (says the *Liverpool Mail*) has forwarded us the following extract from a letter received recently from Ireland. He has every confidence in the source of his information; but we may remark that nothing has to yet been verified, it is strange that no publicity has been given to the affair by the authorities of the Admiralty.—"Near Bell Mullet, Aug. 15, 1853.—You will have heard, no doubt, that a boat was found on the Irish coast close to this place, containing a letter from Sir John Franklin, dated May last, stating that he is prevented by the natives from leaving an island he is now on. The officer of the Coast Guard forwarded it to the Admiralty, and has just heard that the writing is that of Sir John; so there is yet a chance of his being saved."

MAGNIFICENT CHANDELIER.—We have just seen, on the premises of Messrs. Hancock, Rixon, and Dunt, in Cockspur-street, a stupendous chandelier, which they have just completed for the Sultan. It is twenty-seven feet in height, fifteen feet in diameter, and seven tons weight. The stem is of galvanised iron, and has electro-silver plated branches for 404 jets of gas, in imitative porcelain candles, each the size of half a pound. They have been experimentally lighted, when the effect was truly splendid. This chandelier, we understand, will be suspendedin a saloon at Constantinople, one hundred feet high, crowned with a dome, eighty feet in diameter.

THE WELLINGTON COLLEGE TESTIMONIAL.—The amount received in this country towards the above testimonial reaches above £83,000. The sum remitted from India, up to June last, was £20,000; making the present subscription-list to amount to more than £103,000.

CONVENTION WITH THE UNITED STATES.—The Convention between her Majesty and the United States of America, for the settlement of outstanding claims by a mixed commission, which was signed at London on the 8th of February last, has been presented to Parliament. Two commissioners—one named by her Majesty, and the other by the President of the United States, with power to them to name a third person to act as arbitrator or umpire in cases of difference—are to be authorised to decide on all claims arising out of transactions of a date prior to the treaty of peace of December 24, 1814. Each Government is to pay its own commissioner £800 a year; the salary of the arbitrator to be determined at the close of the commission. The salary of the clerk is to be £310 a year; and the whole expense of the commission is to be defrayed by a rateable charge not exceeding five per cent on the sums awarded. Lord John Russell and Mr. Ingersol were the plenipotentiaries who agreed to this convention.

THE MARRIAGE FETES IN BRUSSELS.

(Continued from page 168.)

On Monday evening, at six o'clock, the King gave a grand banquet at the Palace to the Cardinal Archbishop and all the great dignitaries who had taken a part in the imposing ceremony of the marriage. The residence of the King of the Belgians, built on the very spot which during the middle ages was the castle of the old Dukes of Brabant, is opposite the modern park, laid out in the French manner, with converging alleys and rotundas of clipped trees.

On Monday night all the public buildings in Brussels, and the great majority of the private houses were gaily illuminated, with coloured lamps, in various devices, appropriate to the occasion. Prodigious efforts had been made to adorn and illuminate the town; and when night had set in, all Brussels presented a blaze of light from gate to gate and from suburb to suburb. The Royal family and Court traversed the capital, and visited the most remarkable localities amid general enthusiasm.

PROCESSION OF THE GUILDS.

Of all the sights attending the Royal marriage, none has been so interesting and instructive as the procession and cavalcade representing the Commune and Guilds of Brussels in the sixteenth century, which traversed the streets of the city on Tuesday afternoon. It was in the sixteenth century that all northern Europe looked to the cities of Flanders for a fuller development of the arts than was to be found elsewhere. The florid period of France, England, and Spain all came later; and Italy alone, at this period, bore the palm over the land of Hans Honling and Van Eyck. The successors of those artists have reproduced to us the daily life of the Flemings of the sixteenth century, and their works are to be seen in the great galleries of Europe; but the reproduction of that *penchant* for allegory in wood, cloth, and action which showed itself in the festive occasions and cavalcades of the resurrection of art is in Brussels an idea of a genial and characteristic nature.

The historical cavalcade was organised by the Communal Administration. The direction was entrusted to a commission, composed of the Burgomaster and the most distinguished citizens. The most rare prints and pictures have been consulted for the occasion, so as to make the illusion as complete as possible. The costumes and paraphernalia have been months in laborious preparation; and nothing but a more genial sky was wanting to the spectacle. The cavalcade had a double character, being at once historical and allegoric.

The procession was historical, inasmuch as it reproduced the cortèges which formerly traversed the streets of Brussels upon certain days in the year and upon solemn occasions; and allegorical, inasmuch as it offered a symbolic representation of some of the existing elements of the prosperity of the kingdom. The cavalcade was divided into two parts: the first representing the commune of Brussels at the end of the sixteenth century; and the second representing modern industry and modern institutions.

The cortège was opened by the giants of Brussels (who will remind the English reader of Gog and Magog), vulgarly known under the names of *Jannekin*, or Little John; *Mieque*, or Mary, Grandpapa, Grandmamma, and the Sultan. Then came a band of music, who preceded the body known as the *serments des archers*.

No description can give an idea of the droll scenes enacted in pantomime on this occasion. Early in the procession, on a huge platform, drawn by a dozen horses, was the carcase of an old Flemish house; and the carpenters, in the costume of the period, in each story of the edifice, sawing, planing, and hammering. Then came galleys, such as those Jean Mabuse floated on his Sea of Gevazerait, in full sail, manned with urchins in peaked beards. The brewers, singing the old Flemish chorus around a huge vat, surmounted by jolly deities; while batallions of halberdiers, arquebusiers, pikemen, horsemen, men-at-arms, heralds, pursuivants, embryo couches of Charles V. or Catherine de Medicis—every moulding exactly copied from authentic representations.

The second Car in our illustration represented the diversified occupations of the blacksmiths, the locksmiths, the braziers, the iron-founders, and the tin-workers, who busily plied their trades with the help of bellows, furnace, and anvil. Next comes the Car of the Printers, in which the workmen put into type and worked off impressions of a copy of verses composed by the Belgian poet, Adolphe Mathieu, in honour of the marriage of the Prince Royal. Copies of this poem were distributed to the public as the car passed along. A bust of Guttemberg—the illustrious inventor of the most useful of the arts—was exhibited in this car; at the further end of which the Genius of Intelligence raised his flambeaux towards the skies. Then came the Car of Music, which was occupied by the principal musical instruments of music in their hands. Euterpe, crowned with flowers, presided over this group of young beauties.

After the Car of Commerce came a band of military music, followed by detachments of civic guards and of the regular troops of all arms on foot, who served as guard of honour to the last car, called the Car of the Constitution and of Royalty. On the summit of this car, a figure representative of the Constitution is represented as crowned by another female figure symbolical of Royalty. These figures indicated the intimate alliance of liberty and power, the unshakeable basis of the national prosperity. Another band of music followed this car, behind which marched the civic guards, and some detachments of troops on horseback. A battery of light artillery terminated the procession.

We have not enumerated the whole of the cars employed in the procession, two of which, dedicated to the staple branches of industry of Brussels, the manufactures of carriages and of lace, deserve special mention. The cavalcade visited several quarters of the city in the course of Tuesday afternoon, to the great delight of the countless thousands assembled in the streets and squares, and occupying the windows of the houses.

The programme for Wednesday included a grand concert given in the great square of the Hôtel de Ville. The orchestra—composed of 200 musicians—was arranged to be placed under the direction of M. Bender, leader of the King's private band. At ten o'clock the same evening a grand *feu d'artifice*, under the direction of M. Ruggieri, was to be let off in the Quartier Leopold, to which point it was expected an immense crowd of sight-seers would be attracted.

Brussels has been full to overflowing all the week. The hotels and lodging-houses have reaped an excellent harvest from the concourse of visitors. English, French, and Germans have been heard at the corner of every street; and the thoroughfares have been crowded with strangers, who have been as loud as the inhabitants of Brussels and the Belgian provincials in expressing their delight at the splendour of the Marriage Fêtes.

THE REFRESHMENT-ROOM IN THE HOUSE OF COMMONS.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

42, Parliament-street.

SIR,—It will be interesting to many of your readers to know that "Nicholas"—of whom you gave so graphic an account in your history of the Refreshment-rooms of the House of Commons, in last week's Number—is *not* dead. The old man is still alive, and well; his memory as fresh as ever, and his stock of anecdotes still unexhausted. Many old members have taken your statement for granted; we trust, therefore, you will insert this correction in reference to the worthy "celebrity."

While on the subject your article—generally accurate—which we admit—we beg to state, in justice to our late partners, that the prices charged for port and sherry never exceeded 6s. the bottle. We believe of every street; and the thoroughfares have been crowded with our own dining-rooms to the "glories of the kitchen;" and with this alteration in their tastes and habits we have no reason to complain.

We are, Sir, your obedient servants,

August 20, 1853. BELLAMY, SMITH, and BOYES.

BANQUET TO LORD PALMERSTON.—Lord and Lady Palmerston, being on a visit to Melbourne, near Derby, the Liberals of Derby have had a meeting, and determined upon inviting his Lordship to a public banquet, to be held in that town.

THE CALAMITY AT THE CRYSTAL PALACE, SYDENHAM.—A public meeting was held on Tuesday evening at the Crystal Tower Tavern, Norwood, to originate a subscription for the benefit of widows and orphans of the men who perished by the late fatal accident. The attendance consisted chiefly of workmen. The chair was occupied by Mr. Nunn, M.P. Mr. Northouse said that the working-classes were the best protectors of their own interests, if they would only stand together. There were 2000 workmen connected with the Crystal Palace; and if they would each abridge themselves of a pint of ale a week, they might raise a fund of £500 a-year for the relief of widows and orphans (Cheers). Messrs. Fox and Co. had most honourably given a weekly allowance to the widows and families of the sufferers (Cheers). He moved a series of resolutions, expressive of the sympathy of the meeting, and declaring that a subscription should be opened for the widows and families of the sufferers. He suggested that the funds should be ultimately paid into the hands of Messrs. Fox and Henderson as treasurers. The resolution was carried.

RAILWAY INTELLIGENCE.

The general half-yearly meetings of proprietors are now taking place; and, from the published accounts, we have selected the following—

GREAT NORTHERN.—The half-yearly meeting of this company was held in the London Tavern; Mr. E. Denison, M.P., chairman of the board of directors, presiding; who, on moving the adoption of the report, said the directors had been compelled, during the past six months, to lay out more money, in connexion with several departments, than perhaps some of them had anticipated. With respect to the revenue, the receipts of the past half-year, he had no hesitation in saying, he considered most satisfactory; and for this reason—they exceeded, in the aggregate, the sum which was received in the latter half of 1852. They would find, from the statement of accounts in their hands, that the receipts of the last six months amounted to £368,766, as compared with £348,945 in the latter half of 1852—showing an increase of about £20,000. In short, their receipts were most satisfactory; and, although the working charges had increased in the last half-year, yet they had equally increased upon other railways—owing, in the first place, to the bad weather of last winter; in the second place, to the augmented price of materials of all descriptions; and, in the third place, to the increase of wages. The dividend proposed was at the rate of £3 per cent per annum. With respect to vacancies in the direction, the directors had no wish to make it a close corporation; and therefore recommended that, prior to the next meeting, one director should certainly retire, and not present himself for re-election.

YORK AND NORTH-MIDLAND.—The report of the directors states that the sum of £37,743 7s. 4d. has been expended on capital account during the past half-year upon the lines of this company, and £681 6s. 10d. on those of the Hull and Selby and the Hull station and branches. It has again been found necessary to expend a large sum in addition to the rolling stock. The general result of the traffic for the half-year ending June 30 is gratifying to the proprietors. The net revenue, after deducting working expenses, leaves a balance of profit of £112,791 19s. 4d., to which must be added the balance of £4921 12s. 1d., brought from last half-year's account. After deducting from this amount the preferential charges of rent of the Hull and Selby Railway (£33,000), and interest on debentures and guaranteed shares, &c. (£56,977 19s. 7d.), the sum of £26,834 13s. 10d. will remain available for division on the ordinary stock. The directors recommend that a dividend should be declared at the rate of £1 10s. per cent per annum, which will leave a balance of £2462 3s. 10d. to be carried to the credit of the current half-year.

MIDLAND.—The general half-yearly meeting of this company was held on Tuesday, at Derby. Mr. J. Ellis, the chairman of the directors, presided. The report stated that the balance available for dividend was £179,406; and the directors recommended dividend, payable on the 1st of September, as follows:—£1 13s. 6d. upon each £100 Midland consolidated stock; 13s. 9d. upon each £100 Birmingham and Derby consolidated stock; £3 upon each £100 consolidated preferential stock; £1 10s. upon each Erewash Valley share; and 2s. 3d. upon each share of £50 15s. 4d., being £3 per cent upon £5 per share paid up; leaving a balance of £3064 to be carried to the next account. The report having been adopted, the meeting was then made special, in order to determine upon the mode of creating the new capital for the construction of the Leicester and Hitchen Railway. The chairman, in introducing this subject, again suggested upon the advantage which would accrue to the company. Their engineer, Mr. Liddell, had estimated that it would cost to construct £900,000, which the directors proposed to raise as follows:—To take powers for the creation of 183,333 shares, which would yield £275,000, and to borrow the remaining £225,000. They proposed that the new stock should be issued in October next, that it should bear interest at the rate of 4 per cent preferential, that it should be offered to the present holders at the rate of one share for every £100 stock, and that the first call of 20s. should be made on the 24th of October next, a further call of 20s. on the 24th of April, 1854, and the last call of £2 on the 30th of October, 1854. The motion was agreed to.

YORK, NEWCASTLE, AND BERWICK.—The half-yearly report of this company states that, in pursuance of resolutions passed at special meetings held on the 2nd of November, 1852, and the 18th of February, 1853, the directors have taken steps for amalgamating with the York and North Midland, and the Leeds Northern Railway Companies, upon the terms then approved of, and, pending the completion of the amalgamation under the authority of Act of Parliament, to unite the management and revenue of the three lines, and to conduct the whole as one undertaking. There is a balance to the credit of income of £57,820 11s. 1d. on the separate account, and of £113,686 15s. on the joint account; which, with a balance of £12,460 6s. 8d. brought forward, makes a total of £213,376 12s. 9d. From this has to be deducted £116,128 12s. 8d., the amount of the interest, guaranteed dividends, and rents, and £2332 19s. 4d., the first instalment of the sum ordered to be written off two years ago, leaving a divisible balance of £56,915 1s., which will be sufficient for a dividend at the rate of three per cent per annum, and leave £3798 13s. 1d. to be carried forward to the next half-year's account.

EASTERN COUNTIES.—On Thursday the half-yearly meeting of this company was held at the London Tavern; Mr. Waddington, Esq., M.P., in the chair; and a dividend of 5s. per share, declared. In the course of the proceedings, the chairman stated that the average receipts were now exceeding the receipts of the previous year by 1½ per week, and there could be no doubt there would be an increase on the dividend at the next half-yearly meeting.

HULL AND SELBY.—The usual half-yearly meeting of the Hull and Selby Railway Company was held at the new station, Derringston-street, Richard Totise, Esq., chairman of the company, presiding. A dividend was declared of £2 9s. on each of the whole or £90 shares, and £1 4s. 6d. upon each of the half or £45 shares.

LANCASTER AND CARLISLE.—The statement of the traffic account on the Lancaster and Carlisle Railway, for the half year ending 31st July, has just been made up, from which it appears the receipts (including £1,000 balance brought forward from last account) have been £140,854, the disbursements £55,481: leaving a balance of £85,373.

NEWCASTLE AND CARLISLE.—The directors have just declared an intermediate dividend of £2 per £100 share.

MANCHESTER, SHEFFIELD, AND LINCOLNSHIRE.—The half-yearly report of the directors states that the expenditure on capital account for the half-year ending the 30th June last amounts to £93,572 4s. 6d. The ordinary expenditure under the head of stations is increased by the sum of £23,966 14s. 9d. paid in settlement of a long-pending claim, made by the contractors for the stations in Lincolnshire, and which sum has been awarded to them by the arbitrator to whom the question was referred.

BOSTON AND MIDLAND COUNTIES.—On Saturday last the bill for formation of this railway received the Royal assent. The work will be proceeded with forthwith.

BRISTOL AND EXETER.—On Thursday the half-yearly meeting of this company was held at Bristol; Mr. J. W. Buller in the chair; when a dividend, at the rate of 4½ per cent per annum, was declared.

EAST KENT.—The first general meeting of this company was held at the London Tavern; the Right Hon. Stephen Lushington in the chair. The report of the directors having been read, the chairman moved its adoption. He congratulated the meeting on the passing of the Act which authorised a line of railway to be made from Strood to Canterbury. The expense of obtaining the Act was of course very considerable. The line, as they were aware, would pass through a very important district between Rochester and Chilham, shortening the distance between Margate, Ramsgate, and Canterbury 20 miles. The Act gave them power to use the station of the South-Eastern Company at Strood, and also at Canterbury.

BRISTOL AND SOUTH WALES JUNCTION.—The half-yearly meeting of this company was held on Saturday last, at the Commercial Rooms, Bristol. Mr. Bates, one of the directors, occupied the chair; and stated that, as the necessary measures were in progress for the abandonment of the undertaking, and winding-up the company, no report would be presented, nor any business entered upon. The accounts which were laid upon the table showed the total receipts to have been £38,738 11s. 6d.; the general expenditure, £38,056 2s. 6d., leaving the expenses of the present half-year, £102 7s. 10d.; leaving a balance in hand of £670 13s. 1d. The proceedings then terminated.

DAMAGES AGAINST A RAILWAY COMPANY.—In March last, a very serious accident occurred on the Lancashire and Yorkshire Railway, at Dyson-field, when a Mr. Carsil, a Greek merchant, carrying on business at Glasgow, was killed. An action was brought at the Liverpool assizes, last week, for damages; but the defendants having made offers to the plaintiff, which were accepted, a verdict was taken for the plaintiff, damages £3000, which were apportioned by the jury, is, for the deceased's father and mother, one quarter to the widow, and the rest to the children. There were five other actions against the same company, arising out of the same accident. In Fitton *v.* the Company, a verdict was taken for the plaintiff, damages £2000. In Pugh *v.* the Same, damages £1000. In Sefano and Dyer, damages £500. In Kay *v.* the Same, damages £700. Being a total of damages against the defendants of £7200.—Another case at the same assizes—Ford *v.* the Midland Company—was also settled, £500 damages having been agreed to be taken by the plaintiff. At the close of the trials, Mr. Justice Erle remarked, that he thought the damages now paid would be a matter to quiet the public mind with respect to proper care being taken to avoid accidents. A gratifying fact had been manifested [illegible] railway directors felon[illegible] them for manslaughter in cases of deaths from railway [illegible] had, however, always been found that civil actions would [illegible] proper care.

Note.—The sign + denotes above the average, and the sign — below the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The variations in the reading of the barometer have been but small during the week, the highest reading was 30.85 inches at 9h. a.m. on the 21st, and the lowest 29·72 inches on the afternoon of the 25th. The mean reading for the week at the height of 82 feet was 29·805 inches. The mean daily temperature was above its average during the first four days of the week, and below it during the last three; the average daily excess was 2·1°, and the average defect 3·8°. The mean daily temperature of the 20th was 67·4°, and is the highest mean daily temperature recorded on that day since the year 1837, when it was 69·5°. The mean temperature of the week was 6° 3′ above the average of the corresponding week during 38 years. The range of temperature during the week was 29·6°, the highest reading being 77·0° on the 20th, and the lowest 47·4° on the 24th. The greatest daily range of temperature during the week was 23·5° on the 19th, the least 6·6° on the 23rd, and the mean for the week 16·8°. The weather during the week has been variable; on the 22nd, at about 9h. p.m., rain began to fall, and by 9h. a.m. next morning, nearly nine-tenths of an inch had fallen. Rain fell during the week to the depth of one inch and two-tenths

Lewisham, August 26, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending Saturday, August 20, the number of births registered in the metropolitan districts was 1618: of these 775 were boys, and 743 were girls. In the eight corresponding weeks of the last preceding years the average number was 1268. The number of deaths during the week amounted to 1033. If the corresponding week of 1849, in which cholera was the fatality to 2416, be omitted, the mortality of the past week is not very different from the average as corrected for increase of population, though in excess of the preceding week by 31. The causes of death may be thus specified:—To zymotic diseases 293 (their average is 429): of these, 5 are due to small-pox (its average is 17); to measles, 13 (its average 21); to hooping-cough, 28 (its average is 20); to diarrhœa, 126 (its average is 115); to cholera, 10; to typhus, 48 (its average is 45). To dropsy, cancer, &c., 51 (their average is 45). To tubercular diseases, 194 (their average is 177): of these, 139 are due to consumption (its average is 123). To diseases of the brain, nerves, and senses, 110 (their average is 103): of these, 17 are due to apoplexy (its average is 19): to paralysis, 24 (its average is 14). To diseases of the heart and blood-vessels, 41 (their average is 28). To diseases of the lungs and of the other organs of respiration, 92 (their average is 73): of these, 40 are due to bronchitis (its average is 20); to pneumonia, 35 (its average is 34). To intemperance, 2 deaths are due during the week (its average is 3). To violence, 10 (its average is 22). To drowning 3 (its average is 21).

THE NEW CAB ACT.—On Monday the new Hackney Carriage Act partly came into force. The act has reference to licences, and the duties payable thereon, and there are several clauses, framed in consequence of the late strike. A driver is entitled to charge 1s. for every mile or part of a mile beyond the circumference of a circle, theradius of which shall be four miles from Charing-cross. An additional 6d. beyond two persons, for every person, can now be charged; and two children are to be considered as one adult person. The proprietor of every hackney carriage or metropolitan stage-carriage who shall withdraw his carriage from hire for two consecutive days in one week, without just cause, shall be liable to a penalty of 20s. for each day, and the license shall be suspended, or recalled, at the discretion of the Commissioners of Police. In case a proprietor intends to withdraw his cab from hire, he must previously give ten days' notice.

A DEPUTATION OF POLES waited upon Lord Palmerston, on Saturday, to present his Lordship with an address, and some articles of silver, and bronze, of Prince Adam Czartoryski, in testimony of their gratitude to his Lordship for his sympathy. Viscount Palmerston assured them of his deep sympathy in the sufferings of that tribe in the world—in other words, to establish a Museum of Mankind. Lectures and demonstrations will be given in physical geography; upon man, in relation to the world he inhabitants; and upon the elements of general geographical, hydrographical, and ethnological interest; large meeting-rooms, and apartments for persons connected with the scientific, artistic, and literary societies, whose pursuits are in unison with the special object of the Cosmos Institute, will also be erected.

ORTHOPŒDIC HOSPITAL.—On Thursday a quarterly court of the governors of this useful charity was held at the Hospital, Bloomsbury-square. The report stated that the institution had already relieved 14,000 cripples; that 700 were at present under treatment; and that, from want of accommodation, the committee have to deny the benefits of the charity to about 300. To remedy this evil it is proposed to obtain a larger building.

SURREY ZOOLOGICAL GARDENS.—POULTRY SHOW.—On Tuesday the grand annual poultry show took place at these gardens, and was one of a very interesting character. The show was open to all competitors, and included every variety of breed. The specimens exhibited of the Aylesbury ducks attracted much attention, and the golden and silver pheasants were greatly admired.

THE INDIAN CADETSHIP.—Mr. Wilkinson, M.P. for Lambeth, having refused to give up the name of the party who offered his brother (Mr. Norman Wilkinson) for sale a Cadetship, for some office, in the gift of the East India Company, he was summoned before the Lord Mayor on Monday, and the examination was postponed to Thursday, when his Lordship decided that Mr. Wilkinson, in his opinion, he had no jurisdiction. The summons was, therefore, dismissed.

VALUE OF LAND IN THE CITY OF LONDON.—The estates committee of St. Thomas's Hospital met on Tuesday, to receive tenders for a piece of land situate in the parish of Stockwell-street (which is to be widened and rounded), and contains only about 400 square yards. It is let on lease for a term of eighty years; and for this small piece of land the annual rental of £40 per annum and has been given by the Australasian Company, with a condition to build upon it a substantial stone building. This letting, if calculated at its freehold value, at the present price of consols, would represent the extraordinary sum of rather more than £520,000 per acre.

THE ALLEGED BRIBERY AT DERBY.—Major Beresford has obtained a *certiorari* to remove the indictment (for conspiring to bribe the electors of Derby) into the Court of Queen's Bench, on the grounds that a special jury would be less likely to be influenced by popular prejudice in a matter which had been in so many forms before the public, than the class of persons, however respectable, who were usually summoned to the Central Criminal Court. The Major's bail is £100, and two sureties of £50 each. Mr. Coppock was the solicitor for the prosecution.

ILL-TIMED STRIKE.—The workmen in the employ of Messrs. Holland, builders, dined together on Wednesday, at Highbury-barn, to the number of 300. Mr. H. Holland was to have taken the chair, but, on the morning of the day, the bricklayers of the firm waited upon him by deputation, and told him they did not consider it a fitting occasion for an advance of ten per cent on their wages. The morning of a festive occasion, to which Messrs. Holland contributed largely, was thus selected for the commencement of the strike.

MURDER AND ATTEMPTED SUICIDE.—On Wednesday afternoon, a jobbing wine-cooper, named Joseph Mabbs, residing in Goodman's-yard, Minories, murdered his wife by cutting her throat; and, while she was being taken to the London Hospital, he inflicted such a severe wound on his own throat, that he was also taken to the same place. They were each about forty years old, and had four children—two boys and two girls. The man and his wife had lived for some time very unhappily: he was so frequently beating and ill-treating her that he was nicknamed "General Haynau." The poor woman died on her way to the hospital, and the wretched husband is scarcely expected to recover.

NATIONAL SPORTS.

EGHAM RACES.—TUESDAY.

Junkeepers' Plate.—Thrush, 1. The Chase, 2.
Surrey and Middlesex Stakes.—Jouvense, 1. Tobolski, 2.
King John Stakes.—Domino, 1. Stuntaway, 2.
Runnymede Stakes.—Abdallah, 1. Partisan, 2.
Railway Stakes.—Prevarication, 1. Linn, 2.

WEDNESDAY.

Town Plate.—Tobolski, 1. F. by Ion, 2.
Queen's Plate.—Jouvence, 1. Frantic, 2.
Baron's Stakes.—Winkfield, 1. Epaminondas, 2
Magna Charta Stakes. Monie Maces, 1. Worthless, 2.
Prince of Wales' Stakes.—Hyazinth, 1. Jullien, 2.
Egham Stakes.—Antigone, 1. Inder, 2.
Amateur Stakes.—Lady Isabel, 1. Cardinal Wiseman, 2.

RADCLIFFE RACES. -TUESDAY.

Radcliffe St. Leger Stakes.—Baron Oxy walked over.
Free Handicap Sweepstakes.—Bloodwinn, 1. Game Boy filly, 2.
Stewards' Cup.—Thalia filly, 1. Surveyor, 2.

WEDNESDAY.

Bury Purse.—Melbourne colt walked over.
Manchester Stakes.—Rosa, 1. Maid of Monton filly, 2.
Scurry Stakes.—Surveyor, 1. King of Helton, 2.

DERBY RACES.—WEDNESDAY.

Grand Stand Stakes.—Ithuriel filly, 1. Priam the Third, 2.
Produce Stakes.—Incense walked over.
Tradesmen's Plate.—Mary Ann, 1. Missive, 2.
Ladies' Purse.—Lady in Waiting, 1. Sally, 2.

THURSDAY.

Innkeepers' Plate.—Pastrycook, 1. H. by Drayton, 2.
Chatsworth Stakes.—Feldmarshal, 1. Featherwick, 2.
Chesterfield Stakes.—Eva, 1. Horatio, 2.

BETTING AT TATTERSALL'S.—THURSDAY EVENING.

ST LEGER.

6 to 5 on West Australian (offers to take)
4 to 1 agst Slitingbourne (6)
5 to 1 — Nataplan (off.)

DERBY 1854.—50 to 1 agst Mincra (5).

EPSOM 1854.

50 to 1 agst Newminster (5)
50 to 1 — Boarding School (5)
Mine fair (7)
50 to 1 agst Defiance (5)
50 to 1 — Priday (7)
50 to 1 — Rosalba (5)
66 to 1 agst Weatherspar (6)
66 to 1 — Contentment (5)

CAMBRIDGESHIRE.—66 to 1 agst Pelion (6).

BOAT RACE.—A match for £200 was decided on Tuesday, on the Thames, between James Candlish, the champion of the Tyne, and James Messenger, of Teddington. The distance was from Putney to Mortlake. Messenger was the winner, after a desperately-contested struggle—beating his opponent a good boat's length. The time occupied was 24½ minutes.

CRICKET.—THE ELEVEN OF ENGLAND *v.* TWENTY-TWO OF THE LANSDOWNE (BATH) CLUB.—This match was finished, at Bath, last Saturday, when the Eleven gained the event by ten wickets. This was the score:—The Eleven: 1st innings, 204; second, 3. Lansdown Club, first innings, 85; second, 121.

THE *Ticinese Gazette* announces that a convention was signed on the 11th between the Sardinian deputies and those of Valais and Vaud, to the effect that the road from Martigny to Aosta, over the Great St. Bernard, including a tunnel under the Peak of Menove, is to be completed within five years. This convention has already been sanctioned by the Government of Vaud.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Owing, in a great measure, to the large imports of bullion in the previous week, and the extremely favourable advices from Australia and California in reference to the produce of the gold-fields, the Consol Market on Monday was more active than for some time past. Since that day, sales of stock have been effected to some extent, and prices have shown a disposition to decline. The large returns lately received from produce of the gold-fields have deceived the speculative, who otherwise would, possibly, have invested in Consols, to speculate further in the shipment of goods; hence, the supply of money lately invested in the Three per Cents has been considerably increased. The large imports of bullion, however, have tended to keep the value of money at a moderate standard.

The Exchequer Bill market has improved, the Bills having touched 2s. premium. There has been more doing in India Bonds, the prices of which have slightly advanced. On Monday the Three per Cents were officially marked 98⅞ ⅜ ⅛; the Three per Cents Reduced, 99½; and the New Three-and-a-Quarter per Cents, 101¼ ⅜. Exchequer Bills were par to 2s. prem. Bank Stock sold at 223 to 224. On Tuesday, Consols were 98⅜; and, on Wednesday, 98⅛. During the whole of Thursday the market was in a very inactive state, and scarcely any change took place in the quotations. The Bank of England, both for Money and the Account, were done at 98⅜; the Three per Cents Reduced, 98½; and the New Three-and-a-Quarter per Cents, 101¼ ⅜. Long Annuities, 1860, were 6 India Bonds, 98 to 99. Exchequer Bills, 10 dis. to par. Bank Stock, 223 to 224.

The exchanges still continue against this country, gold being 0·58 per cent dearer in Paris than in London, and 0·05 dearer at Hamburgh than here. At New York, the exchange is 0·08 per cent against England.

There has been a very active demand for money. Out of doors, first-class paper has been taken at 3½ per cent per annum; but, we understand that the discount-houses have shown less willingness to accept money on "call" at three per cent.

The total amount received by the Bank of England for bills on India, from the 7th to the 23rd instant, is £129,692.

The imports of the precious metals have been again extensive. Amongst them have been several parcels of silver from the Continent to purchase gold here.

On the whole the Foreign House has ruled tolerably firm. Brazilian Four-and-a-Half per Cents have marked 100; Dutch Two-and-a-Half per Cents, 64⅜; Equador, 5⅛; Grenada Deferred, 10⅜; Peruvian Four-and-a-Half per Cents, 80⅜; Russian Five per Cents, 112¾ to 113⅛; Ditto, Four-and-a-Half-per-Cents, 101; Spanish Five per Cents, 36⅝ ⅜; Spanish, New Deferred, 23¾ ⅛; the Committee's Certificates, 6¼ to 6⅜ per cent.

Miscellaneous Shares and Stocks have continued in fair request, Australasia Bank have been at 41; Chartered Mercantile of India, Australia, and China, 2⅝; English, Scottish, and Australian Chartered, 10; London Chartered Bank of Australia, 17⅛; Oriental, 50⅜; South Australia, 4¼; Union of Australia, 71; Hungerford Market, 12; Waterloo, 5; Vauxhall, 2¾; Albion Insurance, 95; City of London, 24; County, 125; Globe, 159 ex div.; Guardian, 6¼ ex div.; Imperial Fire, 370; Law Life, 86; London, 31; Pelican, 65; Phœnix, 17; Royal Exchange, 249; Sun Life, 65; Universal, 45⅜; Berlin Waterworks, 2¼; East London, 138; Southwark and Vauxhall, 89; West Middlesex, 119¾ ex div.; Victoria Docks, 8⅜; do. new, 4¼; British Columbia Land, 6⅝; Canada Six per Cent Bonds, 114½; Crystal Palace, 6⅜ to 7; City Navigation Bonds, 95⅝; General Screw Steam Ship Company, 1¾; Hudson's Bay, 92¾; Netherlands Land, 3 to 2½; North of Europe Steam, 2½ to 7⅜; Peninsular and Oriental Steam, 77½ to 78; do. new, 39½ to 39. Royal Mail Steam, 72⅜; Scottish Australian Investment, 2⅝; South Australian Land, 39 to 38, and Van Diemen's Land, 17¼ to 16¾.

The transactions in Mining Shares have been far from extensive, and we have to notice a slight depression in most of the quotations. Up to the present time, the reports from the agents abroad are by no means flattering—the great disadvantages under which they have laboured in obtaining adequate supplies of labour, and the heavy expenses of forwarding machinery to the diggings having checked operations. On Thursday, Agua Fria were done at 2¾; St. John del Rey, 32¾ to 33⅛; Cobre Copper, 44 ex div.; Copiapo, 10⅜; English and Australian Copper Company, 7; Imperial Mexican, 89½; Lancashire and Yorkshire, 73⅜; Leeds Northern, 108; London and Brighton, 102; London and North-Western, 112, ex div.; Do. Fifths, 13⅜, ex div.; Do., £10 Shares, 2, ex div.; Do., Eighths, 2⅜; London and South-Western, 86⅜; Londonderry and Coleraine, 12; Manchester, Sheffield, and Lincolnshire, 27½; Midland, 71⅜; Newmarket (Bury Extension), 4⅜; Scorr, Abergavenny, and Hereford, 14; Norfolk, 51½; North Staffordshire, 10⅜, ex div.; Vale of Neath, 15⅜; Waterford and Limerick, 23⅜; West Cornwall, 9⅜; York, Newcastle, and Berwick, 79; York and North Midland, 68.

LINES LEASED AT FIXED RENTALS.—Manchester, Buxton, and Matlock, 3; Midland Bradford, 108; South Staffordshire, 8⅝.

PREFERENCE SHARES.—East Anglian, 4¾; Eastern Counties Extension, No 1, 2 prem.; Great Northern Five per Cent, redeemable at 1) per cent prem., 11⅜; Ditto, Four-and-a-Half per Cent, 8⅜; Manchester, Sheffield, and Lincolnshire, New £10 Shares, 10⅜; Ditto, £6, 6⅜; Norfolk Debenture Shares, 8⅝; Ditto, Five per Cent, 1847, 104⅜; Shrewsbury and Birmingham, 16⅜; South-Eastern (Reading Annuity), 26½.

FOREIGN.—East India Extension, 2¼; Great Central of France, 10⅝; Namur and Liege, with interest, 7⅛; Northern of France, 35⅛; Paris and Lyons, 28; Paris and Strasbourg, 33⅛; Sambre and Meuse, 9⅝; Upper India Scrip, ¾ prem.; West Flanders, 4⅛; Zealand, 6⅜.

Friday Evening.

Consols have been very fiat to day, and prices have fallen one-eighth per cent. The Three per Cents have been done at 98⅜ to 98 and 98⅛; the Three per Cents Reduced, 98⅝ to 98; and the new Three-and-a-Quarter per Cents, 101⅜ ⅛. Exchequer Bills are 1s. discount. In Foreign Bonds and Railway Shares very little is doing.

THE MARKETS.

CORN EXCHANGE (Friday).—During the present week, and fresh up to this morning's market, the arrivals of English wheat have been moderate on a very moderate scale To-day, the show of samples of both red and white was small, owing to which the prevailing wet weather, and the pressure of several foreign buyers, the demand ruled active, at an advance on the prices of Monday of 2s. per quarter, and a clearance was speedily effected. Foreign wheat, the imports of which have been 2,260 quarters, moved off freely, and several parcels changed hands for shipment to France, at from 1s. to 2s. per quarter more money. The few floating cargoes on sale realised an advance of 2s. per quarter. We were scantily supplied with barley, in which a steady business was transacted on somewhat higher terms. In the value of malt no change took place. The supply of oats being small, the trade for that grain was active, at 6d. per quarter more money. Beans and peas produced former currencies. There was a steady inquiry for both English and foreign flour. The in, price of the best town made was settled at 35s per 280 lbs.

Arrivals this week:—English, 16 0 malt, 170 oats, 140 flour, 190 sacks, 120 barrels. Foreign: wheat, 17,690; barley, 490; oats, 12,160 flour, 990 sacks, 0 barrels.

English.—Wheat, Essex and Kent, red, 46s. to 56s.; ditto white, 52s. to 58s.; Norfolk and Suffolk, red, 46s. to 54s.; ditto, white, 48s. to 58s.; rye, 30s. to 32s.; grinding barley, 24s. to 25s.; distilling ditto, 28s. to 31s., malting ditto, 30s. to 36s.; Lincolnshire and Yorkshire oats, 18s. to 20s.; Kingston and Ware, 21s. to 24s.; Dutch and Friesland, 19s. to 21s.; Scotch and Yorkshire and Lincolnshire feed oats, 19s. to 22s.; potato ditto, 20s. to 23s.; Angus and Aberdeen, 23s. to 25s.; Scotch, 23s. to 25s.; ditto, white, 24s. to 27s.; potato ditto, 25s. to 28s.; Irish ditto, 23s. to 25s.; grey peas, 34s. to 36s.; maple, 36s. to 38s.; white, 35s. to 40s.; boilers, 40s. to 42s. per quarter. Town-made flour, 40s. to 43s.; Essex and Kent, 38s. to 40s.; Scotch and Yorkshire, 36s. to 40s. per 280 lbs. *Foreign:* French flour, 36s. to 44s. per sack; American, 32s. to 36s. per barrel.

Seeds.—A very moderate business has been doing in our markets this week. In prices very little change has taken place.

Linseed: English, sowing, 56s. to 60s.; Baltic crushing, 47s. to 50s.; Mediterranean and Odessa, 46s. to 48s.; Calcutta, 54s. to 56s. per quarter. Cakes, 12l. to 14l. per ton. Rapeseed: English, new, 34s. to 36s. per last; old, 36s. to 38s. per last. Foreign, 32s. to 34s. per last. Cakes, 6l. to 6l. 5s. per ton. Hempseed, 32s. to 34s. per quarter. Canary, 40s. to 42s. per quarter. Coriander, 12s. to 14s. per cwt. Tares, 4s. per bushel. English rapeseed cakes, 6l. 10s. to 6l. 15s.; linseed cakes, 12l. 10s. to 13l.; ditto foreign, 11l. 10s. to 12l. per ton. Linseed oil, 32s. 6d. per cwt. Rapeseed oil, 42s. per cwt. Coleseed oil, 40s. per cwt. Cocoa-nut oil, 40s. per cwt. Palm oil, 36s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 6d. to 6½d.; of household ditto, 5d. to 5½d. per 4lb. loaf.

Imperial Average.—Wheat, 51s. 1d.; barley, 29s. 7d.; oats, 22s. 9d.; rye, 34s. 10d.; beans, 40s. 11d.; peas, 34s. 9d.

The Gas Works' Average.—Wheat, 50s. 0d.; barley, 29s. 6d.; oats, 21s. 11d.; rye, 35s. 6d.; beans, 40s. 6d.; peas, 36s. 6d.

Butter.—Best, 1s.; second, 1s.; ditto, 1s.; rye, 1s.; beans, 1s.; peas, 1s.

Tea.—There is a slight improvement in the demand for most kinds of tea; yet there are few sellers of consequence, except common congou, which is 3d. to 3½d. cheaper than last week. The public sales, which commenced on Tuesday, and will continue by adjournments till the 27th inst., comprise 27,514 packages. Of this quantity 19,000 packages were offered on Tuesday, and 8,000 on Wednesday. The total quantity in warehouse is 30,000 packages. The following are the quotations:—Common congou, 8d. to 9d.; fine ditto, 10d. to 11d.; common to good Souchong, 9d. to 10d.; fine to rich ditto, 11d. to 1s. 2d.; common to good Pekoe, 1s. to 1s. 2d.; fine to rich ditto, 1s. 3d. to 1s. 5d.; common to good Twankay, 8d. to 9d.; fine to rich ditto, 10d. to 11d.; common to good Hyson, 10d. to 11d.; fine to rich ditto, 1s. 1d. to 1s. 3d.; common to good Gunpowder, 10d. to 11d.; fine to rich ditto, 1s. 1d. to 1s. 3d.; common to good Young Hyson, 10d. to 11d.; fine to rich ditto, 1s. 1d. to 1s. 3d.; common to good Imperial, 10d. to 11d.; fine to rich ditto, 1s. 1d. to 1s. 3d.

Sugar.—The market for raw is very firm, at further enhanced rates. Proof Leewards, 37s. 6d.; Barbadoes and East Indian, 2s. 1½d. to 2s. 2d. per gallon. Brandy is again dearer. Parcels of the vintage of 1853, have realised 6s. 9d. to 6s. 6d. per gallon. Geneva and corn spirits are very firm.

Hay and Straw. Old meadow hay, 44 4s to 4l 5s; new ditto, 4l 10s to 4l 15s; old clover, 4l. 5s. to 4l. 10s.; new ditto, 4l. 10s. to 5l.; and straw, 1l 8s to 1l 16s. per load. Trade dull.

Wool.—A full average business is doing in English wool, at very full prices; but foreign and Colonial parcels are neglected.

Potatoes.—The supplies are large yet the demand is active. Shaws are worth 80s. to 90s.; Regents, 90s to 120s. per ton.

Hops.—Our market is extremely dull for all kinds of hops, the value of which is barely supported, notwithstanding that the show of samples is small. The accounts from the plantations continue favourable, and further decline is estimated by the duty of £150,000 to £155,000.—Mid and East Kent pockets, 1854, to 180s.; Weald of Kent, 115s. to 126s.; Sussex, 105s. to 114s. per cwt.

Coals (Friday).—Chester Main, 19s.; Holywell, 20s. 6d.; Tanfield Moor, 17s. 3d.; Hartley, 18s.; Eden Main, 20s. 3d.; Belmont, 20s. 3d.; Hasewell, 18s.; Stewarts, 18s.; Cassop, 20s. 6d.; Kelloe, 20s. 6d. per ton.

Smithfield (Friday).—To-day's market was reasonably well supplied with beasts, as to number, and there was a clear average demand. For all breeds, the demand ruled steady, at fully Monday's quotations. Amongst the supply, were 150 oxen from Scotland, and a few Irish beasts, in the middle of the market. The mutton trade was firm, and, in some instances, prices had an upward tendency. There was a decided improvement in the sale for calves. Calves were in good supply, and the veal trade was steady, at extreme currencies. In pigs, only a limited business was transacted, at previously-quoted prices. Prime Scots, 4s. 6d. to 4s. 8d.; other breeds, 4s. 4d. to 4s. 6d.; prime Downs, 4s. 10d. to 5s. 0d.; large ewes calves, 3s. 8d. to 4s. 0d.; prime small ditto, 4s. 8d. to 4s. 10d.; large hogs, 3s. 6d. to 3s. 8d.; neat small porkers, 4s. 0d. to 4s. 2d.; suckling calves, 20s to 24s.; and quarter old store pigs, 19s. to 24s. each. Total supplies: Beasts, 1068; oxen, 150; sheep and lambs, 13,000; calves, 281; pigs, 402. *Foreign:* Beasts, 350; sheep and lambs, 3000; calves, 600.

Newgate and Leadenhall (Friday).—The demand for each kind of meat ruled steady, at our quotations

To-day's prices by the carcase:—Inferior beef, 2s. 10d. to 3s. 2d.; middling ditto, 3s. 4d. to 3s. 8d.; prime large ditto, 3s. 10d. to 4s. 2d.; large veal, 3s. 10d. to 4s. 6d.; middling ditto, 4s. 8d. to 5s. 2d.; large pork, 3s. 6d.; inferior mutton, 3s. 4d. to 3s. 8d.; middling ditto, 3s. 8d. to 4s. 4d.; prime ditto, 4s. 6d. to 4s. 10d.; veal, 3s. 8d. to 4s. 8d.; small pork, 4s. 8d. to 5s. 4d.; lamb, 6s. 8d. to 7s. 4d.

BANKRUPTS

W. TRANGMAR, Crawford-street, Marylebone, hardwareman. G. WINN, Scarborough, draper. C. W. MATHEWS, Woolwich, butcher. J. ANNING, Yiverton, linen-draper.

BIRTHS.

At Cobham-hall, the Countess of Darnley, of a daughter.

On the 20th inst., at Stanmore, the wife of Mr. S. Davison, of a son.

On the 16th inst., at East Hendred, Berks, the wife of the Rev. J. D. Kennedy, of a son.

On the 20th inst., at Elliton-park, the seat of Lieut.-General Vernon, C.B., Mrs. George Vernon, of a daughter.

On the 23rd inst., at Clapham-park, the wife of Philip Hanbury, Esq., of a son.

At Stanstead, the wife of the Rev. James Allan Park, jun., of a son

At the Green, Stratford, Essex, the wife of the Rev. C. Clement Layard, of a daughter.

At 15, Smith-place, Edinburgh, the wife of Mrs. George Blanchard, of a son.

MARRIAGES.

On the 16th inst., at Saint Mary's, Wandsworth, by the Rev. William Wright, of St. John's College, Cambridge, Francis G. Foster, Esq., second son of Foster Bart. of Durham, to Mary, daughter of Edward Cooper, Esq., of Wandsworth.

On the 20th inst., at Saint Mary's, Nouveau Peer, Percy Peat, 60th son of the late Rev. Joseph Peat, of Bellingham, Northumberland, to Isabella Caughey, fifth daughter of the late Col. Cowie, C.B., Bushmoor, Berks, and niece of Sir Peter Parker, Bart., K.C.B., of Winscombe.

On the 20th inst., at Ipsley, by the Rev. Thomas Carter, John Wakefield, Esq., of Ipsley-court, Warwickshire, to Georgiana Eliza, youngest daughter of the late Lieut.-Colonel Hughes, of Hughes-court, Herefordshire.

At Kemp-town, Brighton, by the Rev. Thomas Hincks, Professor of Brighton, to Emily, daughter of the late Rev. Thomas Williams, Henry, son of W. H. Collier, Esq., of Bedford-row, to Margaret, daughter of the late H. Faithfull, Esq.

At Thanington, Kent, by the Rev. Francis G. Foster, Esq., second son of Foster Bart. of Durham, to Lucy, daughter of W. Gwyn, Esq., of Tasburgh-lodge.

On the 20th inst., at Mickleham, Surrey, by the Rev. R. Murray, 87th Royal Irish Fusiliers, to Ellen, eldest daughter of the late Lieut.-Colonel Cromlie, of Eaglehall-house, eldest daughter of Lieut.-Colonel Cromlie, of Eaglehall-house, Dumfriesshire.

On the 16th inst., at Paris, the Baron Amable de Montaignac de Chauvance, to Mary, daughter of Owen Davies, Esq., formerly of Lincoln's-inn-hall, Notts.

DEATHS.

On the 15th inst., at Aden, of brain-fever, Louisa, aged three years and one day, the beloved child of W. Jackson, of the Madras Infantry, and grandchild of the late Sir Dunmore Mackarg, also on the 17th inst., of the same disease, Charlotte Dunmore, aged thirty-one days, who survived her sister but one day.

On the 18th inst., accidentally drowned in Loch Oich, Scotland, Edward Bethell Codrington, aged seven years and six months, only son of Col. Codrington, Coldstream Guards.

On the 19th inst., at Bath, Lieutenant-Colonel Edward Polwarth, daughter of Count Brahl and Alicia Maria, his wife, aged 54.

On the 20th inst., at Bath, Mary Ann, the wife of Mr. Joseph Neale Vale, after protracted sufferings, deeply regretted by her family and friends.

On the 21st inst., at Bath, Lieutenant-Colonel Thomas Lord Saltoun, aged forty.

On the 21st inst., at Bryanstone-square, Dorset, Lieut.-Colonel Augustus Balfe Jones, the last surviving son of the late John Balfe of Oxford-street and Kilburn Priory, aged 52.

THE ILLUSTRATED LONDON NEWS

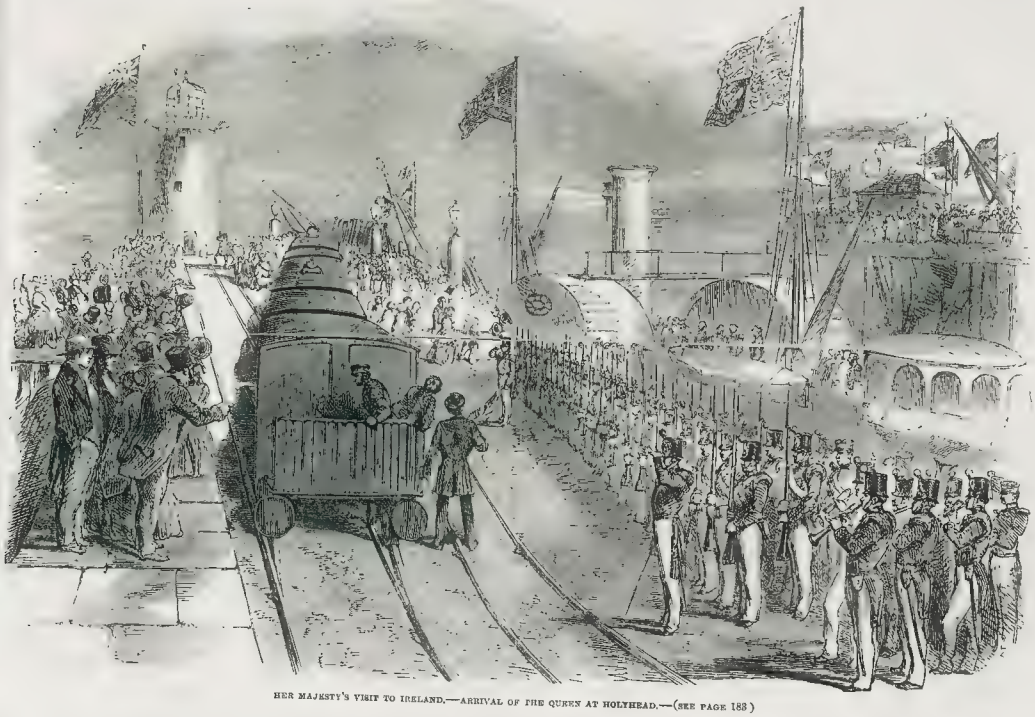
No. 642.—VOL. XXIII.] SATURDAY, SEPTEMBER 3, 1853. [PRICE, WITH A SUPPLEMENT, SIXPENCE.

THE QUEEN IN IRELAND.

The close of the Parliamentary Session has emancipated the three estates of the realm. The Lords and the Commons have betaken themselves to the moor, the mountain, or the sea-side. Fashion as well as politics is at the ebb tide in the metropolis. The West-end is deserted; and the Queen, following rather than setting an example, has sought the change of air and scene which is as essential to Royalty as to humbler conditions of life. But with that sense of duty and kindly regard for the wishes as well as the wants of her subjects, her Majesty, before her final withdrawal into the privacy of Balmoral, has devoted one week to satisfy the claims which Ireland has upon her attention; has crossed St. George's Channel, in spite of a stormy wind and a restless sea; renewed her former acquaintance with a generous and impulsive people; and visited, amid the applause of the whole nation, the Great Industrial Exhibition at Dublin.

Since her Majesty last set foot in Ireland, a great change has been wrought in the physical no less than in the moral aspect of the country. In the August of 1849 Ireland had scarcely emerged from a period of misery and suffering unexampled in history. Famine and pestilence had not only decimated, but redecimated the people. Large districts of country lay uncultivated; farms were abandoned; villages were unroofed and tenantless; the workhouses and the madhouses were so full that there was no room to spare for fresh applicants, and many thousands of able-bodied men were performing hard but unnecessary labour upon the highways, at the public expense, and without public benefit. A moral as well as a physical blight seemed to have passed over the land. The upper classes were ruined, and had none to help them; the middle classes, dreading a similar fate, hurried across the Atlantic; and the lower classes sank still lower, if that were possible, into the slough of apathy and despondency. Yet, amid all this distress, the national character needed but a stimulus to bestir itself. The visit of the Queen was hailed as an omen that a better day was dawning; and a burst of enthusiastic welcome greeted the Sovereign from every part of the Green Isle, and testified that, however much the demagogical party, that grew up amid the slime of the Repeal agitation, might vaunt of their disloyalty, and blazon forth their ingratitude, the heart of the people was sound. Everywhere the blessings of the multitude followed her. She made it fashionable to visit Ireland. Swarms of money-spending tourists followed in her train, and discovered the fact, till then unsuspected, that Ireland was as rich in natural beauty and attraction as the most favourite resorts of the idle and the luxurious upon the continent of Europe. It was felt that Ireland only needed to be seen, to be better appreciated, and that, long as the night of her darkness had been, there was a morning of hope even for her. During her present visit her Majesty has no doubt seen much to convince her that the good auguries of 1849 have not been belied. Four years have not been long enough to repair the misfortunes and the errors of ages, but they have sufficed to arrest the progress of evil, and to sow the seeds of future good. Plague and famine were heavy afflictions, but they did not pass away without leaving some beneficent traces behind them. Things had, in reality, come to that state when, according to the old apothegm, it is impossible but that they must mend. At that very moment Queen Victoria landed in Ireland, and the fact was hailed by the people as in itself a proof that the worst crisis had passed, and that a better understanding between the Saxon and the Celt had already commenced. Politicians and statesmen, not inclined to be over sanguine, anticipated mutual advantage to Great Britain and to Ireland as certain to result. They predicted that the remedy for a whole host of evils would, after this auspicious visit, become comparatively easy; that capital would follow confidence, and that a general amelioration of the condition of all ranks and classes of people would follow the dissemination of capital, in the relation that effect bears to cause. It was not, of course, expected that the voice of faction and sedition would be utterly silenced in a country so long accustomed to hear it and applaud it, or even that that worst plague-spot of the many which had been developed through long ages of neglect and misery, the cowardly and systematic assassination of landowners and rent collectors, would be eradicated all at once. It was scarcely hoped that rival sects or religions would cease their fierce denunciations of each other. But, while the immediate realisation of none of these things entered into the contemplation of any but enthusiasts, it was generally admitted by practical men that these symptoms of social disorder would be mitigated; and that, with the profitable employment of the people, civil, if not religious discord would gradually lose its instruments, and become, as it is in other parts of the country, the exception, and not the rule.

In considering the state of Ireland at the present moment, when, amid similar greetings the Queen of Great Britain and Ireland revisits the long-sorrowful Isle which has been the cause of so much anxiety to herself and her predecessors, it must be confessed that these predictions have not remained unfulfilled. It is true that the Celtic population have swarmed out of the country, and crossed the Atlantic to build for themselves new homes in a rival though a kindred nation. But their place has to some extent been supplied by new blood, and the "Exodus" of the many has left elbow-room for as great a



HER MAJESTY'S VISIT TO IRELAND.—ARRIVAL OF THE QUEEN AT HOLYHEAD.—(SEE PAGE 183)

number who have remained behind. Agricultural labour, that was once the cheapest, if not the most worthless, thing in Ireland, is no longer in excess. Cautious, thrifty, and enterprising cultivators have emigrated from England and Scotland into Ireland; possessed themselves of land; brought capital to work it, and set the aboriginal inhabitants the needful example of energy and industry. Insolvent proprietors have been displaced by a just, though a severe law. The natural wealth of the country, whether existing in the land or in the surrounding seas, has been investigated, and found to be susceptible of immense, if not incalculable, development. Self-reliance has taken the place of despondency. The Great Exhibition of Art and Industry, which Ireland owes to Irish enterprise and liberality, is but one proof, out of many, that the condition of Ireland, though it once seemed hopeless, was never so in reality. The first and most difficult step has been taken; the rest will follow in due course. And Ireland will ultimately, and perhaps speedily, repeat the old experience of Scotland—a country that, in 1745, and for a few years afterwards, seemed as hopelessly miserable—and take her place as the equal in every respect, material as well as moral, of that England whom she once considered her inveterate enemy and oppressor.

The efforts of science have done much, and will do more, to expedite this desirable consummation. Ireland is brought nearer to us every day. The splendid harbour of Holyhead—which the Royal party visited on their way to Dublin, with so much gratification to themselves and to others—is even more of an Irish than an English work. The submarine telegraph has linked the two countries together in a manner more stable than the conquests of Strongbow; while the growing intercourse with America—to which Ireland presents the nearest approach, and to the commerce of which she offers the most available harbours—will still further augment the relations of mutual interest between the whole of the British Isles. The few unreasonable Irishmen who continue to rail against the "Saxon"—who salute the Queen's health with the "Marseillaise," instead of the "National Anthem"—and who persist in attributing the potato disease and the cholera to the machinations of British statesmen, will play their antics in vain. Their example is not contagious; and their malice has become so impotent, that they will doubtless think it incumbent upon themselves to augment the Celtic "Exodus," and settle in the Republican land. But whether they do so or not is of no consequence. The pulse of the Irish people beats true—and long may Queen Victoria be spared to visit and re-visit them!

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

In default of news of her own, Paris occupies herself with news from the provinces—more especially from the watering-places, and most especially from Dieppe; where, of course, every movement of the Imperial guests is, like each action of the King and Queen on Twelfth Night (according to the French custom), made the subject of exclamations and attention. Both the Emperor and Empress have been indisposed since their arrival at Dieppe, owing, it is stated, to their having eaten oysters of a bad quality. The Empress has declined availing herself of the special place set apart for her on the beach for bathing, and has decided on using that employed by all the lady-bathers. She and [illegible] Napoleon walk [illegible] on the terrace and elsewhere, and attend [illegible] assemblies.

It appears that the intended journey of the Emperor to the north is definitively given up, and it is decided that the Empress is to accompany him. The Préfet of the Pas de Calais, M. Duhamel, in announcing to the Conseil Général the intention of their Majesties, demanded a credit of 10,000 francs for their reception in that department; and 2500 more for the furnishing of the *appartement* destined for their use in the Hôtel de la Préfecture.

The Prince Napoleon left St. Cloud on Saturday, and descended the Seine in the Imperial yacht the *Eaghale*, which has been lent him by the Emperor to convey him to Havre, and thence to Dieppe. This vessel, built expressly for the use of the Emperor and Empress, is remarkable for its lightness, beauty, and swiftness. It is fitted up with no less comfort than elegance: the engine and paddle-boxes are placed as far forward as possible, in order to afford more space and less motion to the after-part, where are situated a large, handsome, but simply-furnished dining-room; a salon, richly decorated, and arranged with red damask; a boudoir and dressing-room, in violet, for Louis Napoleon; and a charming *appartement* for the Empress, exquisitely furnished with white satin decorated with gold and magnificent embroidery.

It is stated as a positive fact, that a plan, mentioned last year, but in general regarded as a *canard*, for bringing sea-water from the coast, by tubes, to establish sea-baths in Paris, is about to be carried into effect. The Plaine de Monceaux, a thinly and ill-inhabited quarter, near the Barrière de l'Etoile and de Monceau, is the ground mentioned for the occupation of this establishment.

An attempt, the success of which may lead to results of importance in the commerce of Paris, and consequently of France, has been successfully made during the last week, to bring a vessel of considerable size—400 tons, with a full cargo, and in every way suitable to the undertaking of long voyages—up the Seine as far as Paris. *La Sole*, a vessel constructed by M. Guibert, one of the most skilful ship-builders of Bordeaux, and conducted by himself and Captain Barateau, aided by a pilot taken at the mouth of the river, has, after the greatest dangers and difficulties—proceeding from the lowness of water, usual at this season, the numerous bridges, and the rocks which in several places border the channel, and which, before the most part, unknown to the pilots themselves—accomplished the passage, and thus solved a difficulty hitherto regarded as almost impossible to overcome. It is believed that a project will be submitted to Government for the erection of docks, and other necessary works, in the river, to establish a regular communication for large vessels, and thus to place Paris on the footing of a sea-port town; but whether the advantages of such a plan will counterbalance the expenses is a question that remains yet to be ascertained. M. Guibert is now constructing a second vessel, entitled *La Laromigue* [illegible], of double the size of *La Sole*, which he proposes also to bring to Paris.

An architect, M. Charpentier, has obtained the concession of the [illegible] rooms of the Palais Royal, on which he proposes to build a crystal [illegible] for a *jardin d'hiver*. The concession is for a term of thirty-six years, after which space the building becomes national property.

The theatres are still in a state of preparation for the ensuing season; and, *en attendant*, give nothing new of any importance. The Variétés, the Vaudeville, the Délassemens-Comiques, and one or two other of the smaller theatres, have brought out a few novelties, but not a single piece of sufficient weight or merit to deserve any particular attention. The re-opening of the Opéra, which was stated as intended to take place on the 20th of August, is not likely to be before the 15th of this month. Notwithstanding the near approach of the season, no arrangements have yet been made for the re-organisation of the Italian Opera: nor do we even hear anything like a probable plan proposed for its re-establishment. This theatre has long been languishing, from different causes; the principal—the extreme dearth of real talent; and, until this dearth be supplied, there seems but little chance of its succeeding under any management. Several journals have announced that Fredrik Lemaitre was about to appear at the [illegible] theatre; but this is entirely without foundation. The report, though well founded, is premature. His work in himself. This report, though well founded, is premature. His work in question will not be ready for performance before January. In the meantime, this theatre is preparing for representation a drama by MM. Anicet-Bourgeois and Michel Masson, in which the eminent comedian M. Laferrière is to appear. At the conclusion of this piece—which, it is expected, will run till the commencement of the one before mentioned—M. Laferrière is to go to the Odéon, to play in a work of Alexandre Dumas. The Gymnase has obtained a play from the pen of Madame George Sand, entitled "Le Pressoir," which will, it is believed, be put on the stage. Liszt is almost daily expected here, from Switzerland, and will, it is hoped, give some concerts. Meyerbeer has just completed the arrangement of the "Camp de Silésie" for the Opéra-Comique. Halévy has finished a new work, in three acts, for the same theatre, which is about shortly to appear there. Adolphe Adam is at work for the Théâtre-Lyrique, for the début of Madame Cabel, a singer from whose merits much is predicted. Verdi is employed on the subject of King Lear, and no less than eight other composers are named as being occupied with grand operas, opéras-comiques, opéras-bouffes, and opéras-dramatiques, to be performed in the course of the coming season. The Grand Opéra, will, it is said, open with the "Huguenots," succeeded by the "Muette," "Jérusalem," the "Vestale," and "Charles VI.," with the addition of a hundred choristers to the troupe.

A letter from Dieppe states that the municipal council of that place has received from the Emperor an assurance that in the next budget 500,000 francs shall be set down for the improvement of the harbour.

The Brest fleet is completely organised, under the command of Admiral Bruat, and consists of the following ships:—The three-decker ship of the first class, the *Montebello*, on which Admiral Bruat has hoisted his flag until the arrival of the *Napoleon*; the two-decker, *Hercule*, the screw ship of the line, *Austerlitz*; the screw ship *Jean Bart*; the *Duguesclin*, bearing the flag of Rear-Admiral Gharner; the screw ship *Napoleon*, expected from the Mediterranean; the screw frigate, *Pomone*; the steam frigate, *Caffarelli*; the steam corvette, *Infernal*; the steam corvette, *Roland*.

BELGIUM.

Some articles in the Paris *Constitutionnel* relative to the late marriage fêtes have excited some uneasiness both in Brussels and Paris as indicating a desire of some parties connected with the French Government to pick another quarrel with Belgium. Some months ago, an attack upon the Belgian Government from the pen of M. Granier de Cassagnac appeared in the *Constitutionnel*. The King of the Belgians did not even wait to send a courier with despatches to Paris, but ordered his Ambassador, by electric telegraph, to call for explanations, which were given in such a way as to afford satisfaction. A fortnight ago an article commenting upon the marriage of the Duke de Brabant, signed by M. de Cesena, appeared in the *Constitutionnel*; and on Sunday last the following paragraph appeared in the same paper:—

We alluded some weeks ago to a change in the Belgian uniform; but we were not aware that that change had for its result to very nearly transform into an Austrian uniform the uniform of the Belgian infantry, which published much about the new uniform was particularly remarked during the marriage fêtes of the Duke de Brabant with the Archduchess of Austria, when a part of the Belgian infantry wore the new uniform which was assigned on the occasion of that Princess's visit. The change was badly received even and that the detachments thus transformed received with hisses. The dissatisfaction increased when the Duke de Brabant was to pass through the city dressed in the new military costume. Another cause of coolness for the Civic Guard, which is the Belgian National Guard, has been the particular favour which King Leopold appeared to accord to General Chazal, who is not popular with that force.

This second article, coupled with the absence of the French Minister from the marriage ceremonies, revived and even increased the uneasiness which had been felt; and it was stated that the representative of Belgium at the French Court has received instructions to call for explanations. Nobody knows who suggested or authorised these attacks upon the Belgian Government and the Royal Family; but the fact of their being repeated in a journal which depends for its existence on the will of the French Government, seems to indicate that they have been sanctioned by some high personage.

DENMARK.

The Danish Government is believed to have protested against the claim of 7,400,000 gulden which Austria makes for the expenses of her intervention in Holstein at the close of the late war. By a patent, dated 14th instant, the King has convoked the estates of Holstein for the 5th of September, so that the Representative Assemblies of the two Duchies will meet and deliberate simultaneously with the Reichstag of the Kingdom of Denmark Proper, and it is expected that the law for instituting a Supreme Council or Senate for the common legislation of the whole monarchy will be laid before all three bodies simultaneously. The present course of the Danish Government appears to be gaining favour in the Duchies.

In Hamburg and in the Duchies a report is circulating, though not for the first time, that the King of Denmark is determined on abdicating the throne, and that his uncle, the next heir, the Erbprinz Ferdinand, would have his right of succession in favour of Prince Christian of Denmark, who would then mount the throne as Christian IX. The circumstance that the King has lately been in negotiation for the purchase of some estates in Schleswig for the Countess Danner seems to have given rise to this report, as well as to another that his Majesty intended to retire to that Duchy.

AUSTRIA.

The Emperor has now resolved that a somewhat less severe system shall be tried in the Lombardo Venetian provinces. The state of siege is for the present to be maintained, though under a milder form; the mode of action of the military authorities is exactly defined: all vexations and arbitrary measures are strictly prohibited, and the power of Government is in future to be exercised with due consideration and dignity. Martial-law is still to be had recourse to for all political offences. 1. For high treason, insults offered to his Majesty and to the members of the Imperial House, insurrection and riot. 2. For tumult, for participation in secret societies or prohibited clubs, and for recruiting for the same. 3. For moving to sedition or excitement. 4. For the spreading of alarming rumours, injuring public *employés*, sentinels, or servants in the exercise of their duties; and, finally, for injuring or defacing official placards. Standing military courts are to be formed in Milan and Mantua, for Lombardy, and in Verona and Udine for Venice. Except in case of open insurrection, drum-head law cannot be proclaimed without the express permission of the highest authority in the state. The Council of Ministers has to decide whether, under certain circumstances, persons guilty of murder, robbery, or arson, should not be subjected to military law. The new regulations are extremely strict, but the military authorities have probably received instructions to display less rigour than has hitherto been the case. If the Italians are content to remain quiet, they will, by the first of October, be in no worse position than the inhabitants of Vienna and Prague have been in for the last five years by two months.

ITALY.

The high price of bread is causing serious misgivings in the Italian Peninsula. The King of Naples has issued a royal decree, authorising the free importation of grain into the Neapolitan dominions, until the close of the present year. Marshal Radetzky has prohibited the exportation of grain from the Lombardo Venetian provinces.

The advices of the 17th from Rome state that his Holiness is unwell. Most unfavourable accounts are sent in from the provinces. The people complain bitterly of the enormous prices of the necessaries of life, and of the heavy taxes. The Government is accused of not having taken the necessary measures to keep off the threatening dearth. In the immediate neighbourhood of Rome, the Pope was, not long since, deeply wounded by the offensive behaviour of the populace which surrounded his equipage; and, in the midst of loud cries and noisy complaints, attempted to toss a loaf into the carriage. Twenty-six young men, of good family, have been arrested in the neighbourhood of Prato Rotondo, on suspicion of harbouring an intent to make an attempt on the temporal and spiritual dignitaries. Six men, armed with daggers, were arrested in the Piazza Colonna, while the anniversary of Napoleon's death being celebrated. The Government in consequence transmitted a commission to try the conspirators. Other arrests had taken place on different points of the Roman territory.

SPAIN.

A Paris correspondence has been published between Lord Howden, [illegible] Minister at Madrid, and a member of the present Spanish Cabinet. Application had been made to the British Ambassador to give Christian burial to British subjects dying at [illegible] Church, chapel, or [illegible] Cemetery of public or private worship, will be allowed to be built in the aforesaid locality. 3. All acts which can give any notification of the performance of Divine service whatsoever are prohibited.

4. In the conveyance of the dead bodies to the burial ground, any sort of pomp or publicity shall be avoided.

The nation thus treated by the Spanish Government is that to which Spain is indebted for its own national existence. British arms preserved it in its contest for independence and its struggle for constitutionalism; and at this very moment, when a favour is made of permitting Englishmen to receive the burial of brutes upon Spanish ground, Spaniards are forbidden to be Englishmen in an amount of [illegible] which would purchase half the territory of their kingdom. Only [illegible] Englishman was buried, who certainly, for some time [illegible] considerable risk of "dying within the dominions of Spain." [illegible] celebrated, we believe, a special "Te Deum" for the Duke of Wellington; but, if the death of this great man had occurred [illegible] it might have done—at Madrid, the Government must either have seen its own deliverer debarred from Christian burial, or have convicted itself of deluge by the repeal of its own law. But we need [illegible] upon pointing out the infamous bigotry of a law by which dead Protestants are ranked with excommunicated malefactors, and forbidden to be interred in Spanish ground with any forms of decency or religion.

THE EASTERN QUESTION

The qualified acceptance by the Porte of the Vienna note, was announced, on Saturday, by the Paris *Moniteur*, in the following terms:—

Accounts from Constantinople of the 19th state, that the Sultan has adopted the note drawn up by the Conference of Vienna, with some changes in the wording which are without importance.

This announcement did not satisfy the speculators at the Bourse, and on Monday the following notice was posted:—

The English steamer, which arrived yesterday at Marseilles, was announced by a telegraphic despatch from the French Ambassador at Constantinople, dated the 20th. That steamer brings despatches containing the development of the intelligence already known of the acceptance by the Porte, excepting the unimportant modifications, of the note which was enacted from the Conference of Vienna.

Whether the modifications made by the Porte are unimportant or not will, in some measure, depend upon the view which the Emperor of Russia may take of the note as amended. The Czar required the acceptance of the note "without change," and the Sultan has made changes which will require to be submitted to Russia, and which may afford the Emperor an excuse for re-opening the question. It is stated that in a conversation with General Castelbajac, the French Minister at St. Petersburg, the Czar declared positively that the moment he received an account of the acceptance of the note he should sign the order for the evacuation of the Principalities. The evacuation, which some days ago was believed certain, is now described as merely probable; and until we have positive news from St. Petersburg of the acceptance by the Emperor of the note as amended, it would be incorrect and premature to affirm that the question is yet terminated.

A letter from Constantinople, of the 18th ult., states that a Grand Council had assembled daily, to consider whether the terms proposed by Austria, and approved by the Porte, ought to be accepted or not. It appeared that the peace party (which is led by Redschid Pacha, the Foreign Minister, and Mustapha Pacha, the Grand Vizier) would prevail if a guarantee could be obtained from the four powers, to the effect that the concessions to Russia should never be made an undue use of. The war party among the Turks—of which the leaders are Mehemed Ali, the Seraskier and Ibrahim-law of the Sultan; Mahmoud, the Captain Pacha; and Mehemed Rushdi, the Hosen Musheers, or Generalissimo of the Gunners—are still loud in their opposition. Mahmoud Pacha declared in the Divan of the 14th that he would divorce his wife, but would not advise a dishonourable peace with Russia. This is an expression of the strongest kind in use among the Turks. The indignation among the Turks at what they term the faithlessness of those allies who with them signed the solemn treaties which were to guarantee the integrity of Turkey, is constantly expressed.

The news of the expected settlement of the Russo Turkish question has produced a panic among the refugees, who fear that restrictive measures will be taken against them.

The Sultan has been pleased to grant the decoration of the newly-founded order of Mecheidi to all the high officers of the fleets of Great Britain and France.

The arrival of the Egyptian fleet caused some excitement on Sunday the 14th ult. Each line of battle-ship was towed by two large steamers past the city, and moored in the Bosphorus in a compartment opposite Hardjeh. They exchanged salutes on their arrival opposite the Seraglio, and again when they came within sight of the Turkish fleet. The Egyptian squadron consists of two two-deckers, four frigates, two corvettes, and two steamers, under the command of Kiri Selim Pacha. The fleet has on board 12,000 troops and 5,000 sailors, and is now lying off the port of Unkiar Skelessi, in the Bosphorus, opposite Therapia, where a large camp has been formed for the reception of the troops. The place of encampment is a series of hills surrounding the valley of Unkiar Skelessi, which latter is a broad flat piece of ground, covered by large plane-trees, having much the appearance of an English park, and being eminently picturesque. This was precisely the place where the Russian troops encamped who were called to assist the late Sultan against the Egyptian rebels, and on one of the hills is a monument commemorating the event in the following inscription in Turkish:—

1. Russian troops came to succour the Sultan, [illegible] Mahmoud, and the alliance between the two countries was cemented, and may the alliance of the two powers remain as firm and solid as this block of stone. May the mark of friendship remain eternal as the star Athanor. [illegible] Year of the Hegira 1253 (1838) SELIM HOSAMOU.

The latest post from the Danubian principalities announces that the princes of Moldavia and Wallachia have refused to obey the order of the Porte to appear in person at Constantinople. This places Government in a most embarrassing position.

The account received from the different provinces of the empire speaks of the zeal shown by the people in arming themselves for defence against Russia. It remains to be seen how this unexampled enthusiasm will be allayed without war.

A letter from Constantinople says of the Sultan: "He is not on now probably useless:—" The army was really organised upon a formidable footing. There were 120,000 regular troops on the Danube and Balkan, around Shumla; a reserve of 60,000 or 80,000 men on the Persian frontier. The [illegible] was intact; the reserve, composed of old soldiers, amounted to [illegible] 100,000 men. Then there were volunteers, the contingent of tributary powers, and a population ready to [illegible] The [illegible] ample provisions for a year, and ammunition enough to [illegible] piece of artillery with 500 discharges. All [illegible] the same scale, and had been accumulating for [illegible] the Bosphorus are in a satisfactory condition.

We learn from Galatz that on the [illegible] battery on an island of the Danube, which by the treaties is considered neuter ground, Prince Gortschakoff has signified to her that if he does not abandon that position he will be forced to dislodge it.

It is asserted that the Sultan intends declaring the independence of Moldavia, Wallachia, Servia, and Montenegro, and that these provinces shall form a confederation under the protection of the five great powers.

All accounts from Wallachia agree as to the unhealthy state of the Russian troops, and the unfeeling neglect of their officers, who treat them as mere machines. They were

...ed marching into Dusharest under the burning heat of a July ...ltering under the load of their great-coats, winter clothing, and ... of them from time to time dropping on the road ... typhus fever commits great ravages amongst them. ...tatement requires confirmation, but they have, it is averred, a great ...d of the superior prowess of the Turkish soldier; they express, ... their determination to go forward to certain death and glory to fight for the Holy Sepulchre, which they say has been sold by the Sultan to the Jews. They frequently ask how far it is to Jerusalem, which they regard as the future field of battle. The Wallachians think that the occupation of the Danubian provinces will hardly take place so soon as expected, immense supplies of stores of all descriptions having been sent, and all the necessary steps for passing the winter there having been taken ... strength of troops in the neighbourhood of Warsaw increases ... from the reserves, and the Russian Principalities are "the ... on the basis of the silence.

From Servia we have received information which still further lessens the fear of an Austrian occupation of that province. An explanation has taken place between the Servian Government and the consular agent of the Austrian Government at Belgrade, from which it appeared that the only object of Austria was to assure the Prince of Servia and the Sultan that they might rely on her military assistance in case it was required against internal disorder or foreign attack, and that she had never contemplated an occupation of the Servian territory without the consent of the existing Government. These explanations are said to have satisfied the Servian Government that they had been premature in denouncing to the Porte the intentions erroneously attributed to Austria. The excitement occasioned in the province of Servia by the occupation of Moldavia and Wallachia had been considerably allayed by the mission of M. de Fonton, a Russian agent, sent from Vienna to Belgrade, who had been instructed to declare that Russia was satisfied to maintain the existing Government and treaties with the Porte in reference to Servia.

THE VIENNA NOTE AND MODIFICATIONS.

The following is a translation of the Note agreed to at Vienna and submitted to the Sultan, together with the Modifications proposed by the Sublime Porte:

H. M. the Sultan, having nothing more at heart than to re-establish between his Majesty and the Emperor of Russia the relations of good neighbourhood and perfect harmony (*entente*), which have been unhappily disturbed by recent and painful complications, has carefully undertaken the task to find the means to efface the traces of those different points.

A supreme *Irade*, in date of ——, having made known to him the Imperial decision, the Sublime Porte, &c., congratulates itself at being able to communicate it to H. E. Count Nesselrode. If at all times the Emperors of Russia have shown their active solicitude (1) for the maintenance of the immunities and privileges of the Orthodox Greek Church in the Ottoman Empire, the Sultans never refused to confirm them anew by solemn acts which attested their ancient and constant benevolence towards their Christian subjects

"If H. M. the Sultan Abdul Medjid, now reigning, animated by the same dispositions, and being desirous to give to H. M. the Emperor of Russia a personal proof of his most sincere friendship, only listened to his unbounded confidence in the eminent qualities of his august friend and ally, and has deigned to take into serious consideration the *representations* (2) of which H. E. Prince Menschikoff rendered himself the interpreter to the Sublime Porte.

The undersigned has consequently received the order to declare by the ... at that the Government of H. M. the Sultan will remain *faithful to the letter and the spirit of the stipulations of the treaties of Kutschuk Kainardji* (3) *and of Adrianople, relative to the protection of Christian worship* (4); and that H. M regards it as a point of honour with him to cause to be preserved for ever from all attacks, either at present or in future, the enjoyment of the spiritual privileges which have been accorded by the august ancestors of H. M. to the orthodox Church in the East, and which are maintained and confirmed anew by the present act, to allow the Greek worship to participate in a spirit of high justice in the advantages conceded (5) to other Christians by convention or special agreement.

Moreover, as the Imperial firman, which has recently been given to the Greek patriarchate and clergy, and which contains the confirmation of the ... must be regarded as ... proof which the Sultan gives at present ... moreover the proclamation of that firman, which ... reports, and of prayers ... to be offered in the mosques which ... the religion of H. M. the Emperor of Russia, ... happy to be charged with ... duty of making the present declaration to Count ... in the future, both he ... shall be assured at the same time of the ... of results from the firman ... with the Holy Hierarchy of the Church of the Most of Both ... and ... assure the ... explained and interpreted by the principles ... and in the moral obligation of H. Majesty the Sultan to cause his sovereign decisions to be executed without any alteration.

The Sublime Porte, moreover, officially promises that no modification shall be made in the state of things which has just been regulated, without a previous agreement with the Governments of Russia and France, and without prejudice whatever to the different Christian communities.

In case the Imperial Court of Russia should demand it, a suitable locality shall be assigned in the city of Jerusalem, or in the vicinity, for the construction of a church consecrated for the performance of divine service by Russian ecclesiastics, and of an hospital for indigent or sick pilgrims of the same nation.

The Sublime Porte engages itself even now to subscribe in this respect a solemn act, which would place those pious foundations under the special surveillance of the Consulate-General of Russia in Syria and Palestine.

The undersigned, &c., &c., &c.

[PROPOSED ALTERATIONS.]

(1) For the worship of the orthodox Greek Church the Sultans have never ceased to watch over the maintenance of the immunities and privileges of that worship and of that Church in the Ottoman Empire, and to confirm them anew by solemn acts which attest, &c

(2) The communications

(3) Of Kouschouk-Kainarji, confirmed by that of Adrianople, relative to the protection by the Porte of the Christian worship.

(4) And to make known that H.M. the Sultan, &c

(5) The advantages accorded, and which may be accorded, to other Christian communities, Ottoman subjects.

MOROCCO.

Intelligence from Tangiers to the 20th states that an Ambassador from Morocco was on the point of proceeding to London to settle some difficulties of a serious character, which have arisen between the Governments of England and Morocco. It appears that the English Consul has given notice to the Moorish authorities that they must renounce their present system of prohibition, and adopt one of Free-trade, at least to a certain extent. Some discussion had arisen in this matter, and the Moorish Embassy has for object to endeavour to settle the affair.

AMERICA.

By the Royal mail steam-ship *Niagara* we have advices rom New York to the 16th. Great complaints are made by the friends of the President of the impartial distribution of official patronage among his political opponents. They say that Dissunionists and Fressoilers have from the beginning received by far the larger share of offices; and General Pierce has by this course alienated his supporters, the national Democrats, without purchasing the confidence of his opponents. General Pierce, at his election, stood forward as the representative of the principle of the integrity of the Union. Under his scheme of uniting men of all parties, by bestowing honours and emoluments upon their leaders, seems to be in advance of his age; and the result is, that General Pierce has no party now, and that his Administration will have to confront a powerful alliance of Union men in the next Congress, who will be sustained by the general feeling of the national democracy

... Orleans yellow-fever continued to sweep off large numbers of the citizens. The deaths for the 14th, one day only, were 200. A New Orleans paper gives a fearful account of the scenes consequent upon the want of persons to bury the dead.

Nearly 200 persons had died in New York and the neighbourhood from the effects of heat, the temperature having reached 102. The victims were principally Irish, with a sprinkling of English, Scotch, and American

...he question of the liability of Mississippi upon her repudiated obligations known as the "Union Bank Bonds," has been unanimously affirmed ... the Court of Appeals in that state, before which it had been ... These bonds, which amounted only to a total of £1,000,000 ..., were issued by the state more than fifteen years ago—namely, on the 4th of June, 1838—when their full value was received and expended, some portion of which were subsequently raised as to their legality being met by the Legislature with two distinct resolutions, at different periods, to the effect that the contract was in every respect sound, and ... attempt to deny its validity would be "a calumny upon the justice ... and dignity of the State." In 1842, however, the finances of ... becoming worse, and payment of the interest being pressed, ... resolved to resort to repudiation; and from that time to the present ... contributions to the people or Legislature have had any effect, ... period of prosperity has been experienced which has created a surplus revenue, and been a constant subject of boasting and congratulation. It appears, however, that the principal of the bonds was stipulated to be repaid at certain progressive periods, and, that the first of the series having fallen due in 1860, a suit was commenced by one of the holders, which has just terminated in the decision now reported. The only remaining question, therefore, is whether the citizens of Mississippi will originate the fiat which has been given against them even by the highest of their own constituted authorities; and, although the fact that an appeal to a popular vote as to whether they should or should not recognise their obligations, which was actually made by the Governor a year ago, was decided in the negative, is a discouraging circumstance, there is reason to hope that further resistance will be abandoned and that a resumption of payment may at length be anticipated Should such prove to be the case, repudiation being extinguished in the quarter where it originated, a similar stain cannot long be allowed by the other States of the Union in which it is still practised—namely, Michigan, Florida, and Arkansas.

The general character of the money-market of New York has been one of increasing demand for money, which is likely to continue. This is ascribable to the vast increase of trade, under the impulse of the gold discoveries. While the exports in goods and specie from New York, for the first seven months of 1853 amounted to 44,000,000 dollars, in 185 they slightly exceeded 40,000,000; but the relative progression of exports for the same period was 74,000,000 and 118,000,000; the relative exports for the month of July alone being 13,000,000 and 20,000,000 Already, in New York, they begin to talk of "over-trading"—a phrase which implies some degree of check to the orders upon which Great Britain can calculate.

By the *Arctic* we have later advices from New York, namely, to the 20th ult.

A letter from Washington gives the annexed statement relative to the negotiations upon the fishery and reciprocity questions since the failure of the project negotiated by Mr. Everett, but not presented to the Senate —

The British Government have presented the following propositions for the consideration of our Government:

1. The free navigation of the river St. Lawrence.
2. To permit colonial-built vessels to obtain registers, that privilege being already granted in England to American and other foreign-built vessels.
3. To abolish the system of bounties to our fishermen.
4. To throw open the Californian coasting-trade: that is to say, to allow British vessels to load in the Atlantic States for California.
5. To abolish the duty on fish brought here in colonial bottoms.
6. Reciprocal trade with the provinces in certain articles, the growth of each country, based upon the Reciprocity Bill introduced by Mr. Grinnell in 1848, and passed by the House of Representatives; if their propositions were agreed to, a participation in the British North American fisheries was to be extended to American fishermen.

It is understood the proposition to permit colonial built vessels to obtain American register has been declined by the Cabinet, on the ground, principally, that it is properly a matter for Congressional action. It would be for Congress to determine how far it is expedient to amend the tariff by modifying the duties on iron, copper, hemp, & so as to enable our shipbuilders to compete with the colonists on equal terms.

The proposition to abolish the system of bounties to our fishermen was declined, upon the ground that the bounties are matters of internal policy, with which England cannot be permitted to interfere

The proposition to throw open the California coasting trade was declined, on the ground that the constitution declares that all the States of the Union shall be on an equal footing, and that, therefore, the coasting trade of California could not be opened to England without the carrying with it also the whole coasting trade of the United States. As to the proposition of reciprocal trade, it was considered as much too limited; and there appeared to be no disposition on the part of England to extend it to an interchange in all articles of ground product, and manufacture of the country and the provinces respectively. It was even doubtful if England would consent to a reciprocal trade in the articles enumerated in Mr. Seymour's bill of last session. This is the present position of the negotiations. It is, however, believed that a project of a treaty may yet be agreed upon, as there appears to be a strong desire on both sides to settle the matter; for the President, Lords St. Mary will submit a proposition on the part of the Government, defining precisely what the United States are willing to agree to; and we have little doubt, when that proposition is made, that a speedy solution of the difficulty will be had.

It is stated that Lord Elgin, the Governor of Canada, is to return to England in the *Sarah Sands*.

Advices from Havannah, of the 14th ult., state that the cholera had been terrific on one estate, belonging to Mr. Seals. 131 negroes had died in six days.

It was reported in New York that a severe earthquake had been experienced at Cumana, Spanish Main, on the 19th of July, at three p.m., by which 600 persons were lost. At the same time a slight shock was felt at Trinidad, attended, however, with no serious consequences.

INDIA.

The Great Indian Peninsular Railway has already opened its line from Bombay to Tannah, and the reports of the traffic seem to indicate success. But the great importance of this line of railway will not be truly felt until it is completed as far as the cotton districts of Khandesh on the one hand, and the fashionable station of Poonah on the other. Steps have been taken to accomplish this. The actual capital of the Company has been found adequate to the construction of the line from Bombay to Callian thirty five miles and the India House have just resolved to permit the Company to raise £1,200 000 of addition to their capital with a guarantee of 5 per cent. for £500.000 set apart for constructing the line to Shawpoor; and 4½ per cent. for £1,000,000 intended to commence two lines, one into Khandeish, the other to Poonah. But as there is projected a railway from Calcutta to the northwest frontier, touching at Mirzapoor, Allahabad, Agra, Lahore, and other towns, it is understood that the great Indian Peninsular Company are to survey a route for a junction line connecting their own railway with the Bengal railway at Allahabad or Mirzapoor, thus completing the direct communication between the great cities on the Ganges and Bombay. There has also been recently projected a Central India Railway Company, proposing to connect Bombay and Baroda, and ultimately joining the Bengal line at Agra This latter portion, it is understood, will be surveyed by the Central India Company. These brief intimations throw a brightness on the future.

TERMINATION OF THE WAR WITH BURMAH.

The letters and papers brought by the Overland Mail, which left Bombay on the 20th July, state that peace had been proclaimed with Burmah. The King of Ava appears to have been starved into submission; famine prevailed at his capital, and was attributed to the continuance of our blockade of the river, which prevented the arrival of the usual supplies of rice from the lower provinces He has accordingly expressed his desire for the cessation of hostilities, and requested that the blockade of the river may cease. He announces "that orders had been issued by the governors of districts not to allow the Burmese troops to attack the territories in which the British Government had placed its garrisons and he has set at liberty the British subjects who had been carried prisoners to Ava.

The withdrawal of the blockade will not terminate the famine at Ava as the King expects, for, owing to the disturbed state of the country, there was no cultivation in the lower provinces last season, and a scarcity prevails, which is only prevented from becoming a famine by large and incessant importations of grain from Calcutta and Moulmein. It is unfortunate that the first year of our rule should be one of scarcity. Very little progress has been made in raising the local corps for the annexed provinces. The Feguers exhibit a reluctance to enter the Company's service that was altogether unexpected.

Although the Burmese may cease for the time to molest us, and thus diminish the casualties resulting directly from war, the most deadly enemy will still remain in the climate of the country. Of the relative extent of these two liabilities we may give some idea by stating, that whereas thirteen officers only have been killed in action, no fewer than forty-seven have fallen victims to disease The whole number of European officers who have either perished from sickness or who have been killed, wounded, or invalided during the seventeen months of this Burmese war, amounts to 198.

ELECTRIC GAS.—The experiment of lighting London by electric gas, obtained by the decomposition of water, and applied also to heating, and as a motive power, at half the expense of coal, gas, and with equal illuminating power, non-explosive, inodorous, and free from smoke, is about to be tried on an extensive scale; and, in the event of its succeeding, it is said that all the pipes and lamps in London may be used for it.

THE LAKES.—All the hotels, inns, and private lodging-houses at Keswick, Grasmere, Ambleside, Bowness, Buttermere, Patterdale, Pooley Bridge, &c., are thronged with tourists; amongst whom are many foreigners. A very great number of anglers have visited the northern lakes and streams this season, who have generally met with tolerable success, which may be attributed to the formation of angling associations.

THE QUEEN'S VISIT TO IRELAND.

OSBORNE TO TAMWORTH.

THE Queen has made a rapid and pleasant progress from Osborne to Holyhead. As her Majesty left Osborne at nine o'clock on Saturday morning, there was a south-westerly gale, and the sea ran high; but the Queen is a excellent sailor—was not deterred nor delayed. The Royal embarkation was duly effected on board the *Elfin* at the appointed hour and immediately afterwards the little craft steamed out of the harbour *en route* for the Southampton water

Arriving at Southampton a little after ten, the Queen and the Royal Family (Prince Albert, the Prince of Wales, and Prince Alfred) were received with a Royal salute from the platform, the various ships belonging to the Peninsular and Oriental Company manned their rigging, and each vessel in the dock being dressed, the effect was very imposing. An American brig lying outside also manned the rigging. The Queen, having landed, and acknowledged the many marks of loyalty exhibited, passed on to the state-carriages, which were drawn slowly away, amid the repeated cheers of the people, a band of music playing "God save the Queen"

At Basingstoke, the Earl Granville, who will be the Minister in attendance on the Queen during the Irish visit, met her Majesty, having arrived from London by an early train. Here the first break of gauge took place; and Mr. Charles Russell, the chairman; Mr. Brunel, the engineer; and Mr. Saunders, the secretary of the Great Western Railway, took charge of the Royal train henceforward to Leamington, a distance of nearly a hundred miles.

Leamington—the boundary of the broad gauge portion of the journey was reached shortly after one o'clock. A new state saloon carriage had been prepared for this occasion by the North-Western Company; and the application of a novel mode of communication between the guard and the engine-driver was also brought into use, for the first time, yesterday, as a means of starting at a given moment, and also of signalling in case of necessity. The run from Leamington, by Kenilworth to Coventry, was admirably accomplished. From Coventry, the branch railway was traversed to Nuneaton, where the Trent Valley trunk line is entered; and Tamworth was made soon after two o'clock. At this place the only important stoppage during the day took place. Here her Majesty partook of an elegant *déjeûner*, provided by the railway company, under the direction of Mr. Mills, of the Castle Hotel, whose own resources were aided by the obliging kindness of Sir Robert Peel, who, in reply to a telegraphic message addressed to him at Geneva, desired that his plate chests should be placed at the disposal of the worthy host for her Majesty's use. When the Royal train arrived at Tamworth, the Mayor (T. Robinson, Esq.) and the members of the corporation were present on the platform to welcome the Sovereign. Guards of honour, composed of detachments of the Staffordshire Yeomanry Cavalry and of the 96th Foot, from Weedon, with the bands of both regiments, were also in attendance. The station was decorated with great taste, and a vast number of persons resident in the neighbourhood were permitted to view the arrival of the Royal party from the up and down platforms. The corporation of Tamworth, and the clergy of the town and neighbourhood, then had the honour to present to her Majesty the following addresses:—

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

The humble Address of the Mayor, Aldermen, and Burgesses of the Borough of Tamworth

Most Gracious Sovereign,—We, your Majesty's most faithful and dutiful subjects, the Mayor, Aldermen and Burgesses of the borough of Tamworth, respectfully approach your Majesty, to express our devoted loyalty, and our continued attachment to your Majesty's person and family.

We remember, with feelings of the liveliest emotion and gratitude, that your Majesty honoured our ancient borough with your Royal presence, when your Majesty was graciously pleased to visit your devoted and attached servant, our distinguished representative, the late Sir Robert Peel.

We then prayed that the Supreme Di-poser of all events would bountifully pour down blessings on your Majesty and your Royal Consort, and we thank God that he has granted to your Majesty and your devoted subjects so many great blessings; and we continue earnestly to pray that your Majesty, your Royal Consort, and family, may enjoy the protection of that gracious Providence which has so long granted to this highly-favoured land, under your Majesty's beneficent rule, the blessings of peace, of social happiness, and general prosperity.

WM ROBINSON, Mayor.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

MAY IT PLEASE YOUR MAJESTY,—We, the undersigned, the clergy of the Parish of Tamworth, beg leave to approach your Majesty with unfeigned respect and affection, and to offer to your Majesty our loyal and dutiful submission, and our hearty congratulations, on the occasion of your Majesty's present visit to this town.

It is our earnest prayer that it may please Almighty God to preserve your Majesty in life and health for many years to come, and to grant us a long continuance of your Majesty's happy and peaceful reign over these realms, for the happiness of your Majesty's family, the prosperity of all classes of your Majesty's subjects, and for the protection and enlargement of that branch of Christ's Church of which your Majesty is the head, and of which we, your Majesty's devoted servants, are ministers

Signed by the Rev. E. HARSTON, Vicar of Tamworth, and about thirty other Ministers of the town and neighbourhood.

Her Majesty left Tamworth at the appointed time—2·45 p.m.—having shortened the stoppage arranged in the official time bill, for the purpose of making up the time lost in crossing from Osborne.

TAMWORTH TO HOLYHEAD.

At every other station along the line crowds congregated, without the possibility of seeing more than the whirling dust of the Royal train, which did not stop again until it got to Chester, and there only to change engines. The Royal train arrived at Holyhead at a quarter to seven o'clock. At all the stations on the Chester and Holyhead line the Queen was received with the warmest demonstrations of loyalty, particularly at Bangor, where the people were most enthusiastic. At Holyhead the demonstrations were grand and comprehensive. The quay was spanned with a magnificent triumphal arch, and from almost every house in the immediate vicinity flags and union-jacks were displayed. The vessels and steamers moored in the old pier harbour were gaily decked with naval flags and streamers. A company of the 7th Fusiliers, under the command of Lieut.-Colonel Wilbraham, and also the Chester Pensioners, arrived by railway early in the day, as a guard of honour to her Majesty.

At half-past six o'clock the Royal party arrived at Holyhead. The Queen's reception along the route was very gratifying. Each station had its band of determined and loyal sighted men, who cheered and waved their hats and handkerchiefs at the mere glimpse of the Queen. The *Victoria and Albert* lay at the pier-head; and, opposite to her, were stationed the children of the Holyhead schools, whose voices at the moment the Queen arrived swelled out in full chorus the beautiful strains of the National Anthem. Her Majesty having embarked, the Royal yacht presently moved from the pier-head, and proceeded into the new harbour, surrounded by the steam-frigates forming the Royal squadron.

VISIT TO THE STONE QUARRY

On Sunday the Royal squadron lay quietly at anchor in the new harbour at Holyhead. In such a position, with the Skerries in sight on the one hand, and the South Stack lighthouse on the other, and a stiff westerly breeze over head, the Royal party could scarcely fail to have their attention strongly directed to the magnificent works which are being carried out under the direction of Mr. Rendel for the formation of Holyhead Harbour. Prince Albert, accompanied by the Prince of Wales and Prince Alfred, went to the end of the North Breakwater on Sunday morning, examining minutely the very simple, yet bold and effective manner in which it is extended, foot by foot, into the sea; and in the afternoon the Queen drove in the Hon. W. O. Stanley's carriage to the quarries, whence the immense mass of materials required in constructing it is obtained. The illustrious party must have been not a little impressed by what they saw, and it may not be inappropriate to state, as briefly as possible, the leading features of so remarkable and so truly national an undertaking. It was commenced in 1849, and is intended to secure a total area of 300 acres, for the purpose of a harbour, two-thirds of that space having a minimum depth of seven fathoms at low water. Accommodation will thus be provided for about 400 vessels of all classes, including ... war as the *Duke of Wellington*. ... Albert, the Prince of Wales, and Prince Alfred, were conducted over the harbour and north breakwater stages by Mr. Rendel (the engineer) and Mr. Rigby; and subsequently, on her Majesty's visit to the quarries with her Royal Highness Prince Albert and the Royal children, they were accompanied, as before, by Mr. Rendel and Mr. Rigby, when the mode of obtaining the large quantities of stone by mining operations, with the large charges of gunpowder, was explained to the Royal visitors. Several specimens of the mountain stone that were displaced in the large mines exploded the preceding day were selected by her Majesty and the Royal party; one of which, selected by

PRESENTATION OF THE ADDRESSES TO HER MAJESTY AT TAMWORTH.

the Queen, was forwarded by desire to the Royal yacht, with other specimens for the Prince of Wales and Prince Alfred. The Queen returned to the yacht in one of the railway trucks—a rough conveyance for sovereignty, certainly, but one which enabled her more thoroughly to comprehend how the works are carried on. During the afternoon the Royal tourists also visited the South Stack lighthouse; Prince Albert and the Prince of Wales descending to the rock on which it stands, and spending some time in its examination and in the survey of the fine coast scenery which it commands.

HOLYHEAD HARBOUR OF REFUGE.

The new Harbour of Holyhead having just been selected as the rendezvous for the Royal Squadron, and the port from which her Majesty should leave for Ireland; this being also the first occasion upon which her Majesty has visited Holyhead; and the fleet and the Royal yacht, *Victoria and Albert*, being moored for the first time in the new harbour; we have taken the present occasion of describing the locality and extensive works now in progress.

As the shortest and most direct route from London to Dublin, the passage viâ Holyhead has always engaged the attention of Government; and before the introduction of railways, they had caused to be formed one of the finest mail coach roads in the kingdom; this great work, executed by Telford, the renowned engineer, in the beginning of the present century, was considered his *chef d'œuvre*, with the graceful suspension-bridge spanning the Menai Straits, and the road terminating in Holyhead, at what is now called the Old Harbour—from whence sailing packets, carrying the mails, then took their departure direct for King-town (Dublin). The next road brought to bear upon this port, with the same object (that of shortening the distance as much as possible between the two capitals), was an iron one; and the Chester and Holyhead Railway Company, with a spirit and energy commensurate with the object to be attained, overcame all difficulties; and, with Mr. Peto as their indefatigable chairman, and Mr. Stephenson as their engineer, they constructed the now world-known Britannia Tubular Bridge, through which the mails and passengers from London rapidly pass (at a level of 100 feet above the tide;) then across the Island of Anglesea, to Holyhead Harbour; where the Company's and Mail Steam packets are waiting to receive them; and a sea-passage of four hours and ahalf (the 64 miles intervening) lands them in safety in Ireland.

The increasing importance of this station, together with its applicability, induced the Board of Admiralty (at the suggestion of their engineer, Mr James Meadows Rendel, President of the Institution of Civil Engineers) to select this spot for the formation of one of the national Harbours of Refuge; and this work is now being carried out there, with a speed and activity (aided by appliances of steam and machinery which the science of the present day has developed) in a manner positively surprising. The harbour is formed by a breakwater to the northward, about 5000 feet in length, leaving the shore in the form of a bent arm, extending outwards, from Soldier's Point and the Platters Buoy and another pier running out from the opposite shore, or Salt Island, eastward, a distance of 2000 feet; these two arms enclosing an area of 216 acres, three-quarters of a mile long, and with a depth of six or seven

NOOKS AND CORNERS OF OLD ENGLAND.

PREES CHURCH, VICARAGE, AND SCHOOLS.

In a picturesque district of Shropshire, on an outlying spur of Hss, fourteen and a half miles north of Shrewsbury, stands the old church of Prees, which, together with the village, is storied with associations of historic interest. Here Philip Henry (father to Matthew Henry, the celebrated commentator) was set apart for the ministry, Sept. 16, 1657. In the reign of Charles I. Dr. James Fleetwood, afterwards Bishop of Worcester, was Vicar here; and, in the reign of Queen Anne, Dr. Edward Chandler, afterwards Bishop of Lichfield, was Vicar. Rowland, first Lord Hill, was born in the hall, adjoining the Church, on September 16, 1772. In the vicarage-house are preserved two old portraits (supposed to be those of the first Lord Ferrers and his wife); the paintings were found in 1842, having been bricked up in the roof of the old vicarage. The Church, with the exception of the east end and the tower, appears to be of the fourteenth century. The tower was rebuilt in 1758. The present vicarage and schools were built in 1847.

PREES CHURCH, VICARAGE, AND SCHOOLS.

WRECK OF THE "LARRISTON" SCREW STEAMER.

(From a Correspondent.)

Herewith I send you an account of the shipwreck and total loss of the screw steamer "Larriston," in the China Seas, on the 2nd May last, at about eleven p.m., whilst on her passage from Shanghae to Hong-Kong. The scene of the catastrophe is the Island "Turn-about," situate near midway up the coast, and distant from Fuh-Chow-Foo about eighty miles. I also send you a Sketch of the wreck.

The *Larriston* left Shanghae on the 30th April, at six a.m. The morning was rainy, with thick fog, which rendered the navigation of the river extremely difficult, and considerable time elapsed in reaching Woosung. Here we remained two hours to take in cargo, and some treasure, when we again got under way for our final departure: to clear the anchorage we had to make a long turning, as the tide was running very strong outwards; and, in attempting this, as we rounded the bows of the American frigate *Plymouth*, lying at single anchor in the river, our patent steering apparatus jammed, and we came directly down upon her thwart-hawse. The *Plymouth* being so large and heavy a craft as compared to us, received little damage, whilst we were roughly handled; our maintopmast, mizenmast, and two davits, being carried away, together with one of our two boats partially stove in. At two p.m., the wreck being cleared away, we steamed out of the river, and got out to sea, without further difficulty, on the same evening. Up to the time of the vessel being lost there was nothing particular to note, except that the weather had been moderate, but foggy, which prevented the regular taking of sights. The *Larriston* had been steaming with only one blade to her screw, but with sails set, and before a fine north easterly breeze, she must have been going from ten to eleven knots at the time she went ashore. I had retired to bed about a quarter of an hour, when roused by the concussion, on the vessel striking the rocks, I hurried on my clothes and proceeded on deck, where an awful scene presented itself, the bow of the steamer appeared to be jammed on a small tidal rock, distant from a barren precipitous-looking island, from a quarter to half a mile. The night was dark and threatening, with a heavy and rising surf running; and, to crown all, the ship was reported as making water rapidly, having struck with such force, that the rocks had gone quite through her bottom, rendering all chances of saving her hopeless. The captain had reversed the engines, with the view of backing off; but she was fixed so hard and fast on her rocky bed, that the attempt was unsuccessful; and well it was so; had he succeeded, the vessel would have gone down in a few minutes in from six to ten fathoms, and the probability is every soul would have perished. On learning the dangerous position

WRECK OF "THE LARRISTON" SCREW STEAMER, OFF TURNABOUT ISLAND, IN THE CHINA SEAS.

we were in, a rush was made by the crew to take possession of the boats, which were obliged to be defended by the passengers and officers at the point of the cutlass. About half past eleven p.m. the life-boat was lowered (in doing which she was nearly swamped), and six of the eight passengers, together with three officers and a Lascar crew, made for the shore, where from two to three hours were spent before a landing could be effected. The boat, after getting the passengers on shore, at once proceeded on her return. Meanwhile the weather had got worse, and the sea had risen so high as to render all chance of gaining the wreck that night hopeless. The boat accordingly put back, leaving, of necessity, those remaining on board to their fate; and a miserable night they had, for about one a.m., the vessel sunk aft, obliging them to cling to the bowsprit and forecastle deck, with the sea making a clean breach over them. At daybreak, the weather continued very boisterous, and the sea running so heavy that no relief could be afforded. At about seven a.m. several attempts were made to reach the wreck, but without success; about which time the crew were thinking death so near, made for the shore, on pieces of the wreck, but the great bulk were carried outwards with the current, and perished. The Europeans remained by the steamer, and in this they were wise, for it was the only chance of saving their lives. Several further attempts were made to reach the wreck, but unsuccessfully. About half past eight a.m., however, the weather began to moderate, and continued to abate without interruption until ten a.m.; when, with the assistance of a small native boat, our poor woe-begone shipmates were relieved from the jaws of death. About one hour after finally leaving the wreck, her bows slipped off the rocks, and she totally disappeared.

Pulo Aor, the island on which we found we had been wrecked, is an uninhabited rock; but, fortunately, at this time six fishermen happened to be there from the large island Haitan, distant about seven miles off, on a fishing-run. Such food as they had we partook of, it consisted of dried sweet potato and salt fish, and although hard fare, we were most thankful for it: good water was found on the island. In the evening of the day of the rescue, we despatched across to the Haitan authorities for assistance a boat, which soon reached them safely: but on her passage over was boarded by a fishing-boat, and our messenger robbed of the little money he had in his possession. On the morning of the 4th, the inhabitants of Haitan, having ascertained that a vessel had been shipwrecked, crowded across in their boats in great numbers, to see what they could pick up, steal, or get hold of by fair or foul means—and cut-throat looking fellows they appeared to be. They almost all carried knives, or weapons of some sort, and I am persuaded that had our numbers not been so great (there were about seventy of us, and many of us armed with cutlasses) they would have attacked us.

At two p.m. of the same day (the 4th), our messenger, having been successful in his application to the authorities, arrived with a junk; and at three p.m. we embarked and left Pulo Haitan at about 8 p.m. We were [illegible] at the place where we found a small fishing-boat, in which we had left [illegible] with provisions. [illegible] the Captain had contracted the [illegible] tract, and he [illegible] Penang or both, but said he [illegible] he [illegible] he could make up the cash, we should have [illegible] bodily. The authorities, however, although they could give us no food, gave us lodging for the night, in a joss-house [illegible] place, swarming with fleas. The following day we arranged with the captain of the lorcha, for our conveyance to Fuh-Chow. He agreed to take us there, although considerably out of his way. We started the same day, and arrived on the morning of Saturday, the 7th of May. In the run up to Fuh-Chow, great danger was encountered, and we were nearly lost a second time. A gale from the north-east came on with thick weather, and the pilot, mistaking his course, ran over the dangerous sand banks at the entrance of the river Min, where, had we touched, the vessel would at once have gone to pieces, and every soul on board must inevitably have perished. At parting with the captain of the lorcha, a handsome present was presented to him, together with a letter of thanks from the passengers, and captain, and officers, for the great kindness received at his hands.

We remained at Fuh Chow till the morning of the 11th May, when we took leave in two small clipper-schooners for Kong-Kong; where, after touching at various places on our way down, we arrived safely on the evening of the 16th, after a pleasant run of eight days. [illegible] The *Larriston* having reached Hong-kong, great anxiety was felt for the [illegible] amount; and, when within some [illegible] of the harbour, a boat came alongside, which had just been despatched to look after us. [illegible] her, on ascertaining the news, at once returned to Hong Kong, taking the passengers with her

I cannot close this letter without bearing testimony to the kind treatment experienced after shipwreck from friends at Fuh-Chow, Amoy, and Hong-kong.

The *Larriston* had 101 souls on board on leaving Shai, one hundred and sixteen Europeans, about seventy Lascars and Coast Chinamen, of whom twenty-eight Lascars and seven Chinamen perished.

The above steamer was owned by Messrs. Jardine, Matheson, and Co., of China, (the principal of which firm was on board at the time of accident). She was quite a new boat, having but recently arrived out from England; of 260 tons register, or thereabouts; and built of wood. She is said to have been insured, together with the opium and treasure; but the passengers' luggage, &c., of which there was a large quantity on board, was uninsured.

IMPORTANT TO EMIGRANTS.—FIRE AND COOKING ON WATER.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

Sir,—Several of your readers have expressed their wish, that I should inform the public how to manage the very important experiment of raising gas from, and cooking food on, the surface of the water, wherein it is so very abundantly contained; similar to the experiment on the water at the late Festival at Hartwell, near Aylesbury, where a large fish (tench), weighing 2½ lb., was caught by the persons and at the suggestion of Dr. Lee, and was fried on the water, in a few minutes, by the sub-carburetted hydrogen gas collected out of the river. Therefore, with your permission, and space for a very few lines in your paper, I will endeavour so to do

First, then, this ready-made gas exists in prodigious quantities in *all* muddy waters all over the globe, and any person throwing a walking-stick into the mud at the bottom of any such water, will *immediately* see the gas-bubbles rise in volumes, which the untutored think is wind. These gas-bubbles then are very inflammable. To collect them for use is the next consideration. A tub, turned bottom upwards in the water, makes a good gas-meter, but a hole bored through the bottom to let out the wind is requisite, as also to put in a peg or a tap. By pressing on the tub the gas rises rapidly under the tub; the hole being stopped, the gas accumulates, fills the tub, and lifts it up; when the tap being turned, or the peg taken out, and a light applied, the gas burns till it all goes. The gas, which accumulates and rises from rivers, cesspools, sewers, &c., daily, may be collected and burned *ad libitum*, for domestic or sanitary purposes. It would also be prevented from escaping into the air, and thus poisoning all those who inhale its contact. The cholera and other epidemics and malaria might be modified. Yours, &c.,

J. COPCUTT, Analyst.

Aylesbury, Aug. 1st.

THE NEW LAW ON THE SMOKE NUISANCE.—There are eight sections in the new law, and it enacts that from and after the 1st August next, furnaces in the metropolis shall consume their own smoke under penalties described. From the same day steam-vessels on the Thames above London-bridge are to consume their own smoke under penalties to be recovered in a summary manner before a magistrate. The words "consume or burn the smoke" are not to be held to all mean the same as "consume or burn all the smoke," and justices may remit the penalties if of opinion that such person has altered his furnace as to consume as far as possible all the smoke arising. Constables may be empowered to enter and inspect furnaces and steam-engines. No information is to be laid under this act to recover any penalty, except by the authority of the Secretary of State, or the commissioners of the metropolitan or City of London police.

OMNIBUS FARES.—The proprietors of these conveyances have long had it in contemplation to adopt some other mode of payment than the present. A plan now proposed is to have a box placed outside the door, and into which box every passenger will be requested to pre pay his fare before getting into or upon the omnibus. Another plan is to have tickets, to be purchased of the conductor or at the office of the proprietors (to vitiable for any omnibus belonging to such proprietors), with directions printed on each ticket—so that the holder may know the distance he may ride. The latter plan is recommended to insure the safety of the fare, and monthly tickets; and, according to the number purchased, to give the purchaser an extra number.—*Sun.*

HULL BRIBERY COMMISSION.—The number of certificates issued by direction of the Commissioners were, on Monday last, about 1200. Tuesday 150, Wednesday 250, Thursday 200 making in all about 700. These certificates exempt the parties who have been witnesses before the commission from any penal consequences which might otherwise have resulted from the disclosures they have made

LIBERALITY.—The parish church of Drayton, Warwickshire, has been restored at an expense of £2000. The remains of Sir Isaac Sir R. Peel's family were interred in the vault beneath, on the application of a subscription, and, Misentlement, instead of putting my name upon the list as a subscriber, if you will permit me to see your plans carried out at my own cost, I shall be most happy to do so."

THE LEEDS WELLINGTON MEMORIAL.—It has been decided that the memorial in Leeds of the "Hero of Waterloo" shall be a colossal figure of the departed Duke. At a meeting of the committee of the subscribers held at the Leeds Court-house, Mr. W. Beckett, M.P., in the chair, it was resolved the commission for making the statue should be given to Baron Marochetti. The cost will be about 1800 guineas.

THE BRIDGEWATER CASE.

THE Bridgewater Case, important in itself on account of the large amount of property at issue, became still more important from the principles involved in its decision. The law, the learning, and the ability of the country, in their highest and most authoritative places, were evoked for its consideration; and never did it appear more distinctly that uniformity of opinion was not a certain result of such eminent endowments. On the contrary, the Bar differed, the Bench differed, and the supreme tribunal of the Legislature differed. Yet out of this nettle contrariety, it may be hoped that we have plucked a flower of legal safety, which will mark an epoch in the judicature of the country. Seven questions were propounded by the Lords, but the great problem resolved itself into one—viz., whether folly, elaborated into technicality; or common sense and justice, should carry off an estate of seventy or eighty thousand pounds a year; or, in other words, should an individual, crazed by wealth and ambition, possess the power—after his death—to violate natural rights, and outrage the common weal and constitutional principles of England?

In delivering judgment, Lord Lyndhurst embodied these points in a very impressive address; and the other Peers agreeing with him—Lords Brougham, Truro, and St. Leonard's—also delivered themselves with admirable power; whilst the Lord Chancellor could only regret that his noble and learned associates felt compelled to reverse his judgment, and pronounce against the validity of this extraordinary and indecorous will. He was indeed sustained by the opinions of no fewer than nine judges; whilst on the other side were only the Lord Chief Baron and his coadjutor Baron Platt.

As a Blue-book has since appeared, with all the data pro and con, we have been curious to look at the opinion of a Judge which seems to have produced so decided an effect upon the final judgment of the Peers; and we have read Sir Frederick Pollock's statement with so much interest, and found it so entirely to agree with common sense, justice, and equity, that we think we cannot do better than submit some of its most satisfactory arguments for the perusal of our readers. In doing this, we will not trail them into the legal labyrinth as to whether Provisos were *conditions precedent* or *conditions subsequent*, but endeavour as clearly as we can, to afford an adequate understanding of the whole.

In proceeding to ascertain if all, or any, or which of the provisoes were void, his Lordship states:—

The only provisoes which have been made the subject of any doubt or discussion, are those which relate to the acquisition of the estate to certain [illegible] and [illegible] by the first and last taker of Duke or Marquis of Bridgewater by Lord Chief Baron Henry Hall, and the question is, whether I am at liberty to attend to the owner of an estate I create, by deed or by will, one or more conditional limitations, or conditional powers, which, should a question [illegible] *Is he put pressure to return, a Peerage as a just matter of right, with a particular title, and with prescribed limitations?*

This is the first attempt to impose such a condition since the Peerage has existed, and it will be the last; the only similar case—one involving principles common to both—being that of the Earl of Kingston *v.* Pierrepoint, in which the testator gave £10,000 to be employed in procuring a dukedom, and the gift was held void. Holding that the same result should follow in the present case, Sir Frederick Pollock went on most convincingly to put the circumstances before the court and the country.

In considering this question, I think nothing turns upon the use of the word "acquired." I think no importance can be attached, or special meaning be ascribed to *that word*; it is not worse than the word *obtain*, but it is not better than *procure*, which was considered in the case just mentioned. I think it means, if he shall die without *becoming Duke or Marquis of Bridgewater*; and the *question is*, is this a lawful condition to annex to an estate? It is perfectly clear and certain (as a principle of law) that if this condition be against the public good, it is void. It is distinctly laid down in Shepherd's "Touchstone," Chapter Six, where, among other conditions which are contrary "*to law*," or "*against the liberty of the law*," a condition is also pronounced to be *void* which is "*against the publique good*;" and the learned writer must have meant something "*other than*," and *different* from "*contrary to law*." So in Co. Lyt., 206 b., in treating of conditions, which are void as "*against law*" (though they *concern* not anything that is MALUM IN SE), he mentions those that are *against some maxim or rule of Law* and those which are "*repugnant* TO THE ESTATE," which I take to be, in effect, the same as the expression in Shepherd's "Touchstone" of "*against the public good*."

I think, therefore, I am bound to lay down this principle *as a clear and undoubted maxim of law*, that if the *condition* be "AGAINST THE PUBLIC GOOD" (the *expression in Shepherd's Touchstone*), if it be "repugnant to the State" (the expression in Coke), it is void.

This narrows the inquiry to this point: "Is it against the public good that such a condition should be *created* and enforced?" And this is what your Lordships have to decide.

Interesting cases of the times o. the wars of York and Lancaster, the civil wars of the Stuarts, the Commonwealth, and the Restoration, down to the present day, are adduced, in order to demonstrate that no such absurd and impudent pretension could have been tolerated for a moment; and the greatest authorities are brought to bear on the interpretation now given in favour of a sound induction, as opposed to an unjustifiable attempt to set any dead man up in defiance of reason, to be, by a side-wind, the posthumous creator of peerages, and the violator of the common law and constitution of the realm. Lord Herdwick, Justice Holroyd, Chief Justice Best, Lord Ellenborough, Lord Eldon, and others, are all shown to have held the only doctrine which can be deemed tenable, and is further thus illustrated in a manner which, with the recent decision, must, we think, determine all such issues now and for ever.

I think I am not *permitted* merely to follow the *particular* decisions of those who have had the courage to decide before me, but in a new and unprecedented case *to be afraid of imitating their example*. I think I am *bound to look for the principles of former decisions, and not to shrink from applying them, with firmness and caution*, to any new and extraordinary case that may arise.

The conclusions to which I have arrived, from the decided cases and the principles they involve, are that *all matters relating to the* PUBLIC *welfare* - all acts of the Legislature or the Executive—must be decided and determined upon their own merits only; and that it is against the public interest (and therefore not lawful) for anyone officiously, *wantonly, and capriciously, without any motive but his own will*, to create any pecuniary interest or other bias of any sort in the decision on a matter of a *public nature, and which touches the* PUBLIC *welfare*; the party creating that interest having no special and particular individual interests in the subject matter with which he intermeddles.

And the gist of the whole is perfectly, though, for legal style and fashion, concisely, wound up in the following passage:—

I am of opinion that according to the law of England the owner of property cannot make *any* power the subject of a condition to operate after the death *which he could not have made the subject of a contract or a wager* during his life, I think no man can leave his property clogged and conditioned by his own personal views *of public affairs*, or by his *posthumous ambition* (if I may so call it); he cannot make his political opinions run (like a covenant) *with his land*: he may leave it to whom he pleases, but it must be *unfettered by any condition bearing upon matters connected with the public welfare*, as to which he must leave those who come after him to decide, and to *act upon their own view of the merits of any public question whatsoever by any condition which may create a motive or exercise an influence that would disturb a judgment that ought to be founded* on the public good ALONE.

My Lords, I am not sure that some limit may not be discovered to the fanciful vagaries and capricious conditions with which property may be vexatiously fettered if *touch not the public interest*. But the moment conditions (in this case a series of conditions) are introduced which in principle have a strong tendency opposed to the public welfare, the common law *favours not conditions, but deems them odious, is strong enough to act* and repress the mischief, and in a *perfectly new case* (a case almost impressionis) I think the Judges are bound to *hold fast to principles of the common law*, to remember the maxim, *Salus reipublicæ suprema lex*, and if the condition be really *in principle* against the public good, to *pronounce it in their judgment void*.

To so incontrovertible and luminous a statement we would not venture to add our opinion, which would only be to repeat in other language, what is already so forcibly expressed. But we may congratulate the public on the overthrow of this disgraceful Will, and the establishment of a sound and incontrovertible precedent, in lieu of the jargon and confusion which has prevailed till the year 1853. With regard to the defunct Earl, we can hardly bring ourselves to leave the topic without animadverting on the vain, ambitious spirit which, contemplating wealth as the be all and have all here, betrayed him into the foolish fancy that he could employ it beyond the grave to purchase undeserved or unearned honour. His death was as remarkable as his life. He learned, at its close, that money could not buy every thing. He gave a grand battu on completing a splendid edifice, destined for his future abode, and in attending the Duke of York, in the frosty weather, caught a cold, and was soon in a state to be warned by the physicians that he could not recover. So wealthy, having just finished so glorious a palace, he could not believe the fatal *mené, mené, tekel, upharsin*; and, in paroxysms of disappointment, exclaimed to his physicians: "No! no, it cannot be! I will give you ten—twenty—fifty—a hundred thousand pounds, only save and prolong my life!"

Alas for the vanity of human wishes! He departed within a few hours. His heir, the fine boy who represents Lord Alford, will be both higher and happier than if he had been left in the toils of peerage-hunting by an ambitious and self-sufficient Croesus.

THE DIGGINGS, AND LIFE IN AUSTRALIA.

(Extract from a private letter.)

MELBOURNE, 8th May, 1853.

So here we are at last really in Australia. I can hardly at times believe it, it seems so like a dream to me; but I have but to turn my eyes round to be convinced of the reality. I shall now describe our arrival in the "good land;" and, in so doing, I must look back to the 7th April, the day we anchored in the bay. In a short time after we cast anchor, the "port doctor" visited us; and as all were well on board (we were fortunate in that respect), he soon granted his departure, leaving us at perfect liberty to go ashore as soon as we liked; several gladly availed themselves of the privilege, and went in boats. I and mine could not, however, leave the ship for two days, as the greater part of our luggage was in the hold When the luggage was got out, we went on shore in the river-steamer late of a dark, rainy evening. We could not procure lodgings, and thus were we thrown on the wharf to sojourn, like pilgrims, where to turn to seek shelter from the night, which was fast closing around us, or from the rain which was beginning to fall, as it can fall only here, in torrents! shall not soon forget our first night in Australia; just imagine yourself wandering through a strange, over-crowded town, like this, and on such a night too, without a friendly hand to direct you, and everywhere you turned receiving for an answer, "No room here, sir!" After a long search we got lodgings for one night. I must here mention that we were given to understand by friends that lodgings were provided for us; but when coming up in the river steamer, although inquiring where we could not be accommodated there. I mention the above to show the difficulty one has in obtaining lodgings on arriving in the city.

The following morning we removed to our present abode, which I shall endeavour to describe. Fancy a big barn built of rough boards, with a partition along the middle, and several less ones; thus dividing the whole into compartments of about twelve feet square; the partitions only go the height of the sides, so that the top of the house inside is one large open space There is a door to each compartment on the upper part of which is a window, so they serve as both doors and windows. The doors open to the front and rear, so that the whole has the appearance of two ranges of houses. Each family has one of these apartments allotted to it; you would like to take a view of the interior of ours, look, in imagination, at those rough red weather-boarded walls, through the chinks of which you can see the day-light, and which admit the cold draughts also! I assure you it is rather cold, and a sharp wind, too, sometimes, for you know it is winter now here. Along the two side walls, as you enter, you see a number of bedsteads, contrived a "treble debt to pay;" for besides serving as bedsteads, on which we spread mattresses by night, they are both seats and clothes-chests by day. In the centre of the floor stands the table, on which I now write; it is formed of two packing-cases, one upon the other, covered with an oil-cloth; our seats are small water-kegs, with boards across the top, on which we place a pillow. Lower down, in the corners of the extreme right, you see some sundry barrels, buckets, wash-tubs, and a family of pots, kettles, and pans. Across the middle of the room there is a rope, on which we can hang a sheet which divides a part from the rest, if you can imagine so fanciful a thing, you will have a right picture of the domicile of your humble scribe: and for this magnificent residence, I have paid 30s. per week, or about £80 per annum. I do not intend stopping here long, as I am about taking a cottage some distance from this city.

You see what people have to endure when they first come out here; but I do not think from my first letter that you will have said that I am in the least sorry for coming out; not at all, if I were at home I'd come again; for I do think this is a country where a man can (not to speak of gold-digging) obtain an independence; but it requires energy, and above all, temperance (a rather scarce commodity here at present), all of which if a man possess, his success is all but certain. But it is, I think, quite useless for any one to come here in the hope of getting what they term a situation This place is at present crowded with unfortunate young lads, who are unfit for manual labour, and can't get anything else to do. I chanced myself to get a situation with an attorney (for this I am in a measure indebted to J——), at £3 per week; but I shan't keep it long, for when the winter months have gone over I have very serious intentions of turning carpenter, as I think I could do the work; that is generally done here by them, and their wages are from £1 to £1 10s. per day.

Mr—— travelled through all the drapery shops in Melbourne, looking for a situation, but to no purpose. He is now working a short distance in the country, at 10s. per day, has the use of a tent to sleep in, and can support himself for 2s. per day. He speaks of trying his hand at the diggings in the summer.

Females who "can make themselves generally useful" can do very well—dressmakers and milliners in particular. —— has begun the former business. I have seen her get a pound for making a silk dress—that's the usual price—and ten shillings for a common calico one. It is supremely ridiculous the notions one gets of living out with them: they think they have nothing to do but be ladies, forsooth; but they soon find their mistake. We had a lot of ladies on board our ship that were "good for neither King nor country;" and yet, when they did not find the coaches they expected to be waiting for them, and that there was not such a number of fortunate gold-diggers to be found wanting *incumbrances*, they began at once to try our ground in the country. Many of them have to change their rings, &c., for wash-tubs

One lady—a clergyman's daughter—stated, about a week after her arrival, that she was very much disappointed that the place for ladies getting married she expected; and she would write to her lady-friends at home to inform them so.

We are all in good health, which we have enjoyed since our arrival here.

SALE OF EARL DUDLEY'S STOCK.—The conclusion of this sale proved as remarkable as the commencement, which we noticed in our last Number. The cattle, 62 head, realised £916 guineas—an average of £14 2 per head. The pigs—38 animals, with two litters of young pigs—fetched £68 guineas. One boar fetched £7 7s. There were 500 Southdown sheep on the last day that realised exceedingly high prices: lot 19, five six tooth ewes brought £3 a head; and lot 12, ten of the same description, fetched £3 10s per head; Lord Lisburn purchased a four-tooth ram for £30, and another for £20. The ewes, wethers, and lambs realised a total of £2185 18s., and the rams, 18 in number, brought £337. The sale of Cochin-China fowls attracted great attention: lot 40, "Sir Robert," bought at Mr. Pott's sale for 40 guineas, and the son of a bird sold recently for £100, fetched £28 7s.; this was the highest price obtained. The sale realised £12,223 7s. Among the purchasers were several from New York, though the bulk of the sales were to English breeders

Literature.

By ALBERT SMITH. Bogue

This volume is entitled to come under the designation of the "romance of reality," for the story told in it is, in fact, the historical narrative of Mont Blanc and the Vale of Chamouni—its early tenants, visitants, and associations—its present celebrity; and the first acquaintance of the author with the scene of his latest exploit. It is with rare tact that Mr. Albert Smith has printed the diary of his experimental visit in the year 1838. Here we may learn what genuine *bonhommie* and excellent animal spirits may do for a man; how they may prompt him to enter [illegible] progress—and possible ruin to make the [illegible] instructive is this same diary—partly culpable the contrast between the two active and observant youths in the *banquette*, who are the heroes of the journal, and the two English travellers in the *coupé* of the diligence, who saw nothing—either blinding themselves to the prospect, by excluding the sun with the blinds of the vehicle, or by sleeping; meanwhile, for thus learning nothing, paying four times as much as those who learned everything, and faring otherwise no better—often worse—for the extra outlay. Our adventurers, Mr. Smith and his brother (to whom the book is dedicated), were full of health and hope, and strong desire, earnest of purpose and anxious for sympathy, which from all and sundry they received, [illegible] were [illegible] no interest [illegible] cared for them. [illegible] have proved with the growth of our author, and to [illegible] almost every autumn, until what was the delight of his leisure has proved the foundation of his fortunes. The genial enjoyment of opportunities displayed by him on all occasions amounts almost to genius; and we willingly ascribe his success to the possession of a happy nature, and an elasticity of disposition which could convert even disappointment into a means of triumph. The manner in which Mr. Smith himself moralizes on his course of travel is particularly edifying. Take an example:—

> Pedestrians must not expect to find everything *couleur de rose*. Trivial annoyances of every description will be constantly starting up, but if temper is lost, they become ten times worse: a firm resolve should be taken to laugh at everything, with the certainty that, however vexatious the occurrence may be at the time, it will only serve to talk about the more merrily when you get home again. After I was robbed by the brigands in 1840—with an account of which I made my début in the literary world—I was left all the next day—a wet Sunday at Ferney—in my clothes, or travelling nick-nacks and minor comforts, in a miserable hotel of a gloomy city, with no notion of how I should get home again. I have found myself in Venice without a franc, from having there before the post *restante* letters I expected. I have been kept back by passports; shut up all night in a dirty *corps de garde*; and even been "invited" by the Procureur du Roi to attend at the Palais de Justice, and justify certain heedless acts and [illegible] committed in my student days, but when all these troubles were [illegible] past, I would not but have had them happen for any consideration. In the reminiscences of them I have found a great proportion of the pleasures of travelling.

This moral for tourists is capable of beneficial extension and application to the whole course of life. We have already stated that the book before us contains the early history of Chamouni, and the tale of the brave adventurers on Mont Blanc. The following description of the manner in which the celebrated De Saussure passed his first night in a cabin, temporarily erected at the foot of the Aiguille du Goûté is charmingly picturesque. It is in the traveler's own words:—

> The stars, brilliant indeed, but unscintillating, cast a pale light over the summits of the mountain peaks, sufficient to define their size and outlines. The repose and dead silence which reigned in this immeasurable space, incited by the imagination, inspired me almost with terror. It appeared as though I was left living alone in the [illegible] and that I saw its corpse at my feet. [illegible] I either slept [illegible] entirely, or my thoughts were so bright and peaceful that I was [illegible] slumber. When the parasol was not before the door, I [illegible] my bed, the snow, the ice, and the rocks [illegible] distance to [illegible] the hollows [illegible] enveloped in peaks and wrappers, and [illegible] fed with the wood they had carried, [illegible]

The next chapter opens with a solemn sentence:—

> We are now [illegible] men, in all human probability, the feet of man was placed for the first time, upon the crown of Mont Blanc.

This honour was reserved for Jacques Balmat—a poor discarded man, who achieved the feat [illegible] night amidst the wintry solitude, at an elevation of [illegible] thousand feet above the level of the sea, without food.

At last morning broke. Far away in the east Balmat saw its earliest lights rising behind the giants of the Bernese Oberland who guarded the horizon, and one after another the Jungfrau, Eiger, and the Finsteraarhorn stood out bright and [illegible] their pure cold air. The adventurers had cleared together; the morning was calm and mild; comparatively so even at that elevation; and as Balmat painfully endeavoured to move his almost paralysed limbs into action, he found that his feet had lost all sensation—they were frostbitten. He could, however, move them, and without pain. The night frost had hardened the snow. Presently the sunlight came down the top of Mont Blanc to the Rocher du Goûté, and then, still keeping up his courage through everything, this brave fellow determined to devote the day to surveying the mountain, and seeing if it was practicable for the summit presented itself on the vast and hitherto untrodden deserts of snow. His courage was rewarded: he found that if the crevices that border the Grand Plateau were once crossed, the path to the top of Mont Blanc was clear and unobstructed before him, and he then traced out the route, which was, with [illegible] tion, been followed ever since, and which appears to be, beyond doubt, the only practicable one.

Of De Saussure's visit in 17-8-7 and Dr. Hamel's fatal attempt in 1788, we refer for full particulars to this interesting volume. The account of Mr Smith's own successful adventures is printed nearly in the terms of his lecture and the essay recently published. It was needed, however, to make the narrative complete, and is written with much cleverness and magic ease of style that it will be read with pleasure by all. The entire volume deserves unqualified praise, and will doubtless become the handbook of the route.

YANKEE HUMOUR, AND UNCLE SAM'S FUN. Introduction by WM. JERDAN. London: Ingram, Cooke, and Co.

A Yankee joke is, above all things, a vigorous joke, not "mild." Perhaps the predominant characteristics of the Anglo-American race (and when we say Anglo-American, let not our Irish kinsfolk misapprehend us; we know well the claims of the Milesian part of the Yankee blood has gone to the great national amalgamation across the Atlantic; and we use the term merely for want of a better)—perhaps, we say, the predominant characteristics of that mighty race is the uniform diffusion amongst them of energy and ambition. History is full of instances of individuals whose rule of life seems to have been not to do anything which they would not do with their whole might—("what thou dost, do with thy will"); and in all illustrious communities a wide-spread touch of this quality is to be traced; but hardly ever has there been a people who were, collectively, distinguished by it to so remarkable an extent as the Americans. And if, in the humour of every nation, an attentive observer can discern the general, the pervading qualities under the rough proportions and loose fitting of mirth and caricature, any fool may trace them in that of the citizens of the Union. It is hardly possible to be in doubt for a moment respecting the paternity of a specimen of this department of Transatlantic drollery. "That's an American joke!" never yet occasioned among people who know the world any argument about the fact. It has become a needless commentary—neither eliciting nor requiring rejoinder, affording no room for it, and possessing now almost a stupid effect. In the case of many other great nations it is much more difficult, a much nicer exploit of criticism, to distinguish and appropriate the separate features of the humour. We do not say the hereditary features; the word hereditary would lead to far too large a series of curious facts of the most fundamental psychology, that the things at which a people laughs in one age are not the things at which the same people laughs in another. A more curious thing still is, that a part of the wit of one age may be almost unintelligible and quite unenjoyable to the people of a subsequent time and may come again into vogue at a still later date. This, we say, is much more curious; for there is an enormous difference between wit and humour, and wit is in its nature the more durable and independent. Wit is akin to logic, humour to absurdity. There may be humour, and there cannot be wit, in a costume, in an expression of countenance, in an infirmity, in a passion, in a taste, in an encounter, in a group—in fright, avarice, or love—in a coincidence, a disappointment, in the actual conjunctures and real circumstances of life, and in that felicitous conception and supposition of them, which are the basis of all imitative art. Wit is altogether different, being a sort of rapid and unexpected ratiocination, establishing a dazzling analogy between things which seemed utterly apart, or cleaving a wide chasm of separation between things that were regarded as all but identical. Wit works from within, and humour from without; or, which is the same dogma, reflection is one of the things most necessary to wit, and observation one of the things most necessary to humour. Place and time, therefore, are more influential upon the latter than upon the former. Wit imparts a strictly intellectual pleasure; and humour, a sort of sociable enjoyment. Humour is not successful, unless it excites laughter; but people seldom or never laugh at wit, when it is thoroughly good; on the contrary, they meditate upon it, and are as much delighted, as with some small discovery. Too much wit may spoil a comedy; no comedy can have too much humour, few comedies have enough. In society a very witty person is more dreaded, and a very humorous one more popular; and, finally, the faculty of the latter is one qualification of art, while that of the former bears an illegitimate relation to the scientific and investigating spirit. In the celebrated scene of Columbus setting the egg on end, both wit and humour are brought accidentally together. In the thought and in the inference suggested by the act of the great discoverer, there is wit, and ready wit; but in the group, countenances, and attitudes of the company present, there is so much of humorous matter, that it has afforded a subject for a delightful picture, which everybody appreciates at a glance.

> We need not say much about the distinctive complexion of the humour of different nations. The Germans deserve no notice; they seem hardly to know what humour is in their literature. How inferior, in this respect, is their vaunted Goethe (whose attempts at drollery are really painful) to Shakspeare! And Shakspeare "sitting," because "where the other dares not soar," in all the sublimer qualities and ruling with an easy sceptre the highest empyrean of poetry [illegible] a different reason we may lightly pass over the rich and inexhaustible humour of the United Kingdom: the people to whose peculiarities our attention is now directed are descended from them; they are literally our national kinsfolk, and deliver their sentiments, jest and earnest, in our own noble language. One observation, however, which Mr. Jerdan, the editor of this collection, has made, we think, so very striking, that we will quote it before going further:—"It is worthy of remark," says Mr. Jerdan, "that the English, Irish, and Scottish humour have ever been, and are, very dissimilar; and it is no less curious that, whilst there is scarcely an instance of an Irish joke bordering on obscenity, England has abounded in such freedoms; and Scotland, the most religiously puritanical country of the three, has been overrun and polluted with jests and anecdotes more than equivocal in point, and depraving in morals. It is a remarkable psychological fact," adds this editor, "that, during the sternest times of the Covenant, the licentiousness was most prevalent."

> The French jest in character, like all other nations, except the Germans, who (in literature) hardly jest at all, and who appear, indeed, to want half of that which makes the human character itself, and which one of the sages of antiquity pronounced to be as good a distinction as the faculty of speech between men and the lower animals. Subtlety, keenness, much refinement of thought, and not a little grossness, abound with great variety of invention and great closeness of observation, in the humour and the wit of France. The French are as sensitive to satire as the Spaniards; but recover sooner from the wound, and are fonder with reprisals. They are also more unscrupulous and daring in the objects of their sarcasm. The Spaniards select not so easily for ridicule government, or religion. Satire has effected several political and moral revolutions in France; in Spain, one great social revolution. Government cannot condescend to the reigned by which it is assailed in the one country; in the other it is not menaced by those arms. Cervantes might have encountered a formidable reply among the French; and, probably, chivalry, in its turn, could have been witty. But, on the opposite hand, had Cervantes been a Frenchman, and lampooned the Don Quixotes instead of knights errant, the grave and proud temperament of the Spaniards would have possibly suggested no analogous retaliation; nothing would have appeared like the "Lettres de Quelques Juifs à M. de Voltaire." When the Spaniards are brought to jest at anything, they become ashamed of it, and quit it; when the French are brought to laugh at anything, they become ashamed of it, and hide it.

> The Yankee order of joking bears out our remark, that you can in general detect national character in these sallies. Indeed, it would be wonderful if you could not. It would be strange if the kind of humour which most pleased the majority bore no trace of the pervading temperament in any given society, when we know that even the habits of the individuals who constitute that society are hardly ever otherwise than characteristic. You meet and easily recognise the timid joker, the sly joker, the arch joker, the coarse joker, the refined and cultivated wit, and an almost endless number of nearly the distinguishable varieties. We have observed that the citizens of the Union are full of energy and ambition. Decidedly there is abundance of energy and of ambition in their jests. We shall be able, we think, to convince the reader of this fact. First, let us see what we think of the merits of "Uncle Sam's" fun, *quoad* fun. We have no hesitation in acknowledging our keen relish for it; we think it among the most racy and thoroughly diverting and exhilarating sorts of humour that ever obtained vogue, or prevailed among men. It is common to denounce it as extravagant. We praise it, and like it as extravagant. When extravagance is of the essence of a thing which we enjoy, let us not pretend that we would have the extravagance removed. This is either affectation or confusion of mind. It is saying let us have the strongest-toned bell we can, provided it never be rung loud. Almost all sorts of humour (which, as we have fully shown, is quite a different thing from wit) extravagate of sheer necessity, and wander beyond the bounds that belong to sober earnest; but the humour of our strenuous, strong-pulsed friends of the United States is pre-eminently a wild and vagrant humour, in its very idiosyncracy. When a literal understanding is not to be put on a saying, the less probable and the less possible a literal understanding is, the more perfect in its kind is that saying.

> As to the good sayings which are frequent in the Union, they are the good sayings of a people so remarkably distinguished by unparalleled impossibilities by dint of courage and energy of the robustest sort, that impossibility (if the reader will take notice of this curious circumstance) is the grand constituent element of their drollery. The French humour is full of ingenuity, acuteness, finish; but the American rushes right forward, whatever be in the way. "That lady's voice is so high, that you have to get up a ladder to hear it." The immediacy of these ideas, and the glorious impossibility of the ladder-climbing exploit, are the beauty of the description. They have, in truth, an inherent and genuine force, strictly analogous to that of irony, and yet operating in an almost contrary. In rhetoric and poetry the close of the irony to seeming earnest, the keener and deadlier the strength of it. But like wild, and mad, and bacchanal-like irony of broad fun runs as far out from objective possibility as it can; and is best when farthest. We might give any number of examples of this primary difference between American humour and the humour of the rest of the world (impossibility is not only present in the laughable idea, but constitutes the essence of that which makes it laughable, and has most certainly been expressly searched for to perform that office. Such is the real secret of the oddity of all such sayings as that "a man is so shrewd in his very grins, and cautious in his bravadoes. He takes care to provide beforehand that, if he is to fall, he shall himself be among the laughers. A Frenchman, with a theatrical wave of the hand, and in a sonorous voice, cries *en avant!* is said to be driven headlong under such circumstances. Not so with the Yankee, who says, through his nose, with a shrewd look, "go ahead." Yet the boast is the same, and the vanity not less rampant. Simply, he treats extraordinary things as if they were common to him, and if he performs anything heroic he seems to have done so because he could not help it, and for no other reason.

> One of the points which render this collection of some of the most astounding jests that ever "dispersed" and enlivened the conversation of a great nation, so delightful—one of the points, we say, most agreeable about the book is the felicitous execution of the engravings. There is no doubt at all about the country to which those figures and those countenances appertain. Let all who want to be amused, read the work; and all who want to be instructed, study it.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

The Admiralty have determined to make the Orkney [illegible] ment of [illegible] the North-American mail contract steam packets.

A steamer is about to be sent out to ply on one [illegible] on the west coast of Africa, as a feeder to the English mail packet.

The Earl of Craven has been appointed Lord-Lieutenant of the county of Warwick; and Lord Lovat has been appointed Lord-Lieutenant and Sheriff Principal of Inverness-shire.

A new road is about to be formed [illegible] cut from the Lewisham station of the North Kent line of railway to Blackheath, for the purpose of avoiding the hill in the direction of the Lewisham Grammar-school.

The House of Commons sat 160 days in the late session. The number of hours was 1134, and 5 minutes. It sat 152½ hours after midnight. The numbers of entries in the votes were 11.37. The average sitting was 7 hours 27 minutes and 37 seconds.

The Vienna journals announce the death, at Ischl, by [illegible] of the celebrated tragedian M. C. Devrient, husband of Madame Devrient, the well known singer. He was in his fifty-eighth year.

The amount received towards the Wellington testimonial reaches above £8,000. The sum remitted from India is £28, 00, making the present subscription list to amount to more than £103,000.

In July, 3372 pipes of wine of the first, 157 of the second quality, and two pipes of brandy, were exported from Oporto; and from January to June inclusive, 30,881 pipes were exported. The disease in the vines is said to be on the decline.

The Duke of Abell and Lord Panmure have been honoured with the Orders of the Thistle, vacant by the deaths of Lords Warwick and Saltoun.

The Choral Society of Cologne has presented to the fund for finishing the cathedral 18,000 f., arising from the concert which it lately gave in London. An invitation has been sent to the society to proceed to New York, and give concerts there.

A notification has been issued in Ireland that engineers and valuators are to be despatched shortly to the country, for the purpose of a new valuation to form the basis [illegible] valuation, including the impost upon incomes, &c.

The Right Hon. the Chancellor of the Exchequer is at present at Glenquoich Lodge, Inverness-shire, on a visit to the Right Hon Edward Ellice. Mr. Gladstone is expected to visit Ross-shire.

Madame Ida Pfeiffer had arrived at Batavia from Menada, and left Batavia on the 3rd of July for California in an American ship.

The Duke of Richmond's hospitable seat, Gordon Castle, is full of distinguished visitants at the season. His Grace and party, on the moors of Glenbiddes and Blackwater, during one week, bagged 1816 brace of grouse, and 105 hares.

Letters received from Porto Cabello of July 26, confirm the previous accounts of the earthquake at Caracas. They state that the town was nearly destroyed, and that 200 persons perished.

At a sale by Messrs. Sotheby and Wilkinson, last week, hair from the head and beard of Charles I. sold for £5 2s. 6d.; a lock of Napoleon's hair for 15s.; and a drawing by Napoleon, when a student, representing an attack of artillery, for £6 12s.

An establishment has lately been created at Vienna for the proper training of females who intend to go into service. Besides other matters, they are taught reading, writing, arithmetic, and the getting up of fine linen. The establishment is supported by voluntary contributions.

Mr. Edmund Hornby has been appointed Commissioner on the part of Great Britain, and Mr. Samuel G. Upham, Commissioner on the part of the United States of America, under the recent convention for settling outstanding claims.

Three young Abyssinians, belonging to some of the best families of Adel, are now in Paris. They are destined for the priesthood, and have come to France to study theology.

Pope Pius IX. has sent the Duke de Brabant a fragment of the wood of the manger which formed the cradle of our Saviour. When Margonella presented this precious relic, his Royal Highness was much affected.—*Journal de Bruxelles.*

The personal property of the late Earl of Wemyss, to which the present Earl succeeded, is sworn to be under the value of £200,000.

A splendid barque of 1002 tons register was launched from Messrs. Tindall's yard, in Scarborough, on Friday last. She is the largest vessel ever built there.

The King of Sardinia, as a public proof of respect for the memory of the late Count Cesar Balbo, has appointed his son, Captain Ferdinand Balbo, orderly officer to his Majesty.

The Madrid journals announce that the appearance of the comet has excited great alarm in that city, as it is considered a symptom of Lavine wrath, and a presage of war, pestilence, and affliction for humanity.

It is in contemplation in Liverpool to give a grand entertainment to the Chancellor of the Exchequer and Mr. Cardwell.

Dr. Peez, of Wiesbaden, confirms the statement made by several German practitioners, of the rapid curative agency which attends the [illegible] use of carbonate of magnesia in case of warts.

The Central Acting Committee for the promoting the Great Industrial Exhibition for Scotland have come to the resolution not to attempt to carry out the proposal next year, as originally announced.

Some of the land obtained by the draining of the lake of Haarlem has just been sold for 720,000 florins (1,440,000 f.), which will alone more than cover the expense of draining the whole lake.

Lord Londesboro' [illegible] has completed the purchase of the Selby estate for £270,000 from the Hon. Mrs. Petre, widow of the Hon. E. Petre, of Selby.

[illegible] Royal Society has announced the discovery of [illegible] and tales of 1000 dollars being made by each man per day were current.

A return, obtained by Mr. Brotherton, shows that in the late session there were 314 petitions deposited at the Private Bill Office for Acts of Parliament.

[illegible] Wednesday from his late [illegible] to be able to leave his room [illegible] on Monday morning he proceeded to Liverpool, where, on Tuesday evening, he delivered a lecture, at the Philharmonic-hall, on the subject of "The Highways of Peaceful Commerce are Highways of the Arts."

M. de Montholon, son of the late General de Montholon, has just been appointed French Consul-General and Charge d'Affaires at Lima.

Mr. T. Y. M'Cantie, revising barrister for the city of London, will commence his revision of the lists of voters for members to serve in Parliament for the City, on Monday, the 5th of September.

The *Leander*, Captain Vincent King, arrived on Sunday morning at Plymouth, 14 days from Halifax, with the Earl of Ellesmere and suite. His lordship is indisposed from gout.

The Emperor of France has given a table service in silver as a prize for a lottery which is being got up for the benefit of the gardeners of the neighbourhood of Rouen, who suffered so severely some time ago from a hail-storm.

Mr. N. Wiston Barron, paid attaché to the Mission at Stuttgardt, has been appointed paid attaché at Brussels. The Hon. C. Eden, paid attaché at Brussels, has been appointed paid attaché at Stuttgardt.

From the Black Sea ports we learn that great activity had prevailed, owing to orders from Great Britain, France, and from several of the Mediterranean ports. At Odessa, on the 12th ult., fine Polish wheat had risen to 37s. 6d. per quarter free on board.

Three Inclosure Acts were passed in the late session—the last on the 20th ult., by virtue of which "Chobham," the scene of the late encampment, is to be enclosed.

The extreme penalty of the law was carried into effect on Saturday week, at Lancaster, upon Richard Pedder, for killing his wife by shooting her through the head.

It has been ascertained, that wires of electric telegraphs which are painted red are much less liable to oxidation than those which are painted white.

It is understood that a vigorous stand will be made by the freeholders and societies in defence of their votes in the Court of Revision now about to sit.

At an inquest recently held at Northampton on the body of William Hall, aged 13, the jury returned as their verdict, "Died from inflammation of the bowels, caused by eating cucumber."

"It is a fact," says the *Bombay Gazette*, "that the entire population of India do not spend sixpence per head a year for clothing."

Lord Westerpark laid the foundation-stone of the new Townhall and Smithfield at Uttoxeter, on Thursday week.

Mr. John Parry has made farewell to public exhibition, being compelled by ill-health to retire.

Letters from Malaga and Laredo complain of the presence of the vine disease. It is stated that the vines which produced the largest grapes were the most liable to be attacked.

On Tuesday, the men engaged by Messrs. Rigby and Co., contractors for the repairs of sewers at the Somerstown division of works, struck their work for an advance of wages.

The magneto-electric telegraph is now in full operation between Belfast and Portpatrick, in Scotland. The working of the submerged line proceeds most satisfactorily.

GENERAL VIEW OF THE HOLYHEAD HARBOUR OF REFUGE, FROM THE WEST PIER.

(*Continued from page* 184.)

fathoms at low water, will, when completed, make one of the finest artificial refuge harbours and packet stations in the world.

The method that has been adopted by the engineer, Mr. Rendel, for carrying out this breakwater (and which is under the immediate superintendence of the resident engineer, Mr. G. C. Dobson,) is by means of a timber staging, of five roads 40 ft. above the water, and 150 ft. wide, supported on piles 80 ft. long, which piles remain buried in the bank of stone as the work advances. The loaded stone waggons are taken down these five roads by locomotive engines, then tilted, discharging their contents, each of from eight to ten tons of stone, through the staging, into the sea, forming a bank of rubble stone from the bottom upon which the piles rest, to above the surface of the water. Whole trains of waggons can thus be made to deposit simultaneously, and with a rapidity and certainty that no other system would admit of. 500 tons of the rock obtained in the quarries are thus with ease deposited in the bay on the breakwater at the spot required and indicated; and, by this means, within the last four years about 1,000,000 tons of stone have been brought down, run out, and tipped into the sea. One of the accompanying Engravings gives a view of the above staging with the method of continuing it, in advance of the bank, by means of the cranes upon the stage itself, showing the lifting of the piles, 80 feet in length, from the water till they become upright: they are then properly adjusted in their place by the aid of a lilliputian sea steamer 60 feet long, when the framing and roads are placed upon them, and rails laid to receive the waggons, the discharged waggons are again drawn up to the quarries for a fresh supply of stone, and the move sent from the quarries to the end of the staging goes on continually. This five-road timber stage of the north pier above described has now advanced 1600 feet to sea out of the 3600 required to complete it: the length of breakwater already formed has afforded shelter to hundreds of vessels for the last three winters, and sixty to eighty sail at a time of wind-bound vessels may now occasionally be seen anchored within the area of the new Harbour; and here, on Sunday last, lay the Royal yacht and her Majesty's steam squadron. In order to obtain so large and unprecedented a supply of rock, as 5000 tons a day, blasting with gunpowder, upon a large scale, has been introduced, and at the foot of the mountain, called Holyhead Mountain (which is of a hard schistous quartz rock), quarries have been opened and formed, which, for extent, height of face (almost 200 feet), and yield of stone, are certainly unparalleled. Fifty to sixty shafts and galleries are sunk or driven into the rock, which is of so hard a nature, that only one foot upon an average can be driven in the twenty-four hours by three relays of miners. After the chambers or galleries are completed, two or three of them are sometimes discharged simultaneously, with charges of gunpowder varying from 3000 to 15,000 lbs. The instantaneous ignition of the charges is brought about by means of the galvanic battery, and the results are as great as from 30 to 50,000 tons of rock at once. About 20,000 lbs. of gunpowder, or ten tons, are thus expended weekly in large and small blasts. Gunpowder is by these means made the agent for producing these surprising effects upon a solid and unyielding rock, and without the aid of this prime mover, used upon so large a scale, and with electricity lessening the hazard to human life, it would have required half a century in time, and thousands of hands to have effected what has now been achieved in three or four years. In the quarries (shown in the Engraving) appear the largest amount of activity of any part of this great work—fifty moveable cranes (some with steam power) for raising the stone, 200 to 300 wrought iron waggons for conveying it, eight locomotives, and about fifty horses: these, together with a staff of men on the work of about 1400 are daily employed by the contractors (Messrs. J. and C. Rigby, Westminster) in pressing forward to its completion this great national undertaking.

The once small town of Holyhead, situated in a remote corner of Anglesea, will speedily become an important place. Already we have shown the continual attention given to it, as lying in the direct route from London to Dublin (which traffic and communication the railway of the Chester and Holyhead Company is year by year increasing and developing), and, as the new harbour approaches completion, the applicability of the port as a Transatlantic packet station will be considered, and the town will still further rise in importance. Should it have been selected as the point for carrying out a work of which England may well be proud—a harbour inclosed on a most dangerous and unprotected coast, offering a free shelter to vessels of every nation, and a haven of refuge to the mariner of every flag.

STAGING FOR THE CONTINUATION OF THE BREAKWATER, AT HOLYHEAD.

HOLYHEAD TO KINGSTOWN.

The Queen, always an early riser, left Holyhead at a quarter past three on Monday morning. The weather during the voyage across the Channel was as fine as could be wished, and when the sun rose the spectacle presented was an exceedingly imposing one. Behind, and becoming fainter and fainter on the eye, lay the dim outline of the Anglesea coast; and in front could be distinguished in the clear cool light the misty forms of the Wicklow mountains. Over the sea, still heaving slightly, beneath the influence of the recent south-westerly gales, the Royal yacht and her attendant fleet of steamers bravely held their way. It reminded one somewhat of the recent Spithead review to see

RECEPTION OF HER MAJESTY AT KINGSTOWN.—THE ROYAL SALUTE.

t e e, in a long line, and without a stitch of canvas set, steadily pushing forward against a smart westerly breeze. Some rolled heavily in the swell of the Channel, while others held their way lightly over it. As the passage lay immediately before them the fastest vessels began to show unmistakeable evidence of their superior s eed. The Royal yacht led the way, and close behind her came the *Banshee*, the *Terrible*, and the graceful *Fairy*.

The harbour of Kingstown presented at this moment a most interesting sight. The basin was occupied with a swarm of steamers, schooners and square rigged vessels of all sizes; but the great proportion, consisting of the yachts of the St. George's Yacht Club, and others, whose graceful forms, as they rose and fell gracefully to the swell of the water, formed a sight that must have delighted the eyes of every lover of marine movements

LANDING OF HER MAJESTY AT KINGSTOWN

The landing of her Majesty at Kingstown presented features of peculiar interest and beauty, which are rarely witnessed in the sister kingdom. The fine harbour of Kingstown, with its noble breakwater of granite, never enclosed such a concentration of power and brilliancy as on that occasion. The scene on Monday morning was truly regal and majestic when the fleet, bearing its Royal freight, swept round the eastern pier and moored itself in the sailing order within the harbour. Preparations of more than ordinary splendour, in anticipation of the interesting event, had been made by the Kingstown Railway Company, and nothing was wanting to render the éclat of the Royal landing as brilliant and effective as possible

A few minutes before eight the arrival of her Majesty outside the pier was announced by the *Hogue*, a 76 man-of-war, lying in Kingstown harbour, by a salute, which was instantly answered by the combined fleet; and the sound of the first two fires had scarcely died away, ere the *Victoria and Albert* appeared in the mouth of the harbour, and sailed quietly but proudly up to the landing-place in the centre of the jetty. One hearty cheer was instantly given by the assembled concourse of spectators; and all, for a short space of time, was in a state of comparative quietude. At length it was announced that her Majesty intended landing in three-quarters of an hour, and intimation to that effect was conveyed to the different authorities by electric telegraph

Her Majesty was accompanied by Prince Albert, the Prince of Wales and Prince Alfred. The Ladies in Waiting were the Duchess of Wellington and the Hon. Miss Bulteel; and the other distinguished personages who were in attendance were Earl Granville, the Marquis of Abercorn, and Sir James Clark. Lord Adolphus Fitzclarence was in command of the vessel which bore her Majesty

The first person who arrived to congratulate her Majesty on her arrival in Ireland was the Lord Lieutenant, who was accompanied by the Countess St. Germans; followed, in a few minutes, by the Primate, the Archbishop of Dublin, the Duke of Leinster, Lord Gough, Mr. Dargan, J. Radcliffe, Esq., Commissioner of Kingstown Harbour, and F. Hornidge, Esq., the active and obliging secretary; Sir Edward Blakeney, and all the distinguished officials in the capital of the sister kingdom.

Kingstown itself, with its fine amphitheatrical rise, presented an animated and brilliant aspect. The two club houses on the extreme projecting jetty—the St. George's on the right, and the Royal Irish on the left—with the railway terminus which has just been finished, in the centre were covered with spectators The space between the jetty and the warehouses was intersected with strong barriers, which materially diminished the pressure of the crowd. The adjacent piers, the huge cranes, the breakwaters which form the two sides of the noble harbour, the multitudinous craft which covered the waters within, and every space and within sight of the scene, were crowded with animated and anxious spectators

Immediately her Majesty appeared on deck the Lord-Lieutenant generally introduced the noblemen and gentlemen, and the high functionaries to her and Prince Albert; after which her Majesty stepped on shore, and was received with a succession of cheers which "made the welkin ring." Her Majesty, who looked somewhat flushed and a little fatigued, was in mourning dress, white ground and pointed flowers of pink and green; a pink silk mantle; a white bonnet, with white feathers. After the introductions, however, the silk visite was exchanged for a white Indian embroidered shawl. The Prince was dressed in a black coat and white waistcoat, with the blue ribbon and star. The young Princes were dressed simply and neatly, and seemed singularly amused. The pressure to follow in the same train as her Majesty was tremendous; and many of the rank and fashion were forcibly excluded by the police. The Royal carriages were carefully arranged and in ten minutes the whole party were handed on the platform at Westland-row.

Here the Queen received the address of the Mayor and Corporation, who had been in waiting for some time. The address was presented in a state room at the station, which had been expressly fitted up for the occasion. The order of procession was then formed at Westland-row; and, amid a deafening shout from the dense crowd who filled the space opposite the station, and overflowed into the adjoining streets, the procession proceeded through the city. A troop of the 11th Hussars preceded her Majesty's carriage, and a troop of the 2nd Dragoons followed in the rear. The route of the procession was as follows:—Westland-row, Lower Mornington-street, Clare-street, Leinster street, Nassau-street, part of Grafton-street, across Collegegreen, Westmoreland-street, Carlisle-bridge, Sackville-street, Cavendish-row (Rutland-square) Here the *carrige* turned into Gardiner's-row, passing along Great Denmark-street as far as Temple-street. Turning into Upper Temple-street, it passed through Hardwicke-place by St. George's church, across Dorset-street, through Eccles street, across the Canal-bridge, along the Circular-road (the city boundary), and thence to the Viceregal-park, where her Majesty, Prince Albert, the Royal Princes, and suite, arrived about half past eleven.

Soon after her Majesty's arrival at the Lodge she went out again, and walked for some time in the grounds. In the course of the evening she and Prince Albert took a drive through a portion of the city, and a few miles out into the southern suburbs. They went in the direction of Donnybrook, Dundrum, Rockbrook, and Mount Anville; and at the latter place they called at the house of Mr Dargan. The visit was entirely without previous intimation; and it happened, unfortunately, that both that gentleman and his family were absent, witnessing the preparations for the illuminations.

THE ILLUMINATIONS.

In the evening, all the public buildings, the leading hotels and shops and many private dwellings in the metropolis, were brilliantly illuminated. The principal thoroughfares presented a very striking appearance thus lighted up; and the whole population turned out to witness the spectacle. Sackville-street and College-green were the chief objects of attraction: but all the leading streets were filled with people; and a continuous stream of cars, which never gave foot-passengers a moment's rest from the terror of being run over, flowed along them. Pleasure was expressed in every direction; and a cheer, loud as thunder, announced, in one of the gas light legends, that "the good time coming" had at last "come" for Ireland.

HER MAJESTY'S VISIT TO THE GREAT EXHIBITION OF DUBLIN.

The preparations for the visit of her Majesty to the Exhibition of Industry were upon a scale of more than ordinary importance, and reflect the highest credit upon the Committee of Management. An awning was erected in front of the main entrance which led to a reception-room, lined up with alternate sections of yellow, white, and blue satin, corresponding to the coloured tints of the interior of the Building, and which had a most elegant appearance. The arrangement of objects in the interior of the hall, so as to afford the utmost space for the due reception of her Majesty, was also completely altered—the single figures of sculpture being placed on each side of the uninterrupted avenues and the groups and busts principally in the middle, which had a most pleasing effect

At the end of the main hall, upon the dais, a slightly-elevated platform was erected, upon which the chair of state was placed. On either side of this chair—the same, by the way, in which her Majesty was seated when crowned—were two other chairs, with blue satin seats and backs, and white arms and legs, gilded, which were intended for Prince Albert and the two young Princes. The platform was covered with red and white cloth, its base being composed of blue Receding a few steps upon the dais, two semicircular forms were placed for the reception of the élite of the fair sex who graced the reception of her Majesty. Behind this receding curve, the statuary, intersected at intervals by twenty lancers, had a most picturesque effect, and formed the real background of the Royal tableau. The banners floating as an emblem of each contribution, the finely-arched roof, and the dome-like span of its concentric range, the fair sex thronging the front places, both in the galleries and the lateral halls, elegantly attired and anxiously expectant of the coming event, and the brilliant uniform of the military flitting like fire-flies through every part of the Building, made up a scene that was strikingly effective.

Precisely at eleven o'clock, and in unison with her accustomed promptitude, the arrival of her Majesty was announced; after spending a short time in the reception-room, her appearance in the main hall was greeted with an acclamation that was truly affecting. The waving of handkerchiefs, and the hearty, joyous, and in every way unmistakeable expression of kindly feeling evinced, made a sensible impression upon her Majesty, and was received with a subdued but evidently heart-felt response.

Her Majesty, leaning on the arm of Prince Albert, and accompanied by the two Princes, walked down the main avenue of the Hall to the dais at the end, through a concourse of loyal, dutiful, and well-attired subjects, many of whom, at every step of the way, were overpowered, and fainted. Her Majesty was attired in a lavender lace dress and shawl, a pink gauze bonnet, and held in her hand an elegant bouquet of flowers. Prince Albert was in the uniform of a Field-Marshal, with the blue garter and star upon his breast; while the young Princes were neatly and simply arrayed. The Lord-Lieutenant, in full diplomatic uniform, with the order of St. Patrick round his neck, and the Countess of St. Germans were immediately behind her Majesty's chair; the Marquis of Breadalbane and the Earl Granville, in the household uniform being in attendance, and officiating in the several ceremonies necessary upon the occasion. Her Majesty looked much better than on the preceding day, and seemed to take much interest in the whole ceremony.

The Duke of Leinster, the Marquis of Waterford, Lord Talbot de Malahide, Lord Mazareen, Sir Edward Blakeney, Sir Edward Macdonald, Mr. Dargan, the leading functionaries of the corporation, and the first state officials in Dublin, were all present to honour the event. The ladies-in-waiting were the Duchess of Wellington, and the Hon. Miss Bulteel. Her Majesty arrived in a private carriage drawn by four horses, and was followed by the Lord-Lieutenant, in a similar vehicle. On being handed to the Royal chair, the Committee of the Great Exhibition presented an address to her Majesty, complimentary to the Royal visit, which was responded to, standing, in the following terms:—

I receive, with sincere pleasure, your address, and I thank you for the expression of your loyal and dutiful attachment.

I willingly contributed to this collection of arts and manufactures from most of the countries of Europe, the object of which was to promote the industrial and intellectual improvement of my people, and it has added much to my gratification in revisiting this portion of my dominions, to see the complete success of an enterprise which has been carried out in a spirit of energy and self-reliance, and with no pecuniary aid, but that derived from the patriotic munificence of one of my Irish subjects.

After a series of introductions the most striking of which was that of Mr. Dargan, who kneeled and kissed her hand, and retired to his place in the dais, having received the hearty cheers of those who were immediately cognisant of the fact—her Majesty and the Royal *cortège* walked down the main hall, and through the principal avenues of the Exhibition, to the joyous sound of music, and followed by the enthusiastic thronging of her delighted subjects. On returning to the dais, her Majesty was addressed in a lengthy petition on bended knees, by the corporation of Dublin; to which a suitable reply was given: and after making a slight *détour* through the Exhibition, in the opposite direction to the first walk, took her departure, accompanied by a brigade of Dragoons and Lancers.

(*Continued on pa* 197.)

THE COMET.

"THE Comet," writes Mr Bind, "was very favourably seen at Mr. Bishop's observatory, Regent's-park, on Saturday last, and again on Sunday evening On the latter occasion, allowing for the proximity of the Comet to the horizon, and the strong glow of twilight, its nucleus was fully as bright as an average star of the first magnitude; the tail or external atmosphere was fan-shaped. When viewed in the telescope, the nucleus appeared of a bright gold colour, and about half the diameter of the planet Jupiter, which was shining at the time in the southern heavens, and could be readily compared with the Comet. The tail proceeds directly from the head in a single stream, and not, as sometimes remarked, in two branches The distance of the body from the Earth, at eight o'clock on Sunday evening, was 80,000,000 miles; hence it results, that the actual diameter of the bright nucleus was 8000 miles, or about equal to that of the planet Mercury; the tail has a direct breadth of 4,000,000 miles, and a breadth of 280,000 miles, which is rather over the distance separating the moon from the Earth.

It is usual to assume that the intensity of a comet's light varies as the reciprocal of the square of the distance from the Sun and from the Earth and Sun; but the present one has undergone a far more rapid increase of brilliancy than would result from this hypothesis. The augmentation of light will go on till the 3rd of September, and it will be worth while to look for the Comet in the daytime about that date for this purpose an equatorially-mounted telescope will be required, and Mr. Bind suggests the addition of a light green or red glass, to take off the great glare of daylight, for a moment being adjusted to focus on the planet Venus. The position of the Comet for noon, mean time, at Greenwich:—

	Right Ascension.			Declination	
	h.	m.	s.		
Sept. 3	11	19	19	.. North	3 59
„ 5	11	19	20	.. „	1 13
„ 5	11	8	53	.. South	1 44
„ 6	11	3	2	.. „	4 34

In a letter copied into the *Times*, Sir William Hamilton hints at the possibility of this being the Comet I had been expecting, but I avail myself of the present opportunity of stating that such is not the case, the elements of the orbits having no re-embrance. The Comet referred to will probably re appear between the years 1858 and 1861, and, if the perihelion passage take place during the summer months, we may expect to see a body of far more imposing aspect than the one at present visible.

SURVEY OF THE ATLANTIC.—The American brig of war *Dolphin*, commanded by Lieut. Perryman, has arrived at Southampton, to refit and take in stores. During the past few months the *Dolphin* has been employed in a deep-sea sounding expedition in the Atlantic; and will, as soon as she has received her stores, sail from Europe. The more useful but laborious operations, which are instituted by the United States' Government solely with a view to the benefit of science. The service is a very arduous one, and requires incessant attention and vigilance.

STUPENDOUS CHIMNEY.—The rage for large factories which has for some time pervaded Lancashire and Yorkshire is leading to the construction of chimneys towering to extraordinary heights One of these has just been completed at Preston, near Manchester, for the mill of Mr. Richard Kay. The outside diameter at the base is 23 feet 9 inches, the shaft is 240 feet high, and in that length the outside diameter has been decreased to 7 feet 6 inches. The inside diameter at the bottom and top are 17 feet 6 inches, and 5 feet 6 inches respectively. Nearly half a million of bricks have been consumed in erecting it. The "cap" is of cast iron, and weighs upwards of fourteen tons; the lightning conductor is of copper roping, with a gold tapped point. The whole has been completed without an accident.

THE CAMP TRAFFIC ON THE RAILWAY.—A return showing the number of persons from all the stations on the South-Western, up and down, that alighted at the under-mentioned stations, for ten weeks, during the Camp at Chobham, and corresponding period of 1852:—

	1853	1852	Increase
Staines	14,314	6726	7588
Chertsey	55,491	2953	52,538
Woking	11,385	4486	6872
	81,110	14,065	67,045

Of the above, the proportion applicable to general increase, irrespective of the Camp, cannot be ascertained. Soldiers are not included.

FOREIGN WATCHES.—A parcel of watches having been brought from France, for shipment to Australia, on account of a foreign gentleman about to proceed to that colony, it was found that they were surreptitiously marked with the name of a well-known English maker, although of inferior foreign manufacture; and also bore the mark of the Goldsmiths' Company, which rendered them doubly illegal, and liable to confiscation as the assay marks were found to be forgeries; and they were therefore, taken by the revenue authorities, and ordered to be confiscated.

METROPOLITAN IMPROVEMENTS.—By order of the Commissioners for carrying out the improvements in the City of London, a further portion of the houses in Ray street, Clerkenwell, are forthwith to be demolished, to complete the direct line of communication from Blackfriars-bridge and Farringdon street to Islington and the Great Northern Railway terminus at King's-cross. The long-talked-of widening of Fenchurch-street is at last being carried out, and the whole of the houses on the south side, extending from Bishopsgate-street, crossing London-street and Railway place up to Church-row, Aldgate, are being taken down for that purpose. A great many houses are now being pulled down on the south side of Threadneedle-street, in Finch lane, and Cornhill, to complete the approaches to the Royal Exchange, as also in Cheapside-hill, to widen and improve that thoroughfare

PROGRESS OF THE CHINESE REBELLION.

We shall not inappropriately commence our digest of Chinese news by some particulars relative to the town of Amoy, of which we are enabled to present our readers with an original Sketch. When the last mail left, the conduct of the rebel force in possession of Nankin contracted a good deal of attention; since the Amoy insurrection appeared to be in no way connected with what may be termed the regular army of Nankin, but consisted wholly of members of the Triad Societies, or "small-knife men," who, taking advantage of the rebellion in the north of the empire, had resolved to carve out a small province for themselves

Amoy is a commercial city and sea port, in the province of Fokien, in a bay of the China sea opposite Formosa, and about 300 miles from Canton It will be remembered that Amoy was taken on the 26th August, 1841, by the English army, who held the fortified island Kooloongsoo, commanding the entrance to the harbour, until the final payment of the sum of 6,000,000 dollars, exacted from the Chinese Government by the treaty of Nankin.

The population of Amoy is about 300,000. The harbour is excellent, and ships can lie close to the quays The town is handsome nor clean, but has many roomy public buildings, well-supplied shops, and good private houses The English merchants residing in Amoy are an active and intelligent body, and a good deal of trade is carried on, especially with Formosa.

The accompanying Sketch was taken from the signal station at Amoy, at the top of a very high hill commanding a most extensive view of the surrounding scenery. In the back-ground is the main land of China, with a little island called "Pagoda Island" lying near it, which takes its name from a pagoda built on it, perhaps for show, or as a sort of landmark for the Chinese navigators, as it is merely a "dummy," and looks much better in the distance than on closer inspection. It is also now in so very dilapidated a condition, and so much out of the perpendicular, that few people venture near it.

The Island of Koolongsoo, which occupies the centre of the Sketch, is the spot where the British Consulate was first stationed at the close of the war in 1842; but it subsequently proved so very unhealthy, and, indeed, almost fatal to the English community, that removal took place to the opposite island of Amoy. The English still visit Koolongsoo very frequently for the purpose of walking there, as Amoy offers few temptations to pedestrians, being so densely populated. The English burial-ground, also, is there on its own peninsula, and a very mournful spectacle it is to see the sable processions crossing the water on the occasion of a death in the little community.

There is a singular tradition connected with one of the rocks on the coast of Koolongsoo. It is a very high perpendicular mass of granite, propped up securely with a heavy wall of masonry on the sea side of it, and the Chinese take especial and continual care to keep the wall in good repair, because they say that as long as that rock stands, the Chinese Empire will stand too, as its fall would be to them a sure omen of the speedy dissolution of their dynasty.

The foreground of the Sketch is a part of Amoy. The roofs of a few of the houses are visible between the rocks. The remaining part gives a correct idea of the general appearance of the island The scenery is almost entirely a succession of hill and valley, the latter of which are highly cultivated, and the former covered with Chinese tombs, interspersed with enormous masses of black granite rocks, some of them of most fantastic shapes, and almost inaccessible in some places, and contrasting very beautifully with the patches of long grass and wild flowers that fill every vacant space.

The constant trade between the two islands, where the British and foreign men-of-war, merchant vessels, Portuguese lorchas, and Chinese junks have for many years anchored in peaceful proximity.

Our readers are already aware that Amoy had fallen into the hands of the Tartar insurgents, and that the conduct of the captors had been so orderly that trade was expected to be immediately resumed: serious dissensions, however, arose among the rebel chiefs regarding the future government of the place: and exaggerated reports of these disagreements induced the Imperialists to send Admiral, then officer of the coast, with the hope of recovering possession of the place. Accordingly, on the 29th of May, he appeared in the harbour with a fleet, stated by the lowest accounts at 19, and by the highest at 30 junks. He immediately landed 1000 men, who marched steadily towards the city walls, when the rebels made a rush and drove them back to their boats, with a loss of about twenty or thirty killed, and from twenty-five to fifty prisoners. Next day the rebels began trying the prisoners with great formality. They were exceedingly civil to the Europeans, placing chairs for all who liked to attend. All the Tartars taken were immediately beheaded, the insurgents making no secret of their intention of utterly exterminating the whole race but the Chinese soldiers, being generally pressed men, were usually acquitted. It is stated that they showed excellent discipline and self control, and that plunder is certain death to the offender. They are now rather short of funds, but are arranging a plan of government, and propose a scale of taxation which is more moderate than the former tariff.

The rebel chief in possession of Amoy is in several endeavours to get some of the wealthy inhabitants to accept of office, and it is not probable that any of the better classes, however favourably disposed to the revolt, will openly take part with it, but its success appears much more certain than at present. On the 10th of June, an Amoy Chinese, after being severely tortured, was beheaded, for posting up placards announcing the projected return of the mandarins, and his head was paraded through the streets. It is said that several executions of prisoners have lately taken place A gentleman who paid a visit to the Hall of Justice of the rebel chief, for the purpose of observing how matters were managed, states that outside the building were three human heads suspended, and beneath these were huddled together between 80 and 40 wretched mandarins' men, prisoners, heavily manacled, awaiting a formal trial before execution Within the hall of justice was elevated the head of an inferior mandarin, and beneath this ghastly object stood the executive officer of the Provisional Government on his trial. The rebel flag was displayed in a prominent part of the building. The judges consisted of the rebel chief and a Straits Chinese named Seng-koo (formerly a linguist in the employ of Tait and Co., but dismissed for rascality), who took a very active part in explaining the law as administered by the rebel rulers of Amoy. The culprit was condemned to lose his head; but no sooner had the two European gentlemen retired, than the wretched man was sentenced to die of starvation. The cruelty exercised by the rebel rulers had disgusted all classes; but these vile tortures were resorted to to deter the loyally-disposed from aiding the Imperialists. It was generally expected that the Tartar forces would endeavour to recapture the city. The hope of an early riddance of the rebels seemed to please the generality of the people; and some of them are said to have tendered small quantities of rice for the immediate wants of the Mandarin soldiers; and this, occurring at the same time that the rebels had to take by force what they got, leaves no doubt as to the real causes of the trading classes. However, the rebels were making every preparation in their power to retain the place, and evince neither fear nor despair.

Another account says

Although the so-called "small-knife" society in possession of Amoy, are not in direct connection with that larger body of revolutionists who, for distinction sake, must in future be called the Christian army, still their conduct and promises are of such a commendable character, that we should feel great regret at seeing them displaced by the Tartars, whose antecedents leave us nothing to hope in the way of progress, and much to fear from the unrestrained licentiousness to be entertained by the friends of Hien-fung, that, had the entrance of Christianity been opposed, things would never have arrived at the present pass. The chief of the insurgents in possession of Amoy issues manifestos as generalissimo in the army of the restored dynasty of Ming; and in quarters where we have been accustomed to look for authentic information, we have been confidently assured that Tien Tsa is not the man, and that he only waits for the rising to be more general to come forward and take his position as lawful sovereign of the empire.

We conclude this notice of the state of affairs at Amoy with the following extract from a letter dated the 18th

The rebels are planting guns in every street where the attack is likely to be made, and as there will be no quarter for them if captured, they will no doubt fight as only those who are desperate can fight. From what we saw of Imperialist fighting before, there is not much chance for them, numerous though they are reported to be.

Chang-chow and Tang wang have both succumbed to the insurgents, though not without severe loss to the latter. At Tang-wa the inhabitants *en masse*, though sanctioning the ejectment of the mandarins, have refused to allow the insurgents to have anything to do with the government, and have proceeded to declare themselves free and independent burgesses, who could govern for themselves.

Some months ago, when the Governor-General Seu, in command of the main body of the Imperial forces, was defeated, and fled from the rebels, he excused his failure and accounted for the rapid progress of the enemy by attributing both to the "extraordinary ferocity of the rebels, and to their skill in springing mines" The following particulars of the capture of Nankin appear to confirm both these representations:—

On the 8th of March they (the rebels) appeared before Nankin, and on the 19th of that month sprung a mine under the wall near the northern [illegible] and effected a breach of twenty yards in extent. The [illegible] and [illegible] rushed in, and [illegible] the [illegible] and [illegible] the [illegible] and [illegible] the [illegible]

THE LATE LIEUTENANT-GENERAL SIR CHARLES J. NAPIER, G.C.B.—FROM A PHOTOGRAPH BY KILBURN.

well with Lord Ellenborough's successors, and never got on well at all with the Council in India or the Government at home, was ordered to prepare for a new field. He collected together an army of 16,000 men; and his plan was to invade the Sutlej. But he was not fortunate at this period. The new Governor-General ordered him to Bwawlpoor; and he consequently missed the battles of Ferozhur and Sobraon—battles which gave peerages to others. From this time forth—being done with Scinde, and there being peace in India—he warred on the Government, and sustained, here and in India, a restless paper controversy. In 1847 he returned home a great man. The army held him as a hero; and great festivities were given in India in his honour ere he set out. Here, he was received with civic honours by our great towns. Parliament had already voted him thanks.

His career after 1848 is the news of the day. In 1849-50 came the new Sikh war. Lord Gough had been defeated, and there was a panic in this country that India was being lost. The Duke of Wellington shared the fears—fears which, it proved, were unjust to Lord Gough; and the Duke sent for Sir C. Napier, and said, "You must go to India; or, I will!" Sir Charles went; the glory of such a selection by a great people could not be rejected; and he obeyed the call. But when he reached India Lord Gough had recovered his fame, and had routed the Sikhs. Sir Charles, however, stayed some time in India, and recommenced his old work of reforming the army. He also commenced his old work of quarrelling with the Government; and he came home indignant and sulky, as he took care to show with very good cause. On the India bill of last session, he was almost quite silent, but it was understood that his views were represented by the authoritative voice of Lord Ellenborough; and, as we have mentioned, he died while preparing another pamphlet for the press. Sir William will probably now give this work to the world; it will, no doubt, possess great interest.

We cannot better conclude this necessarily imperfect memoir, than by quoting an anecdote of this remarkable man, which well illustrates that, as in the case of Wellington, his greatness was the greatness of simplicity. The anecdote should stamp Sir Charles Napier as the British Cincinnatus—a parallel he would not object to, for he led a Roman's life, and lived after Roman models. The simplicity of his style of living enabled him to enforce his admonitions with peculiar power. This trait was amusingly exemplified on the occasion of the arrival of the messenger who bore the despatch from the India House, announcing his appointment to the chief commandership in of the Indian forces. The door of his temporary residence in Berkeley-street was opened by a female servant, who, in answer to the eager inquiries of the bearer of the despatch, asserted that neither Sir Charles Napier nor his lady was at home. This was perplexing to the messenger, who had been charged to deliver the despatch into the hands of either Sir Charles or Lady Napier. While engaged in altercation with the servant in the hall, a door at the head of the stairs was suddenly opened, and the veteran himself appeared. "I am Sir Charles Napier," said he, "but as we are at present at dinner, and I have no second room to show you into, you had better call again." The surprised messenger announced his errand, and the despatch was at once safely lodged in Sir Charles's own hands.

Looking back to the great services of Sir Charles Napier, and observing the thorough greatness of his character, it must be confessed that such an Englishman should have died in the Peerage. He sought, it is believed, that honour, if only because his fellow soldiers had obtained it; and there must have been a want of generosity somewhere, as he did not obtain it.

The first of the accompanying Portraits has been copied from a photograph by Messrs. Kilburn, which has also been engraved by Joseph Skelton, and published by Messrs. Hering and Remington, Regent-street. The second Illustration is likewise from a photograph by Messrs Kilburn, to whom Sir Charles Napier sat for a bust executed by Mr. Wyon.

LIEUT.-GEN. SIR CHARLES J. NAPIER, G.C.B., AS HE SAT FOR HIS BUST TO MR. WYON.—FROM A PHOTOGRAPH BY KILBURN.

AMOY, SKETCHED FROM THE SIGNAL STATION.—(SEE PAGE 190.)

ST. GEORGE'S HALL, BRADFORD, OPENED WITH A GRAND MUSICAL FESTIVAL, ON WEDNESDAY LAST.

BRADFORD MUSICAL FESTIVAL.

(From our own Correspondent).

BRADFORD, Thursday.

THE great Musical Festivals in the North have not extended, of late years, further than Birmingham. York—which was once famed for its gatherings; which boasts of such a colossal cathedral, and such a gigantic organ—has long ceased to have a festival, the present dignitaries refusing the use of the magnificent edifice for the purpose. The Manchester Festival died with Malibran, in 1836. The same year the Liverpool meetings were given up, the intention being avowed not to renew them until the town was provided with an adequate music-hall. It will take eighteen years before this want will be supplied. In the meanwhile there was a town gradually springing up in size, wealth, and importance, which has at length stolen a march even on the "men of Manchester," and the "gentlemen of Liverpool." The time is not very remote, when the traveller asking, "Where was Bradford?" would have been answered, "Oh! not far from Leeds." Now it must be met with the reply, "Leeds near Bradford," and not Bradford near Leeds. Certainly, the rise of this place is one of the most remarkable facts of the day: the town is extending in all directions—it is, in fact, a succession of towns for miles, and yet are its limits apparently not yet defined. Some of the finest warehouses in the world may be seen here. The prosperity is overwhelming: there are no poor—the operatives are in full work and in full pay—the manufacturers are merchant princes in their way, and their operations extend to the remotest portions of the world, the golden countries having come into a large share of the business of the town. The alpaca manufacture is carried on to perfection here: the most exquisite dresses, defying the eye to distinguish them from the finest and softest silk, are to be obtained at this mart. And, amidst the din of trade and commerce, the civilising influences of the fine arts are not neglected. There are manufacturing men who are first-rate connoisseurs, and who boast of a rare collection of pictures by ancient and modern masters. Noble buildings are springing up on every side, and a grand park is in course of formation. And suddenly, some Aladdin of Bradford discovered a wonderful lamp, and in an incredibly short space of time has raised a Music-hall, of noble proportions, not only worthy of the locality itself, but one that will challenge comparison with the grandest halls in the kingdom. A slight description of the Hall, as a key to the Engraving, in this day's columns, will be acceptable. It stands in the centre of the town, three of its sides facing into separate streets. The first stone was laid by the Right Hon. the Earl of Zetland, the Grand Master of the Masonic Body, with due honours, in the presence of an immense concourse of people, on the 22nd of September, 1851, and the building is now completed.

The entire building covers an area of 1600 square yards, and its outer walls and columns are of Yorkshire stone. The front of the western

BANQUET TO MR. PETO AND MR. WARNER, IN ST. ANDREW'S HALL, NORWICH.—(SEE NEXT PAGE.)

elevation is 77 feet in height from the ground to the apex of the pediment; and is composed of a rusticated basement, 37 feet high, surmounted by Corinthian columns and pilasters supporting the entablature and pediment. The principal entrance is by three arched doorways on the basement of this façade, and on each side are niches containing bronze candelabra. The keystones of the arches and niches are enriched with richly-carved masks. The lower part of the intercolumniations are occupied by windows; and the upper with circular shields, surrounded by wreaths of oak leaves. The south side elevation consists of a rusticated basement and mezzanine story, with deeply recessed windows; between which are elaborately carved trusses and festoons of fruit and flowers. Above this story are Corinthian columns and pilasters, supporting an entablature. The intercolumniations are filled with arched windows, 14 feet high. The three doorways of the principal entrance open into a vestibule 48 feet [illegible] feet, and 22 feet high. From the centre of the floor springs the grand staircase, branching off to the right and left, and terminating in the gallery on each side, leading to the stalls and area. At this part of the staircase, on either side are bronzed candelabra, 12 feet high, with nine globe burners each. The great hall itself is 103 feet in length, 764 feet in width, and 80 feet in height. It is divided into area, stalls, and gallery. The first is 80 feet by 48 feet wide from the orchestra front to the back, and will accommodate 1000 with seats. The stalls are raised 10 feet 6 inches above the area, and contain 570 seats, lined with crimson. The front of the stalls is ornamented with foliated scroll-work. In the centre of each scroll are groups of symbolical figures in high relief. The gallery is carried round three sides of the building, and contains upwards of 1600 seats. The whole of the seats are calculated to hold upwards of 3200 persons, exclusive of the orchestra. The eastern or orchestral end of the hall is semicircular, with a diameter of 48 feet. On each side of the organ platform are Corinthian pilasters, springing from the orchestra, and supporting the entablature. The space above the cornice and the ceiling is coved to its junction with the latter, and divided into panels, enriched with a deep border of vine and ivy-leaves, fruit, and flowers. Around the ceiling runs a border of the same design. The ceiling itself is divided into four compartments by an inner border of flowers, cups, and scroll-work, with central ornaments of water leaves and flowers.

The Hall is lighted by sixteen arched windows, fourteen feet high. The plan for lighting it in the evening is by a continuous line of 1680 jets, from pipes carried entirely round the Hall, on the upper and outer edge of the cornice, on the same plan as the Liverpool Parliamentary hall. This affords a subdued but splendid light to all parts of the Hall, without the disagreeable effect of strong lights and shadows occasioned by the ordinary mode of lighting with lamps and chandeliers.

The ventilation is effected by a continued series of circular apertures, six inches in diameter, placed through the external mouldings of the outer border of the ceiling, and continued round the entire building, the air escaping through openings in the roof.

The heating is by the usual hot water apparatus. Cold air can be turned into the building in such a manner as not to create perceptible draughts, and yet in sufficient quantities to change the atmosphere of the Hall in a few minutes.

The general arrangement for the comfort of the audience has been carefully attended to: separate entrances are provided for each class, and all possible precautions taken to avoid a crush on entering or leaving the Hall. On a level with the stalls are ample refreshment and other rooms for the accommodation of the occupants of that portion of the Hall; and a similar arrangement is provided for those of the area. Altogether, it may be said, without exaggeration, that there is not a building of the same character in the United Kingdom, in which so large an audience can be assembled, where the provisions for the comfort and accommodation of each class have been so much considered and so effectually provided for.

Messrs. Lockwood and Mawson, of Bradford, are the architects.

It is to celebrate the opening of St. George's-hall that the present Festival was organised. Mr. Sharp of Bradford, Samuel Smith, Esq., having been the active chairman of the Committee. He submitted the plan of the new edifice to her Majesty and Prince Albert, who were pleased to express their gratification thereat, and extend their patronage to the Festival. The Lord-Lieutenant of the West, East, and North Ridings of Yorkshire, Andrew Montague, Esq. (the High Sheriff), and his Grace the Lord Archbishop of York were included in the list of patrons; and the Earl of Harewood accepted the presidency. Under such distinguished auspices the arrangements and engagements progressed satisfactorily. Costa was engaged as conductor, with *carte blanche* for the instrumentalists. The orchestra is 40 feet in depth, and fills the circular end of the hall, and, besides the chorus, will accommodate a band and chorus of upwards of 300 performers. The arrangements for the convenience of the musicians—in the way of ante rooms, tuning-rooms, &c. and especially in access to the orchestra at various points—are well attended to

There are sixteen first violins, sixteen second ditto, ten violas, ten double basses, ten violoncellos; with the usual complement of wood, brass, and percussion. Amongst the executants are Sainton, H. and W. Seagrove, Watkins, Cooke, Cusens, Dando, Anderson, Goffrie, Griesbach, Thirlwall, Zerbini, E. W. Thomas, Case, H. and E. Chipp, Chippen., Lucas, Howell, Severn, F. S. Pratten, Trust, Rowland, Campanile, Wright, R. S. Pratten, De Folly, Barret, Nicholson, Lazarus, Maycock, Hausman, Larkin, C. Harper, Jarrett, Rae, Cudlip, Prosper, Horton, Hausmann, W. L. Phillips, W. F. Reed, Webb, Hill, Weslake, Westropp, &c. Mr Brownsmith, of Exeter Hall, is the organist Mr. W. Jackson, of Bradford, has drilled the chorus singers, who include the picked Lancashire and Yorkshire vocalists with some London aid.

The programme, to call into play the powers of this formidable instrumental and choral phalanx, with Madame Clara Novello, Miss Louisa Vinning, Miss Sunderland, Miss Freeman, Mrs. Lockey (Miss M. Williams), and Madame Castellan; Signor Gardoni, Mr. Lockey, Mr. Sims Reeves, Mr. Weiss, Mr. Winn, Signor Taglafico, and Herr Formes, has been carefully selected, and the gleanings well balanced Commencing yesterday with the National anthem, the "Last Judgment" of Mendelssohn —regarded by many judges as his masterpiece—was given; and then the "Hallelujah" Chorus from Beethoven's Mass in C. To-day Handel's "Messiah" has been the morning performance; and to-morrow's scheme includes top the Creation from Haydn's "Creation" and Handel's "Israel in Egypt," but is strengthened by two novelties of great interest: the one a MS. Credo, by Mendelssohn, presented to the Festival Committee by the deceased composer's executors; and the other the Baptismal Anthem, composed by Costa, for the christening of a friend's child at Birmingham, which was also performed at the christening of H.R.H. Prince Leopold, on the 28th of January, 1853.

Before the materials of the three mornings, sacred and severe in their unpolluting style, and overflowing in their soaring proportions. In the evening concerts rarely have there been witnessed such a concentration of orchestral gems. Last night, the glorious "Jupiter" Symphony of Mozart, the vivacious "Masaniello" overture of Auber, the lively and dramatic "Italy" Finale by Mendelssohn, the grand, solemn, and magical "Der Freyschütz" overture of Weber. To-night, Mendelssohn's fanciful Symphony in A minor, Beethoven's brilliant "Leonora" overture, Weber's potent overture, the "Ruler of the Spirits," a new march by Mr. W. T. Best, the celebrated organist; and to-morrow night Herold's romantic "Zampa" overture, "Rossini's picturesque and historical "William Tell" overture, Beethoven's tremendous and mysterious Symphony in C minor, Mendelssohn's fairy music to Shakspeare's "Midsummer Night's Dream," &c. Upon the general execution of these interesting programmes time and space preclude me at this moment from dilating: to next week must this duty be unceremoniously postponed.

Every attention has been paid to the numerous visitors from all parts of the kingdom. Special arrangements were made with the various railway companies, to enable the amateurs of the surrounding towns to attend both morning and evening performances. The prices of the seats and stalls are one guinea; the reserved seats in the area, fifteen shillings; and in the west gallery, half-a-guinea. For the evening concerts the charges are respectively, 15s., 10s. 6d., 7s. 6d. The unreserved seats are—10s. 6d., 7s. 6d., 5s., and 3s. 6d. Special tickets for the entire performances have cost five guineas (stalls), three and a half guinea (area), and two and a half guineas (first gallery). The reserved seats were given out, by ballot, at the Exchange-rooms. The chairman has been indefatigable in his exertions, and the thousands of visitors have indeed reason to be gratified with the high character of the musical entertainment and the excellence of the execution.

THE CHOIR BENEVOLENT FUND.—The annual choral festival on behalf of this institution, established under the patronage of the Queen and Prince Albert, took place on Friday week, at the Chapel Royal, St. George, Windsor. The music of the morning service was performed by the choirs of London, Canterbury, Rochester, and Windsor, and Eton College. The anthems were by Richard Farrant, William Byrd, Orlando Gibbons, Henry Purcell, William Child, Dr. Blow, Dr. Croft, Dr. Robert Creyghton, Dr. Maurice Green, and Dr. Elvey, the present organist of St. George's Chapel; the versicles Venite and Litany, by Tallis; the chant for the Psalms, by Dr. Croft; the Te Deum and Benedictus, by Orlando Gibbons. The magnificent execution of this service is beyond all praise.

PROVINCIAL TOURS.—Madame Castellan, Mdlle. Bellini, Signor Gardoni, and Signor Tagliafico, are on one of Mr. Beale's active tours; Mr. F. Mori is the accompanyist. The party was at the Liverpool Philharmonic last Monday; at Nottingham on Tuesday; at the Bradford Festival on Wednesday, Thursday, and Friday; and will be at Scarborough to-day. Next week they visit Manchester. Derby, Birmingham, Sheffield, Harrogate, and Hull; and, on the week following, will sing at the Gloucester Musical Festival.——Grisi and Mario commence their farewell provincial tour, for a month, on the 24th of September. Their departure for America becomes more and more doubtful. Mario is now in Italy, and Grisi is in the Isle of Wight.

ENGLISH OPERA AT DRURY-LANE THEATRE.—It is now stated that Mr. Carte, the flautist, will be the manager for English opera, to commence next February.

ELECTION DINNER AT NORWICH.

THE return of Messrs. Peto and Warner as members for Norwich was celebrated last week in Norwich, with great éclat, by a two-fold festival. The large number of electors rendered it impossible that all the company should dine together; hence it was found necessary to divide the city into two districts—the Liberal electors of which should dine at St Andrew's Hall on two successive days. It was arranged, therefore, that the electors of the third, fourth, fifth, and sixth wards, and of the parishes of Plea, Timberhill, and the precincts in the first ward, should form the first day's (Thursday) party; and those of the remaining parishes of the first, second, seventh, and eighth wards, the second day (Friday). Both days were distinguished by the merry pealing of the bells from several churches of the city.

The management was vested in a committee of gentlemen: and right nobly did that committee perform its work; for both days passed off in a manner which left nothing to be desired.

In the hall, accommodation was provided for above 1000 persons. Two long rows of tables crossed the east end, and eight ranged from east to west. The former was presided over by Mr. Page, of the West-End Retreat; and the dessert by Mr. Wilson, of Queen-street. The noble hall was tastefully decorated with flags and banners bearing appropriate mottoes and devices, chiefly furnished by Mr. Beaty, of Little London-street; the election committee and Mr. Page also supplying some adornments of a similar character.

At five o'clock on Thursday about 1000 electors — with several gentlemen of the county—sat down to the bountiful repast; and during the evening they were entertained, in the intervals between the speeches, with the excellent singing of a number of amateur gentlemen electors, and the superior performances of Messrs. Fitzgerald and Jackson's well-known band. One singular feature in the arrangements excited considerable attention and amusement. Hitherto at the public dinners which have taken place on a large scale in Norwich, one of the officials of the Corporation has given the signal for the proposing of the toasts by the ringing of a large hand-bell. Upon the present occasion the flourish of a trumpet was substituted, which produced a novel and pleasing effect.

Mr. Peto and Mr. Warner, on entering, were received with loud applause. Lord Viscount Bury presided, supported by Messrs. Peto and Warner; Mr. R. Cooke, Mayor of Norwich; and Mr. G. Womack, Sheriff of Norwich. There were also present A. Hamond, Esq.; F. W. Keppell, Esq.; W. Gwyn, Esq.; T. M'Cullagh, Esq.; W. N. Burroughes, Esq.; J. Bielly, Esq., and James Jackson, Esq., of Yarmouth; J. Birkett, Esq.; and most of the leading gentlemen of the Liberal party of the several wards selected for that day's entertainment. The gentlemen appointed as chairmen of the side-tables were S. S. Beare, Esq., for the Guildhall; J. Wilkett, Esq.; W. L. Mendham, Esq.; C. Winter, Esq.; and Mr. William Bunn. A large number of ladies occupied the orchestra, amongst whom were Mrs Peto, Mrs. E. Willett, Mrs. I. O. Taylor, &c.—whose entrance was the signal for loud demonstrations of applause.

After the usual loyal toasts, the Chairman gave, in terms of high encomium, "the health of Messrs. Peto and Warner, the members for the city." Mr. Peto, who, with his hon. colleague, was most enthusiastically received, returned thanks. He said, that I think this splendid entertainment on the part of the electors as a twofold testimony first, that they approved the career of his hon. colleague and himself, that their principles were the same, and that they believed those principles had been honestly expressed on all occasions; and secondly, and in the second place, he took it as a protest against the calumnies which had been unworthily and dishonestly expressed with respect to the constituency themselves. He believed that at neither of the elections for the city of Norwich, since he had had the honour of being returned either by his opponents or friends had one skilling been spent at which any honest man need blush; and he looked at this meeting, therefore, as an expression to the world, that while Norwich might blush for what had occurred in former times, they were proud of the representative to which he had alluded, and asserted her independence and honesty. Passing in review the principal political events which had transpired since the general election, the hon. gentleman stated, that he had felt the present Government merited his confidence, and he had accordingly given it, he trusted, an intelligent and independent support. He congratulated the meeting upon the great amount of practical legislation which had taken place during the session—upon the passing of the Charitable Trusts Bill, of the Succession-duty Bill (which involved a virtual abandonment of class legislation) and of the Canadian Reserves Bill, which he looked upon as one of the greatest measures of those which had occupied the attention of Parliament. Having been largely concerned in Canadian affairs, and having an extensive acquaintance with that country, he was convinced that if Lord Derby's Government had remained in office another year, his policy would have lost Canada to the mother country. He thoroughly approved the foreign policy of the present Ministry; and Lord John Russell's maxim of doing all that could be done to maintain an honourable peace before going to war commended itself entirely to his mind. He believed we could only have an honourable peace by being perfectly prepared for war. In the present state of things, enormous armaments could not be helped; and this country, therefore, ought never to be ashamed of keeping up a navy to face the world, and an army equal to all its antecedents. Next session—taking as his text the speech of Sir James Graham at Carlisle—the country was promised a hearty, thorough-going, searching, intelligent reform; and with nothing less than that should he ever be content. A Ministry, however, was bound to propose, not only what they wished, but what they could carry. It was of no use for Ministers to bring forward what would throw themselves out of office, and place out of reach what the people had a right to demand. They must not, therefore, be angry if the new Reform Bill was not all they could desire.

Mr. Warner next addressed the meeting assembly, and drew a comparison between the Budgets of Mr. Disraeli and Mr. Gladstone, to the manifest disadvantage of the former; the hon. member expressing his full confidence in her Majesty's Ministers, because they are pledged to give to the people a large, a liberal, and full measure of reform.

Mr. Peto then proposed the health of the Chairman, which was drunk with great enthusiasm; and Lord Bury, in thanking the company, declared himself "a Whig of the sixth generation," and in favour of vote by ballot, and an advocate of Free trade.

The Chairman then proposed "Agriculture and Commerce, and the Union of the City and the County;" to which Mr. A. Hamond replied. Mr. Warren then gave "the health of the Mayor and Deputy-Mayor, and of the Corporation of Norwich;" to which the Mayor replied

The Chairman then proposed "the Health of Mr. M'Cullagh, the late unsuccessful candidate for Yarmouth." Mr. M'Cullagh returned thanks. The Chairman then gave "the Health of Mrs. Peto, Mrs. Warner, and the ladies," which was drunk with great applause. Mr. Peto briefly thanked the company; and the proceedings then terminated.

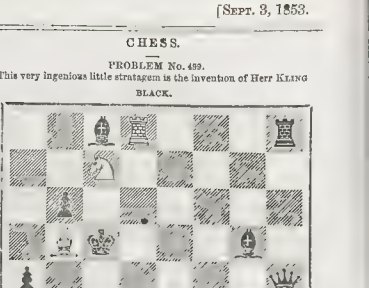
MONUMENT TO WATT.—The directors of the School of Arts, Edinburgh, established for the instruction of mechanics in such branches of science as were of practicability in their respective trades, it may be recollected, lately made several purchases of the central premises long rented by them in Adam-square, with the funds at their own disposal and the sum raised by public subscription many years ago in honour of the memory of James Watt, and resolved to denominate the institution "The Watt Institution and School of Arts." They also resolved to erect a monument to the memory of the great philosopher in front of the premises. The statue, which is to be of stone, is to be placed on a pedestal, and the whole will be about 14 feet in height. It is expected that the monument will be completed and inaugurated on the 19th of January next, the anniversary of the birth of Watt. It will be placed about nine feet from the pavement, skirting Adam-square

CHESS.

PROBLEM No. 489.

This very ingenious little stratagem is the invention of Herr KLING

BLACK.



WHITE.

White, moving first, to checkmate in three moves.

CHESS IN BELGIUM.

The following game is one of several just played by Mr. STAUNTON with M. de RIVES, a highly-promising amateur of Brussels.

(*King's Knight's opening*)

WHITE (Mr. S.)	BLACK (M. de R.)	(WHITE Mr. S.)	BLACK (M. de R.)
1. P to K 4th	P to K 4th	23. P to K B 4th	Kt takes K B P
2. Kt to K B 3rd	Kt to Q B 3rd		(g)
3. P to Q B 3rd	K B to Q B 4th	24. B takes Kt	B takes Kt
4. P to Q 4th	P takes P	25. P takes B	Q takes K Kt P
5. P takes P	K B to Q Kt 3rd	26. K Kt to K B 3rd	K R to K 3rd
6. K B to Q B 4th	P to Q 3rd	27. Q R to K B sq	K Kt to K 4th
7. P to K R 3rd	Q to K R 3rd (e)	28. Q R to K B 2nd	Q R to K sq
8. Q B to K 3rd (d)	R Kt to K 4th	29. Q to her 3rd	Q to K 3rd
9. Q Kt to Q B 3rd	Castles	30. Q to K 2nd	P to Q B 3rd
10. P to Q R 3rd	P to Q R 3rd	31. Q R to Q Kt 2nd	P to Q 4th
11. Q Kt to K 2nd	P to K R 3rd	32. K P takes P	P takes P
12. Q R to Q B sq	Q B to Q 3rd	33. P to K B 5th	B to Q R 4th
13. Q Kt to K Kt 3rd	Q B to Q sq	34. K R to K 3rd	Q to Q 2nd
14. Castles	K Kt to K Kt 3rd	35. R takes R (ch)	Q takes R
15. Q Kt to K 8th	Q to K 2nd	36. Kt to K 2nd	Q to Q 2nd
16. Q to her 3rd (c)	Q Kt to Q R 4th	37. Kt to K B 4th	R to Q sq
17. P to Q Kt 3rd	Kt takes B	38. Kt to Q 6th	Q to K Kt 5th
18. P takes Kt	K R to K sq (e)	39. R to K 8th (ch)	K to R 2nd
19. Q to K Kt 3rd	Q to K B 3rd	40. P to K Kt 3rd	Q takes B
20. K to K R 2nd	Kt to K B 4th (f)	41. Q takes K (ch)	K takes Q
21. Q to Q 2nd	Kt to K 3rd	42. P takes Q	
22. K Kt to K Kt 4th	Q to K Kt 2nd	And Black abandoned the game (h).	

(a) This sortie of the Queen is premature, and occasions Black a good deal of subsequent embarrassment.

(b) He might also have advanced the King's Pawn with advantage

(c) Important, to prevent a dangerous check from his Queen.

(d) Not judicious, as it enables Black to exchange his Q Kt for the adverse K Bishop.

(e) P to K B 4th would perhaps have been better

(f) Producing but not a good exchange.

He has no better resource

If to K B 5th	If to K B 3rd
If takes K P	If takes K P
Q Kt to K 8th, and wins	R to Sq

(g) It is proper to mention that although M. de Rives has not yet played without accepting odds with Mr. Staunton himself or Mr. Staunton, he is quite aware that either of those players can at any time command a superior advantage. He will probably in future play at the odds of the Pawn and two moves with them

CHESS IN RUSSIA

Lively Skirmish between Major JAENISCH and Prince OUROUSSOFF of the Caucasus.

(*Irregular Opening*)

WHITE (Major J.)	BLACK (Prince.)	WHITE (Major J.)	BLACK (Prince.)
1. P to Q 4th	P to K 3rd	12. Kt to K 5th (ch)	K takes B
2. P to Q B 4th	Kt to K B 3rd	13. K Kt takes P	P to Kt sq
3. Kt to Q B 3rd	P to K 3rd	(double ch)	
4. P to K 4th	P takes P	14. Kt to K 6th	Q to h 2nd
5. B to K Kt 5th	B to Q Kt 5th	15. Q R to K sq	Q kt to his 3rd
6. Q to her B 2nd	Castles	16. Kt takes P at K	Q to Q R 6th
7. Castles	B takes Kt	Kt 5th	(ch)
8. P takes B	P to Q 4th	20. K to Kt sq	B to Q 2nd
9. P to K B 3rd	P takes K B P	21. K R to K B sq	R to h sq (b)
10. Kt takes P	Q Kt to Q 2nd	22. R takes R (ch)	B takes R
11. P takes P	P takes P	23. R takes Kt	P to K Kt 3rd
12. B to Q 3rd (a)	P to K R 3rd	24. R takes P (ch)	K to B sq
13. B to K R 7th (ch)	K to K sq	25. Q to K 5th	K to his 2nd
14. Kt to K R 4th	P takes B	(ch)	

And White announced Mate in five moves.

(a) Although he has a Pawn less than his adversary, White's game is preferable, on account of the freer range his pieces have.

(b) Black loses immediately by this move He would probably have made a drawn game if he had played the Bishop to Q 2d

CHESS ENIGMAS.

No. 840.—From the *Schachzeitung*.

White: K at K R 4th, Q at Q R 8th, R at K Kt 3rd, B at Q R 2nd, Kts at K B 8th and 5th, P at Q 4th.

Black: K at his B 2nd, Q at her 4th, Rs at K B sq and Q 2nd, B at K Kt 3rd, Kt at K B 3rd, P at K 3rd.

White to play, and mate in four moves.

No. 841.—By a CANADIAN.

VISIT OF THE QUEEN TO BELGIUM.—Letters from Ostend state that her Majesty Queen Victoria intends making an excursion so that town, to return the visit of the Belgian Royal family and to congratulate the Duke and Duchess of Brabant on their marriage.

POPULATION AND MEMBERS OF PARLIAMENT.—A return to the House of Commons has been published respecting the population and members of Parliament returned for cities and boroughs in England and Wales, and Scotland. It appears that in England there are 89 boroughs at present containing 5000 inhabitants and upwards, not returning any members; and in Scotland there are 10. In some places in England the towns not returning members have considerably beyond 5000 inhabitants.

MONEY ORDERS.—GENERAL POST-OFFICE, AUGUST, 1853.—Minor money order offices opened at the undermentioned places on the respective dates named:—Bristall, Yorkshire, 6th Sept.; Pocombe, Cornwall, 1st Sept.; Elland, Yorkshire, 1st Sept.; Harewood, Yorkshire, 1st Sept.; Lymm, Cheshire, 5th Sept.; Morley, Yorkshire, 1st Sept.; Brodick, Bute, 1st Sept.; Tillicoultry, Clackmannan, 1st Sept. Northleach having been reduced to a sub-office under Cheltenham, and Brecwood to a sub-office under Stafford, they will be served (as regards money-order advices) from those places respectively.

THE THEATRES.

SADLER'S WELLS.

This theatre re-opened for the season with the tragedy of "Macbeth," in the style of its performance on its revival some six years ago, except that omissions is now made of the scene in the fourth act in which *Lady Macduff*, and her son, with their assassins, appear—a scene remarkably pathetic, but requiring first-rate acting. The *Lady Macbeth*, on the present occasion, was Mrs. Terman, who performed this most arduous and difficult character with a highly respectable effort, eschewing, however, the Collier amendments, and marking her disdain of them by a more emphatic pronunciation than usual of the accepted text. In some passages she was very successful, and made certain points with more power than might have been expected from her physique. The *somnambule* scene, however, disappointed the audience, and it might have been more satisfactory. had a better selection of drapery been made. In the character of the guilty thane, Mr. Phelps laboured more than usual to be effective, and had evidently studied some new and minute points for the more elaborate filling up of the general outline. He was also slower in elocution than he went, and aimed with success at artistic effects. In the scene with *Lady Macbeth* before the banquet, in which he conceals from her his orders just given for *Banquo's* assassination, he was excessively mysterious; but, although the meaning of the whole, as we have often pointed out, was missed, yet there was a poetic appreciation of the more embellished passages deserving of praise The poet's design was, that *Macbeth* should here re-assert his marital authority, and feel as elevated as he cannot but observe his wife to be depressed. The "horriest fancies" which she attributes to her husband are, in fact, nothing but conjective feelings of her own. *He* never was in better spirits; he has just uttered his mandate for the despatch of *Banquo* and *Fleance*, and is so jealous-found of the act of authority he has just displayed, that he will not concede a jot of the independence he has then recovered, by suffering his wife to partake in the guilty knowledge of the fact. The "night's black agents and their preys" (in the *plural*) are the hireling assassins, and poor *Banquo* and his boy *Fleance*; the superstitious dressing he lends to the occurrence is simply a mental characteristic. It is not until he finds that this "deed"—so worthy, in his anticipation, of his wife's after "applause"—is not thoroughly accomplished that his "fit comes again." It is then that he relapses into a state of indecision, while she for a moment recovers her self-possession; but only for a moment, for already she is stung with that remorse which leads finally to her sleep-walking and suicide.

The house was full, and plaudits were frequent—Mr. Marston, in particular, who performed *Macduff*, being summoned before the curtain at the end of the fourth act.

LYCEUM.

On Tuesday evening this theatre was opened for the début in opera of Mr. Augustus Braham, son of the great tenor; the character being *Edgardo*, in "Lucia di Lammermoor." In quality and character, Mr. Braham's voice resembles his father's; but it lacks power and dramatic passion. Nevertheless, the performance was a promising one; the recitatives and arias in the last scene were most effectively given by Mr. Braham, and were received with great applause. Miss Rebecca Isaacs was an admirable *Lucia*, the *Lisbon* of Mr. H. Corri was a judicious performance; the orchestra was ably conducted.

CREMORNE GARDENS.—The annual gala for the benefit of Mr. T. B Simpson, the enterprising proprietor of these gardens, took place on Tuesday evening, and was most numerously and fashionably attended. The illuminations were most brilliant, and the fireworks magnificent.

BOULOGNE.—This pleasant watering-place, now so easily reached in six hours by the trains of the South-Eastern Railway, is beginning to fill, in anticipation of the visit of the Emperor and Empress. Until this last month the weather has deterred many bathers. The town has been extremely improved within the last few years, provided with handsome footpaths, and attention paid to cleaning the streets, after the fashion of our watering-places. It is a pity that the town does not erect on the seashore a more substantial and elegant building for morning lounge, evening balls, and concerts, than the present shabby edifice, with a polite and spirited manager, prepared to make himself agreeable to both English and French such an establishment would be a great attraction. The Boulonnese learnt a lesson as to the value of English patronage in 1848; yet, on the slightest glut of visitors, the boarding-house keepers display a dearth of the cheapest and most profitable article in their trade—civility. There is decidedly an opening for a well-conducted boarding house near the jetty. There is one now building, facing the sea, in a most original situation for bathers its success will depend on moderate charges and civility. There have been some very pleasant concerts in the past month. Signor Salvatore Marchesi, and his wife, late Mdlle. Grisi, gave one on the 22nd, with little Tilo Matai, the extraordinary boy-performer on the pianoforte, with great success. It was, in fact, the most successful concert of the season. The Marchesis were afterwards engaged to sing a second time at the Philharmonic Concerts, on the 31st ult.

SALE AT DAYLESFORD, THE SEAT OF WARREN HASTINGS.—The sale of the furniture and effects of the mansion at Daylesford, the seat of the late Warren Hastings (engraved in the ILLUSTRATED LONDON NEWS of last week), was concluded on Saturday last by Mr. Lye, of the firm of Farebrother and Clark; the estate and manor having been previously disposed of to Mr. Grieswood, of the Stock-Exchange. The sale was numerously attended, and the furniture and other articles sold brought very good prices. Among the pictures, "Colonel Mordaunt's Cock-fight at Lucknow" brought 216 guineas; the oval Portrait of Warren Hastings, by Sir T Lawrence, 53 guineas; "The Lacemaker a Child in a Cradle," by Maas, 130 guineas; "The Taj Mahal—the tomb erected by the Father of Aurungzebe to the memory of his Sultana, Argemund Banoo," thirty guineas, "A Landscape," by Decker, eighty-four guineas; "A Volume of Forty Drawings, representing the Customs of the East," thirty-six guineas; "A Collection of Persian Drawings," thirty-eight guineas; "A Collection of Chinese Drawings," forty-two guineas. "A Collection of all the Evidence against Warren Hastings," in thirteen volumes, sold for eighteen guineas. The sale of the furniture produced £4000. At the commencement of the last century the Daylesford estate was alienated by the Hastings family, and it was upon that occasion purchased by a London merchant; and, after the lapse of seventy years, it was re-purchased by the late Warren Hastings.

TESTIMONIAL TO LEWIS JACOBS, ESQ.

THE high sense entertained by the members and seat-holders of the Great Synagogue, of the distinguished services of Mr. Lewis Jacobs, the Great Warden, has lately been testified by the presentation of a very superb piece of plate. The gift consists of a silver épergne, so formed that it can be used as a candelabrum. The pedestal of the épergne is divided into three compartments, and from its centre springs a grape-vine, the branches of which are so formed as to hold glasses or wax-lights. Around the vine are three Italian dancing figures, elegantly executed in frosted silver, and the base of the épergne is tastefully ornamented with grape-leaves and clusters of grapes. In one of the compartments of the pedestal is a Hebrew inscription, and in another is the following English inscription:—

Testimonial presented by the Members and Seatholders of the Great Synagogue, in London, to LEWIS JACOBS, Esq., Warden, for the eminent services rendered by him in the discharge of the several honorary offices of the congregation, extending over a period of fourteen successive years; for the urbanity and courtesy by which his conduct has ever been distinguished; for the anxious zeal at all times shown by him to advance the interests of the congregation, and for the zealous and efficient manner in which he has attended to his official duties, whereby the welfare and prosperity of the Great Synagogue have been materially promoted.—5613 (May, 1853).

The ceremony of presentation took place in June last, by a deputation consisting of Mr Lewis Nathan, Mr J L Mocatta, Mr Isaac Levyll, Mr. Isaac Hyam, Mr. Vanderlyn, Mr Isaac Lyon, and Mr Morris S. Oppenheim, the honorary secretary; who were accompanied by the Rev. A. L. Green and Mr. S. Oppenheim.

The Testimonial was presented by Mr Lewis Nathan, in a highly appropriate address; and Mr. Jacobs returned thanks for the splendid gift, assuring the subscribers that "he should hand it down as an heirloom to his children, hoping that when they reflected on the mark of respect which had been paid to their father, they would be zealous to support the greatest and most influential synagogue in Europe.

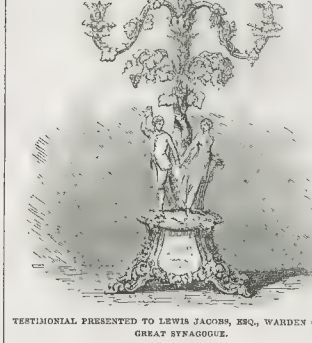
This elegant piece of plate is from the establishment of Messrs. Barnard and Sons, Angel-street, St Martin's-le-Grand.

TESTIMONIAL TO MR. SHERIFF CROLL.

THIS classic piece of plate has recently been presented to Mr. Sheriff Croll, in testimony of his highly judicious exertions in "the Gas Movement." The design consists of a Vase, with overhanging foliage and grapes, bearing two basso-relievi representing Fame, in connection with

TESTIMONIAL PRESENTED TO JOHN SADLEIR, ESQ., M.P.

manufactures and the fine arts. The Vase rests on a solid square base, the panels of which are filled with the arms, crests, bearings of the Sheriff,



TESTIMONIAL PRESENTED TO LEWIS JACOBS, ESQ., WARDEN OF THE GREAT SYNAGOGUE.

the arms of the City of London and County of Middlesex, with the civic insignia of office, and the following inscription:—

Presented to ALEXANDER ARCHIS CROLL, Esq., Sheriff of London and Middlesex, by the Directors and Shareholders of the "Surrey Consumers' Gas Light and Coke Association," in grateful acknowledgment of the advantage derived from his energy and talent in overcoming difficulties, and establishing the prosperity of the Association.—July 26, 1853.

The angles of the base are supported by frosted figures, representing Liberty, Truth, Justice, and Prosperity. The workmanship is of a high order, and reflects much credit on the manufacturing department of Mr Metcalf Hopgood, 202, Bishopsgate-street, London.

TESTIMONIAL PRESENTED TO MR. SHERIFF CROLL.

TESTIMONIAL TO JOHN SADLEIR, ESQ., M.P.

A VERY interesting ceremony took place on the 30th of July last, at the residence of John Sadleir, Esq., M.P., one of her Majesty's Lords of the Treasury, and Chairman of the London and County Bank, on the presentation of three very elegant Candelabra to that gentleman, by upwards of 300 of the shareholders of the London and County Bank, as a mark of their admiration of Mr. Sadleir's munificence in presenting a donation of £4500 to the officers of the establishment, towards the formation of a Provident Fund.

The Rev. Edward Johnstone, Vicar of Hampton, and chairman of the committee who had the management of the Testimonial, delivered a very excellent speech on the occasion; dwelling upon the superb gift, and the advantages which must result from the fund, the establishment of which they had met that day to commemorate.

The Chairman of the Bank, after replying in most appropriate terms, invited the company to an elegant dejeûner, and the party afterwards separated.

The Candalabra were manufactured by Messrs. Hunt and Roskell. We have engraved the centre-piece, which bears an inscription, describing its presentation by 310 shareholders and gentlemen connected with the London and County Bank.

THE MELBOURNE ATHENÆUM.

ON Saturday last, the ceremony of laying the foundation-stone of this building was performed by Viscount Palmerston, in the small but thriving town of Melbourne, in Derbyshire; the noble Lord and Lady Palmerston having been temporarily residing at Melbourne hall. As long ago as the year 1835 the germ of the Melbourne Athenæum was laid by the establishment of what was then termed the Society for Mutual Improvement. This society advanced by slow degrees; and for a considerable period its meetings were held in the silk glove manufactory of the Messrs. Haimes. As, however, it gradually grew into favour among the operatives, and extended its sphere of usefulness, a desire was naturally felt among the members to possess an independent and permanent habitation; and hence the interesting proceedings of Saturday last, which gave so distinct an embodiment to this feeling.

The cost of the proposed building (which will be situated in Potter-street, and will be a neat structure, with two porches, erected after the design of Mr. Stevens, of Derby) is estimated at about £700; of which sum subscriptions, including a donation by the late Lord Melbourne, have been already raised to the extent £450. It is intended to combine three distinct but important objects in the building: first, accommodation for an infant-school; next, a mechanics' institute; and lastly, a savings bank. The hall will also be available for lectures and public meetings. The Institute at present possesses between eighty and ninety members, and a library containing nearly a thousand volumes.

Every effort was made by the inhabitants to give *éclat* to the occasion, and the day was observed as a general holiday. Accordingly the Committee, feeling that it was only fitting, from the interest which Lord and Lady Palmerston ever evinced in all that concerns the well-being of Melbourne, that they should be invited to take a prominent part in the proceedings, embraced the opportunity offered by his Lordship's visit to his Melbourne estates, to request him to lay the foundation stone—a task which the noble Viscount cheerfully consented to undertake.

The town was gaily decorated, and a number of visitors from Derby and the neighbourhood of Melbourne took part in the proceedings. The Earl and Countess of Harrington, Viscountess Palmerston, and Lord Petersham, were among the spectators

The proceedings commenced by the presentation of an address to Lord and Lady Palmerston

Lord Palmerston, in his reply, said—

Allusion has been made in the address to the foreign policy which her Majesty pursued while I held the office of Minister for Foreign Affairs. What I had the honour of filling that situation, it was my object to use every effort in my power to preserve to the country and to Europe the inestimable blessings of peace. But I felt that the best security for the continuance of those blessings was to make foreign Governments understand that while, on the one hand, this country would never willingly or knowingly inflict wrong upon a foreign nation, on the other hand, we would never submit to the infliction of any wrong from them. In these endeavours I was nobly supported by the people of this country. I am convinced that as long as the Government of this country know that they are supported by the generous feelings of the British nation, we shall retain that respect in the minds of foreign Governments which is the best security for the maintenance of peace.

Lord Palmerston handled his silver trowel like an expert workman and laid the first stone of the Melbourne Athenæum in a solid and truly masonic manner, for which he was loudly cheered. His Lordship then addressed the assembly. He said—

Ladies and gentleman, it has afforded me great pleasure to assist in laying the foundation of so interesting a building as that which is to be erected on the spot where we now stand. It is, indeed, a building of peculiar interest, because it is destined to be, I may say, an epitome of the life of man, as well as an exemplar of the civilisation and improvement of the age. It is to contain, in the first place, a provision for infancy; in the next place, it will afford instruction and amusement for men of maturer years by means of the mechanics' institution; and, lastly, in the savings bank there will be a provision for advanced and declining age. In former times the treatment of infants was far different from that which now prevails Mothers considered, and still in some other countries consider, their infants as encumbrances, impeding their useful exertions; and they used to be soothed to their repose, and beaten till they ceased to weep (A laugh). In some countries, mothers who want to employ themselves in useful labour wrap them in swaddling clothes and hang them on pegs as you would a hat or a great coat (Renewed laughter) But our improved civilisation has taught us that we may provide for the care of infants, and at the same time begin to instruct their youthful minds. We are, when we establish infant schools, not only assisting mothers by giving them the means of more useful occupation, but we are laying the foundation for good order in that community of which their infants are hereafter to be members. The advantages of mechanics' institutes are so well known, and so justly and universally appreciated, that it would be a waste of time, I may say, to dilate upon them; but, nevertheless, it is not useless to bear in mind that these institutions contribute not only to the intellectual pleasures of the working classes, but also conduce greatly to their worldly comforts and advantage. And, speaking of pleasure, I may say that there are no pleasures which are really worth having but those which are connected with the intellectual faculties (Hear). Now, gentlemen, there is a remarkable difference between the times in which we live and those which have preceded us. We have, indeed, in these days, great discoveries and inventions made, worthy of the intellectual progress of the people who now live. Having described the progress of inventions, his Lordship proceeded. Now, happily, knowledge is at the command of all, and books for improving instruction of every kind are accessible at prices which place them within the reach of all; whilst also these mechanics' institutions enable the working classes to profit by the exertions, bodily and intellectual, of those who are the investigators and acquirers of knowledge (Cheers). The workman now, without going many yards from his home, may acquire a knowledge of distant countries which was gained by adventurous travellers who had traversed the burning desert or encountered the stormy ocean—who had visited the Arctic regions, or gone to the extreme of the southern hemisphere. The mechanic has now an opportunity of acquiring the results of these painful exertions without stirring from home. He has now also the means of applying to his own purposes all the knowledge which men of deep science have gained by laborious processes, whether in chemistry, in mechanics, or any other branch; and he is enabled easily to profit, at a small expense, from the investigations which have been so arduously pursued by others The mechanic is also, by these institutions, initiated into the secrets of nature, the contemplation of which tends to elevate the mind; and while, on the one hand, it teaches every man how insignificant a portion he is of the great universe which science unfolds to him, it must also, on the other, render him more contented with his lot, and more resigned to bear those individual evils which Providence in its wisdom may have ordained him to suffer. The mechanic in his small room, by the library which is placed at his command, is enabled to know the wonderful contrivances by which insects, too small to be seen by the naked eye are yet formed with all the artificial conformation of larger beings—that, although you cannot perceive them, they have joints, and limbs, and veins, and blood that circulates, and lungs that breathe—that they are endowed, although in minuteness hardly conceivable by man, with all the elaborate contrivances which we find in the larger objects of creation. The mechanic also by these institutions is enabled to carry his mind to the more elevated and distant regions of the universe; he is enabled, not merely to understand the wonderful mechanism of that system of which this earth forms a part, but he can carry his views further, and learn that there are visible to those who have the command of the marvellous telescopic improvements of the day, eighty millions of suns, all of them probably as large, though some may be larger

than ours—all of them surrounded by planets like our sun, and containing, probably, an indefinite number of beings, all the creatures of the same great incrutable Power wh ch made this world—the contemplation of which subject must, I think, raise the mind of the mechanic from earthly low, and vulgar considerations, and tend to direct his mind with fervent devotion towards that great and mysterious Being from whom he derives his present existence (Cheers) Well, then, if these institutions are advantageous to the middle age of man, so also are savings banks valuable establishments for the benefits they confer upon declining age. There is no maxim of life more important than this, that a man should make the day conducive to the morrow (Hear) —that he should be willing to forego the enjoyments, the temptations, the allurements of time present, for the purpose of laying up a store which shall ensure to him comfort in time to come: and the observance of that maxim is no less productive of comfort and happiness in this world than essential for our well-being hereafter. Those who act upon that maxim will find themselves comfortable, wealthy, and respected. Those who, on the other hand, are careless of to-morrow, and think only of to-day, and waste and riot in extravagant and needless pleasures those means which ought to be laid up in store for their future support, will lose the respect of all their neighbours, and, what is still a greater loss, they will lose all respect for themselves (Hear). Well, gentlemen, nothing can be more calculated to encourage the habit of forethought and providence than these savings banks; and I trust that the good effect of the establishment of one in this town will be as great as it has been proved to be in other places where similar institutions have been founded. I look therefore upon this institution as one of perhaps greater interest than any that has ever been placed under a single roof, because it combines a care for man from his infancy to his most advanced age—it provides those means which the improved civilisation and greater knowledge of the times have pointed out as useful to all classes of the community; and I trust, therefore, that this day will be one auspicious to Melbourne—that every man and every child who now hears me will reap in the future career of this institution benefits far greater than perhaps many may have anticipated, but benefits which have always attended institutions of the like nature wherever they have been founded, and wherever they have been adequately supported (cheers). There is one other topic, ladies and gentlemen, on which perhaps I may be permitted to address to you a few words. There is one thing, I think, still wanting to complete the institutions of this town—I mean a school for the education of girls (Hear). There is an excellent boys' school, but there is not yet a similar establishment for girls. Now, gentlemen, it is well known that the education of women is of the greatest importance to society. Men may be indeed the rough stones of which the fabric of society is built—they are the strength and the resisting portions of that fabric; but women are that finer cement without which these rougher ingredients would not find order or consistency, and without which there can be no beauty, no form, no lasting endurance (Hear). We all know the important influence which is exerted by women upon the welfare of man, whether it be in the capacity of daughters, of sisters, of wives, or of mothers; and therefore, independently of any regard for the fairer sex—a regard, however, which I am persuaded all whom I now address feel in the strongest degree (a laugh)—the most selfish consideration, a single regard for ourselves, a mere regard for man, abstracted from and independent of woman, ought to lead us to endeavour so to mould and educate the rising generation of the female community that they may be as well fitted as it is possible for good training and instruction to make them to perform the various duties of life in the capacities of daughters, sisters, wives, and mothers. I therefore commend to your consideration—though it forms no part of the institution now about to be established—I commend to your anxious and earnest consideration the establishment also of a girls' school at Melbourne (Cheers).

The ceremony concluded with the National Anthem, in which the whole of the company joined.

The party then retired to the National School-room, where a collation was served under the presidency of Mr. J T Cantrell. Lord and Lady Palmerston Earl Cowper, the Hon Mrs. Lamb, the Hon. Mr. W. Cowper, M.P., Mr. and Mrs. Moss, the Rev. Mr. Dean; Messrs. Mosley, S. Fox, Sandars, Heywood, &c., were present on the occasion. After the repast, the usual loyal toasts were duly honoured, when the Chairman gave "The Health of Lord and Lady Palmerston," which was drunk with enthusiastic applause. Lord Palmerston thanked the company, and proposed "Prosperity to the Melbourne Athenæum." The Chairman then gave "The Health of Lord and Lady Cowper;" and Lord Cowper proposed "The Health of the Committee." The Rev. Mr. Dean returned thanks on behalf of the committee, and proposed "The Health of Mr. Moss, the Mayor of Darby, and the Visitors" Mr. Moss acknowledged the toast. Lord Palmerston then proposed "The Beauties of Derbyshire," and the toast was drunk amid loud cheers. The Hon. H. Cowper, M.P., returned thanks on behalf of the ladies.

The proceedings then terminated. The company, as well as the townspeople, afterwards dispersed themselves among the gardens and grounds of Melbourne, which were, by the kind permission of Lady Palmerston, placed at the disposal of the Committee for the benefit of the institution. Boats also plied on the lake for the accommodation of excursion parties.

VISCOUNT PALMERSTON LAYING THE FOUNDATION STONE OF THE MELBOURNE ATHENÆUM.

THE ENCAMPMENT AT BESIKA BAY.

OUR artist sends us the accompanying Sketch of the Encampment established at Besika Bay, for supplying the combined fleets with provisions. This temporary wooden village is situated close to the shore on the left bank of the little river Scamander; and has a very busy and picturesque appearance. When it is considered that the armaments of the two fleets are jointly equal in number to the population of many third-rate cities, the crowd of bullocks, sheep, and poultry, daily driven up from the interior, and slaughtered there, may be imagined. Fruit, vegetables, and other provisions, in equal abundance, including spirits, wines, and various slops, are brought by camels; and the speculators

ENCAMPMENT, AT BESIKA BAY

in these commodities drive an active and profitable trade. The sanitary arrangements are very much neglected; there being no provision made for carring off the refuse of a considerable population accidentally brought together. The offal from the thousands of animals slaughtered on shore is thrown into the sea; which being cast back covers the shore for miles on either side, loading the air with a most offensive stench. Fever is life amongst the Orientals on shore, and a good deal of sickness also prevails in both fleets. Clouds of locusts until recently filled the air, but they have begun to disappear. A detachment of *kavasses*, a Turkish police, picturesque-looking fellows, armed with yataguns, are here to keep order.

POSTSCRIPT.

FRANCE.

The prospects of the harvest and the high price of corn receive much attention from the Government. Although the French Government endeavours by assurances in the *Moniteur* to persuade the country that the crops have turned out better than was expected, the measures it has taken and the active speculations of the French corn-trade prove that considerable scarcity is apprehended. Louis Napoleon judges that nothing is more likely to embarrass his Government and to arrest the immoderate commercial speculations now afloat in France than a sudden rise in the price of provisions. Accordingly, he some months ago suspended the sliding-scale of the French Corn-laws, and has since removed the differential tonnage dues on cargoes of corn. The supply of flour which we have received from France for the last few years has ceased, and the French dealers begin, on the contrary, to import largely. The Government have already made purchases to the value of about 2,000,000*l*.; but flour is very scarce, and there is a continuous rise of prices in all the markets. The latest news from Odessa is that the French Government are making enormous purchases of corn there, the dearth of bread threatens discontent and disturbances among the working-classes. A telegraphic despatch from Rennes (Britanny), received in Paris on Wednesday, mentions that some rioting had taken place in that town in consequence of the rise in the price of corn. The increase of price, by the Government returns, has been from 21*f*. the hectolitre to 30*f*.—being an augmentation of 9*f*. in one month.

There was a considerable amount of business transacted at the Paris Bourse on Wednesday; but as there were more sellers of Government securities than buyers, prices declined. In the absence of all political news of importance, the state of the corn-market occupied the attention of the speculators, and the rapid rises in the prices of the four principal articles, 3*f*. the hectolitre per day produced an unfavourable effect. The Three per Cents opened at 70*f*. 45*c*., rose to 70*f*. 50*c*., but subsequently to 70*f*. 30*c*., and closed at 70*f*. 40*c* for the end of the month. The Four-and-a-Half per Cents closed at 104*f*. 75*c*.

SWITZERLAND

A great fire took place at Lausanne, on the 26th ult. relative to the increasing price of corn, which had begun to cause considerable uneasiness amongst the population.

AUSTRIA.

Advices from Vienna, dated the 26th ult., state that the Emperor has consented that a considerable reduction of the army shall take place in 1854, except only in case of some unforeseen occurrence. Now that a new loan is about to be negotiated, it is necessary for Austria to make some attempt to re-establish her credit in the Exchanges of Europe.

RUSSIA AND TURKEY.

A semi-official announcement is made by an English Government organ, that the alterations required by the Divan to be made in the note adopted by the Conference at Vienna affect the substantial provisions and meaning of the document so slightly, that they can hardly, by any possibility, occasion any serious opposition or delay at St. Petersburg. The answer of the Porte, with the modifications, would probably be received at St. Petersburg on Wednesday; and in a day or two the Emperor's reply will be known

An autograph letter from the Emperor of Austria has been received by the Sultan, in which his Majesty the Emperor prays his friend and brother to accept the last project of a note, stating that if rejected he (the Emperor) will retire altogether from the question. The Sultan, in reply, has sent an autograph letter to the Emperor of Austria, thanking him in the manner for the "good results of his mediation, and the efforts he has made for the maintenance of peace."

During all the negotiations, Turkey and Russia have not for a moment ceased their warlike preparations. Both sides have been busily employed; troops are seen passing up the Bosphorus, in transports towed by government steamers. About 60,000 men have been already forwarded to Varna; most of whom are sent to different posts on the frontier. The Turkish fortifications on the Danube continue to be pushed forward with activity. In the Dobrodja, in the environs of Shumla, and especially in the defiles of the Balkan, redoubts are being constructed, it is said to the number of 200. Unless the dispute receives a pacific solution, the Turks will have, by the middle of September, an army of 381,000 men ready to march. By the last steamer from Galatz, we learn that more Russian troops, with cavalry and artillery, had entered Moldavia.

Letters from Odessa to the 20th of August state that an extraordinary activity reigns in the grain market. The stores were not sufficiently large for the quantities of corn brought to the place, and it had been found necessary to establish depôts in the open air, which contained 60,000 hectolitres of wheat, 100,000 of rye, 20,000 of barley, 50,000 of oats, and 30,000 of maize. The price of wheat varied from 14*f*. 28*c*. to 15*f*. 40*c*. per hectolitre, and the freight was from 9*f*. to 10*f*.

INSURRECTION IN TORTOLA.

By the *Magdalena* we have news of a serious riot and insurrection at Tortola, one of the Virgin Islands, belonging to Great Britain. The insurrection broke out on the 1st of August—the day fixed for the payment of the rural tax of the Island. This tax has recently been increased, but the people resolved to resist it, and went in a body to the Treasury, tendering the original amount of the tax, which being refused, some disturbances occurred, and several of the ringleaders were taken into custody, fined, and put into gaol. The people thereupon assembled together and rescued the prisoners. They then broke out into open revolt, took possession of the town, and burnt many of the houses Roadtown was left a mass of ruins, and the wealthier inhabitants were flying in every direction. Colonel Chads, President, administering the Government, sent to St. Thomas's for assistance, and a sailing-vessel with troops was despatched after them at once, but they arrived too late to prevent or punish the excesses committed. At the latest accounts the insurgents had retired to the interior, and the troops from St. Thomas's had taken possession of the remains of the town. Only one of the insurgents seems to have been killed, but several were wounded. The Court-house was totally burnt. Twenty-five houses in Roadtown were also burnt down, and seven others plundered and destroyed. When the last advices left, reinforcements were arriving from the neighbouring West Indian islands in sufficient numbers to enable Colonel Chads to retain the command of the island against the rioters.

Tortola is an island twelve miles in length and four in breadth, with a population of less than 9000. It has a Governor, Council, and Legislative Assembly. The island is very unhealthy to Europeans

THE IMPERIALIST GOVERNMENT AT PEKIN.

In another column will be found ample details of the progress of the Chinese rebellion in the provinces. From the following letter we learn that apprehensions of an impending famine and a commercial panic at Pekin, distract the councils of the Emperor and his Government, who, under the pressure of general discontent and an exhausted treasury, are resorting to measures of a desperate and suicidal character.

The exhausted state of the Imperialist military chest is fully confirmed by the edicts and memorials of the *Pekin Gazettes*, and by private letters from Pekin. A memorial of one of the boards states that upwards of 70 000,000 taels of silver have been expended in these military operations; and we know that before they commenced the State funds had not recovered from the drain caused by the Kanghin indemnity. The Central Government has now been compelled to pay in notes, which, as they represent nothing but the emptiness of the Imperial Treasury, have no value in the market. In consequence of their issue about 100 of the private banking establishments, whose notes (for such are as 100 cash), form the circulating medium in Pekin, closed in a panic, causing immediate embarrassment and distress among the lower classes, whose position had already become straitened from the high price of grain. Our readers are aware that the population of Pekin (comprising a paid stationary garrison of about 100,000 Manchoos and their families) are mainly dependent on the supplies sent annually from the fertile lowlands on both sides of the Yang-tse; as far as the Yellow River on the north, and the bay of Hangchow on the south. These supplies used to be despatched by the great canal in the months of March, April, and May; being in each case the contribution from the crops of the preceding year. During the last two or three years a portion has been sent by sea, and last year a thousand junks cleared seaward from the port of Shanghai. This year none has been sent by canal; and the whole supply furnished by the above-mentioned region was that contained in some two hundred vessels, which left this port about a month ago, forming, probably, not one-fifteenth of what will be required. The price of grain has trebled in Pekin about a month back; and as the last and only resource, a high officer has recommended in a memorial, that rice be bought up in Formosa by the local authorities; which, he argues, can be done with the smallest amount, may arrive in time to stave off the apprehended distress. But it is extremely doubtful that the authorities of Foo-keen and Formosa have the money, the energy, or the will to effect such a measure. The only method of raising the extreme necessary money at Pekin. It appears, from the *Gazettes*, to be driving the Government to perfectly suicidal measures. The properties of the former Minister, Se-shang-ah, and of the Imperial Commissioner Sze kwang-pin, have been confiscated—their sons, mandarins in Pekin, being previously degraded and thrown into prison to prevent their abstracting any portion. As both of these officers had been brought prisoners to Pekin, and the former had been already tried and condemned to death for misconduct, these proceedings had in them nothing unusual; but the same fate has befallen the property and family of Tuh-kwei-ing, who fell at his post in Nankin. The death of an officer at his post by the hand of the enemy has hitherto been held to obliterate all faults. Such rule has been to confer posthumous honours on the deceased and rewards on his family. Now, unsuccessful devotion has been visited in the same manner as early and flagrant dereliction of duty. Besides these, two others, Kwang-yung and Ta-tsze-kwei, have been executed for some wealthy families—those of Muhchang-ah, Keying, and other former Ministers—amounting to a partial confiscation of their property. This step creates dissatisfaction amongst an influential class, and is at the same time driving the specie in private hands out of the capital. The above detailed proofs of the scarcity of provisions and the want of money in the Government treasuries at Pekin, we conceive to be of great importance, as showing—first, that the Imperial armies near Nankin, Yangchow, and Chin-kiang must depend for subsistence on the provincial treasuries, known to be only nearly or quite exhausted; secondly, that the Central Government, far from having the means of sending down reinforcements of Tartars from beyond the Great Wall, may have to struggle for existence with a local insurrection in Pekin itself. As to Tartar chieftains moving down with their people at their own cost, as we have seen it somewhere stated certain of them had offered to do, we can perfectly comprehend why the Emperor had, as we also stated, declined the offer. It could only have emanated from some of the hereditary Mogul Princes, of whom no one knows better than the Manchoo Tartars they have never forgotten their descent from Genghis Khan and his generals, the former rulers, not of China merely, but of all Asia and the East of Europe. They have always been jealous of the pension and jealousy to the reigning dynasty. It is by no means impossible that they and their followers, bred in the saddle and accustomed to the hardy life of nomadic herdsmen in sterile regions, would, if now brought in, be able to hold all that portion of China north of the Yellow River for years against a dynasty established in the south; but it is equally probable that they would hold it for themselves, not for the Manchoo Sovereign. As to the low canal-intersected country south of the Yellow River, these horsemen, to whom a boat must be somewhat of a curiosity, would there have small chance of coping with the Kwang-tung leaders and their army—men familiar with internal navigation from childhood, and now inured to the hardships and dangers of war.

THE RAJAH OF SARAWAK.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

WHITE LACKINGTON, ILMINSTER, August 31st, 1853.

In a late number of your excellent and interesting paper, you noticed the fact of the noble-hearted Rajah of Sarawak, Sir James Brooke, having been attacked by small-pox. As an appendix to such notification, I beg to send you an extract from a letter which I received yesterday, from my son, Capt. J. Brooke Brooke, the nephew of Sir J. B.; the contents of which, if you please, you can circulate.

I am, gentlemen, yours faithfully, REV. FRANCIS C. JOHNSON.

My son has taken the name of his uncle, which makes it distrent from mine.

Sarawak, [illegible] August 8th, 1853.

I am sure you will be anxious, very anxious to hear of our Rajah. Thank God! he is fast recovering, and to-day sits in an arm-chair for the first time. We have had a trying time, and for once I gave up all hope of saving him; the native doctors told me he must die, that it was of no use doing any more: however, stimulants brought him through. He has suffered very little pain; and now, though of course dreadfully weak, is in excellent spirits, and mending every day. You must not be at all alarmed at the aspect of our affairs. We are not so; we are doing right, and we are doing "great good," and that's a comfort with which to console us under all adversity. I think, when people have calmed down, we shall be informed in a quiet manner, and be looked upon as the *martyrs*, and then there will be a reaction. However, all we can do will be left alone. Sarawak can fight her own battles, and protect her own people from piracy. I am going off up the river in about an hour's time, to build a sanatorium on one of the hills inhabited by the Dyaks, where the Rajah will remove, when strong enough. (Ever (in haste) yours

THE EARTHQUAKE IN CUMANA.

—The first accounts of the late earthquake in Cumana were so terrible that they were supposed to be greatly exaggerated. It is, however, very painful to learn, from unquestionable information, brought by the *Ocean Bird*, from Curaçoa, that the destruction was even greater than had been at first reported. Information from *La Cronica* we learn that—"The 15th, 16th, 17th, and 18th were days of anxiety to the inhabitants of this island, which was enclosed, and until two p.m. a fresh breeze blew from the sea, which tempered the heat. The wind then changed to the south, and a quarter of an hour after the first shock was felt. Supposing it to be one of the slight trembings of the earth to which the inhabitants are accustomed, almost the whole population remained in tranquillity, but scarcely a few instants had passed, when a most violent convulsion was felt, accompanied by a frightful noise and a deep darkness. These were caused by the edifices of that ancient city, which fell all at once, and produced an indescribable sound. When the motion of the earth had ceased, those who had the fortune to be saved from the calamity [illegible] to be called. A terrible picture presented itself—ruins under which a great number of victims were buried. The consternation was universal. Scarcely a single family had escaped, but to mourn the loss of one or more of its members; and in the streets, squares, and neighbouring fields were seen wandering spectres, covered with blood and dust, and filled with terror. It is not even yet possible to ascertain with certainty the number of victims; but it is said positively not to be less than six hundred. All the public buildings fell—viz., three churches, the Castle of San Antonio (the last prison of General Paez), the Theatre, the Charity Hospital, that of the Lazarines, the College, the Government-house, &c. Almost all the private houses were also destroyed; and those which were not entirely ruined have been left in such a state as to be uninhabitable. It is impossible to estimate the number of inhabitants who were then living, and enjoying the comforts of life, and were suddenly left in orphanage or misery, with no shelter but the fields and the sky, in a debilitating climate. The natural phenomena which accompanied this commotion were the following:—The sun-Lation was vertical; the sea retired at the beginning several yards from the coast, and then rose above its level and surrounded the city; the river Manzanares also rose several feet, while the *pozos* fell visibly, and remained exhausted on both sides. Besides the loss of life, the destruction of property amounts to millions. The ancient city of Cumana, the first built on Terra-firma by the Spaniards, it may be said, has disappeared in an instant."

WESLEYAN METHODISTS.—A correspondent wishes us to correct our statement that the Wesleyan body had decreased 1000 during the last year; and says it should be 10,000. Another correspondent confirms the statement.

ELECTION NEWS.—Mr. J. F. Maguire has been returned for Dungarvan by a majority of 74 over Mr. Gregory. —By the death of Mr Smyth, M.P., a vacancy has occurred in the borough of Lisburn.

BEQUESTS.—Mr. John Simmit, late of Lower Norwood, has bequeathed £2000, to be equally divided among the following metropolitan charities:—City of London Hospital for Diseases of the Chest, St. Mary's Hospital, the Royal Sea Bathing Infirmary, Margate, and the Royal Free Hospital.

NEW MAGISTRATES FOR LANCASHIRE.—Two new magistrates for the Salford Hundred of Lancashire, qualified as the Salford sessions—namely, Mr. Robert Ashton, of Rushome hall; and Mr. James Heywood Whitehead, of Southside, Manchester.

STRIKE OF LIGHTERMEN.—The free lightermen on the Thames have struck for an advance of wages, causing a vast amount of inconvenience to shipers and merchants, and the public. Their weekly earnings have hitherto averaged 27*s*., they now demand either 6*s*. per day and 6*d*. for night work, or an equal sum per night work. The freemen of the Watermen's Company possess the exclusive right of navigating craft on the Thames, and none freemen, however competent, are restricted from doing so by heavy penalties

FATAL FALL FROM A CLIFF.—On Thursday week, a large party of friends, who had been enjoying themselves at a pic-nic in the picturesque neighbourhood of Boscastle, Devonshire, were about to return home, when the hat of Mr. Dennis, a solicitor, who was sitting with ladies to the carriage, was blown off, and, in running hastily to recover it, the unfortunate gentleman fell over the cliffs, and was instantly dashed to pieces.

THE QUEEN'S VISIT TO IRELAND.

(Continued from page 190.)

THE FIRST VISIT ON TUESDAY.

How highly her Majesty was gratified with her visit to the Exhibition, and the reception she met with, was evinced by the following official communication, which was received by the Committee early in the same afternoon:—

Viceregal Lodge, August 30.

SIR,—In obedience to her Majesty's commands, I have the honour to inform you that her Majesty has been graciously pleased to express her Majesty's entire satisfaction with the arrangements which have this day been made for her Majesty's reception at the Exhibition.

I am, sir, your obedient servant, GRANVILLE

The Chairman of the Executive Committee.

TUESDAY AFTERNOON.

His Royal Highness Prince Albert, accompanied by Col. Phipps and the Hon. Major Ponsonby, visited the public baths and wash-houses, Usher's Island. His Royal Highness was received by Sir Edward Blakeney, Bart., who conducted him through the building, in which he remained a quarter of an hour. The Prince, accompanied by Sir Edward Borough, and the aides-in-waiting, then drove to Marlborough-street, for the purpose of visiting the model lodging-house recently established in that street. His Royal Highness expressed himself much pleased with the result of both visits. On leaving the hall he was warmly applauded by those outside who recognised him. His Royal Highness then proceeded to the Viceregal Lodge.

THE QUEEN'S VISIT TO MR. DARGAN.

Her Majesty proceeded, at a quarter to five o'clock, to visit William Dargan, Esq., at his residence, Mount Anville. The weather, which had been threatening for some time previously, began to assume a more cheering aspect. Her Majesty, Prince Albert, the Prince of Wales, Prince Alfred, and the Countess of St. Germans, entered the first carriage. His Excellency the Lord-Lieutenant, the Hon. Miss Bulteel, and the Earl Granville occupied the second carriage. In a barouche which accompanied the Royal carriages, were the officers of the staff in attendance on her Majesty. During the ride to Anville, the rain fell heavily, and the tops of the carriages had to be closed.

The route taken by the Queen was along the quays at the north side of the city, over the Ha'penny Bridge, through Grafton-street, Dawson-street, and the south side of Stephen's-green, over Leeson-street-bridge, Donnybrook road by Clonskea, and on by Roebuck to Mount Anville, the residence of Mr. Dargan, where her Majesty and party arrived at half-past five o'clock.

The cortege proceed d up the splendid avenue of this princely residence at a slow pace. The Royal party having alighted, her Majesty, Prince Albert, the Prince of Wales, and Prince Alfred, were received by Mr. and Mrs. Dargan. The manner of her Majesty was exceedingly gracious and courteous, and that of Prince Albert most polite and cordial. Mrs. Dargan having been presented to her Majesty and Prince Albert, by whom she was most graciously addressed, the Royal party were then conducted throughout the house, and thence to the lofty tower adjoining, from which they obtained a view [illegible] to be surpassed for grandeur, beauty, and variety in the United Kingdom, commanding as it does views of Kingstown Harbour and the whole mountains, Howth, and the Bay of Dublin, the city and the luxuriant valley of the Liffey.

Her Majesty and his Royal Highness expressed their warmest admiration of the scenery.

After paying a visit of more than half an hour's duration, the Royal party proceeded to return; and while the carriages were being brought round, the Queen and Prince Albert again entered into familiar conversation with Mr. and Mrs. Dargan, of whom they took leave most graciously on departing for the Viceregal Lodge. In returning, the Royal party proceeded at a quicker pace by the route leading through Kilmainham to the Park, and arrived at the Lodge shortly after seven o'clock.

THE DINNER AND SOIREE.

The following had the honour of receiving invitations from their Excellencies the Lord-Lieutenant and the Countess of St. Germans, to meet her Majesty and his Royal Highness Prince Albert, at dinner on Tuesday evening, at the Viceregal Lodge:—The Earl Granville, the Duchess of Wellington, the Earl and Countess of Clanricarde, the Earl of Glengar, the Earl and Countess of Miltown, the Earl and Countess of Erne, the Earl and Countess of Donoughmore, Viscount and Viscountess Gough, Viscount St. Lawrence, Lord Adolphus Fitzclarence, Lord and Lady Dunsandle, Hon. Miss Balfour, Hon. Colonel Grey, Hon. Colonel Phipps, Hon. William Knox, Sir John and Lady Young, Sir Edward and Lady Blakeney, the Lord Mayor, Captain the Hon. J. J. Bourke, aide-de-camp in waiting.

Later in the evening, their Excellencies gave a *soiree dansante*, to which a very large and brilliant party received invitations.

TUESDAY'S ILLUMINATIONS.

Several of the principal streets throughout the city, which had been illuminated on the previous evening, were re-lighted this night by the proprietors of those establishments from which the various gasfittings and devices had not been removed. An extra number of the metropolitan police were placed on duty in several districts within the Circular-road. The pedestrians preserved the greatest order during the evening.

THE VISIT TO THE EXHIBITION ON WEDNESDAY.

Her Majesty, accompanied by Prince Albert and the two young Princes, visited the Great Exhibition this morning, and examined the different objects in the main hall, the Fisheries department, and the Picture Gallery. Her Majesty was attended by the Lord-Lieutenant, the Duchess of Wellington, the Hon. Mr. Dundas, Colonel Phipps, the Earl of Granville, and the Earl and Countess of Rosse.

Her Majesty was dressed in a printed blue barège robe, a Canton white shawl, and a white crape lisse bonnet; the Prince was plainly attired in a black coat, and the young Princes in light paletots and white trousers.

Her Majesty entered by Kildare-street, and took the visitors by surprise. The public were not admitted till twelve o'clock, when her Majesty expressed a desire to wait half an hour longer, in order that she might have the pleasure of meeting her loyal subjects in a private manner.

Her Majesty admired greatly a picture by Wappers, a Belgian artist: the subject is Louis XVII. in prison, who is represented in a starving condition, and expressly imploring the Almighty to forgive the murderers of his parents. The young Princes and her Majesty took great interest in the picture.

Her Majesty also much admired and ordered a toilet-mirror in the case of Messrs. Elkington and Mason. It is composed of oxidized silver and gold, with an agate-ring cup on the top, and standing on a marble plinth. This was the only object, except a picture, that her Majesty purchased.

The Grand March played by the military band in the Exhibition, on her Majesty's visit, was composed by Dr. Stewart, at the request of the Committee, and is to be dedicated to the Prince of Wales. Dr. Stewart, also, played several of Prince Albert's German melodies on Berrington's organ.

Upon Prince Albert's attention being called to Mr. Griffith's splendid geological map and sections by the Lord-Lieutenant, the Royal party approached, and were waited on by Dr. Griffith, who entered into a detailed explanation of the structure of the country. During the course of this explanation her Majesty frequently testified the deep interest she took in the subject by some expressive remarks; and Prince Albert, who is known to have a good general knowledge of geology, upon Mr. Griffith calling his attention to the metamorphic rocks of Galway, anticipated the explanation, by remarking upon the igneous rocks produced by the proximity of the granite in that district. Her Majesty was also pleased to accept a reduced copy of Mr. Griffith's geological map.

Her Majesty having passed two hours in examining the various productions, returned to the Viceregal Lodge.

THE REVIEW IN THE PARK

In the afternoon there was a Review in Phœnix-park. Her Majesty, Prince Albert, and the Royal children were present. There was an immense attendance. The evolutions commenced at half-past four o'clock, but did not continue very long, owing to heavy rain. The Queen rode in an open carriage. Prince Albert was on horseback.

On Monday afternoon her Majesty sat to Mr Patterson Smith for her portrait, from which, when completed, Mr. Cranfield, of Grafton-street, will publish an engraving commemorative of the Great Industrial Exhibition in Dublin of 1853.

CALENDAR FOR THE WEEK.

SUNDAY, Sept. 4.—13th Sunday after Trinity. Riots at Manchester, 1830.
MONDAY, 5.—Malta captured, 1800. First American Congress, 1774.
TUESDAY, 6.—Blucher died, 1819. Hannah More died, 1833.
WEDNESDAY, 7.—Buffon born, 1707. Dr. Jounson born, 1709.
THURSDAY, 8.—Nativity of the Blessed Virgin.
FRIDAY, 9.—William the Conqueror died, 1087.
SATURDAY, 10.—Mungo Park died, 1771.

THE RUSSO-TURKISH QUESTION,
AND THE CONDITION—MORAL, SOCIAL, AND POLITICAL—
OF THE TURKS IN EUROPE.

In preparation.

A GRAND DOUBLE NUMBER
OF THE
ILLUSTRATED LONDON NEWS.

Profusely Illustrated with Splendid Engravings of Scenes and Incidents in European Turkey, from Sketches made expressly for the purpose by the Artists of the ILLUSTRATED LONDON NEWS. Among other Subjects, will appear:

A Large Panoramic View of Constantinople from the Tower of Galata. From a Sketch by S. Read, drawn on the Wood by Birket Foster.
Egyptian Camp on the Bosphorus.
The Golden Horn.
The Sultan's New Palace.
An Original Portrait of the Sultan on horseback, proceeding to the Festival of the Bairam.
The Patriarch of the Greek Church.
The Combined British and French Fleets, sketched in Beshik Bay, August, 1853.
Group of Turkish Militia.
The Castle of the Seven Towers.
Sketches of Turkish Costume and Character in the Streets of Constantinople.
The "Sweet Waters of Europe."
The Passes of the Balkan. Drawn by Dodgson.
The Obelisk on the Hippodrome, at Constantinople.
View of Ichtiman.
Turkish Police-station.
The Mosque of St. Sophia.
Hotel of the British Embassy at Pera.
"Miraculous" Spring in the Greek Church, Constantinople.

And various panoramic and other sketches in the Bosphorus, the Dardanelles, and the Black Sea.

The Literary portion will include letters from our Correspondent in Constantinople; a *resumé* of Turkish history from the commencement of the decline of Ottoman power in Europe and a full and authentic statement of all the circumstances connected with the present dispute between to Czar and the Sultan, derived from official and other sources.

TO CORRESPONDENTS.

J. J. P.—The word Chinois, is not pronounced She-nay, but She-nwah.
TIRO, Bath.—The Staunton Chessmen are decidedly the best. The price, which has lately been reduced, can be ascertained by reference to our advertising columns.
A CORRESPONDENT.—The City of London Companies have been well described as so many trusteships for "charitable purposes" and "chartered festivals," and their earliest object was the formation of a common stock for the relief of poor or decayed members.
W. F., Lakenham See "Lindley's Botanical Dictionary."
W. T.—The height of the Apollo Belvedere is upwards of 7 feet
C. W. P., Abingdon.—"Little's Poems" were written by Thomas Moore.
F. H., Deal Wasdell.—"Felix on the Bat," is an excellent manual of Cricket.
M. B. L.—Sal Letter apply to a glazier.
A. C. L., Accrington.—See "Hogg's Handbook of Photography."
E. J. Turkey is styled the Ottoman Empire from Othman, or Ottoman, one of the Seljuk chiefs, who in 1299 erected an independent standard, and founded the mighty Ottoman Empire on the ruins of the empire of the Eastern Greeks.
P., Pensting Vicerage.—The town of Shiraz, in Persia, was destroyed by earthquake on the night of the 14th of May last, when it is calculated 12,000 persons perished.
N. A.—Applications for permission to view the Royal Mint are to be addressed to the Master or Deputy Master, in writing, stating the name and address of the applicant and the number of the party, no exceeding ten in all
B. E., N. N., A. C. C., Hamburg.—Declined
F. P. B., Chester-street.—Cross's Menagerie was removed from the King's Mews, Charing-cross, in 1830.
J. L.—The late Lord Hill was appointed General-Commanding in-Chief of the Army in 1828, and continued to fill that office under several Ministries
L. D. A "Guide to Leamington" may be had of Cruchley, publisher, Fleet street.
J. H.—The Duke of Wellington gave his customary Waterloo Banquet on June 18, 1851.
A SUBSCRIBER, Bridgend, Glamorganshire.—We have not room to reprint the letter.
K. T. D.—The Animal Kingdom is arranged into four divisions. 1. Vertebrated Animals. 2. Molluscous Animals 3. Articulated Animals. 4. Zoophytes.—See Bingham's "Technological Dictionary."
SHELA.—The shamrock, seamrog, or shamrog (wild trefoil) is said to be worn by Irishmen on St. Patrick's Day, from that Saint having plucked a piece of trefoil to explain the Trinity in Unity.
HARRIET J., Sydenham Prince Rupert's Drops are made by letting melted glass fall into cold water, when it becomes suddenly cooled and solidified on the outside, before the internal part is changed; when, as this part hardens, it is kept extended by the arch of the outside crust; and the fine point of the drop being broken off, the cohesion of the atoms of the glass is disengaged, and the whole flies to powder with a smart explosion.
CONSTANCE, Lancashire.—The Secretary's Assistant is a useful desk book for Letters of addresses.
INQUIRER.—To become a fellow of the Royal Society, it is necessary that the candidate be distinguished in connection with science; his certificate must be signed by six or more Fellows, all of whom three certify their recommendation "from personal knowledge;" the payments are ten pounds on admission, and four pounds annually; or the latter sum may be compounded for by paying in one sum £50. See Dr. Rimbault's volume on the Learned Societies and Printing Clubs of the United Kingdom.
KNUPER.—A crest used upon the top of note paper, or on cards, would render a party liable to the tax. The best means of tracing a pedigree back to the year 1600 is through the parish registers, family documents, and the Will-office.
A CONSTANT READER.—*Arms* of Shuckburg: "Sa. a chev. between three mullets arg. *Crest*: A blackamoor couped at the waist ppr. with a dart in his head or. *Motto*: Hoc mundo non pertinax" has no judicial power in Notts." And he further maintains that "no one can have a right delegated to confer titles to be universally used, the Queen being the sole fountain of honour." In reply to numerous correspondents on this subject, pro and con, we must still retain our opinion as to the bad taste of any professional gentlemans or persons in trade, who may obtain commissions in the militia, calling themselves colonels, majors, or captains, except when employed on regimental duty; but it seems different as regards officers who have served in the line, and who have no other occupation. They may, without any infringement of proper taste, call themselves by the title of the rank to which they have been respectively gazetted in the embodied militia force.
AN OBSERVER, Berkhan pstead.—In reply to our correspondent, who asks whether the Comet will appear before sunrise, after perihelion, we may state that its rapid motion towards the south will prevent its being so shewed in these latitudes. We understand that Mr. Hind has received an extraordinary number of letters respecting this Comet, from its having been generally mistaken for the Comet to which he drew attention some years since (that of 1261 and 1556).
HOMO, Kidderminster.—Hausen's patent flax-cottoning process is detailed in the ILLUSTRATED LONDON NEWS No. 518.
IGNORAMUS.—See "Webster's Dictionary of the English Language," 8vo, and "Hints on Etiquette."
A SUBSCRIBER, Jamaica, is thanked; but we have not space for the sketch of the Blue Mountain Peak.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, SEPTEMBER 3, 1853.

THE Turkish question remains undecided; and, notwithstanding the utmost efforts of Great Britain, France, and Austria to bring it to a satisfactory solution, threatens even yet to endanger the peace of the world. The Austrian note—only so called because it was drawn up at Vienna—and which was assented to by all the powers who have at heart the peace of Europe, as well as the independence of Turkey—has met with no demur at St. Petersburg. The Czar, by the mere fact of his occupation of the Danubian provinces, has done as much as a war could do, to impoverish, weaken, and disintegrate the Turkish Empire. His ready assent to the terms of the Allies is, therefore, a matter of course on his part, all the more agreeable to him, because it may help to keep up among Russians and Germans, if not among Englishmen and Frenchmen, a show of magnanimity and fair dealing. But the Sultan has not thought fit to show the same readiness. He was the aggrieved and offended party; and the point of honour was, therefore, the sore point with him, in an infinitely greater degree than it could be with the Emperor Nicholas. The friends of peace may, for an infinity of reasons, regret that the Sultan has shown so much sensitiveness as to insist upon various verbal alterations in the terms of the note to which his foe has acceded; but they can scarcely be surprised at the jealous care with which he and the Divan have endeavoured to exclude every phrase and word, and shadow of expression, which might wound him in the estimation of his subjects, or impair in the remotest degree the independence of the Turkish nation. Viewed in this light, the alterations proposed by the Divan in the Viennese note are by no means so trivial and unimportant as they have been represented; nor does the Sultan deserve the threats or the chidings of those organs of public opinion, in England or France, which have hitherto supported his cause. Peace is an inestimable blessing, as every one admits whether he be, or be not, a member of the Peace Society—but a temporary peace may often be bought at the price of a protracted war. A man in the position of the Sultan must not only look behind, but before; and it is his sacred and imperative duty, as Sovereign of Turkey, to assert the dignity of his office, and his independence of foreign control, even at the last moment—lest his neglect or pusillanimity, though it procured him a momentary respite from difficulty and danger, should increase his difficulties, or those of his successors, a thousandfold, and bring upon him perils far more serious than those from which he was endeavouring to escape. So far from believing that the question will be settled—even should the amendments so unexpectedly introduced into the note by the Divan be accepted by Russia—we believe that a spirit has been aroused in European Turkey which will inevitably complicate the question, and lead to results the most deplorable, at some future and perhaps, not distant, time. The Czar may be alarmed at the attitude which Europe has assumed towards him; the Ottoman Porte may be poor, enfeebled, and dispirited, and, therefore, averse from war; and it may be the interest of all parties to insist upon peace, *à tout prix*—and yet there may be elements in the quarrel which may explode in spite of all these. The fierce, Anti-Christian and Anti-European character of the Turks themselves, has never been sufficiently considered by those who look upon the Turkish Empire as plastic clay in the hands of its Allies. Already the Sultan has lost much of his previous popularity, because he has preferred negotiation to hostilities; and already the efforts of Great Britain, Austria, and France, who have been sincere friends of the Turkish Empire—if such a thing as sincere friendship ever existed in the world—have been decried by the fanatic Mussulman party as more dangerous and fatal than Russian aggression. If there be any party in Turkey that can be held as the bone and sinew of the empire, it is that of the bigotted Mussulmans—strong in their own faith, their own traditions, their own policy, and their peculiar and undying antagonism to the religion and civilisation of Christian states. This party, backed as it is by Asia and Africa, is as fierce as it is ignorant, and as jealous as it is foolhardy. In their impatience, they might at any moment render of no avail all the diplomacy of the best diplomatists of Europe, dethrone the Sultan, and stir up a new "Holy War" of Mussulman against Christian. In such a war, their defeat, though certain, would be costly and difficult. Perhaps the Czar foresaw even this, when he so wantonly fastened a quarrel upon the Sultan; but before the public writers and statesmen of Europe condemn the Sultan and his advisers for being punctilious as regards forms and words, and for sending back the Viennese note for emendation, they should coolly reflect upon the very dangerous and critical position in which the Sultan is placed. The more firmness, courage, and independence he displays under the enforced tutelage into which the interests of Europe, no less than his own, have thrust him, the better it will be for him—provided always that these qualities can be exhibited without cutting a knot, which it is desirable to untie, and without lighting a conflagration which he, more than any other man, would be interested in extinguishing. There may be no occasion for alarm in the tenor of the latest intelligence from Constantinople, but there is certainly some reason for anxiety. Should the Emperor of Russia simply refuse to depart from the terms to which he has already acceded, and insist upon disallowing even a slight verbal alteration in the collective note of the Allied Powers, the whole question at issue will be re-opened, with the immense advantage to Russia of actual possession, and with the immense disadvantage to Turkey of wasted resources and baffled policy. To the allies would remain a sense of fruitless intervention, resulting in nothing but a display of their own powerlessness. All the friends of civilisation must earnestly hope that such a catastrophe may be averted.

THE last mail from India brings intelligence that the King of Ava has sued for peace, on our own terms; and that the Burmese War is positively at an end. The country will rejoice to learn the fact: for the war was neither creditable in its origin nor satisfactory in its progress. Whether it will prove consolatory or beneficial in its results remains to be seen. In the meantime, we have annexed Pegu, taken forcible possession of the mouth of the great river on which the Burmese depend for the supply of their food, and constituted ourselves virtually the masters of the whole country, whether its inhabitants be at peace or at war with us. But will Pegu be worth holding? Will it pay the cost of its own government in our hands? And will not the dreadfully severe terms we have imposed upon the Burmese Sovereign—the loss of a province which is essential to the independent existence of his empire—make the Burmese our permanent enemies—provoke us into collisions with them, and keep us in a state of perpetual hostilities, the prosecution of which will be exceedingly expensive, exceedingly annoying, and not in the least degree glorious or even satisfactory? It is premature to answer such questions, though not to ask them. The restoration of peace is, however, a real benefit: as far as it goes; and it is to be hoped, for the sake of the good government and prosperity of our vast Indian Empire, that such useless wars will not again be undertaken: and that means will yet be found to make the Burmese good neighbours, and to link their interests to ours by the extension of trade and friendly intercourse. But if we would do this, we must not, by any acts of ours, render their Sovereign too weak to be respected by his subjects. The stronger the kingdom of Ava can be made within the limits to which we have resolved to restrict it, the better chance will there be for the establishment of friendly relations between us. A disorganised kingdom and a powerless monarch, though existing by our favour and under our shelter, are but unreliable neighbours. We have inflicted immense evil upon the Burmese state; and it will now become our duty, as well as our interest, to avoid troubling what remains of it, by interference or control. To have to annex Ava as well as Pegu would be indeed a calamity.

THE COURT.

The Queen left Osborne, for Ireland, on Saturday last. Full details of her Majesty's progress and reception in the Irish metropolis, will be found in another part of our Paper.

The Princess Royal, and the younger members of the Royal family, left the Isle of Wight for Scotland, on Monday, and remained at Holyrood until the arrival of their Royal parents from Ireland.

HIS ROYAL Highness the Prince Adalbert of Prussia left Prussia House, Carlton House terrace, on Monday evening, for Dover, from which port he proceeded at a late hour in the evening, in the Prussian steamer have been placed at the disposal of his Royal Highness by the Admiralty.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Canonry*: The Rev. R. Campbell, to Perth Cathedral. *Rectories*: The Hon. and Rev. J. H. Nelson, to Trimley St Mary, Suffolk; the Rev. F. W. Collison, to Marwood, Devon; the Rev. Frederick Hockin, M.A., to Phillack and Gwithian, Cornwall; the Rev. Edward Evans, to Eccles St Mary-next-the-sea, Norfolk. *Vicarage*. The Rev. James W. Wenn, to Wokhambrook.

ENGLISH CHURCH AT GENEVA.—A correspondent informs us that the new English church of the Holy Trinity, was consecrated by the Bishop of Winchester on the 30th ult. The Bishop was already at Geneva, and the interesting ceremony excited the liveliest sympathy of all true Protestants.

TESTIMONIAL.—The congregation of St. Mary, Haggerstone, have recently presented to their late Curate, the Rev. John H. Ness, theological associate of King's College, London, an address accompanied with an elegant silver tea and coffee service, as a token of their esteem for the unwearied zeal and ability he at all times displayed in performing the arduous duties of that extensive district parish.

MERCHANT SEAMEN'S ORPHAN ASYLUM.—The half-yearly meeting and election of children to this institution was held at the Asylum, Bow-road, on Monday: Captain Nelson in the chair. The appearance of the children was neat, and an air of comfort and happiness pervaded the scene. They have at present on their books, in round numbers, 120 children—eighty boys and forty girls—and it was the desire of the committee to increase that number, but this cannot at present be done, for a great want being a suitable building.

PRESERVATION OF LIFE FROM SHIPWRECK.—A meeting of this institution was held on Thursday last at the office, John-street, Adelphi, Captain Lambert Perrott in the chair. The silver medal of the society was voted to Lieutenant E. Kelly, R.N., in appreciation of his gallant conduct on the occasion of the wreck of the ship *Randolph*, which was wrecked off Port Louis, Mauritius, in June, 1851, when, through his indefatigable exertions, fifty Coolies and the mate of the vessel were saved from drowning.

RAILWAY MEETINGS.—The half yearly and general meetings of the various railway companies still continue. During the past week, there have been several, in their respective localities. The general railway shares have been somewhat influenced by these meetings, and are quoted at a rather lower rate. A general decline of from two to three per cent has taken place during the last month. The many calls for the present month amount to £400,789, as against £698,640 of September, 1852. At the Oxford and Worcester Railway meeting, on Wednesday, a dividend at the rate of £1 14s. per cent per annum on the preference shares was carried after some opposition. At the Manchester, Sheffield, and Lincoln meeting, on Wednesday, a dividend of six per cent upon the guaranteed stock of that class was declared, and the £4 paid up on the Lincolnshire stock was consolidated. At the Lancashire and Yorkshire meeting, to be held on the 7th inst., a dividend at the rate of three-and-a-half per cent less Income-tax is to be declared, which will leave a surplus of £9840 to be carried to the next account.

DENMARK AND SWEDEN.—Papers relating to the succession to the throne of Denmark have been presented to Parliament and printed. They contain a despatch addressed by M. de Bluhme, the Foreign Minister of Denmark, to the different Danish Ministers accredited to the Courts of the Sovereigns who were parties to the treaty of the 8th of May, 1852, and which M. de Bille was instructed to communicate to Lord Clarendon, together with a summary of the discussions which took place in the United Chambers. In transmitting a copy of this despatch, Sir H. M. W. Wynn informed Lord Clarendon, that a spontaneous declaration by him of his approval of the view taken by the Danish government of the agreement, and that the right of succession, according to the *Lex Regia*, had been, both for the present and future, abolished, would be very acceptable to the Danish government, although such declaration was not formally requested. Lord Clarendon therefore replied, in a despatch dated June 7, 1853, that he was desired to instruct you that her Majesty's Government do full justice to the motives by which the Danish Government have been actuated, and that they see no reason for changing the opinion already expressed on various occasions so recently as by Viscount Palmerston, that the abolition of the law in question would record a simple, safe, and apparently unobjectionable method of hereafter preventing renewed complications, such as those to which the treaty of the 8th May so happily put an end.

GUERNSEY: HARBOUR OF ST. PETER PORT.—On Wednesday (last week) the foundation-stone of this new harbour was laid with grand masonic ceremony, by the Baliff, Peter Stafford Carey, Esq. Of this very interesting scene we shall have an engraving, from a clever sketch by M. Naftel.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS, TAKEN DURING THE WEEK ENDING THURSDAY, SEPT. 1.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches.							Inches.
Aug. 26	29.245	66·0	52·0	59·3	— 0·5	78	S.W.	0.28
„ 27	29.311	63·0	47·7	55·8	— 3·6	76	S.W.	0.47
„ 28	29.363	67·0	49·2	56·2	— 3·3	77	W.S.W.	0.00
„ 29	29.787	70·1	47·6	57·1	— 2·2	69	W.	0.06
„ 30	29.567	69·9	48·7	57·3	— 2·1	75	W.	0.09
„ 31	29.888	67·6	48·7	58·7	— 2·3	74	S.W.	0.00
Sept. 1	29.[illegible]	67·9	50·0	57·8	— 1·1	90	S.W.	0.[illegible]

Note.—The sign — denotes below the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the Barometer decreased from 29.82 inches at the beginning of the week, to 29.20 inches by midnight on the 26th; it turned to increase nearly in the morning of the 27th; and was 30.04 inches by the morning of the 30th; again decreasing by the end of the week. The mean reading for the week, at the level of the sea, was 29.[illegible] in.

The Wet Days during the week has been changeable: the wind was blowing very strongly on Friday and Saturday, with frequent passing showers to 10 hs. and 11 hs. on the square foot. On the 7th, there was frequent heavy rain, of rain and wind. The temperature of the air has been below [illegible] during the week, being on the average 3°·3 below the average of the week. The highest temperature in the week was [illegible] on the 27th; the lowest [illegible] on the 31st. The mean temperature in the week was therefore 57°·8. The range of daily temperature during the week was the greatest on the 28th, the value of which was 19°·6; and, on the 31st, it was 7°·2; the mean daily range for the week was 10°·8. Rain fell to the depth of 1.4 inches in the week.

Fog-bo. Months. signal, the mean reading of the barometer at the level of the sea, was 29.[illegible] inches; the highest temperature in the month was 72°·1, and the lowest was [illegible]. The range of temperature in the month was 31°·5. The mean of all the highest temperatures by day was 70°·8, and of all the lowest by night was [illegible]. The mean temperature for the month was 59°·8, being below the average of 58 Augusts, by 1°·[illegible]. The mean temperature of the dew point was 52°·9, and the mean degree of humidity was [illegible]·78, that of complete saturation being represented by 100. [illegible] fell in the month to the depth of 1.4 inches.

JAMES GLAISHER.

HEALTH OF [illegible]. During the week ending the birds of [illegible] were registered in the metropolitan districts. In the eight corresponding weeks of the eight preceding years, the average number was [illegible]. The number of deaths registered in the [illegible] last week is below the number [illegible] during the [illegible] weeks. Among the principal [illegible] 95 persons died from chronic [illegible]. The causes of death in [illegible] 20); the Longevity [illegible] 2; of cancer, [illegible]; of [illegible] 8; of [illegible] 8; of [illegible] 8

THE BRADFORD MUSICAL FESTIVAL.

(Continued from page 194.)

BRADFORD, Thursday Night.

The opening of St. George's Hall, in musical annals, must be recorded as a "great fact." It was only in 1848 that the enthusiastic amateur, the present mayor, gave the first notion of a music-hall; and although his protégé, as was considered, passed almost unremarked at the time, the idea, once entertained by a man of purpose, was not abandoned. Yesterday must indeed have been a proud day to him—to find that the resolution of the 21st of December, 1849, to erect, to open, to inaugurate, and to perform had been fully carried out in the presence of the highest Church authorities of the north, in that of the most elevated authorities in the county, and in that of amateurs assembled from all parts of the United Kingdom, and even from the Continent. It was a grand and imposing spectacle when the conductor gave the signal for the National Anthem; and the whole auditory, composed of people of all creeds and shades of political opinion, rose in respect to the symbol of authority and Majesty—our own solemn and exciting prayer for the reigning sovereign of the realm.

The performance of Mendelssohn's oratorio "Paul," yesterday, is cited by those professors and amateurs, who have heard this work from its first execution at Düsseldorf and at Liverpool, as one of the finest—if not the finest—rendering of the oratorio yet given. Such perfection in the playing of the accompaniments, and such accuracy and precision in the choral singing, I venture to assert, were never before attained. The list of players will naturally confirm the accuracy of the former assertion, but the choristers to Londoners are comparatively unknown. It is almost to be regretted that your illustrative columns absolutely preclude the giving of their names, as the zealous and accomplished vocalists of Bradford, Leeds, Manchester, Huddersfield, Halifax, Hull, Salford, Keighley, Dewsbury, York, Bierley, Hebden-bridge, Wakefield, Holmfirth, &c., would deserve individual mention. Their firm attack of the points, their nice observance of the accidentals, their appreciation of light and shade, their downright earnestness and musical knowledge, cannot be too highly rated or eulogised. They were evidently on their mettle; they watched the conductor's beat unremittingly; and the result was a delivery of the composer's meaning thoroughly real and artistical. The Chorus Master (Mr. Jackson) is entitled to every credit. The appalling "Stone her to death"—the intensely captivating chorus, "Happy and blest"—the glorious "Arise! shine! the wonderful chorals, "Sleepers, awake!"—the delicious chorus, "O be gracious"—may be quoted as particular specimens of success; but the whole was gone through without a hitch; and Costa must have been proud of his forces. Madame Novello and Mr. Lockey sustained the soprano and tenor parts in the first act; and Miss Louisa Pyne and Mr. Sims Reeves were allotted those in the second part. Mrs. Lockey and Herr Formes were assigned the contralto and bass parts throughout the oratorio.

Sublime as Beethoven's "Hallelujah" chorus from the "Mount of Olives" unquestionably is, the policy of introducing it after "Paul" may be doubted. Mendelssohn's work is such a coherent and consistent entirety, that a fragment from the oratoric of another composer seemed to be a kind of intimation that "Paul" was without a finale sufficiently imposing to conclude a morning's performance. When the Archbishop of York, the Lord-Lieutenant, and the audience rose for the "Hallelujah," the effect was superb. During the morning there had been a variety of changes in the aspect of the hall, as the sun shone through each window in succession, but the climax of interest was during the standing of the congregated multitude—it was something to remember.

It would be not only unjust to the crowds in the streets to pass unnoticed their orderly behaviour. The barriers were kept without difficul y by the police, and the people were most kind and accommodating in allowing visitors to the Hall to break through their ranks. The absence of the slightest approach to the general disturbance, were proofs of the thriving condition of the operatives, whose dresses, if of inferior materials, were universally neat. Foreign writers, who dilate on the wretchedness of our manufacturing towns, should visit Bradford to be convinced that comfort can be found with even restricted means.

It is understood that the pecuniary success of the Festival is now placed beyond a doubt. The building of the Hall was begun with a capital of £16,000, in shares of £5 each; but such an edifice cannot have been built for such a sum. At all events, it is palpable that Bradford can for the future hold its triennial festival with safety, both artistically and financially. The Committee of Management are Messrs. W. B. Addison, Garnett, Hustler, Payne, Semon, Tee, Stanfield, Dale, Mawson, with the Mayor as chairman, and Mr Charles Ollivier as secretary.

NATIONAL SPORTS.

LICHFIELD RACES.—Monday.

Prendree Stakes.—Whalebone walked over.
Staffordshire Stakes.—Morning Star, 2.
Campaigne Stakes.—Eva, 1. Mysterious Lady, 2.
Anson Stakes.—Earl of Golborne, 1. Mary Ann, 2.
Gold Cup.—Whalebone, 1. Sally, 2.
Free Handicap.—Sally, 1. Forester, 2.
Queen's Plate.—Knight Errant, 1.

PLYMOUTH RACES.—Tuesday.

Tradesmen's Plate. Catharina, 1. Czarina, 2.
Saltram Stakes.—Sleeping Partner, 1. Madame Wharton, 2.

WEDNESDAY.

Handicap Sweepstakes.—Ethelwolf, 1 Pride, 2.
Queen's Plate.—Lambton, 1. Charles the Twelfth filly, 2.

CHELMSFORD RACES. Tuesday.

Trial Stakes.—Lascelles, 1. Monie Moses, 2.
Chelmsford Stakes.—Garforth, 1. Miss Talbot, 2.
Galleywood Stakes.—Youthful Days, 1. Luxurious, 2.
The Members' Plate was won at three heats, by Antigone beating Brunette.

WEDNESDAY.

Her Majesty's Plate.—Lascelles, 1. Garforth, 2.
Town Plate.—Luxurious, 1. Sophistry, 2.
Cup Stakes.—Waverley, 1. Brunette, 2.
Mark's Hall Stakes.—Farmer's Boy, 1. Lady Isabel, 2.

LINCOLN RACES. -Thursday.

Brownlow Stakes.—Young England, 1. Magic, 2.
Granby Stakes.—Trump Queen, 1. Brown Brandy, 2.
Lincolnshire Handicap.—Anna Eliza, 1.

FRIDAY.

Tyro Stakes.—Hotchpot, 1. Ratan colt, 2.
Scurry Stakes.—Scarcity, 1.
Brock e-bury Stakes.—Captain Cornish, 1.

BETTING AS TATTERSALL'S.—THURSDAY.

LEAMINGTON STAKES.—1 to 2 agst the Friar (t)

6 to 5 agst West Australian (t) and off.)	7 to 2 agst Sittingbourne (t) 10 to 1 —— Redvers (t)	15 to 1 agst Lord Exeter's colt (t)

CAMBRIDGESHIRE.

40 to 1 agst Pelion (t)	40 to 1 agst Sailorboy. Offers to give 30 agst the field.	100 to 1 agst Towton (t)

CHESHIRE PUTH.

1000 to 30 agst Pallon (t)	40 to 1 agst Nutwell (t)	500 to 15 agst Lord Exeter's lot (t)
1000 to 25 —— Winter (t)	1000 to 10 —— Garforth (t)	
1000 to 20 —— Jawster (t)	1000 to 10 —— Oracle (t)	Offers to give 30 agst the field.
40 to 1 —— King Pepin (t)	1000 to 10 —— Gorgebost (t)	

DERBY RACES, 1854.—Viscount Palmerston and Lord Stanhope have accepted the stewardship of those races.

CRICKET.—A grand match was played at Brighton on Monday and Tuesday, between Sussex and Nottingham, in which the latter won the match in one innings by eight runs.—The Kent and Surrey have had a struggle at the Oval, at Kennington, in which the Surrey worsted the Kents by twelve runs only. Surrey, first innings, 92; second, 109. Kent, first, 85; second, 104.

PEDESTRIANISM IN FRANCE.—A button-polisher, aged 17, named Laleu, made a bet that he would in four hours run over the 40,000 metres (about 25 miles) of the military way which follows the bastions of the fortifications. He won the wager easily in three hours and fifty-three minutes.—*Paris Journal.*

COTTON ROPES FOR SHIPS.—There is a novelty about the *Sovereign of the Seas* that doubtless will be soon imitated by other vessels. The ropes which form the running rigging are of cotton, which is not only capable of a tighter twist, but is not so liable to become deteriorated by friction as hempen cords. After they have been in use, too, for years, they can be sold for nearly as much as the original cost. These ropes are quite smooth, and run with great rapidity through the blocks. The sails also of this vessel are of cotton—two sets of cotton sails costing only the sum paid for one set of linen.—*Liverpool Times.*

NAVAL AND MILITARY INTELLIGENCE.

THE CHANNEL FLEET.—All the divisions of the fleet are by this time (Aug. 30) clear of the English Channel, and are engaged in trial sailings and exercise. Both Admiral Corry's and Commodore Martin's squadrons will touch at Bantry Bay occasionally, and anchor for a day or night. The fleet will rendezvous at Queenstown on the 17th instant, to meet the Admiralty. Another screw-frigate *Tribune*, 31, Capt. the Hon. S. T. Carnegie, will join Commodore Martin's squadron after the attendance on the Royal Yacht Squadron. The *London*, 90, Capt. C. Eden, was paid wages at Spithead, and sailed to join the fleet.

THE CRIMEAN CAMP.—The Adjutant-General of the Forces has, in an official letter to the Commissary-General, Sir R. Routh, conveyed the expression of the Commander-in-Chief's entire satisfaction at the manner in which the commissariat arrangements were carried on during the late encampment.

ON DITS.—It is generally believed that Major-General Sir de Lacy Evanis is to have one of the vacant regiments—the 2nd, Queen's Royals, or the 1st Dragoons. Colonel Gawler, Military Secretary to the General Commanding-in-Chief, will have a *vacancy Lord* on his return from orders, he having left London on leave of absence.—Lieutenants holding the situations of staff officers of pensioners will be promoted to captaincy immediately on the completion of twenty-three full pay service, ten of which were served as staff officer.—The Board of Ordnance are causing Fort Sunderland, at Hythe, to be put into a state to receive guns of a heavy calibre.—*U. S. Gazette.*

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Only a moderate amount of business has been transacted in the Consol market this week, both for money and time, and prices have fluctuated to a certain extent, with a downward tendency. Considering the rapid increase in our export trade, and which is absorbing the greater portion of the surplus means of the shippers, the quantity of stock in the hands of the jobbers has not been large, and we may observe that this demand for money has not been quite so active as of late; nevertheless, large advances have been made by the Bank of England, and by private bankers, to parties engaged in the Eastern and Australian trades.

We have had no arrivals of specie from New York, only to the extent of £5,000, per the Niagara; but from South America £340,000 in dollars, and from the West Indies £100,000 in doubloons have been reported. A few parcels of gold have come to hand from Australia, and large supplies of coined silver have come in from France and Germany to purchase gold. Notwithstanding this silver is now abundant, a further advance has taken place in its value, standard bars having realised 5s 2½d per ounce. At that quotation, large transactions have taken place for India and China. That the late supply of gold should not have passed into the Bank of England in the usual manner, is not a matter of surprise, when it is considered that in selling bullion to the Bank, the fixed price is £3 17s 9d per ounce; and in receiving gold from the Bank, whether in the shape of coin or bullion, the price is £3 17s. 10½d the ounce. It is obvious, then, that the 1½d. per ounce is so much additional profit to the importer, if he possesses his own merchant. According to a Parliamentary paper, the total amount of gold coined in our Mint, during the four years ending with 1851, was £10,927,201; and from the 1st of January, 1852, to the 1st of August, 1853, it exceeded £17,800,000. In the face of this great increase in the supply, the loss and has gone on increasing, and the stock in the Bank of England is at present less than it was at the corresponding period in 1852.

The influx of gold in the Paris Mint continues unabated, and it is estimated that the present stock is little short of £3,000,000. The period for the delivery of coin has been extended to seven days.

The total nett circulation of the United Kingdom for the month, ending the 6th of August, was £30,210,205. The stock of bullion in the Bank of England at the above date was £17,370,370, being £1,230,000 more than at the same period in 1852.

There was a moderate degree of firmness in Consols on Monday, with an increased desire on the part of the *Bulls* to operate. The Three per Cents were done at 98¾, ⅞, and 98⅞; the Three per Cents Reduced, 98¾, 99; and the New Three-and-a-Quarter per Cents, 101⅛ ⅜; India Stock marked 277. Exchequer Bills were firmer, and fetched a premium. On Tuesday and Wednesday especially the latter day—Consols were steady and lower, they have declined to 97⅞. India Bonds were 1s. to 20s. premium. The market on Thursday was heavy, at further reduced prices. The extreme heaviness was chiefly attributed to the fact that the Directors of the Bank of England were to distribute 10 per cent per annum. The Three per Cents opened at 98⅝, and closed at 97⅝. The New Three-and-a-Quarter per Cents were 100⅛ to 100⅜; and the Three per Cents Reduced, 98¾ ⅞. Exchequer Bills were heavy, at 4s. to 1s. prem.; and India Bonds, 3s. pm. East India Stock, 2s.; Bank Stock, 227 to 228.

In the Foreign Stock Market, business has prevailed; but prices have not varied materially. Brazilian Old Five per Cents, Small, have been 102; Ditto, Four-and-a-Half per Cents, 1852, 89¾; Chilian, Six per Cents, 10¾; Ditto, Four per Cents, 1842, 81; Mexican Three per Cents Deferred, for the Account, 26⅜ ¾; Portuguese Four per Cents, 45½ to 45¾; Russian Five per Cents, 110 to 110⅛; Sardinian Five per Cents, 110 to 110⅛; Spanish Five per Cents, 19¾; Spanish Old Three per Cents, 17⅞; the Committee's Certificates, 9⅞ per cent.

Miscellaneous shares have been tolerable firm. Australasia Bank have marked 81; British, 62½; Colonial, 82; Commercial of London, 18¾; Bank of Asia, 6¾; Colonial, 18½; Union of Australia, 70½ to 70; Union of London, 10¾; Hungerford Bridge, 12½; Waterloo, 6½; Vauxhall, 20¾; Albion Insurance, 86; County, 12½; Globe, 100; Guardian, 6¾; Hope, 4¾; Imperial Fire, 14; Law Life, 85; Palladium, 47; Phœnix, 185; Royal Exchange, 242; Sun Fire, 1½; Ditto, 4; Ditto, New, 2½; Australian Agricultural, 22½; Australian Land Company, 2½; Australian Royal Mail, 2½; Australian Steam Navigation, 2½; City Natural Gas, 5¾; Hudson's Bay, 21; Peninsular and Oriental Steam, New, 2¾.

Railway shares have been in some request, and prices have given way. The total "calls" for the present month are £496,720. In September, last year, they were £693,640. The total "calls" for the first nine months of 1853 are £7,712,013, against £5,898,077 in the corresponding period of 1852. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Caledonian, 65¾; Eastern Counties, 13, ex div.; East Lancashire, 70¾; Edinburgh and Glasgow, 73¾; Great Northern, 81, ex div.; Ditto A Stock, 53; Ditto B Stock, 131, ex div.; Great Western, 65¾, ex div.; Lancashire and Yorkshire, 74½; Leeds Northern, 15½; London and Blackwall, 8¾, ex div.; London and Brighton, 51¾; London and North-Western, 109¾; Ditto Lightns, 2½; London and South-Western, 84; Londonderry and Enniskillen, 11¾; Manchester, Sheffield and Lincolnshire, 20¾; Mid.and, 69¾, ex div.; Newport, Abergavenny, and Hereford, 14¾; North British, 32; Oxford, Worcester, and Wolverhampton, 48½; Scottish Midland, 64; Shrewsbury and Birmingham, 65¾; Ditto Guaranteed Stock, 69; South-Eastern, 69½; South Wales, 9¾, ex div.; Thames Haven Dock and Railway, 2¾; York and North Midland, —, ex div.

LINES LEASED AT FIXED RENTALS.—Hull and Selby, 111, ex div; Wear Valley, 82.

PREFERENCE SHARES.—Eastern Counties New Six per Cent Stock, 14¾ ex div.; Eastern Union Scrip, 2¼; Great Northern Five per Cent, 113, ex div.; Ditto, Four-and-a-Half per Cent, 85; Great Western Irredeemable Four per Cent, 109; Consolidated Bristol and Exeter, 51; Shrewsbury and Birmingham, 13½; South Devon, 14½, ex div.; South Eastern, 26.

FOREIGN.—East Indian, Extension, 2; Grand Junction of France, 12½; Great Central of France, 10; Luxembourg, 7½; Ditto, Preference, 1⅜; Ditto, Guaranteed, 3¾; Namur and Liege, with interest, 6¾; Northern of France, 36½; Paris and Lyons, 28½; Paris and Strasbourg, 33⅜; Sambre and Meuse, 9; Upper India Scrip, 1 prem.

In Mining Shares, comparatively few transactions have taken place. On Thursday, Agra and Masterman were done at 2 to 1⅞; Australian Freehold, ⅜ to ⅝; British Australian Gold, ⅜; Copper Mines of England, 68; English and Australian Copper Smelting Company, 10½; Great Nugget Vein Scrip, 2⅜; Linares, 8¾; Nouveau Monde, 1½; Tin Croft, 7½; United Mexican, 4½.

Friday Evening.

Consols have been very flat to-day, yet we have no material change to notice in prices. The Three per Cents Reduced have been 98¾ ⅞, the Three per Cent Consols, 97⅝ ⅞; the New Three-and-a-Quarter per Cents, 100⅜ ⅞; and the New Three per Cents, 123⅛; Bank Stock, 227 to 228; South Sea Stock, 115; Ditto, New, 100; Long Annuities, 6⅛; Exchequer Bills, 1s. pm. to 2s dis.; India Bonds, 18s. prem. Foreign Bonds and Railway Shares have met a dull market.

THE MARKETS.

CORN EXCHANGE (Friday).—This week's arrival of English wheat up to our market consewhee has amounted to 1600 quarters, almost wholly from Essex and Kent. Fresh up to-day the samples by land carriage were trifling, and the show of samples was small. Selling slowly, the trade was not to say brisk, factors were very firm, and most of them refused to sell, except at a decline of from 1s. to 2s. per quarter. From abroad, 10,960 quarters of wheat have come in. The article was in good request, and prices were a shade higher than on Monday. Floating cargoes realised extreme rates. There was a good sale for barley, and new qualities sold as high as 38s. per quarter. There was an improved demand for malt, the value of which had an upward tendency. Good sound oats were scarce, and rather dearer. Low and middling parcels were firm. Beans and peas sold on former terms. There was a good business doing in flour, and the best town made were worth 40s. per 280 lbs.

ARRIVALS.—English wheat, 1320; barley, 40; malt, 6960; oats, 110; flour, 540. Irish oats, 280. Foreign wheat, 10 [illegible] Scotch [illegible] Norfolk and Suffolk, [illegible] Kent and Essex, 30 [illegible] Scotch and North 36s. to 38s. [illegible] Chevalier, 60s. to 67s. Yorkshire and Lincolnshire feed oats, 19s. to 23s.; potato ditto, 23s. to 24s.; Youghal and Cork, black, 18s. to 22s.; ditto white, 19s. to 22s.; Dublin black, 20s. to 22s.; ditto brown, 20s. to 23s.; ditto white, 23s. to 25s.; Sligo, 20s. to 23s.; Limerick, 23s. to 25s.; Galway, 20s. to 23s.; Scotch potato, 23s. to 25s. per quarter. Town-made flour, 38s. to 40s.; Essex and Suffolk ditto, 36s. to 38s.; Kent and Essex, 36s. to 38s.; Irish, 32s. to 34s.; Scotch, 32s. to 34s.; American, 24s. to 28s. per barrel.

Seeds.—A few parcels of good new Canary seed has sold at 50s. per quarter. Winter tares have produced 6s. 6d. to 7s. per bushel, and fine new rapeseed, £26 per last. Linseed is less active, but cakes are very firm.

Wool.—In the wool market, 54s. to 56s.; Hull crossbred, 47s. to 50s.; Mr Hieremann and Company, 60s. to 63s.; Kingswood, 38s. to 42s. per quarter. Coriander, 12s. to 14s. per cwt. Rape was mustard-seed, 8s. to 13s.; white canary, 7s. to 8s. and tares, 4s. 6d. to 5s. 6d. per bushel. English rapeseed, new, £26 to £28 per last of ten quarters. Linseed cakes, English, £5 10s. to £10 10s.; ditto, foreign, 6s. to £10 5s. per ton. Rape cakes, £5 5s. to £5 10s. per ton. Canary, 60s. to 63s. per quarter. English clover seed, 42s. to 63s.; white ditto, 44s. to 64s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 8½d. to 9½d. for 4lb. loaf of household ditto, 6½d. to 8d. per 4lb. loaf.

Imperial Weekly Average.—Wheat, 48s. 6d.; barley, 29s. 9d.; oats, 21s. 6d.; rye, 33s. 8d.; beans, 34s. 1d.; peas, 35s. 6d.

The Six Weeks' Average.—Wheat, 48s. 10d.; barley, 29s. 7d.; oats, 22s.; rye, 33s. 6d.; beans, 34s. 9d.; peas, 36s. 6d.

Tallow.—Wheat, 1s.; barley, 1s.; oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s.

Potatoes.—Prices on average business to dealers in the markets, at about stationary rates. Common round sorts, 70s. to 110s. per lb. Up to Saturday last, duty was paid on 23,013 lbs. of foreign, and 2,600 cwts. to 3,000 cwts. of home growth.

Sugar.—The demand has continued steady; but, with the exception of [illegible] of refined goods, the market has ruled very dull, at barely former prices. Low lots of raw [illegible] have been sold at 36s. to 36s. 6d.; low good to fine, 37s. 6d. to 38s.; good to fine brown, 39s. to 39s. 6d.; and yellow, 40s. to 40s. 6d. per cwt. Refined goods have been in limited request, at 44s. 6d. to 45s. for crown lumps, and 46s. 6d. to 47s. for single loaves. Crushed, firm. The total clearances to the 27th ult., were [illegible] tons, against [illegible] tons in 1852.

Coffee.—Good ordinary native Ceylon has sold steadily, at from 45s. to 46s. 6d. per cwt. Plant ation kinds have supported former terms. Mocha has advanced 1s. to 2s. per cwt.

Tobacco.—In consequence of the very large sales, the Bengal has been withdrawn from public sale at 1s. per cwt.

Provisions.—For all kinds of butter the demand has ruled heavy, and prices have given way from 1s. to 2s. per cwt. The bacon market is dull at 2s to 3s per cwt. Lard is quiet, and is clearing at last week's rates. Hams are in limited demand.

Spirits.—A very active business is doing in rum, the value of which is still 1d. advance. The Leeward Islands, 1s. 2d. to 1s. 2d. Rum, Demerara, 1s. 1d. to 1s. 2d.; and Barbadoes, 1s. 1d. to [illegible]

[illegible] (Friday).—Lambeth [illegible] Tyre, 2s.; Wheelwright, 2s.; Carpenter, 2s.; Bengal [illegible] Large (Friday).—There is a [illegible] Ditto [illegible] Kent, 115s to [illegible] Old (Friday).—To-day [illegible] quality, nevertheless, the demand for [illegible]

Cattle (Friday).—Lambeth [illegible] Tyre, 2s.; Wheelwright, 2s.; Carpenter, 2s.; Bengal [illegible]

Wheat, Barley, Oats, Rye, Beans, Peas, Linseed, Rapeseed, Tares, Mustard, Coriander, Canary, Flax, Hops, Wool, Coals, Tallow, Potatoes, Sugar, Coffee, Tobacco, Provisions, Spirits, Cattle, Timber, Iron, Hemp, Oil, Cotton, Wine, Metals, Drugs, Dyes, Seeds, Cheese, Butter, Bacon, Lard, Hams, Rum, Meat, Horses, Sheep, Pigs, Calves, Deals, Battens, Pitch, Tar, Rosin, Turpentine, Linen, Silk, Paper, Leather, Glass, Soap, Candles, Shipping, Freights, Exchange, Bullion, Funds, Railways, Mines, Foreign Stocks, Miscellaneous Shares, Banking, Insurance, Gas, Water, Canals, Docks, Harbours, Bridges, Roads, Canals, Docks, Harbours, Bridges, Roads.

BANKRUPTS.

F. B. M. FOWLER, Brownlow-road, Dalston, builder. J. SOUL, St. George-road, New Kent-road, surrey, and Botolph lane, City, fish-salesman. A. COOKE, Upper Marylebone-street, Regent-street. J. GAMON, Wesley Place, King, near Chelmsford, cambridge. Clerk, horsehair. T. HUTCHINS, Bank-street, Westminster. [illegible] Lancaster, and Anston, Yorkshire, miller. J. KELLY, Hereford, shoeworth, tailor. T. S. CATLIN, Leicester, grocer. J. FOWLER, Macclesfield, Cheshire, journeyman-builder.

SCOTCH SEQUESTRATIONS.

J. MORRO, Milton, Kilmarnock, farmer. W. CREE, Glasgow, [illegible]

FRIDAY, SEPT. 2.

WAR OFFICE, Sept. 2.

2nd Foot—Major-Gen Sir J. Dalbiac, K.C.B. and K.T.S. to be Col., vice La [illegible]
Lord Saltoun, K.C.B. and K.T. 21st, Major-Gen. Sir De L. Evans, K.C.B. [illegible]
Brig. Major-Gen. Sir J. Burgoyne, Bart. to be C.B. and G.C.B. [illegible]
Royal Horse Guards, Lieut.-Col. C. Du P. Egerton to be Lieut.-Col., [illegible]
Regiment of Lieut.-Col. Hon. C. W. Grey to be Lieut.-Col., vice [illegible]
Major Lieut. H. Pitt to be A. [illegible] Lieut. F. W. Fitz-Hardin [illegible]
Cornet and Sub-Lieut. A. Compton, to be Lieut., vice [illegible]
1st Regiment Guards, Lieut. S. Pearson to be Lieut. vice Hancock
[illegible] Hancock to be Lieut. and Capt. vice Pearson
[illegible] Lieutenant-Colonel [illegible]
[illegible] Lieut. Hon. Leopold Lieutenant-Colonel [illegible]
Robinson, Ensign J. Crispin to be Lieutenant, vice Holdsworth; Under [illegible]
Ensign, vice Crosse. 6th Captain J. M. Barrington, to be Captain, vice [illegible]
Captain J. Turner to be Captain, vice Hennessy. 10th Lieutenant J. [illegible] to be Captain, vice Bellingham; Ensign C. W. Bobart to be Lieutenant, vice Gregory; A. P. Ramsay to be Lieutenant, vice Hamilton; Surgeon W. Brighouse to be Surgeon, vice Campbell. 13th, Lieutenant J. M'Kay Hynd to be Captain, vice Hewitt; Ensign R. H. Hunter to be Lieutenant, vice Hynd; G. W. B. Hughes to be Ensign, vice Hunter. J. Paul to be Captain, vice Barry; Ensign G. Bruce, to be Lieutenant, vice [illegible] Lieutenant to be Lieutenant, vice Bruce. 31st, J. A. Beard to be Lieutenant, vice [illegible] to be Ensign, vice Bond. 35th Ensign R. W. Fielding [illegible] Lieutenant, vice Hamilton; Ensign J. Wilson, to be Lieutenant, vice Fielding. 38th Lieutenant Wm. Leslie Bellingham Lieut. G. G. Cooper to be Captain, vice Lloyd. HOSPITAL STAFF.—Surgeon to be Inspector-General of Hospitals and Surgeons of the Fleet, vice Brayshaw.

BANKRUPTS.

T. PUCKRIDGE, Church-street, Greenwich, builder. R. [illegible] Lisle, grocer. J. BLAIR, Caroline Place, Pimlico, chemist. [illegible] Bayswater. [illegible] Bangalore-street worth, warehouseman. C. J. KELSO, Clifton, Bristol.

BIRTHS.

BENTLEY.—On the 28th ult., at Felton, Salop, the wife of the Rev Peter George Bentley, of a son.
BOSE.—On the 26th ult., at Barlow Hall, Lancashire, the wife of William Camille Brooks, Esq., of a daughter.
HOLDSWORTH.—On the 28th ult., at 12, Heathcote-street, the wife of Robert H. Holdsworth, Esq., of a daughter.
MONTAGU.—On the 22nd ult., at Cromore, the lady of Lord Robert Montagu, of a daughter.
REID.—On the 30th ult., at Winchester, the wife of George Shuldham Peard, Esq., 20th Regiment, of a daughter.
ROPER.—On the 29th ult., at Chichester, Lady Roper, of a daughter.

MARRIAGES.

GREAVES—BRECKNELL.—At Mayfield, Staffordshire, the Rev. Talbot Aden Ley Greaves, Vicar of Mayfield, to Catherine Ellen Caroline Colyear, only daughter of the late Captain and Lady Catherine Brecknell, and niece of the last Earl of Portarlington.
MACLEOD—CAMERON.—At Westminster, Henry Dunning MacLeod, Esq., of the inner Temple, second son of the late R. MacLeod, Esq., Lieut.-Lieutenant of Cromarty, N.B., to Elizabeth Mackenzie, eldest daughter of Hugh Innes Cameron, Esq., of Hydepark-gate, Kensington gore.
MILLS—LASCELLES.—At Harewood, on the 26th ult., Charles Henry Mills, Esq., only son of Charles Mills, Esq., of Camelford-house, to the Lady Louisa Isabella Lascelles, eldest daughter of the Earl of Harewood.
MONTMORENCY—READE.—On the 23rd ult., at St. George's, Hanover-square, Le Comte Alexander de Polignac to Jessie Anne, daughter of William Ramsay, Esq., of Charles-street, Berkeley-square.

DEATHS.

BURNETT.—On 25th May, 1853, at Melbourne, Victoria, John Alexander Burnett, Esq., aged 40, Attorney-General, Queensland, intermittent fever.
CARTWRIGHT.—On the 28th ult., at Ayuhoe Rectory, Lady Fanny, wife of the Rev Stephen Ralph Cartwright, and daughter of Harriet, Dowager Countess of Errol, aged thirty-six.
DAMER.—At Petersham, on the 26th ult., the Lady Jane Dawson Damer, sister of the Earl of Portarlington.
MARTYN.—At the Old Kent-road, London, Hannah, relict of the late Joseph Martin, Esq., and youngest daughter of the late William Blackmore, Esq., of Pittsdean House, Tenterden, Kent, aged ninety-four.
NOEL.—On the 28th ult., at his residence, Nottingham-place, Plymouth, the Rev. Thomas Noel, A.M., Rector of Kirkby Mallory, Leicestershire, aged seventy-nine.
PERSON.—On the 28th ult., at Plymouth, Sarah, the beloved wife of James Person, Esq., aged thirty-five.
REIFFENSTEIN.—On the 28th ult., at Frankfort on-the-Maine, the wife of J. E. Reiffenstein, aged thirty nine.
TONGE.—On the 12th ult., suddenly, at Bagneres de Luchon, in the Pyrenees (in consequence of a fall from his horse), Captain John Henry Tonge, late of the 14th Lancers, formerly of the 14th Light Dragoons, third son of the late William Tonge, Esq., of Alverston, Gloucestershire, aged thirty-five.

THE ILLUSTRATED LONDON NEWS.

No. 643.—VOL. XXIII.] SATURDAY, SEPTEMBER 10, 1853. [PRICE, WITH A SUPPLEMENT, SIXPENCE.

THE RESULTS OF "PROTECTION" IN FRANCE.

FRANCE is an exceptional country, and has to be governed by exceptional means. It is now pretty clearly ascertained that the harvest of 1853 will fall considerably short of the average. A period of scarcity is in every country a matter of serious alarm to the governing classes. When the people are well fed and well employed, they cause but little anxiety. When famine stares them in the face they are apt to become troublesome, and to raise ugly questions that are at all times better left alone. In countries like France, where the people have no share in the government, and where the executive power pretends to supervise everything, regulate everything, and accomplish everything, a deficiency in the supplies of food is an evil far more serious than in states where kings and rulers make no such pretensions. Before the auspicious repeal of the Corn-laws in England, there was constant danger that a year of scarcity might imperil our best institutions, and lead to civil strife, if not to violent revolution. Fortunately, these fears exist no longer. The animosity of food-eaters against food-producers is at an end. Trade has been left in its natural channels; there is no tax upon the people's bread, and no law whatever to impede or to prevent abundance. The markets of the world have been opened to us. England has become the storehouse and the granary of all nations. Whatever scarcity we may suffer will be a natural, not an artificial, one, and will not be in the remotest degree aggravated by mischievous restrictions and interferences. The people having no complaint to make of the Government in this respect, do not hold it responsible for famine, or look to it for any relief which they know it will be powerless to afford.

Such are the inestimable results of justice and freedom, and adherence to the laws of nature. In France the state of affairs is widely different. The Emperor has some Free-trade tendencies; and seems to understand, though as yet but imperfectly, how much France might gain by the extension of her commercial intercourse with her neighbours, and especially with England. But, with the exception of Bordeaux, and other wine-growing districts, France is densely and almost hopelessly Protectionist. Small as the progress which the Emperor has made in economical science, he is, in many respects, in advance of his countrymen. But much as he can do—and the events of the last two years have proved that no previous Sovereign of France could do so much—he is powerless when he struggles against the inexorable laws of nature. To become natural is not easy, even to him, when he has the whole weight of such public opinion as he has allowed to exist, arrayed in strong phalanx against him.

The commercial policy of France is positively suicidal. Native industry and agriculture are pampered, helpless, and ignorant, and exist in constant danger of a collapse. Louis Napoleon, able as he was, and is, to combat political factions, and to hold them in the iron grip of a despotism that seems to be a necessity, would be unable to carry out a policy of Free-trade, even if he thoroughly understood it, against the immense obstruction of Protectionist prejudice existing on every side of him. It is to be found amid all classes of society—from the *millionnaires* of the factory down to the lowest and most miserable proprietor of two or three acres of land. It is, therefore, much to be feared that France must pass through a heavy ordeal of suffering before the people will be convinced how utterly erroneous are the principles upon which they regulate their trade with other countries. It needed a famine in Ireland to procure Great Britain the inestimable advantage of untaxed bread. Perhaps nothing less than a famine will be sufficiently powerful to uproot from the minds of Frenchmen the absurd and illiberal notions which have hitherto pervaded the whole nation—the wine-growers excepted—and to convert them to a sounder and wiser policy.

In the meantime it is painful, though instructive, to witness the well-meant, but pernicious, efforts of the Government to accomplish a task which is utterly beyond its province and its capacity. The Emperor, who has monopolised all power in his own hands, feels the perilous responsibility of his situation. It is no trifling matter for an absolute Prince to be confronted with the prospect of a scarcity. Louis Napoleon is in this predicament. He sees a people clamorous for their food, and looking to him to give it them. The terrible history of the first revolution is doubtless present to his mind. He must feel instinctively, that were his power ten times more stable than it is, were it founded on the affections of all classes, and supported by an enlightened public opinion;—and were it the result and representative of ages of growth and development, one winter of famine, or even of scarcity, would shake it to its foundation. Louis Napoleon appears to be fully sensible of the danger; and, with his proverbial energy and coolness, he has taken means to avert it. But his wisdom has been deficient. No doubt some of his measures have been just and proper. He has temporarily suspended the duties upon the importation of corn, for he could not retain a protective tariff on food when prices were rising to the famine standard, without a glaring disregard of the popular interests, as well as of his own safety. But this measure came too late to be of much service. The permanent freedom of the corn trade is necessary to avert such dangers as France will incur between the harvest of 1853 and that of 1854. The world has made its bargains, while France was asleep in the drowsy bed of Protection; and England more especially has drawn to her own shores the supplies of the world—such as they are—and placed herself in a position of safety that no other European nation can hope to reach. The

PARISIANS DISCUSSING THE PRICE OF BREAD.

other measures adopted by Louis Napoleon are unwise in the extreme. He has gone into the market with the money of the nation, and bought corn at a high price, with the avowed object of selling it again at a low price. He has thus done all that a state could do to ruin its own merchants—the best, because the natural, purveyors of food. He has effected this object without the least good to any class; forgetting that the purchasers of the unnaturally cheap food which he offers—with the hope of bribing into quietness the insurrectionists of the street, and the "dangerous classes" in general—are themselves the tax-payers, out of whose money the sacrifice is made. This is the first false step that has been taken; but it is a false step which, unfortunately, is in accordance with the ideas of the mass of the French people. It has been forced upon the Emperor by his own education, no less than by the unhappy centralisation of all power in Paris, and in one pair of hands, which has been the result of the long series of revolutions in that country. The official newspapers have denied that the Government has been a purchaser of grain. It is possible, however, that the denial has not been authorised, and it is equally possible that it is not exact—but intended simply to tranquillise the corn trade, and allay the panic that has arisen. In either case the effect upon the market remains the same. The corn merchants have been startled by the possibility of State competition, if not by its reality; and have restricted their dealings in consequence. The next false movement was to apply the same principle to the retailers. The press having been commanded, under penalty of extinction, not to excite alarm by informing the public of the true state of the case—a task which, in this country, the press performs in the interests of commerce and of the State—the bakers of Paris were commanded by authority to sell their bread at a losing price, the Government undertaking to bear the loss, and promising them reimbursement. How long the State can carry on such a trade it is impossible to say; but it is evident that every month of its duration will inflict a tax upon all France for the supposed benefit of Paris—a tax towards which the bakers and the Parisian bread-eaters will be compelled, as a matter of course, to contribute their proportion. A financial crisis is the most natural result of such unwise proceedings—unless, indeed, the consequences go further, and produce the very ruin and revolution which it is the object of the Government to avoid.

Perhaps the French will ultimately see things in this light. If so, they are certain to become Free-traders. Louis Napoleon himself, who reads the English newspapers, and profits by them, and who has a clear head, as well as a firm will, may be converted before them. If he be, he will have a noble task before him. We have never been his indiscriminate eulogists or opponents. We supported him in his conflict with the Legislative Assembly; we condemned his daring seizure of supreme power by the *coup d'état* of 1851; and we have since seen reason to admire the courage and the sagacity which he has displayed in governing a people, who have been hitherto found ungovernable. Both France and Europe owe much to him, and not the least of their obligations is the firm alliance which he has formed with England on the Russo-Turkish question. The destruction of his power by the classes that would be exasperated against it by a winter of scarcity, would be a public calamity of the gravest kind, not only to France, but to every other country in Europe. Hence it is to be most sincerely desired that he may weather the great storm that is rising, not for his own sake so much as for that of the people; and through them, for that great cause of Free-trade and free intercourse which is the best, if not the only, security for the peace of the world, and the healthful progress of all civilised nations. To see the error of a Protectionist policy, to become a thorough convert to Free-trade, and to carry the French nation along with him in the change, would be indeed achievements which would throw into the shade all the martial deeds of the great founder of his family. His leanings are on that side. Famine will no doubt be a hard task-master; but if the truth cannot thoroughly pervade the French mind without receiving the irresistible impetus which a famine or a scarcity will give it, neither France nor the world will have ultimate reason to regret the catastrophe.

THE BAKING TRADE IN PARIS.

(From a French Correspondent.)

The present organisation of the baking interest of Paris dates from the year 1801, and was the work of Bonaparte, then First Consul. This important branch of commerce, which attained the rank of a corporation many ages previously, and which received its first laws and regulations from King Louis IX., was for the moment broken up by the great revolution of 1789, which abolished all its privileges. The First Consul thought it necessary to centralise anew the action of the Paris bakers, and limited the number of the bakeries. He compelled each baker to give guarantees for depositing in a public depôt a certain number of sacks of wheat, and to have constantly in their possession a minimum amount of provisions, calculated according to the number of their ovens. He also established a bureau, composed of twenty-four members, selected from the baking trade, whose duty it was to elect from their body four syndics or magistrates, to whom was entrusted the surveillance and administration of the grain thus deposited in the public granaries. This organisation has continued to the present day, with some slight modifications required by the progressive increase of the population, and the new obligations which have thereby devolved upon the bakers of the capital to secure an increased supply of provisions.

The number of bakers to whom are now confided the supply of the provisions required by the inhabitants of Paris are 600—being nearly at the rate of one baker for 1600 persons. They alone have the right of selling bread in the city of Paris; and they can only carry on their trade in shops and in the markets specially appointed for that purpose. It was not until the year 1823 that the tax, which up to that period was irregularly levied upon the obligations which have thereby devolved upon the bakers of the capital to secure an increased supply of provisions.

It was calculated by the authorities upon the average market price of corn during the previous fortnight. The price of bread in Paris has been for some time rising; and unless the Government had taken energetic measures to prevent a further rise, it is probable that the price would have risen during the present month to 20 centimes for the 4lb. loaf. According to law in France, the assize of bread in towns is determined, every fifteen days, by the municipal authority, with reference to the average price of flour, in order that the consumer may have the full benefit of a fall in the value of the raw material. When the price of flour rises, the assize of bread rises, of course, in the same proportion. By this rule, and according to the quotations of flour on the 1st of September, the price of bread should have been fixed for the ensuing fortnight at 20 cents the loaf of 2 kilogrammes (above 4lb.), instead of 20 cents, which had been the rate in August. But an intimation was conveyed *par ordre supérieur* to the syndicate of the bakers that 20 cents was the maximum price at which bread should be sold in Paris; and that the bakers were, accordingly, to sell their bread at that price, even though they suffered a loss, which would hereafter be made good by the Treasury. This price is still very high, the Parisian public having been for many years accustomed to pay from 15 to 60 centimes.

We must not forget to mention among the useful regulations of the baking trade an ordinance of 1840, which prescribed that bread should always be sold by weight, and weighed by the seller in the presence of the purchaser. Before that loaves were only of nominal weight, to the great loss of the buyer.

The Paris bakers employ either two, three, or four workmen, according to the extent of their trade. The first journeyman, called "the brigadier," is charged with the duty of placing the dough in the oven, and watching it until it is properly baked. He receives a salary of 4f. 50c. a day, independently of an allowance of bread, which all the journeymen bakers receive. The second workman, called *aide*, has to prepare and knead the dough, to use the yeast, and watch the same. He generally receives wages of an equal amount with the "brigadier." When there are more than four ovens to be attended to, a third workman called *secondaire* is employed, whose remuneration varies from 3f. 75c. to 3f. 50c. a day. When a third journeyman is necessary another workman called *quatrième* is called in, who receives the wages of the second *aide*. After the revolution of 1848, an ordinance approved by Louis Blanc as President of the Commission for the Workpeople, endeavoured to ameliorate the condition of the journeymen bakers by decreasing, that, besides an increase of wages, they should receive rations of wine to the value of twenty centimes a man per day. We believe that this decree has since been abrogated by the master bakers.

The extent of the deposit of corn in the public granaries varying according to the number of each baker's customers, and the extent of his establishment, it has been found expedient to arrange the master bakers into four different classes, each of which has its special obligations. The first-class, to the number of 21, are obliged to have provisions to the extent of 140 sacks of flour in their houses, and at the depôt a reserve of twenty sacks. The second-class, to the number of 275, are bound to have a depôt of 130 sacks; the third class, numbering 105, 100 sacks; the fourth class, numbering only 5, 50 sacks. The total quantity of provisions which the master bakers of Paris are compelled to provide, inclusive of the reserve depôt, amounts to 51,280 sacks, of the weight of 117 kilogrammes each sack, or 127,000 metrical quintals.

Those of our readers who have visited Paris must have observed the sombre appearance which the greater part of the bakers' shops present. They are almost all protected by a strong *grille* or iron railing, which gives them the appearance of a prison. This system of iron bars is a tradition of past times, when it was adopted to prevent the attacks of the populace, who, in periods of dearth, have on all occasions turned their fury against the bakers, and pillaged their shops. The danger in some of the quarters of Paris has apparently not yet entirely disappeared, which has no doubt induced the bakers who inhabit the populous quarters to preserve the ancient means of protecting their property; while in the wealthier districts the appearance of the shops has been gradually transformed, and they no longer offer to the eye the appearance of a *place d'armes*.

Besides the bakeries just mentioned, there exists in Paris a central *boulangerie* for making army bread, in which the greatest activity is observable; and also a bakery for all the hospitals, which consumed in 1852, 5,843,439 kilogrammes of bread and flour for the 90,000 inmates of the various establishments of this kind.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The presence of the Emperor and Empress at Dieppe has continued to attract crowds to that watering-place, which has been undergoing, beneath the surveillance of Louis Napoleon himself, a series of alterations and improvements which will add immensely to its advantages and attractions. The high bank, which completely shut out the view of the sea from the best-inhabited and most important part of the town, is being levelled; and, in its place, a handsome esplanade is to be established, for the inauguration of which a fête is to take place. The state of the port, which greatly required reparation and improvement, has been examined into, and a sum of 500,000 francs has, in the first instance, been accorded, for the works requisite in the port and in the *bassins*, or docks.

The Imperial guests have made various excursions in the neighbourhood of the town—the Empress in an open carriage; the Emperor generally accompanying her, but sometimes going on horseback or on foot. He has frequently visited the works going on on the beach for the new esplanade, and given directions and encouragement to the workmen. The Ministers of the Interior and of Foreign Affairs, Lord Cowley, the Ottoman Ambassador, and various members of his legation, the Vice-President of the Council of State, and numerous other notabilities, native and foreign, have, within the last few days, taken their departure for Dieppe. When the weather has not permitted the Emperor and Empress to go out, they have passed a part of the day in playing billiards, at which game the latter is said to be very expert.

The Château de Beauregard, situated within a short distance of St. Cloud, and lately purchased by Louis Napoleon for a million of francs (£40,000), is now destined to serve as a retreat where their Majesties are to retire from all public affairs whatsoever, and to remain, when they so desire, in complete seclusion. The building and grounds are to undergo a thorough restoration and alteration in all respects, and it is computed that the execution of the plans proposed for these works will cost at least double the price paid for the domain itself.

The annual *Fêtes des Loges* has been going on at St. Germain during Sunday, Monday, and Tuesday. As generally happens with this festival, the weather has shown it but little favour—the principal day, Sunday, being cold and broken by stormy showers. On Friday and Saturday the troops stationed at Satory are to perform a number of grand military evolutions at and in the neighbourhood of St. Germain.

We hope to give our readers next week an account of the doings of the Imperial guests at Boulogne.

It being observed in certain high quarters, that the Senators and other important functionaries were not rendered sufficient honour to their positions and consequent emoluments, in their outing and their appearances in public, a plan has been settled for rendering these points no longer subject to the option of the dignitaries in question, by the authorities commanding a certain style of carriages, horses, and harness, to be adopted in each particular service.

The equipages of the Senators have been made the subject of an especial address on the part of M. Troplong to his colleagues, to all of whom has been forwarded a circular containing a design for the decorations in question, with drawings also of the mantle and coronet intended to sustain and surmount their arms and cipher on the panels.

The most serious alarm continues to prevail on the subject of provisions. A *rassemblement* of a threatening nature took place on the 31st ult. at the Place Maubert, and others have been feared and expected in the *quartier* St. Antoine, from the rise in the price of bread. The means adopted to satisfy the exigencies of the moment—namely, the order given by Government that a certain fixed price (eightpence the four-pound loaf) shall not be exceeded, promising the sellers, as an indemnity, that that price shall be maintained for a stated period after the fall takes place, by no means satisfies the public in general who find that by this means the poor profit no more than the rich; while the bakers see in the hope of future gains but an uncertain reparation for present and positive losses. Two plans have been proposed to Government to meet the dangers which the winter threatens to bring in this question of vital importance. It is to be hoped that its deliberations will tend to the removal of the difficulty which menaces the population to a most alarming extent.

The Camp at Satory is, next Sunday, to be the theatre of a series of amusements and exercises among the soldiers, for which the most animated preparations are being carried on, and to which the public will be admitted as spectators. Most of the games (for which prizes are to be distributed) are quite novel, being due to the ingenuity and invention of the men; others consisting of wrestling-matches, sack races, and trials of strength, are nearly such as we see on such occasions in England. Among the new sports, those of the *chèvre de fer* (a sort of *montagne Russe*, the descent of which entails a variety of upsets more ridiculous than dangerous), *le baptême de la ligne* (games of a number of duckings), and the *fruit d'anguille*, promise much amusement. A series of comic scenes, acted by the soldiers on a temporary stage, completes their part of the entertainment: while in the evening a grand ball will be given by the officers in the Imperial tent, to which a large number of guests is to be invited.

The Intendant General, Ben-Ayot, whose fortune is supposed to be almost beyond the reach of calculation, and who not long ago purchased the Palais Royal, has now, we learn, the intention of buying the large portion of the four streets it traverses, for the purpose of demolishing the houses, and erecting on the ground they now occupy an enormous bazaar.

The news we gave last week respecting the concessions accorded to an architect of the garden of the Palais Royal, for the purpose of establishing a *jardin* with [illegible] is not to be met with, at least premature. The measure has not yet been carried into effect, but is still in deliberation.

General Cavaignac, who two years since married a young lady of considerable fortune, has just been blessed with a son, who has been named Godefroy, in memory of his brother, whose name has little less of historic importance than his own.

The Opera Comique has had an important success with the "Nabab" of Halévy. The libretto—which has nothing to do, be it hinted *en passant*, with a nabob, the scene being laid in England and Scotland, and the personages loyal British subjects—*laisse à désirer* in the way both of novelty and probability; but the music is charming, fresh, full of fantasy and grace; and some of the arias, words, and music, alike are eminently original, pleasing, and striking. The piece has a marked success, and, on the whole, a deserved one.

The Théâtre Lyrique has brought out "La Moissonneuse"—the music by M. Vogel, the words by M. Adolphe Masson and Aimée Bourgeois. The subject turns on a *somnambule*, who is led by her magnetiser into a series of what are more expressively than elegantly denominated "scrapes," when under the magnetic influence. Of course, however, like *Amina*, her innocence triumphs, and all winds up satisfactorily. The music in this piece, as in the former, is the best part, and possesses much merit, especially as to melody.

Alexandre Dumas has read at the Théâtre Français a new piece, just completed, entitled, "La Jeunesse de Louis XIV.," which has been received with acclamations. It contains no less than twenty-two personages, and is to be immediately put in repetition by the *élite* of the company, including Mdmes. Augustine and Madeleine Brohan, Allan, Dubois, &c.; and MM. Delaunay, Prevost, Régnier, Got, &c.

The Emperor and Empress are expected to return from Dieppe on Saturday (this day).

The Minister of Foreign Affairs has taken possession of his new hotel, near the Chamber of Deputies.

The Duke of Rovigo surrendered himself a day or two ago to undergo his sentence of a month's imprisonment as one of the convicted "foreign correspondents."

One thousand five hundred individuals of bad character have been arrested in Paris within a short time, through the vigilance of the police authorities—of whom 207 have been imprisoned, and the remainder expelled.

The price of wheat and flour has more than ordinarily occupied public attention during the last eight days. A considerable speculation has been carried on in flour. The measure adopted by the Government to prevent a further rise in the price of bread in Paris has defeated for the present the manœuvres of the famine-mongers, and a stop has been put to a further rise in the price of flour. The best marks, which were forced up to 20f the sack of 157 kilogrammes, are now quoted at 88f. the sack; and those who purchased two months since are offering at 2f. a sack lower. Foreign wheat has been offered for sale in the Paris flour market, particularly Spanish, of excellent quality. A quantity of American flour has arrived at Havre, which has produced a fall in that market of 2f. the barrel. Wheat has fallen in Marseilles, in consequence of the large arrivals there from the Black Sea.

The late extraordinary rise in the price of wheat and flour has not been received with pleasure by the generality of French farmers. They observe that the natural effect of an artificial or forced rise in the price of wheat is to encourage importations are made, which produce an overabundance, and a consequent unnatural fall in prices, the loss of which falls eventually on the farmers. Such was the result of the scarcity of wheat in the year 1847, after which the farmers were forced to sell their wheat at a price which did not defray the cost of cultivation. Letters from the south of France are filled with lamentations at the progress of the *oidium*. The disease is extending rapidly in the vineyards, and the proprietors are becoming more exigent in their terms for the sale of the wines remaining in their cellars; and brandies increased eight francs the hectolitre within eight days.

A letter from Perpignan, of the 2nd inst., states that the crop of fruit in that district is more abundant than has been seen for many years. The latter adds that peaches (the earliest fruit in that market) are selling at 10 sous the dozen of best quality, 2 sous the second quality, and 1 sou the third quality. Thirty large waggons are despatched from Perpignan every morning with fruit and vegetables, and the diligences take daily from 50 to 60 tons of fruits of various kinds.

The *Moniteur* contradicts the assertion that the French Government is disposed to make purchases of corn. Far from opposing the regular course of commerce, says that journal, the Government interferes only to accord it by general and equitable measures which secure its liberty and the security of its operation, and which promote the importation of grain, and its distribution throughout the country. The different decrees, which have successively abolished certain prohibitions, reduced entrance duties, and suppressed tonnage dues, were (says the official journal) published in this spirit, and their efficacy is already felt in our ports.

An Imperial decree provides that all French or foreign vessels, loaded entirely with grain, breadstuffs, rice, potatoes, or dried vegetables, shall pass on all the rivers and canals free from all navigation dues from this date up to the 31st of December next.

Considerable uneasiness appeared to prevail amongst the few speculators at the Bourse on Tuesday, in consequence of the delay in the conclusion of the Eastern question, and likewise on account of the cold and stormy weather, which leaves very little chance for the vintage to arrive at maturity. Under these depressing circumstances the Three per Cents, which opened at 72f. 30c., fell to 72f. 05c., at which they closed for the end of the month.

The movement in France in favour of Free-trade is of so much importance to the interests of English trade and commerce, that it deserves to be carefully chronicled. The Council-General of the Hérault has unanimously voted a resolution in favour of a general reform of the Customs tariff, in which forcible reasons are urged in favour of a modification of the restrictive system of France. The writers, M. Michel Chevalier—

The Council-General of the Herault, considering that the French Customs tariff, by far the most restrictive in Europe, and that it has remained nearly unchanged since the re-establishment of peace, or rather appearing with [illegible] in foreign markets. Considering that for some years [illegible] governments without exception have [illegible] their tariffs so as to increase them (or as in most cases [illegible] that prohibition has almost entirely disappeared from [illegible] tariffs without exception; that duties on primary articles have experienced considerable reductions; and that those reforms have been crowned with the most complete success, although the manufactures of almost all foreign nations were much less advanced than ours. Considering that the increased duties imposed by the French tariff have provoked rigorous reprisals, which have been principally directed

...ant an extremely important branch of French agriculture, the growing of wine, which is the principal resource of the department of the Hérault. Considering that the excessive duties imposed on foreign iron causes a serious injury to the greater number of the national manufactures, and particularly to agriculture, and that the principal effect of those same duties with respect to French iron manufactures is to cause them to remain in an inferior condition, whilst the considerable tax imposed on the public might have been employed in concentrating this manufacture in favourable localities, in which France is not deficient: Considering that at a period when everything indicates the nations to unite and live in peace, and when they are making the greatest efforts and the greatest sacrifices to multiply their relations, it is an object worth of the solicitude of an enlightened Government to proceed, with all the precaution which good policy commands, to conciliate our Customs tariff with a system of temperate liberty. The Council therefore renews its wish that a revision of the Customs tariff be commenced, that commercial prohibitions be abolished, and replaced by moderate duties; that the excessive duties be reduced to such a rate as may avoid permit...petition to stimulate French industry; that the duties imposed on primary matters be gradually reduced, so as to disappear as soon as possible; and that the duties on coal, steel, and cast metal be reduced to the rates levied during the reign of Napoleon I.

BELGIUM.

The prospect of a deficient harvest has caused much disquietude. At Brussels crowds assemble in the Corn-market, though their demeanour is peaceable. They complain of the high price of provisions. In consequence of the high price of corn, popular discontent is openly manifested in the important city of Liege, and the authorities have forbidden all assemblages in the public streets of more than five persons, and have ordered all the *cafés*, and other places of public resort, to be closed at nine p.m. Inflammatory placards of a very violent description are affixed to numerous buildings in Ghent. A numerously-signed petition is to be sent from Verviers (the Leeds of Belgium) to the Minister of Finance. It states that the bad harvests of Belgium, France, Greece, Germany, and Italy, and the consumption of corn by the "massive voracious consumers" now armed by the despotic powers, threaten to bring about a crisis in the kingdom.

GERMANY.

The approaching military manœuvres at Berlin, and the Kirchentag which will succeed them, will be attended by a great number of foreign officers, among whom will be his Royal Highness the Duke of Cambridge, Lord Hardinge, Lord Raglan, Colonel Bloomfield, and several other officers of the English army. The committee for arranging the Kirchentag find that their visitors will, in all probability, be so numerous that the 1,500 thalers voted by the Prussian Chambers will not suffice to cover all their expenses, and they have applied to the Cultus Ministerium for a grant of a similar sum. Many of the most talented preachers of Germany will officiate every day during the period of the Kirchentag, and the Dom Choir will lend its aid in the celebration of choric liturgical services. The King of Prussia has returned from Silesia, and has since left Berlin for Saxony.

No progress has yet been made in the Zollverein conferences. The greatest activity and zeal are shown by Austria in assimilating her Customs arrangements to those of the Zollverein, in preparation for the new treaty of commerce between the two, which will come into force at the beginning of next year; and the expectation that, by the expiration of the old treaty, Austria will be prepared to distance Prussia, and outbid her in liberality of tariff, seems likely to be realised. The rejection of Prussia's motion for a diminution of the duty on iron involves her in a dilemma with Hanover, by whom this was made a *sine qua non* in the union of the Steuerverein with the Zollverein.

There appears now some probability of France entering into a commercial treaty with the Zollverein, in spite of the attempt to bring about such a result having hitherto always failed.

In consequence of the dearness of all kinds of grain, Prussia is about to propose in the Zollverein conferences to admit corn duty free, and it is not improbable that this motion will pass. This will probably, be only a temporary measure, dictated by the partial failure of the harvest.

The general prosperity of trade and manufactures at Berlin, is just now increased by considerable orders for Australia particularly for boots and shoes, of which 2000 pairs have been ordered from Berlin. Boots are one of the few articles which are made here undoubtedly better than in England, and at half the prices, best men's boots costing only 12s. to 13s. 6d., but the leather is not so well tanned as it might be.

The College of Rural Economy of Prussia has made a favourable report of the harvest.

The friendly relations between the Government of Hesse-Cassel and the dignitaries of the Catholic Church have been disturbed. The Minister, Von Hassenpflug, refuses to confirm a certain grant made by the present estates to the see of Fulda. Besides this, certain seminaries for boys and girls, which had been established by the Bishop, have not met with the approbation of the Electoral Government.

The guild of towers of Nuremberg, in Bavaria, has just celebrated a *Volksfest* that forms a pendant to the historical cavalcade lately seen in Brussels—a procession of trades, &c., in highly-decorated vehicles, preceded by a representation of "the Chase," at various different periods in the history of man. The communes of the surrounding country contributed each a carriage. On one of them sat Bavaria, surrounded by smiling representatives of the eight Circles of the kingdom; another was made, by the skilful use of heads, corn, and fruits, to represent a ship with its masts and rigging; and in the inside of all sat the beautiful beauties of the respective villages dedecked with wreaths and garlands, and escorted by their rural *beaux* on horseback, in black leather breeches, red waistcoats, and hats figuring with many coloured ribbons. Goldbeaters wielded their hammers, and girls laid the glistening leaves between sheets of paper for export; the smiths had got up Vulcan for the occasion, hammering at his anvil, with Venus for a handmaid, and lots of Cyclops helping; every trade produced whatever it had peculiarly characteristic to show. Gambrinus, the Bacchus of Bavaria, the inventor of beer, sat enthroned on a vat drawn by six horses, under a bower of hops, and wearing his Royal crown and his cloak of ermine (for he is king of Flanders and Brabant); and his attendants bore staves encircled with hops—kegs were slung round their ample chests, and tankards served them for helmets. Brewers and coopers in appropriate costume accompanied the Royal Gambrinus on foot, and about 20,000 people, with King Maximilian among them, were present.

AUSTRIA.

The Emperor Francis Joseph arrived at Salzburg on the 31st ult., and was received by the population with every demonstration of loyalty and affection. Shortly afterwards the Duchess Maximilian and her daughters the Princesses Elizabeth and Helena likewise arrived there, and were also hailed by the joyous acclamations of the people.

By Letters from Ischl inform us that while there the Emperor "was as happy as the days were long." At two in the morning his Majesty generally drove away to shoot in the mountains; but at ten o'clock he never failed to meet his fair bride and the Imperial family at the so-called "Molken-sieders" (whey-boilers), where breakfast was taken. Ceremony there was none. His Majesty in the morning was equipped in a full Styrian suit of grey, trimmed up with green, and a green hat, ornamented with the tail feathers of the capercailzie. Count Grünne, his Adjutant-General, who always accompanied the Emperor on his shooting excursions, officiated as coachman, in a similar costume, driving either four horses, or *en à la Daumont*, that is, three abreast.

Love at first sight is not often a Royal experience: but a letter from Vienna, of the 31st ult., says:—

We learn from a source worthy of credit that the rapid choice which the Emperor made of the Princess Elizabeth of Bavaria took place in the following way: At Ischl the family of Prince Maximilian of Bavaria happened to be present at the Court ball. The Emperor appeared charmed with the Princess, and requested to be allowed a few minutes' conversation with her after the ball. At the end of a few instants, the Emperor returned with the Princess leaning on his arm, and presented her to the company as the future Empress of Austria.

Lieut. Schwartz, the commander of the brig *Ussero*, who has become notorious by the Cossta affair, has been promoted to the rank of captain.

A great many natives of the Tyrol, who have become converts to Protestantism abroad, have, on their return to their own country, petitioned for the *Indigenat*. The local authorities forwarded the petitions to the Government at Vienna, which rejected them.

ITALY

The intelligence from Italy is serious. The measures adopted by the Roman Government increase in rigour: arrests continue to be made on all ... the States; they extend to all classes of persons, and ... to attempt at insurrection has only served, as at Milan, to add to the number of victims. An attempt has been ma... the Legate at Ravenna, but without success. The ... by the populace on account of the high price of bread. He has taken flight into Tuscany. Part of the Austrian garrison of Florence has been sent into the Romagna. The official journal of Lombardy contradicts certain rumours which have gone abroad respecting the harvest, and announces the arrival at Venice of so large a quantity of corn that the authorities are at a loss where to stow it.

The Church of Rome has, at present, its hands full of difficulties. It is at odds not only with the heretical Governments of Baden and Prussia, but with the Liberal Catholic Government of Piedmont, but with the Government of Bavaria.

Advices from Naples state the names of twenty-two persons whom the Criminal Court of Naples has condemned to death *in contumaciam* for the part they took in the revolutionary movement of May, 1848.

SPAIN.

The harvest in Spain has been magnificent, and the produce greater by one-fourth than that of an ordinary year.

M. Egana, who occupies the triple post of Minister of the Interior in Spain, confidential friend of the Duchess de Blanzares, and director of her organ, the *Regano*, has issued a circular prohibiting the circulation of the *Times* in the Spanish dominions, in consequence of some severe strictures upon the intolerance evinced by the Spanish authorities in itregulations relative to Protestant burials. The *Times*, for answer, avers that the present Spanish Government depends for its existence upon the tolerance of a Court favourite, and that the present Government are regarded with contempt, hatred, and burning shame by the Spanish people for conniving at the profligacy of the Court.

RUSSIA.

We hear from St. Petersburg that the Emperor Nicholas has finished the reviews of the grenadiers of the Guard. The manœuvres at Krasnoe Selo were brought to an end by a grand parade, held by the Emperor on the 27th ult.; and the troops, after a day's rest, returned to St. Petersburg. It was expected that the Emperor would soon set off to inspect the troops concentrated at Warsaw, and from thence visit Germany. In order to relieve the public Exchequer of the expenses of the military educational establishments, the Emperor has ordered 700,000 silver roubles from the two savings banks in Petersburg and Moscow to be invested, and the interest to be paid over to the military school. The ships of war that were built last year have now completed their equipping, and have put out for a cruise of evolution. At the source of the river Alkma, in Siberia, where till lately no human foot had strayed, on the banks of the Lena, and also in a tract of land between the rivers Wilim and Olekma there have been found rich deposits of gold, which will, it is said, furnish occupation for many thousands of labourers for a period.

The reports relative to such movements of the Russian Government as might be supposed to be indicative of its intention to withdraw or not to withdraw its troops from the Danubian provinces, are contradictory. From the provinces we hear of the countermanding of orders given to tradesmen on the assumption that the troops were to winter in the provinces, purchases of means of conveyance in a backward direction, arrest of the advance of army divisions, &c. On the other hand, the news from Moscow and Warsaw speaks of no symptoms of a return of the Russian troops to their own country. The arrangements made to forward the detachments drawn from the two localities named were broken up some months ago, as if the occupation of the provinces were to be permanent.

The tone of the Russian journals has not ceased to be warlike, and, among other means used to keep up that fer-our, poetry has been invoked. The *Abeille du Nord* of St. Petersburg, a journal which enjoys the greatest circulation of any in that capital, publishes a copy of verses, entitled "The Song of a Russian Warrior," and of which the following is a literal translation:—

1. Before thee, Holy Image, I bend thrice to the earth, and, after having offered up a prayer, I will rush amid the whirlwind of combats in the cause of the altar, in the cause of holy Russia, in the cause of the White Czar.

2. My sword, the heritage of my ancestors, has drunk the blood of the enemy in the wars with the Tartars and the Swedes. It now thirsts for blood to wash away its rust.

3. From the summit of th. Balkan our brethren stretch out their hands to us with hope and prayer. Their sufferings are not unfelt by us. Russia has compassion on them, and goes forth to combat for them.

4. It is there that our ancestors received the holy baptism which rescued them from the darkness of Idolatry. There is the country of our faith.

5. It is there that the chalice of salvation restored them to life.

6. The mother of orthodox Russia, Kiew, holy and sublime city—is she not the god-daughter of Constantinople? Constantinople must be sacred to us. They contain the promise and the pledge of destines which will be theirs in strength in silence.

6. The honour and glory are the strength of Russia. The grace of God protected with them our fathers in times long past. We have not forgotten the example of our fathers, and the valour of their sons rushes also to the battle under the banner of their faith.

7. We go forth to chastise the proud, to avenge our altar, insulted by the impious. Burst forth, then, holy war! let our cry, the precursor of victory, be raised! That cry is—All for the God of Heaven, for the Czar of the Russians.' PRINCE P. WIASEMSKI.

It is stated that a *corps d'armée* of 6000 men have been assembled at Irkutsk, the entrepôt of the Russian trade with China in Siberia. The troops are intended to protect the frontiers towards the Celestial Empire, which have been hitherto but slightly defended.

THE EASTERN QUESTION.

The text of the official note addressed by Redschid Pacha to the representatives of Great Britain, France, Austria, and Prussia, conveying the acceptance by the Sublime Porte of the Vienna collective note, with the modifications proposed, has been published. The Vienna note, and the proposed modifications, appeared in the ILLUSTRATED LONDON NEWS last week. Redschid Pacha's note contains the following passage:—

If the last note proposed by the Sublime Porte be accepted, or if the Vienna note receive the desired modifications, the Ottoman Cabinet will not delay to sign one or other of these two propositions, and to send immediately an Ambassador Extraordinary upon the condition of the evacuation of the Principalities.

The Government of the Sublime Porte also expects a substantial guarantee on the part of the high powers against all interference for the future, and all occupation from time to time of the Principalities of Moldavia and Wallachia. And the aim of the Ottoman Government in fortifying itself with precautions to this degree consists in the wish to shun everything which could bring about a misunderstanding between the two Empires after the Sublime Porte shall have renewed relations with the Court of Russia.

The news of the 19th ult., from Varna, is of unusual interest. The ruined fortifications have, to the astonishment of all, been completely restored. Six new trenches have been dug at Varna, and 7 commanding entrenched works in the neighbourhood of Schumla. Between the Balkan and Tultcha 101 bulwarks of various kinds have been constructed. The whole Turkish army under Omer Pacha's command amounts to 84,000 men, of whom 37,800 are on the Danube. The English General, O'Donnell, after having passed two days in Varna, returned to Schumla. Many foreign officers are in Omer Pacha's camp as lookers-on.

By a letter of the 24th inst., we learn that fresh materials for the construction of bridges have just been received by the Russians. The rations supplied by the inhabitants of Moldavia and Wallachia are paid for in *assignats*, to be redeemed at some future time by the provincial Governments. The amount of these bonds will be deducted from the indemnification which Russia claims for her outlay during the last occupation. It is related that the Hospodars of the two Danubian Principalities have concluded a secret treaty by which they are bound to make common cause in case the Sultan should subsequently call them to account for their present conduct, but this rumour hardly deserves attention. Immense quantities of corn are collected in the neighbourhood of the Sulina mouth, but under present circumstances no vessels can venture to take in cargoes. We hear from Semlin that fresh Russian troops continue to march into the Principalities. At Belgrade the repairs of the fortress are vigorously carried on, and it is remarked that a great number of guns are turned towards the city. The great public still believe that the Russian answer will be favourable, but the diplomatic world is less sanguine.

Sickness prevails amongst the fleets of Besika Bay, and a return to Malta or Smyrna Bay was shortly expected.

UNITED STATES.

There seems to have been a real fatality attending the New York Exhibition. A letter from that city, dated August 24, says:—"All the English commissioners have sailed, except Professor Wilson: and the mission of those who have gone has been nearly a failure. No one of the departments of the Crystal Palace on which they were to bestow their special attention was complete at the time expected. Mr. Dike sailed last Saturday, his stay being shortened by illness in his family circle. Professor Wilson is thus left alone, and, although after his [illegible] in explorations he has been constantly occupied in the Palace, yet his special department is still very incomplete. It is deeply to be regretted that the blundering management of the Exhibition should have so far defeated the generous plan of the British Government in sending out its commissioners. For some as they have been [illegible] have been their obstructions on the country, it will be entirely beyond their power to present such a report as was originally contemplated."

YELLOW FEVER IN NEW ORLEANS AND MORTALITY [illegible]

New Orleans has been to the West ever since its cession to the United States Union in 1803, even more truly than Constantinople to the East, the City of the Plague. Built upon a site that only the ma... of commercial lust could ever have tempted men to occupy—a huge swamp at the mouth of the Mississippi—it subjects all but its native and negro inhabitants to a process of acclimation; under which ... a large proportion of them perish. Every year, about the beginning of August, the fever season sets in, and seldom departs before the middle of October. Two months since, there were about 30,000 inhabitants reported by the health authorities as "unacclimated"—that is, hacle to the sickness; and already *one-tenth* of that number have died! so that, if the rate of mortality were to go on as it has begun, half of the ... acclimated would sink under their first experience of ... ow fever. Two hundred deaths per day out of so small a pop... n, is a larger proportion than the records of great plagues anywhere present. The most horrible incidents which the ghastly pencil of Defoe has preserved to us are outdone by the scenes reported to us of the Crescent City. When the grave-diggers became unequal to their work, chain-gangs were brought from the prisons, and induced by threats and bribes to do the sexton's office. These failing to keep pace with the multiplication of corpses, negroes were hired in aid. Five dollars an hour, and brandy without stint, could not stimulate this demon-like crew to give decent interment to the bodies flung just within the cemetery gates. Trenches of fourteen inches' depth are furrows, not graves—but not even these could be made fast enough, or the bursting coffins be quickly enough covered up.

On a Sunday evening the citizens took alarm at the accumulation of unburied corpses; and the perplexed authorities ordered the burning of one hundred and twenty. Last accounts say that the plough was employed to open gaps in the rotten earth, wherein to hide away the still more rotten clay that but a day or two before was adorned with life, perhaps adorned with beauty. And to ... the horror of the whole, the city rivalled, in its attention to the usual sports of the summer season, the drunken, ruffian levity of the chain gangs and the negroes. One who visited the scene jestingly describes it as a journey made under the title of "Pass Jones on among the dead men." ... regattas were announced, as if no pestilence ... Great Plague of London in 1665 has been regarded as the ... ence of modern times; and yet, out of [illegible] ... alone 60,000 were swept in a year; whereas journals state that the present epidemic is destroying at the rate of 4000 per month, out of a total population of not over 80,000, and of a population liable to the disease of not over 30,000.

The epidemic is spreading up the Mississippi valley in all directions, and general alarm is felt throughout the south. It has been ... summer all over the American continent.

In New York the intense heat of the weather has caused an alarming mortality, which resembles more the results of an epidemic, than the ordinary consequences of an increased temperature. During the week ending August 20th, 969 deaths occurred in the city, of which upwards of 400 were traced to the effects of the extreme heat. Almost the whole of the latter arose either from direct exposure to the sun's rays, or from over-exertion in a heated atmosphere. To prove, however, ... posure to the sun was not necessary to produce fatal results, it is stated that a printer in the composing-room of the *Herald* office, while picking up types at his frame, fell suddenly dead from the effects of the heat. Among the list of dead, there were several instances, as appeared upon the inquests, where the "stroke," was received either within doors or in the open air, among the victims were several servant girls, who had overheated themselves by walking fast. The three coroners of the city of New York were engaged from an early hour of the morning to a late hour of the night in holding inquests; and ... parent were the demands upon them that many cases had to be postponed. In many instances the relatives of the deceased have besieged the coroners, with imploring appeals, that the inquest might be holden, so that the burial might be taken away for burial. For, positive lack of time, could not be heeded, and the bodies were removed to the Dead-house. On Sunday, the 14th August, 100 ... were reported for the city of New York. The large majority of ... vehicles up to the heat of the sun were persons of intempe... Numbers of horses died in the streets. When the last steamer left ... weather had become cooler, and the mortality had diminished.

THE CHOLERA IN THE NORTH OF EUROPE.—The appearance of Asiatic cholera in Hamburg is authentically announced. About this time last year the dreaded visitant came thus far on its way towards us, and then mercifully turned back. Again it has issued from its eastern hiding-place, advanced from Persia into the Russian Empire, to Prussian Poland; and, after cruelly ravaging Copenhagen, fastens upon the westernmost point of central Europe, whence it is but a short journey to our shores. In Copenhagen, nearly 600 persons—out of a population of 200,000, have perished by it—a rate of mortality four or five times greater than that ordinary course as we have no right to expect can ... us from its desolating presence. The daily increase of cases of cholera ... Berlin amounts now usually to 20 odd. The total amount since the beginning of August is 185, of which 93 (a large proportion) have ... Fatal (cholera is increasing rapidly at Danzig: 41 cases were ... from ... to the 26th; the deaths already noted amount to ... have been about 200 cholera cases at Hamburg, two-thirds of ... proved fatal.

TESTIMONIAL TO HENRY EDWARDS, ESQ.—... SENTATION AND PUBLIC DINNER AT HALIFAX.

On Tuesday (last week), the splendid Testimonial which ... purchased by the subscription of the friends and supporters of ... ward, Esq., was presented to that gentleman at a public dinner of the subscribers, at the Riding School, Halifax, a building of forty yards by twenty, and is stated to be the largest riding-school in England it was decorated for the festival with much taste. The north end ... appropriated to the principal guests of the evening, ... three large panels surmounted with massive semi-circular ... greens. In the central panel was the inscription, "Edwards, our ... man," surmounted by the Royal arms in relief. Beneath the inscription the busts of the Duke of Wellington, the late H. L. Edwards, Esq., Eye Nest; and the late Samuel Waterhouse, Esq., of Well Head, were placed upon ornamental brackets; and immediately over the head of the chairman was a large painting of the device of the Halifax Conservative Association, the sceptre on the Bible, with the well known motto, "The altar, the throne, and the hearth." On the east end of the raised table was a large painting of the Royal arms suspended from the wall; and at the opposite end were two flags of the Halifax Local Militia, ... by another painting of the Royal arms. The right hand panel bore a large portrait of her Majesty with the national flag behind it, crossed with a neat blue banner, bearing the motto "Church and ... The left hand panel was a companion portrait of Prince Alb... which was another national flag, crossed with a blue banner, ... "Edwards and Education." The pilasters separating the two side arches from the centre one were formed of evergreens, each surmounted with a large national standard.

The east and west sides of the hall were paneled with evergreens, and decorated with numerous flags and devices. At the south end of the hall was a gallery for 500 ladies; and the walls were hung with gorgeous banners. From the centre of the roof was suspended an immense gas chandelier; on either side were pendent circles of gas. A brilliant star was placed immediately in front of the inscription, "Edwards, our townsman," and a number of lesser lights were dispersed in various other available parts of the hall. The chairman and Mr. Edwards, with a party of his immediate friends, entered the hall about a quarter-past five, and were received with loud cheering. When Mrs. Edwards took her seat in the gallery a few minutes after, she was also received with a similar demonstration. George Haigh, Esq., occupied the chair; and on his right sat Henry Edwards, ... Colonel Monckton, of Felkirck, ... of Nostel Priory; Colonel Thompson, ... ton, near York; R. Carter, Esq., of ... Esq., John Waterhouse, ... Esq., Holdsworth, Esq., ... chairman ... count Galway, ... Esq., John Abbott, ... Esq., John Emmet, Esq., J... son, Esq., and William Holdsworth, Esq. The guests exceeded 300. The excellent band of the 2nd West York Yeo...

stationed in the marquee on the east side of the hall, where they performed a selection of appropriate music during dinner.

The customary loyal toasts having been drunk, the Testimonial Committee approached a moveable pedestal upon which the Testimonial had been placed, and wheeled it from the centre of the room along the aisle, immediately in front of the upper table; when the plate was uncovered, and its appearance was hailed with loud applause.

The Chairman then rose, and, in an eloquent address, observed—"It is not only for the very important services which Mr. Edwards rendered to this town and neighbourhood during the five years that he represented us in Parliament—not for the efficient services bestowed by him in obtaining for us the railway accommodation we now enjoy—not for having always given his time and his interest for the advantage of his constituents during the period he was in Parliament—not for having obtained that boon for the factory operatives which he did, and for which they owe him an eternal debt of gratitude—not for his good Conservative votes as a member of the Legislature—it is not for any of these excellent and praiseworthy services alone that we are now about to present him with that gorgeous and costly Testimonial; but it is because of the universal esteem which he has acquired among his fellow-townsmen, because of the invariable urbanity of his manner and the kindness of his disposition, that this trophy of transcendent worth is about to be handed over to him (Loud and continued cheering). Ay, gentlemen, it is also for his unbounded liberality, and for his friendship towards the inhabitants of this town and neighbourhood, that we are about to put this honour upon him (Loud cheers). These are the grounds on which we present that gentleman with this magnificent Testimonial" (Cheers). The Chairman then narrated the origin of the splendid gift, which he formally presented amidst immense cheering. The plate was manufactured by Messrs. Garrard, of the Haymarket, London, at the cost of a thousand guineas. The pedestal, which is richly chased and burnished, has four bold supporters. Surmounting the pedestal is a group of figures of large size representing a "Hawking Party of the time of the Cavaliers"—the subject from Sir Walter Scott's "Peveril of the Peak." The centre figure is a lady, mounted upon a spirited horse, watching the sportsman, who has just secured the hawk, and by his side is the prey—a dead heron. A boy with a cross-bow also forms a fine feature in this portion of the grouping. Behind the sportsman is the servant, and a gay Cavalier is by the side of the lady. In the background is the keeper of the hawks. The figures, horses, and dogs, are in chased and frosted silver; the other portions being burnished. The following inscription is engraved upon one side of the pedestal:—

TESTIMONIAL PRESENTED TO H. EDWARDS, ESQ., HALIFAX.

Cui honor, honorem.

Presented to HENRY EDWARDS, Esq., by his friends and supporters in the borough of Halifax and its neighbourhood, as an enduring testimonial of their sincere regard for him as a townsman, and to perpetuate their high sense and appreciation of the integrity and firmness with which he discharged his public duties during the five years he represented the borough in Parliament, and the zeal and assiduity with which he has at all times devoted himself to promote the best interests of his constituents, the general welfare and prosperity of his native district, and the comfort and happiness of its industrial population.

Mr. Edwards returned thanks for the superb Testimonial in a spirited address, wherein the hon. gentleman expressed his determination to contest the representation of Halifax with the present members so long as the Conservative committee gave him their confidence. The gallant Major concluded his address amid loud and protracted cheering, after which the assembly gave several rounds of enthusiastic cheering for Mrs. Edwards and family.

W. Forbes, Esq., M.P., in an appropriate speech, then proposed "the Town and Trade of Halifax," which was replied to by J. Holdsworth, Esq., after the health of Mr. Forbes, proposed by Mr Edwards, had been drunk.

The other toasts drunk were "Their Glorious Constitution in Church and State," proposed by John Abbott, Esq.; "The Lord-Lieutenant and the Magistrates of the West Riding of Yorkshire," by John Staveley, Esq., responded to by Rowland Winn, Esq.; "The Mayor and Corporation of Halifax," proposed by J. M. Kirk, Esq., replied to by the Mayor; "The Visitors," by Dr. Kenney, replied to by Lord Galway, M.P.; "George Haigh, Esq., the Chairman, and the Committee and Secretaries who provided the Edwards Testimonial, and had the management of the Festival," proposed by W. F. Holroyd, Esq., and replied to by the Chairman. Then followed "The Ladies;" "The Press;" and "Messrs Garrard and Co., and Mr. Dexter," the manufacturers and the *artiste* of the splendid Testimonial.

The musical arrangements included some delightful singing by Mrs. Sunderland, who was received with great enthusiasm.

M. SOULÉ,

UNITED STATES AMBASSADOR TO THE COURT OF SPAIN.

PIERRE SOULÉ having distinguished himself in the United States as a talented leader of the ultra-Southern party, one of the tenets of whose faith is "Cuba at all hazards," it was not perhaps surprising that the Spanish people should feel a little annoyance when this same gentleman, having rendered himself exceedingly popular with his party by his powerful advocacy of Cuban annexation, was selected by General Pierce as the Ambassador to the Court of Spain. Pierre Soulé is a Frenchman, and was born during the first consulate of Napoleon, at Castillon, in the Pyrenees. Being intended for the church, in 1816 he was sent to the Jesuits' College, at Toulouse, the discipline of which soon proving too irksome for his disposition, he retired from the college, and finished his studies at Bordeaux. Paris was his next field of action. Here, in conjunction with two friends, he established a newspaper, of liberal Republican politics. He was not, however, long permitted to disseminate his ideas of politics. Being brought before the courts of law, his advocate, whose name was Ledru, defended him on the ground of his youth, and requested the clemency of the Court on that account, when young Soulé started up and denied the criminality of his opinions in a burst of feeling. His eloquence, as a matter of course, was of no avail: he was sent to St. Pelagie, and in a short time escaped to England. After residing in England until he considered the storm had blown over, he returned to France. While at Havre some sincere friend advised him to proceed to the United States and exercise his talents in a field more in accordance with his Republican ideas, offering him at the same time a free passage as far as St. Domingo. This offer he accepted, and landed at Port au Prince in September, 1825; he afterwards proceeded to Baltimore, and finally settled down at New Orleans the latter end of 1826. Heimmediately decided upon entering the profession of law, and accordingly he studied with great assiduity the English language and American jurisprudence, was admitted into the honourable profession of the law, and soon rose to distinction by his talent and his eloquence. In 1847 he was elected senator from Louisiana, and re elected in 1849 for six years; and since the death of Mr. Calhoun has been considered the leader of the ultra-Southern party.

PUBLIC DINNER TO HENRY EDWARDS, ESQ., AT THE RIDING SCHOOL, HALIFAX.

THE CUTLERS' FEAST, SHEFFIELD.—(SEE NEXT PAGE.)

THE DARGAN VILLA, MOUNT ANNVILLE.—VISIT OF HER MAJESTY.

THE visit of her Majesty to Mr. and Mrs. Dargan, immediately on her arrival in Ireland, is regarded as one of the most remarkable circumstances connected with the Great Exhibition of Dublin. It was a dignified recognition of the prevailing idea of the age—industrial development; and a graceful honour to one of its most deserving and most successful illustrators.

Her Majesty, accompanied by Prince Albert and the two young Princes, and attended by the Duchess of Wellington, the Hon. Mrs Bulteel, Lord Granville, and the Lord Lieutenant, in private carriages, arrived at Mount Annville soon after twelve o'clock, and was received by Mr. Dargan, who conducted the Royal and distinguished visitants to the upper apartment of the campanella tower.

The Dargan Villa, at Mount Annville, is constructed in the Italian style of architecture, with a square tower at one end; the principal entrance being beneath a portico of Grecian Doric, composed of granite, upon a base of blue limestone. The villa is roomy, spacious, and singularly convenient.

Immediately in the rear of the villa is a hot-house of glass, and of elegant and classical proportions. The terraces leading from each side the house to the lawn and garden—the esplanade in front—the tasteful arrangement of the flowers and groups of evergreens—the rare cedars, whose gloomy boughs form a rich contrast to the emerald and Pomona tints of the surrounding foliage—combine to render the Dargan Villa and its grounds a magnificent picture.

The interior of the villa is equally deserving of notice. From the hall you are conducted, by a slight *detour*, to the grand staircase, which leads to the campanella tower, with its two apartments, furnished with three bay windows on each side, and its twenty four distinct views of the fine and singularly diversified panorama around. The two oblong drawing-rooms, bisected with an elegant boudoir, are tastefully furnished

On the first landing of the grand staircase, leading to the tower, are two marble busts: the one representing Mr. Dargan, the other Mr. Provis the engineer of the Menai-bridge. These busts were executed by Jones. Between these busts is a picture by Leseur; and other pictures, some of curious excellence, adorn the different compartments of the villa. The views from the tower are unequalled in Ireland. The north commands a view of the Bay of Dublin, with its beautiful indentations, the bold promontory of Howth, Ireland's Eye, Lambay, and the city of Dublin stretched out in its whole length; to the right of these objects may be descried the heights of Killiney, which, with Howth, forms the main entrance to the Bay, Dalkey Island, Bray-head, and, fardy distant, the Greater and Lesser sugar-loaves, which rear their lofty peaks above the Wicklow range of hills. In nearly an opposite direction, the eye can range over the Dublin mountains, the richly-wooded valley through which the Dodder winds its slow and sluggish course. Her Majesty, who warmly expressed her surprise and delight, seemed riveted to the view towards the north; and the whole of the Royal party, indeed, expressed a similar feeling

Mrs Dargan, accompanied by the Lord-Lieutenant, ascended the tower to meet her august visitors, and was naturally affected by such a remarkable and unlooked-for circumstance. On reaching the upper apartment, leaning on the arm of the Lord-Lieutenant, Mrs. Dargan was introduced to her Majesty, who received her with the most affectionate kindness, and severally introduced her to Prince Albert and the two young Princes. The Lord-Lieutenant then introduced Mrs. Dargan to the Duchess of Wellington and the Hon Miss Bulteel, the two Ladies in Waiting; and to the noblemen who accompanied the Royal party. Mr. Dargan had

to the distinguished visitors. The visit ... an hour ... ace at Wyke seemed highly ... ic scenery. The tide being ... also supported to the ... ive feature; and, the weather being fine, ... an excellent opportunity of fully discerning ... The Mayoress was simply attired in a green silk dress, ... ize bonnet and her appropriately favourite shawl—a white ... dered crape.

THE SHEFFIELD CUTLERS' FEAST

THE annual grand banquet on the inauguration of the Master Cutler (A. Matthews, Esq.) took place on Thursday last week, and, for the ... time in the annals of the borough, this office and the Mayoralty are ... ted in one individual.

The guests began to arrive about four o'clock. They were met at the ... ance of the reception room by Henry Atkin, Esq., one of the past ... and presented to the Master Cutler. Much apprehension was ... in consequence of information that several distinguished guests had been seriously injured by the collision which happened on Wednesday evening to the Great Northern express train shortly after leaving London. Among those who were then on their way to partake the hospitality of the Master Cutler, were the Lord Mayor of London, Sir J. Duke, M.P., J. A. Roebuck, Esq., M.P.; E. B. Denison, Esq., M.P. The Lord Mayor, Sir J. Duke, and Mr. Denison returned to town; but Mr. Roebuck came forward, and arrived in Sheffield about two o'clock on ... day morning. Mr. Denison came down on the following day. The ... ed in the town on Mr. Roebuck's account was very ... ggerated reports were circulated as to the injuries he had ... hon. member arrived at the hall in company with ... Dunn. Mr. Roebuck looked feeble, and bore on his face the marks of the injury he had received. His entrance into the reception room was greeted with loud cheers, and many were the congratulations addressed to him on his re-appearance amongst his constituents, and on providential escape on the previous day. In consequence of the pain experienced in standing, arising from injury by the accident, a chair was provided for him, and he sat among the guests in the reception room, until dinner was announced. When the company had assembled, the folding doors of the hall were thrown open, and the gentlemen took their seats. The number of guests was upwards of ...

The hall was very tastefully decorated. The arrangements being on a ... of unusual splendour. The tables were ornamented with a profusion ... plate, whilst a judicious interspersion of evergreens lent a very ... tiful appearance to the whole scene. The arrangements for the musical portion of the entertainment were likewise most complete. The Yeomanry band took up their position in the orchestral, whilst in another part of the hall were stationed "the English Vocal Union," comprising members of the choirs of Westminster Abbey and the Chapel ... Windsor. The choristers of St. Paul's Choir, under the direction of Mr. J. S. Warner, also lent their assistance. Mr. J. E. Walker presided at the pianoforte.

The Master Cutler was supported by Lord Wharncliffe, the Lord Mayor of York, Lord F. Howard, Hon. F. Wortley, J. A. Roebuck, Esq., M.P., E. Denison, Esq., M.P., G. Hadfield, Esq., M.P., S. M. Peto, Esq., M.P., Walter Stanhope, Esq., &c.

The usual loyal toasts, followed by the "Army and Navy," having been duly honoured

The Master Cutler then gave "The Duke of Norfolk, Lord of Hallamshire and the house of Norfolk."

Lord E. Howard made an appropriate reply, in the course of which he dwelt on the prosperity of the country, and its friendly relations with other na...

Lord ... ...

n-Chief, a Secretary-at-War, a Poor-law Board, and a great variety of offices, have been at every period created as they were [illegible] ever was it the case here, as Mr. Symonds represents, however desirable to make it so hereafter, that all the offices of our State were formed on one plan, and subjected to one scheme of subordination. Some departments—as the Admiralty and the [illegible]—have been governed by boards, singularly organised, presided over by First Lords; and other departments have been governed and presided over—like the Home and Colonial departments—by a single Secretary, without any responsible advisers, but only Under-Secretaries and clerks to do his bidding. When the multifarious duties of a Home or a Colonial Secretary are considered—the former having to watch over the magistracy and the militia, to investigate criminal trials, that he may advise the Sovereign when to pardon, and when to carry the law into execution, and to watch over the police and health of the Empire; the latter having to administer the affairs of numerous colonies, with different systems of laws, and the people speaking different languages—it would seem more reasonable that each Secretary should have a board of advisers for such widely different subjects, than the First Lord of the Admiralty, or the First Lord of the Treasury, should have a board of advisers, one of whom has to look after the navy only, and the other after the finances. The reason possibly may be that the First Lord of the Treasury is not necessarily a financier, nor the First Lord of the Admiralty a sailor. It is found, too, in fact, that the First Naval Lord is, in most cases, the real working head of the Admiralty, and the Chancellor of the Exchequer the sole Finance Minister, while the members of the boards of Admiralty, or Treasury, except as the head of each is a Cabinet Minister, have little more to do than the duty of signing cheques. Such duties can be performed by any persons; and ensigns of the army, or young peers fresh from college, make very good junior Lords of the Treasury or Admiralty.

Abroad, functionaries, under the name of the *bureaucratie*, form a class almost as distinct from the rest of society as the military; and, except in a few instances in France, administrative offices are always filled by persons brought up to the business. It seems desirable that we should have the administration of public affairs provided for by some well-organised system, and that men should be educated to fulfil these duties. We curiously prescribe, however, and a prenticeship of three or seven years to learn how to make a coat or a pair of boots; and suppose that the important and delicate functions of an administrator of public affairs can be well performed without any training. According to our present plan, administrative organisation and administrative ability are supposed, like digestion and appetite, to come by nature. Hence the administration of pubic affairs has become a great jumble and a mockery in the eyes of all systematic men.

A plan for a complete system of administration implies, first, a clear comprehension of the duties of Government, and a clear definition of what it ought to undertake and what it ought not. Mr. Burke has told us that he found the task of solving that problem the most difficult he ever undertook. We know, for certain, that Government should not undertake too much—should not, for example, direct individuals how to get rich, and should protect all its subjects from injustice, and the State from invasion. Abroad, the locomotion of individuals is hampered by police regulations; here, it is perfectly free. The boundaries therefore of a Government's duties must first be prescribed, and that done, they may be divided into departments, and each department placed under one responsible chief. Such a project, however, would require much time and much investigation to prepare it; and would require, first, a philosophical inquiry into the duties of Government, and then an inquiry at all the different offices, of the duties now performed, and into the reasons of them, as well as how those duties—supposing them to be consistent with the duties that Government ought to undertake—can be best performed. To assume that Government is to regulate every part of the business of society, is absurd; to suppose that what it now undertakes to regulate, is precisely what it ought to regulate, is not much better—because its assumption of functions, like the modes of administering them, has been dictated more by chance and circumstances than by any well-devised system or well-founded general principle. Into this all-important and even fundamental inquiry Mr. Symonds does not enter. He tacitly assumes that all which the Government now attempts to do, it ought to do, and his plan only contemplates the necessary provisions for doing that well. He would build on the departments as they now exist—first inquiring into the functions of each, and then endeavouring to make it perfect in itself, and perfect as a part of a perfect whole. He contemplates no curtailment; efficiency is his great aim, and consistently with that, he proposes great extension. He would have libraries and librarians for each department, actuaries, registrars, accountants, &c., who are not at present in existence, but who would be required in a perfect system. His plan would be more acceptable, we think, to functionaries than to the public. It would add to their number and their importance; Mr. Symonds leaves the public in no doubt, whatever, as to the imperfections of the present no-system: his own untried scheme wants the warrant of experience, or rather experience is against it; for it more resembles the system in use in Germany than any thing else; and, on the whole, that is far more injurious than beneficial to the Germans.

THE GRAPE VINE MILDEW.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

As the Grape Mildew is now exciting such great interest, especially in the horticultural world, and is certainly becoming, by the rapid progress of the disease, a matter of European importance—second only (even if it be so) to the potato blight—I send you for illustration a drawing, upon an enlarged scale, of a specimen of the mildew, now under my observation by transmitted light in one of Nachet's (of Paris) best microscopes (having a magnifying power of 500 diameters), and upon the correctness of which you may rely.

The mildew, seen here, forms a very beautiful microscopic object; and in the illustration I send you, may be very distinctly traced the progress of the fungus from its seed to its decay.

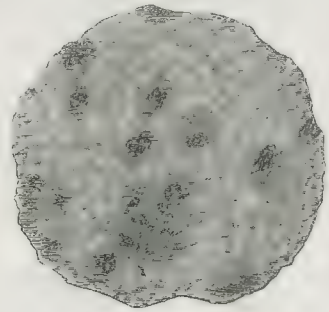
The grape or "egg mildew" as it is sometimes called, assumes, when at perfection or in its most vigorous state of development, the form of well-defined oval or egg-shaped berries or cells, semi-transparent, and of a pale greenish hue, declining in colour as the seed approaches maturity; the cells or seed-vessels then gradually collapse, and assume the shape of an elongated cube (a circumstance, I believe, not hitherto observed, but which under my object-glass is quite decided); and at this period it is that the cells either burst or the seed is ejected from their now open extremities, and, becoming scattered in all directions among the vines, reproduce the destructive fungus with astonishing rapidity.

Upon observing the mildew *in situ*—or in its natural position upon the grape—many of the sporidia are found joined together at the [illegible], forming tubes of two or more cells, but rarely exceeding four or five in number—thus losing their individual cellular character. This tubular arrangement of the seed-vessels has been supposed by some persons to be a provision of nature for the purpose of fertilisation; but I much doubt it, as we find—by simply washing, or otherwise carefully removing a portion of the mildew—such to be the rapidity with which the sporidia attach themselves to each other, that tubes or necklaces of them are instantly formed, sometimes of very considerable length. Hence I conclude, not that the cells take this form by reason of any natural law, for any specific purpose, but more probably from these minute atoms having some magnetic attraction towards each other, very analogous to crystalline polarisation; or, perhaps, by having some gluttinous exudia at the apex of the cells, they may, by simple contact, become fixed in this particular position.

MICROSCOPIC VIEW OF THE GRAPE MILDEW.

What the grape mildew really is will no longer admit of a doubt: it is, like the potato and other blights that threaten such serious consequences and destruction in the vegetable world, a "parasitical fungus"—the cause, and not the effect of disease, the healthy and unhealthy vine being attacked by it indiscriminately. In my opinion, each sporidia forms a complete and perfect fungoid plant of itself, possessing an inherent power of reproduction, vegetating upon any part of the vine from which it can draw a sufficient supply of vegetable juice, and thus causing the disease and ultimate destruction of the foliage and fruit.

It may perhaps be to little purpose to speculate or theorise as to the origin of the grape or other prevailing blights; some persons believe them to be "atmospheric"—that is to say, that they are induced by some peculiar condition or state of the atmosphere. There seems, however, no good reason to suppose that our present atmosphere differs in any material degree from that of past ages (excepting, it may be, in its average temperature) when these blights were unknown among us; and, unless we are prepared to admit the possibility of active vegetable life



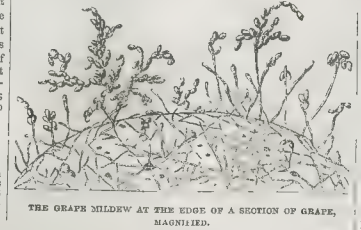
MICROSCOPIC VIEW OF THE OUTWARD TISSUE OR SKIN OF THE GRAPE, PARTIALLY DESTROYED BY THE MILDEW

being generated by the constituent gases of our atmosphere—viz., oxygen and azote, aided in some mysterious way by electricity or some other unknown agent, I think we may safely discard this "Atmospheric Theory," as unsound and unphilosophical. What is more probable, is, that these mildews, or blights, are the hybrid productions either of some of the minute fungi already existing among ourselves, or in other, and perhaps far distant lands, and from thence have been wafted upon the wind into these latitudes. W. D.

"The Hermitage," St. Mary Church, Torquay.

P.S. I have to state with great satisfaction, that one of my own vineries having been attacked this season with the blight, I have completely destroyed it without the slightest injury to the foliage or fruit, by once syringing with a composition, the basis of which is sulphur in solution, and which, I have not the slightest doubt, will prove as effectual as a preventive of the mildew (under glass) as a cure.

The accompanying additional Illustration, showing the Vine Blight at the edge of a section of Grape, magnified 75 diameters, is from an



THE GRAPE MILDEW AT THE EDGE OF A SECTION OF GRAPE, MAGNIFIED.

interesting pamphlet, by Mr. Quarles Harris, recently published

The grapes (says Mr. Harris), when blighted, are covered with what appears to be a white powder, like lime, a little darkened with brown or yellow. These fungi send forth laterally, in all directions, thread-like filaments, which become completely interwoven with one another as entirely to cover and enclose the skin of the grape in a compact and firm net-work, and on each is seen the egg-shaped capsule or seed-pod. The pips and juice go on swelling, and at times, when struck late in the season, the grapes become partially ripe and coloured; but very soon, expansion from within going on, checked by this net-work, the grape bursts, but as it cannot burst as it would do were it unconfined, the edges of the part where it bursts turn inward in place of outward, and the pips are exposed to view as the teeth of a man when the lips are drawn back. If the grapes are struck in an early stage of their growth, they dry up, fall off, and become very offensive, but do not split.

THE QUEEN'S VISIT TO IRELAND.

THE LAST VISIT TO THE EXHIBITION.

HER MAJESTY paid her fourth and last visit to the Exhibition on Friday morning. At a little before ten o'clock, the Royal carriage drove into the court-yard of the Royal Dublin Society, and, passing through the house, were received at the passage leading into the Exhibition by the members of the Executive Committee. The public were not admitted till a later hour, with the exception of Exhibitors and members of the press.

The Queen wore a richly-figured French barège dress, a rich white scarf, and a white bonnet—the scarf and bonnet both trimmed with blue. Her Majesty appeared in excellent health and spirits. Prince Albert wore a dark-coloured paletôt, buttoned up to the neck, and dark grey trousers. The Prince of Wales and Prince Alfred wore black cloth paletôts, white trousers, and light grey caps.

Her Majesty was attended by the Duchess of Wellington, Lady in Waiting, the Hon. Miss Bulteel, Maid of Honour in Waiting; the Lord Lieutenant of Ireland; the Marquis of Breadalbane, Lord Chamberlain, Earl of Granville, President of the Council; Colonels Grey and Phipps; and Sir James Clarke, Physician to her Majesty.

As on her former visits, her Majesty had inspected the entire of the ground floor, the galleries now attracted the Royal party. Her Majesty paid particular attention to the various specimens sent from the industrial schools in different parts of the island, and made several purchases of laces, embroidered muslin, &c. Having concluded an intimate examination of all the remaining departments in the Exhibition, and having made a large number of purchases, the Queen entered the reception-room at the grand entrance to the building; from which her Majesty passed through the assembled masses, who had meanwhile been admitted to the other extremity of the hall, whence the Queen took her departure by the private door through which she had entered. But, previous to her leaving the building, her Majesty again expressed her satisfaction at the admirable manner in which the whole arrangements had been conducted.

CAVALRY REVIEW IN THE PHŒNIX-PARK.

In the course of Friday morning his Royal Highness Prince Albert reviewed the cavalry forming the Dublin garrison, in the Phœnix-park. His Royal Highness wore the undress uniform of a Field-Marshal, and was attended by a large staff, also in undress uniform. At twelve o'clock a Royal salute from the Artillery upon the ground announced the arrival of his Royal Highness. The Prince of Wales and Prince Arthur shortly afterwards followed in one of the Lord-Lieutenant's carriages, as did also the Countess of St. Germans, &c.

The cavalry was commanded by the Earl of Cardigan, Colonel of the 11th Hussars; and the regiments upon the ground were the 1st or King's Own Dragoon Guards, the 2nd or Queen's Bays; the 11th or Prince Albert's Own Regiment of Hussars, the 16th Lancers, and a six-gun battery of the Royal Horse Artillery.

His Royal Highness having ridden round the lines, they afterwards passed before him in quick and slow time; after which a series of brilliant manœuvres were performed, by which the admirable discipline and efficiency of the troops was proved. At the conclusion his Royal Highness expressed himself much satisfied with the proceedings.

VISIT OF THE QUEEN TO HOWTH.

Shortly after the return of his Royal Highness Prince Albert from the review, her Majesty, Prince Albert, and the Prince of Wales, accompanied by the Lord-Lieutenant, and Countess of St. Germans, the Duchess of Wellington, Hon. Miss Bulteel, Marquis of Breadalbane, and Sir James Clarke, visited Howth Castle, the picturesque residence of the Earl of Howth. The Duke and Duchess of Leinster, Marquis and Marchioness of Waterford, Marquis and Marchioness of Kildare, Lord and Lady Talbot de Malahide, Lord Dunkellin, &c., were invited to meet the Royal party.

The Royal carriages were accompanied by Colonels Grey and Gordon (Equerries in Waiting) on horseback, and they proceeded by the Clontarf road, passing through the demesne of the Earl of Charlemont. On her arrival at Howth, her Majesty was received by the Earl of Howth and his son, Lord St. Lawrence, and conducted to the Castle, where her Majesty afterwards drove round the hill, and appeared particularly struck with the splendid prospect. Shortly after seven o'clock the Royal party started again for the Viceregal Lodge, highly pleased with their visit.

The Lord Lieutenant and Countess of St. Germans invited distinguished parties each night to dinner to meet her Majesty. The party on Wednesday evening comprised Earl Granville, the Duchess of Wellington, the Marquis of Breadalbane, the Marquis of Bath, the Earl and Countess of Mayo, the Earl and Countess of Clonmel, the Earl of Listowel, Viscount and Viscountess Massereene and Ferrard, Viscount and Viscountess Monck, Viscountess Forbes, Lord and Lady Clarina, Lord and Lady Talbot de Malahide, the Hon. Miss Bulteel, the Hon. Colonel Grey, the Hon. Lieutenant-Colonel Gordon, the Chief Justice of the Common Pleas and Miss Monahan, the Right Hon. the Attorney-General, Sir James Clarke, Major Henry Ponsonby, Aide-de-Camp in Waiting. Later in the evening their Excellencies received a select party.

The following were honoured with invitations from the Lord Lieutenant and Countess of St. Germans to meet her Majesty at dinner on Thursday evening in the Viceregal Lodge:—The Earl Granville, the Duchess of Wellington, the Marquis of Breadalbane, the Duke and Duchess of Leinster, the Dowager Marchioness of Sligo, the Dean of St. Patrick's, the Earl and Countess of Besborough, the Earl and Countess of Desart, Earl and Countess of Bective, Lord West, Lord and Lady Naas, Lord Adolphus Fitzclarence, the Dowager Lady Vivian, the Hon. Miss Bulteel, the Hon. Colonel Phipps, the Hon. Colonel Gordon, the Lord Chief Baron, the Right Hon. the Recorder, the Hon. Granville Eliot, Sir J. Clarke, and Major Bagot, Aide-de-Camp in Waiting.

The dinner-party on Friday evening comprised the following distinguished personages:—The Earl Granville, the Duchess of Wellington, the Marquis of Breadalbane, the Marquis and Marchioness of Waterford, the Marquis and Marchioness of Drogheda, Viscount and Viscountess Ashbrook, Lady E. Cornwallis, Lord Eliot, Hon. H. Eliot, Hon. Colonel Phipps, Hon. Colonel Grey, the Hon. Miss Bulteel, Right Hon. Francis and Mrs. Blackburne, Right Hon. the Lord Chief Justice, Major and Mrs. Larcom, Major-General Cochrane, Very Rev. the Dean of Leighlin, Sir James Clarke, Lord Dunkellin, Mr. Felton Hervey. The band of the 83rd Regiment performed during dinner. Later in the evening, her Excellency the Countess of St. Germans gave a soirée dansante, to which the élite of the aristocracy sojourning in Dublin were invited.

DEPARTURE OF HER MAJESTY ON SATURDAY EVENING.

Long before the hour announced for the departure of her Majesty and suite, the entire line of route, from the Viceregal Lodge in the Phœnix-park to the extremity of the pier at Kingstown, presented a scene of unusual excitement and animation. Two squadrons of the 11th (Prince Albert's own) Hussars, the 16th Lancers, and 2nd (Queen's Bays) Dragoon Guards, were drawn up in line in front of the Viceregal Lodge for some time before the appointed hour of departure; and close to them were ranged the pupils of the Royal Hibernian Military School, upwards of 300 strong, with their own band and colours. At about half-past five o'clock, the carriages of her Majesty and suite, and those of the Lord-Lieutenant and his household, drew up at the principal door of the lodge; shortly after which her Majesty appeared, and was at once welcomed with the National Anthem.

The first carriage was occupied by her Majesty, Prince Albert, the Prince of Wales, and Prince Alfred. In the second carriage their Excellencies the Lord-Lieutenant and Countess of St. Germans, with the Duchess of Wellington and the Hon. Mary Bulteel, Maid of Honour in Waiting, took their seats. The Marquis of Breadalbane, Lord Chamberlain; Earl Granville, President of the Council; and the Hon. Colonels Gordon and Grey, occupied the third carriage; and two other carriages that followed were occupied by officers of her Majesty's and the Lord-Lieutenant's household. Her Majesty's servants wore the Royal livery and her carriage was attended by outriders. A squadron of the 16th Lancers preceded the Royal equipage, whilst the 11th Hussars and Queen's Bays brought up the rear. The carriages proceeded at once through the Park, Park-street, Essex-quay, &c., over Carlisle-bridge, and thence by D'Olier-street to the terminus of the Dublin and Kingstown Railway, where the arrangements were not materially different from those made on the occasion of the Queen's arrival. The principal streets were kept clear by military, both cavalry and infantry; and, although the most intense desire was manifested to obtain a last glimpse of her Majesty, yet the conduct of the immense masses congregated was so admirable that the slightest confusion did not arise. In every available place where her Majesty could be seen, large crowds were assembled, who cheered vociferously whenever the Queen appeared.

The Queen alighted at the station under a tastefully-erected canopy;

VISIT OF HER MAJESTY TO THE DUBLIN GREAT EXHIBITION.

THE ROYAL VISIT TO THE DUBLIN EXHIBITION.—HER MAJESTY'S RETIRING-ROOM.

when deafening cheers rang along the street, which were renewed again and again, even after the Queen had disappeared from view. Her Majesty at once proceeded to take her place in a state carriage prepared for her, whilst the suite, and several members of the nobility and principal officials in Ireland, were accommodated in other carriages in the same train.

Meanwhile not only was every train to Kingstown crowded with passengers, but a continuous stream of cars, carriages, and vehicles of every description—all as crowded as possible—continued to fill the road (nearly seven miles) from Dublin to Kingstown. The pier at Kingstown, about a mile in length, was equally crowded, as well as every point in the neighbourhood of the harbour—roof, window, vessel, hill, or rock—which could command a view of the embarkation. A battery of heavy artillery had been placed along the western pier at Kingstown, to give the necessary salutes, and to add to the imposing appearance of the scene.

A little before six o'clock loud bursts of applause announced the arrival of the Queen at Kingstown. Her Majesty, leaning on the arm of Prince Albert, and accompanied by the same parties who had formed the Royal cortège from the Viceregal Lodge, shortly afterwards appeared, and proceeded between lines of fashionably-dressed ladies and

THE ILLUMINATION AT DUBLIN.—SCENE ON CARLISLE BRIDGE.

gentlemen to the jetty pier, where the Royal yacht the *Victoria and Albert*, was moored. Her Majesty proceeded along a carpeted avenue and was attended by the members of the Executive Committee of the Exhibition, and the Directors of the Railway. Her Majesty recognising Mr. John Benson in the crowd, immediately addressed him, and said she was glad of the opportunity thus afforded her of again expressing to him the satisfaction she had derived from viewing the splendid building of which he was the architect and des gner.

As soon as the Queen had placed her foot on board the Royal yacht, the *Hogue* thundered forth a Royal salute, which was taken up by the vessels in the harbour, the batteries on shore, and the Pigeon-house fort in the distance.

The Royal yacht having slipped her moorings, anchored in the harbour at a little distance from the shore, and it soon became known that the Royal squadron would not weigh anchor until the following morn ng, notwithstanding which the crowd still continued to linger at Kingstown till a late hour

At about ten o'clock the same evening there was a brilliant display of fireworks at Kingstown, which was still densely crowded. The Lord-Lieutenant and Countess Ely, Germans were honoured with invitations to dine on board with her Majesty.

At four o'clock on Sunday morning, the Royal fleet weighed anchor and proceeded to sea.

Among the evidences of her Majesty's enjoyment of the visit are the following:—"We have spent a delightful week, and are quite sorry to leave so soon," was the gracious exclamation of her Majesty to the Lord Mayor of Dublin, on leaving the Westland-row terminus for Kingstown; and, on a preceding day, his Royal Highness Prince Albert remarked to Mr. Roe, the Chairman of the Committee of the Great Exhibition, in reference to the latter, "that it was a most interesting event, and that her Majesty would not have lost it for the world."

ARRIVAL AT HOLYHEAD.

Her Majesty arrived at Holyhead on board the Royal yacht at half-past eight on Sunday morning. The other vessels of the squadron arrived also in the course of this morning.

Divine service was performed on board the *Victoria and Albert* in the morning. About two o'clock in the afternoon her Majesty and Prince Albert, accompanied by their suite, went on board the *Fairy* tender, which immediately proceeded on a marine excursion round the Head to the entrance of the Menai Straits. The *Fairy* was accompanied by the Trinity yacht *Irene*, and the *Banshee*. The day was beautiful and clear, and her Majesty had a distinct view of the South Stack and the whole south-west coast of Anglesea, with Carnarvon Castle on the opposite shore. The *Fairy* returned about seven o'clock, when her Majesty proceeded on board the *Victoria and Albert*.

On Monday morning the Royal party witnessed, in Holyhead harbour, the explosion of a great mine, containing 4000lbs. or 5000lbs. of gunpowder at the quarries. By this gigantic operation, about 20,000 tons of material available for the breakwaters were at once detached from the cliff; and the sublimity of the spectacle may, therefore, readily be conceived.

DEPARTURE FOR SCOTLAND.

At half-past eight o'clock, the *Victoria and Albert* steamed round to the landing-place of the old harbour; the illustrious party disembarked, and, entering the Royal train, were drawn by horses to a point on the rails nearly opposite Hibbert's Royal Hotel. Here the engine was attached, and the journey northward at once commenced. Captain Simmons, R.E., again took charge of the train. The Royal party reached Chester at a quarter to eleven o'clock, where Mr. Bidder, the manager, and the other officers of the Chester and Holyhead Railway took their leave. Proceeding at a rapid pace by Parkside, Lancaster was gained at one, and Carlisle at a quarter past three. After a stay of an hour there for luncheon, the journey was resumed. Her Majesty was received throughout with the warmest demonstrations of loyalty by crowds of her subjects collected at all the stations on the route. At Chester a guard of honour lined the platform and saluted, the band played the National Anthem. Further on, at Warrington, a salute was fired from a fine new ship on the stocks, and the factory operatives turned out in large numbers to give their Queen a hearty cheer. It was much the same along the entire line, and nothing more bespeaks the interest with which her Majesty is regarded even by the humblest of her people, than to observe that at the loneliest wayside cottages the inmates on these occasions await her approach, and shout and wave their hats and handkerchiefs as the train whirls past.

THE QUEEN AT EDINBURGH.

The sun was setting as the train approached Edinburgh from the west, and brought out in strong relief the picturesque outline of the Pentland range on the south, with the lion-like form of Arthur's Seat, crouching guardian-like over the northern capital. The time fixed for the arrival was a quarter before seven, and precisely at that time, or rather two minutes before it, the train stopped at the Lothian-road station On alighting, her Majesty and Prince Albert at once received the municipal and civil authorities, and then proceeded to the reception-rooms; from whence to the carriage in waiting for them on the other side was but a few paces. The procession which progres to the Abbey Palace differed in many striking respects from her Majesty's former entrances. Instead of the wild and picturesque appearance of the Queen's Park, through which she passes when entering Edinburgh by the North British line, she passed, on this occasion, through the heart of the town. But then that progress included the whole length of Princes-street, from the Castle to the Calton-hill, constituting a vista as noble and stately as any capital in Europe can furnish. The whole of the streets on the line were crowded with spectators, who, of their own accord, formed a double avenue, through which her Majesty might pass. The Queen and Prince Albert, with the children, proceeded in an open carriage slowly through the multitude, whose bearing was at once cordial and enthusiastic. After a progress of nearly half an hour, the Queen entered Holyrood, and the pageant was at an end.

DEPARTURE FROM EDINBURGH.

The Duke of Cambridge, who is in Edinburgh on a visit, called on her Majesty in the evening, and joined the Royal party at breakfast before the departure. That departure was fixed for a quarter past eight, and punctually to the moment the guns of the Castle announced that her Majesty had left Holyrood. She proceeded through the park, in which, notwithstanding the early hour, there was a large body of people, and entered the carriages at St. Margaret's. The Royal train then left Edinburgh on the Glasgow line; from whence the Queen turned off at Castle Carsy for Perth and Cupar Angus. From that point her Majesty proceeded by carriage, a distance of sixty miles, to Balmoral, which was happily reached about seven o'clock.

THE ILLUSTRATIONS.

Two of the Engravings upon the preceding pages represent the first visit of her Majesty to the Exhibition, on Monday.

Just as the clock struck eleven, an immense cheer outside the building announced the arrival of the Queen. The great centre door was thrown open, and her Majesty, leaning on Prince Albert, the Royal children walking beside, set her foot for the first time into the Irish Exhibition building. After remaining for a few minutes in the Reception-room—a small and prettily fitted-up apartment, adjoining the main entrance—her Majesty entered the great hall amidst a tremendous chorus of human voices, waving of handkerchiefs and hats. As her Majesty proceeded up the hall the cheering was again and again renewed, until her Majesty reached the dais, where she stood in evident admiration of the magnificent scene before her. Her Majesty, at brief intervals, bowed most graciously to the assembled multitude, in return for the brilliant reception she received. The Marquis of Breadalbane handed her Majesty the chair in which she was crowned, but she declined to occupy it, preferring to look about, in evident admiration and surprise of everything she saw and heard.

Another account states, the commissioners, who, headed by their chairman, George Roe, led the way, having reached the foot of the raised dais on which the throne had been placed, formed a semicircle at its base, while the Queen and a few other members of the Royal family, ascending the steps, took their places, her Majesty in the centre with the Prince of Wales on her right hand and Prince Albert and Prince Arthur on her left. The spectacle which the hall now presented was singularly imposing—in front, the vast assemblage standing up and cheering loudly; behind, the Court, in an attitude of respectful attendance; and beyond them, on the verge of the platform, a semicircle of the Irish nobility. The Queen appeared touched by the scene, which, probably, recalled to her memory another of the same description, though still more splendid. His Royal Highness Prince Albert seemed also affected, and both gazed earnestly for some minutes over the great area of the hall, to the aspect of which the enthusiasm of loyalty added an indescribable charm.

The magnificent bouquet of roses and shamrock carried by her Majesty on this visit, was prepared and arranged by Mr. Harding, of Clifford-street, Bond-street, who proceeded from London to the Viceregal Lodge for that purpose.

The third Illustration is a scene from the illumination of the city, on Monday evening, on the north side, where the effect was extremely beautiful and effective. It consisted almost entirely of gas devices, a few hanse only in different places being lit with candles from within; and the deep gloom of a starless sky heightened the splendour of the artific al light, which at some points fell like a flood upon the streets, revealing the moving masses by which they were filled. Multitudes of well-dressed ladies and gentlemen walked in every direction, enjoying the *coup d'œil*. The throng of vehicles and foot passengers on Carlisle-bridge, Westmoreland-street, College-green, and some other points, was immense

Thus terminated the Queen's second visit to Ireland, made under far happier auspices than the first, and destined to inaugurate the new era of prosperity at length opening upon the country. Perhaps no incident connected with the event better illustrates this than the circumstance that, as her Majesty was receiving last week in Dublin, the English and Irish Magnetic Telegraph Company had completed the communication between that city and Belfast, thus enabling the welcome news to be instantaneously forwarded to the British coast.

DUBLIN GREAT EXHIBITION:

AN ESTIMATE OF THE COST OF ITS CONSTRUCTION, AND OF THE VALUE OF ITS CONTENTS.

Those who take a warm interest in the industrial development of the age will peruse the following Estimate with more than ordinary pleasure, as it furnishes something like a true index of the progress already made in that direction, and indicates pretty clearly the onward movement of the future. It is scarcely necessary to remark that the details of the Estimate are derived from the most authentic sources—have been carefully drawn up, and collated with scrupulous accuracy; an error or so, however, and a few slight discrepancies, must naturally be expected in estimating the value of such a vast collection of objects, especially where so much uncertainty of data prevails, and so few authentic sources can be appealed to.

If the Estimate, therefore, be not as strictly correct throughout the wide range of its details as an accountant's balance-sheet, it will at least closely approximate to it, and be found worthy of reference as an epitome of the exact cost of the Building, and the true value of its Contents. With these few preliminary remarks we shall content ourselves, as lengthened comment on this occasion would be somewhat unseasonable—our object being simply to lay before the reader the main facts and features of the Great Exhibition, which are not only curious and instructive in themselves, but also suggest the right road to the industrial regeneration of the age.

THE COST OF CONSTRUCTING THE BUILDING.

The cost of constructing the Building is principally comprised in the following items:

There are 80 cast-iron pillars to support the galleries, each pillar measuring 12 inches in diameter and 36 feet in length. Calculating the weight of a single pillar at 36 cwt., and the price at £6 per ton, we arrive at the sum of	£864
There requires 36 cast-iron girders to support the large roof, each girder measuring 70 feet in length, and weighing two tons, which, at £6 per ton, amounts to	432
The roof, being an elongated dome, is formed of 14 semi-circular wood ribs, each rib weighing 8 tons, with a span of 100 feet. Each end of the roof has 4 ribs, weighing 4 tons per rib, and forming a segment of a circle. There are also 2 ribs in each 56-feet bay to form the roof, weighing 2 tons each; and 4 half-ribs at each end, weighing 1 ton each. The timber required for the ribs some of the several galleries and bays therefore involved an outlay of 624 tons, at £2 per ton	1,872
The purlins, and the intermediate ribs in the galleries, required an equal quantity of timber; for between every principal rib there are two segments of a circle to make up, to form an equal roof. The galleries, also, have 4 ribs, weighing 2 tons per rib, and forming a segment of a circle. There are also 2 ribs in each 56-feet bay to form the roof, weighing 2 tons each; and 4 half-ribs at each end, weighing 1 ton each. The timber required for the ribs some of the several galleries and bays therefore involved an outlay of 624 tons, at £2 per ton	1,872
The sash bars which, with the glass, form the apices of the different roofs, are 15.0 in number, and at 3s. each amount to ..	225
The flooring required 200,000 superficial 3-inch deal, or 1600 tons at £3 per ton	4,500
The counters, side-boards, stands, pillars, &c., involved an outlay in timber alone of	10,800
There are 168 wrought-iron lattice girders to support the floors of the several galleries, each girder weighing 16 cwt., which at £6 per ton amounts to	1,814
The quantity of glass consumed amounted to 90 tons, covering a surface of 144,000 feet, which at £20 per ton is	1,800
The quantity of lead used amounted in value to	472
The paint	450
Iron (wrought and cast), for various purposes	1,500
The average number of hands employed during the process of construction was 700. Of these, 250 were carpenters, 350 labourers, and 50 parts of sawyers. The carpenters were paid at a weekly average of 25s. per week, and the sawyers at 30s. per week. From the latter week in August to the middle week in May, the last is calculated. Such, and estimating the aggregate of labour for this period, we have the following results:	
350 labourers at .. .. £18 7s. 6d.	6 4 3
250 carpenters at .. .. £38 15s. 0d.	9,875
50 parts of sawyers at .. .. £45 0s. 0d.	1,750
TOTAL COST OF THE BUILDING	£47,130

Sir John Benson, Architect; Charles Atkins, Engineer of the works. The machinery for lifting the roof and great ribs was constructed by Mr. Atkins, in the Building.

THE CONTENTS OF THE BUILDING.

The first object that generally attracts the attention of the visitor is the Fine Art Gallery, either that of the modern or the ancient masters. The collection is singularly rich in variety, and valuable in character and quality. The last corrected edition of the Catalogue informs us that there are upwards of 1100 pictures; and when we state that the value put upon them ranges from £7000 to £7 each, some notion may be formed of the difficulty of arriving at a just conclusion as to their aggregate worth. From such premises, however, we are enabled to approximate to the real fact, which is much better than indulging in vague and undefinable guesses—too commonly the case when this portion of the Exhibition is under consideration. The following classification may be fully relied upon:—

PAINTINGS.

The 115 French pictures average £70 each, and are valued at £8,050	
The 172 of the Belgian School average £120 each, and are valued at	20,640
The 100 Dutch paintings are valued at £90 each	9,000
Ten belonging to the King of the Belgians, at £500 each ..	5,000
The British Modern Paintings are valued at	60,000
The Old Masters, at	57,040
Total value of paintings	161,280

SCULPTURE.

88 busts (plaster cast), at £5	440
57 single figures and groups (average), £23	1,311
Statue of Dargan (full-length), £100	100
92 Marble busts, £100	9,200
30 single figures, groups, &c, £150	13,500
Statue of her Majesty, £1000	1,000
20 Bronze busts, averaging £50	1,000
62 Statuettes £20	1,240
8 Statues, £100	800
20 Groups, £50	1,000
Total value of sculpture	30,091

OBJECTS OF EXCEPTIONAL RARITY, WHICH DO NOT ADMIT OF CLASSIFICATION.

Her Majesty's grand Fountain, of silver gilt	4,000
The Irish fisheries Models or Boats, Weirs, and Nets ..	400
Dr. Griffith's collection of Grasses, &c.	5,000
James Forrest's collection of Lace, &c.	500
The Mount Melleray Process of making Beet Sugar ..	150
Pim Brothers' case of Poplin, Silks, Scarfs, &c.	1,200
Specimens of Ores, Minerals, Marbles, Slates, &c. ..	1,000
Chance's Lighthouse	1,000
The Colourcockdale collection of Metal Works	700
Sanders and Son's contribution of Paper Manufacture ..	200
Tyler and Son's Metal contribution	1,000
The Shakspeare stand of Worcester Porcelain	1,000
Dunham and Son's cases of Iron objects	2,500
Price's case of Candle Materials	600
Organ Fountain	250
Mediæval Room (800 objects)	8,000
Royal Irish Flax Society's contribution	500
Deering's Harvesting Machine	300
J. Bennett's grand Clock	150
Rackin's case of Watches, &c	500
Atkinson and Co.'s case of Irish Poplins, embroidered and plain	1
Harrison, Jardine, and Co.'s newly-invented Kitchen Range	60
Hall, Knox, Sons, Painted Glass Window	800
Todd, Burns, and Co.'s contribution—Jacquard Looms, weaving a curious pattern	1,000
H. Walmesley's case of Mixed Fabrics	500
The American (D. W. Hayden's) Sewing Machine	60
The Irish antiquities	5,000
25 painted windows	2,500
1 locomotive and 1 luggage van	1,500
Harris, emigrants' houses, panels, paper, &c.	800
66 water coloured drawings, £5	330
Grinding-stones, leather, zinc, rope, &c.	200
12 metal beds, &c., £25	300
Arthur Lindlay's display of lamps	700
Stand of Pompeiian vases	90
Messrs. Mozet's 2 stands of pianofortes and harps	4,000
Messrs. Fry's winding, warping, and weaving department ..	200
Messrs. Waterhouse's 3 cases of jewellery and silver ..	10,000
Messrs. Elkington's 3 cases of electro plate and bronzes ..	2,000
Newhall's patent railway break	50
Grubb's telescope	1,500
Grubb's metal table	60
Grubb's machine for marking notes	100
3 organs, one large and two small	2,000
Lambert's gold silver	3
M'Anaspie's cement and seaglioa works	2
Total value of objects of exceptional rarity ..	72,150

PORCELAIN.

A stand of one thousand pieces, valued at	500
Ditto, sixty-five	3,000
Shakspeare's jug (presented to the poet at the age of forty)	1,000
One hundred and sixty pieces of Parian statuary, £4 ..	640
Sixty plates (china), £2 2s.	126
Stand of vases and jugs, valued at	200
Twenty-two slabs, £11	22
Three rich vases, £50	150
Fifty miscellaneous objects, £2	100
Thirteen hundred pieces of porcelain, 12s.	845
Four hundred ditto, 1s. 6d.	30
Seventy lamps, £10	700
Three hundred pieces of glass, 12s.	200
2600 ditto china, 10s.	1,300
Total value of porcelain	9,816

TERRA-COTTA OBJECTS.

One thousand objects, average each 4s.	200
Twelve hundred ditto, 10s.	600
One stand of encaustic tiles	20
Four ditto, stone-work, tiles, &c.	200
Models, vases, bricks, pipes, &c	300
Total value of terra-cotta objects	1,320

HOSIERY.

Ten cases of silk hosiery, gloves, &c., £116	1,160
Four stands of cotton do., £50	200
One stand of different objects of clothing, £60	60
Two stands of lace gloves, £30	60
Total value of hosiery	1,460

BOOTS, SHOES, &c.

One thousand pairs of boots and shoes, 10s.	500
Three stands of miscellanies, £10	150
Total value of boots and shoes	650

LINENS.

Twenty stands and cases of linen, &c., £300	6,000
Six stands flax processes, £30	180
Five stands yarn, twine, and rope, £100	500
Total value of linens	6,800

WOOLLENS, &c.

Forty stands of woollens, &c., £100	4,000
Ten of mixed materials, £50	500
Four silver tissues, £100	400
Total value of woollens	4,900

COTTONS.

Ten stands and cases of cotton goods, £200	2,000
Four cases of woven thread, £150	600
Total value of cottons	2,600

FURS, LEATHER, SADDLERY, AND HARNESS.

Thirty-one stands and cases of leather, furs, saddlery, harness, and trunks, averaging each £30	930
Fifty stands and cases of books, paper, and stationery, averaging £100	5,000
Twelve printed and dyed fabrics, £40	480
Ten contributions of iron and general hardware, averaging £160	1,600
Total value of furs, leather, saddlery, &c	8,010

MACHINERY.

Fifty machines for direct use, £50	2,500
Six y manufacturing machines, £40	2,400
Barbarin's machine	3,000
Todd, Burns' jacquard, weaving twelve ribbons	100
Henry Walmsley's jacquard (new)	60
Total value of machinery	5,860

AGRICULTURAL IMPLEMENTS.

There are 20,000, implements, including spades, forks, ploughs, churns, steam-engines, &c.; and, upon careful examination, we find the value of them to be as follows:

Messrs. Ransom and Sims' stand	500
Messrs. Crosskill	465
Messrs. Howard	100
The remainder (eighty in number)	2,200
Total value of agricultural implements	3,265

CARRIAGES, CARS, &c.

There are fifty-six vehicles of a light structure, the principal of which are as follows:

Her Majesty's carriage	£1,000
W. H. Mason's mail phaeton	140
Hallmarker's circular-fronted Brougham	170
The remaining fifty-three, average £90 each	4,770
Total value of carriages, cars, &c.	6,080

NAVAL APPARATUS, MODELS, ORDNANCE, AND ARMOUR.

There are sixty stands of models, boats, guns, &c., besides the Admiralty contribution, the value of which is estimated as follows:

The Admiralty Models	5,000
60 others at £100 each	6,000
Total value of naval apparatus, &c.	11,000

PHILOSOPHICAL, HOROLOGICAL, AND SURGICAL INSTRUMENTS.

There are 160 contributions in these departments, the average value of which is £160 each .. .. | 25,600

CUTLERY AND EDGED TOOLS.

28 contributions at £150 each	4,200

ARTICLES FOR PERSONAL OR DOMESTIC USE.

72 contributions at £50 each	3,600

JEWELLERY.

45 contributions at £500	22,500

FURNITURE, UPHOLSTERY.

100 contributions, averaging £90 each	9,000

The Belgian Department, with its carriages, marble chimney-pieces, bird-cages, tapestry, whips, canes, and guns, &c., is valued at	4,434

ZOLLVEREIN.

The Zollverein Department, containing bronzes, statuary from the King of Prussia's Gallery, Ornamental Vases, Terra-Cotta objects, Royal porcelain, medallions, globes, maps, flax, mineral stones, confectionery, furniture, pipes, pencils, cutlery, tools, saddlery, &c., is valued at	7,500

THE EASTERN.

As it would be difficult to assign even an approximate value to collections like the Japanese and East Indian, which are mainly dependent upon the rarity of the articles of which they are composed, we shall be guided by those who have an immediate interest in their preservation, and who, in most instances, have been the direct collectors themselves, and know the exact sum which has been paid for the various collections. The values of the respective collections are credibly stated to be as follows:—	
The Japanese Department	[illegible]
Lord Gough's Contribution	2,000
The East Indian Ditto	2,500
Total value of the Eastern department	[illegible]

TOTAL VALUE OF CONTENTS £628,594

There are thirty officers and clerks, and fifty porters in the Building. The number of police employed averages sixty per day, at a weekly cost of £100.

Poleon the Gunter of Dublin—employs eighty-two hands, at an average wages of 32s. per week for each hand; and in Bresian's department of refreshments, there are from fifteen to twenty hands, averaging about 1[illegible]s. 6d. per week.

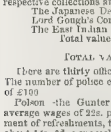
Such is this Temple of Industry: the activity of mind, the ingenuity and skill, and the vast amount of material development, must be left to conjecture, for it scarcely admits of demonstration.

OBITUARY OF EMINENT PERSONS.

SIR SOLOMON HEARTH WRAY PECKHAM-MICKLETHWAIT,

BART., OF IRDGE-PLACE, SUSSEX.

The death of this respected Baronet occurred at his seat, Irdge-place, on the 3rd inst., after a short illness. He was born 30th May, 1784, the second son of the late Nathaniel Micklethwait, Esq., of Beeston, county Norfolk, by Sarah, his wife, daughter and heir of Miles Branthwayt, Esq., of Taverham; and assumed, by Royal license, in 1824, the additional surname and arms of Peckham, in right of his grandmother, Elizabeth, daughter and heir of William Peckham, Esq., of Irdge in 1838, he was created a Baronet for a personal service rendered to her Majesty (then Princess Victoria) and the Duchess of Kent, at St. Leonards in November, 1832. He married, 20th July, 1809, Anne, only daughter of William Hanbury, Esq., of Kilmarsh, and sister of Lord Bateman, but had no issue; the title is consequently extinct.

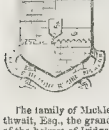


The family of Micklethwait is of considerable antiquity: John Micklethwait, Esq., the grandfather of the deceased Baronet, and the husband of the heiress of Irdige, was sixth in descent from Sir William Micklethwait of Kimberworth, ancestor of the extinct Viscounts Micklethwait, whose estates are now inherited by Nathaniel Micklethwait, Esq., of Tuverham, Sir S. B. Peckham-Micklethwait's elder brother.

LIEUT.-GENERAL SIR NEIL DOUGLAS, K.C.B., K.C.H.,

COLONEL 78TH REGIMENT.

This gallant officer, whose death took place on the 1st inst., was fifth son of the late John Douglas, Esq., of Glasgow, whose grandfather, Douglas of Cruxton and Stobbs, descended lineally from the famous Earls of Angus. Inheriting the martial spirit of his race—



Douglases were heroes every age—

Sir Neil (who was born at Glasgow in 1780) entered the military service of his country in 1802. He was present at most of the trying scenes of the Peninsular campaigns. For twenty-two years he commanded the 79th Highlanders, a regiment of which he subsequently became Colonel.

Sir Neil Douglas took part in the battles of Busaco, the Pyrenees, Nivelle, Nive, Toulouse, and Waterloo. His gallantry on the field of Waterloo obtained for him the Austrian Order of Maria Theresa, and the Russian Order of St. Waldimir of the Fourth Class. He also got a pension of £300 per annum for the wounds he received at Busaco and Waterloo.

Sir Neil Douglas, who was knighted in 1831, and created a K.C.H. in 1837, was aide-de-camp to George IV. and William IV. He became a Lieutenant-General in 1846. Sir Niel married, in 1810, Miss Robertson, daughter of a banker, of Greenock.

THE WELLINGTON MEMORIAL AT GUILDHALL.—On Monday a number of workmen were employed at the Guildhall in constructing a substantial boarding inside that building, for the purpose of receiving the different models in commemoration of the late Duke of Wellington. Out of these one will be selected by the committee, to be fixed, after the marble is chiseled, in one of the niches. On Tuesday the committee met to view the specimens.

MONUMENT TO DR. JENNER.—His Royal Highness Prince Albert has transmitted £25 to the committee for the proposed monument to Dr. Jenner. The American States, Sweden, and other foreign countries have forwarded liberal donations for the purpose. The statue is to be a colossal bronze figure, and is to be erected in a conspicuous part of the metropolis. The model has been designed by W. C. Marshall, R.A.

SOUTHAMPTON.—The owner of the American yacht *Sylvia*, Lewis Depau, Esq., has ordered of the late mayor, Mr. Alderman Andrews, two of the most splendid paintings for that could; one, a large four-in hand coach, for [illegible] the [illegible], being we understand, an adept at driving on land as well as on water; the other a beautiful Queen's pattern fancy phaeton of the most costly kind.

CHESS.

17. Kt to Q B 4th (a)	P to Q 3rd	40. K takes R	Q to K R 3rd (ch)
18. P to Q Kt 3rd	Q to K 2nd	41. K to Kt 3rd	Q takes B (ch)
19. B to K 2nd	B to Q 2nd		

The game was carried on for many more moves, and finally ended as a [illegible].

a. Perhaps his best play here was to have [illegible] with [illegible] and saved [illegible] by [illegible] the Kt at the Q [illegible].

b. Black's object in this move is the object of pla[illegible]ng the Q B down to K B 3rd, which would not be prudent with his King as the Kt's fore[illegible]. This manœuvre is well to observe.

2.	B takes B (He gains nothing by taking the K[illegible]
3.	B to K 6th (ch) and White makes a piece.

But if he could not give check now, he would [illegible] exchange.

(c) Better to save taken off the Kt. and then play the Bishop to K B 3rd. This was shown in a back game that concluded thus:

28.	[illegible] takes Kt
29.	[illegible] takes P

If P to K B 4th, Black would at once by moving his Q to K Kt 3rd, &c.

30.	[illegible] R 4
	Q to K B 2nd (best

If Q to her sq., Black wins by Q to her Kt 7th, a[illegible]

30.	P to B 8 moves
	Kt to K sq
	Q to Q 6th

And White cannot save [illegible]

MR. STAUNTON gives the odds of the Pawn and two moves to M. DE RIVES.

(Remove Black's K B P from the board.)

WHITE (M. de R.)	BLACK (Mr. S.)	WHITE (M. de R.)	BLACK (Mr. S.)
1. P to K 4th		17. P to Q 6th	Q to K R 4th
2. P to Q 4th	Kt to Q B 3rd	18. Q Kt to K 2nd	B to Q B 3rd
3. P to K B 4th	P to K 3rd	19. K to R sq	Q R to Q B sq
4. Kt to K B 3rd	P to Q 4th	20. Q R to Q B sq	B takes Kt
5. P to K 5th	Kt to K R 3rd	21. R takes B	R to K B 4th
6. B to Q 3rd	Kt to Q Kt 5th	22. Q to K Kt 3rd	Q to K R 4th
7. Castles	Kt takes B	23. Q to R 3rd	R to K B 2nd
8. Q takes Kt	P to Q B 4th	24. Kt to K Kt 3rd	Q to K Kt 3rd
9. P to Q Kt 3rd	B to Q 2nd	25. P to Q Kt 4th	Q R to K B sq
10. P to Q B 4th	P takes Q P	26. Q R to K B sq	P to K R 4th
11. Kt takes P	B to Q B 4th	27. P to K R 3rd	P to K R 5th
12. P takes Q P	Kt to K B 4th	28. Kt to K 4th	Q to K R 4th
13. B to K 3rd	Kt takes B	29. Kt to K Kt 6th	Q to K Kt 3rd
14. Q takes Kt	B to Q Kt 4th	30. Q to Q 2nd	Q takes Kt (e)
15. B to Q sq	Castles	31. P takes Q	R takes R (ch)
16. Kt to Q B 3rd	B to Q 2nd	32. K to R 2nd sq	K to K R 7th

And White surrendered *(b)*

a. While the adverse Queen stood at the K's 3rd, it was safe to take the Kt, but the moment she was played to her second, the capture could be made with advantage.

(b) For, if—

33. Q takes R	R takes Q	33. Kt to R sq	R to Q 7th (dis ch)
34. P to Q 7th	R takes P (ch)		And wins easily

Or if—

33. P to Q 7th	R takes Q	34. R takes R	R to Q sq
			And wins.

CHESS ENIGMA.

No. 815.—By Signor ASPA.

White K at K R sq, Q at K 3rd, R's at K B 5th and Q Kt 7th, B's at K R 6th and K 8th, Kt at Q 7th, P's at K R 3rd and Q Kt 2nd.

Black: K at Q K 5th, Q at her sq, R's at K R 2nd and K B 3rd, B at Q R sq, Kt at Q B 3rd, P's at Q Kt 3rd and Q R 2nd.

White to play, and mate in four moves.

ELECTRICITY.—A paper by M. Jobert de Lamballe on the effects of electricity employed to restore animation in cases where it had apparently ceased under the influence of chloroform was read at the last sitting of the Academy of Sciences. We learn from this communication that M. Jobert, after administering chloroform to various animals and producing apparent death, used the galvanic pile, and, operating by properly-graduated shocks, succeeded in restoring animation. In some cases the time that elapsed before the desired effect could be produced was so great that little chance of success seemed to present itself, but by persevering the result required was produced.

RAILWAY TRAFFIC.—The traffic returns of railways in the United Kingdom for the week ending 27th August amounted to £381,282, and for the corresponding period of last year, to £357,111. The gross receipts for the eight railways having their termini in the metropolis amounted for the week ending as above, to £161,[illegible]2, and for the corresponding week of last year, to £[illegible]5. The increase on the Eastern Counties was £[illegible]; on the Great Northern, £[illegible]; on the Great Western, £1,449; on the North-Western, £[illegible], on the London and South Coast, [illegible]; on the Brighton, £[illegible], on the South-Western, £[illegible], and on the South Eastern, £[illegible]. The receipts on the other lines in the United Kingdom amounted to £[illegible]; and for the corresponding period of 1852, to £181,[illegible] an increase of £[illegible]. The total receipts from the 1st January to the 27th August, amounted to £[illegible],621; for the corresponding period of 1852, £9,691,[illegible]—an increase of £1,491,[illegible]

FOUNDATION OF A NEW HARBOUR AT GUERNSEY

WEDNESDAY, the 24th of August, the seventh anniversary of the landing of her Majesty, Prince Albert, and the Royal children, at Guernsey, was appropriately appointed for the commencement of a new Harbour at the above island. The spectacle was of a very imposing character. Hundreds of visitors arrived on Tuesday and Wednesday; and the spectators are said to have numbered from 10,000 to 20 000. The streets of the town were gaily decorated with flags, flowers, and evergreens; the vessels in both harbours and in the roadsteads were prettily dressed; and the telegraphic signal-posts at Fort George and Castle Cornet were gaily dight with all the flags used as signals for vessels trading to the port.

As the hour drew near for the various bodies to meet at the Arsenal, this became the chief point of attraction. An arch of evergreens was thrown over the principal entrance, and this and the other gateway were surmounted with the union-jack. The States flag also adorned the top of Victoria Tower. At half-past twelve o'clock the Manchester Unity Friendly Society, preceded by a banner and the band of the Royal Artillery Militia, arrived at the Arsenal, next came the operative masons employed on the harbour works, followed by the Freemasons. In the meantime the different members of the States, the heads of departments, and other public bodies, had taken up their respective places. The members of the Royal Court, with its several officers, shortly before one o'clock arrived on the spot, headed by the Queen's Sheriff, wearing the insignia of office.

Shortly after one o'clock the gate of the Arsenal opened, and the procession moved forward in the following order, the rifle companies of the 1st Regiment forming the advance and rear guard:—

Advance Guard.
Band of 1st Regiment.
Operative Masons.
Contractors.
Engineer.
Freemasons, in Masonic order.
The Royal Court, attended by its officers.
Clerical members of the States.
Douzaines, according to precedency.
Heads of Departments.
Foreign Consuls.
Chamber of Commerce.
Officers of the Agricultural Society
Mutual Insurance Company.
Manchester Unity
Band of Royal Artillery Regiment.
Rear Guard.

The procession moved through Doyle-road, the Grange road, St. James's-street, smith-street, High-street, Church-street, &c., which were filled with spectators, the militia of the island lining the way from St James's-street to the entrance of the new harbour site. The stage erected about the foundation stone was situate about 200 feet below high-water mark. Half a dozen national flags of Old England floated over its surface. In the centre, between the extremities of the stage, a new triangle was raised, from which was suspended, about twelve feet from the ground, the foundation-stone—a square block of granite, weighing about five tons. A temporary fence was erected to prevent overcrowding within its enclosure. Beyond that was a more spacious circle, destined for the reception of other public bodies and the militia of the island, the skirts of which was guarded, to prevent intrusion, by the rifle companies of the 2nd, 3rd, and 4th regiments. This outer ring was occupied by a dense multitude. The sight was magnificent; a beautiful panorama, formed by a bright green ground some two hundred feet above the level of the beach, studded with houses, towering above each other in majestic grandeur, with gardens in the sloping grounds below, occupied by spectators. Some of the platforms were not so well filled as we expected; but every other place which could command a view of the spot was fully occupied, and even the roofs of some of the houses were not without their share of occupants. The heights at Fort George, too, from which a view could be obtained, added their contingent to the general mass. And beside all this the whole neighbourhood was enlivened with a large number of flags, of various descriptions, so that nothing had been left undone, which could be done, to give complete effect to the imposing ceremonial. The hour, however, approached which was to realise the hopes of the expectant multitudes, and the sound of martial music in the distance gave unmistakeable indications that the procession was approaching. At ten minutes past two o'clock, the advance guard entered the allotted enclosure, followed by the remainder of this imposing pageant. The Court, the Clergy, the members of the States, and the Freemasons entered the inner circle, when the masonic standard was hoisted at the head of the flag staff.

At thirty-five minutes past two p.m., Colonel Fraser, R.A., Commandir in-Chief *pro tem.* arrived, being accompanied by the following staff:—Colonel Romer, R.A., Colonel Brock, C.A.L., Major H. St. George Prandi, A.D.C., Commander Lefebvre, R.N., Lieutenant Simpson, R.A., and Lieutenant Griffiths, R.A., with Messrs. E. S. Hoskins, M.D., and De Beauvoir De Lisle, M.D. The Harbour Committee conducted the staff an officer to his place on the platform, on the right of the Bailiff, the bands playing the National Anthem.

The ceremony was commenced by the Rev Richard Poteger, Rector of St. Martin, who implored the Divine blessing upon this great undertaking, by offering an impressive prayer.

Occupying the extreme left of the platform was a most efficient vocal corps, composed of the united choirs of the different churches and chapels of the establishment in the town parish, and who, when the prayer ended, sang the 100th Psalm in grand chorus.

The Queen's Greffier then read the Act of the States for the construction of the Harbour.

The inscription-plate, which was of brass, was then presented by the Vice-President of the Harbour Committee (Mr. Carré) to Mr. V. W. Br. James Gallienne, Provincial Grand Treasurer of the Freemasons, who read it aloud.

The plate was then re-delivered to Mr. Carré; and the Treasurer of the States placed in a cavity of the stone the coins of the realm, including a States' 8 double piece, 4-double piece, and 1-double piece (copper); together with the Act of the States, an almanack, and copies of the four local newspapers last printed.

The R. W. Provincial Grand Master next ordered the Provincial Grand-Treasurer to deposit the coins within the cavity. The plate was afterwards covered with tinfoil, and being placed over the cavity, mortar was spread over it. The Bailiff, at the request of the States' Supervisor, then descended into the foundation, and was presented by the Provincial Grand Master with a silver trowel, with which he smoothed the mortar.

The stone was then slowly lowered, the band of the 1st Regiment playing "The Sicilian Mariners' Hymn;" and the Rev. V. W. Br. C. Lynn, Provincial Grand-Chaplain, offered up a prayer.

The Choir chanted "So mote it be."

The Provincial Grand-Master adjusted the stone with the level, plumb-rule, and square, which were severally presented to him. This done, he delivered to the Bailiff a mallet, with which the latter struck the stone once; the Provincial Grand Master, with his own mallet, afterwards striking it thrice, declared the stone to be laid.

Corn was then presented by the Provincial Grand-Junior Warden (V. W. Br. W. B. Goldstone) to the Provincial Grand-Master, who sprinkled the same over the stone.

The Choir chanted "Glory to God in the highest, on earth peace, good will towards men."

Next pouring wine the Provincial Grand-Master implored a blessing.

Again "Glory to God" was chanted; and oil was poured, and the Provincial Grand Master implored a blessing.

The chanting was repeated, and the Provincial Grand Master made an invocation "So mote it be" was chanted, and the Rev. V. W. Brother Pendleton, Provincial Grand Chaplain, concluded with a prayer.

The Bailiff having mounted the platform, addressed the assembly.

When the Bailiff had concluded, the five militia bands played "Rule Britannia" in concert; and upon cheering followed a salute of sixteen guns was fired by a battery of artillery, posted to the north of the platform. The infantry regiments then deployed, with bands playing, and, with the right of their line resting on the Terres, the left on the ground fronting the platform, executed a *feu de joie*; and the pageant was over.

The different bodies forming the procession retired to their respective places of meeting—the Royal Court, preceded by a guard of honour, to the Court-house—and the militia marched to the New Ground. Hither the band of Freemasons afterwards proceeded, and warmly expressed his thanks for the way in which the several corps had performed their duty. The men partook of the refreshments provided by the Harbour committee. But the principal festivity was the Sisters' collation to 250 guests, served in the Arsenal, which was splendidly decorated for the occasion. The Bailiff presided, and the Lieutenant-Bailiff acted as Vice-President. A variety

GRAND CEREMONY OF LAYING THE FOUNDATION-STONE OF A NEW HARBOUR AT ST. PETER PORT, GUERNSEY.

of toasts were drunk including "Prosperity to the New Harbour," "Mr Rendel, the Engineer and his representative, Mr Lyster," "The Contractors, Messrs Le Gros and De la Mare," &c. The musical arrangements were by Mr Gobbins, Mr Farquharson Smith, and Mr George Genge. The ceremony of the day was also commemorated by the members of the Chamber of Commerce dining at the Royal Yacht Club Hotel. The Freemasons likewise dined together. There were various other public and private entertainments.

The accompanying Illustration of the foundation ceremony is from a clever drawing by Mr P. J. Naftel.

We understand that upon this memorable occasion the Judge and state wore their official costume for the first time. It is of purple, trimmed with ermine and was much admired. Harbour ceremonials and precautions at Guernsey have long been called for, there is crowded space, the want of berths for the steamships of the company, and at neap tides, the deficiency of water having rendered the present harbour a less made retreat and defensive, while both during exposed to gales from the S.E. which bring in heavy seas, vessels have been and now sometimes expose to serious damage, and even destruction. Until the early part of the year 1851, however, nothing effectual was done to secure the desired improvement. At this period the Chamber of Commerce, having duly reorganized, took the matter in hand, the Lieutenant Governor Lieutenant General Sir John Bell gave his cordial support and assistance towards its accomplishment, and the Board Peter Stafford Carey, Esq. carried the measure into operation through the States that body finally adopting a plan which had by the direction been made by Mr. Rendel, the eminent civil engineer, and in the spring of 1851 engaged with certain contractors for the execution of its first portion estimated at about £40,000. Owing, however, to the failure of those parties, just as they were about to enter on the work the undertaking was again delayed until other contractors were agreed with. Finally on the 16th of May of the present year, a contract for the execution of the first section of the plan, and a portion of the second, was entered into with Messrs Le Gros and De la Mare of Jersey, for the sum of £16,500. The entire plan as framed by Mr Rendel is estimated at upwards of £48,000, but the States confine themselves, in the first instance to the execution of the portions above mentioned. These consist of a spacious quay extending from Glatney Esplanade to the Terres, a length of about 1100 yards, and by an arm extending from the South Beach in a north easterly direction so as to shelter the present harbour and give a large additional area for shipping, and lastly, the walls of an intended floating dock which are to be constructed between the new south arm and the old Harbour.

THE ROYAL SEA-BATHING INFIRMARY, MARGATE.

THE ROYAL SEA-BATHING INFIRMARY, MARGATE.

This excellent institution has been in operation nearly sixty years. Notwithstanding which, in the words of the report issued on July last, "the charity does not at present stand as it has not for many years stood, but that charge of general patronage which, from the peculiar character of its services it so justly entitled to claim." It provides poor scrofulous patients, from all parts of England, with a Hospital placed upon the shore of the ocean, so that they may receive its restorative influences.

The Hospital has an interesting history. The first stone of the building was laid on the 21st of June, 1792, in the presence of Dr Lettsom (the originator of the scheme), Dr Hawes, Mr Deputy Nichols, the Rev. Weedon Butler, the Rev. John Pridden, and James Boswell, Esq., benevolent men of their day, and on the 20th of July, 1796, the building was completed and sixteen patients were admitted into it.

Since the Infirmary was first opened, extensive additions have been made to the building by means of munificent legacies and donations from time to time, and it is now a spacious edifice. It is divided into separate wards for males and for women, and for children. The number of beds made up for patients in the sleeping rooms is 220, and spacious apartments are provided for such patients, in which to take their meals and to sit together during the day. Private rooms well furnished, are assigned to a superintendent and to a matron, as well as offices in which to transact the business of the Hospital. There are also kitchens, with apparatus on a large scale for cooking and preparing meals daily for 300 persons. Rooms are also found for an executive committee of management to meet in, for a dispensary, and for warm baths, cold baths, and douche baths. There are also washing rooms for the patients, and accommodations of every sort to meet their wants and increase their comforts.

Situated within the grounds, which in extent are about four acres, surrounded on three sides by walls, with the sea on the fourth, is a house for the resident surgeon, and at the entrance to the premises is a porter's lodge. On the side of the sea there is a descent from the grounds, through a gap made in the cliff, to the sands below, where a private bathing machine is continually in use for the benefit of the patients.

The cripples and the feeble are laid out here on litters or in easy chairs, and placed comfortably in positions to breathe freely in an atmosphere, which in very many cases is found daily to give more and more tone to their constitution, gradually reorganizing tissues long impaired, healing wounds assumed to be incurable, restoring to happy use again eyes dimmed almost to darkness by disease, and limbs the joints of which seemed to be passing into decay.

It is an affecting sight to see the sick and suffering poor dispersed about the premises in groups by the sea side, feeling within themselves that a turning point is at length reached in their miserable malady, and with hope reviving under sensations which hold out a promise of recovery.

We have not space for "the machinery of the charity," but may briefly mention that the Medical Board, by some one or other of its members, visits the Hospital at Margate, and reports upon its state and condition, examines the claims of the patients applying for admission into the Hospital, and grants or refuses certificates of admission as cases brought before them may be found to be scrofulous or otherwise, or coming within the range or not of the designs of the charity.

The annual visitation will take place on Monday next, the 12th inst. at twelve o'clock precisely; and the Governors and friends of the charity will dine at the York Hotel on the same day, Sir Brook W. Bridges, Bart., in the chair. On Sunday the 11th instant, preceding the visitation, sermons on behalf of the funds of the Infirmary will be preached, at Margate.

NATIONAL FLORICULTURAL SOCIETY.

At the recent bi-monthly meetings of this Society, held at 21, Regent-street, there have been some attractive exhibitions of the extraordinary development of the Hollyhock—not the long, gaunt, naked stalks rising some ten or twelve feet high, with here and there one stray flower; but, on one occasion (the exhibition on the 26th ult.), there were some sixty

PRIZE DAHLIA.

of the most gorgeous spikes, varying in every shade of colour—white to blush, pink to deep rose, carmine to rich crimson, maroon to black, cream to sulphur, primrose to deep golden yellow; these spikes averaging about thirty inches to three feet, strong and erect, and furnished with flowers individually five to six inches over, with full, dense, regularly-formed globular centres. The whole spike may well be termed masses of flowers, with here and there gracefully-arranged brilliant green foliage.

Our Artist has represented a spike of one of the leading flowers shown by Messrs. Paul and Son, of the Cheshunt Nurseries, to which specimen the censors of the day awarded a first-class certificate; other and similar awards were made to several distinct varieties. Dahlias, ver-

PRIZE HOLLYHOCK.

benas, gladiolii, antirrhinums, fuchsias, scarlet geraniums, &c., made up an interesting and nicely-varied exhibition, which we were glad to see well attended.

In our Illustrations, with the hollyhock are some fine specimens of dahlias.

The number of amateurs in the culture of hollyhocks has, of late, greatly increased; and their warmth of colour, symmetry, and magnificence, entitle them to this high favour. Mr. Maund, in his "Botanic Garden," (No. 977) observes:—

The hollyhock, for several years past, has had much to complain of from the undue neglect with which it has been treated. Here and there it has found a discerning patron; but, generally speaking, the floral world has been influenced by a dahlia excitement, from which it is now subsiding in sober disposition to judge all flowers by their respective merits. The rose is again the queen, and the hollyhock is again at court.

Upon this, Mr. Paul, in "An Hour with the Hollyhock," remarks:—

It is true the dahlia and the pelagonium have each their peculiar beauties, but they, in common with many others, are robbed of their gay attire by the first breath of winter; but the hardy nature of the rose and the hollyhock carries them forward fresh and beautiful throughout the chilly months of autumn. When others languish and decay, they fear-

PRIZE DAHLIA.

lessly confront the blast; their many-coloured blossoms often enlivening for a long period, the desolation caused by a single frosty night.

THE COMET.

(*To the Editor of the* ILLUSTRATED LONDON NEWS.)

The accompanying Sketch, with which I have been favoured by a lady, requires but a few words of explanation to make it appreciable by your numerous readers. The prominent object is a very beautiful Comet, which has been visible here the last two or three evenings, and whose brilliancy, seen with the naked eye, attracted my

COMET, SEEN AT CASTELLAMARE, BAY OF NAPLES.

attention on the evening of Saturday, the 20th ult. Its position in the heavens is N W

I have no doubt the beautiful visitor has been observed by the indefatigable professors at the Observatory of Naples, and that the result will, in due time, be made public in the official newspaper

The heat during the last few days has sensibly augmented; the atmosphere, as usual, very clear. The moon became visible above the lofty hills in this vicinity at about nine o'clock on the evening of the 2 ult, at which hour the Comet had descended below the horizon in the direction of Naples, having been visible since half past seven, or soon after sunset, and during the limited twilight natural to these latitudes. On the evenings of the 21st and 22nd, it was visible for nearly the same space of time—say for about an hour and a quarter. Care has been taken to place the stars in the Sketch in their correct positions.

Many of my countrymen who saw the Comet will be desirous of knowing whether it was seen in England, and the newspapers will be read with eagerness, in consequence, for the next week or ten days.

Local bearings—Naples, N.N.W.; Vesuvius, N.

Your obedient servant,

Castellamare, Bay of Naples, 3rd Aug., 1853. J. T. L., Jun.

[NOTE OF THE EDITOR.—The Comet is now moving rapidly, both from the Earth and the Sun; and, although visible in the southern hemisphere, its great brilliancy is passed. The position of the Comet for noon at Greenwich

Sept. 10,	right ascension 10h. 43m.,	and its declination 13° 30′	south.
" 11,	" 10h. 32m.,	" 15	"
" 12,	" 10h. 24m.,	" 16½	"
" 13,	" 10h. 20m.,	" 18½	"

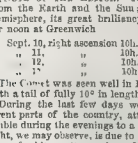
The Comet was seen well in England, at places distant from London, with a tail of fully 10° in length.

During the last few days we have received many letters from different parts of the country, attributing a great light which has been visible during the evenings to a supposed influence of the Comet. Such lights, we may observe, is due to the aurora borealis, as well as the wavy lines of white matter spoken of by other correspondents. During these days the magnets were much disturbed.

SPOT ON THE SUN.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

I enclose a drawing of a large Spot on the Sun, as seen on the 28 h inst, with the full apertare of a 9-inch Newtonian equatorial telescope. It presents, I believe, an unusually fine example of the perforation of the interior atmosphere or envelope of that luminary.



The Sketch is intended to show —1st, the penumbra, or the shelving funnel-shaped sides of a ragged-edged oval, opening through the exterior luminous atmosphere; 2nd, the umbra, or portion disclosed of the interior darker envelope, passing through which is seen—3rd, a further aperture into an interior region of darkness so great in comparison of the general splendour of the solar surface, as to appear absolutely black by contrast

I am, &c.,

J. H.

Stoneaston, Aug. 30, 1853.

THE RIVAL RAILWAYS.

THE SHREWSBURY AND BIRMINGHAM RAILWAY COMPANY *v.* THE HON. R. H. CLIVE AND OTHERS.—On Tuesday (the 23rd ult.) an application was made before Vice Chancellor Sir William Page Wood, at the Bull Inn, Cambridge, for an injunction, on the part of certain shareholders of the Shrewsbury and Birmingham Railway Company, to restrain the defendants from acting as directors of the above company, or in any way dealing with the property thereof. The Solicitor-General said, that this was a bill filed by the Shrewsbury and Birmingham Railway Company against certain persons who were, or had been, directors of the company, and he believed that all the defendants appeared. The object of the application, the notice of which was dated the 16th of the present month, was, that the defendants, Robert Henry Clive, Joseph Walker, Henry Hill, Richard Smith, Thomas Jefferies Badger, Frederick Pratt Barlow, Thomas Bunkeler, Charles Emery, Robert Roy, or such of them as were directors of the company, might be removed from being such directors; and that the said George Knox might also be so removed, in case he had not already ceased to be such director; and that the said George Knox and the said defendants, or any of them, in the meantime, restrained from dealing with the plaintiffs' property or effects, administering their affairs, or otherwise acting as the plaintiffs' directors; and that the defendants, the directors, might in like manner from permitting the said George Knox to attend, and that the said George Knox might be restrained from attending at the offices of the company, and from having access to, or in any way interfering with the books or documents of the company, or otherwise than as an ordinary shareholder, and under such inspection as would prevent him from erasing, altering, or otherwise tampering with, or dealing with the same; and that he and the said other defendants might be restrained in the like manner from moving any of the books or documents of the company from their office; that the defendants Henry Hill, Thomas Jefferies Badger, and Joseph Walker, might be restrained from voting at any meeting of the company in respect of the said company's shares transferred into their names as trustees; that the defendant Henry Mortimer might be restrained from voting at any meeting of the company in respect of the said shares so transferred into his name; and that the directors generally might be restrained by the like order and injunction from presenting to the half-yearly general meeting of the company, for the purpose of confirmation, any transfer that neither should be done in the meantime, he must press for an interim order. His object was that in the interval between the present time and the day of adjournment, things should remain precisely in statu quo. After considerable discussion upon the details of the arrangement for adjourning, a document was drawn up and signed by the counsel to the following effect:—Copies of the affidavits to be delivered on or before Saturday next, and copies in reply to be returned on or before the Wednesday following. Motion to stand over to Friday, September 2, at half-past ten; defendants undertaking, in the meantime, not to deal in any manner with any of the shares or debentures of, or belonging to, the company, or to issue any proxies at the expense of the company. Books and papers to remain at the company's office in their present custody." The proceedings were then adjourned till Saturday last; when Mr. Giffard, Mr. Russell, Mr. Glasse, Mr. Terrell, and Mr. Kerslake, having been heard for their respective clients, the Solicitor-General replied in a speech of more than three hours' duration; and the Vice-Chancellor delivered judgment. He reviewed, at considerable length, the whole case strongly denounced the unquestionable culpability of Mr. KNOX's proceedings, but intimated clearly that the French (the plaintiffs') party had no right to accuse any one of such transactions; in fact, that they did not come into court with clean hands. He declared that he would make no order. The proceedings thus fell to the ground, and by common consent the costs were made costs in the cause.

EMIGRATION FROM LIVERPOOL.—The number of ships which have taken their departure from Liverpool for foreign ports during the last month has been 82, carrying in all 20,040 passengers. Of these which came under the operation of the Emigration Act, there were for the United States, carrying 1593 passengers; for New [illegible] 321 passengers; and 5 for Port [illegible] [illegible] [illegible]

France, and it is now sought to introduce it into England. Dr. Roth thus explains the general principle of the doctrine of movements :—

The subject of this doctrine is the human organism, considered by Ling as a whole, and existing for itself, possessing of life, vital power, and substance; the vital phenomena of which are subordinate as well to physiological as to physical laws in general, and are only ideally arranged, that we may better understand them, in three principal orders: those of the Dynamical, Chemical, and Mechanical agents. We say that the distinction is only ideal, because no vital phenomenon of one order is manifested without being more or less in combination with those one or more of another order; and only the union and harmony of the three combined constitute a perfect organism

The volumes are illustrated by a variety of engravings of the human body, showing the different positions in which it is placed under treatment, so as cure specific diseases. Of course, by pressure or extension, any particular muscle or tendon may be separately affected, or several in combination, as there is no difficulty in attacking the part or parts affected; and it is asserted that, by this process of movements, nearly all maladies may be cured, not excepting those of a mental character. The treatment aims at an increase of the vital and nervous power, and the diversion of the blood from one set of organs to another. It proposes to diminish strength in one part and diminish it in another, to remove congestion from internal organs; and to rectify the disorders of muscular fibre No doubt this system has its value, so far as it gives a scientific direction to gymnastics, and we can readily understand how it conduces to keep a sound body free from disease; but we should, without denying its efficacy in curing ophthalmia, and some other complaints enumerated. Upon this point, however, it is beyond the province of a public journalist to enter.

THE PANTROPHEON; OR, HISTORY OF FOOD and its PREPARATION, from the Earliest Ages of the World. By A. SOYER. Simpkin, Marshall, and Co.

The history and illustration of the food and cookery of all nations are favourite subjects with modern French authors. To their vivid fancy we are indebted for many a successful attempt

To form a science and a nomenclature
From out the commonest demands of nature.

And, although Dugald Stewart was struck by the analogy between cookery, poetry, and the fine arts, to French writers belongs the merit of originating the metaphysics of cookery. They were the first to establish the wide contrast between the sensuality of gourmandism and the refined enjoyment of the gourmet. To them we owe "The Classics of the Table," and "The Physics of the Table." Dr. Kitchener may have been the first to expose the fallacy of the palate of this and half of the next generation; but to Brillat-Savarin are we indebted for "Maxims for a Dinner;" and, quoting one of the aphorisms in his famous "Physiologie du Gout," M. Soyer, in his introductory chapter, says: "to the austere Jew, the voluptuous Athenian, the obsequious or vainglorious senator of imperial Rome, and even to the fanatastical, prodigal, and cruel Cesars: 'Tell me what thou eatest, and I will tell thee who thou art.'"

One of our profound moralists avowed that he cared little for a man who did not care for his dinner; and the writer of the volume before us doubtless possesses the same predilection, if we are to judge by the elaborate research with which his bulky volume is "interlarded." He found it easy to penetrate into the temples, the baths, and the theatres of the ancients; not so to rummage their cellars, pantries, and kitchens, and study the magnificence of their dining-rooms. However, this he has accomplished by perusing poets, orators, historians, philosophers, epistolographers, writers on husbandry; and he has even peeped into the domestic usages of the doctors of the Primitive Church. The latter was prudent for here can we find such glowing pictures of luxurious epicurism as in the monastic kitchen? The enchantments of the table Soyer dates from the Assyrians and Persians; then ranges to the people of Athens, anathematising, by the way, "the Lacedemonians, those cynics of Greece, who threw a saddening shade over the delicious picture of present happiness, undisturbed by any thought of to-morrow." The Roman phase is told with a touch of grave humour.

Rome was long renowned for her austere frugality; and, it is remarked that, during more than five centuries, the art of making bread was there unknown, for the want of civilisation and intelligence. Subsequently, the conquest of Greece, the spoils of the subjugated world, the prodigious refinements of the Syracusans, gave to the conquering nations (says Juvenal) a complete revenge upon their conquerors. The unbridled excesses of the table swallowed up patrimonies which served to be inexhaustible, and illustrious dissipators obtained a durable but sad renown.

Soyer then offers an odd apology for the whimsical Romans in serving the flesh of asses and dogs, and ruining themselves in fattening snails; which our author attributes to the caprices of fashion, rather than the refinement of sensuality. In lists of desserts of the antique banquets of two or three thousand years since, he has borrowed data from Petronius, Athenæus, Apuleius, Macrobius, and Suetonius; and a description of a supper given by the Pontiff Leutulus is ingeniously conjectured to be imperfect, arising from the "regardless" manner of the order prescribed for those punctilious and learned transitions to which a feast owes all its value" Captain Morris set the right value upon the luxuries of old Lucullus and his forty cooks; and Vitellius's meals, which cost a million. Our old lyrists sings :—

At all feasts, if enough,
I most heartily stuff,
And a song at my heart alike rushes,
Though I've not fed my lungs,
Upon nightingale's tongues,
Nor the brains of goldfinches and thrush.es.

Nor does M. Soyer regard these oddities higher than the curiosities of his subject; for he duly remarks :—

When we compare the cookery of the ancients with our own, and the parallel naturally presents itself to the mind, it often betrays strange anomalies, monstrous differences, singular perversions of taste, and incomprehensible amalgamations, which baffle every attempt at justification. Apicius himself, or perhaps, the Coelius of the third century, to whom we owe the celebrated treatise "De Opsoniis," would run great risk if he were now to rise from his tomb, and attempt to give vogue to his ten books of recipes, either of passing for a poisoner or of being put under restraint as a subject decidedly insane. It follows, then, that although we have inherited many incrustations, we leave to the Roman epicurean and to his times the entire responsibility of his work.

This brings us to the more practical character of the present volume, the method of which is admirable; commencing with agriculture, cereals, grinding of corn, manipulation of flour, ferments, grains, seeds, and vegetables. Then follow the kitchen-garden, plants used in seasoning, fruits, animal food; the cook and the kitchen; beverages; repasts, and a variety of accessory articles; all illustrated with numerous of ancient and modern history, and hints of practical value.

As a book of luxurious reading, abounding in classic anecdote and often gossip, the "Pantropheon" will, doubtless, become popular. It is produced in fine style; its bright blue binding, enriched with a marble-like ease, and a boar-chase in gold. It is embellished with some forty plates, illustrating marvels of antique gastronomy. The subjects are nicely drawn, and remind one how few changes have been made in the implements since the days when cooking stove and gridiron of Herculaneum to the latest improvements in our Club-kitchens; though, in the form of vessels we have missed beauty of outline. These antiquarian illustrations are a valuable and attractive feature in M. Soyer's work of useful and amusing research.

MRS. BEECHER STOWE.—This lady has been on a visit to Leeds, and during her stay has been the guest of Mr. Edward Baines. During her sojourn she was presented with an address from the Anti-Slavery Society of Leeds, either built mostly of the bricks of Leeds, and 100 sovereigns from readers of "Uncle Tom's Cabin." The presentations took place at Headingley-lodge, in the presence of numerous party. The brother of Mrs. Stowe (the Rev. Mr. Beecher) read a written reply acknowledging the compliment, and expressing a confident hope that slavery in the United States would eventually be abolished. Mrs. Stowe, in consequence of the illness of her daughter, took her departure for New York in the Arctic, which sailed from Liverpool on Wednesday.

A NEW GAS.—In the Nova Scotia Legislature, Dr. Gesner submitted a proposal to light the Parliament buildings and the provinces with his new hydrocarbon gas, which he estimates would effect a saving of £15,000 per annum over the present mode. He has been allowed to try the experiment with the buildings at Niagara Beach, which he lights at a charge of £10 per annum, effecting a saving of £50. It is said that the mode of procuring the gas was quite simple, and a Boston company have had all their vessels lighted with it, as well as their factories, &c. It was brought on board in India-rubber bags. The works are stated to be managed by a common labouring man. No mention is made of the mode of preparation, nor of the material from which it is manufactured; but it is said to be much cheaper than ordinary gas.

RAILWAY COLLISIONS.

THE recent unfortunate collision on the Great Northern Railway has naturally attracted more than usual attention to the subject of railway accidents, and to the means, if not of preventing them, of diminishing the loss of life and the injury to limb which but too frequently attend them. We therefore present the annexed particulars and diagrams of Mr. Asbury's patent apparatus, without pledging our opinion that the invention is a practical one. The subject, however, is of such importance as to justify us in giving publicity to this well-meant attempt to provide a remedy.

"It is well known," says Mr Asbury, "that railway travelling is not always unattended with danger; and from some causes which are not under man's control—as the darkness of the night, or a dense fog—one train is run into another before it can be discovered There are other causes of accident, which might and ought to be under control as the starting a quick train after a slow one, a reckless engine-driver, who obeys no signal, or forgets to reverse his engine from panic when danger is before him. These, and many other incidental bearings in locomotive conveyance, oftentimes place the passengers in great danger of loss of limb and life, and other injuries, which, under collision, must take place, and under circumstances that cannot be prevented at all times, with the present arrangement of railway carriage building.

"The present carriage frame is objectionable, it is made of solid timber, longitudinal and cross pieces with diagonals; this frame is placed on wheels, and then the carriage bodies on the frame. The buffers for ordinary purposes of traffic are placed at each end, beyond the limit of the space assigned for passengers. It is well known from sad experience under collision, that when these buffers are driven in, serious injury follows to the passengers, by the breaking up of this frame of solid timber, and the force is extended to other carriages in advance, with similar destruction, until the momentum is lost, and an equilibrium established. It must be obvious to an ordinary observer, that the carriage frame, which has to sustain the opposite forces of momentum and inertia under collision, has two points of impaction, one at each end, where the buffers are driven in on the cross timbers, and between these two points of impaction lie fracture, mutilation, and death, where the forces of momentum and inertia are violently opposed to each other. There is no provision to ward off this danger in the present construction of railway carriages.

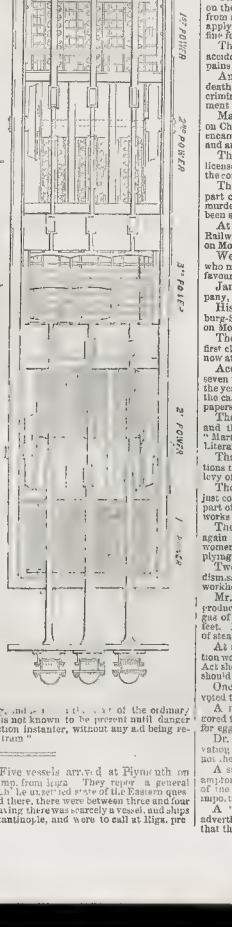
"It has been said there can be no machinery constructed of sufficient power to check a train of 100 tons at a velocity of fifty miles an hour. There is an axiom in dynamics which exemplifies this point, viz., reaction is equal to action, and it must be observed that it is also opposite to action; therefore, when a heavy train is passing with great velocity, it carries with it its own power of arresting itself, for when the momentum strikes a train or body at rest, the inertia returns the blow with equal force, and prevents the train at such high speed passing onward.

"A familiar illustration of this axiom may be here introduced. A carpenter is seen driving a nail with a hammer into a plank of hard timber, he does not enter to his satisfaction, he becomes impatient, and gives the nail a violent blow, when it instantly goes out into his face, now the plank of timber did not drive the nail into his face.

"Experience is the result of observation from numerous collisions that have occurred on different lines of railway, proves that all the mischief is done in one or two seconds of time; two or three carriages are broken up, and the momentum is thus expended in traversing some fifty or sixty feet. In the present construction of the carriage frame, this mischief must always occur, there is no preventing it under collision, as there is no giving way to force The blow, with its reaction, is the cause of all the injury, by directing its force at once to the two points of impaction and pressure, at each end of the frame This remedy is here obvious. Let the blow be received in such way that the momentum may be some time and all but lost before it arrives at the points of impaction. There is a property in matter which appears to have been overlooked in the construction of railway carriages, that will effect this purpose.

"In the field of Waterloo afforded a striking illustration of this power Soldiers were found, with gunshot wounds, not dead, where the ball struck a yielding tissue; but the solid and compact structure being hit, the ball entered and killed. Compact and solid work introduced in the building of railway carriages now in use, does not, therefore, constitute the best mode of receiving sudden and great forces applied to them, and the result of the accidents that have occurred proves that strength founded on solidity, affords no protection to passengers, but, on the contrary, constitutes the best quality for giving the greatest shock under collision.

"Asbury's improvements consist in bringing the momentum and inertia to bear on each other simultaneously, so as to prevent concussion when contact between these two opposing forces takes place. This principle is effected by machinery placed within the longitudinal and cross timbers of the carriage-frame, and possessing three degrees of power. The first at each end is the weakest, and admits of compression to its assigned limit of space. The second power is stronger than the first, and admits also of compression to its own assigned limit of space, with the same amount of space added to it from the first power; thus two degrees of space have now been traversed by the first power, one alone, and the other in conjunction with the second power. The third or centre power is the strongest, and admits of compression to its own limit of assigned space each way, and carries with it another degree of space from each of the other powers. By this arrangement, in a train of several carriages, the momentum in the first instance is conducted from carriage to carriage throughout by the first power, and the second and third powers follow each other in rapid succession; and whether a train in advance is at rest, or progressing with less speed, or two trains meet each other of different weight and velocity, the greater momentum will be carried on. Such is the object of this invention is not abruptly to stop a train, but to transfer its motion until an equilibrium is established.



"The machinery is of a light and simple character of the ordinary use of the carriage, therefore it is not known to be present until danger occurs, when it is called into action instanter, without any aid being required by the attendants of the train."

FLAX-TRADE AT RIGA.—Five vessels arrived at Plymouth on Monday, laden with flax and hemp, from Riga. They report a general stagnation of trade there, through the unsettled state of the Eastern question. When these vessels arrived there, there were between three and four hundred sail loading; but on hearing there was scarcely a vessel and ships that had taken cargoes to Constantinople, and were to call at Riga, preferred returning in ballast.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

Wednesday next, the 14th, will be the first anniversary of the death of the Duke of Wellington.

The accident on the Great Northern Railway will cost the company from £10,000 to £20,000, on account of the number of respectable people injured, and the amount of destruction to property.

We learn, says the *German Journal of Frankfort*, that the Prussian Government has it in contemplation to propose to the Customs Conference to suppress the duty on corn.

Queen Christina of Spain and her consort visited the Polytechnic Institution on Saturday last, and spent some hours in examining the several models and works of art there. The diver, diving-bell, and sewing-machine appeared to astonish the Royal party very much.

An officer has been engaged at Ipswich, by order of Government, in selecting a proper site for the erection of infantry barracks, for 1000 men.

The marriage present made by the Emperor of Austria to the Duchess de Brabant was a diadem of large diamonds, the centre one being an exceedingly fine rose diamond. The Archduchess gave the young bride a broad belt made of diamonds and pearls; and the Archduke a toilette service of silver.

The demand for seamen in the Tyne continues. Various crews have, during the last ten days, obtained £4 to £5 5s. per month for the Baltic; and, in some instances, men have been shipped above the age of fifty, who had not previously followed the occupation of seamen.

A man and a boy were, a few days ago, taken by vipers whilst collecting leeches, at Ince, near Nantes; and they were so much injured that the man died, and the boy will be deprived of the use of his legs.

Miss Rose Soane, grand-daughter of the late Sir John Soane, has appeared with great success at the Wolverhampton Theatre in the character of *Lady Macbeth*. Her personal appearance is much in her favour.

Mr. Shaw, known in the agricultural districts as editor of the *Mark-lane Express*, and managing director of the Farmers' Insurance Society, died recently in Australia.

The Duke of Brunswick has decreed that henceforth criminals shall be beheaded with an axe, and in a closed place, in the presence of the public prosecutor, a deputation of the Tribunal, a priest, the prisoner's counsel, and twelve persons chosen from amongst the representatives of the commune.

The Earl of Seafield is a candidate for the vacancy occasioned by the death of Lord Saltoun in the Scottish representative peerage.

A contemplated insurrection of the slaves in Nottoway County, Virginia, has recently been discovered and suppressed. They intended murdering all the white inhabitants of the place.

William Comely, of Tipton-hall, near Dudley, last year raised some potatoes on his ground, but they proved so badly diseased that he would not go to the expense of getting them in. This year there has been a very fair crop of sound potatoes off the same ground.

Mr. Eade has been appointed Chief Commissioner, and Mr. Hill and the Rev. R. Jones the two paid Commissioners; Mr. Vane, the Secretary, and Messrs. Hare and Skirrow, the two Inspectors, under the Act for the better administration of Charitable Trusts.

An extensive fire broke out in the Pearl-street House, New York, on the 23rd ult., which destroyed 200,000 dols. work of property

The widow of Mr. D. M. Moir—so well known as the "Delta" of *Blackwood's Magazine*—has been submitted to the Queen by the Earl of Aberdeen for a pension of £100 a year, and her Majesty has been pleased to approve of the Premier's recommendation.

At the trial trip on the Dee-side Railway last week, an attempt was made to throw the train off the rails—at the time of the lengths of rail on the line having been lifted by some miscreant. Fortunately, the circumstance was noticed in time to avert any injury.

The Emperor of Russia has conferred the order of St. Anne of the first class on Prince Danilo of Montenegro, and the same order of the second class on Peter Petrowich, President of the Senate.

It appears, from a recent return, that the Universities in Germany and Switzerland had, in 1852, 181 professors and 4,000 students, of whom 1930 were educating for the Catholic priesthood, 1765 for the Protestant clergy, 670 in law and political economy, 4183 for medicine and surgery, and 2644 in philosophy.

The names of persons liable to serve on juries are now exhibited on the church doors. Persons of sixty years and upwards are exempted upon serving, but in order to avail themselves of the privilege they must apply to the overseers, or they will be returned to serve, and liable to fine for non-attendance.

The Lord Mayor is recovering from the effects of the recent accident on the Great Northern Railway, although still suffering from pains in the head, and from want of sleep.

An Arab named Hamed Ben-Amar-Ben-Hamed was put to death recently, on the beach of Cherchell, in Algeria, by sentence of a criminal court, for having murdered a Cheikh. He was shot by a detachment of soldiers

Many boys are engaged in picking up quantities of copper caps on Chobham Common, which have been used by the regiments recently encamped there. The boys sell them to the ironmongers for old copper, and are said realise 2s. or 3s 6d. a day by their industry

At the present number of persons in Rome who have taken out game licenses is 160,000 The cost of each license is 25f, of which 10f. goes to the commune and 15f. to the State.

There is now lying at Gibraltar an English vessel, the Maltese part of the crew of which mutinied on the high seas, and endeavoured to murder their shipmates. Several men were shot, and the remainder have been sent to prison at Gibraltar.

At Retford, the coal brought thither by the Great Northern Railway Company, and hitherto sold at the station at 7s. 6d. per ton, was on Monday last advanced 2s. 6d. per ton

We are glad to state that M. de Berg, of the Russian Legation, who met with a serious accident some weeks since, is progressing most favourably towards complete recovery

James Cosmo Melvill, Esq., Secretary to the East India Company, has been made a C.B. of the Civil Division of the Order of the Bath.

His Royal Highness the Hereditary Grand Duke of Mecklenburg-Strelitz, accompanied by Baron Rauch, arrived at Fenton's Hotel on Monday, from the Continent, and left for Edinburgh on Wednesday.

The King of Prussia has conferred the order of the Red Eagle, first class, on Prince Felix Jablonowski, Austrian Field-Marshal, who is now at the manœuvres of the camp at Satory.

According to a Parliamentary paper, it appears that twenty-seven vessels were detained at various ports in England in quarantine in the year 1848; three in 1851, seventeen in 1852, and four in 1853. Most of the cases of detention occurred from irregularities with respect to the papers of health

The Rev. W. Hickey, a clergyman of the Established Church, and the popular agricultural writer under the well-known name of "A Man, Style," has been granted a pension of £80 a year out of the Literary Fund.

The Income-tax collectors are proceeding to their several stations throughout Ireland, to make the necessary arrangements for the levy of the first instalment of that impost.

The company of the Victor-Emmanuel Railway, in Savoy, has just completed its caution money of 4,000,000 fr. The surveys of a great part of the line will be terminated by the end of the month, and the works will be commenced on different parts by the end of October.

The demand for female servants still continues; and we may again mention that, for the sum of twenty shillings, respectable young women from the Highlands will come a distance of 500 miles, by applying to Captain Macarthur in Inverness.—*Inverness Courier.*

Two officials connected with the Coleraine workhouse have been dismissed, by order of the Poor-law Commissioners, for "marching the workhouse boys, on the 12th July, with Orange flags."

Mr. Shepherd, of Brompton, has patented a machine for the production of gas from water by means of electro-magnetism. By it, gas of good illuminating power can be made for a mere trifle per 1000 feet. It is proposed to drive locomotives and marine engines by it instead of steam; a trial is about to be made on two railway.

At a meeting held on Monday in Shrewsbury, a resolution was agreed to, declaring it to be not desirable that the Public Health Act should be brought into operation in that town; yet that measures should be taken to improve the sewerage of the town.

One million six hundred thousand pounds have already been voted to defray the cost of building the New Houses of Parliament

A man in the service of Mr. Walter, at Bearwood, has been come to death by a ball, into which he had imprudently ventured for eggs.

Dr. Ick, an excellent meteorologist, has, after the closest observation of the moon and weather, arrived at the conclusion that there is not the slightest connection between them.

A sample package of Natal tobacco has been received in Southampton from the Cape. This is the first specimen of the colony that has been sought to the mother country for the purpose of ascertaining its value in the home market.

A "balance-sheet of the trustees of the 'Amazon' fund" is advertised, by which it appears that the subscriptions were £18 283, and that there is now a balance in hand of £6411.

THE ANTWERP REGATTA GOLD CUP.

This splendid Cup was presented by his Majesty the King of the Belgians, for the Antwerp Regatta of Wednesday last, open to yachts of all nations.

THE ANTWERP REGATTA GOLD CUP.

The value of the prize is 3000f., or £120. The Cup is inscribed: on one side—"Leopold I. 6th Sept., 1853. Course de Yachts;" and on the other, "Yacht Club Royal Belge."

The Fox the Farmers' best Friend!—In Yorkshire there are ten packs of fox-hounds, one pack of stag-hounds, and five or six of harriers, equal in all to 12 or 14 packs of fox-hounds. Thirteen packs of fox-hounds of 50 couple each—i.e., 1300 hounds, consume annually 200 tons of oatmeal, at a cost of £2800, besides the carcasses of about 2000 dead horses, worth nothing if no hounds were kept. There are at least 1020 hunting men in Yorkshire, keeping upon an average four horses each; 4000 horses will cost them £200,000, at £50 each; and their keep at £50 per annum each makes £200,000 more; 400 horses employ 2000 men as grooms (generally the offspring of the agricultural population), and consume annually 40,000 qrs. of oats, 2000 qrs. of beans, and 8000 tons of hay and grass. Every tradesman also is benefited by hunting tailors, shoemakers, blacksmiths, saddlers, druggists, surgeons, veterinary surgeons, &c. If fox-hunting were given up, where would the farmer find a market for the above produce, or for a well-bred horse of four or five years old? Foxes are the farmers' best friends, and they ought to use every exertion to preserve them, and prevent them being stolen, to be sent where masters of hounds are unsportsmanlike enough to purchase them, no matter from whence they come.—*Doncaster Chronicle.*

Railways.—In consequence of the organization of fast trains on all the railways, the distances between the capitals of Europe are reduced as follows: From Paris to Berlin (viâ Brussels and Cologne), 43 hours; from London to Berlin, 42 hours; from Berlin to Vienna, 31 hours; from Berlin to St. Petersburg, 137 hours; from London to Munich, 62 hours; from London to Vienna (viâ Paris, Strasburg, Munich, and Salzburg), 118 hours. By means of the steamers on the Danube, the distance from Vienna to Constantinople is now effected in from six to eight days. —*Galignani's Messenger.*

AMERICAN ALOE IN BLOOM.

This magnificent Aloe has just come into blossom at Cloyne House, Cloyne, the seat of John Wilkinson, Esq., of the county of Cork. It grows in the open air, and has attained the height of 25 feet. It was formerly kept in the green-house; but, occupying too much space, it was removed outside. For many years it made no apparent growth; but about the commencement of July last, it suddenly shot up from the leaves to its present extraordinary altitude, exhibiting sixteen or seventeen tufts of blossom of a pale yellow colour. The plant has been visited by numbers of the respectable inhabitants and tourists, who are at the present season enjoying the unrivalled beauty of Cork river and harbour. The proceeds of the exhibition, we understand, are to be appropriated towards raising a fund for establishing an Industrial School in the town of Cloyne.

Mr. Brinkley, the celebrated astronomer, and last Bishop of Cloyne, used to take great delight in the garden in which the Aloe grows: it is attached to the See house; and the elegance of its arrangements, under his superintendence, never failed to delight his numerous and distinguished visitors.

AMERICAN ALOE IN BLOOM, AT CLOYNE HOUSE.

WARWICK RACE PLATE.

This elegant historical group in silver, designed and modeled by E. Jeannest, and manufactured by Elkington, Mason, and Co., of London and Birmingham, has been contested for in the past week. The

THE WARWICK RACE PLATE.

design represents Queen Henrietta Maria meeting Prince Rupert, when on her way to the plain of Kineton, under Edgehill, to join King Charles I. (A.D. 1643). The group is mounted on a pedestal of Cornish marble, ornamented with panels in oxidised silver, bearing the arms of England; also the arms of Prince Rupert, and medallion portraits of King Charles I. and Queen Henrietta Maria. The height of the group is 1 foot 6½ inches; with pedestal, 2 feet 5½ inches.

THE LORD WARDEN HOTEL, DOVER.

This handsome and extensive building has been erected for the South-Eastern Railway Company, by whom it was opened with a grand public dinner on Wednesday. The original design was made by the late Samuel Beazley, and the principal part of the building was erected under his direction. Upon his death, the completion of the structure devolved on Mr. W. Tress, architect, Fenabury-square. His portion of the works were not unimportant, though principally in the interior arrangements; many things having been done to get every part of the Hotel into proper working order; and for this purpose persons experienced in the management of large hotels have been consulted, and their suggestions acted on.

The Lord Warden Hotel occupies a commanding position, close to the railway terminus, at Dover, and at one corner of the harbour, adjoining the new Harbour of Refuge, which forms a fine esplanade for the enjoyment of the sea air. The exterior elevations are in the Doric order of architecture. The prospect is magnificent; including Dover Castle and heights; the town of Dover and harbour; and the sea views are scarcely to be surpassed at any place in England.

The interior plan comprises a spacious *salle-à-manger*, and a noble coffeeroom fitted up *en suite*, and lighted by three superb chandeliers.

"THE LORD WARDEN" HOTEL, DOVER, OPENED WITH A GRAND PUBLIC DINNER, ON WEDNESDAY.

The entire number of rooms is one hundred and eleven. The various floors differ in the fittings and decorations, but each is en suite. Ample provision is made for salt-water and fresh-water baths, hot and cold.

The grand entrance faces the harbour, and a carriage can be driven beneath the portico, so that visitors may alight immediately in the hall.

The Hotel has been furnished for the South-Eastern Railway Company; under whose management, however, the business will only be carried on until a tenant can be found by the Company for the premises.

At the dinner to commemorate the opening of the Hotel, on Wednesday, there were about 150 guests connected with the South-Eastern Railway and port of Dover. Mr. James Macgregor, M.P., the Chairman of the Company, presided. The usual loyal toasts were proposed and drunk with much applause; and the memory of the illustrious Lord Warden, the Duke of Wellington, under whose immediate auspices the Hotel was built, was honoured in a manner which did credit to the feelings of the chairman and the company. Mr. Macgregor mentioned the interest his Grace took in the design, and how beneficial he thought it must prove to the town of Dover; and, dwelling at some length on this sentiment, he called on the inhabitants to second the effort now made to establish one of the most convenient and sumptuous (at the same time moderate in its price) places of entertainment in the empire. Mr. Rice, the member for Dover, and other gentlemen of mark were called up by suitable observations from the chair, and the whole affair went off in the most social and convivial style. The dinner could not be surpassed, and the show of fine fruits was of a very superior order. If the Hotel, indeed, can supply such accommodation and such wines, the people of Dover will have cause to rejoice in an attraction for visitors of every class by sea and land, and also for the resort of company to enjoy sea-bathing and the delightful walks round Shakspeare's immortal Cliff. The cove-room is a magnificent structure, almost laved by the sea. A number of the party stayed over the night, and returned to town with the directors in a quick early train. In short, nothing could be more auspicious than this "opening day."

PROVINCIAL INTELLIGENCE.

MR. DISRAELI AND HIS CONSTITUENTS.—Mr. Disraeli has accepted an invitation addressed to him by the Royal Buckinghamshire Agricultural Association, to meet a portion of his constituents, the freeholders of Buckinghamshire, on Wednesday, the 14th inst. The proceedings will be preceded by a dinner at the George Inn, Aylesbury. Mr. Disraeli will be accompanied by Mr. Caledon G. Du Pre, one of his colleagues in the representation of the county.

DINNER TO SIR JOSEPH THACKWELL, AT GLOUCESTER.—A public dinner was given at the Shire Hall, on Tuesday evening, to General Sir Joseph Thackwell, G.C.B., in testimony of the meritorious services which he has rendered. The gallant General is intimately connected with this city, and prior to his leaving this country for the Indian campaign, he resided in Gloucester for several years. Hence on his return from India the inhabitants invited him to a public dinner, and, having accepted the invitation, the event came off on Tuesday. The Mayor of Gloucester, W. Washbourn, Esq., presided; and among the company present were Earl Fitzhardinge, Sir Martin Crawley Dorsey, Bart.; W. P. Price, Esq., M.P.; S. Baker, Esq.; J. C. Thackwell, Esq.; Rev. Dr. Closson, R. B. Purnell, Esq., county chairman, &c. Lord Ellenborough would have been present, but was attending the funeral of the late Sir Charles Napier. The Mayor proposed Sir Joseph Thackwell's health, who responded in an interesting address. Several other toasts suitable to the occasion having been given and duly responded to, the company separated.—(A characteristic portrait of Sir Joseph Thackwell appeared in the ILLUSTRATED LONDON NEWS, No. 355).

CHATHAM ELECTION.—The reported statement that Captain Leicester Vernon had resigned his seat for Chatham is not strictly accurate. The gallant officer certainly declined to defend his seat, but his election is defended by the electors who returned him, who have also entered a counter-petition against the return of Admiral Sir James Stirling.

LIVERPOOL AND MANCHESTER AGRICULTURAL SOCIETY.—The annual show of this society was held on Wednesday, at Warrington, in a large field adjoining the London and North-Western and Grand Junction Railway station. A variety of circumstances contributed to render this show the most successful that has ever taken place since the union of the two societies; and it may truly be said that the exhibition of live stock of every description, whether as regards numbers or quality, was equal, if not superior, to anything which has ever before taken place in the north of England.

MALDON BRIBERY COMMISSION.—The Commissioners, upon a review of the whole evidence, have come to these conclusions:—"That corrupt practices in various forms have long prevailed at elections for the borough; and that open and direct bribery was practised at the last; and that the disposition to a greater extent than at any which preceded it. We also find that a large portion of the electors, consisting chiefly of the poorer class of freemen, have, in giving their votes, been influenced, not by the political or personal recommendations of the candidates, but by considerations pecuniary either to themselves, and that such influences have been habitually employed to corrupt them: but we cannot forbear adding as our opinion, that the blame of such corruption rests not so much with them as with their superiors, by whom the temptation to it was held out."

COST OF LAND IN LIVERPOOL AND MANCHESTER.—The trustees of the Liverpool Docks having occasion to purchase 38,858 square yards of land for increased accommodation in the docks, had to pay for it £1 2s. 11½d. per square yard, or a total of £53,113. One thousand square yards required for the erection of a warehouse in Manchester last week fetched £10 per square yard, or a total of £10,000.

SALE OF THE ESTATE OF ISLAY.—This large and valuable estate, the largest and most valuable, perhaps, ever sold in this country, was exposed on Wednesday in George-street, at the upset price of £440,000, and, after competition between Mr. Morrison, of the great firm of Morrison, Dillon, and Co., bankers, and Mr. J. Baird, of Gartsherrie, M.P for the Falkirk burghs, was knocked down to the former at £451,000. The estate has been in the market for upwards of five years, and has been repeatedly exposed to sale, both as a whole, and in three divisions, at successively reduced upset prices, the last, in 1852, being £440,000.

DOWLAIS IRON-WORKS.—We are happy to state that the colliers of this place, after being out six weeks on strike, resumed their work on Wednesday week. This result was brought about chiefly through the interference of the shopkeepers, whose interests were materially affected by the strike. A donation was offered to every collier who should return to his employment within a given time, and the expedient had the desired effect.

MAILS BETWEEN ENGLAND AND IRELAND.—Great changes are about being made by the Post-Office authorities, in reference to the mails between England and Ireland. It is recommended that two mails be despatched daily from London to Ireland—one in the morning, the other in the evening; instead of despatching the two mails one at 5 p.m. and the second at 9 p.m.

RAILWAY ACCIDENTS.—The afternoon train from Holyhead, on Tuesday, arrived near Chester as a short luggage train was crossing both lines of rails to reach a shunting. The latter was overturned. Happily, however, there was no harm done to life or limb, all the damage being confined to the foremost carriages of the passenger train.——On Monday the Scotch express from Edinburgh went into a siding (the points being wrong), instead of continuing on the main line, when past the Euxton station. The driver felt the jerk, instantly shut off the steam, blew the whistle for the guards to apply their breaks, and then leaped off the engine, followed by the fireman. In another moment the shock took place. The front part of the engine was demolished, but, marvellous to state, the carriages sustained little or no injury, the passengers being found almost unscathed, although, of course, in a state of great confusion. Carriages on the siding were shivered, two wheels belonging to one of them being discovered in the smoke-box. Baxter, the driver, was found lying by the side of the line, in a state of insensibility, having several cuts about his head and back. The fireman escaped with little injury. It appears that the points were in so dirty a state as to prevent their closing of themselves, when the empty carriages were turned. Her Majesty had passed only a short time before!——Pardington and Wood, the driver and stoker of the express-train on the Great Northern, were again examined at Clerkenwell, on Wednesday. Some of the passengers were called, but nothing important or new was elicited; and, by general agreement, the inquiry was formally postponed till Wednesday next, but then to be further prorogued till the 20th. The bail for the prisoners to be enlarged till that date.

VESSELS FROM THE NORTH OF EUROPE.—A fleet of upwards of 300 vessels has arrived in the Thames during Monday and Tuesday from the northern ports of Europe, putting the docks in the greatest bustle and activity, and giving employment to several thousand labourers. This immense arrival is owing to the recent shifting of the wind, which brought them up from the North Sea, where they have been detained by the south-westerly gales. With few exceptions, they are all from St. Petersburg, Archangel, Riga, Cronstadt, Stettin, Dantzic, Memel, Stockholm, Hamburg, Rotterdam, Harlingen, &c. The passing of the fleet up the river had an imposing effect, and it was with difficulty that the Custom-house authorities at Gravesend could meet the sudden call for officers to take charge of each ship, so rapidly did they come up. Numbers of them were laden with grain.

MUSIC.

BRADFORD MUSICAL FESTIVAL.

(From our own Correspondent.)

The remembrance of this magnificent meeting will not easily be effaced. Rarely has a musical gathering been attended with such gratifying results. The opening of a new Hall—which, whether its capacity or bold large masses, its acoustical adaptation for musical purposes, its imposing exterior, its vast and convenient interior, be regarded—must be classed as the most stately and sumptuous edifice of its kind in this or any other country. Minor objections in the details sink into utter insignificance by the side of the naked truth, that for size it is unequalled in England, and for sound unsurpassed in Europe. We speak with our own knowledge of the chief edifices in the leading Continental capitals, and we repeat emphatically, that we never heard the inner and more delicate part of the score stand out with such perfectness and clearness. From every side of St. George's Hall, did we test its capabilities—from the extreme seat of the most elevated gallery, to the very verge of Costa's colossal orchestra. True, there was a question of degree, as to superiority of hearing: it is not to be supposed that where the elevation was lowest, the sound would be strongest; but, taking the entire Hall into account, it is a wonderful erection—one that will confer immortal honour on the public-spirited men who have carried the undertaking through with such zeal and energy. In respect to decorative art, it may be possibly felt by some persons that the severity of the style adopted in the ceiling, might have been harmoniously followed in the façades of the galleries; others will naturally object to the obtrusive private boxes, breaking the graceful curve of the orchestra; and those who sat in the area, will groan at divers draughts which penetrated therein, the system of ventilation by the perforated ceiling having been scarcely applied as yet. But "Rome was not built in a day," and a perfect Music Hall to exclude excessive heat and cold, to ensure the best hearing, to hold the largest number of people, to present every facility for ingress and egress, to have the requisite anterooms and retiring rooms—cannot be improved. The defects are few; the beauties are many, the conveniences are great; and Bradford spirit, with Bradford experience, will remedy existing evils. A town which builds palaces of warehouses, which doubles its population every ten years, which is becoming the great northern mart of manufactures, will not be cramped by trifles.

The receipts have exceeded £6000, and they will cover the outlay, leaving a balance to the building fund. This was a large taking for the very first festival ever held in Bradford. It speaks well for the amateurs of the West Riding; they must have music in their souls as well as speculation in their minds. And how natural was the exhibition of their feelings! How they welcomed their favourite Mrs. Sunderland: how they patronised their local violinist, young Corrodus—the promising pupil of Molique. How indulgent they were to Miss Freeman and Miss Winn! Your London amateur would have small consideration for a vocalist or instrumentalist, merely because he or she was born within sound of Bow bells.

If we take a retrospective glance at the week's doings amidst the torrent of sound during six morning and evening performances—amidst the hurry and confusion of rushing from a remote corner of the town, where the penalty of visitors drove all new comers as a refuge for the destitute—amidst the legal discussions with flymen as to the payment of six shillings for three-quarters of a mile (quite eclipsing the extortionate glories of London cabmen)—amidst the incessant avalanches of breakfasts, luncheons, dinners, and suppers which overwhelmed the stranger, on the supposition that music must keep the stomach at a state of famine—and endeavour to draw general conclusions as to the opening of St. George's Hall, we should begin with the Hall as a theme, next take the Chorus as a subject, then the Band, then the Principal Performers, and finally begin to discuss the effect produced by the principals. After all, it is the Chorus which, artistically speaking, is the remarkable fact of the Festival, next to the magical rising of the building.

It is impossible, within the limits of your illustrated columns, to follow the choral triumphs step by step. We should have to go through the divine fervour of Mendelssohn's chorales in "Paul," to follow the sublimities of Handel in the "Messiah," to indicate the overpowering sensations produced in Haydn's "Creation," and to pick out not only one by one the stupendous pieces in the choral epic, the "Israel in Egypt," to do anything like justice to the Yorkshire choir. But it was not a little curious to watch the sensitiveness of the audience at the very treat that had been afforded to them. Applause was prohibited at the morning performances, but on the Thursday night, on the occasion of Festa's madrigal, "Down in the Flowery Vale," it was at once proved what a deep impression had been made by the chorale-like. After chorus that must have adequately tested the solidity of the Hall, there ensued such a double encore as has been rarely heard. The most excited of Italian audiences, at the genius of a Pasta or Malibran, never displayed a greater amount of *furore*. On Friday night upwards of 2000 persons were assembled in the Hall; and their greeting of Costa at the end of the final concert, and then of their Mayor, was equally as marked and rapturous.

The execution of the choral symphonies under Costa's direction, is too well known to require special analysis. As usual, he gave the most intellectual and poetical reading to the score of the masters whose names figured in the programmes. A conductor of his genius will naturally not accept the special readings of critics and professors—no two of whom can be found to agree, as to what ought to be pianissimo, or to what ought to be slow or fast. Take, as an instance, the Handelian chorus, "Unto us a child is born." One commentator will declare that it is jubilant; organ, it ought to be held forth fortissimo throughout; another asserts that Handel makes no mark in the score to indicate the times of former and present execution of works have changed. What is positive is, that Costa's reading has a sublime effect, and if that result be attained in such a solemn subject, and in such sublime strains, then is justice done both to the religious and musical character of the gigantic chorus. The novelties in the schemes were comparative failures. The "Credo" of Mendelssohn is far removed from the sublimity of that of Beethoven. Indeed, but for the restless undercurrent of orchestration in the former work, the three movements might have been set down to the account of Bach. Well executed as was the "Credo," the effect was a nullity. The Baptismal Anthem of Costa also produced no marked emotion. Nicely voiced, nicely scored, and nicely adapted to the simplicity of the text, the anthem was wanting in breadth and grandeur. No invest it with the individuality calculated to move the masses. Mdme. Clara Novello and Mrs. Lockey were assigned the *soli*, and sung them charmingly: indeed, the accompanied duet was perfect.

The solo-singing at the Festival was chequered. The weather was so unfavourable the two last days, that the vocalists must have been affected, for the majority by no means sang their best. There were, however, some splendid specimens of finished vocalisation and style amongst them must be cited that of Madame Clara Novello, in "Paul;" and, above all, in Mozart's air, "Deh vieni non tardor." from the "Nozze;" Miss Williams (Mrs. Lockey) also well sustained the honours she has gained as a contralto. With more animation in her style, and a little more attention to her declamation, this charming singer would leave nothing to be desired. But it is from bad reading that our singers fail the most, and the effect which their naturally fine voices ought to produce in oratorios. Mr. Sims Reeves, on several occasions, took the hall by storm by his powerful organ. Gardoni was not in voice, and made little or no impression; on the concluding evening he was absent from illness. Formes's power D'estramdon. Carrington in the siding were shivered, two wheels belonging to one of them being discovered in the smoke-box. Baxter, the driver, was found lying by the side of the line, in a state of insensibility, having several cuts about his head and back. The fireman escaped with little injury. It appears that the points were in so dirty a state as to prevent their closing of themselves, when the empty carriages were turned. Her Majesty had passed only a short time before!——Pardington and Wood, the driver and stoker of the express-train on the Great Northern, were again examined at Clerkenwell, on Wednesday. Some of the passengers were called, but nothing important or new was elicited; and, by general agreement, the inquiry was formally postponed till Wednesday next, but then to be further prorogued till the 20th. The bail for the prisoners to be enlarged till that date.

Vessels from the North of Europe.—A fleet of upwards of 300 vessels has arrived in the Thames during Monday and Tuesday from the northern ports of Europe, putting the docks in the greatest bustle and activity, and giving employment to several thousand labourers. This immense arrival is owing to the recent shifting of the wind, which brought them up from the North Sea, where they have been detained by the south-westerly gales. With few exceptions, they are all from St. Petersburg, Archangel, Riga, Cronstadt, Stettin, Dantzic, Memel, Stockholm, Hamburg, Rotterdam, Harlingen, &c. The passing of the fleet up the river had an imposing effect, and it was with difficulty that the Custom-house authorities at Gravesend could meet the sudden call for officers to take charge of each ship, so rapidly did they come up. Numbers of them were laden with grain.

local members, &c., and to other guests of all degrees; and Mr. Hallstone, the steward of the orchestra, in his curious and antique mansion, Horton Hall, also entertained large parties on the various days. The leading manufacturers not only kept open house, but generously afforded their operatives the means of attending the performances. The blind were permitted to leave their asylums and admitted into the hall, the absence of one sense being keenly supplied by the double action of another: it was touching to the last degree to see the tears rolling down their cheeks as they listened with acute attention to the sublimities of devotional music.

He must be a stranger who witnessed the material magnitude of Bradford was astounded by the wondrous extension of the factories over so many miles of ground, how much more must he have marvelled at the indomitable spirit of the townsmen who, amidst such trading influences, have raised a building in which the most refined art may be cultivated. There has been a glorious week of Inauguration with music; but there will be many more noble developments of the true and beautiful within the walls of St. George's Hall. The fine arts generally will find a place therein, and taste and refinement will be the natural result. The Festival has been the pioneer, for the moral improvement of the population, to keep pace with its astonishing physical progress.

THE THEATRES.

DRURY-LANE.

This theatre has opened for a new dramatic season, under improved auspices. Mr. Gustavus Brooke is in the ascendant for twenty-four nights. He performed *Othello* on Monday to a crowded house, by which he was rapturously received. This actor has perfectly recovered the use of his vocal organ, which, previously to his departure for America, certainly appeared to be in a hopeless condition. To a performer of Mr. Brooke's calibre and style of acting, this was well nigh a fatal drawback; for, upon vocal feats of elocutionary force and finesse, his stage success mainly depended. Dignified in action, but deficient in facial expression, the power of naturally announcing poetic dialogue, and of throwing out with startling energy particular passages, was of the utmost importance. Mr. Brooke's *Othello* is a piece of acting possessed of many beauties; the pathetic delivery of the great speeches being remarkable for the quality of tone and tenderness of the expression. It was very well chosen for the opening night, it being generally appreciated as his best character. It certainly possesses all the characteristics of his style; and in none is he so equally excellent. His other characters, such as *Shylock*, *Richard III.*, and *Sir Giles Overreach* are charged with physical exuberance, which not seldom degenerates into violence and extravagant excess. Nothing of this sort attached, on Monday, to his *Othello*, which deservedly extorted from the house the most enthusiastic applause Mr. Brooke was well supported by Mr. Davenport, who, in *Iago*, acted admirably. Mr. G. Bennett, also, who has, it seems, left Sadler's Wells, performed *Brabantio* with telling force. There was also a good *Roderigo* in a Mr. Lewis; and a respectable *Emilia* in a lady of the same name. Miss Anderton was the *Desdemona*; and, though too demonstrative for the peculiarly feminine character of Shakspeare's heroine, acted with stage tact and effect. The tragedy was succeeded by an extravaganza, from the pen of Mr. Kingdom, and entitled "The Fountain of Beauty." As a composition it is worthless; but Miss Featherstone had in it some good songs, which she sang well.

OLYMPIC.

On Tuesday, the "Merchant of Venice" was revived; on which occasion the part of *Shylock* was attempted by Mr. Kirkland, for whose benefit the performance was intended, and who supported the character very respectably indeed. He was much applauded by a numerous audience.

HENRY RUSSELL AT THE LYCEUM.—Mr. Russell has been giving, during the week, a farewell series of his American entertainment at the Lyceum Theatre with great success. The house has been crowded to overflowing night after night. We are pleased to see that, notwithstanding the multiplicity of the candidates for public favour, Mr. Russell retains his popularity unimpaired; and this no one can begrudge him, for the tendency of all his entertainments has been not only unexceptionable but laudable.

NATIONAL SPORTS.

WARWICK RACES.—TUESDAY.

Guy Prudoe Stakes.—Nightcap walked over.

Racing Stakes. Economy, 1. Eccentricity, 2.

Leamington Stakes.—Little Harry, 1. King of Trumps, 2.

Castle Park Stakes.—Domino, 1. Rosalind, 2.

Queen's Plate.—Aristo, 1. Young England, 2.

Foal Stakes.—Clifton, 1. North Pole, 2.

Corinthian Stakes.—The Hero, 1. Wardleby, 2.

The ground in excellent condition, weather most propitious, and attendance of company immense. The scene on the course was of the largest and liveliest character. The event of the day during the race for the Leamington Stakes was remarkably interesting.

WEDNESDAY.

Avon Stakes.—Sylphine walked over.

Selling Stakes.—Ch. f. by Harkaway, 1. Fermentation, 2.

Great Warwickshire Stakes.—Chilton, 1. Sylphine, 2.

Warwick Cup.—Goorkah, 1. Adine, 2.

Welter Cup.—Milcote, 1. Farmer's Boy, 2.

County Stakes.—Canmore, 1. Peggy, 2.

Borough Handicap.—Jack Frost, 1. Lurley, 2.

Town Plate.—Calot, 1. Elisa, 2.

Scurry Handicap.—Vaultress, 1. Mayday, 2.

The attendance of company was nearly, if not equal, to that on the previous day. The weather was superb, and the sport excellent. Altogether, Leamington and Warwick may congratulate themselves on a most brilliant reunion

30 to 1 — Lerrish

SOUTH LONDON HORTICULTURAL SOCIETY.—The last grand dahlia and miscellaneous flower-show of this society for the present season was held on Monday at the Surrey Zoological Gardens. A very numerous and many assembled to view the various collections sent, which, with hardly an exception, were unusually good. Indeed, when the period of the season is taken into consideration, the show may be considered of an unprecedented character. The exhibition of dahlias, however, required no allowance to be made for them upon this or any other account. Of hollyhocks there were a few solitary specimens, one of which, however, was an exceedingly fine one; and some of the bouquets, also, were magnificent in their way. There was a good display of fruit, flowers, and greenhouse plants.

THE GREAT NAVAL REVIEW AT SPITHEAD.—Mr. J. W. Carmichael, the celebrated marine painter (one of the artists engaged by us to depict the Grand Naval Review at Spithead), has been honoured by her Majesty's becoming the purchaser of six large drawings of the principal movements in that great national display.

EMIGRATION FOR YOUNG JEWESSES.—The Jewish Ladies' Emigration Committee have already raised a sum of nearly £800 to defray the cost of sending out Jewish young women to Australia, and purpose raising sufficient funds to forward a second visa thy, instead of twenty, as originally contemplated, who will be sent out under the charge of Mrs. Chisholm, in October or November next.

DEATH OF MR. BLEWITT, THE COMPOSER.—We regret to announce the death of Blewitt, the celebrated English composer, who expired at his house in Charlton-street, Islington, last Sunday, leaving a widow and two daughters entirely destitute. A notice of the career of this popular musician will appear in our next Number.

BEES.—At the meeting of the Entomological Society, on Monday, Mr. Westwood recommended the process of placing an empty hive over an inverted stock of bees, and then drumming the sides of the full hive, until nearly all the bees had left and ascended into the empty hive. The few bees left were generally so astonished, that they offered no resistance to any operations of the apiarian. The bees might be restored to their natural home by the converse of the process. Mr. Westwood had tried the plan himself, and had lost scarcely a bee.

THE BANK OF IRELAND, following the movement of the Bank of England, has raised its minimum rate of discount to four per cent.

The Festival was brought to a close on Friday evening, when the Messiah was performed. Mr. Sims Reeves, who had been suffering from indisposition, was unable to sing, and Mr. Lockey undertook the tenor music. Mr. Lockey's singing was very good, but he was not in his best voice. Mr. Weiss was in excellent voice, and sang the music allotted to him with great effect. Mdme. Clara Novello was in her best style, and sang the music allotted to her in a manner which left nothing to be desired. Miss Williams was also very successful. The choruses were given with great power and precision, and the band was in every way worthy of the occasion. Mr. Costa conducted with his usual ability. The audience was very large, and the performance was received with great enthusiasm.

The receipts have exceeded £6000, and they will cover the outlay, leaving a balance to the building fund. This was a large taking for the very first festival ever held in Bradford. It speaks well for the amateurs of the West Riding; they must have music in their souls as well as speculation in their minds. And how natural was the exhibition of their feelings! How they welcomed their favourite Mrs. Sunderland: how they patronised their local violinist, young Corrodus—the promising pupil of Molique. How indulgent they were to Miss Freeman and Miss Winn! Your London amateur would have small consideration for a vocalist or instrumentalist, merely because he or she was born within sound of Bow bells.

If we take a retrospective glance at the week's doings amidst the torrent of sound during six morning and evening performances—amidst the hurry and confusion of rushing from a remote corner of the town, where the penalty of visitors drove all new comers as a refuge for the destitute—amidst the legal discussions with flymen as to the payment of six shillings for three-quarters of a mile (quite eclipsing the extortionate glories of London cabmen)—amidst the incessant avalanches of breakfasts, luncheons, dinners, and suppers which overwhelmed the stranger, on the supposition that music must keep the stomach at a state of famine—and endeavour to draw general conclusions as to the opening of St. George's Hall, we should begin with the Hall as a theme, next take the Chorus as a subject, then the Band, then the Principal Performers, and finally begin to discuss the effect produced by the principals. After all, it is the Chorus which, artistically speaking, is the remarkable fact of the Festival, next to the magical rising of the building.

It is impossible, within the limits of your illustrated columns, to follow the choral triumphs step by step. We should have to go through the divine fervour of Mendelssohn's chorales in "Paul," to follow the sublimities of Handel in the "Messiah," to indicate the overpowering sensations produced in Haydn's "Creation," and to pick out not only one by one the stupendous pieces in the choral epic, the "Israel in Egypt," to do anything like justice to the Yorkshire choir. But it was not a little curious to watch the sensitiveness of the audience at the very treat that had been afforded to them. Applause was prohibited at the morning performances, but on the Thursday night, on the occasion of Festa's madrigal, "Down in the Flowery Vale," it was at once proved what a deep impression had been made by the chorale-like. After chorus that must have adequately tested the solidity of the Hall, there ensued such a double encore as has been rarely heard. The most excited of Italian audiences, at the genius of a Pasta or Malibran, never displayed a greater amount of *furore*. On Friday night upwards of 2000 persons were assembled in the Hall; and their greeting of Costa at the end of the final concert, and then of their Mayor, was equally as marked and rapturous.

The execution of the choral symphonies under Costa's direction, is too well known to require special analysis. As usual, he gave the most intellectual and poetical reading to the score of the masters whose names figured in the programmes. A conductor of his genius will naturally not accept the special readings of critics and professors—no two of whom can be found to agree, as to what ought to be pianissimo, or to what ought to be slow or fast. Take, as an instance, the Handelian chorus, "Unto us a child is born." One commentator will declare that it is jubilant; organ, it ought to be held forth fortissimo throughout; another asserts that Handel makes no mark in the score to indicate the times of former and present execution of works have changed. What is positive is, that Costa's reading has a sublime effect, and if that result be attained in such a solemn subject, and in such sublime strains, then is justice done both to the religious and musical character of the gigantic chorus. The novelties in the schemes were comparative failures. The "Credo" of Mendelssohn is far removed from the sublimity of that of Beethoven. Indeed, but for the restless undercurrent of orchestration in the former work, the three movements might have been set down to the account of Bach. Well executed as was the "Credo," the effect was a nullity. The Baptismal Anthem of Costa also produced no marked emotion. Nicely voiced, nicely scored, and nicely adapted to the simplicity of the text, the anthem was wanting in breadth and grandeur. No invest it with the individuality calculated to move the masses. Mdme. Clara Novello and Mrs. Lockey were assigned the *soli*, and sung them charmingly: indeed, the accompanied duet was perfect.

The solo-singing at the Festival was chequered. The weather was so unfavourable the two last days, that the vocalists must have been affected, for the majority by no means sang their best. There were, however, some splendid specimens of finished vocalisation and style amongst them must be cited that of Madame Clara Novello, in "Paul;" and, above all, in Mozart's air, "Deh vieni non tardor." from the "Nozze;" Miss Williams (Mrs. Lockey) also well sustained the honours she has gained as a contralto. With more animation in her style, and a little more attention to her declamation, this charming singer would leave nothing to be desired. But it is from bad reading that our singers fail the most, and the effect which their naturally fine voices ought to produce in oratorios. Mr. Sims Reeves, on several occasions, took the hall by storm by his powerful organ. Gardoni was not in voice, and made little or no impression; on the concluding evening he was absent from illness. Formes's power D'estramdon. Carrington

CALENDAR FOR THE WEEK.

SUNDAY, Sept. 11.—16th Sunday after Trinity. Lord Thurlow died, 1836.
MONDAY, 12.—Battle of Aberdeen, 1604. Siege of Vienna, 1683.
TUESDAY, 13.—C. J. Fox died, 1806. General Wolfe killed, 1759.
WEDNESDAY, 14. Duke of Wellington died, 1852. Moscow burnt, 1812.
THURSDAY, 15.—Huskisson killed by a railway carriage, 1830.
FRIDAY, 16.—Buck-hunting ends. George I. landed in England, 1714.
SATURDAY, 17.—Siege of Gibraltar ended, 1782.

TIMES OF HIGH WATER AT LONDON-BRIDGE,

FOR THE WEEK ENDING SEPTEMBER 17, 1853.

Sunday.	Monday	Tuesday.	Wednesday	Thursday	Friday.	Saturday.

THE RUSSO-TURKISH QUESTION,

AND THE CONDITION—MORAL, SOCIAL, AND POLITICAL—OF THE TURKS IN EUROPE.

IN PREPARATION,

A GRAND DOUBLE NUMBER

OF THE

ILLUSTRATED LONDON NEWS.

PROFUSELY ILLUSTRATED

With SPLENDID ENGRAVINGS of SCENES and INCIDENTS in EUROPEAN TURKEY. From Sketches made expressly for the purpose by the Artists of the ILLUSTRATED LONDON NEWS. Among other subjects, will appear:—

A Large Panoramic View of Constantinople from the Tower of Galata. From a Sketch by S. Read, drawn on the Wood by Birket Foster.
An Original Portrait of the Sultan on Horseback, proceeding to the Festival of the Bairam.
Interior of the Greek Church at Balukli.
The Russian Ambassador.
The Combined British and French Fleets, sketched in Beska Bay, August, 1853.
The Sultan's New Palace.
The Patriarch of the Greek Church.
Group of Redifs—Turkish Militia.
The Castle of the Seven Towers.
The "Sweet Waters of Europe."
View of Ichtiman.
The Mosque of St. Sophia.
The Great Cemetery of Scutari.
The Golden Horn from Eyoub.
The Tower of Galata.
The Arsenal.
The Turkish Fleet in the Bosphorus.
The Egyptian Camp on the Bosphorus.
Sketches of Turkish Costume and Character in the Streets of Constantinople.
The Obelisk in the Hippodrome at Constantinople.
Turkish Police-station, in the Balkan.
Hotel of the British Embassy at Therapia.
Gateway at the Palace of Dolmabaghasche.
Encampment on Shore at Beska Bay.
"Miraculous" Spring in the Greek Church of Balukli.
Palace of Dolmabaghasche.
Dancing Dervishes.
Adrianople.
Pass of Trajan's Gate in the Balkan.
Turkish Soldiers.
Turkish Woman at Fountain.
Jewish Woman.
Turkish Lady.
Cavan.
Armenian Lady.
Turkish Police.
Bazaar in Constantinople.
Street in Constantinople.
And various Panoramic and other Sketches in the Bosphorus, the Dardanelles, and the Black Sea.

The Literary portion will include letters from our Correspondent in Constantinople on a remand of Turkish history from the commencement of the decline of Ottoman power in Europe;—and a full and authentic statement of all the circumstances connected with the present dispute between the Czar and the Sultan, derived from official and other sources.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, SEPTEMBER 10, 1853.

THE rise in the Bank rate of discount to 4 per cent, which was announced last week, is fully justified by the state of the Money Market. Far from exhibiting any symptoms of abundance, it has every day given evidence that money is becoming scarcer, and consequently dearer. Consols have gradually declined without any political cause—a sure sign of the increasing value of money. Weeks ago it was said by those accustomed to consider this subject, that the rate of discount for the best mercantile bills would reach 5 per cent before Christmas, and there is now a great probability that the prediction will be realised. Many enterprises undertaken in the confidence that loans could be obtained at a low rate of interest to complete them, will be checked by the rise which has already taken place. A high rate of interest, therefore, while it is a sign of present profits and prosperity, is also a sign that they have reached nearly their topmost height. Thus, on account of the influence the rate of discount exercises over business, it becomes, for the public, a very important subject.

The present rate is much higher than usual. Except at the troubled commercial period of 1847, the rate of discount has not, of late years, been much above 3 per cent. Mr. Gladstone and some actuaries of Assurance Companies have assumed 3 per cent to be about the normal rate. All through the year 1851 the Bank minimum rate was 3 per cent, but that was above the market rate; and the Bank found, in consequence, comparatively little employment for its money. On the 2nd of January, 1852—four years after the discovery of gold in California, and after nearly £1,000,000 of gold had been received from Australia—the Bank lowered its minimum rate to 2½ per cent; and three months afterwards it lowered the rate to 2 per cent; and that rate continued till the 6th of January in the present year. It was then raised to 2½; on January 20th, it was raised to 3; on June 2nd, to 3½; and on September 1st, to 4 per cent. But, throughout the year 1852, the Bank rate of 2 per cent was so much above the market rate that money was gladly lent on discount at 1½; and money was so abundant that discount brokers would not take it on call to lend again. The yield of gold in California continues to increase—there is no reason to apprehend a diminished yield in Australia; and thus we have both a very low and a high rate of interest in conjunction with continual and large supplies of gold. It is obvious, therefore, that the supplies of gold, to which the public attention is chiefly confined, do not determine the rate of interest; but that it is regulated by the number of enterprises undertaken, the quantity of business to be done, and the amount of capital in existence. A low rate of interest begets many new enterprises. We see this from the experience of 1852, when there was a very low rate of interest; whereas, in 1853, there are many new enterprises, and an immense quantity of business to be done.

The Board of Trade tables for July, just published, inform us, for example, that, in the first seven months of 1853, the excess of imports over the imports in the seven months of 1852 has been very great. The excess of exports reaches £9,723,083—or an increase equal to nearly one-fourth of our total exports; and the tonnage entered inwards and outwards is 907,444 more in the seven months of 1853 than in the seven months of 1852. The same tables tell us that the value of the exports to Australia in 1852 was no less than £4,222,205; being greater than our exports to any other country except three, and about one-fifteenth of our whole export during the last year. This is a prodigiously large trade of itself, and we know—though we have no official accounts of the details—that the trade has greatly increased in the present year. The business of society has rapidly augmented, and there has not been and could not be any corresponding increase of capital. There is, consequently, a great demand for capital; merchants hope to make much by using it, and they are willing to give much for it. This, in few words, is the present state of the business of the country and of the Money Market, and it makes itself manifest in the books of the Bank.

Instead of allowing the Bank to borrow very largely by issuing its promises to pay, the public are returning its notes to the Bank and requiring gold; in other words, the circulation and the bullion in the Bank are decreasing. So its customers, the private bankers, the discount brokers, and others who usually leave large sums in its hands, have withdrawn them to a considerable extent; or, in other words, the private deposits, mentioned in the weekly Bank returns, have decreased. The Government deposits too, from the appropriation of the Government funds to other purposes, are very small; and while the Bank has now, therefore, much smaller sums to lend than usual, the demand for loans is greater than ever. The actual condition of trade, therefore, as it shows itself by a demand for more accommodation, while it has already exhausted nearly all the accommodation that could be afforded to it, is a sufficient and a just reason for inducing the Bank to raise the rate of discount. The present apprehension, indeed, is that the Bank rate is still below the market rate, and that it must, ere long, be again raised.

WE have referred in another part of our paper to the apprehensions of a deficient harvest in France, and to the measures taken by the French Government to provide an increased supply. The *Moniteur*—in consequence, no doubt, of the alarm created among the corn-merchants by the threatened competition of the State in buying dear and selling cheap—has been instructed to deny, in more emphatic terms than those employed by other newspapers supposed to be in the confidence of the Government, that it had any intention of becoming a purchaser of grain. The denial is in the following terms:—

It has been announced by a journal that the French Government was about to make purchases of corn. The supposition is absolutely false. The results of the harvest are not yet known, but the Government is convinced that the deficiency which it may show will be made up by the trade, acting alone and without impediments. Far from wishing to thwart its action and compete against it, *which would be senseless conduct*, the Government would only interfere to assist it by general measures, equal to all parties, and which assure the liberty and security of its operations, and render more easy the transport and distribution of corn in the interior. The different decrees which have successively abolished certain prohibitions, reduced entrance duties, and suppressed tonnage dues, were published in this spirit; and what is calculated to tranquillise the public mind is, that having been issued at an opportune moment, in order to allow foreign commerce to take advantage of the fine weather, their efficacy begins to be already felt in our ports. It is by such measures, tending to protect energetically and facilitate private industry, that the State will usefully exercise its action. The two decrees published to-day relative to internal navigation and the railways are a fresh proof of its constant solicitude in this respect.

Unfortunately, much mischief was done before this announcement of the *Moniteur* could reach the knowledge of those merchants whose capital was embarked in the corn trade. At the market of Nantes, the first rumour of state interference stopped all business, and led to the countermanding of extensive orders which had been sent to England and elsewhere for wheat and other grain. We are glad, however, to find that the Emperor has had the courage to retract, and to admit, as the *Moniteur* does on his behalf, that freedom of action is the best remedy in the case to be apprehended. The *Moniteur* does not deny the previous purchases of the Government, but limits the contradiction to the one point—that it will not make such purchases for the future. No denial is attempted of the other ill-judged proceeding, on which we have elsewhere animadverted—the arbitrary command issued to the bakers to sell their bread at a loss. It is likely enough that even this measure will be covertly abandoned, and allowed to sink into oblivion. We trust that France may escape the anticipated famine; but hope, at the same time, that the mere dread or possibility of it will prove sufficiently salutary to complete the conversion of the Emperor to sound commercial doctrine. He already confesses—virtually, if not in terms—that Free-trade, if it cannot prevent, can mitigate a famine. Admitting this, he will hereafter see that Protection—equally powerless to insure a nation against the effect of bad seasons—is certain to aggravate the popular sufferings in a period of scarcity.

THE BRITISH ASSOCIATION.

THE British Association for the Advancement of Science commenced its twenty-third meeting on Wednesday last, at Hull, under the presidency of William Hopkins, Esq., M.A., Vice-President of the Royal Society, and President of the Cambridge Philosophical Society—a profound mathematician, and gentleman of high standing in the scientific world, and who has been a conspicuous and valuable contributor to the Physical Transactions of the Association since its formation at York, in 1831. The Vice-Presidents are the Earl of Carlisle (unfortunately absent, travelling in the East), Lord Londesborough, who has become a large landed Yorkshire proprietor at Grimston-park, a short distance, in railway times, from the scene of action; Faraday, whose name is fame; Wheatstone, hardly less celebrated; Spence, the eminent naturalist; Sedgewick, the admired in science, and esteemed and loved in every other relation of life; Lieut.-Col. Sykes, whose Oriental and statistical researches have produced such useful information and results, and Mr. Charles Frost, the President of the Hull Literary and Philosophical Society, whose consideration in the third port of England, long-continued zeal in the cause of literature and improvement, and, at last successful urging of the invitation, which is crowned by this meeting, justly entitle him to the distinction of a place in this honourable list. Under its auspices a gratifying muster is expected; and from the facilities of communication afforded by steam navigation from the northern parts of Europe, it is hoped that the attendance of distinguished foreign *savans* will be considerable. In order to entertain them, and the members of the association generally, in a suitable manner, a local subscription has been raised to the amount of between £2000 and £3000, which, if judiciously expended, will enable the citizens of Hull to mingle with the mere dry encouragement of science, enough of that social hospitality which made the earlier assemblages pass off with so much enjoyment and éclat, and was only tried to be carped down by voices which have long ceased to impugn the proceedings of the "Peripatetic Philosophy."

Far be it from us to advocate any course which could interfere with the advancement of science, to the utmost that comes within the compass of these meetings; but it should never be forgotten that one of their declared and foremost objects was to bring together the cultivators of every branch of intellectual pursuit, and to promote their personal and friendly intercourse. In England, with English habits and feelings, we need not point to the best mode of accomplishing this desideratum, but refer, in evidence of it, to what has been achieved by the Association in the twenty years during which its festive and scientific system has run cordially and effectively on the same common wheels. In short, philosophy, to flourish, ought neither to be pampered nor starved.

At first the Association commenced hopefully, but confidently; and the splendid congresses at Oxford, Cambridge, Edinburgh, and Dublin, developed its powers in every direction. The four original sections expanded into seven; and medicine having fallen out of the sphere, statistics, mechanics, geography, and ethnology remained as additions to compensate for a science which can hardly be adapted to popular investigation and discussion. Now, the whole arrangement stands as follows:—

A.—*Mathematical and Physical Science:* Friends' Meeting-house, Mason-street.
B. *Chemical Science:* Theatre of the Literary and Philosophical Society, Kingston-square.
C.—*Geology:* St John's Upper School-room, Waltham-street.
D. *Zoology and Botany:* St. John's Lower School-room, Waltham-street.
E.—*Geography and Ethnology:* Saloon, Mechanics' Institution.
F.—*Statistics:* Wesleyan Upper School-room, Waltham-street.
G.—*Mechanical Science:* Christ Church Lower School room, Jobn-street.

In all these departments, the proceedings of the British Association have led to important results: and latterly, when its representatives have felt authorised to offer suggestions to, or require aid from, the Government, several undertakings, not only of national but universal interest, have been procured. Indeed, some of the grandest problems which affect mankind are at this moment subjected to solution through the agency of the Association, on many far distant spots on our terrestrial globe, and over the latitude and longitude of every sea. Another benefit which has arisen out of this Institution has been the bringing forward into public notice of many eminent individuals, who, but for the opportunities it afforded, would have been "born to blush unseen, and waste their sweetness on the desert air." Some of these are joined at the period of middle life, have passed away; and, if we look around us for the active competitors for distinction, who have within the last ten years won golden opinions from all sorts of men, we shall find them emanating from the ranks of the British Association—their talents tested by the sectional friction with their compeers, and their genius stimulated by the publicity which these encounters opened on their way. And speaking of these advantages, we trust the leading directors will never lose sight of the principle, that, whilst the oracles at the head of our school, in visiting the provinces, do great service by diffusing the knowledge of which they have attained so splendid and useful a share, it is no less their vocation to elicit every local contribution, and encage the aspirations of humble men to add their mite to the heap, and (if deserving and promising) devote themselves to studies and experiments which may raise them also to eminence in the noble rank of those whom the world recognises as its benefactors. This matter, we think, has of late, been too much neglected. The *genius* or *genii loci* ought to be diligently sought out, and presented.

On Monday last the preparations for the reception of members were all but completed. The Reception-room, Scalcoates Hall, offers every facility for finding friends, procuring lodgings, and making other convenient arrangements. Rooms for the Sectional meetings, near to each other, are provided; and the public rooms in Jarratt-square and saloon of the Mechanics' Institute are freshly embellished for the Evening Promenades—of which two are announced—and the evening meetings for the President's Address on scientific lectures. Various excursions are spoken of, either during the week or at its close; Beverley and Barton Constable, of much antiquarian interest; and several excursions of high geological promise, such as the Spurn and Flamborough Head—being included in the number. Lord Londesborough's seat, Grimston Park; his Lordship's yacht, and another yacht, built on the model of the American clipper, are also among the attractions of the scene

On Wednesday the general committee met Colonel Sabine, the President of last year, in the chair—when Mr Phillips, the secretary, read an interesting report of the Council; and in the evening, Mr. Hopkins was installed in the presidency of the present assemblage, upon which occasion he delivered a very luminous and able address, taking a comprehensive view of the progress of every science—from astronomy to mechanics—which now so essentially occupy the attention of mankind.

On Thursday the meetings of the Sections commenced; but we must consult the brief notice, and reserve a more particular account of the transactions for our next week's ILLUSTRATED LONDON NEWS. We may add, however, that several learned and distinguished foreigners have already arrived in Hull.

THE COURT.

The concluding details of the Royal visit to Dublin, with the statement of her Majesty's progress to the Royal home at Balmoral, will be found in another column.

Her Majesty Queen Christina of Spain has arrived in London from Paris. The Queen, accompanied by his Excellency Senor Isturitz, paid a visit to Windsor on Wednesday, and inspected the State Apartments at the Castle and St. George's Chapel.

Her Imperial Highness the Grand Duchess Maric of Russia and suite arrived at Edinburgh, on Saturday, from Chatsworth, *en route* for Hamilton Palace.

His Royal Highness the Hereditary Grand Duke of Mecklenburg Strelitz, accompanied by Baron Rauch, arrived at Fenton's Hotel, on Monday, from the continent, and left for Edinburgh on Wednesday, to join the Grand Duchess, who, with the Duchess of Cambridge and the Princess Mary is at present on a visit to the Duke and Duchess of Buccleuch at Drumlanrig Castle.

Lord John Russell left town, on Monday, for Woburn, *en route* for Rosenesth, Dumbartonshire. The noble Lord had been summoned from the north to attend a Cabinet Council at the close of last week

Sir William and Lady Molesworth have left town for Pencarrow, county of Cornwall.

THE ROYAL CHILDREN IN SCOTLAND.—The Royal party—embracing the Princess Royal, the Princess Alice, the Princess Helena, with Colonel Biddulph, Miss Hillyard, and attendants left London on Wednesday morning, and arrived at the Stonehaven station of the Aberdeen Railway at a quarter past one on Thursday. The station was beautifully decorated, and converted into a neat reception room for the occasion. The party, after partaking of an elegant luncheon, proceeded in carriages by the Slug, or mountain-road, to Banchory, on their way to Balmoral, which place they reached about seven the same evening.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Canonry:* The Rev. R. Campbell, to Perth Cathedral, and to be Principal of the Diocesan Model School. *Honorary Canonry:* The Rev. C. M. Arnold, to Westminster Abbey. *Rectories:* The Rev. W. F. Collison, to Marwood, Devon; the Rev. E. Evans, to Eccles St. Mary-next-the-Sea, Norfolk; the Rev. J. Healy, to Redmile, Leicestershire; the Rev. F. Hockin, to Philleck, and Gwinhan, Cornwall: the Rev. J. Rowlands, B.D., to Grimstone, Norfolk; the Rev. C. R. Rowlatt, to West Thurrock; the Rev. H. Evans, jun., to Kreswell, Suffolk; the Rev. R. Sankey, to Witney; the Ven Archdeacon Sandford, B.D., to Grimley and Hallow, Worcestershire; the Rev. G. B. Dawson, to Gilbertstown. *Vicarages:* The Rev. H. B. Bullocke, to Mullyon, Corn wall; the Rev. W. E. Edwards, to Orleton, near Ludlow; the Rev. E. J. Green, to Leintwardine; the Rev J. S. Utterton, to Farnham; the Rev. F. Wheeler, to Dunchurch, near Rugby.

CONSECRATION OF THE NEW CHURCH AT GENEVA.—The high ceremony of consecration of the new church of the Holy Trinity, for the English congregation at Geneva, was performed on Tuesday, August 30, by the Lord Bishop of Winchester, the Lord Bishop of London having waived his right to officiate, at the request of the congregation, in consideration of the long connection and intimate relations between the Lord Bishop of Winchester and Geneva.

ST. PAUL'S.—The Bishop of London has appointed the following gentlemen to be the special preachers at St. Paul's Cathedral for the present month:—Sunday, Sept. 11, the Rev. R. C. Packman, M.A., Rector of Langdon Hill; Sunday, Sept. 18, the Rev. W. Gibson Humphry, B.D., Vicar of Northolt; Sunday, Sept. 25, the Venerable Archdeacon Robinson, D.D., Master of the Temple.

REDCLIFFE CHURCH.—We understand that the contributions made towards the restoration of the north porch in St. Mary Redcliff-Church, Bristol, by that mysterious person "Nil Desperandum," already amounts to £240.—*Bristol paper.*

LATEST INTELLIGENCE.

SCOTCH REPRESENTATIVE PEER.—On Wednesday, the Scotch Peers assembled at Holyrood-house, and unanimously elected Viscount Strathallan, in place of the late Earl of Seafield. Another vacancy will have to be filled up, in lieu of the late Lord Saltoun, and for which the new Earl of Seafield is a candidate.

AMERICA IN SIX DAYS.—The following is from the *New York Herald*:—"A steamer is now on the stocks at the shipyard of J. W. Griffiths, at Greenpoint, which is expected to be ready for sea in February next. This steamer is being constructed under the plans and specifications of Wm. Norris, C.E., and J. W. Griffiths, naval architect, who have patented their improvements in this country, England, and France. The builders and patentees, as we are informed, are under engagements to cross the Atlantic, from New York to England within six days, in all seasons, with greater comfort to passengers and less risk of life than by the present conveyances. Collins and Cunard, pshaw!"

FUNERAL OF LIEUT.-GENERAL SIR C. NAPIER.—This mournful ceremony took place at Portsmouth, on Thursday, with every respect due to such an illustrious soldier. (We shall, in our next Number, illustrate the ceremonial, and enter fully into the subject.)

EXPERIMENTS ON THE GREAT NORTHERN RAILROAD.—On Thursday, Captain Wynn, of the Board of Trade, made some experiments (relative to the late accident at Hornsey station) as to how far an express train would run after it was suddenly, and in case of danger, checked. Three trials were made at the different speed of forty, forty-five, and fifty miles per hour; and it was found that, with everything on the "look out," the train could be quite stopped at from 500 to 600 yards.

FOREIGN.

FRANCE.

Letters from Paris state that the belief was general among the speculators of the Bourse on Thursday, that the Emperor of Russia has refused to accept the modifications of the note of the Conference of Vienna, demanded and insisted upon by the Porte. The Funds consequently, again fell. The Three per Cents, for cash, closed at 73f 40c.; and the Four-and-a-Half per Cents, at 101f. 75c. Unless some better news should arrive, a further fall may be expected, for there appears to be a general disinclination to invest money in the present state of uncertainty.

It was positively stated at the Russian Embassy at Paris, on Thursday, that the Emperor had refused to accept the Vienna note.

Letters from Odessa state, that so far from there being anything to indicate that the Russians are about to evacuate the Principalities, fresh troops have arrived, and contracts for provisions and stores have been entered into, which would seem to imply their intention of remaining for the winter.

Accounts from the Danubian Provinces assert that the Russian army is suffering severely from disease, and that provisions have reached a famine price at Bucharest. The army of Omer Pacha consists of 35,000 men and 180 pieces of cannon. He was daily receiving reinforcements whilst the Russians, it was said, had lost 13,000 men by typhus and diarrhœa since their entrance into the Principalities. The Russians, to the amount of 6000 men, pitched their tents on the 10th, at Totragem, on the left bank of the Danube, so that the sentinels of the two armies are within musket shot of each other.

Paris is perfectly tranquil, but it is asserted that several persons have been arrested for attempting to excite the populace against the bakers—some of whom, in consequence of the loss they sustain by selling bread for less than it costs them, had so much diminished their usual quantity of loaves for the daily supply, that, after twelve o'clock in the day, not a loaf was to be purchased. The authorities have taken means to prevent a recurrence of this conduct, but they have at the same time resolved to punish with great severity persons who attempt to excite *emeutes* against the bakers. A correspondent says

I am bound to say, judging from the expressed opinions of the masses and the lower class of tradesmen, that if, in maintaining bread by artificial means at an under price, the Emperor runs counter to the principles of political economy, he does not shock the conscience or the understanding of his people. They look upon the bakers as their natural enemies, think it quite right that they should be forced to trade at a loss, and are utterly deaf to any arguments showing that the public must ultimately suffer for the violence done to trade.

The *Patrie*, Paris paper, gives accounts from Canton of the 22nd July, which state that the insurgents were marching on Pekin, and that the Emperor had sent out commissioners to them, with propositions of arrangement.

The Emperor has granted pardons to sixty-eight prisoners, and also to sixty others who were sentenced by courts-martial to transportation to Algeria after the insurrection of June, 1848.

It is said that the concession of the privilege of supplying Paris with Seine water is to be given to a mixed French and English company, of which Mr. Masterman is the head.

General Changarnier is now with Baron Nathan Rothschild, in Piedmont. General Bedeau is in Switzerland.

The excitement in the provincial districts of France regarding the price of bread is very great. In one of the country towns in the department of the Ardennes, a riot has taken place between the peasantry and the working people of the place: the latter having attempted to pillage a waggon loaded with corn, which was entering the place.

It is now ascertained that the corn harvest in France for 1853 is much more under the average than was at first stated by the Ministerial journals. A journal of the Cote d'Or, which is one of the best departments for the growth of corn, states the yield is just one-third under the average; and this, is probably, the case, throughout France.

THE EMPEROR'S VISIT TO BOULOGNE.

The town of Boulogne has been for several days in a state of extraordinary excitement in consequence of the promised visit of the Emperor and Empress. Triumphal arches have risen, as if by enchantment, in the principal thoroughfares; the Esplanade has been profusely supplied with flowers and evergreens; apartments have been splendidly furnished and decorated in the Sous-Prefecture for the Imperial visitors: and a spacious banquet-room has been constructed in the court of the edifice, in which several hundred guests may sit down at the Imperial table. In the Rue Mesnigny an immense ball-room, which comprises the interior of the theatre, has been constructed, and decorated with splendid mirrors, lustres, drapery, flowers, carpeting, and everything that can add to its splendour. The ball at the theatre will take place on the day of the Emperor's arrival, and with it is expected, be honoured by the presence of the Emperor and Empress. Preparations are making in the Tintelleries for a *bal champêtre*—to be given (gratis) to the people simultaneously with the one at the theatre. On the Place Daunou a tent has been formed on a platform, in which the Emperor and Empress will be received and welcomed by the local civil and military authorities. On the Liane, on the day following the Emperor's arrival, various nautical amusements will take place. On the summit of the hill on the Calais road a gigantic arch has been erected, and another at the entrance of the enclosure of the Column.

It is expected that the Emperor will visit the Column. The opening of the new bridge, and the visiting of the new road in the cliff, will depend on the Emperor's pleasure. Grand illuminations are to take place opposite the Sous-Prefecture on the Champ de Foire, on the evening of the day that the Emperor and Empress may arrive. Their arrival at Boulogne is expected to take place on the 24th inst.

SPAIN.

We hear from Madrid that the question as to the reception or non-reception of Mr. Soulé as Envoy Extraordinary of the United States, has been much agitated of late. It is now stated that the Spanish Government will oppose no objection to his reception as American Envoy; but should any objectionable expression be contained in his address on presenting his credentials, it would be instantly resented. There can be no doubt that Mr. Soule will find his position at Madrid a very difficult one.

AUSTRIA.

The marriage of the Emperor of Austria will take place before Advent; that is, somewhere in the month of November. The Emperor and the bride-elect being first cousins, the papal dispensation must be procured.

The execution of a Franciscan Monk, at Freshurg, has produced a painful impression at Vienna. The friar, Marcus Gasparich, joined the revolution in Hungary, and has since the revolution conspired with Kossuth and Mazzini, to overthrow the present Government. Five other persons have also been condemned by the same court-martial to imprisonment for different terms. After having been "descerated," Gasparich suffered death on the gallows, and this has given great umbrage to the ultra-Catholic party.

GREECE.

The official reports of the crops of grain in Greece prove a deficiency of at least one-third, as compared with those of last year. In order to make up for this deficiency, it is calculated that an importation of 600,000 kilos. will be required.

RUSSIA AND TURKEY.

No intelligence has yet arrived from St. Petersburg to indicate whether the Emperor will accept or reject the modifications proposed in the Vienna note, by the Porte, and concurred in by the representative of the four powers. A telegraphic despatch is daily and anxiously expected; but, meanwhile, a rumour has gained ground on the London Stock-Exchange that the Emperor of Russia intends to object to the modifications of the Vienna note. This rumour, coupled with the unexpected return of Lord John Russell and Lord Palmerston to London, which was thought to imply business of an urgent character, caused a decline in the Funds. Lord J. Russell had only just arrived in Edinburgh when he was summoned to London. The next day (Saturday) the noble Lord had a prolonged interview with the Premier, Viscount Palmerston, and the Earl of Clarendon, to whom the present management of the Eastern question appears to be confided by their colleagues in the Cabinet. This hasty conference in Downing-street is thought to have rather an ominous aspect; and the fall in the English and French Funds shows that the decision of the Emperor of Russia is awaited with considerable anxiety and misgiving. The question has again assumed the importance which formerly belonged to it; and, although few persons believe in the probability of an immediate war, the impression currently prevails that the modifications demanded by the Porte, and the expectations expressed in the note of Redschid Pacha, contain the germ of new and interminable delays and complications.

A letter from Constantinople, dated the 25th ult., states that some excitement exists, owing to the modifications which the Divan has introduced into the Viennese note. Relying on the support of France and Great Britain, and finding itself at the head of an army of 200,000 men, Turkey is inclined to go to war. The warlike preparations are continued. A Cabinet Council was held on the 24th, and measures were canvassed for the defence of the country. Fresh troops are daily pouring in. The army in Asia numbers 80,000 men. A battalion of Turkish riflemen, organised on the model of the Chasseurs de Vincennes, has had left for Varna by the Turkish steamer. The transport of troops to the frontiers of Wallachia continues. Arabs and Kourds have tendered their services to the Porte. They are forming troops of irregular cavalry. Omer Pacha, the Commander-in-Chief of the army of the Danube, has changed the positions of various corps, so as to be prepared for all eventualities.

The attitude of Greece is watched with great interest by the Turkish politicians.

The last accounts from Malta state that Admiral Dundas had sent in the invalids of his fleet, the physicians having declared that a change of air was necessary for their recovery. The British squadron being anchored along the coast, and being exposed to the miasma from the shore, had several seamen attacked with the fever of the country, but there was no danger. The French fleet was more healthy, being anchored further to sea, and the number of sick did not exceed the usual average amongst such a number of men confined in so small a space.

AMERICA.

The United States mail steam-ship *Humboldt* has arrived, with dates from New York to the 27th ult. The New York papers publish the reply of Lord John Russell, on behalf of the British Government, respecting the proposition for a tripartite treaty with regard to Cuba. Lord John Russell, whilst admitting the right of the United States to receive the proposal, observes that Great Britain must at once resume her entire liberty; and, upon any occasion that may call for it, be free to act either singly or in conjunction with other powers, as to her may seem fit. The yellow fever in New Orleans has increased, and one of the latest reports mentions 315 interments in one day. Advices from Jamaica to the 12th ult., state that the political and commercial situation was unchanged.

PROTESTANT BURIAL ON THE CONTINENT.

The conduct of the French authorities with regard to Protestant cemeteries, presents a favourable contrast to that of the Spanish Government. Mr. Hamilton, the British Consul at Boulogne, has published a letter, calling the attention of surviving relatives to the fact that it is the intention of the authorities to demolish the tombs of British subjects buried at Boulogne, unless the ground is purchased, according to the usual rules of the cemetery. The circumstance has excited some painful feeling among the English residents in that town; but, it appears that, as the French law stands, in all burying-grounds, where the ground is not made the subject of purchase, the authorities, after a certain term, hold themselves entitled to resume possession. A list of the graves which may now be opened was forwarded some time back from the Mayoralty to the British Consulate which is to be given to the numerous instances, the dates of concession have long since expired. The list was enclosed in a letter to the Consul, in which it was stated that the authorities wished to show every deference to the feelings of the survivors, and four months are allowed from the 25th of the present month before anything shall be done. With regard to one particular grave the French authorities have displayed a yet more kindly feeling. The case of the *Amphitrite*, the convict-ship which was lost on Boulogne Sands, will not readily fade from the recollections of the public in this country, although some twenty years have elapsed since the occurrence of the calamity. This monument the municipality of Boulogne will allow to remain without purchase, and will present it, and a certain portion of ground round it, to the English public, on the simple condition that four pillars and an iron railing or chain be placed round it to protect the spot. With regard to the other tombs, in some instances the period of concession expired some thirteen or fourteen years ago.

The *Times* seizes the occasion to contrast the conduct of Catholic Spain with that of Catholic France. To us (says our contemporary) the French have no obligations—

> The records of history show that, until recently, we have been rival nations—rivals in the Cabinet and the field; but, upon a question of this kind, the French act as befits a nation of Christians and of gentlemen. Not so with the Spaniards. That Spain at this moment an object of hatred to that nation, and not a French province, is due to the valour of English soldiers and to the warlike skill of an English general. It was by a costly sacrifice of English treasure, and still more costly sacrifice of English blood, that the soil of Spain was freed from the foreign invader. Now mark the result. From the gallant enemy against whom our armies contended year after year—from the lines of Torres Vedras to the gates of Toulouse—we receive tokens of goodwill and respect; the nation whose political existence upon the map of Europe we maintained at no less a cost than that of the life-blood of our fathers denies to us even the rites of Christian sepulture.

HARVEST IN IRELAND.

HARVEST IN IRELAND.—Notwithstanding the vast amount of the emigration, which is carried on with vigour up to the present moment, no very serious inconvenience has yet been felt by the farmers in their harvest business. The workhouses have, to a considerable extent, supplied the deficiency in the labour-market; and this has necessarily led to a great decrease in pauperism, the beneficial effects of which must soon be felt by both landlords and tenants.

REAPING MACHINE TRIAL.—At Stirling, on Wednesday, there was a trial of various reaping machines, when the judges awarded the first prize to Bell's machine, and the second to McCormick's.

DOUBLE MURDER AT STOCKPORT.—A wretched man, named Thomas Moore, has been committed under the coroner's warrant to the next Liverpool assizes, for the wilful murder of his two step-children, John and James Higham, by drowning them in the canal at Reddish. The only motive assigned is that the children were entered in two burial clubs, and that the criminal would thereby receive about £24 on their being buried.

BIRMINGHAM GAOL INQUIRY.—An inquiry is proceeding at Birmingham into the conduct of Lieutenant Austin, Governor of the gaol, charged with cruelty towards some of the prisoners. It takes place in open court, and is not yet concluded. Some of the evidence against the Governor is very decisive. It appears that the system of crank labour was originally an exceptional punishment; that, at Mr. Austin's suggestion the cranks were increased from two to twenty two; that the Act of Parliament, which provides that no prisoner shall be kept at crank labour for more than ten hours a day, has been disregarded; that it was customary to keep prisoners, even boys, at the crank labour in the dark, to count the revolution as they best could; that the power of increasing or decreasing the severity of the crank labour was exercised by Freer (one of the keepers), without the special sanction of the Governor in every case; that the records of the punishments, attempts at suicide, and so on, were imperfectly kept, the records of the suicides, especially, being made up "from memory," that the warders were in the habit of going into the cells of the prisoners whenever they pleased; and generally, that the officers were in a state of scarcely disguised insubordination.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS, TAKEN DURING THE WEEK ENDING THURSDAY, SEPT. 8.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading	Thermometer. Lowest Reading	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.

Note.—The sign — denotes below the average, and the sign + above the average.

The reading of the Barometer increased from 29.76 inches at the beginning of the week to 30.43 by the morning of the 8th; and decreased to 29.85 in by the end of the week. The mean for the week was 30.107 inches at the height of 29 feet.

The Weather during the week has been dull and cold: the wind has been continually from the N. and N.E. The 2nd, 3rd, and 7th were very cold days. The sky has been mostly overcast, and was wholly so on the 7th and 8th.

The Temperature has been below its average during the week: that of the 3rd was 21·2°, and was lower than any other 3rd of September since the year 1833; that of the 7th was also very low. The mean for the week was 55·1°, being 3·1° below the average of 38 years.

The range of temperature in the week was 25·9°, being the difference between the highest on the 6th, and the lowest on the 3rd

The daily range of temperature was 5·3° only on the 2nd, and was 21·3° on the 6th. The mean for the week was 14·3°.

Rain fell to the depth of rather more than half an inch.

Lewisham, Sept. 9, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending last Saturday, 1552 children were born within the metropolitan districts; of these 805 were boys, and 777 were girls. This number exceeds the average in eight corresponding weeks of the eight preceding years by 204. The deaths registered during the same week numbered 1025, being less than the number of births by 553. The average number of deaths in the corresponding weeks of the previous ten years, omitting that of the cholera in 1849, is 950. To zymotic diseases, 315 deaths are attributed (their average is 284, omitting that of the same week in 1849, when 2469 deaths took place attributable to those diseases); of these, 3 only are small-pox, 31 measles, 22 scarlatina, 24 hooping cough, 152 diarrhœa (whose average is 84), 16 cholera (in the same week of 1849 the number of deaths from cholera was 2026), and 48 typhus. To dropsy, &c., 47 deaths (their average is 36). To tubercular diseases, 171 (their average is 178). To diseases of the brain, 115; to those of the heart and blood-vessels, 41; to those of the lungs and organs of respiration, 86. To age, 36. To sudden death, 3. Poison, 2. Burns and scalds, 5. Hanging, 1; drowning, 6; fractures, 23; and wounds, 2. The most prevalent disease at the present time is diarrhœa, as epidemic, which is on the increase. The deaths from cholera, as stated above, is 16; but one of these is mentioned as Asiatic cholera: the general circumstances of all are mentioned by the Registrar-General; and they are cases which, for the most part, have happened among the poor, in crowded places, with cesspools in their immediate vicinity, or the places affected by unwholesome smells.

CITY OF LONDON REGISTRATION OF PARLIAMENTARY VOTERS.—The claims and objections to come before the revising-barrister for the City of London this year, according to the returns made under the act to Mr. T. M'Christie, are as follows:—

	Claims.	Objections.	Total Claims and Objections.
Freemen and liverymen	1	1	
Inhabitant householders	173	1012	
	174	1220 =	1494

	185	749	
	187	1288 =	1475

THE COMMISSION OF INQUIRY INTO THE CORPORATION OF LONDON.—The Commissioners appointed to conduct this inquiry—Sir John Patteson, Mr. Henry Labouchere, and Mr. G. Cornewall Lewis—have met and appointed their secretary, and have arranged to commence their labours early in the ensuing month. The inquiry will be conducted at the Guildhall. It will be an open court, and it is understood that the Commissioners have determined on hearing all the evidence that may be tendered to them. From the terms of the Commission, the inquiry will of necessity be a most extensive one, under the following heads. 1. The relation of the City to the metropolis at large, and the proportion which it bears, in point of population, property, and extent, to London proper sarily so called. 2. The limits of the corporate jurisdiction. 3. The constitution of the corporate body. 4. The constitution and machinery of the governing bodies, including the election of Mayor, aldermen, common councilmen, &c. 5. The number, duties, salaries, and mode of election or appointment of the corporate officers. 6. The courts, (civil and criminal) within the jurisdiction of the corporation. 7. The division of the city into wards. 8. The management of the police, state of the prisons, &c. 9. The regulations of the port of London, and the conservancy of the Thames and the river. The appointment of the pilots, and the city brokers and of porters. 11. The markets, their condition, sufficiency, and revenues. 12. The constitution and management of the Irish Society. 13. The property of the corporation, their annual revenue, and the mode of its disbursement. 14. The jurisdiction of the corporation in the borough of Southwark. 15. The constitution, functions, income, and expenditure of the various livery and other companies.

A NUGGET OF GOLD IN THE THAMES.—A large piece of gold found in the river Thames, was produced at the Bow-street Police-office under the following singular circumstances:—It was presented at the shop of Mr. Clarke, pawnbroker, by a labourer in the employ of Mr. Cubitt, who said he had picked it out of some gravel dug out of the bed of the river. Mr. Clarke promised to give it back, and told the man to call again—communicating in the meanwhile with the police. It turned out, on inquiry, that the story was perfectly true. It appeared to be a rough gold coin, of very ancient workmanship. Mr. Jardine directed that it should be retained for a fortnight, and then, if not claimed, given back to the lucky finder.

BIRTHS.

CLOWES.—On the 30th ult., at Aigburth, Liverpool, the wife of J. Clowes, Esq., of a son.

EAST.—On the 3rd inst., at the Parsonage, Hounslow, the wife of the Rev. Edward East, of a daughter.

EMLYN.—On the 4th inst., at Stackpole Court, Viscountess Emlyn, of a daughter.

HANKEY.—On the 5th inst., at Mount Craig, Ross, Herefordshire, the wife of Bellingham Barnard Hankey, Esq., of a daughter

KAYE.—On the 5th inst., at St. John's-wood-park, the wife of John Kaye, Esq., a son.

PEARCE.—On the 27th August, in York-road, Lambeth, Mrs. Robert Pearce, of a son.

MARRIAGES.

ABERCROMBIE—HASTINGS.—July 6th, at Burdwan, Bengal, by the Rev. Bernard Geidt, Alexander Abercrombie, Esq., Bengal Civil Service, to Jane, youngest daughter of Thomas Hastings, Esq., Gressenhall, Norfolk.

BENN—HAMILTON.—On the 1st inst., at Lea, Portarlington, the Rev J. W. Benn, incumbent of St. Paul's, Portarlington, to Maria Louisa, daughter of the late Major-Gen. Hamilton, C.B.

FINDLATER—WOLFE.—September 1st, in St. Peter's Church, Dublin, William Findlater, Esq., solicitor, of Talbot-street, to Mary Jane, daughter of John Wolfe, Esq., of Fitzwilliam-street, Fitzwilliam-square

ROLLAND—BINET.—On Tuesday, the 30th August, at St. Saviour's Church, Jersey, Robert John Joseph, only son of James Henderson Rolland, Esq., late surgeon of the 4th, or King's own Regiment, to Jane Ann, youngest daughter of John Binet, Esq., Governor of the Jersey General Hospital.

DEATHS.

COCKS.—On the 29th ult., Mrs. Cocks, of Heightley Cottage, Chudleigh, Devon, aged eighty-three.

COX.—On the 5th inst., the Rev. F. A. Cox, of Hackney.

FLETCHER.—April, 1853, at Melbourne, Australia, deeply regretted, Thomas Fletcher, aged twenty-one, late of the Telegraph Office, and Haymarket.

GREENAWAY.—On the 29th ult., at Finchley, William Greenaway, Esq., of the firm of Gunter, Greenaway, and Co., of Calcutta, aged fifty-two.

HODGSON.—On the 4th inst., at Bridekirk, the Rev. Edward Hodgson, aged seventy-nine—forty-eight years Vicar there.

LYALL.—On the 1st inst, at 17, Park-crescent, George Lyall, Lsq., formerly M.P. for the city of London.

SCOTT.—On the 4th inst., at 16, Chesham-place, Eleanor Sophia, the wife of the Hon. and Rev. William H. Scott.

TORRINGTON.—On the 2nd inst., at Wrotham-park, Frances Elizabeth, only child of Viscount and Viscountess Torrington, aged eighteen.

WILSON. On the 1st inst., John Wilson, Esq., of Shirley Common, Hants, second son of the late John Wilson, Esq., of Waudle grove, Mitcham, Surrey, aged forty five.

DREADFUL OCCURRENCE AND LOSS OF LIFE.

ON Thursday morning an unusual occurrence—the fall of an inhabited house—took place in the Strand, and, unfortunately, caused the death of three persons. Those in the Strand, at the top of Arundel-street (Nos. 185, 186, and 187), have recently been pulled down in order to furnish a site for the erection of premises, to be occupied by Mr. Smith, the well-known news-agent. The house which fell was No. 184, occupied by Mr. Thompson, a tailor, and it is supposed that in excavating the vacant ground for the purpose of laying the foundations of the new house, the walls of Mr. Thompson's house were to some extent undermined, which led to the fatal catastrophe. Shortly before eight o'clock in the morning, while a boy in the service of Mr. Thompson was taking down the shop shutters, the whole of his masters's premises, without the slightest previous intimation, suddenly sank, and slipped away from No. 183—occupied by Mr. Fisher and Mr. Clarkington, printeliers and photographic artists; the materials falling sideways into the space where the new erections were to be made, leaving the party wall between Nos. 183 and 184, perfectly uninjured; the whole wall downwards presenting the appearance of having been carefully cleaned and scraped. The crash of the falling building was heard for a considerable distance, and brought the neighbours in consternation into the street, to ascertain the cause of the noise. For several minutes everything was obscured by a dense cloud of dust, and, as it cleared away, a mass of ruins became visible. The most exaggerated statements were quickly put into circulation as to the loss of life, some of the beholders confidently asserting that not less than sixteen persons were buried beneath the superincumbent mass. Although, fortunately, this statement was not true in regard to the extent of personal mischief, yet we are sorry to add that three lives have been sacrificed, and that one man has received a severe compound fracture of the thigh, and is otherwise considerably bruised.

A large body of the F division of the metropolitan police were upon the spot in a very short time, and rendered the most efficient service in keeping a space clear for the operations of the workmen, who immediately set to work to dig up and remove the rubbish, with a view to get out as quickly as possible those who might unfortunately have been buried. They had scarcely commenced their work before one of the

REMAINS OF THE FALLEN HOUSE, NO. 184, STRAND.

workmen thought he heard the voice of a woman feebly imploring assistance, and in consequence every exertion was directed to that spot. They soon succeeded in drawing out Mr. Thompson's female servant, a young woman about sixteen years of age, from the coal-cellar, which was immediately under the pavement of the street in the Strand. It appears that, when the building fell in, she was in the act of getting out some coals from the cellar, and thus providentially saved her life. When extricated, she was able, without assistance, to walk across the street, and obtain shelter in a neighbour's house.

The next person who was got out was a man of the name of Rowe, who was, it is stated, the builder's foreman. He was taken upon a stretcher to King's College Hospital, in Portugal-street, where he was instantly attended by the house-surgeon. He has recei.ed a compound fracture of the thigh, and is in a most dangerous condition. At nine o'clock the body of Mr. Thompson's foreman was discovered; shortly afterwards that of Mrs. Thompson; and about ten Mr. Thompson was dug out. These three persons were all dead. Their bodies did not appear to be much bruised, and were consequently easily recognised. By eleven o'clock the rubbish was so far removed as to enable the workmen to ascertain that no other bodies were in the ruins.

The shop-boy of Mr. Thompson had a narrow escape; for, perceiving the house slipping away, he quickly stepped backward into the roadway, and did not receive any other injury from the falling materials than a wound on one of his knuckles, caused by a descending brick. Mr. James Henderson, photographic artist, had also a fortunate escape. This gentleman, it appears, occupied Mr. Thompson's first floor, where he in the daytime pursued his occupation, but slept out of town; he was on his way to his workshop, and within but a few yards of the house, when he saw the whole slide away.

The fall of the Strand where the accident occurred is rendered impassable for the present both to pedestrians and carriages; but measures are being promptly taken to secure the houses which are now in a dangerous state, by the erection of a hoarding and strong supports; in order, if possible, to prevent any future calamity after the securing of which, the Strand thoroughfare will be again opened. Distressing as the above circumstances are, it is particularly fortunate that the loss of life was not greater than it is; for it happened that the workmen who are employed in the new erections had not commenced their business for the day. Had the case been otherwise, many of them, doubtless, would have been killed. Part of the house was let to lodgers, who, fortunately, are out of town.

Great apprehensions are entertained that the adjoining house, No. 183, will fall; for, although shored up in front, it is in a very ricketty and dangerous condition. The inmates have left it, and every precaution is taken by the police to prevent persons from passing close to it.

BOROUGH ELECTIONS AND POLLING.—By an act lately passed, elections in future for boroughs, cities, &c., are to take place within six days after the receipt of the writ or precept, giving three clear days' notice, at least, of the day of election, exclusive of the day of proclamation and the day of election. It is also enacted, that in future no polls shall be taken at inns, hotels, public houses, &c., or in any booth or place communicating with such, unless by the consent of all the candidates.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The advance in the minimum rate of discount by the Bank of England to four per cent, having been followed by a corresponding increase in the value of money amongst the leading private bankers—many of whom now refuse to make advances even upon first-class paper under from ¾ to 4 per cent per annum—speculation has received a decided check. As might be expected, the Consol Market has felt the effect of the present comparatively high rate of money. Very few investments have been effected in any of the national securities: hence prices have again given way. The present firm attitude of the Sultan in reference to the final settlement of the dispute with Russia, has produced some uneasiness in the Stock Exchange, and numerous *bear* operations have been the result. The Unfunded Debt has continued dull, but no material change has taken place in its value.

The Board of Trade returns for the month, ending on the 5th August, show an increase in the declared value of our exportations of £1,467,718, compared with the same period in 1852. The total value of our shipments during the first seven months of the year has been £31,681,614, against £30,1.3,.46 in the same time in 1852.

There was a moderate business doing in Consols on Monday; but the Market closed rather heavily. The Three per Cents were done at 97¼ ⅞; the Three per Cents Reduced, 97½; and the New Three-and-a-Quarter per Cents, 100¾. India Stock was 258. Bank Stock, 222½, and South Sea Stock, 115¾. On Tuesday, scarcely any purchases were effected, and the Three per Cents ruled lower. Another fall took place in prices on Wednesday, on which day Consols were done as low as 97⅞. On Thursday very little change was observed in prices; but the Market was exceedingly inactive. The Three per Cents were quoted at 97⅞ ¾, and the New Three-and-a-Quarter per Cents, 100. Bank Stock, 227½. India Bonds, 1.s to 1.s. prem. Exchequer Bills, 2s. dis. to 1s. prem.

The whole of the foreign exchanges are still considerably against this country. For instance, gold is 1.027 per cent dearer in Paris than in London; 1.14 per cent dearer at Hamburg than here; and 0.58 dearer at New York than in London.

The Foreign House has been very inactive, and prices have tended downwards. Several heavy parcels of stock have been thrown upon the market. Letters from Mexico state that the Finance Minister has completed his Budget, and that he recommends mortgaging 17,000,000 dollars of the Church property to pay the interest on the English debt, and for other purposes. The Brazilian Small, have been 101¾; Cuba Seven per Cents, 102¾; Chilian Six per Cents, 106¾ to 105¾; Grenada Deferred, 9¾; Mexican Three per Cents, 26¾; Russian Four-and-a-Half per Cents, 101¾; Spanish Three per Cents, 47⅞; the New Deferred, 23; Passive, 5¾; Swedish Four per Cents, 94¾; Belgian Four-and-a-Half per Cents, 100; and Dutch Two-and-a Half per Cents, 65.

Rumours have been current that a new French and Austrian loan is contemplated.

The exports of gold to the Continent continue enormous. Nearly £300,000 has been forwarded from London and the outports, and further large sums are about to follow. Silver is in demand, and standard bars are worth 5s. 2¼d.; dollars, 5s. 0¾d. per ounce. In addition to the shipments given above, £400,000 has been sent to India, China, &c. We have had an arrival of £204,000 in gold from Australia; but no imports from the United States.

In Miscellaneous Securities very few transactions have taken place. Australasia Bank have been done at 75¾; London Chartered of Australia, 16¾; Union of Australia, 65¾; Australian Agricultural, 34; Crystal Palace, 6¾; Peel River Land and Mineral, 2¾; Peninsula and Oriental Steam, 77; South Australian Land, 35; Submarine Telegraph, 1; Van Diemen's Land, 16¾ to 17; Hungerford Bridge, 12; Waterloo, 5; Vauxhall, 2¾; Albion Insurance, 95; Alliance Marine, 60; County, 97; Globe, 150½ ex div.; Guardian, 61 ex div.; Imperial Fire, 370; Law Life, 56; Pelican, 45; Phœnix, 138; Royal Exchange, 240; Sun Life, 65; Universal Life, 45¾; Berlin Waterworks, 7¾; East London, 128; Southwark and Vauxhall, 90; West Middlesex, 114; East and West India Docks, 145, ex div.; London, 122 to 121; St. Katharine, 90¾ to 92; Edinburgh and Glasgow, 71; Great Northern, 90 ex div.; Ditto, A Stock, 81; Ditto, B. Stock, 29½; Great Western, 85¾ ex div.; Lancashire and Yorkshire, 77¾; Leeds Northern, 14¾; London and Blackwall, 8¾ ex div.; London and Brighton, 99¾; London and North-Western, 107½; Ditto, Eighths, 2⅜; London and South-Western, 80¾; Ditto, £50 Shares, 33½; Manchester, Sheffield, and Lincolnshire, 22½; Midland, 66¾ ex div.; Norfolk, 51¾ ex div.; North British, 31; North Staffordshire, 12½; Oxford, Worcester, and Wolverhampton, 45; Portsmouth, par.; Shrewsbury and Birmingham, 61; Ditto, London and North-Western Guaranteed Stock, 98; South-Eastern, 67; Thames Haven Dock and Railway, 8; York, Newcastle, and Berwick, 67 ex div.; Ditto Great North-Eastern Purchase, 9¾ ex div.; York and North Midland, 54 ex div.

LINES LEASED AT FIXED RENTALS.—Hull and Selby, 10½ ex div.; Ditto, Half Shares, 55 ex. div.; Ditto, Quarter Shares, 27 ex div.; Midland Bradford, 105 ex div.

PREFERENCE SHARES.—Caledonian, 105; Eastern Counties, No 1, 1⅞ prem. ex div.; Ditto, No. 2, 1⅜ prem. ex div.; Ditto, New Six per Cent Stock, 14¾ ex div.; Eastern Union Scrip, 2¼; Great Northern Five per Cent, 111¾ ex div.; Ditto, Four-and-a-Half per Cent, 83; Lancashire and Yorkshire, Six per Cent, 160¾; Manchester, Sheffield, and Lincolnshire, New £1 Shares, 1⅞; Midland Preference, Four-and-a-Half per Cent, ex div.

FOREIGN.—East Indian, 24¾; Great Junction of France, 12; Luxembourg, 6¾; Ditto, Railway, 4¾; Northern of France, 85½; Paris and Lyons, 27¾; Paris and Orleans, 49½; Paris and Strasbourg, 37⅜; Sambre and Meuse, 9; South-Eastern of France, 2¾, Upper India Scrip, ¼ prem.; Ireland, 6.

Mining Shares have been very flat, and lower. Agua Fria have marked 1¾; Australian Freehold, 7; Ave Maria, 3; St. John del Rey, 4¾; Colore Copper, 44; Copper Miners of England, 60; Mexican and South America, 7; Nouveau Monde, 1¾; Santiago de Cuba, 2; and United Mexican, 4½.

Friday Evening.

We have had a very dull market for Consols, to-day, and prices have tended downwards. The Three per Cents have been done as low as 96¾ ⅞; but they have touched 96⅞. The Three per Cents Reduced are now closed. The New Three and-a Quarter per Cents have been 99¾ ⅞ to 100; Exchequer Bills, 2s. dis. to par. Foreign Bonds and Railway Shares very dull.

THE MARKETS.

CORN EXCHANGE (Friday).—To-day's market was more extensively supplied with English wheat than for some time past. A portion of the supply was composed of the refuse of Monday. Owing to the large imports from abroad, the demand for all kinds ruled heavy; and, in some instances, prices were from 1s. to 2s. per quarter lower than on Monday. Upwards of 27,000 quarters of foreign wheat having come to hand, that article was very dull, and rath r lower in value. Floating cargoes off Falmouth were held at full prices. Barley, the s.pply of which was but moderate, moved off steadily, at full prices. There was a fair in.uiry for malt, at extreme rates. The show of foreign oats was immense 116,180 quarters having arrived this week, of which the greater part was landed. The trade ruled dull, at 1s. per quarter less money. Beans, peas, and flour were in moderate request, at full quotations.

ARRIVALS.—English wheat, 4350; barley, 80; malt, 4320; oats, 2040; flour, 3070. Irish wheat, 1270 qrs.; oats, 1060. Foreign: wheat, 77,010; barley, 6670; oats, 116,180.

English.—Wheat, Essex and Kent, red, 50s. to 53s.; ditto, white, 55s to 58s.; Norfolk and Suffolk, red, 51s. to 53s.; ditto, white, 55s. to 57s. 31s. to 36s.; grinding barley, 26s. to 31s. distilling ditto, 32s. to 33s.; malting ditto, 35s. to 40s.; Lincoln and Norfolk m.l.s, 52s. to 54s.; ditto, white, 55s. to 58s.; Kingston and Ware, 51s. to 54s.; Chevalier, 55s. to 57s.; Yorkshire and Lincolnshire feed oats, 19s. to 22s.; potato ditto, 21s. to 24s.; Youghal and Cork, black, 19s. to 20s.; ditto, white, 19s. to 22s.; Scotch beans, new, 27s. to 29s.; ditto, old 31s. to 32s. grey peas, 24s. to 26s.; maple, 26s. to 28s.; white, 24s. to 26s.; boilers, 28s. to 30s. per quarter. Town-made flour, 40s. to 42s.; Essex, Stockton and Yorkshire, 38s. to 40s. per sack. *Foreign.*—Prices nominal. Wheat, 40s. to 44s. per sack; American, 28s. to 33s. per barrel.

Seeds.—Winter tares have sold steadily, at 8s. per bushel. Linseed, rapeseed, and most other articles are firm, and quite as dear as last week.

Linseed, English, sowing, 54s. to 57s. Baltic crushed, 47s. to 50s. Mediterranean and Odessa, 46s. to 48s. Linseed cake, 9l. to 9l. 5s. per 1000. Coriander, 17s. to 18s. per cwt. Brown mustard seed, 8s. to 10s.; white ditto, 7s. to 8s.; tares, English, 8s. per bushel. Foreign, 6s. to 7s. Canary, 48s. to 52s. per quarter. Hempseed, 36s. to 38s. Carraway, 40s. to 42s. per cwt. Rapeseed, English, new, 42s. to 42s.; last of last quarters. Linseed cakes, English, £5 10s. to £10 10s.; ditto, foreign, £5 0s. to £10 0s. per ton. Rape cakes, £5 5s. to £5 10s. per ton. Canary, 38s. to 42s. per quarter. English clover-seed, red, 62s. to 68s.; white ditto, 45s. to 55s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 8½d. to 9d.; of household ditto, 6½d. to 8d. per 4lb. loaf.

Imperial Weekly Average.—Wheat, 50s. 6d.; barley, 30s. 4d.; oats, 21s. 10d.; rye, 32s. 3d.; beans, 41s. 1d.; peas, 37s. 5d.

The Six Weeks' Average.—Wheat, 51s. 7d.; barley, 29s. 10d.; oats, 22s. 1d.; rye, 34s. 10d.; beans, 40s. 11d.; peas, 36s. 11d.

Butter.—Whenever there is any inquiry for this article, prices have been fully maintained. Fine weather has caused a fair supply of grass butter to be brought forward this week. A fair average quantity has changed hands, but green qualities have gone a shade lower. Private business is doing, on former terms. Up to Saturday last, duty was paid on 27,781 cwt., against 26,193 cwt. in 1852.

Bacon.—There has been a steady sale for all kinds of rasher bacon, at very full prices. Hams have moved off slowly, at barely former rates. Singed sides have changed hands at from 52s. to 56s. per cwt. Dutch ditto, 50s. to 52s. Irish ditto, 50s. to 54s. Prime mild cured middles, 48s. to 52s.; good ditto, 44s. to 46s.; fine ditto, 50s. to 54s.; prime Irish ditto, 48s. to 50s. Prime hams, 60s. to 70s.; fine ditto, 72s. to 80s.; rasher ditto, 70s. to 80s. Prime Irish ditto, 60s. to 70s. Fine ditto, 72s. to 80s. Prime lard, 48s. to 52s. per cwt. Irish ditto, 46s. to 48s. per cwt. Inferior ditto, 40s. to 42s. per cwt. Irish ditto, 40s. to 42s. per cwt. Inferior ditto, 36s. to 38s. per cwt. Irish ditto, 36s. to 38s. per cwt. Inferior ditto, 32s. to 34s. per cwt. Irish ditto, 32s. to 34s. per cwt. Inferior ditto, 28s. to 30s. per cwt. Irish ditto, 28s. to 30s. per cwt. Inferior ditto, 24s. to 26s. per cwt. Irish ditto, 24s. to 26s. per cwt. Inferior ditto, 20s. to 22s. per cwt. Irish ditto, 20s. to 22s. per cwt. Inferior ditto, 16s. to 18s. per cwt. Irish ditto, 16s. to 18s. per cwt. Inferior ditto, 12s. to 14s. per cwt. Irish ditto, 12s. to 14s. per cwt. Inferior ditto, 8s. to 10s. per cwt. Irish ditto, 8s. to 10s. per cwt. Inferior ditto, 4s. to 6s. per cwt. Irish ditto, 4s. to 6s. per cwt. Inferior ditto, 2s. to 4s. per cwt. Irish ditto, 2s. to 4s. per cwt. Inferior ditto, 1s. to 2s. per cwt. Irish ditto, 1s. to 2s. per cwt. Inferior ditto, 0s. to 1s. per cwt. Irish ditto, 0s. to 1s. per cwt. Inferior ditto, 0s. to 0s. per cwt. Irish ditto, 0s. to 0

THE ILLUSTRATED LONDON NEWS.

No. 644.—VOL. XXIII.] SATURDAY, SEPTEMBER 17, 1853. [PRICE, WITH A SUPPLEMENT, SIXPENCE.

THE TURKISH QUESTION.

THE Russo-Turkish question has advanced another step. The Emperor of Russia has definitively refused to accept the modifications introduced by the Turkish Government into the note recommended for mutual adoption by the Conference at Vienna. Europe is now on the tip-toe of expectation, to know what the next movement will be—whether it will be war declared by Turkey against Russia, or by Russia against Turkey; or whether revolution in Constantinople, or civil commotion stirred up among the Greek subjects of the Porte, may not, separately and collectively, do their utmost to confound still further the existing confusion? Whatever the result may be, it is evident that the Emperor of Russia has done his utmost to produce a European catastrophe. He has shown himself the common enemy; and upon his head will rest the responsibility of all the evils that must ensue, if diplomacy do not, even yet, extricate him, as well as others, from the perilous position in which he stands, and in which he has placed the rest of Europe. It will not answer to throw the blame upon Turkey. There is a fanaticism of peace as well as of war. Some organs of public opinion which a few weeks ago vented their indignation against Russia for imperilling the peace of Europe by wanton and unjust aggression against an inoffensive neighbour, are now employed in venting similar indignation against the Sultan for over-punctiliousness in the terms of the concession which he was willing to make to his wily and rapacious enemy. If we are to believe these writers, it was Turkey, and not Russia, that endangered the peace of Europe. The policy they seem to recommend is that Turkey should be left to her fate. They assert that the Sultan is too obstinate to be any longer befriended; and that, as he did not choose to take the advice of his allies, the only course is to leave him to battle out his dispute with his antagonist as best he can. These writers would have us believe that this opinion is not confined to themselves, but that it is shared to a large extent by the politicians of Europe; that it is looked upon with no disfavour in the British Cabinet, and that in France the Emperor is more than half-inclined to act upon it.

Such ideas are so suitable to forward the views of the Emperor of Russia, that it is not surprising that the promulgation of them should have been attributed to direct Russian influence. We do not believe that any English journal is in the pay of the Russian Court, and we hold such opinions to be simply those of the writers who have expressed them. We are confident that they are not those of the British public. The sturdy common sense of John Bull shows him instinctively that Turkey cannot with safety be abandoned on any such pretext. Men of business and experience may wish that the Sultan had accepted, without variation, the terms proposed by his allies, without coming to the fatal conclusion that the interests of Turkey demand no further efforts to uphold them.

ABDUL MEDJID, SULTAN OF TURKEY, PROCEEDING TO THE FEAST OF THE BAIRAM.—FROM A PICTURE IN THE PALACE AT CONSTANTINOPLE. (SEE NEXT PAGE.)

The question is by no means so simple. The destinies of Europe are too mighty to allow the Allied Powers to leave the settlement of them to Russia on grounds so unworthy. If they feel any displeasure against Turkey for non-submission to terms which were not satisfactory to her national dignity, they are much too wise to allow such feelings to influence their policy. We believe that no such sentiments are entertained by them, and that the complete and cordial understanding which existed among the Ambassadors at the Conference of Vienna has not been impaired in the slightest degree by the unfortunate turn which events have subsequently taken

During the last three or four months it has often been a subject of regret that the British Government thought it proper to maintain a reserve which was not imitated by other Governments, and especially by that of France. In both Houses of Parliament the Ministers, when called upon for explanations, were unwilling to encourage discussion. This reserve was displayed at a time when M. Drouyn de Lhuys thought it incumbent upon the French Government to publish its dignified and convincing reply to the insolent circular of M. de Nesselrode. The opinions of the British Government upon that circular were not promulgated. Neither Lord John Russell, in the House of Commons, nor the Earl of Clarendon, in the Lords, gave utterance to any such authoritative denunciation of Russian aggression, or of the reasons put forward by M. de Nesselrode in its defence. Lord Palmerston, who is not the Foreign Secretary was the only British Minister who thought it advisable to speak his mind in strong words that Europe would remember. In commenting upon and eulogising his Lordship's speech, we took the opportunity, some weeks ago, of stating our opinion that "the publication of the despatches addressed by Lord Clarendon to our representatives at Vienna and Constantinople, and especially at St. Petersburg, would prove that our Government had not been secondary in energy and "pluck" to M. Drouyn de Lhuys. This anticipation has been fully realised. The despatch addressed on the 16th of July, by Lord Clarendon to Sir G. H. Seymour, our Ambassador at St. Petersburg, is now before the world. Having found way in French into several Continental journals, and having been translated into English in a necessarily imperfect form, has been transmitted from the Foreign-office to our daily contemporaries as originally written. The document more than confirms the estimate which, before we had seen it, we ventured to form of it. There could, in fact, be no doubt what its tenor and tone would be. It is quite as lucid and emphatic as the

circular of M. Drouyn de Lhuys. It leaves nothing to be desired on the point of dignity; and achieves by facts and figures so complete an argumentative triumph over M. de Nesselrode, that it deprives the Russian Government of the possibility of a reply. Not contented with proving by dates that the occupation of the Danubian Principalities was not and could not have been consequent upon the presence of the British and French fleets in Besika Bay, Lord Clarendon protested in the strongest manner against the Russian assumption that even if the fact were as stated, it would justify so wicked an invasion. "Her Majesty's Government deny," says his Lordship, "that any resemblance exists between the position of the combined fleets in Besika Bay and that of the Russian armies in the Principalities. The fleets have the same right to anchor in Besika Bay as in any port in the Mediterranean. Their presence there violates no treaty and no territory; it infringes no international law; it is no menace to Turkish independence; and it assuredly ought to be no cause of offence to Russia; whereas, by occupying the Principalities, Russia does violate the territory of the Sultan, and the special treaty which regards that portion of his dominions. It is an infraction of the law of nations, and an act of direct hostility against the Sultan, which he would be justified in meeting by a declaration of war, and by a requisition to the allied squadrons to come up to Constantinople for his defence; and, lastly, it is an act so dangerous as a precedent, and so violent on the part of a powerful state towards one whose very weakness should be its protection, that, throughout Europe, it has created feelings of alarm and reprobation. To admit that any similarity exists, or that any comparison can with truth be established, between the position of the English and French fleets outside the Dardanelles, and that of the Russian armies within the Principalities, is manifestly impossible."

There is every reason to believe that the spirit which animated Lord Clarendon at that time, still influences the deliberations of the British Cabinet, and that the same good understanding still exists among the Great Powers who have interposed their good offices in defence of Turkey. They may, perhaps, disapprove of some of the acts of the Turkish Government, and they may regret that her honour was not more easily satisfied; but there is a vast difference between such sentiments and the abandonment of her cause. The Great Powers know that to abandon Turkey in a quarrel which has been forced upon her by the ungovernable ambition of her neighbour, would be unwise and unsafe. It would only purchase peace to-day, at the expense of war to-morrow. It would encourage Russia to make other, and, perhaps, more unreasonable demands, and would throw away a golden opportunity of united resistance to a wrong-doer. To waver in such a cause, is to give an advantage to a potentate who has at last shown himself in his true character, the foe and the disturber of all Europe.

THE SULTAN OF TURKEY.

We this week present our readers with an original portrait of the Sultan Abdu'l Medjid, on horseback, taken during the great Turkish festival of the Bairam. The Portrait is from the Daguerreotype of a picture in the Palace at Constantinople. The Sultan, who is only thirty years of age, looks at least ten years older. He has a black beard, and a handsome, well-bred face, of a French cast; but his countenance and figure are marked by an indescribable air of languor and debility arising from his early initiation into the worst features of Oriental life. His eyes are bright, with black rings round them; his cheeks are pale and hollow; and his countenance is usually marked by an air of sorrowful exhaustion. The Sultan by no means possesses a vigorous seat, but lolls upon his horse as if the fatigue of riding were too great. He is usually dressed in a plain European blue frock and trousers, and wears a dark blue cloak, fastened by a blazing diamond clasp upon his breast. He is always surrounded and followed by a crowd of eunuchs, pachas, colonels, and officers of state.

The Sultan's dark melancholy eye generally rests for an instant upon the Europeans whom he passes in the streets; but it can hardly be said that he looks at them; for, if he sees them, it is, as one traveller expressed it, "as if he might have seen a dark streak in the wall close to where I stood." That gaze—in which there is nothing of recognition, and in which no distinction is made between an animate and inanimate object—appears peculiar to the East—perhaps to absolute power in the East."

The two Bairams are celebrated with great pomp at Constantinople. The Sultan, on these occasions, receives the homage of the different orders of the Empire, and afterwards proceeds in state, upon a charger richly caparisoned, to the mosque, followed by all the higher officers, while a hundred guns are fired at intervals. Instead of the red cap and the plain frock-coat, the Padishah, as he is called by the Turks—or Father of all the Sovereigns upon Earth—wears the Imperial *sigrette*, a military uniform richly embroidered with gold, and upon his left breast a brilliant diamond star, which may be seen under his cloak.

The first Bairam breaks the rigorous fast which is observed during the month Ramazan. It commences from the moment when the new moon of the month (Sheval) becomes visible, and the appearance of which, as marking the termination of four weeks of abstinence and restraint, is awaited with great eagerness. A discharge of guns at the Seraglio at Constantinople, and the noise of drums and trumpets in all public places in the city, announce to the delighted population the arrival of this festival. The second Bairam is celebrated seventy days after the former, and lasts four days. The period of the occurrence of the Bairams varies. As the Mahometans have a lunar year of 354 days, the two festivals run, once every thirty-three years, through all the seasons.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The Emperor and Empress have returned from their *séjour* at Dieppe, where their presence has done much good, and where they have gained great popularity. On the evening preceding their departure, a grand fête, with illuminations and fireworks, was offered to the Imperial guests, who at nine o'clock arrived on foot to witness the rejoicings, despite a violent toothache from which the Empress was suffering. At a signal given by her Majesty, the fireworks commenced at the Château and along the cliffs, and, reflected in the ocean, produced a magical effect. On Saturday (the day of departure) the Emperor drove the Empress in a little carriage to the *Calvaire* erected on the pier, to deposit a farewell offering for the poor, and at two o'clock the Imperial train bore away the travellers, amid various satisfactory demonstrations on the part of the Dieppois. The Princess Mathilde, who had gone from Dieppe to Havre, on a visit to her father, the ex-Roi Jérôme, has proceeded thence in the steamer *le François* to Trouville.

The shooting of the *Chasse* has nearly exhausted the supply of game in many parts, the unfavourable has the season proved, from the rain and cold, which have destroyed quantities of eggs and young birds, so that in various places, few, except old couples or very small coveys, are to be seen; and the latter are, for the most part, by no means full grown. Hares, also, are small and scarce in general.

The magnificent weather of the last few days affords considerable consolation to the agriculturists—more especially the vine growers, who, until now, entertained but slight hopes of the grapes ever thoroughly ripening this season.

A remarkably fine show of fruit, flowers, and vegetables took place during the early part of this week at Versailles, under the patronage of the Empress. Among the flowers appeared several Litherio guerite, with some newly-introduced orchids, and other green-house and hot-house plants, were particularly remarkable. Several members of the distinguished, that of the Empress was bestowed on M. Truffant for a collection of glaieuls.

This is, *par excellence*, the season for fêtes of the various towns and villages in the neighbourhood of the metropolis. On Sunday commenced that of St. Cloud—one of the most attractive of its class, from its position—taking place in the beautiful park of the palace. This fête lasts at least a fortnight, sometimes a day or two over; and when the weather is fine, presents the most picturesque and animated scenes. As in all of these festivals, there is held a fair, in which figures every imaginable description of merchandise—fine laces and embroideries; pots, pans, brooms, and mousetraps; penny trumpets, and gingerbread which eats like sponge; baskets of all shapes and sizes, some of them extremely pretty; ribbons, false jewellery, boots and shoes, casquettes and brilliant handkerchiefs, china and delf, cutlery (which, for the most part, wont cut): all these articles praised and puffed, and offered and sold by trim and eloquent little damsels, or persuasive *marchands*, who stand at the counters ranged in their booths, crying out to the passers by: "*Voyez, voyez, Messieurs et Mesdames!*"—as the London 'prentices some two or three centuries ago were wont to address passengers with, "What do ye lack?" and generally contriving to tempt them into the purchase of a variety of gewgaws which they don't want, and can't carry home. Then there are wooden horses, merry-go-rounds, shows of all descriptions; dusty cakes, barley-sugar, *coco* (a nauseous beverage, composed of an infusion of liquorice), and various other equally tempting refreshments. And there *grisettes* and *ouvriers*, with a goodly sprinkling of the upper classes and *force bourgeois*, amuse themselves to their hearts' content. In the evening there is dancing, with illuminations, fireworks, and theatres; and on Sundays the *grandes eaux* play. A distinguishing mark of all these fêtes, and one which tells particularly well for that class of the people—generally supposed to be one so fierce and brutal, is the good-humour, civility, and absence of bad language and intoxication observable among them. Rarely does it happen that the eye or ear is offended by sounds or scenes of vice; and the peculiarity, whether it be the cause or in any degree the effect of their presence, enables women of all classes and ages to mix freely among the populace on these occasions, and not only to witness but to share in their gaiety, without fear of insult or annoyance.

The fête at the Camp at Satory, on Sunday, went off with tolerable éclat, though in few of the games did the soldiers display much skill or force, whether from want of training or other causes we pretend not to decide. To-morrow (the 16th), there is to take place a grand military festival as the Camp, in honour of the fête of the Empress, the Ste. Eugénie.

Some most singular and distressing cases of suicide have, last week, greatly occupied public attention. In the Rue d'Amsterdam, an English lady, residing with her three daughters, having occasion to go to St. Germain, left them in the house alone. During her absence, the sisters, who each occupied a room of her own, assembled in the apartment of one, and, having lighted six *fourneaux* with charcoal, they all lay down on the bed, and, in the morning, were found lifeless. No motive whatever for the commission of this fearful act has been yet discovered, nor any plausible one suggested. Active measures are being pursued to discover the cause of so desperate and apparently inexplicable a proceeding; but, even if detected, it is hardly probable that it will become public. An instance hardly less distressing has also occurred in a noble family. The Vicomte de P. (a young man in the prime of life, with a young wife and two children, to whom he was fondly attached—a handsome fortune—a stainless character—every external circumstance that could ensure happiness) went, a short time since, to his medical attendant, saying that he wished to consult him on the state—not of his physical, but of his mental health; as, without any cause, he suffered from the most intense depression of spirits, from which he in vain endeavoured to rouse himself. Finding in the counsels of the physician no remedy for such a case, he, a few days since, put an end to his existence by throwing himself into the well of the house he inhabited; in which, after a long search, he was discovered, but not till life was extinct.

The re-opening of the Opera took place on Monday night, with the "Huguenots." The *salle*—arranged under the superintendence of M. Visconti, who, in the main adhered to the principal lines of architecture and general plan laid down by M. Rohault (with whom want of sufficient means, rather than of taste and skill, principally caused a failure of effect—the sum accorded proving insufficient for the purpose)—was gorgeously decorated, and everywhere glittered with gold—which, in a *théâtre de parade*, is not only desirable, but, to a certain degree, necessary, to form a suitable background for the toilets of the audience on state occasions. The effect was altogether most brilliant, and produced the most favourable impression. The performance was announced to be perfectly successful. At last the Italian Opera has found an *entrepreneur* in M. Rajani, who wisely desiring not to injure the cause he has undertaken by too much precipitancy, desires to have till the middle of November to collect his forces. The Vaudeville is giving, with much success, a translation of Dickens's "Battle of Life," adapted by MM. Amedée de Goy (who has rendered many of our great novelist's works into French) and Mélesville. The Ambigu Comique has an intensely far-fetched, improbable, improper, and *larmoyant* drama, entitled "Le Viole de Dentelle;" but which, in consequence of the admirable acting of Mdlle. Thuillier, attracts a crowded audience.

The Emperor and the Empress came to Paris on Sunday, but returned to St. Cloud in the evening. All the Ministers immediately proceeded to the Palace of St. Cloud.

During his residence at Dieppe, the Emperor appointed a Commission to examine and submit to him the improvements of which the harbour was susceptible. The works are to be completed in three years, and to cost 1,800,000f.

Queen Christina arrived, on Monday, in Paris from England, and was present the same night at the Opera. The Emperor and the Empress were also present. They were attended by the usual escort.

The Legitimist journal, the *Gazette de France* states that the hopes which were entertained of a fusion between the two branches of the Bourbons are at an end. An attempt which has been made at Claremont by some distinguished Orleanists to induce the members of the family of the late King to take the only steps for fusion which would be agreeable to the other branch, has entirely failed.

According to the last census, the population of Algeria, on the 31st December, 1852, amounted to 246,421 individuals; namely, 124,401 Europeans, and 122,020 natives, inhabiting the territory occupied by the Europeans.

M. de Persigny has left Paris for Dieppe, where he is to remain some days. A secret, dated St. Cloud, of the 11th, confides the administration of the Ministry of the Interior, during the absence of M. de Persigny, to M. Abbatucci, Minister of Justice.

The corn question still occupies as much as ever the public attention, but it seems that the very great alarm which existed with respect to the deficiency has to a certain extent diminished. The *Moniteur* says—

Some foreign journals again speak of purchases of corn made on account of the French government. The contracts entered into in England, about six weeks ago, for 419,000 hectolitres, for the annual supply of the army and navy, are the only facts of this nature which could give a pretext for such an allegation. With the exception of the purchase made abroad, in order not to influence the markets of the interior, the Government has not and never had the idea of intervening either directly or indirectly in any operation relative to grain. It has already declared, and declares again, in the most formal manner, that any contrary supposition is absolutely false. It has full confidence in the efficacious activity of commerce, and only intends to exercise its action to facilitate operations by general measures.

The note in the *Moniteur* had at once a beneficial effect. On the very day when the note was known at Marseilles, business in grain, which had been paralysed, showed a tendency to improvement. Flour continues in full, though scanty, in the Paris mart. The millers were apparently yielded, as well as the speculators, who just closed their during the high prices. The price of 90f. the sack of 157 kilogrammes appeared; and it is now not easy to dispose of the best brands at that price. Seconds are quoted at 85 francs. The bakers still obtain large quantities, but only buy as it were from hand to mouth. The present price of bread is that of the commencement of 40 centimes; but it was not probable that it would be reduced consequently by the 16th inst. (Thursday) to enable the bakers to sell the same loaf at 40 centimes, the price fixed by the Government. Foreign wheat is beginning to appear in the Paris market. The port of Marseilles is described as full of wheat from Odessa; and Polish has fallen in that place to 21f. 25c the hectolitre.

According to the accounts from the departments, the defalcation in the wheat crops may be estimated at nearly one-third less than those of an average year.

All the butchers in Paris have reduced the price of their meat, and yet it would appear that the consumption has not diminished.

The Chamber of Commerce, Lyons, have come to a unanimous vote to address the Government, praying that it will immediately allow the introduction of foreign coal into France duty free. It is expected that the example of Lyons will be followed by all the large manufacturing towns.

M. Salsmanck has again returned to Paris, upon which he is entrusted with the Spanish railways.

On the 25th June last, James Thorpe, master of the English fishing-sloop *Wilberforce*, saved and landed at Hull the crew of the brig *La Providence*, of Ayde, whom he met at sea just as the vessel was sinking. Wishing to reward the generous conduct of that seaman, the Emperor has granted him a silver medal of honour of the first class.

A report has been addressed to the French Minister of War by two superior French officers, employed in the Turkish service for the instruction of the army. The account given of the state of the army, its appearance, its discipline, and its skill in the use of the musket, is very favourable, and would show that the Turks are in a much better military condition than was supposed. The irregular troops in the service of the Sultan are also well spoken of. It has been found that Omar Pacha had extended his line too much, and thereby greatly impaired its strength; but the report states that that active and intelligent chief can, within twenty-four hours, concentrate a force of 60,000 men on any given point, either for attack or defence. On the first shock there is not much doubt of the Turkish troops having the advantage; or at least rendering the victory very doubtful. The Russian commissariat is said to be generally very bad, little or no care being taken of the men, who are regarded as of no more value than, perhaps not so much as, brute beasts; whose loss in the field or in quarters can be easily supplied from an almost inexhaustible source; and this neglect is the cause of the maladies which are sure to break out when Russian soldiers are collected in great numbers. If such be the case on the present occasion, it will no doubt give a great advantage to the Turks.

HOLLAND.

The Session of the States-General was formally closed on the 10th, by the Minister of the Interior, M. Van Reenen. The Minister expressed the thanks of the Government to the Chamber for the support it had afforded to the law on religious liberty. The Royal assent to the law is looked upon as certain.

GERMANY.

Berlin bears an unusually military aspect just now from the accessions to the garrison and the arrival of the Mecklenburg troops for the purpose of taking part in the manœuvres of the Guard and 3rd Armée Corps. In addition to the English officers, who will be present, the Grand Duke of Mecklenburg Schwerin, the Grand Duke Saxe-Weimar, the Duke of Saxe-Coburg-Gotha, Prince Charles of Bavaria, Prince Frederic Wilhelm of Hesse, and the Prince of Hohenzollern Sigmaringen will also be present. The Archduke Leopold of Austria and the Bavarian General Von Pfotow will also attend in their quality of Inspectors of the Prussian Federal Contingent

The King and Queen of Prussia returned on the 10th to Potsdam, and on the 11th his Majesty set off again to Ruder-dorff, to be present at the manœuvres of the Guard and 3rd Corps, which commenced on Monday. The greater part of the foreign military guests had arrived, and the streets of Berlin were an unusually gay appearance from the variety of uniform. The whole of the Guard marched out of Berlin on Saturday, and were into cantonments at Ruder-dorff. The grand review was to take place on Friday (yesterday). The Mecklenburg-Schwerin troops joined the Guard in the march to their cantonments. The Guard forms the western corps, while the Third Army Corps composes the eastern. The former contains twenty-three battalions of infantry, twenty-eight squadrons of cavalry, thirteen batteries of artillery, and two companies of pioneers; the latter consists of twenty-six battalions of infantry, thirty-three squadrons of cavalry, eleven batteries of artillery, and two companies of pioneers. After the conclusion of this grand field-day, the cavalry will remain out till the 22nd instant, amounting, with the addition of the Mecklenburg troops, to sixty-one squadrons in all.

The expectations of medical men, that the visitation of the cholera would be unusually severe this year, seem likely to be realised. Though the cases at Berlin are not numerous (about 20 a day), they terminate fatally in about 60 per cent, and after a very short illness. Up to the present time, out of 322 cases, there have been 187 deaths, 24 cures, and 111 still under treatment.

AUSTRIA.

The insignia of the Kingdom of Hungary, but little damaged, has been found at Orsova. His Majesty has already given orders to bring the crown and sword with all pomp and ceremony to Buda. It is not a little singular that Guyon and Percel kept Kossuth in ignorance of the place where they had concealed the insignia.

ITALY.

The excitement in Italy regarding the price of bread is still great. Count Tampieri, Gonfalonere of Faenza, has died of wounds which he received in the bread riots. At Terni, the Governor has been killed by the mob, infuriated by the increasing dearth of bread. Two companies of infantry have been marched upon Terni.

As all the world is playing at soldiers, the King of Sardinia has resolved to form a camp at Alessandria, near Turin. All the available troops have been withdrawn from Genoa, and the National Guards of that town are now doing the garrison duty—a proof of the confidence Government has in their integrity and the good sense of the people, notwithstanding the late disturbances about the price of grain. The force to be collected for exercise on the plains is about 20,000 men. The Duke of Genoa is expected to take the command.

The Genoa and Turin Railway will be opened for traffic in its whole length in November. The King intends to be present at its inauguration.

The dispute with Austria appears to have induced the American Government to despatch an unusual number of American ships of war to the Mediterranean. The revolutionary party in Italy appear to cherish the hope that an American squadron will appear before Trieste in the spring.

Letters from Turin state that it is quite expected that the Austro-Sardinian quarrel will, before long, occupy a prominent place in European politics.

PORTUGAL.

The *Gamet* steamer has brought Lisbon letters and papers of the 2nd inst. Reports of a break up of the Saldanha-Magalheena Cabinet had subsided, and all seemed again quiet for the time, in spite of the efforts to re-organise Count Thomar's party.

The departure of the Queen for Rio, on the 20th inst., was celebrated by a public entertainment. This splendid vessel is the first of a new line of steamers which will enable this country henceforth to have intercourse with Brazil once every month.

The disease which affects the grapes is making great ravages. There will not probably be one-third of the quantity of wine that there was last vintage. Grapes for the table are exceedingly scarce, as the trellised vines seem to be more susceptible of corruption than the rest.

THE TURKISH QUESTION.

The refusal of the Emperor of Russia to accept the modifications made by the Porte in the Vienna note, has been so generally expected during the last few days, that the announcement, by the electric telegraph, on Wed-

nesday, can scarcely be said to have taken the English public by surprise. The telegraphic despatch which brought from Berlin the news for which all Europe was impatiently waiting, informs us that the rejection by the Czar of the Turkish modifications of the Vienna note is a rejection "pure and simple," without stating reasons for the rejection, which would necessarily lead to further negotiation. A later despatch, however, from Vienna states that the Czar rejects the Turkish modifications, but abides by the Vienna note, and promises to evacuate the Principalities if the Porte accepts it pure and simple." This promise to evacuate the Principalities has the appearance of an advance towards conciliation, and it by no means follows that the decision of the Emperor will necessarily lead to hostilities. The intelligence produced something like a panic at Vienna, and a considerable fall in the Stock and Share Markets of Paris and London; but the remaining Powers will no doubt redouble their exertions to find a fresh basis of negotiation; and their zeal and ingenuity will, it is hoped, find some means of escape from the present imbroglio.

Instead of proceeding to the scene of military preparations in the south, it is now announced that the Emperor of Russia will proceed to meet the Emperor of Austria at Olmutz, on the 23rd inst. This meeting of Emperors is a customary resort with Russia; and no means will be left untried to detach the Emperor Francis Joseph from the combined policy of his empire, and from the counsel of his Western Allies. The Czar will be accompanied by Count Nesselrode and Baron Meyendorf. The interview which the Emperor of Austria will shortly be called upon to hold is thus one of common moment, and it is hoped that he will be prepared to support the independent policy of his country, without compromise to foreign influences. It is thought that until this conference has taken place, no important step will be taken by the Czar. The greatest element of danger now, is the difficulty which Omar Pacha finds in restraining the ardour of his troops on the Lower Danube.

The Russian forces in the Principalities and Bessarabia amount to 110,000 infantry, and 25,000 cavalry. As the Turkish army at the present may be safely estimated at 75,000 infantry, well supplied with an efficient field artillery, and 8000 cavalry, it follows that its virtual inferiority (as long as it remains upon the defensive) is confined to the latter item. 70,000 infantry, acting on the defensive, and supported by strong fortresses, should prove fully capable of resisting any attacking force that the Russian army (as now constituted) could venture to detach. Indeed, more than double the force now occupying the Principalities would be required before operations could be undertaken with any reasonable hope of success on the right bank of the Danube; rumour, therefore, points to 250,000 or 300,000 men as concentrated within the Russian dominions, at points from whence they can be readily moved upon Bessarabia and the Principalities, in support of the troops already there.

A remarkable change has been effected of late in the military position of the army of occupation. Until lately every military movement seemed to be directed towards Georgevo, and at that place it was supposed that the Russians intended to pass the Danube to attack Rustchuk and Tirnovo. Since the Turks have carefully fortified the line of the Balkan, between Schumla and Tirnovo, the corps of General Dannenberg has received the order to establish its general-quarters at Craïova; and the line of operation, in case they pass the Danube, will be by Widdin, Nissa, and Sophia. The Turks will not fail to fortify the passes on this side, as they have done for the line of Schumla and Tirnovo. It is very possible, in that case, that the Russian troops will cross the Danube and attack Servia.

The warlike preparations of the Turks are carried on with unabated vigour both in Europe and in Asia. The troops work literally day and night at the fortifications on the right bank of the Danube; and a cavalry cordon has been formed from Widdin to Schumla, and from Schumla to Varna, so that any news of importance can be transmitted in twenty hours from one extremity of the Turkish line of defence to the other. Zarif Pacha, who commands the army at Erzeroum, is said to display as much energy as Omar Pacha. In the various fortresses and in the passes of the Balkan are guns of a large calibre In Varna there are six batteries of heavy mortars. The order and discipline maintained in Omar Pacha's camp are highly spoken of, but the financial difficulties with which he has to contend are great. We learn that the so-often-mentioned Spanish General, Prim, has been sent to Turkey, "to keep him out of the way" he being a somewhat restless personage—and to annoy the Emperor Nicholas, who has not yet recognised Isabella II. as Queen of Spain. It is estimated that the armaments of Omar Pacha, up to the middle of August, must have cost 120,000,000 of piastres.

A letter from the lower Danube states that Russian regiments continue to arrive at Braila. After morning us that the Turkish army is "mad for war," the writer says—"If it does not come to blows, the campaign could not last long. The Russians move slowly but surely, and even those who are hostile to them do not doubt that their advance to Constantinople would be little more than a parade march." The reserve troops under Omar Pacha begin to grow restive. These men, we have all served before, insist on being led against the Russians. The Turkish Commander is unwilling to damp the ardour of his troops, but, on the other hand, he fears that their enthusiasm may degenerate into licentiousness if they are kept in inaction. A Russian messenger, who had been sent with despatches from Bucharest to Constantinople, fell into the hands of the Turkish outposts, and was conducted to the camp. Omar Pacha sent the man on with an escort, but at Varna he nearly fell a sacrifice to the fury of some fanatical auxiliary troops.

Letters from Constantinople state that the Egyptian troops were expected to set out soon for Schumla, but were to be reviewed previously by the Sultan. The Turkish Government has entered into a contract for the supply of 300,000 great coats, lined with leather, for the troops, and this was thought indicative of a further complication of the question with Russia, and, consequently, the probability of hostilities. The English had become very unpopular at Constantinople, almost as much so as the Russians. Lord Stratford has, it is said, positively tendered his resignation, with assurances that his post was no longer tenable at Constantinople. The decision of the English Government about replacing him was expected there on the 16th. Almost equal dissatisfaction was felt with the French Government. Lord Stratford, it is understood, resigns because he feels that his personal influence with the Sultan is gone.

The despatch addressed by Lord Clarendon to Sir H. Seymour, her Majesty's Minister at St Petersburg, on the 16th July, in answer to the circular despatch of Count Nesselrode to the Russian Missions, and which despatch the Secretary for Foreign Affairs was so urgently recommended by the Earl of Malmesbury to publish, has at length found its way into the newspapers. Substantially, the contents of Lord Clarendon's despatch were made known by the one from the pen of M Drouyn de Lhuys, containing representations on the questions in dispute between Russia and Turkey closely resembling those advanced by the British Minister; but Lord Clarendon's letter will be, in many respects, satisfactory to the public, and its tone will help us to understand the views which the British Government will probably take at the crisis. Lord Clarendon's despatch to the Russian Government written on the receipt of Count Nesselrode's extraordinary assertions with reference to the presence of the combined fleets in Besika Bay, establishes beyond the possibility of doubt, that it was not because the fleets were sent to the entrance of the Dardanelles on the 2nd of June that Russia invaded the Principalities, for the hostile intentions of Russia had been announced on the 31st of May, and were known in London on the 6th of June. But the menaces of Russia addressed to Turkey, for the purpose of sustaining demands so much at variance with the assurances previously given by the Court of St Petersburg, and the vast armament carried forward on the very confines of Turkey, had left no doubt on the mind of her Majesty's Government that the Sultan was about to be placed in imminent danger, and they accordingly resolved, in the interests of peace itself, to be ready to protect the Sultan. The dates of these transactions alone suffice to convict the Russian Minister of gross inaccuracies; but the British despatch goes on to express with great force the opinion of the Government on the substance of the dispute, and to expose the unfounded character of the complaints and pretensions on which Russia has based her demands. It denounces the invasion of the Principalities as a violation of territory, and an infraction both of special treaty and of public law, amounting to an act of hostility which would justify the Sultan in meeting it by a declaration of war, and by a requisition to the allied squadrons to come up to Constantinople for his defence. Lord Clarendon shows, as M. Drouyn de Lhuys showed, that Turkey had satisfied the reasonable claims of Russia; that if any injury had been done by the Porte—of which, indeed, only one instance was at all made out—it had been atoned for; that the practical questions were in fact closed, and that if Russia had any special privileges in regard to the protection of her co-religionaries in the East, those privileges were called in question by Russia herself in demanding anew the recognition of them by Turkey. Lord Clarendon also points out that every Government are interested in maintaining the existing order of things in the East"—an interest which cannot be overlooked by any differences may since have occurred in the course of the negotiations. The effect which this despatch produced upon the Czar was marked and immediate. It probably reached St. Petersburg about the 28th of July, or a few days before the first intimation arrived there of the draught note which the four powers were disposed to recommend, and no sooner had the Russian Government been told in this unequivocal manner what opinion was entertained in Europe of its proceedings, and what resistance would be offered to its attacks, than it instantly accepted the very first terms of compromise offered to its consideration. The resistance of the British Cabinet to the claims of Russia was open and peremptory, and its success was complete, inasmuch as Russia acceded, within twenty-four hours' delay, to all that the Conference of Vienna asked of her.

The warlike aspect of the Eastern question, the consequences of hostilities between Turkey and Russia, the probable attitude of the other powers in the event of a war, have been ably handled by the *Times*.

The Sultan has now a larger and a better army in Bulgaria than the Ottoman Empire has sent forth for many years. It is probably superior in numbers, and perhaps in strength, to the Russian forces now under the command of Prince Gortschakoff in the Danubian Principalities. Omar Pacha, its commander-in-chief, is a bold, and has hitherto been a successful, general; and he has obtained the reinforcements which he required to make a movement across the Danube. He has, moreover, distinctly intimated to the Russian Generals that, if any attempt be made to bring vessels of war or armed boats up the Danube above the confluence of the Pruth, they will be fired upon by the Turkish fortresses. As long as the relations of the two empires remain as their present unsettled and precarious condition it is not easy to determine what is to be done with the army. To maintain it in winter quarters, and to disband it, are equally impracticable.

The fears of the Turkish Government have also been excited. It has been argued that terms cannot be accepted at this moment without imminent danger of a popular insurrection or a military revolt, which might be fatal to the Sultan, and perhaps place his brother, Abdul Aziz, on the throne; and that the only alternatives for the Porte are open resistance to Russia or entire submission, followed by a state of vassalage under Russian protection. These opinions have all been expressed more or less freely in the Divan, and some of them have attracted the attention of the foreign ambassadors.

Omar Pacha has a clear right to cross the Danube and reconquer the Principalities for the Sultan, if he can; but the undertaking is a formidable one. He must convey an army of nearly 100,000 men across the widest river in Europe, and continue to operate with this river between himself and his base of operations, holding no fortress on the north bank. Defeat in such a position would be annihilation to the military forces of Turkey; and a general action could not be fought without staking the existence of the empire on the fortune of the day. Let it even be supposed that the Turkish army is victorious, and succeeds in driving Prince Gortschakoff across the Pruth before the country becomes impassable. Such a success would only render the quarrel more deadly and the resentment of Russia more fatal to Turkey. The pride of the whole Muscovite nation would be roused. Military preparations on a gigantic scale would be made; and, in the spring, the war would be carried on in the most decided form, and probably with the most disastrous results; for it must be observed that Turkey has already put forth all the strength she can collect on the Danube. Russia has at present used only a fraction of her military power in the occupation of the Principalities.

The alliance of England and France and the counsels of Austria and Prussia may be all-powerful for the purpose of defence; but the presence of the most powerful fleets in the world cannot exercise a decisive influence on the march of armies. We were masters of the sea during the whole Peninsular War, but it was the Duke's army and six campaigns which drove the French out of Spain. Indirect measures of warfare, such as an embargo on Russian ships, the blockade of Russian ports, or the bombardment of most towns, would, in almost every instance, be more destructive of our own property and interests than of the enemy's; but, however injurious to Russia and inconvenient to ourselves, they could exert no positive control on military operations behind Mount Hæmus. The assistance which the four powers were able to afford, and have afforded, to Turkey, was their moral influence in obtaining for her terms of accommodation.

But will any one venture to affirm that the same unanimity would exist if Turkey were to commence hostilities after Russia had accepted the proposed conditions? Is Austria prepared to act on such a contingency? Nay, more, is France? We wish to speak with respect of the conduct of the French Cabinet throughout this negotiation, because so far as we are acquainted with these particulars, it has been temperate, judicious, and straightforward. But the French Government has given Turkey and the country no reason to reckon on its support and co-operation in the event of hostilities arising out of the rejection of a note which France herself prepared. On the contrary, the rejection of that proposal has been quite as severely judged in Paris as in London or in Vienna. Much of the recent language of the Emperor of the French confirms his fixed intention to remain at peace. From the instant that the Porte attempts to turn the support she has received into an argument for bravado, hostilities, the Turkish Ministers are reckoning on a degree of authority in Europe which they do not possess. Whatever may happen from the wilfulness or violence of one party or the other, there can be no doubt that England and her allies will preserve that impartial and mediatory character which is still the best security of peace.

The position to which we aspire for England is not that of a party or a principal in this contest, we have no inclination to back the passions or the fanatic zeal which may once more let loose a Turkish army upon Europe—still less are we disposed to shut any aggressive career of the Russian empire, or to transfer the fertile provinces of European Turkey from a Mahomedan to a Christian despotism. Both these results would be evils of the first magnitude, and would, probably, leave Europe less united and unsettled as it is at present. The true position of England and her allies is that of mediators, and, if necessary, of armed mediators, in defence of a pacific policy; and, though the British Government did not hesitate to protest with becoming spirit against the aggressive policy of Russia, that Government is not the less bound to exercise a salutary control, if it can, over the warlike propensities of Turkey.

The Dutch flotilla, which is expected in the Levant, will consist of seven vessels—the *Prince of Orange*, *Doggersbank*, *Palenbang*, *Colonel*, *Makassar*, *Amsterdam*, and *Soembing*. The appearance of the frigate *Doggersbank* at Smyrna, some months ago, gave rise to all kinds of conjectures, but no one appears to have any idea why the Dutch Government has now resolved on sending half a-dozen other vessels to the same spot.

The accounts from the Sulina are as sad as ever. Vast quantities of corn are lying prepared for exportation, but the bar is as before almost impassable. A Galatz letter speaks of the losses incurred by the commercial firms and shipowners as "incalculable." The captains of the vessels detained first presented a memorial to the Russian Consul, and then entered a protest against the inactivity of the Russian Government. On the 22nd of August the dredging-machine began to work, but in the course of a week or two we shall certainly hear that, owing to bad weather, it has been obliged to suspend its operations.

We hear from Malta that the seamen of the English fleet, who had been sent ashore for the benefit of their health, have all recovered and returned to their ships.

The intelligence from Syria is unsatisfactory. Great disorder prevails in Damascus. Some fanatical Mahomedans had ill-used the French and Russian Consuls. The former got satisfaction, but the latter none. The authorities are so feeble that they cannot venture to ride out in the environs of the city. In Aleppo, where there is an energetic Governor, things are better. Two "primates," who attempted to create disturbances, were sent off to Constantinople. The environs of Jerusalem are very insecure, and no one can venture to travel on the Jaffa road without an escort.

AMERICA.

By the *American* steamer, we have advices from New York to the 30th ult. Among the passengers are the Earl of Elgin, Lady Elgin, and three children.

There was nothing of importance from Washington. No definite settlement had as yet been come to with regard to the mission to France.

The yellow fever still continued in all its virulence at New Orleans. The number of deaths in that city during the week ending the 27th of August was 1365; and for the three weeks ending on that date 3669.

The Pacific Steam Navigation Company's Royal Mail steamer *Quito* had been totally lost on the 10th of July by striking on a rock near Huasco. The letter bags and a portion of the silver were saved. Seventeen bars of silver, which were shipped at Copiapo, were lost. One person only is reported to have been drowned: his name was Don Cruz Tellez. The ship's bottom was completely torn out by the force with which she struck on the rocks.

From the West we learn that the Executive and Congress were zealously employed working out plans for the improvement of the country and the development of its resources. The country in general was in a very tranquil state.

From Peru we learn that the difficulties between that country and Bolivia remained *in statu quo*. No actual conflicts had occurred between the forces of the two nations.

Telegraphic accounts from St. Louis of August 28 state that Mexican troops were approaching El Paso, intending to keep possession of Mesilla Valley, where the Mexican flag was waving. The Mexican troops were deserting; and one thing appeared certain, that, should hostilities break out, the majority of the inhabitants of New Mexico would lean to the United States.

Montreal advices of the 29th ult. state that the mayor of that city, the Hon. Charles Wilson, had been arrested by the Vigilance Committee and held to bail in the sum of 8000 dollars to appear on the 14th of October next, at the Criminal Court of Queen's Bench, on the charge of murder during the Gavazzi riots, on the 9th of July. Three more of the rioters had been arrested.

CALIFORNIA.

(From our own Correspondent.)

SAN FRANCISCO, August 1, 1853

THE subject of most paramount interest in this country at the present time is the validity of certain titles to land. When Alta California came by conquest into the possession of the United States, the Government, by the ordinary law of nations, respected the rights and holdings of the conquered. The Mexican Government had been in the custom of making large grants of land to individuals, either for public services rendered, or to enable them to colonise certain districts. As these tracts of land were chosen in the most fertile parts of the country, and as the strictly agricultural lands of California are only of limited extent, since the immense immigration these lands have become objects of envy and desire to those who have been accustomed to acquire land in what is called the Western Country, upon only the presumptive laws of the States.

A Land Commission has been appointed by the Government at Washington to investigate into, and adjudicate upon, the validity of the titles of these holders; but, as their decisions and operations have been very tardy, the estates throughout the country have been all more or less squatted upon; each squatter fencing in his 160 acres—the quantity he would be permitted to take of land belonging to the United States by the pre-emption law—it having been contrary to his will and his interest either to wait for the judgment of the Commissioners, or to presume that the original holder had a better right than he.

In many instances the old rancheros or farmers have been completely stripped of all their possessions, the squatters not leaving them even their orchards, gardens, or yards. In one instance, under our knowledge, the herds were driven from the "rancho," and the owner was compelled to pay for the grazing of his cattle upon his own land (and of which he had held quiet possession ever since the Spanish settlement of the territory.

These agrarian outrages are also not uncommon in the vicinity of this city. An Irishman from Sydney, by the name of McCarthy, seized upon a small lot of land within the city limits, upon which he erected a house; the owner of the land proceeded to eject him by process of law; and on the 20th of July, the Deputy-sheriff went with a writ from the District Court to dispossess him. McCarthy resisted, and shot the Sheriff; and he, in return, shot McCarthy. The wound of the officer is in the hip, and not dangerous; but the squatter is dangerously wounded with ball in the lungs.

The harvest throughout the country is producing very general satisfaction, though the wheat crops are much suffering from rust, which, it is said, will make their yield from twenty to twenty-five per cent. less than it would otherwise have been. This has advanced the price of wheat considerably; and the farmers will realise large profits, notwithstanding the rust.

The present season is highly favourable to mining operations in all the gold districts. The miners seem to be generally fortunate in possessing valuable claims, which are yielding abundantly by the use of improved means for extracting the metal. From present appearances, the total product of gold for the six months commencing with the 1st of June will be larger than during any similar period since the opening of the mines. This result will be effected, too, at larger profits to the miners engaged than heretofore.

During the past fortnight new and rich placers have been discovered in the south, near Santa Cruz, and also on the northern coast, towards Oregon.

The various English quartz companies are progressing satisfactorily. San Francisco is rapidly increasing in size, and all over the city the old wooden structures are giving place to handsome and substantial brick and stone ure-proof buildings. Several large stone churches have been and are in process of erection, and last Sunday the Bishop of the diocese laid the corner-stone of a new Catholic church. In the *Catholic Standard* we see that a subscription is on foot for the present the Rev. Dr. John Newman with a massive gold ring of elaborate workmanship, and with a large nugget in the centre—the whole of which is to weigh 14 ounces.

A Dr. Speer, who has been long a Protestant missionary in China, has been delivering lectures on China and the Chinese, and the result is a handsome sum found in this city a Chinese mission. Fifteen thousand dollars were subscribed in a few days to erect a building to be used as a church and a school for the numerous Chinese who are resident amongst us.

There has been a general strike for higher wages amongst the workmen and artisans in this city, which has been successful. It was commenced by the bricklayers' labourers, who were not contented with five dollars a day for carrying the hod, but required six; then it was taken up by the carpenters, who thought eight dollars would be more acceptable every night than seven; then the long-shore men; then the shipwrights and caulkers would have theirs increased from eight to ten dollars, and so on. Surely this is a golden age for working-men! Never in any country or in any age did skilled and unskilled labour demand such a rate of remuneration. The expense of living is now moderate. Vegetables of all kinds are both cheap and abundant. Meat is only twenty cents a pound. Groceries very cheap; and five or six good-sized loaves may be bought for a dollar.

WORCESTERSHIRE NATURAL HISTORY MUSEUM BAZAAR.

THIS very interesting Fancy Sale was opened on the 8th inst., in aid of the funds of the Natural History Society, in the Shire-hall, Worcester, which was fitted up and decorated for the purpose with the Chinese style. The embellishments were executed by Mr. Brooks, of the Tything, from designs prepared by Mrs. Stephenson.

In a central recess of the spacious apartment, immediately fronting the principal entrance, was a pagoda, in which were seated two mandarins in rich robes. They were modeled by Mr. Toft (of Messrs. Kerr, Binns, and Co.'s China Manufactory), from two figures of Chinese mandarins brought over by Lord Macartney, as side-board ornaments. The prevalent colours of the decorations were gold, crimson, and green. The stalls, ten in number, were arranged round the walls, on either side and at the ends of the room; being closed at one extremity by a "Post-office," and at the other by a "Printing-office" and an "Old Curiosity Shop." Around the stalls were hung small bells, and several varieties of lanterns were displayed in various parts. The large terminal windows were festooned with artificial flowers. A refreshment stall was provided by the committee, which was attended to by Lady Ribblesdale, Hon. Mrs. Cradock and Mrs. Lester, and was plentifully replenished with choice fruits, &c., from the conservatories of the neighbouring gentry. Earl Beauchamp (with his wonted liberality), R. Berkeley, Esq., and the Rev. Thos. Newport, being the principal contributors.

The birds holding ribbons in their beaks, on which were inscribed the names of the ladies holding the different stalls, were ably executed by Mr. Arden, Tything. Mr. Heywood, of Broad-street, contributed a beautiful ornament in dahlias; and Mrs. Baker, of Thorngrove, sent a Chinese gong, which was placed in the outer hall.

The *tout ensemble* when the various articles of taste and skill were arranged on the stalls was very pleasing.

In the following stalls presided the different ladies:—Lady Georgiana Lygon, Mrs. Peel, Lady Hastings, Hon. Mrs. and Miss Coventry, Mrs. Isaac, Mrs. Marriott, Mrs. Allcard, Mrs. Sargent, Mrs. John Pearson, and Miss Pearson.

The stall of Lady Georgiana Lygon contained some splendid pieces of needlework; but the chief feature of interest was a *bal costumé* party the work of the Misses Lewis, of Worcester. The ingenuity displayed in the dressing and grouping of the figures, and decoration of the miniature hall-room, obtained many admirers. There was also a lady in full court dress, [illegible] of—the latter being the work of Miss Dyson, of Malvern. On Mrs. Peel's stall, in addition to an elegant assortment of articles of needlework, was placed a contribution from Mr. M. Cartier, "the mouse drawing-room," a party of white mice being seated at cards; this was also much admired. Lady Jane Peel contributed a beautiful pair of [illegible] and hand-screens, and a complete toilet set.

A case of birds of varied plumage, preserved by Mr. Robinson, of Worcester, also ornamented the stall. The chief ornament of Mrs. John Pearson's stall was a hanging flower-glass, formed of glass bugles, the work of a lady resident in Shropshire. Various productions in crotchet-work were profusely scattered about. Some very handsome chair-covers and ottomans were exhibited at Mrs. Aldham's stall. At the adjoining one, at which Mrs. Melville and Mrs. Parker officiated, was an elegant ottoman, worked by Miss Pennythorne; and also a cushion, the work of Miss James. A collection of silks from China graced the stall of Mrs. and Miss Blayney. The centre of the Hon. Mrs. Coventry's stall was occupied by a transparent eight-day clock, exhibited by the maker and inventor, Mr. James Edwards, of Stourbridge. The stall of Lady Hastings contained white mice turning a table, contributed by Miss Charlotte Best; some beautiful drawings, by Miss Gordon; and several garden hats, curiously composed of plaited newspapers, by Miss Lowe, of Malvern. The "Old Curiosity Shop," was

TOILET-GLASS, PURCHASED BY HER MAJESTY, AT THE DUBLIN EXHIBITION.

well stocked with bamboo Chinese figures—models of junks, curiously-manufactured paper matchlocks, "household gods," model of a Chinese lady's ancle, a curious citron, carved to represent the hand of the god Buddha, two-handled swords, some Chinese money, &c. The collection also contained the Peruvian mummy lately brought to this country by Captain Aldham: it is that of a female, in a fine state of preservation, the hair still adhering to the scalp, and the plat across the forehead being yet distinctly visible.

Hopkins's brass band was in attendance.

The first day's receipts for admission realised £43.

The Bazaar re-opened on Friday, and was well attended. By the kind permission of Colonel Clive, the band of the Queen's Own performed for an hour in the afternoon in front of the Shire-hall.

On the day of the opening of the Bazaar the annual meeting of the institution took place—the Lord Bishop of Worcester in the chair. The report stated the progress of the Museum to have been highly satisfactory, and enumerated a variety of interesting donations of specimens in natural history, and other curiosities. A vote of thanks was then passed to the council; on whose behalf Sir Charles Hastings, M.D., president, returned thanks, as one of the original founders of the Museum. An eloquent contemporaneous address was then delivered by the Rev. John Pearson, upon the progress of the Natural History Society and the Museum.

On the motion of the Mayor (R Padmore, Esq.), seconded by Mr. Amphlett, a vote of thanks was accorded to the rev. gentleman, by acclamation.

Mr. G. H. Hastings, in moving a vote of thanks to those persons who had kindly contributed specimens of natural curiosities to the Museum during the past year, took occasion to mention that about 20,000 specimens of curiosities and antiquities were contained in the Museum. Dr. Malden having seconded the resolution, it was carried unanimously.

The Lord Bishop having left the chair, the same was taken by Sir Charles Hastings, when a vote of thanks to his Lordship, for his kindness in presiding, was proposed by J. H. H. Foley, Esq., M.P., seconded by the Rev. R. B. Brown, and carried unanimously.

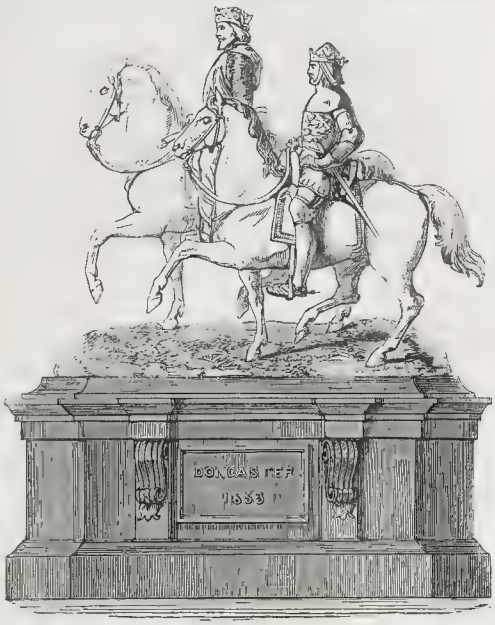
THE DUBLIN EXHIBITION.

This elegant Toilet Glass was purchased by her Majesty, during one of her recent visits to the Dublin Exhibition. It is called in the catalogue the "Dolphin Toilet Stand;" and is made of silver, oxydized, and gilded in parts. The glass swings in the ordinary way. The cup at the top is of agate, and used for containing small ornaments, as they may be taken off by the fair wearer. The festoons at the sides, issuing from the mouths of dolphins at the screw head, are composed of coral and shells, in metal—the coral gilded, and the shells oxydized. The vase upon which the dolphin rests its head, is a lump of coral, fastened on an escallop shell, which rests on a plinth of white marble. The whole appearance is very elegant.

Amongst the interesting events connected with the Royal visit was the presentation to her Majesty and the young Princes of the three children of Dr. Cuthbertson. These three children were born at one birth, and are now about seven years of age. They were accompanied by their mother to the Viceregal Lodge, about half-past nine o'clock on Saturday, when they were presented by her Excellency the Countess of St. Germans to her Majesty, to whom they had the honour of presenting three bouquets. Her Majesty spoke to them for a few moments, asked their names and ages, and having shaken hands with each of them, the Countess of St. Germans presented each with a souvenir from her Majesty. The children were also presented to the young Princes, who had just returned from a drive; and Dr. Cuthbertson had a conversation with Sir James Clarke respecting their health.

THE DONCASTER CUP.

The Cup, or, more properly speaking, Group of Plate, which was run for at Doncaster yesterday (Friday), has been designed and modeled by Baron Marochetti. The scene is from kingly captivity, and not from sporting story. The subject was, we understand, suggested to the artist by Lord Ribblesdale, whose good taste and zeal for the sports of the turf



"THE DONCASTER CUP."—KING JOHN OF FRANCE LED CAPTIVE BY EDWARD THE BLACK PRINCE.

are well known. It is a memorable episode in the brilliant reign of Edward III.—being the entry into London on the 24th of May, 1357, of John, King of France, who, having been taken prisoner by Edward the Black Prince at the battle of Poictiers, was brought to England and detained in honourable custody by his captor, who paid him the respect to which his courage, misfortunes, and high rank entitled him. The group is modeled from the circumstantial chronicles of Froissart and Walsingham. The King and the Black Prince rode through the City in great state. The Prince, to show that his humility was equal to his valour, rode on a small black horse, unadorned, and dressed simply in the suit of armour he had worn in the battle. The captive King of France was mounted on a white courser, covered with stately trappings, himself wearing his regal robes. The illustrious personages were received by Henry Picard, the Lord Mayor, accompanied by the aldermen and city authorities, with all the formalities of the City pageants; and in the streets, as they passed to Westminster, the citizens hung out all their plate, tapestry, and armour, so that "the like," says the chronicler "had never been seen before in the memory of man."

Baron Marochetti has modeled the group with a masterly hand and it has been admirably executed by Mr. Hancock, of Bruton-street, and presents a fine specimen of working in metal.

BAZAAR IN THE SHIRE-HALL, WORCESTER, IN AID OF THE FUNDS OF THE WORCESTERSHIRE NATURAL HISTORY MUSEUM.

MEETING OF THE BRITISH ASSOCIATION, AT HULL.

PRESIDENT: WILLIAM HOPKINS, ESQ., M.A., F.G.S.

MR. HOPKINS, the President of the Hull meeting of the Association, and also Vice-President of the Royal Society, and President of the Cambridge Philosophical Society, entered the University of the latter place

WILLIAM HOPKINS, ESQ., M.A., PRESIDENT OF THE BRITISH ASSOCIATION, 1853.

rather later than usual in life. He soon, however, distinguished himself by his successful application to his studies, and took honours as a Wrangler, as well as the degree of M.A. His rank is eminent among the highest mathematicians of the age, by which small philosophical group his powers of analysis are held in great estimation. But his mere popular fame is established on his unparalleled repute as a teacher. From among his pupils at Cambridge more have risen to the rank of Senior Wranglers, and other marked distinctions, than were ever before prepared by any tutor for the achievement of such honours, which at once stamp their possessors with fortunate auspices to commence the grand race for superiority in Church and State. In this useful and splendid career Mr. Hopkins has won golden opinions from the learned and scientific world; and wears his laurels with so much modesty and unaffected ease, as to make himself as much esteemed as a gentleman in private society, as he is admired in his more public capacity.

VICE-PRESIDENT: THE RIGHT HON. LORD LONDESBOROUGH.

LORD LONDESBOROUGH is the second son of the first Marquis of Conyngham, and therefore younger brother of the present Marquis. He was born in 1806, and began his public career in the Blues. He, however, left the army to embrace the diplomatic profession, and was successively attaché to the British Embassies at Berlin and Vienna; and, subsequently, held the office of Secretary of Legation at Florence, from whence he was removed to a similar position at Berlin. He returned to England to enter the House of Commons in the Liberal interest; and, as Lord Albert Conyngham, represented Canterbury in several Parliaments, though with an interruption of some years, occasioned by delicate health.

Lord Albert Conyngham had already given proofs of a taste for literature, more especially for archæological science, at the time when, in 1843, the Archæological Association was founded; and he exerted himself warmly in the support of that institution, of which he became the President. At the time of the unfortunate division in that body, he espoused the party which contained the two founders and chief labourers in it—Mr. Roach Smith and Mr. Wright—and continued to act warmly with them until the Chester Meeting in 1849, when, disapproving of the manner in which the institution began to be conducted, his Lordship resigned his office; and his resignation was followed immediately by those of Messrs. Croker, Wright, Fairholt; and subsequently by those of Mr. Roach Smith, and others of their friends

Almost immediately after his resignation of the presidency of the British Archæological Association, the death of his uncle, Mr. Denison, left his Lordship sole heir to the princely property of that gentleman; upon which he exchanged the name of Conyngham for that of Denison; and having purchased of Mr. Hudson, the "railway king," the estate of Londesborough, in Yorkshire, he was raised, in the spring of 1850, to the Peerage, under the title of Lord Londesborough. The addition of the Londesborough estate to those which he had already inherited from his uncle, made his Lordship the largest landed proprietor in the East Riding of Yorkshire; and, indeed, almost the largest landholder in one county in England. As there was no house on the Londesborough pro-

THE RIGHT HON. LORD LONDESBOROUGH, VICE-PRESIDENT.

perty, he subsequently purchased of Lord Howden the house and smaller estate of Grimston Park, near Tadcaster, which is his chief residence in the country; and he has lately added to it, by purchase, large estates at Selby. These latter estates, Grimston and Selby, lie in the West Riding, although his Lordship's influence belongs more especially to the East Riding, where he has made himself popular as well as powerful, by his public spirit and warm and friendly disposition. In the spring of the present year, her Majesty conferred upon his Lordship the honourable office of Vice-Admiral of Yorkshire.

Since his elevation to the Peerage, Lord Londesborough has shown in many instances his zeal for literature and science; and, himself a really able and experienced antiquary, he has sought to gather round him at dinners and conversaziones held in his house in London, the élite of

CHARLES FROST, ESQ., VICE-PRESIDENT.

literature, science, and art. His influence in Hull and the country around naturally made him a valuable ally to any scientific body which should assemble there; and it was no sooner known that the British Association of Science had chosen this town for its place of meeting in the present year, than he came forward in the most liberal and hearty manner to offer it his personal assistance, and to exert himself in promoting its objects.

VICE PRESIDENT: CHARLES FROST, ESQ., F.S.A.

MR. FROST is an eminent solicitor of Hull, where he succeeded his father in the profession, and has, through life, taken an earnest and honorable part in promoting the intellectual progress of his native place. From a brief memoir of him by the Rev. George Lee, published at the request of the members of the Literary and Philosophical Society, of which he is president, who also presented his full-length portrait to the Institution,* we learn that in 1815 Mr. Frost made his first appearance as an author by publishing a legal pamphlet on the remuneration of witnesses in civil actions, which led to much discussion. In 1820 he published a letter on the equalisation of the Poor-rates of Hull, but in 1827 took a higher literary station by giving to the world a quarto volume, entitled "Notices relative to the Early History of the Town and Port of Hull, compiled

* It is now hung in their handsome room beside the Museum, and thus honourably inscribed:—"This portrait of Mr. Frost was presented by his friends to the Hull Subscription Library, as a memorial of their esteem and respect for his character, as well as of their appreciation of his indefatigable exertions in the cause of literature and science in his native town."

HORTICULTURAL FETE IN THE PARK OF BISHOP AUCKLAND.—(SEE PAGE . .

annual Records and unpublished MSS. and illustrated with ... and Memoirs"—a work of deep research, which ... great ... and ... Mr. Wyke demonstrated that Hull was built on the site of a pop... improving town ... Wic, or Wyke, antecedent by more than a century to the time ... Edward III., whom Leland, Camden, and other antiquaries ... to be its founder, and from whom it ... changed from Wyke-upon-Hull to Kingston-upon-Hull.

Under Mr. Frost's presidency, the Literary and Philosophical Society has grown up and flourished; and there is now building (at the cost of 2600 or 3000) a very handsome edifice, in which the Town Library will be deposited, under the same roof, and in union with the above society. In the year as a spacious lecture room, capable of containing from 600 to 1000 persons; the whole building is to be a lasting ornament to the town, and a most beneficial establishment for the moral and literary culture ... whom the active pursuits of commerce, nevertheless, ... portion of time to be devoted to mental improvement and ... useful knowledge. By having so large a room attached to ... developments of means for human enlightenment, Mr. ... himself to high esteem among his fellow-citizens, ... confidence in their affairs connected with the great ... seek interests. We have seen him, on this occasion, during ... learned week," receiving constant proofs of the consideration in ... which he is held; and displaying the hospitality of a cordial welcome to ... members of the British Association, of which he is so worthy a ... President.

The ... option of the British Association at Hull has been such as to reflect ... upon the town and its inhabitants, whose hospitalities have been ... Hull had for years been constant and ... In preaching its ... and, though the third part in ... England, there was yet a sort of feeling that it was out of the way, and ... other men in regard to science, which probably prevented the resi... of the meeting to the present time. If there were any doubt, ... moreover, of its success, they have been dissipated by the event. The trade of Hull has recently increased in prosperity, and her superb docks have never been so full of shipping as during the last six months. And, keeping pace with this improvement, intellectual pursuits have grown in extent and activity, and the physical and commercial benefits ... been accompanied by an equal cultivation of mind and the establishment of museums, libraries, and institutions, all affording lively evidence of progress; and showing that if there had been a partial torpor, the population (now numbering 85,000) were now fully awake to the advantages of a higher culture. In this condition we cannot but believe that the proceedings of the ... sociation will produce an excellent effect, and give just that additional stimulus to the spirit of ... place which might be wanted to confirm its ... course, and possibly do the good work of years within the space of one short week. The field was prepared for the seed; and, it is to be hoped and expected, that it will yield a valuable harvest.

WEDNESDAY

On Wednesday, the 7th (as mentioned in our last), the twenty-third meeting commenced; but, owing to various causes, the attendance of the leading officers, under whose auspices the direction of the whole business was announced, was unfortunately incomplete. Mr. Hopkins, the president elect, had to regret the absence of four out of the eight vice-presidents—namely, the Earl of Carlisle (in Palestine, we believe), Professor Faraday, himself a host in science, Colonel Sykes, hitherto taking so prominent and serviceable a part in these annual discussions, and Professor Wheatstone, so exalted in many branches of experimental ... There were present, however, Lord Londesborough, on ... in every agreeable way to the success of the ... pillar of evening strength; Mr. Frost, vice-president as the main-spring and most laborious worker; ... Mr. Spence, the distinguished botanist. We ... the absence of Dr. Royle (who, we regret, has resigned the office of general secretary, the immediate duties of which have been very kindly performed by the ex-president, Colonel Sabine); and a considerable number of accustomed members—such as Sir D. Brewster, Sir R. Murchison, Professor Owen, Professor E. Forbes, Dr. Lyon Playfair, Sir H. de la Beche, &c. &c.—did not show upon this occasion. Still there was no lack of scientific men of great distinction, and the transactions were of a character to leave less cause to grieve for the meeting. There were not so many foreigners as might have been expected, but the services of the master was satisfactory, and the sectional business quite as effectual as it has been in past years.

At the head of the sections were elected, A—the President; B—Mr. J. F. W. Johnston, the distinguished Professor of Chemistry at Durham, and a writer and high authority on agricultural subjects, now so ... to be thoroughly understood; C—Professor Sedgwick; D—Mr. C. C. Babington, who stands so high in Natural History; E—Dr. Latham, whose name is enough; F—Mr. James Heywood, M.P.; and G—Mr. W. Fairbairn, the eminent civil engineer; and on Thursday morning they proceeded to work.

But, previous to our taking a cursory view of what appeared to us most worthy of notice—whether for science or popular information—we must glance at the comprehensive opening address of the President—one of those papers so essential to the public value of the British Association, as bringing up, if we may use the expression, the knowledge of the *status* at which the various branches of science has arrived, and offering the conquered ground from which to start, for the acquisition of farther intelligence, away

To fresh fields, and pastures new.

Mr. Hopkins, in passing in review the more recent discoveries and improvements of the times, spoke of the advances in Astronomy, which is continually revealing to us wonderful objects in the regions of space, of which the existence was never dreamed of till within a very recent period. The powers of glasses, and the untiring watchfulness of those whose researches were incessantly sweeping the heavens, had, within the last fourteen months, added nine new planets to our sphere. They, as well as those previously found, all lie between the orbits of Mars and Jupiter, and, though invisible to the naked eye, are equal to stars of about the 8th or 9th magnitude. Many more will, no doubt, be discovered, and the planetary part of our system be multiplied both by nearer neighbours, and by others farther remote than Uranus and Neptune. New comets, too, are augmenting the circle of our celestial visitors; and from all the observations on these curious bodies, it is evident that much more ... reserve to be ascertained respecting their apparent changes of form and volume, and the other phenomena to which they are subjected. Biela's comet, the period of which is about six years and a half, is especially remarkable, as having divided into two distinct parts, with separate nuclei, as it cut longitudinally into halves, and the one side diverging from the other to pursue a different course in its revolutions round the sun. The examination of nebulæ is also being carried on with great activity and Government, it is understood, will unite with the Association in establishing an observatory in the southern hemisphere, with instruments of great power, to follow up the survey made by Sir John Herschel at the Cape of Good Hope. The science of terrestrial magnetism is also being taken out of the field of speculation, and its true laws ascertained. Colonel Sabine's numerous observations have shown that the secular changes, the periodical variations dependent on the solar day and the time of the year, are all variations attributable to the Sun as their cause. There is, therefore, a direct magnetic influence emanating from that luminary, and additional results now obtained, establish the same conclusion with regard to the influence of the moon, so that what we have been accustomed to consider as terrestrial, is in reality solar and lunar magnetism. The difference between light and heat is undergoing experiment, and the application of the latter to motive power will be more clearly made out. Meteorology is in like manner making great progress, and it is seen by an ably-discussed map of isothermal lines, that the Gulf-stream confers the utmost blessing upon the northern isles. This current appears to traverse the Atlantic in a north-westerly direction, till it reaches the West Indian islands, and the Gulf of Mexico, and is then reflected by the American coast, and takes a north-easterly course to our own shores, extending beyond Iceland into the North Sea. To this enormous mass of heated water than poured into our colder sea, we ... character of our climate, for if it were by any cause ... her direction (as, for instance, cross the Isthmus of ... ama, into the Pacific), we should be frozen into arctic regions of ... ial ice and snow, and Britain be only a mass of uninhabitable ... rs. It is to be hoped that the grand water communication ... ested across the Isthmus, will not be of sufficient ... to ... this terrible evil!

We do not enter into matters of theory, including ... radiant heat, geological speculations, the doctrines of fusion ... pressure, &c., all of which are probably leading to important results in mechanics, ... and other scientific inquiries; but which, until they assume ... practical usefulness, could afford little intelligence of a nature to interest the readers of a popular journal.

THURSDAY.

On Thursday the Sections assembled. In Section A there was a discussion on Luminous Meteors, on which Mr. W. Grove threw out the ... ginal light, considering them as ... of revolving planets, revolving in small orbits, which, from their ... motion to the earth, could not be seen, except at particular times, when they came across our orbit and threw out meteors.

Mr. Sollitt, of Hull, ... a paper on Specula for Reflecting ... and we were glad to see that the remarks we offered, on ... on the ... on of local talent, was well acted upon at this meeting and that many of the communications from ... were of very able de...

A paper on Oceanic Currents, by Mr. Scoresby; and another ... by Mr. Grove on Dynamic Sequence in Kosmos, concluded the sitting.

In Section B, Professor Johnston delivered a short address on the ... portance of Chemistry to arts, manufactures, agriculture, and civilisation, generally.

Mr. Hunt, Professor Stokes, Mr. Claudet, and others, discussed the subject of the ... Action of the Solar Radiations on ... three Lectures was followed by some very useful ... especially on the grape and potato disease.

Professor Hunt's discovery, a means of increasing the production of germination in trees and plants, ... he stated, been tried by ... with ... success. Mr. Marshall, of ..., who informed him that, by using his invention, it had put ... in his pocket, having raised the vitality of seeds from 40 to from 40 to 80 per cent.

Dr. Price read his paper on the Employment of Pentasulphuret of Calcium ... as found to arrest the disease, and for years afterwards it never re-appeared, therefore it would be invaluable in the grape-growing districts which are ... afflicted with the disease.

A paper on the Preservative Effect of Sulphate of Lime, on Vegetable Substances, by the Chevalier Clausen, detailed the result of ... experiments made by him on vegetable substances. The process employed consisted in first drawing the vegetable substances in a ... solution of sulphuric or muriatic acid (one part of acid to two hundred of water), and subsequently plunging them in lime water, of almost the consistency of milk. Upon observing the process ... that in ... the substance first in the ..., and afterwards in the acid—he found that the process of decomposition was accelerated. The substances more particularly experimented upon were potatoes and beet-roots. The whole of the potatoes were affected, more or less, with the prevailing disease, at the time they were selected, but, upon examining them some time after, the Chevalier found that the diseased part of the potato had not extended itself, as was the case with those which had not been subject to the ... of the sulphate of lime. He stated that the flavour of the potato was not in the least affected by the action of the sulphate, and thought that it was probable that their germinating powers were not destroyed by the process. The Chevalier considered the effect of ... formation of the sulphate in immediate contact with the vegetable substance somewhat analagous to that caused by galvanising metals—viz., preventing the action of atmospheric ... The paper suggested that the results described must, in all probability, lead to the discovery and adoption of some plan by which the total destruction of the potato crop, after being taken out of the ground, might be prevented.

Mr. Sollitt read a paper of much local, and not without general, interest, on the Mud of the Humber, ... on chemical analysis, ... found to consist ... per cent of fine sand and ... of fertile substance. Thus, the nature of the banks shifting in the river, and the quality of the composition for ..., could be traced for ... purposes.

In Section C, the ... nature of the ... number were described in a comprehensive paper by Mr. Oldham; in drawing deductions from which he anticipated ... whole of the ... Road would be speedily ... a Town Clerk of Hull, also read an ... under ... Geological Features; and Mr. G. ... (both inhabitants of the place) contributed further ... to the Yorkshire Coast, the nature of the soil, &c.; and the business terminated with an account of the ... found in the Aire Valley, near Leeds, held to be ... and subsequently to ... anier era, and anterior to the existing ... on this part of the globe.

In Section D, Collections of various Birds; a notice of Chickenhatching; and ... on the Reproduction of the Lower Extremities of the Thrush; and ... on the Conferva, occupied the attention of the naturalists.

In Section E, Mr. John Hogg read a paper on Iceland—its Inhabitants and Language, tracing them from the ninth century to recent times. The language is a mixture of the Danish and Norwegian; the country thinly populated; and the people warm-hearted, but constitutionally idle, subsisting chiefly on fish.

Mr. Calvert, recently arrived from Australia, read an important communication on the "Production of Gold in the British Isles," and readers will learn with surprise how many districts ... possess metal is to be found—viz., Cornwall, Dartmoor, and Exmouth ... area of 50,000 square miles, where the clay slates are in a prop ... tion West of ... ascent rocks. He classed them as follows

The West of England, North Wales, Mid-England, Northumbrian, Lowland, Highland, Ulster, and Leinster ... Cornwall, Dartmoor, and Exmouth might be divided into three districts—Cornwall, Dartmoor, and Exmouth or West ... In Cornwall, the tin-streams which were of the same composition as gold digging, had long been known to contain nuggets of native gold. The Dartmoor district contained gold in the northern and southern streams. A miner, named Wellington, got about £... worth of gold at Sheepstor; and Mr. ... had, upon five occasions, found nuggets of native gold in Sydenham Down. In the West Somerset were four companies for working gold ores. From ... tons of Poltmore ores, 102 ounces of gold were lately reduced, being at the rate of 16 dwts. per ton, or twice the rate of the St. John del Rey ores. ... The Exmouth district produced ... ounces, and ... sites at Combe Martin and the Mendips. ... The North ... district might embrace all the western counties of the principality. ... Carnarvon ... produced ... per deposits, but gold ... had been worked at Carnhuanawe, Berthllwyd, Dolfrwm, ... and other ... The Mid-England region embraced Alstone Moor; but the chief known gold-field was in Westmoreland and Cumberland. In the Goldscrop mine gold had been found in the copper for ages, and he (Mr. Calvert) had discovered it in many of the ores and rivers of the district. He showed ... specimens from Rich Tarry, Caldbeck Fells, the Buttermere and Crummock-read, Borrowdale, Buttermere, Bassenthwaite, and a fine lump of gold-possum, which weighed one ... The south of Scotland district has only been worked ... to any extent ... cents in Tyndesdale and Nithsdale, but in his (the lecturer's) ... considered throughout the lowlands. Gold was found is above ... and in the ... of ... Mr. Calvert mentioned that in the manuscripts of Queen Elizabeth's time the diggers relied on keeping a refined earth, as an indication of gold, and the miners do so now. He had seen ... in their ... Mr. Calvert mentioned that in the manuscripts of Queen Elizabeth's time the diggers relied on keeping a refined earth, as an indication of gold, and the miners do so now. He had seen ... in their ... He had recognised it also in Australia and elsewhere. He found gold ... the Lowther Burn, Long and Shot Clench Burns, Mannock Water, Kepple Burn, Glengonnar, Elvanfoot, Goldscour, and other ... At Wanlockhead he saw gold in the midst of the town. At one place the miners, ... years ago, ... of gold, which at Glasgow they sold for ... Peruvians. Effects of ... were ... and Lmlithgowshire. It appears, from returns obtained from the Dublin goldsmiths, the ... present supply of the peasantry is about £2,000 ... He ... the Wicklow gold-fields ... the ... of ... the Mayola streams in Londonderry ... gold. The yearly produce ... found in ... fields was now ... £1,000 a-year, which might be largely ... The number of ... was ... hundred. Gold had been found in ... At ... of these were worked in the middle ages, and probably also by the Romans. ... Gold was found associated with silver, lead, copper, iron, and zinc; with quartz, granite, slate, oxide of iron, and ... Lower Lake only been worked at ... The river Derwent was widely worked by the miners or peasantry in Wicklow, Lanarkshire, Antrimshire, and Devonshire. The washing of gold stuff in our ... rivers was very rude, and not equal to that in Australia, and had there been for a long time any deep workings. Many rich gold ores were thrown away, and much metal was produced from which the gold was ... The only two gold-fields which had yet been worked had yielded considerable amounts: the Lanarkshire district from a quarter of a million to half a million, the Wicklow above £... The largest known nugget were 3 ounces. Lanarkshire, and the gold ... from there and Wicklow. The importance of attending to this branch of the national resources was strongly urged. Mr. Calvert concluded by stating that he considered the clay slate formations of Canada would soon be discovered to be a vast gold-field.

Mr. Findlay read a paper on Oceanic Currents, with a view to shortening the voyage of ... s, by directing them to where such help was ... Arctic ... Whale Fisheries were largely discussed ... connected with the trade of Hull and a system of Decimal Currency was proposed by Mr Rathbone

In Section G, Mr. Fairbairn, the President, delivered an inaugural address; and the Reaping machines, and the award of superiority to Mr Bell's, were fully described and illustrated by models, and with this closed the business of the day, and a dinner at the Railway Hotel at which Colonel Sabine took the ... and the ... nation of the British Association at Hull.

FRIDAY.

In Section A, Mr. Robert Russell read a paper on ... Winds which veer from the South West to West, and North ... North, in which he denied the rotatory theory to be ... high latitudes. Mr. Claudet offered some useful explanations ... the angle to be given to binocular Photographic Pictures for the Stereoscope. There was an account of curious concentric lines, seen ... Snowdon. ... papers which occupied the section till half three o'clock had no novel fact to demand detailed notice.

In Section B, Professor Hunt read a paper ... on the Chemistry of Photography; and M. Claudet on the Practice of the Daguerreotype on which subjects a long discussion ensued. ... instrument as no picture could be taken by the light of the moon, and that the intensity of sun light was so great, as M. Claudet stated, that a Daguerreotype portrait might be obtained in the thousandth part of a second. The Rev. Mr. Exley described the process of the transmission of Electricity along the Electric Telegraph; and the President, Professor Johnston, read a paper on the Origin and composition of Rotten-stone, found in the district called the Great Fin, in Derbyshire, and which he held to be a decomposition of the black marble of this country. The practical application of his arguments was that as gold existed in the soil, which destroyed lime and other mineralogical substances; and, therefore, that farmers must lime their lands, in order to repair what is thus lost to them. Dr. Daubeny added a philosophical view of the soil, and entirely concurred with Professor Johnston.

In Section C, the difference between Professor Sedgwick and Sir R. Murchison, relative to the Cambrian system of ... one, and the Silurian system of the other, was brought forward; and as it is and ... regarded *terra incognora hic*, we shall merely remark that the science helped to thin the meeting of some of the usual, very active, and distinguished attendants of the Association. The papers read related to Ayrshire Fossils, Cleavage in Slate Rocks, and the Cornbrash of Gloucester and Wilts, which was found to be of agricultural value.

In Section D, nearly the whole time of the meeting was spent in a debate upon the Microscopic Observations on Pyonogenites, a minute species of crustacea and dictomiceæ, found in the neighbourhood of Hull, and which was not exactly made out to be either a primitive organisation of nature, or vegetables, or animals, or something else

In Section E, Dr. Latham read a paper on the Earthmen, Aztecs, Zulus, and other varieties of the human race, now exhibiting in London. The Zulus he held to be between the Kaffir and real negro. The Earthmen are members of the Bushman family or Saab branch of the Hottentot. Of the two (supposed to be full-blooded) Australians (not yet exhibited), we were told their locality is the parts about Cape York. their language the Cowraega. The height of the taller of the two was 5 feet 10 inches, of the shorter 5 feet 2 inches; the chest well developed, but the lower extremities so attenuated as to show that the representations of the two Australians in Dr. Prichard's one-volume edition is by no means exaggerated. The skin black forehead prominent (the capacity of the skull being small) sclerotic, yellow—nose broad at the base, aquiline, and very characteristic. They held little conversation with each other—so little that even if they were disposed to either belong to hostile tribes, or to speak mutually unintelligible languages. This however was found, on examination, not to be the case. Temperament, gloomy in one, airy in the other, neither, however, seemed to be insensible to kindness and kind treatment; on the contrary, they showed visible signs of emotion on parting with the people of the house wherein they had passed a fortnight, showed great power of that kind of imitation which consists in telling a story in dumb show. Their hair was more crisped and curled than negroes, that of the Sandwich, perhaps, the most important of their physiognomy. Of the Aztecs, readers have heard enough.

In Section F, Dr. Cooper, one of the zealous and efficient secretaries for Hull for the other, Mr. Jacobs, being no less so—read two papers on the Cholera of 1849, and the other Diseases of Hull; the Rev. J. Selkirk, chaplain of Hull Gaol, one on Crime in the same locality; and Mr. Wm Newmarch, a communication on the ... branches relative to the New Bank of Issue, and the circulation of bills of exchange. Mr. Selkirk entered largely into the causes of crime, such as drunkenness, promiscuous dwelling in filthy and crowded habitations, &c.; and in speaking of the number of offences which were being often committed by young individuals, it was mentioned that some were convicted twenty or thirty times within a few years; and the Rev. Mr. Piper instanced a family with which he was acquainted, of which sixteen members had been transported, their venerable father having never ceased to impress upon them this wholesome advice: "Never steal—near home!"

In Section G, the steam navigation of Hull, a rotatory-valve engine, and several other mechanical improvements, usefully occupied the time of this section.

After a well-supplied ordinary, the president in the chair, in the evening, Mr. Phillips delighted a crowded audience with an excellent lecture on the geology and geography of Yorkshire.

SATURDAY.

On Saturday only three sections (A—Mathematical, B—Chemical, and C—Mechanical) met; the majority of the visitors employed themselves in inspecting the noble docks, various manufactories, public institutions, all of which were liberally thrown open, and other "lions" of Hull. The prison appears to be one of rigid discipline, but humanely conducted, and the learned Recorder, Mr. Warren, who attended the meeting, was lavish of the naming of the effects produced upon the unhappy prisoners. We found the baths and wash-houses well arranged, both in construction and administration, and consequently learnt with more regret, that they were not so popular as they ought to be in such a town as Hull, were cleanliness was ... akin to godliness, and a blessing to the order of inhabitants who now neglect the cheap and ready means provided for them;—they are declining rather than increasing

Of the manufactures, that which struck us as the most novel and important for domestic purposes was Mr. Russell's new form of a Retort for Gas from coal, oils, or vegetable substances, whereby a larger amount of gas is obtained than can be done by an ordinary retort. The sources of supply is also interesting. The articles now consumed at the Britannia Works are vegetable materials, both solid (in the shape of bricks), and liquids; and the gas obtained from these is not only free from all deleterious vapours, but is of a quality to produce a good flame, five feet giving a light of 32 standard candles! Though consumed in immense factories, the apparatus is also chiefly designed for, and applicable to, private mansions; and it is no small recommendation to this use that the gas is obtained at a cost considerably below that of coal gas. And the invention altogether offering a considerable saving in the expense of illumination.

In section A, the Moon was the great orb of attraction; and, besides, Mr. Nasmyth's magnificent representations of the moon illustrated by drawings of parts on a large scale, to assist Mr. Phillips in his lucid explanation of phenomena ascertained by the committee appointed at Belfast to inquire into the physical character of the luminary, as compared with that of the Earth; and their assistance devolved on Lord Rosse's telescope, at Parsonstown, to that purpose. The map looked like a section of Stonehenges, studded with circular rings, presumed to be mountains produced by extinct or existent volcanic action; and ranges of mountains resembling Alps and Apennines; and dark spaces, held to be deep valleys (or, by a vague hypothesis, seas); and shadows so ... as to prove the height and something of the forms of the elevated portions; and luminous streaks, the nature of which is unknown, and speaking of one very remarkable one very remarkable gorge across the lower mountain and valley—which seems to overturn the theory that these radiations might be rivers; and, in our opinion, militates against the idea that they might be prodigious fissures, filled up with molten matter, as of metal. Any thought in the way of adding much to our knowledge of our lovely satellite, we are not yet enabled to have an Ordnance survey of her face, nor to ascertain, by engraving, whether the material substance of her mountains is sufficient to fill the valleys and ... of which they rise. It was, nevertheless, amusing, as well as instructive, to learn from Mr. Hopkins that we might soon arrive at safer deductions respecting the surface of the Moon than we could respecting the Earth, since we had the power to examine the whole of the former at one view, whereas we could only make out the prominent feature of the latter imperfectly in detail. The principal novelties mentioned by Mr. Phillips was the discovery that the rings were not perfect but occasionally broken up by lacunæ; that the prominent one called Gassendi, about forty-eight miles in diameter, had, apparently, smaller hills in the interior, or crater; and that, by the instruments and observations already employed and made, it was possible to point out

objects not more than 800 feet in breadth. The examination ought to take place under three aspects :—

1st, a little after the Sun rises on that part of the spherical surface, 2nd, when the Sun is on the meridian of that part; 3, a little before the Sun sets upon it. By this arrangement, each part of the surface may be delineated and described under three directions of sunlight, two of them, [illegible] suited by long shadows to discover the inequalities of level, [illegible] other, two, aiding by a vertical incidence to make apparent the unequal reflective powers and different colours which characterise the different lunar regions and the systems of brilliant stripes which are connected with certain lunar forms. Then the age of the Moon, when a drawing is made, should be stated to the second decimal of the day. The objects to be chiefly attended to were the steepness of the slopes in ring mountains the difference of level between their exterior and interior bases; the curvature of their interior, whether greater or less than that of the general surface; whether the brilliant stripes are elevated above the ground where they pass, and the angle of illumination at which they disappear; slopes, height, and breadth of the ridges at the summit, or sea (though it must by no means be considered as a sea); the external fragments round ring mountains, and the relation between mass of wall and area of depression

An interesting conversation took place (Professor Stokes in the chair), in which Mr. Hopkins, Mr. Grove, and others, discussed the applicability of photographic art to the continued investigation of the lunar surface. It seemed to be agreed that excellent photographs could be obtained by the collodion process*; and then, the scale being enlarged, that the study of every feature would be more distinct and accurate in results

Dr. Buist, on the Currents of the Indian Seas, pointed out geographical and natural phenomena, which, if carefully ascertained and attended to, would improve the navigation in that quarter of the globe.

A communication, by Sir D. Brewster, on Optical Science, and other short papers, closed the sitting.

In Section B. Mr. Gassiot read an interesting paper, on the Decomposition of Water under pressure by the Galvanic Battery. He entirely confirms, by a series of experiments, the law laid down by Faraday.

Section G was chiefly occupied with the subject of Railway Collisions, and the propositions of inventors to prevent these accidents; but as nothing determinate was elicited, we abstain from report.

* In a minute, with some addition of iodide of iron to render the process more sensitive; the more necessary, as the librations, or oscillating motion, in the Moon makes observations very difficult.

(*Continued on page 257.*)

HORTICULTURAL FETE IN AUCKLAND PARK.

THIS very interesting Fête took place on the 2nd inst., in Auckland Park, which had been kindly offered for the occasion by the Bishop of Durham. His Lordship's princely residence, Auckland Castle, is situated in a beautiful and extensive park, through which runs a winding stream, with rocky and precipitous banks, crowned with noble forest trees. High above this stream, in a well wooded declivity, stands the episcopal residence, which, as seen from different places in the park, forms a most majestic object. It was on one of the rocky promontories above this stream that a spacious marquee was erected, in which the exhibition of fruit and flowers took place. The spot was judiciously selected, both for convenience and natural beauties. The castellated building near the marquée, which forms so picturesque a feature in the landscape, is a winter-house, in which to feed the deer, of which there is a plentiful supply. Under the colonnades an efficient band was stationed, adding the charms of music to a scene in itself most beautiful.

The show of fruit and flowers was most excellent, evincing much taste and skill on the part of the exhibitors. The attendance of visitors was very great, and would have much more numerous had the weather been more propitious. But unfortunately the sky was clouded, and frequent showers fell during the day. However, the admirers of nature and art were not to be deterred by an occasional shower; and many hundreds, notwithstanding the inclemency of the weather, were collected together. This is the third time within the last month or two that the Bishop, with a kind and liberal spirit, has thrown open his grounds for the amusement of his neighbours, and it cannot but be a source of satisfaction to him that he has ministered so much to the amusement of so many hundreds, who, we doubt not, felt grateful to his Lordship for his kind consideration

THE FATAL ACCIDENT IN THE STRAND.

The inquest upon the bodies of the unfortunate persons who were killed by the falling of the house in the Strand, on Thursday week (and illustrated and described in our last Number), was held on Saturday, at the vestry room of St. Clement Danes, before Mr. Langham.

The inquiry created increased interest from the circumstance that Mr. George Rowe, the foreman of the works, had died the same morning, about an hour before the sitting of the jury.

At ten o'clock the jury were empanelled on the bodies of Robert Thompson (aged 40), Sarah Thompson (aged 44), George Dunn (aged 21), and George Rowe (about 54); and, at the suggestion of the coroner, they proceeded to view the site of the accident, and afterwards the bodies, in King's College Hospital.

Mr. Bodkin appeared on behalf of the Messrs. Lucas; Mr. Charles Few, for the Duke of Norfolk, on whose property the premises stood; Mr. Ford (Rogerson and Ford), for Messrs. W. H. Smith and Sons; Mr. Aldridge, for Mr. Abrahams, under whose charge the works for the new buildings were progressing; and Mr. Hawkins, for the relatives of Mr. and Mrs. Thompson, and the deceased George Dunn.

The principal evidence adduced was (relative to the finding the bodies and the cause of death) by Mr. Thomas Skeel, who said:

I reside at 42, Norfolk street, Strand, and am a surgeon. I was called to attend the deceased persons on the morning of the accident. I first saw Mr. Thompson when he was taken out of the ruins. I also saw Mrs. Thompson taken out of the ruins, just from the lead flat in the rear of my house. I was called to see Mrs. Thompson, but not the others. I have since examined the bodies, and the deceased George Dunn. Mr. Thompson's features were pale, but not at all distorted; and there was not the slightest abrasion even of the skin. The body generally was not at all mutilated, and I could discover no fracture of the limbs or ribs.

Mr. Skeel then described the appearance of the other bodies; and stated that, from the appearances, he should say that these three persons had died from suffocation, in the absence of other evidence.

The evidence of the servant girl, who so fortunately escaped, is interesting. Her name is Elizabeth Stanhouse, and she appears about eighteen years of age. She said:—

I am now living at 42, Lloyd's-row, Clerkenwell. I was a waistcoatmaker at Mr. Thompson's, and have been with him six years. I was in the house when the fall occurred, about a quarter to eight o'clock. I was in the kitchen when I heard a slight crack. It was a very slight crack, and appeared to come from just where I was standing, close by the pavement in the area. I threw myself down, at the back part of the room, instead of running up-stairs, and I fell on the steps leading into the cellar. I was stunned, and before I could recover I heard a noise like thunder, and all was perfectly dark. None of the bricks fell upon me, but blocked up the vault door so that it made the place extremely dark. I was there, I think, about an hour and a half, screaming and crying out for aid, before any of the bricks were removed. The rubbish was removed from off the grating where the coals were let down, and I then turned the gas off at the meter, which was in the cellar, as I feared an accident, and I was nearly suffocated by the escape of it. About five minutes before the house fell down, I had left Mrs. Thompson in the parlour. She was dressing at the time. Mr Thompson was standing in the back shop, between the parlour and the front shop. The distance between Mr. and Mrs. Thompson was about as far as from here to the windows (about five yards). George Dunn was standing on a short pair of steps at the shop door. I ran down stairs to get a bottle of ale for breakfast, and I never saw any more of them after I did so.

The evidence of Mr. Bush (a master builder and carpenter) went to show that every precaution had been taken to secure the house during the digging of the foundation for the new houses:—

I was called in by Mr Thompson to examine the wall about twelve months since. That was to ascertain whether it would be requisite to pull the wall down when the houses were taken down. I stated to the surveyor's clerk that as it was a first-rate house, the new houses might be erected without pulling down the wall, as Mr. Thompson had a great objection, on account of his business. They wished for Thompson's leave what I gave them by letter, at his request. I examined the house some fifteen or twenty times more, at Mr Thompson's request; the last time on last Tuesday. There was nothing to indicate any settlement up to that time, which was about two in the afternoon. I went into the vault and passed out through the opening in the wall under the parlour, not under the main house. I saw Mr Rowe there, and he said he could not get bricklayers, as they were then very scarce. The ground was there three or four feet below the brickwork of the wall, but that was not the main wall of the house. He then explained how he intended to carry up the wall of the lead flat. The back parlour projected beyond the line of the house. The wall of the house appeared to me to be sound. I was at the time satisfied of the security of the wall of the house.

After some further evidence, it was agreed to adjourn the inquest to Monday next (the 19th inst.)

HOTEL CHARGES.

ALL the world is on its travels. The Clubs are deserted—and London misses the "old familiar faces" of the Senate, the Exchange, and the learned professions. It is discovered by a locomotive public that English Hotels are not what they ought to be; and that extortion is but too often the rule, and not the exception merely. A furious and not undeserved onslaught has, therefore, been directed, in the columns of a powerful contemporary, against the whole fraternity of innkeepers. John Bull, as personified by a whole host of "CONSTANT READERS," long suffering in silence, has rushed into print in despair, and libelled—if truth be a libel—the whole "guild" of hotels, by printing their bills, exhibiting in all the odium of type those hieroglyphics which he had previously crumpled up in disgust, flung to the railway winds, or consumed in lighting a dear bad cigar. Travellers ask why hotel living should be one hundred percent when private living is not more than twenty-five per cent cheaper on the Continent than in England? And now that for a few shillings, in a few hours, a man can transplant himself from the costly and monotonous fare of the insolent and grasping innkeepers of Dover to the artistic variety of the *tables d'hôte*, and bland suavity of the landlords, of the Rhine, the rapid comparison, either going or returning, seems to add insult to injury

The fact is that the innkeepers of England offer one more instance of the difficulty with which a system, established and reared under a Protective monopoly, adapts itself to altered circumstances. Inn licences are a monopoly in the hands of the magistracy. In the good old times the peer and the squire provided for a dependent by putting him into an inn. In those days the profits of hotel-keeping were derived from posting and port wine: four horses and four bottles of port went together in the bill of every respectable man. Travellers, if comparatively few, were wealthy. Wax lights—the master bringing in the first dish, followed by the whole obsequious array of waiters, were only imitations of the style in which the guest was presumed to live. It is the weakness of Englishmen to desire to be taken for great personages, and to be willing to pay for the mistake; this weakness innkeepers have successfully preyed on. Charges very suitable for a Duke, with his chariot and four, and valet following in a chaise, have been submitted to by the Browns and Smiths, lest an innkeeping chorus—from barmaid to boots—should declare Smith or Brown "no gentleman." When stage-coaches began to intrude on the domain of post-horses, those who ventured to avail themselves of the cheaper conveyance were punished for their "meanness" by bad dinners, short time to eat them, high charges, and careless attendance. The march of temperance in high quarters has put an end to port wine profits. Travellers are punished by diminutive pints and imaginary quarts, for not drinking like their forefathers. The extension of railways has extinguished the trade in post-horses—by which some of the largest inns in the country were supported. The result has been the closing of a number of splendid establishments on the main roads. Even in towns like Sheffield and Bristol, well-known high-charging hotels, like the Bush and the Tontine, have been converted to other uses. Travellers cannot be compelled now to stay, sup, sleep, and breakfast, whether they will or not. The economical have the option of biscuits, sherry, and the night train. Those innkeepers who are wise in their generation—and there are a few—have adopted a moderate scale of charges, so as to attract and make up by numbers what they lose in wealthy customers. Thus, we find the chief hotel of Birmingham obliged to condescend to open a Commercial Travellers' Room: others expect, by reducing quarts to pints, and pints to gills, by shaving hard and close those they catch, and trusting to a constant supply of strangers, to make up the profits lost by the altered system of travelling. The late war, when the Continent was closed, is the period to which veteran innkeepers look back as the golden age of their class. Then pleasure-seekers could neither escape to nor compare their demands with the more moderate Continental charges. Now the Continental system of innkeeping, especially that of Germany, has given the public a lesson from which, though long in learning, they seem determined to profit.

The great railway companies are very much to blame for the impediments they have thrown in the way of a cheaper hotel system. At the extremity of every line hotels have been erected in situations which virtually monopolise all the best traffic. These hotels, built on a scale of great magnificence, are burdened with a proportionate rent. To meet these rents, the landlords are permitted to make charges which seem framed on the principle of increasing every item, and then putting, in addition, a daily charge for servants.

In answer to the protests against hotel bills, it is all very well to urge the higher scale of expenses in rent, wages, taxes, and price of provisions. Without stopping to analyse these items, although the majority of the fixed expenses, taking the short season into consideration, are as high in the chief towns of the Continent as in England; it is sufficient to point out that the scale of charges paid by commercial travellers, if applied to ordinary travellers would at once remove the cause of the present outcry, and induce thousands not only to travel more, but to travel in England instead of on the Continent. Tunbridge Wells is as pleasant as most of the watering-places on the Continent; but, under the present system, who will go into that abominable den of extortion, to be vexed as well as robbed, when France and Germany are open to him? The expenses of travelling in England might be made moderate as well as profitable, if English innkeepers saw their own interest. For example, the expenses of a commercial traveller—for breakfast, with meat; dinner, with a pint of wine; and tea, including servants—do not exceed, and often fall under, 12s. a day. If, as is common in these temperance days, dinner be turned into tea, with meat, there is a further diminution; and for this sum the best of everything in season is provided. While in the coffee-room the solitary pleasure traveller is sitting down to stale fish and a thrice-roasted fowl, at 4s. 6d., on the other side of the way the commercial man is enjoying the choicest viands for half the money.

We cannot compel innkeepers to change their system; but self interest will soon compel them to encourage pleasure-travelling by moderate charges, if means are adopted to make known the names of those who are willing to give the good, plain entertainment to which the middle-classes are accustomed in their own houses, at moderate rates. There are sensible innkeepers of this class much despised by their high-charging competitors: let us know their names, and support them.

A few years ago it was impossible to get so good a dinner in London for seven shillings as we now get in the Strand or the City for three shillings. It is only needful to extend to the great line of traffic the principles which have established the good cheap dining-houses of London.

But the Railway Companies can and ought to give some active aid towards Hotel Reform, and put down the absurdity of treating every first-class passenger as if he were a Duke or a millionaire in disguise. Perhaps those who have the management of the "Lord Warden"—an hotel much needed in rapacious Dover, and one of the most splendid buildings of its class in Great Britain—will set the example.*

In order to show how [illegible] of architecture, abundance of accommodation, the best [illegible] and most careful service, may be made consistent with moderate charges, we annex the following particulars of the Hotels [illegible] in the United States, in connection with the Mount Vernon Hotel, New Jersey, with which we have been furnished by an American correspondent:—

THE MOUNT VERNON HOTEL, CAPE MAY, NEW JERSEY (U.S.)

AN American hotel typifies the American character and the American continent. The grandeur and vastness of the natural scenery are reflected in the daringness of mind and ambitious ingenuity of the people, and are again reflected in whatever an American manufactures, constructs, or builds. The country which has a Mississippi and a Niagara, whose coast on one side is washed by the Atlantic and on the other by the Pacific, whose prairies are as extensive and apparently limitless as oceans, and whose mountains are more than Alpine in height, must have everything else in proportion. Jonathan feels that he has a firm footing in the world; that he has ground enough to stand upon, and no fear of capsizing. Hence results a certain amount of boldness, self-reliance, and intrepidity. He has no fear that the sea will encroach upon his island to such an extent that on any day to come it will be entirely washed away. His boundary line is not the Straits of Dover, nor the Rhine and Strasburg bridge, nor a sentry-box, with Austria on one side and Prussia on the other. Jonathan's ideas, expansive intellects, beginning is a long way off, and where it terminates, or at what it arrives, is a long way farther off still. Nothing doubting that his country is "licked" by creation only, Jonathan must perforce "lick" creation. And this he does—to use one of his own phrases, "to a pretty considerable extent." Everything he constructs must go faster, or shoot farther, or cut more furiously, or explode more completely, or secure more lightning or hold more comprehensively than that which the representative of any other nation designs, plans, or executes. Hence American [illegible] pleasure-steam-boats, in electric telegraphs, in fast-sailing yachts, in twenty-barrel revolvers, in ring-machines, and hotels. That Jonathan should exceed in hotels seems, on first consideration, to be matter of surprise. We call to mind hotels, as we know them in France and Germany; we remember the luxuries of some, the means and appliances of others, and the comforts we have found in many; and we wonder that Jonathan—the man who goes on so quickly, does everything so instantaneously, bears hardships with so much fortitude, eschews every effeminacy, and depreciates everything aristocratic—that he should either find the time, or have the inclination, to attempt in any way to emulate the luxurious elegance of Meurice's, or the pleasant places and agreeable arrangements of the fairy-like palace at Baden-Baden. Yet Jonathan does emulate them, and, still more, he surpasses them. He is as great in hotels as he is in everything else—sea-serpents and boiler explosions included. He asks himself "Shall I not take my ease in mine inn?" and seeing no possible reason why he should not make himself as easy there as he does everywhere else, he proceeds accordingly to avail himself to the utmost extent of his unlimited ability, of whatever may conduce to his ease and enjoyment in every possible way. Like *Sir Charles Coldstream*, in "Used Up," he sees no particular reason for going to Rome. What's Rome or Paris to him? If he wants either, he can buy it, and bring it to New York.

"To a homeless man," says Washington Irving, "who has no spot on this wide world which he can truly call his own, there is a momentary feeling of something like independence and territorial consequence when, after a weary day's travel, he kicks off his boots, thrusts his feet into slippers, and stretches himself before an inn fire. Let the world without go as it may! let kingdoms rise or fall, so long as he has the wherewithal to pay his bill, he is for the time being the very monarch of all he surveys. The arm-chair is his throne, the poker his sceptre, and the little parlour, some twelve feet square, his undisputed empire." This is pleasant, homely writing, and suggests ideas of a similar description. But the parlour, "some twelve feet square," in which the author of the "Sketch book" luxuriates, is not that which would satisfy his countrymen. Jonathan can appreciate the snug, but he must have the elegance: he can enjoy the *otium*, but it must be if he can pay for it *cum dignitate*. To illustrate this the Mount Vernon Hotel may be taken as an example.

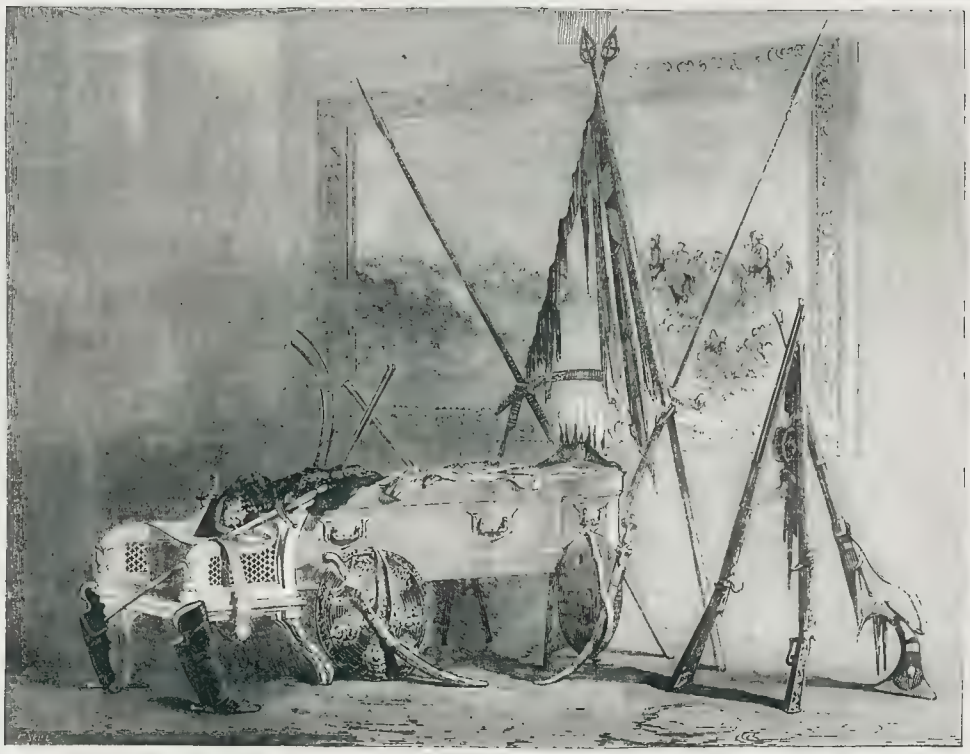
This magnificent establishment is not situated in a large city nor in any very populous neighbourhood, but at the quiet watering-place of Cape May, in New Jersey. It has been recently built for the accommodation of visitors who wish to enjoy sea air and healthful recreation. The style is palatial; the dimensions far exceed those of any hotel in England. The building consists of a front, four stories in height, and 300 feet long, and two wings extending backwards at right angles, of similar height, but each 500 feet in length. Enclosed between the wings is a large garden, planted with beautiful shrubs, and having in the middle a fountain of elegant design and elaborate construction. This garden is open at its southern extremity to the sea, between which and the front itself a smooth and sloping sandy beach intervenes. In the middle of the front, and in the middle of each wing, there is a large tower, containing two extra stories, and at each angle there is also a tower one story higher than the rest of the building. Balconies and verandahs are continued round the structure in front of each story; and some idea of the great extent of the whole pile may be formed from a statement of the fact that there is one mile and a half of verandah. The basement story is approached on each side by a broad flight of steps; while the towers are surmounted by the American ogle and the stars and stripes of the Union. The architecture is Italian; and the effect produced is that of magnificence and elegance combined. The Hotel is intended to accommodate 3500 guests. It contains that number of sleeping-rooms and beds, besides superb separate dining-rooms for the ladies and the gentlemen; and saloons for dining, on a scale of extensiveness unparalleled in any building of a similar character. The furniture of these apartments is ornate and costly, and the embellishments are all of the most gorgeous description. Every endeavour has been made to combine the utmost luxury with the greatest comfort; and whatever ingenuity could suggest, or art supply, towards producing that result has been adopted, without regard to the greatness of the expenditure. He must be a Sybarite, indeed, who could find cause to complain of the quality of either his bed or board. And the price he has to pay for it is very different to that which he would have to give for similar accommodation in England. The visitor is charged two dollars and a half per day. This includes his lodging and his meals; but not his wine, his washing, and the servants. The wines are charged extra, and are very high priced. The servants are paid for indirectly, by one dollar a day being demanded for washing. They are not expected to receive gratuities; but the guest who wishes to be waited on well, does not omit to win the good graces of the waiter by a conciliatory fee. In fact, to neglect doing so, is almost equivalent to going without a dinner. The best things will be passed over to some one more liberal, and the ungenerous is likely to be the dinnerless. Nothing is carved at the table: but everything that the most epicurean diner could wish for, provided it be in season, can be had in the *salon a manger*. At the Mount Vernon Hotel there are the best poultry and the best joints to be found in the Union. The soup is sure to be unexceptionable; the fish is of the rarest, and the fruits are of the finest. In this respect it is unrivalled by any Parisian *restaurateur*. Add to which the cookery would do honour to a Ude, a Francatelli, or a Soyer. Lucullus would have said he had never dined better in his life, had he lived to dine at the Mount Vernon; and Colonel West, the proprietor, is not the man to allow

* In our last week's Paper we gave an illustration of the exterior of the "Lord Warden." We this week publish a view of the principal apartment in the building, as it appeared on the occasion of the opening festival. The particulars were sufficiently noticed in our last

THE MOUNT VERNON HOTEL, CAPE MAY, NEW JERSEY (U.S.)

his guests to look back with regret at the good fare they may have left behind them elsewhere. Every guest has his bath in his bed-room, and there are hot and cold water taps for his use when he pleases. The establishment is lighted with gas, manufactured on the premises; and so extensive is the building, that it contains 125 miles of gas and water-pipes—indeed, it has pipes enough in it to supply any moderately-sized town. Each room is complete in itself, and contains all the conveniences necessary for the comfort of its inhabitant. But there is one apartment known as the "Bridal Chamber," on which all the art of the decorator and the upholsterer has been lavished with the most unsparing profusion; still, however, producing a chasteness of effect combined with the very perfection of ornamentation. This exquisite apartment is always engaged for weeks before-hand. No wedding being fashionable, unless the happy pair secure this elaborate room for their temporary residence. It lets at from £8 to £10 per day. The daily receipts of the whole establishment are very large. For instance, there are 3500 rooms, and these are always full. They let at 2½ dollars daily, and hence realise £1750 per diem. There is no other hotel in the world, the receipts of which approach to this immense sum; and there is no other hotel where the visitor receives better accommodation or greater luxury at so small a cost.

THE DINING ROOM AT THE "LORD WARDEN," DOVER



THE REMAINS OF SIR CHARLES J. NAPIER LYING IN STATE AT OAKLANDS, NEAR PURBROOK, HANTS.

FUNERAL OF LIEUTENANT-GENERAL SIR CHARLES JAMES NAPIER.

THE interment of this great and gallant soldier took place at Portsmouth on Thursday, last week. Sir Charles not being in active employment at the time, the funeral was not a military one; but the spontaneous respect testified for his memory by all classes, military and civil, was of so impressive a character as to more than compensate for the absence of military display. The universality of respect bespoke a feeling which has been thus ably characterised by a contemporary:—"That as star after star dies out from among that bright constellation that has irradiated the paths of our army and navy in that 'war of giants' which shook the civilised world, we act as though we felt some regret that while its light was still left to us we did not regard it with greater attention, and pay it a tribute of loftier admiration. The people, so long as its brains are not bound up with cotton-twist, its heart stuffed with calico, and its eyes blinded by steam, knows its great men by instinct, but too often the recognition is made as it beholds their funeral obsequies. War, that terrible necessity which is co-existent with the individualities of states and empires, and which is only to be destroyed by the obliteration of all the geographical definitions which mark their limits, is still the *ultima ratio* of nations; and he who can best use the weapons of that dreadful and most trenchant rhetoric will so long be invested with the old heroic grandeur in the minds of his fellow-countrymen. We recognise in the warrior who vindicates the honour or defends the liberties of his native land one whom Heaven has gifted with special qualities for the holiest of objects. Whether he be clothed in the steel-plate of

FUNERAL OF SIR CHARLES J. NAPIER, AT PORTSMOUTH.

LIEUT.-GENERAL SIR CHARLES J. NAPIER'S FAVOURITE CHARGER, "RED ROVER."

Sidney, or the earlier cont of a Napier, we do homage to the generous courage, the chivalrous spirit, the grand and simple characteristics of those *fulmina belli* which have cleft their fiery way though the enemies of our name and nation, and have trodden down their legions, and turned the tide of victory around our banners."

In anticipation of the said ceremony, the Town Council of Portsmouth met on Wednesday, when it was resolved that the Mayor, Aldermen, and officers of the Corporation of Portsmouth, should attend the funeral; and, at the same time, a letter of condolence was addressed to Lady Napier.

THE LYING-IN STATE

At Oaklands, where the hero breathed his last, was presented the impressive scene which our Artist has depicted on the preceding page. Sir Charles Napier expired under the old colours of the 33rd Regiment, for his son-in-law, Major M'Murdo, took those glorious relics from the corner of his chamber, and fastened them to the head of his open bedstead before breathing ceased. His remains subsequently lay in state: the head of the coffin immediately beneath the fine picture of "Meanee," by Jones; and the glorious colours of the 33rd hanging over it. On each side of the corpse is an Indian spear, and around are Beloochi shields, sabres, pistols, &c., and other trophies taken in battle. At his feet is the Chief Annes's white marshal-chair of state, over the back of which are arranged the General's military orders, the Grand Collar and Cross of the Bath. On the seat he has placed his naval service, and other accoutrements worn in fight. Beside the coffin are two sashes of honour—one presented by the Lord of Ellenborough, the other by the officers of the 102nd Regiment, which he commanded in a victorious expedition against the Affreedees. Last and most esteemed of all, is placed, close beside him, a sword of honour presented by the Bengal Soldiers, his desperate enemies in war, but, after experiencing his government in peace, his great admirers and firm friends, for, when he had power in his hands, those generous men gave him the sword, as a testimony that they regarded him as the pacificator and benefactor of their country; therefore it lies beside him in death.

THE FUNERAL.

On Thursday, the day of the funeral, vast number of persons began to assemble on the line of the route to be taken by the mournful cortége. The number present was estimated at 50,000. From many of the shops on the town being closed, the general aspect of the streets was one of deep and general mourning. The moment the people of Portsmouth heard of the movement which was made to surround the simple and unostentatious funeral of the conqueror of Scinde with some sort of popular excitement, and to give it a public character, which the wishes of the deceased, and of his friends, seem to forbid—at all events, to deprecate—they joined in it with the utmost enthusiasm. The town of Portsmouth acted warmly and readily the instant that the officer commanding the garrison at the time gave them the initiative. Few of us who were present at the funeral of the Great Captain in St Paul's, in the close of last year, can forget the "sensation" of sympathy and respect which ran through that vast multitude as they beheld the veteran lieutenant, who had borne so distinguished a share in the most daring and gallant of the many daring and gallant actions emblazoned on the colours of our Peninsular regiments, hobbling stiffly up the aisle, all scarred and scarred and battered by bullet, bayonet, sword, and musket-butt, and bearing about him the traces and proofs of his long and desperate service. There was a murmur at the moment—"There is Sir Charles Napier" and as one saw that eagle face, that bold strong eye—caught, in fact, the "aquiline" expression of the whole countenance—he felt there was a mighty man of battle" before him. The feeling that he was so indeed—that he was a great soldier and an excellent citizen, no doubt, prompted the people of Portsmouth to observe the day of his funeral with all honour: and it must be said that they kept it befittingly. For two hours before the cortege was appointed to pass, nearly all the houses in the High-street and along the route to the burial ground were closed, and all had their shutters up.

The inhabitants of the remoter part of the town of Gosport, of the Island of Southsea, and of villages and towns all along the coast, left their homes, and poured into the streets, or private houses in the commanding localities. All along High-street the houses were crowded from the ground to the roofs; and, in many instances, indeed, even the house tops were occupied by men and children. The ramparts at the Landport, the Platform Battery, and the ramparts by the beach, near the church, were all covered by a dense mass of people.

The troops who took part in the proceedings were understood to be fourteen hundred. No compulsion of any kind was used to secure their attendance. Most of them came from Gosport; and it is just sufficient to say that the detachment to Portsmouth must have cost each of the privates nearly a third of the whole, a sizable portion of their day's pay for the ferry. And yet between 2500 and 3000 men of these marched and rowed privates of the British army, made the sacrifice cheerfully to do honour to those great deeds and name were known to most of them only by hearsay.

Colonel Commandant Menzies, aided de camp to the Queen, acting Lieutenant-Governor in the absence of Major-General Simpson, issued the following orders in reference to the funeral:—

Accordingly, some 5000 men and officers assembled and paraded the inhabitants in their demonstrations of regard. The Commander-in-Chief, Lord Hardinge, was down from London to attend the funeral, following it from Oaklands. The Lieutenant-Governor, Major-General Simpson, also repaired to his post and acted as one of the pall-bearers.

The roads from Oaklands to Portsmouth were covered with spectators. All along High street, from the Garrison Chapel to the Landport gates, there was soon formed a living wall of regimental masonry in green and red and blue and white, with vari-coloured facings and feathers brightening up its layers, and relieving the sombre lines of the bank of civilians at the rear. At the Artillery Barracks a number of naval and military officers in full uniform assembled in order to join the procession; and Sir J. Graham and the Lords of the Admiralty attended at the same place till the cortége arrived. The First Lord was dressed in a suit of mourning, but the Naval Lords were in uniform. They were joined here by Commodore Schroeder and the officers of the Prussian frigate *Gefion* and corvette *Amazone*, and by M. Vandenbergh, the worthy and respected Prussian Consul at the port, who was attired in his consular costume. The funeral cortége left the seat of the deceased General soon after twelve o'clock, in a very quiet and unpretending manner. The hearse and mourning coaches were plain and unostentatious, nor was there any following of private vehicles; but all along the crossroads of the route, from the mansion to the Landport of Portsmouth, a distance of seven miles, the country people had collected, and with uncovered heads waited till the carriages had passed.

About two o'clock the carriage containing the coffin and the mourning coaches arrived at Landport, and the procession was then formed in the following order:

The Masons of the Phœnix, Royal Sussex, and Portsmouth Lodges. Sir Charles Napier's Favourite Charger.
The Mayor and Corporation of the borough of Portsmouth.
Their Carriages, and with their insignia of office.
Chariot with Dr. E. J. Scott, Dr. Wilson, Dr. Davis and Mr. Perry.
Undertaker—Messrs Marvins
Mutes
In Astol
Four Soldiers. Four Soldiers. Four Soldiers.
Chariot with trappings
Mourners
1st Carriage—Ladies of the family
2nd Carriage—R. Napier, Esq., Lieutenant-Colonel W. Napier, Major M'Murdo, J. Napier, Esq.
3rd Carriage—C. Napier, Esq., Mr. Alcock, Mr. J. Alcock, Vice-Admiral Sir C. Napier
4th Carriage—The Earl of Ellenborough, Viscount Hardinge, Lieutenant-General Sir W. Napier.
Colonel Kennedy.
Pall-bearers.
Rear-Admiral the Hon. H. D. Byng
Major Travers. General Hunter. W. Grant, Esq.
Sir Colin Campbell.
Major-General Simpson
Carriage of the deceased.
Lords of the Admiralty
Officers of the Navy and Army
Seamen and Marines' Orphan School.

Soldiers. Soldiers. Sir Jas. Graham and the Lords of the Admiralty. Sir Jas.

In this order they advanced down High-street. The masons all in full mourning, the corporate officers in their robes, the hearse with nodding plumes, and the row of dark carriages, followed by the blaze of uniforms, had an effect all the more striking, perhaps, that no sound was audible save the tramp of feet and the grating roll of wheels, for "not a drum was heard—not a funeral note," save the slow booming of the death-bell, so that a wondrous silence reigned over the whole scene. Major Travers, one of the pallbearers, is the only officer who now remains alive of all who messed and lived and fought with the dead General in Spain, and it is somewhat noteworthy that the very battalions in which they both served should have furnished men to accompany the funeral procession. Mr. Grant is an old personal friend of the deceased. Major-General Simpson, the Commandant of the town, was also an old friend of Sir C. Napier.

The charger of the late General, "Red Rover" a handsome light bay—which bore him through many a hard day in India, followed the hearse, led by a groom, and decorated with military trappings, while the boots which had so often pressed his sides in the *reconnoissance*, or the gallop, hung dangling idly to the nimble leathers. As the officers and seamen passed, the soldiery closed in from the sides of the street, and formed a dense column across it, bring up the rear of the procession. The cortege took about fifteen minutes to pass, and arrived at the entrance to the Garrison Chapel before three o'clock. Inside the humble walls, which serves as garrison chapel, a great number of ladies and gentleman were assembled, and outside the crowd was very dense. The coffin was removed from the hearse at the entrance of the churchyard; and the chaplain of the garrison (Mr. Milner) meeting it there, proceeded to read the sublime funeral service of our Church. It was observed that the coffin was not highly decorated or over ornate. The inscription on it simply stated that Lieutenant-General Sir C. J. Napier, C.B., was born on such a day, and died on such another.

On the lid were the General's hat, with plume, &c., of the deceased. There were two swords also, one of which was worn by the General for many years, and memorably in the last fatal campaign. The guard was torn up and bent backwards towards the blade from the hilt. This was the work of a musket or gingal ball at Hyderabad. The second was a *sabre d'honneur*, a very richly mounted and handsome weapon, presented to the General by Lord Ellenborough when Governor-General of India.

When the coffin was lowered into the grave a plain bracked-up pit, some five or six feet deep, by the side of the path from the door to the church and the solemn words "Earth to earth, ashes to ashes, dust to dust" were pronounced, not a few of the old soldiers present were unable to restrain their emotion. As soon as the service was concluded Mr. Napier, standing by the side of the grave, turned round to the soldiers, who formed three sides of a square round it, and, as well as we could hear, said,—

Soldiers! There lies one of the best men the best of soldiers—the best of Christians that ever lived. He served you faithfully, and you served him faithfully. God is just.

The gallant officer could proceed no further. He had evidently intended to speak something at greater length, but was unable to command his words, and slowly and sadly the group around the grave broke up, and the military filed away. The crowd gradually thinned, and at last nothing was to be seen in the churchyard but the men who were closing up the mortal resting-place of one of the noblest soldiers England ever sent forth to do her service.

THE LATE SIR CHARLES NAPIER

To the Editor of the ILLUSTRATED LONDON NEWS

SIR, In your interesting memoir of Sir Charles Napier, you do no notice that the post of first Governor of the new colony of South Australia was offered to, and refused by him, on grounds creditable to his foresight and economy, as there and that it was this offer which produced his work on Colonization. The subject is thus alluded to in Sidney's "History of the Three Colonies":—"The Commissioners first offered the post of Governor to the present distinguished General, then Colonel Sir Charles Napier; but, on being refused a small body of troops as police, and power to draw on the British treasury for money in case of need, he declined the dangerous honour (which ruined the Colonel who did accept it), observing, with wise prescience: 'While sufficient security exists for the supply of labour in the colony, and even forces that example, there does not seem to be any security that the supply of capital will be sufficient to employ that labour.' Thus Australia lost an active Governor, and India gained a great General. Of the two Governors appointed, one was compelled to receive four hundred thousand pounds, and the other obtained a company of soldiers in lieu of an expensive police.

AN AUSTRALIAN.

THE LATE SIR CHARLES NAPIER.—Lieut.-General W. Napier has written a letter to correct an error into which the biographers of his brother have fallen: the statement that to the late Marshal Soult Sir Charles Napier owed his liberty at Corunna. He says:—"It was not so. Marshal Soult treated him with great kindness, and I would no doubt have continued to do so; but I marched from Corunna three days after the battle, leaving Sir C. Napier to the care of Marshal Ney, who protected him for several months, and finally gave him his liberty. The circumstances deserve to be repeated, as showing the generous temper of Ney. His Aide-de-Camp, Captain Comet, reported that a frigate had sent a flag of truce to inquire if Major Napier was living? Tell them 'Yes, so that he is well. Let him be seen.' Captain Comet looked expressively at the Marshal, and said, 'He has an aged mother, a widow.' 'Let him go himself, then, to tell her he is alive,' was the response. And with Major Napier he freed about twenty-five English soldiers, who had been badly wounded and left behind."

THE PENNY POSTAGE.

Looking over an old number of "Chambers' Edinburgh Journal," dated May 20, 1837, No. 277, I find an article on the system of Penny Postage, then proposed to be adopted. My object in drawing your attention to the subject is to show how much an historian, or author, however well-informed, may be deceived by anticipating the future from that which has resulted from past or present experience. The following extract is taken from the article referred to: "We have followed Mr Hill through the whole of his reasonings, and are convinced that he has fallen into one error. We consider this as one of the most visionary schemes ever put forth by a writer on finance. Mr. Hill, like most political economists, commits the blunder of making no allowance for the passions, the feelings, the habits, and stupidities of mankind. At present every body knows how to put a letter in the Post-office, but under the system proposed only a section of the people would know how to process letter, imagine every one having to buy stamps beforehand for his letters or having to pay a penny with every letter he submitted to the inspection of the Post office clerk, per. You see here that nothing like decency or feeling or the preservation of secrecy is taken into account. Every one who sends a letter is to come under the scrutiny of an officer of Government. But this is not all: the payment of the penny is full as open to objection. People will pay postage when they receive a letter, their feelings at the moment inducing them to pay any sum that is reasonably demanded; but few like to pay money along with a letter; as much as a penny is, we believe that it would be grudged severely by many, and its exaction would, in effect, ruin the whole project. Looking at human society as at present existing, we are sure that it will never work."

In reference to much on various reasons for the falling off of the postage since at that time, and to suggest modes for the future regulation of the postage, mentioning the fact that in the United States as a precedent a letter conveying 30 miles, 4d.; 30 to 80 miles, 5d.; 80 to 150 miles, 6d.; and so on, it may appear strange that a journal such as the Illustrated London News should not, in a penny as well as a penny-a-year, have taken notice of such useful and progressive measures. ROBERT RAINIER.

Camberwell, Sept. 6, 1853.

THE BIRMINGHAM GAOL INQUIRY.

This important inquiry has now proceeded over twelve days; and the disclosures of each day have added some new phase of harsh treatment or cruelty. Refractory boys of twelve and upwards were punished by being put to "the crank," the "waistcoat," and the "leathern collar." We give an outline description of these articles:—the labour upon the crank is the snake-like turns of the handle, the weight of the crank being nominally 5 lbs., but in reality 15 lbs.—a weight too great for a robust labourer. Any lad, not having performed his task, was sentenced to bread and water, and for shouting and making noise he was punished with the strait waistcoat, in addition to the deprivation of his regular food. The jacket is a linen garment, into which the arms are thrust, and fastened by a series of straps behind: a strong leather belt is passed over the arms, restraining them as if they were pinioned, and fastened to the waist. Round the neck is buckled a leathern collar, 3½ inches in depth, a quarter of an inch in thickness, and the edges unbound. Upon this the chin is supported. In this gallery, with the straps so tight that the finger could not be inserted between the leather and the skin, the lad was placed for several hours together, and drenched with water to keep him from talking or "shamming." When released from this torture, he was again placed upon the crank, "the work of a quarter of a horse." With a famished stomach, and enfeebled with the restraint and privation of preceding punishment, he is, of course, unable to do the work, and is left in the cell in the dark, to labour at his dreary task. One punishment alternates with another, until the mind and body are prostrated, and at last the poor boy seeks escape in self murder.

The examination called many of these things into sight. One day, last week, several of the boys in the Reformatory school detailed their experience of prison life. Abner Wilkes, of fifteen, was strapped to the wall, for breaking his crank; he was unable to feed himself, and even with Mr. Sherwin's assistance he was unable to tie the bread to the collar. A second, William Jay or, quite a boy, was kept without food from Wednesday night till Friday morning; a third, William Barnes, eleven years old, served a month on bread and water, and was put into the collar for this offence; a fourth, Thomas Lloyd, ten years of age, for rapping on the wall, was sentenced to three days in the collar, three days with bread and water, and fourteen days without bed and gas; a fifth, Isaac Cottings, eleven years, for writing on his tin can, had three days in the jacket, three days' bread and water, and nine days deprived of chapel, three days no dinner, and fourteen days without bed and gas; for a still more trivial offence three days more bread and water.

The general treatment of the lads appears to have been mostly of a very severe nature. With respect to the general question of the discipline, it is proved, that the returns made to the Home Office were false—feigned cases of illness were reported attempts at suicide. Entry after entry is made that such and such a person died in the infirmary, while he was left to drag out his existence in his cell, without a bed to rest on, but some mid example in a hammock. The summary justice seems to have been nearly unused, the prisoners generally dying in their cells. Insane prisoners were frequently left alone in their cells, to do as they pleased with themselves, and so far was the system of carelessness carried that prisoners have been known to die in their cells without a creature beside them to receive their last breath.

On Tuesday evening the inquiry was brought to a close. Mr Lucy, one of the visiting justices, disowned all knowledge of the severities and extreme cruelties practised in the goal. He also deposed to having, in one instance with his brother justices, sentenced the system when they became aware of cognizant of it, after the death of the boy Andrews whose death gave rise to the investigation.

Mr Wills, also a visiting justice, declared that the visiting justices, deposed generally, that he was not cognizant of the severe punishments which were practised in the goal. He had given directions that the strait-jacket should not be used, except when rendered necessary by the extreme violence of a prisoner, and had never seen the collars before that were produced in the course of that inquiry. The witness admitted that he was one of the magistrates who, in their report to the Home-office, expressed their approval of the conduct of Lieutenant Austin. He was not quite shocked to hear of the practice when had been pursued of depriving boys of their food for the space of a day. Mr. Wills was examined at great length, but nothing material was brought out which had not been previously stated by other magistrates.

Mr Perry, the Inspector of Prisons for the Midland District, spoke to having reported Lieutenant Austin against the infliction of severe and unusual punishments in January last.

After a few explanations from Mr. Jaques, Mr. Wills, and Mr. Perry, the evidence on all sides was brought to a close.

Some days will most likely elapse before the Report on this painful and unlooked-for evidence can be laid before the public.

A roll of papyrus, purchased at the sepulchral diggings about Luxor, turns out to contain some pleadings at the Greek bar. They are three centuries older than the Christian era, and are said to be older than any known MSS.

THE THEATRES.

DRURY LANE.

Mr. Brooks still continues to attract crowded houses. Last Saturday's performance was of considerable interest, as it involved a new character,—that of *Iago*.—Mr. Davenport undertaking *Othello* in *Iago*, Mr. Brooke had a character rather of intellect than passion, and one that required subtle elocution as distinguished from vehement demonstration. The performer here, accordingly, is to be seen in quite another light as in *Otho* by and Mr. B cooke afforded an air of easy nonchalance and familiarity of speech, that brought him to the ordinary level of stage-power. The assumption of character proved flippant; there was no exaggeration, but there was no profundity. Deep-seated malice was not indicated, though great emphasis was judiciously given to the passages in the soliloquies expressive of his jealous suspicions regarding both *Othello* and *Cassio*. Mr. Brooke's is far from the best *Iago* we have on the boards; that of Mr. Marston is much superior, and Mr. Vandenhoff leaves it at an immeasurable distance. We were much better pleased, and had much more reason to be satisfied, with Mr. Davenport's *Othello*. In person majestic, in style natural, in disposition gentle. Mr. Davenport's *Othello* has never been exceeded for tenderness, suavity, and pathos. Nowhere was there obstreperous display; but the climax of passion was reached with cumulative power, and the plaudits of the house secured for the proper places in the text. Intelligence, taste, and judicious treatment belong to Mr. Davenport in general; to these qualities, he adds, in the noble Moor, a fine range of emotion, and a magnificent bearing for the display of which the character affords frequent opportunities, none of which were omitted by this thoroughly good and well-practised actor.

ASTLEY'S.

A change of performances has at length occurred at this equestrian theatre. The new management has selected a classical subject; the new drama beginning with a plentiful group, but continuing and ending in burlesque. The piece is entitled "Jupiter's Decree, and the Fall of Phaeton; or, the Fiery Coursers of the Sun." The dialogue is by Mr. W. Eater, whose attempts at humour, however, it must be confessed, are not always of the most salient order. The main effects of the production are the pictorial situations—the falling and the fallen Phaëton, with the Horses of the Sun variously grouped about the chariot, form two magnificent tableaux. For grand and picturesque arrangement these perhaps have never been excelled. There is also a ballet introduced, with Mdlle. Christine for its heroine, of great merit, spirit, and purpose. The reception of the new drama was enthusiastic. It was succeeded by the athletic feats and humours of the ring. In the latter Miss Emily Cooke is the great star rider, and performs feats of extraordinary agility. Her leap through sixteen tissue papered hoops appears to be a performance of much difficulty. Sufficient impetus to carry the body through the air a considerable distance is required; and even then the result is not to be accomplished without an evident act of intensified and prolonged volition. Miss Emily Cooke, however—though sometimes not until after repeated trials—subdues all obstacles by the force of will and, with great dash, makes each and every one make her aerial passage through all the impediments, as if, like Plato's pigeon, she had to encounter no resisting medium. The new management is clearly capable of sustaining the ancient triumphs of the arena, and the "scenes in the circle" still continue to command admiration, as of old, and that "involuntary praise" of wonder which at all times has been the reward of the gymnast and the equestrian.

SADLER'S WELLS.

"The School for Scandal" and "Virginius" have been revived. The *Sir Peter Teazle* of Mr. Phelps is effectively artistic one of those chaste pieces of individuality, indeed, in which this judicious performer is most potent. His *Virginius*, also, is pathetic, well studied, and effective; not withstanding the level and measured style of the performance. Not a syllable of the text but is duly weighed. The houses have been well attended.

THE NEW LAW ON RECEIPT STAMPS.—The new law on receipt stamps, which will take effect from and after the 10th day of next month, is of public importance. On all receipts for the payment of £2 and upwards the new duty is one penny, and may be denoted either by a stamp impressed upon the paper wherein any such instrument is written, or by an adhesive stamp, &c. Parties and the Commissioners of the Inland Revenue are to provide stamps of both descriptions for the purpose of denoting the duty. In any case where an adhesive stamp is used for the purpose aforesaid, any person writing or causing to be written upon any part of the said adhesive stamp, or upon any piece of paper or parchment on which the same is given shall, before the instrument is delivered out of his hand, custody, or power, cancel or obliterate the stamp so used, by writing thereon his name, or the initial letters of his name, or in such manner as to show clearly and distinctly that such stamp has been made use of, and so that the same may not be again used; and if any such receipt, &c., is given, and the stamp not effectually cancelled, the party giving the same is to forfeit the sum of £10. Any person getting off or removing, or getting the stamp and using or causing it to be used for her Majesty, is to be liable to a forfeiture of £50. Persons having receipt stamps on hand are to be allowed for the same.

WILLS.—The will of the late Earl of Ducie was proved in London, on the behalf, by his brother-in-law James Baughton Langston, Esq., the Hon. Percy Moreton (his Lordship's brother) having a power reserved to him. The personalty was sworn under £120,000, which is bequeathed amongst younger sons and daughters, his Countess taking a life interest therein. *Benjamin*.—The late Admiral Sir Charles Bullen, K.C.H., has bequeathed to his nephew, Richard Edward Bullen, R.N., his residence at Southampton, together with the whole of the furniture, pictures, plates, &c., and his star as Knight Commander of the Bath. The rest of his property, real and personal, is to be divided into four equal parts between his said nephew and three nieces.—Richard Long, Esq., of Penzance, Cornwall, has left to the British and Foreign Bible Society £100s, and to the London Missionary Society £1000.—Mrs. Gubbe, of Chester, has bequeathed £200 to the London Society for promoting Christianity among the Jews, £200 to the London Tract Society, £50 to each of the following:—The British and Foreign Bible, Church Missionary, and London Missionary Societies; and £100 to the Schools of St. Mary's Church, Birkenhead.

TESTIMONIAL.—A short time since the sum of £13 was transmitted to the Rev. P. S. Desprez and Mr. T. Pinchard, of Wolverhampton, anonymously, for the purpose of purchasing a Bible, to be presented to the Rev. Robert Bilmore (now Curate and Sunday Evening Lecturer of St. Luke, Old-street, London), and to bear the following inscription:—"Presented to the Rev. Robert Bilmore, B.A., late Curate of St. George's, Wolverhampton, by an unknown friend, as a testimony of personal esteem, and an appreciation of his courageous and devoted conduct during the cholera in 1849."

MRS. GIBBON, THE AUNT OF THE HISTORIAN.—Among the papers of this lady were found, after her decease, several letters to her from her nephew, Edward Gibbon, the historian, and his friend Lord Sheffield, from which it would appear that the religious views of the former had, at least from the year 1768, undergone considerable change from one of these interesting letters, shortly to be published, the following is an extract:—"Whatever you may have been told of my opinions, I can assure you with truth, that I consider religion as the best guide of youth, and the best support of old age; that I firmly believe there is less real happiness in the business and pleasures of the world, than in the tranquil which you have chosen of devotion and retirement."—From *Notes and Queries*.

A RELIC OF FERNANDO CORTEZ.—The Duke de Montpensier has just purchased the humble house which was inhabited by Fernando Cortez, at Castiglia de la Cuesta, near Seville. The Prince, being desirous of transmitting to posterity what may be called a monument of Spanish national *keep*, is about to have the house repaired, without changing its form, so as to leave it just as it was inhabited by the illustrious Spaniard.

THE BRITANNIA AND MENAI BRIDGES.—A new neighbourhood is rapidly springing up in the district in the immediate vicinity of these far-famed structures; and, before many years have elapsed, a large and populous town will have risen up. The price of land has advanced enormously; ground which four years ago realised £5 now being now worth £25. A new hotel is about being erected between the bridges, and elegant villas are to be built in the park which was so beautifully designed and laid out by Sir Joseph Paxton. In the neighbourhood of Bangor the price of land has advanced amazingly, and such is the case all along the Chester and Holyhead line.

GREENWICH HOSPITAL.—Improvements at Greenwich Hospital and in the grounds are being carried out, which will be of much advantage to the locality. The bad and vane near the dome surrounding the Painted Gallery have been regilt, as also that over the chapel. At the west end a large space of ground, which has been cleared away, is being covered over with sods of grass, and an extensive gravel walk is being laid down. This is intended for the visitors and the pensioners, who will have a shed erected for them, where they will be allowed to smoke. An elegant iron railing will be erected in front of the hospital, facing the flames.

CHESS.

TO CORRESPONDENTS.

*** Our customary Notices are resumed this week and will in future be continued without intermission.

J. D. M.—It is probable, but not certain. Due notice, however, will be given to our northern friends.

To C. F. S., Bromwich. J. W. S., Boston. U. S.; F. M., of Preston. M. P. C., Halifax; and to many others too numerous to specify, our thanks are returned for their obliging communications.

J. S., Dalston.—Quite right. The Kt could have been safely taken.

R. F., of Culcheth. We are sorry and surprised, too, that you have failed in your laudable endeavour to establish a Chess-club in the regiment. We should have thought the game of Chess, of all others, the most preferable and congenial recreation for military men.

R. D., Portsmouth.—Your very interesting communication on the subject of Russian Chessmen shall appear. The address given is quite eligible.

A SUBSCRIBER. It is in contemplation, we believe, to publish a list every month in the *Chess Player's Chronicle*.

LES PETITS ENFANTS.—In the event of the player being reduced to his King and one Pawn or piece, that remaining Pawn or piece may be taken by his adversary. 2. In former times the party stalemated was considered to have won the game. At the present day, stalemate makes a drawn game.

A. L., Albany street; G. Mea., Edinburgh; R. W., of Wakefield.—They shall be examined and reported on immediately.

WAVERLEY.—See the notice above, to Les Petits Enfants.

SOLUTION OF PROBLEM No. 497.

WHITE.	BLACK.

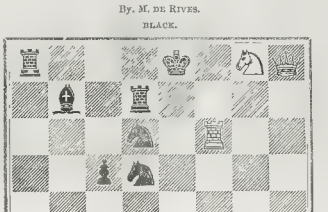
PROBLEM No. 501.

By. M. DE RIVES.

BLACK.



WHITE.

White to play, and mate in four moves.

CHESS IN RUSSIA.

The following beautiful Game was lately played between Mr. SCHUMOFF and Prince OURUSSOFF, the younger.

(*Genoco Piano.*)

WHITE (Mr. S.)	BLACK (Prince O.)	WHITE (Mr. S.)	BLACK (Prince O.)
1. P to K 4th	P to K 4th	17. Kt to K 4th (d)	Kt takes Kt (e)
2. Kt to K B 3rd	Kt to Q B 3rd	18. B takes Q	B takes P (ch)
3. B to Q B 4th	B to Q B 4th	19. K to his 2nd	P to K Kt 6th
4. P to Q B 3rd	Kt to K B 3rd	20. P to K R 3rd	R takes B
5. P to Q 3rd	P to Q 3rd	21. B takes K B P	B to K B 4th (f)
6. B to K Kt 5th	P to K R 3rd	22. B to Q 5th	R to K 2nd
7. B to K R 4th	P to K Kt 4th	23. P to 4th	P to Q B 3rd
8. B to K Kt 3rd	P to Q R 3rd	24. R takes Kt	R takes P
9. P to Q Kt 4th	P to Q Kt 3rd	25. R to K Q sq (g)	Kt takes B (ch)
10. P to Q R 4th	Kt to K 2nd	26. K to his B sq	P to Q B 7th
11. Q to her Kt 3rd	Kt to K R 2nd (a)	27. R takes P (ch)	K to his 2nd
12. Q Kt to Q 2nd	Kt to K Kt 3rd	28. R to Q 2nd	B to K 3rd
13. P to Q 4th	P to K Kt 5th (b)	29. Q takes Q B P	B to Q B 5th (ch)
14. Kt to K R 4th	Kt takes Kt	30. R to Q 3rd	K to K B sq
15. B takes Kt	P takes P	31. Q takes Q B	R takes Q
16. P to K 5th (c)	P takes Q B P		

And White resigned the game.

(a) There is a freshness and originality about the games of the Prince Ourussoff, that render them as delightful as they are instructive to the chess student.
(b) A capital counter-move.
(c) All these moves were ever-justly conceived.
(d) What might also have taken the Pawn with his Queen.
(e) This, though perhaps unasked, is played with remarkable ingenuity.
(f) From this point Black plays in a most masterly manner.
(g) Q takes P seems a better move.

CHESS BY CORRESPONDENCE.

Game between Mr. BIGLAND, of Leamington, and Mr. ZACHARY, of Huddersfield.

(*Sicilian Opening.*)

WHITE (Mr. Z.)	BLACK (Mr. B.)	WHITE (Mr. Z.)	BLACK (Mr. B.)
1. P to K 4th	P to Q B 4th	14. Kt to Q B 4th	P takes P
2. K Kt to K B 3rd	Q Kt to Q B 3rd	15. P takes P	P to Q R 4th
3. P to Q 4th	P takes P	16. Q to K 6th	P to Q R 5th
4. Kt takes P	P to K 4th	17. Kt to Q B sq	B to Q R 3rd
5. K Kt to Q Kt 3rd	K Kt to K B 3rd	18. Kt to K R 3rd	Q R to Q B sq
6. Q B to K Kt 5th	P to K R 3rd	19. Kt to Q 2nd	B to Q sq
7. B takes Kt	Q takes B	20. Kt to K 2nd	B to Q Kt 4th
8. B to Q B 4th	B to Q Kt 5th (ch)	21. Kt to K 3rd	Q to K 2nd

REFORM IN AGRICULTURE.—THE DUCIE FAMILY AND ESTATES.

(*From a Correspondent.*)

The unprecedented prices obtained for the live stock of the late Earl of Ducie, at the recent sale at Tortworth Court, Gloucestershire (600 and 700 guineas each for cows), have attracted public attention to the agricultural reforms achieved by his Lordship and his scientific assistants. We propose to take a brief review of those improvements and of the estate generally. First, of the estate and family:

The principal seat of the family is at Woodchester, near the clothing town of Stroud, in which it has considerable influence. The situation is thirteen miles south from Gloucester. Tortworth Court is another estate, about twenty miles south-west of Gloucester. It is remarkable for its fertile meadows and woodland scenery. The most ancient chestnut tree in England grows there. It is known to have been a tree in the year 1216. Atkyns, in his county history, describes it (130 years ago) to be several trees grown into one. But the present writer agrees with more recent authorities, in believing it to be one entire growth. It was eighteen yards in circumference at the end of last century, but was then, as now, much decayed.

The parish of Cromhall is the scene of the greatest of the Ducie agricultural changes. It is situated about twenty-three miles south of Gloucester, and six west of Wotton-under-Edge. Like Tortworth, it forms a portion of the Vale of Berkeley.

The Ducies came to England from Normandy with a regiment to contend for Queen Isabel, consort of Edward II., against the Royal favourites, the Spensers. For this service they got a grant of land in Staffordshire. This continued in the family for many generations, until James Ducie, Esq., sold most of it, near the end of the reign of Henry VIII. The son of his second son being poor, went into trade in London, flourished, and married the daughter of an Alderman. He was Lord Mayor in 1631; and, being immensely rich, was made banker to Charles I. At the breaking out of the Civil War, he lost £80,000 by the King; nevertheless, he left £400,000 to four sons, and the title baronet to the eldest: he also left him Tortworth Court and the other estates, which, in the reign of Queen Victoria, are undergoing such wonderful transformations. They were sequestered from his son, Sir Richard Ducie, by Oliver Cromwell. He compounded for a payment of £816 14s. Dying unmarried, he was succeeded by his brother Sir William Ducie, who was created Lord Down by Charles II. Having no issue, the estates passed to his niece, wife of Edward Morton, and Mortons, in Staffordshire. This brought the present surname of Morton into the family. This lady's son and heir was Matthew Ducie Morton, who was created Lord Ducie in 1720, and having married the daughter and sole heiress of Sir Thomas Prest wich, of Lancashire, acquired that valuable property now known as the Ducie estate, in and on the north side of Manchester. Some of it is already covered with valuable buildings, and all of it promises to be soon covered with the great thoroughfares of that advancing city.

It does not appear that any successor added materially to the estates except the late Earl, and he did so by increasing the productiveness of the soil already in possession, rather than by acquiring a greater number of acres. As space is limited, we refer only to one farm, that of Whitfield, in the parish of Cromhall. The figures are given on authority.

VALUATIONS.—The valuation of the farm for a poor-rate in 1840, the last year of the old system, was £120, the gross rental being £200. In 1853, the third year of the new system, the valuation for poor-rate was £204, the estimate of gross rental being £364.

EXTRA LABOUR.—In three years there had been expended on extraordinary labour (other than that of routine culture)—namely, on roads and bridges, grubbing old hedges and roots of trees, drainage, levelling, fences and walling, sub-soiling, liming, and erection of buildings, the sum of £7823 11s. 3½d.

WAGES.—The wages paid under the old system were—to two men at 9s. a week each, one boy at 3s., and two women at 4s. each, £75 8s. per annum; to four men at 9s. a week, harvest for ten weeks, 18s. each, £24; to carpenter, blacksmith, horse and cow-doctor, &c., £15: total, £114 8s.

Under the new system, the wages for ordinary labour were estimated at for hirers and other day-labourers, £178 19s. For the following men hired by the year: superintendent, £80; foreman, £39; three ploughmen, £78; shepherd, £33; cowman, £26; two boys, £20; dairymaid, £20; second dairymaid, £15; old man for jobs, £18 12s.; carpenter's bill, £13 18s.; blacksmith's, £15 10s.; saddler's, £4 10s.; hurdle-making for sheep, £8. Total, £550 1s.

PRODUCE.—The produce under the old system, on an average of twenty-one years, was—from twenty-five cows, 62½ cwt. of cheese, at 50s., £156 5s.; the calves of same cows, at 30s., per cow, £37 10s. A fat pig sold for every five cows—five at £3 each, £15: eighteen calves, at 10s. each, £9; seven cows or heifers, sold at £9 each, £63. Wheat (average about 12 bushels per acre), 168 bushels, at 7s., £58 16s. Barley (averaging about 20 bushels per acre), 80 bushels at 4s., £16. Eighteen acres of potatoes (one-third only manured, averaging about 8½ tons per acre), £96. Eight acres of tassels, £12. About 25 acres of farm occupied by profitless swamps, banks, foul hedge-rows, &c.

Produce under the new system, in the second year from commencement of agricultural reform.—In one field of 10 acres, the wheat yielded *forty-five* bushels per acre, instead of *twelve*, as before. The whole wheat crop of forty acres yielded from forty-one to forty-six bushels per acre; and would probably have done more but for the excessive weight of straw, amounting in one instance to 2104 cubic feet per acre, after being five weeks in the stack.

In the first year of the new system, white carrots yielded twenty-seven tons per acre. Oats, barley, beans, and turnips were grown in like proportion. There were 1600 cubic yards of farm-yard manure, besides large accumulations of liquid manure in tanks—the solid being estimated at three buildings per cubic yard.

The live stock consisted of 412 sheep, which, with wool, were valued at £1075 11s; thirty-two Hereford oxen, value of £532; three cows, value £22; thirty-three pigs, £41; and ten horses, £410. Total value of live-stock, £2,080 12s.

BUILDINGS.—The farm buildings, under the old system, consisted of a dwelling house, 46 by 35 feet, containing kitchen, back kitchen, dairy, and parlour below, with four bed-rooms above. A small barn, a stable for four horses, a shed for eight cows, a house for four cows, and a calves' house. The rest of the live stock had no shelter, and all these buildings were in bad repair.

Under the new system, the buildings consist of barn, straw-house, chaff and root-house, two stables, feeding-house for cattle, open shed for cattle, granaries, open sheds for sheep, cart and tool-house, piggeries, root-house and granary (second set), steaming-house, house for steam-engine, open courts for loose stock, manure tanks, weigh-bridge, and cottages for married workmen: also, buildings to contain the thrashing and winnowing machinery driven by the steam-engine. The timber, which choked up the numerous small fields before, paid for nearly half the cost of erecting three buildings, and effecting the drainage, new roads, bridges, and fences. The increase of produce up to the present time, 1853, has averaged 1000 per cent in quantity for human food over its amount up to 1841. Wages are 30 per cent higher for each person, and the persons employed are 500 per cent more in number than under the old system. The farm during the last ten years has been let to a tenant (the intelligent agent, Mr. Morton, who first improved it), and yields a satisfactory rental. The work-people, with improved wages and considerate master, have equalled in moral advancement the physical reforms of the farm.

In connexion with the above sale, it will be interesting to record the sale of a bull, which has realised a higher price than any obtained by the late Earl Ducie's stock.—

In the year 1810, the then celebrated short-horned bull "Comet" was sold for the extraordinary sum of 1000 guineas—a price which no bull has ever before realised, and which, it was predicted, would never occur again. This allegation continued to be correct until within the past month, when Mr. Booden, of Red Bank, near Lancaster, sold his short-horned bull, "Grand Duke," a direct descendant from the bull "Comet," for a similar sum of 1000 guineas. This bull was purchased for exportation to America; but it is a satisfaction to know that Mr. Booden has "by more cattle of the same strain than any breeder of the celebrated and favourite breed being now in existence."

We may add that in this very sale of Lord Ducie's stock

MR. BOLDEN'S SHORT-HORNED BULL, "GRAND DUKE," SOLD FOR ONE THOUSAND GUINEAS.

nearly all Mr. Bolden's animals claim affinity in a closer or more remote degree. For example, the two cows that fetched respectively 700 and 600 guineas are own sisters of Mr. Bolden's bull. Again, the animal that obtained 650 guineas, was by the same bull belonging to Mr. Bolden from a granddaughter of one of Mr. Bolden's cows, thus claiming blood ties on both sides. Again, the bull that sold for 500 guineas was out of a cow in the possession of Mr. Bolden. Indeed, several of Mr. Bolden's stock are related by blood to the animals that fetched such high prices at Lord Ducie's sales. These points of excellence redound highly to the honour of agriculture in the Lancaster district.

FESTIVITIES AT KINMEL PARK, COUNTY DENBIGH.

THE beautiful demesne of Kinmel, and the picturesque little town of Abergele, were lately the scene of great festivities, on the occasion of the return to his ancestral home of Hugh Robert Hughes, Esq., and his bride, the second daughter of the Hon. H. T. Liddell, M.P. for Liverpool. Mr. Hughes is nephew of the first Lord Dinorben, and succeeded, about a year ago, at the death of the second Lord, to the vast estates of the family in North Wales, including the princely mansion of Kinmel, of which we give a View, taken since its recent improvements.

The whole country around was embellished on the day of the rejoicings (Tuesday the 30th ult.) with triumphal arches, and banners bearing appropriate inscriptions; and, from afar and near, thousands of tenant farmers, friends, and well-wishers crowded to the scene. After three addresses of congratulation had been presented to the youthful proprietor, the dense mass of people, comprising large numbers of the élite of the county, proceeded to the refreshment booths erected in the park; and concluded the day's enjoyment by wandering about the demesne, and visiting the attractive gardens and pleasure grounds.

Seldom, on such occasions, has so much enthusiasm been displayed; and, altogether, the demonstration was most gratifying. Our Engraving represents the arrival of Mr. Hughes at the Portico of Kinmel, just before the following address was presented by the Rev. John Jones, Rector of St. George's.

TO HUGH ROBERT HUGHES, ESQ.

Sir,—We, the undersigned, clergy, gentry, and friends, beg leave to offer you our heartiest congratulations on this your happy return to the home of your inheritance. We hail your arrival amongst us with feelings of the more lively satisfaction, from seeing you accompanied by your fair and amiable bride—the daughter of a house so honoured as that of Ravensworth. We rejoice that we are not called upon to bid welcome to a stranger, but to the representative of a family long known and respected in the Principality; and that these noble demesnes have passed into the possession of a true-hearted Welshman. We cannot refrain from expressing our admiration of the generous anxiety you have already manifested to promote the welfare of your poorer neighbours, and our gratitude for your munificent contributions to the public charities and schools. We pray that you may continue, as you have begun, to prove a good steward of the bountiful gifts which it has pleased God to shower down upon you; and we most heartily wish you and your beloved partner a long life of happiness, and a career of usefulness and honour amongst your fellow-countrymen.

In reply to this address, and to two others from his tenantry, Mr. Hughes spoke very feelingly, reciprocating the feelings of satisfaction towards him, and trusting that he "shall never neglect the duties of private hospitality, nor turn a deaf ear to the calls of charity."

FETE AT KINMEL PARK.—PRESENTATION OF THE ADDRESSES TO W. H. HUGHES, ESQ.

PROCESSION OF THE LONDON TEMPERANCE LEAGUE, IN LINCOLN'S INN FIELDS.

GREAT DEMONSTRATION OF THE LONDON TEMPERANCE LEAGUE.

On Monday morning, between the hours of ten and eleven o'clock, the members of the Teetotal Societies in and about the metropolis, according to arrangement, assembled in Lincoln's-inn fields, for the purpose of a grand demonstration, on the invitation of Mr. Gough, a celebrated teetotal advocate from America. Mr. Geugh is on a visit to this country in furtherance of his mission.

By half-past eleven—the hour fixed for starting—there were many thousands of persons assembled; the parties being conveyed in vehicles of every character and description, from the aristocratic four-in-hand barouche and the four-wheeled phaeton down to the more humble pleasure-van and cart—many of them filled with respectably-dressed females; the vans being tastefully decorated with banners and evergreens. The number of vehicles amounted to several hundred. The females wore favours of various colours but that prevailing was white ribbon, with a virgin white artificial rose; and, judging from the number in requisition, the artificial flower-makers must have reaped a profitable harvest, each male member being decorated with a rose.

Mr. and Mrs. Gough, and the President and Vice-Presidents of the London Temperance League, headed by the brass band of the Hon. East India Company, having arrived on the ground, the procession was formed at twelve o'clock, and started, headed by an immense number of young children, called "The Band of Hope," with flags, followed by the numerous vehicles containing the adult members of the various societies, the committee and officers of the League, the Islington and Westminster Teetotal Leagues, with their banners, bands of music being interspersed at intervals during the line of procession; the rear being brought up by open carriages drawn by four horses, containing the principal officers and advocates of the movement—the last carriage, drawn by four horses and postillions, containing Mr. and Mrs. Gough, and the President and Vice-Presidents of the League, the Hon. East India Company's band preceding them. The procession moved from Lincoln's-inn-fields through Great Queen-street, Long-acre, St. Martin's-lane, Charing-cross, Parliament-street, Bridge-street, Westminster, London and Walworth roads, Manor-place, to the Zoological Gardens where it arrived about two o'clock; and where the parties enjoyed themselves to their hearts' content with the varied amusements that were offered at these delightful Gardens.

In addition to the ordinary entertainments of the place, the proceedings were diversified by Mr. Gough, and other gentlemen, on the topic of the day—Teetotalism, varied with vocal and instrumental music at intervals.

DESTRUCTIVE FIRE AT MILWALL, POPLAR.

On Saturday morning last Poplar was visited by a fire which, in the course of a few hours, laid in ruins property roughly estimated in value at upwards of £100,000 sterling, besides throwing out of employment several hundred workmen.

The scene of this misfortune was the extensive iron steam-ship manufactory belonging to Messrs. J. Scott, Russell, and Co., at Milwall, at

DESTRUCTION BY FIRE OF MESSRS. SCOTT, RUSSELL, AND CO.'S IRON STEAM SHIP BUILDING WORKS, AT MILWALL.

the angle of the Isle of Dogs, facing the Royal Dockyard at Deptford. As many as 1000 hands were employed on the works. The bulk of them left at the usual hour, six o'clock, on the Friday evening, and about 100 were detained at the factory completing some particular work up to the period of the fire being discovered soon after twelve o'clock—by a police-officer on duty in the neighbourhood, and by the watchman employed on the premises. An alarm was raised, and several of the men hastened to the spot to render assistance; notwithstanding their exertions, the flames, which it was at first expected would be confined to the building in which they broke out—the immense forging department—made fearful progress, and very speedily extended to the floors above. The stock contained there proved such a powerful auxiliary that the fire spread in four directions, igniting in succession the erecting shops and the long range of carpenters' and painters' workshops

The powerful engine belonging to the firm was at once got out and set to work, but the water thrown by one engine made not the least impression upon the fire, which quickly broke through the roof. Mr. Brunwood, the superintendent of the fire brigade; Mr. Henderson, the chief officer of the Division of the establishment; Mr. Fogo, the head officer of the A district; and Mr. Connorton, the foreman of the West of England office, were all busy with their engines as fast as possible, as they supposed, towards the seat of the calamity. Unfortunately the light of the fire deceived them, and, instead of taking the Middlesex side of the river, they crossed the bridges, and proceeded at full speed towards Deptford Dockyard; but on reaching that establishment the firemen, for the first time, ascertained where the fire was raging, and the engines had to be turned back and cross London-bridge. The powerful steam-float, at Southwark bridge, was sent down the river as fast as possible, and reached the place almost as soon as some of the land engines, which had taken the wrong side of the water. The floating engine belonging to her Majesty, for the protection of the Dockyard at Deptford, was also brought across the Thames and set to work, and also the lower fleet of the fire brigade from the Rotherhithe station. The whole of the land engines present (ten in number), and that of the West of England Company, were likewise set to work from an abundant supply of water furnished by the East London Company's mains; but, in spite of their exertions, the work of desolation continued, and the smithy, containing a number of forges, cutting and ploughing machines worked by steam, estimated to be worth £12,000; and the carpenters' cutting department, a building nearly 90 feet long by 25 feet broad, became enveloped in one immense sheet of flame. From these premises the flames seized upon a lofty stock of timbers (upwards of 1000 tons), used principally for constructing the decks and internal fittings of the iron ships. Contiguous was a heap of eighty tons of coals, under a shed. This speedily became ignited, and the conflagration, with the large mass of property on fire, brilliantly lighted up Greenwich Hospital, the Observatory, and the other large buildings on the opposite bank of the river. The wind, which had been blowing fresh all the night, had by this time greatly increased.

The firemen tried all that was possible to prevent the flames from communicating with the pattern-lofts, the mould-lofts, and the coal-sheds, but without success; and in a brief period the whole of these premises, composed of brick and timber, considerably over 150 feet long, nearly 100 feet broad, and three stories high, filled with articles of great value, were wrapped in flames, which communicated with a spacious timber building belonging to Messrs. Napier, the steam-engine manufacturers, adjoining the west side of Messrs. Russell's ship-yard.

The firemen, upon finding that there was every probability of the whole of Messrs. Napier's premises also falling a prey to the fury of the flames, brought all their force to bear upon the building that had just taken fire, and, by great perseverance, succeeded in preventing the spread of the flames in that direction; but the building itself, which was of great extent, was levelled with the ground, and the valuable contents destroyed.

By three o'clock the whole of the fitting-up and erecting shops of Messrs. Russell were burning from the base to the roof; and the heat was so intense that the firemen were frequently exposed to imminent danger.

Two splendid iron ships built for the North of Europe General Steam Navigation Company, each 600 tons burden, one of which was intended to be launched this day (Saturday), were also exposed to such an intense heat that their bows have bulged while lying on the slip.

A vast amount of property that was in the mould lofts has likewise been destroyed; and the destruction of patterns—among which were those of the intended largest ship in the world, to be built by the firm for the Eastern Steam Navigation Company—has proved most disastrous.

Fortunately, the premises on the opposite side of the yard, although much scorched, are not destroyed, and it is understood that business will not be entirely suspended.

The damage done is thus officially reported:—"The erecting shops, the fitting-up shops, the carpenters' and moulders' shops, the smithy, destroyed; the stores, sheds, and contents severely damaged by fire, and the heads of two iron steam-ships on the stocks burned by the fire. The erecting houses, pattern shops, mould lofts, the carpenters' shops, the smithy, the engine and boiler house, and the tool warehouses, the steam-engine house, the boilers and machinery therein, the stock and utensils in trade, the painters' shops, the stock and utensils in trade, with the vessels on the slips, were insured in the Sun, Atlas, Globe, Phœnix, and West of England offices, to the extent of £90,000. Fortunately no lives were lost during the raging of the fire.

A very strict investigation has been made by the brigade authorities, and also by Messrs. Russell, for the purpose of ascertaining how the fire occurred, but nothing satisfactory could be elicited.

Such an extensive fire has not taken place in the neighbourhood for several years.

THE KILMORE ADDRESS.

During the Queen's recent visit to Ireland the following address was presented to her Majesty —

To the Queen's Most Excellent Majesty, the dutiful and loyal address of her Majesty's faithful subjects, the parishioners of the parish of Kilmore, in the diocese and county of Meath, Ireland.

May it please your Majesty,

We, the parishioners of Kilmore, satisfied that your maternal love, exemplified towards your realm at large, will kindly entertain the expression of loyalty, duty, and affection, from even the humblest of your subjects, beg leave again to respectfully welcome you to Ireland; and embrace the opportunity to congratulate your Majesty and your Royal Consort on the late happy accession to your family, and likewise to express our thankfulness that the Almighty Giver of all good has vouchsafed speedy and perfect recovery from the dangerous illness and distemper with which it pleased Divine Providence to visit yourself and domestic circle.

Some of us personally joined in the cordial adieus which pealed from Irish tongues, expounding the Irish heart, when from the steamer's deck your Majesty bade a short farewell to our shores—so feelingly, so touchingly pronounced. The interval has happily tested the sanction and consolidate policy whereby passing political clouds dimming our horizon were dispelled, and this section of your Majesty's dominions preserved intact, and where peace and prosperity smile on your Majesty's revisit; and the impetus given to scientific art and manufacture by the local realisation of the nobly-conceived suggestion of his Royal Highness Prince Albert, has been accomplished in the progress of both; affording practical testimony of co-operation in his particular views for the cultivation of industry and progress of knowledge, the justness of which has been unequivocally admitted by the assistance and European status, in their adoption of a similar plan for industrial exhibition

That the guardianship of the "Author and Finisher of salvation" may, by a continuous shower of blessings, be manifested towards your Majesty, your august Consort, and Royal children, is the sincere and constant prayer of your Majesty's loyal and devoted subjects, the parishioners of Ashbrook.

(Signed on their behalf)
E. TIGHE GREGORY, Rector and Vicar, Chairman.

Previous to her Majesty leaving Dublin the patriotic Rector of Kilmore was honoured with the following communication, written by the Secretary of State, who accompanied the Sovereign to Ireland:—

Phœnix-park, Sept. 3, 1853

Rev. Sir, I have had the honour to lay before the Queen the address of the parishioners of Kilmore, which her Majesty has been pleased to accept graciously to receive.—I am, Rev. sir, your obedient and humble servant,
The Rev. Dr. Tighe Gregory, &c. GRANVILLE.

The Kilmore address was the only parochial compliment paid to her Majesty, on this as on her former visit to Ireland.

We understand that Dr. Bowring, on whose motion in the House of Commons, the tenth of the pound sterling, or farm, was carried in 1847, is about to put out a volume on decimal coinage and accountancy, with the view of establishing the progress of the decimal system through the westward, and the advantages associated with its introduction.

THE NORTH STAR.

Oh, stedfast star, that crowns the North!
Which to the world God gave,
To guide the way of wanderers
In desert or on wave.
Oh, stedfast star, that crowns the North
To thee belongs alone,
'Mid all the rolling host of heaven,
A never-moving throne.

II.

Long, long before the Eastern sage
Had found the earth long forth
That star—the king of precious stones,
That ever joins to North.
Thou wert the predecessor,
Set bright and clear on high,
Enthroned above the ivy pole—
The magnet of the sky!

III.

And lest the untaught wanderer
Should gaze for thee in vain,
There rolls a constellation
Which boys call Charles's Wain
And in this constellation,
Wherever it may be,
There are two fair and faithful stars
Which ever point to thee.

IV.

Yet not alone dost thou perform
Good offices to men;
In other climes, a group of stars
Attract the Indian's ken.
They shine upon fair perfum'd isles,
Whence light canoes come forth,
And guide the seekers of the South
As thou dost of the North.

V.

They shine, too, on the storm-rent bark
Which, toils around Cape Horn,
And cheer despairing mariners
Who vainly long for morn:
And as they form a sacred sign.
The men whom wild waves toss,
Have recognised the symbol,
And bless the Southern Cross.

VI.

But still to thee, the North-man turns,
For on his stormy shore,
Than men who dwell 'neath cloudless skies,
He needeth thee the more.
And though he scan the compass now,
Yet still he blesseth thee,
Who ages since didst teach his sires
Their way along the sea. ANGUS B. REACH.

IRELAND.

DUBLIN MODEL LODGING-HOUSE.—The Queen has expressed deep interest in the success of the efforts now made to establish a model lodging-house for the working classes in Dublin; and as if the benevolent project should receive general support, her Majesty and Prince Albert would allow their names to be placed at the head of the subscription list for the sum of £500.

THE DARGAN INSTITUTE.—The Committee of the Dargan Institute, at a meeting held at the Commercial Buildings, acknowledged the receipt of subscriptions from each member of the Journeymen Plumbers' Society of Dublin, and letters were read from the representatives of other trades, stating that collections were in progress to aid the movement. Many noblemen and gentlemen have also joined in the subscription. The Lord Lieutenant, Chairman and Mrs. Gibson are amongst the foremost of the list of public benefactors.

THE INDUSTRIAL EXHIBITION.—The attendance at the Exhibition Building on Sunday was numerous and fashionable, and the receipts at the door satisfactory. The total number present on one day during the week was 9873.

BELFAST AND BALLYMENA.—Mr. Dargan has taken the contracts for constructing the lines from Ballymena to Coleraine and the Harbour of Portrush, and from Randalstown to Cookstown. Operations are to be commenced immediately, and the line to Portrush is to be completed in twelve months.

REPRESENTATION OF LISBURN.—Another candidate has been announced for the representation of Lisburn, in addition to the Messrs. Richardson. The *Daily Express* calls upon the voters to hold their votes disengaged, "as a gentleman of highly Conservative principles, and long known in Parliamentary life, an Irishman, whose family and connections have been extensively associated with the trade and manufactures of the north of Ireland, intends to offer himself as a candidate to represent them in the Commons House of Parliament at the approaching election."

THE CHANNEL FLEET.—The *Cork Constitution* announces that the Channel fleet put into Bantry Bay on Monday, *en route* to Queenstown, which they are to leave on Saturday.

THE "IRISH BRIGADE."—Some correspondence has been published very damaging to some members of the Irish Brigade. Last week the *Cork Reporter* insinuated a charge against Mr. Maguire, the member for Dungarvan, that he had offered a place in the Ministry, on condition that they prevailed on Mr Edmund O'Flaherty to withdraw his petition against Mr. Maguire's return. Mr. Magu re retorted that the charge was a "lie." Con mcneuse Murphy immediately wrote to Mr. Magnire, asking him whether he did not request Mr. Murphy to wait on Mr. Hayter and the Duke of Nevcas le to induce them to obtain the withdrawal of the petition. "What equivalent," Mr Murphy asks, "had you to offer them for their interference?" Mr. Maguire replies by admitting that he not only asked Mr. Murphy's assistance, but that Mr. Murphy volunteered it; and that others had also been asked. "But," writes Mr Maguire, "that I authorised any man to make a corrupt compact on my behalf, is a lie." Mr Murphy states distinctly that Mr. Maguire did authorise him to say that "he would not oppose the Government." In a subsequent letter, Mr. Murphy publishes his charge against Mr. Maguire:—"Mr. Maguire requested me to crave the interference of Mr. Hayter, and authorised me to assure him that he would not oppose the Government." And here the matter stands.

USES OF THE STEREOSCOPE.—A couple of flat daguerréotype pictures of any scene are put into a little box. When they are looked at in a couple of reflectors properly arranged, the scene itself seems to be visible in bold relief. So, for example, we may perchance look in upon the river Volga flowing between banks and under the piles and works of a great unfinished bridge forming a track partly across the tide from bank to bank every post as sound and as real as though the river and its banks and the great work there in progress had been modelled by the fairies. Goethe tells a story of fairy who was carried about by a mortal in a small box, through the chinks of which could be seen her sumptuous palace. Here is a box of about the same size, containing any fairy scene that, by the help of photography, we may be disposed to conjure up. It is called the Stereoscope. And of what use is its magic? To go no further than the two ships pictured, just received, of very great use. The Emperor of all the Russias is in great hurry for the completion of the bridge therein represented. He does not make frequent long expeditions to the works, and if he remained long absent, the architect never seemed to him to be sufficiently industrious. The architect now saves all trouble to his Imperial master, and maintains his own credit, by having a couple of true and undeniable copies of the works taken once a fortnight by the sun, and sent to St. Petersburg. There they are put into a stereoscope, with which the Emperor may sit in his own room, and in which he may count every dam and post, see every ripple of the distant tide.—DICKENS'S *Household Words*.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC

The Chancellor of the Exchequer was presented with the freedom of the burgh of Inverness last week, the honour having been conferred by the town council.

By an Act of last session the registrar of the Privy Council is empowered to examine witnesses on oath, and the registrar of the Council may appoint a person to act for the registrar in his absence

The Emperor of Austria has decreed that a railway shall be constructed from Verona to Besanzone in Lombardy, under the superintendence of the Ministry of Commerce.

Lord Elphinstone has been appointed Governor of Bombay; and Sir Thomas Munro, late Governor of the North-west Provinces has been appointed to the Government of Madras

An importation has just taken place from Holland of small quantities of different kinds of beer made in Denmark, in order to ascertain if they are likely to become saleable in this country as an article of commerce.

For the annihilation of mosquitoes the Chinese have found nothing so effectual as the savings of the resinous juniper-tree with which they smear a bamboo, and set it burning.

Constables of the Metropolitan police force have been for some days past busily engaged in the outskirts of London in ascertaining the number of inhabitants.

Coghroe mills, county Cork, are at present busily at work in grinding wheat for the Emperor Napoleon. The quantity of wheat at these mills on French account is 5000 barrels.

The police of Fribourg have just promulgated two measures, one interdicting every person under sixteen from smoking; and the other recommending parents not to allow their children to play with chemical matches.

Mr. Bernal Osborne, M.P., has returned to transact business as Secretary of the Admiralty. The hon. member has been called back in consequence of the absence of Captain Hamilton, arising from the death of a near relative

The King of Holland, on the occasion of the anniversary of his birthday, made his son, the Prince of Orange, a lieutenant of grenadiers and marines.

By an Act of the late session, the Public Loan Commissioners are authorised to advance money at less than five per cent.

Mr. W. Chambers is about to proceed to North America, for the purpose of writing a descriptive tour through the United States and Canada, and collecting accurate information respecting the condition and prospects of emigrants in these countries.

The United States steamer, *Uncle Sam*, which arrived at Panama from New York in fifty seven days, reports having been boarded by the captain of Lady Franklin's brig *Isabel*, on July 28, at Port Famine. The captain and all hands were well.

Ship letter-bags for Adelaide, Port Phillip, and Sydney will be made up at the General Post-office, to be forwarded by the *Australian* steamer, appointed to leave Plymouth on the 23d inst

Alderman Wire, has been elected to the office of Sheriff for the ensuing year, has appointed Mr. James Anderton, of Bridge-street, Blackfriars, his Under-Sheriff.

Several French engineers have arrived at Vienna, to inspect the construction on the Semmering. The Austrian Minister of Commerce has appointed an engineer to accompany them to Glogganitz

A strange scene took place the other day in the Jardin des Plantes. Close to the menagerie of the hippopotamus was an elegantly-dressed lady having a black Charles's dog. The little animal having gone inside the rails, was seized by the hippopotamus, and swallowed in an instant.

Last week a shoal of 33 whales came on shore in the west voe of Sumburgh, in Zetland, and were killed and secured. The blubber sold at £14 per tun.

The Hon. Henry Fitzroy, M.P., Under-Secretary of the Home Department, has been enjoying the sport of shooting on his manor, at Tretford. The hon. gentleman is much improved in health.

Last week, J. C. Dent, Esq., when out sporting on the Sudeley estate (Gloucestershire), shot a fine woodcock a rare bird to be seen at this season of the year.

The journals of the south announce that the Pope has ordered Baron Grazioli to purchase at Leghorn 140,000 sacks of wheat, in order to provide for the scarcity now felt in the Pontifical States.

Notice of motion was given at the last meeting of the Glasgow town-council, that, at their first meeting, the council would petition her Majesty to combine the administration of Scotch affairs to a special minister of State for Scotland

Mr. R. B. D. Morier is appointed an Unpaid Attaché to her Majesty's Mission at Vienna, in the room of Lord Boyle, who has resigned. Mr. Frederick Joseph Law is appointed a member of the Legislative Council of Ceylon.

M Pontois, the French ambassador, and his horse, were probably saved from serious destruction on Sunday last, at Berlin, by his carriage being before instead of during the accident. It is to be regretted this similar accidents do not always attend preparations for these exhibitions of wanton cruelty to animals.

Under the new act the annual duty payable by masters on servants will be £1 1s. on servants of eighteen years old and upwards, and 10s. 9d. under eighteen. It will include waiters, only servants, except occasional waiters. One pot-boy to carry out beer is allowed to every licensed victualer.

Her Majesty and his Royal Highness Prince Albert have forwarded a further donation of £100 in aid of the building fund for the new church at Eton.

The works of the Genoa Railway, on the section of the line between that port and Busalba, are being carried on with such activity, that it is believed it can be opened for traffic by the end of the year.

The General Commanding-in Chief, Viscount Hardinge, has returned to Penshurst, from London. It is doubtful whether the noble and gallant Lord will proceed to Prussia to attend the grand reviews about to take place near Berlin.

According to the last account taken of the number of horses in Paris had increased by 2,000 since the last census, in 1851, the number being at the last census 91,000.

The Prince Paul Esterhazy, for many years Austrian Envoy to our Court, is in the enjoyment of excellent health, and his Highness has been giving splendid entertainments at his château, in Hungary.

An act was passed last month to extend the powers of a former act for the apprehension of offenders. Warrants may now be endorsed for the apprehension of persons charged with any felony.

An Ostend journal, having repeated the report that Queen Victoria was about to return to Belgium to visit the Royal family, the *Independance* of Brussels gives a formal contradiction to the statement.

Lord Elgin, previous to his departure from Canada, crossed over to the Lanciere rolls mines, determined to see for himself. He procured a pan and in a few minutes washed some twelve shillings worth of gold out of the sand more money, as he playfully observed, than he ever made before in so short a space of time.

The total of principal and interest paid into the Exchequer on account of loans advanced by the Commissioners for Public Works to the 8th January last, was £7,811,741 11d., of which £6,840,678 4s. 4d. was principal, and £4,740 6l8 ... interest.

The Archbishop of Lyons has collected 10,000 francs, which he has just sent through the Spanish Ambassador in Paris, for the relief of the suffering inhabitants of Granada

The Bishop of Tarbes, in commemoration of the clergy having been deprived by the constitution of their ecclesiastical jurisdiction, was uncovered a few days ago. It contains the names of all the municipalities which are contributed to the erection.

Mr. Robert Stephenson, who has been in Canada on railway business, was entertained at a public dinner, in Montreal, last month. His presence there had reference to the building of a great bridge over the river.

Within the last three years but fifty-eight soldiers suffered corporeal punishment in each year out of our army, of 110,000.

The Irish "Patriots" at New York, are quarrelling among themselves at a fierce rate. O'Donoghue and Meagher head opposite parties. The former is extremely violent.

The advance in the price of coals has been nearly 70 per cent within the last twelve months, in consequence chiefly of the scarcity of shipping, which is likely now to be relieved.

At a meeting of the City Court of Sewers on Tuesday, Mr. Simon, the medical officer, read a report containing suggestions for regulating the slaughter-houses in Newgate-street, which was very much praised.

News from Algiers to the 31st inst. states that the colony is perfectly tranquil. All the information received by the Governor-General leads the colonial crop promises to be exceedingly.

A new coal-field has been found in Staffordshire, Cannock Chase, always considered a bleak and dreary moor, in its soil to be a good coal-field, containing "millions upon millions of tons of coal."

Sir F. Palgrave has reported to Parliament that the free admission of literary inquirers to the Public Record Offices, tried experimentally during the past year, has answered admirably

Literature.

TEN MONTHS AMONG THE TENTS OF THE TUSKI ; with Incidents of an Arctic Boat Expedition in Search of Sir John Franklin, as far as the Mackenzie River, and Cape Bathurst. By Lieut. W. H. HOOPER, R.N., with a Map and Illustrations. Murray.

A SUMMER SEARCH FOR SIR JOHN FRANKLIN ; with a Peep into the Polar Basin. By Commander E. A. INGLEFIELD, R.N : with short Notices, by Professor Dalkie on the Mineralogy, and by Dr. Sutherland on the Meteorology and Geology ; and a New Chart of the Arctic Seas. Harrison

Hope springs eternal in the human breast,' and the spirit of enterprise is a distinguishing attribute of British character. Captain Cook's voyage and Mr. Penny's expeditions, without satisfying expectation, carried a step or two onward the search for Sir John Franklin and his mates : and, by affording evidence of their having wintered at the entrance of the Wellington Channel in 1845 and 1846, though unmindful of further exploration in that direction. Sir Edward Belcher, indeed, was despatched by the Admiralty with a large squadron for that purpose, thus giving official sanction to the reasonableness of continued investigation. Lieutenant Hooper not only concurs in this general view of the question, but entertains "most sanguine views" of his own "with regard to the discovery ships :

Notwithstanding (he says) nearly eight years have elapsed since tidings were received, I still see no reason to despair. A mass of evidence is before us to show that the Polar regions abound in animal life : the cases of four Russian sailors who spent six years on Spitsbergen 1743-49, and that of Sir John Ross and party, who were three years ice-bound, afford precedents for the existence of the party now sought for : and when we consider, moreover, that only the mere portals have yet been passed, and scarcely the threshold entered upon of that vast unknown region, in *one* part of which it is possible the missing voyagers may be detained, we may reasonably refrain from fear or despair of unreasonableness or obstinacy in the persistence of earnest *hope* that their families—whose sad suspense all must deeply commiserate—their native country, and the entire civilised world, will yet welcome with transports of delight the return of at least a portion of the veteran wanderers

Such are the grounds of appeal, therefore, that these works present for our still taking an interest in a subject the results of which have been so long deferred. The heart must not yet be made sick by the delay of satisfaction, but still persevere in the path of brave and honest endeavour. Individual sentiment seems to have been excited in an extraordinary manner. Of this Commander Inglefield is an example. Anxiously taking command of the *Isabel* screw-schooner of 140 tons register, which the Admiralty refused to accept as a gift, "not wishing to add to the number of vessels already employed on the dangerous search, he "determined to explore the sounds and shores of the west coast of Baffin Bay, and was permitted to finish the equipment of the vessel in a Government yard. Commander Inglefield adds, that he is "one of the numerous party who consider that Franklin is to be found, or at all events to be followed by the same path he had pursued." On the 4th of July, 1852, the *Isabel* was enabled to move out of the basin at Woolwich. We find, by the 7th of August, the vessel anchored in "the little harbour of Fatherson," and the commander making the acquaintance of Mr. Lassen, the Danish Governor, and witnessing "the Inuarsuit assembled in Christiansen's ship. He paid much material court of the people. It was the desire of the commander to visit Holstenburg, and to persuade Adam Beck to join their party. The latter a strict search of Wolstenholme Sound with him, they might "feel less scarcity in the local circumstances to which he appealed for the assistance of the natives." Mr. Lassen, however, "sent Adam Franklin and his crew, by the natives on that coast." But, as usual with such projects in these latitudes, he was disappointed. When entering the Polar Sea, wild thoughts of getting to the Pole—of finding their way to Behring Strait—and most of all, of reaching Franklin and giving him help, rushed rapidly through the brain of the explorer ; thoughts as vain as they were wild. Thick fogs and mists prematurely set in, and impeded their career. They succeeded, indeed, in reaching the point of Renbow and Terror Bay, the great surprise of the crew of the depôt-ship *North Star*, which was lying there, and who believed in nothing human being near them within hundreds of miles. Here they were taken on shore at Beechey Island, and shown relics of Franklin's missing squadron

The results of this voyage were but slender. Whale Sound was examined, but not thoroughly. Smith Sound, also, was looked at through glasses ; and Jones Sound was so far investigated as to give them reason to believe that it was an impenetrable gulf, with some small and contracted inlet towards the Polar Sea.

Lieutenant Hooper's volume has an interest independent of the Franklin expedition, as the great surprises of Tuski and Sir John Franklin and his crew, by the natives on that coast." But, as usual with such projects in these latitudes, he was disappointed. When entering the Polar Sea, wild thoughts of getting to the Pole—of finding their way to Behring Strait—and most of all, of reaching Franklin and giving him help, rushed rapidly through the brain of the explorer ; thoughts as vain as they were wild. Thick fogs and mists prematurely set in, and impeded their career. They succeeded, indeed, in reaching the point of Renbow and Terror Bay, the great surprise of the crew of the depôt-ship *North Star*, which was lying there, and who believed in nothing human being near them within hundreds of miles. Here they were taken on shore at Beechey Island, and shown relics of Franklin's missing squadron

The results of this voyage were but slender. Whale Sound was examined, but not thoroughly. Smith Sound, also, was looked at through glasses ; and Jones Sound was so far investigated as to give them reason to believe that it was an impenetrable gulf, with some small and contracted inlet towards the Polar Sea.

Lieutenant Hooper's volume has an interest independent of the Franklin expedition, as the great surprises of Tuski and its inhabitants. This word simply means a confederation or brotherhood. Of this people "less is known than any on the face of the habitable globe." Cook, in 1778, was the first who touched upon this shore. Behring, in 1785, communicated with the people of this coast, in latitude 64° 30′ north, near the Tchutskoi Nos. The expedition of Wrangell, in 1821, extended our information relative to the people of whom Matiuschin gained a casual knowledge at the fair of Ouremoyie. The experience of our voyagers at Leigh convinced them that they consisted of two races—the Reindeer Tuski, or Tuski Proper ; and the Fishing, or Alien Tuski, speaking a dialect evidently first corrupted from the Esquimaux, and now further disguised by adoption of many words of the Reindeer tribe. The country is desolate and unfruitful. The flora is meagre, consisting of mosses and lichens, with a very few stunted twigs of the Andromeda class. Ranges of hills cross and recross each other with little variety in shape, but all betokening a volcanic origin.

The description of sledge-driving, of hut-building, of peculiar manners and extraordinary customs, is not less amusing than novel. The intimacy with the natives which Lieutenant Hooper enjoyed gave him available opportunities of observation

The style of the book is generally good and picturesque. The novelty of the subject would of itself recommend it to general perusal ; and the intelligence of the author will yet more promote its success with the judicious reader. To the latter it will be eminently useful for reference ; and as such it merits to become a library volume.

ESSAYS ON VARIOUS SUBJECTS By his Eminence CARDINAL WISEMAN. Dolman. London, 1853.

Those who remembering the public commotion which Cardinal Wiseman was recently the object, and the uproar which, in this country directly, and then throughout the civilised world, by a sort of reverberation, his movements and language excited—those who, on this account, and also because they know he is an historical character, occupying a very peculiar position, vacant until now these three hundred years, may feel curious to measure the extent of his endowments, and to estimate in a general manner the value of his abilities, and the bent of his character, will find in these three large volumes abundance of materials to help their judgment, and to serve them with a fair criterion Many of the essays—indeed all, we believe, with one exception—were contributed at various intervals to publications which, though ably conducted, have never enjoyed a large miscellaneous circulation, being supported merely or chiefly by the most highly-educated of the Roman Catholic class, whose gains and exponents they are in religious politics (if we may so express ourselves), as well as in art, science, and literature. Therefore, though in great part reprints, these essays, besides being corrected, retouched, and improved, will be new to the public. In order to assist in the deliberation whether he should peruse this publication, every one who may have asked himself is it worth my while ? we will give as clean an account of its contents, and of the character and the value of these as the limits of a brief article permit

Before doing this, we would say a word respecting one significant sentence in the preface. "I have long ceased," says the Cardinal, "to anticipate fair dealing from those who look upon me as an enemy, and think it their duty to treat me as such."

We think it our duty to regard the merits and the demerits of works that come before us for review as merits and demerits which ought to be impartially, carefully, and conscientiously described. It would be possible to treat "an enemy" with justice : we should have that treatment secured ; but, further, we should think it stupid, as well as dishonest, to reckon any author our enemy in the capacity of author. If we had not, as we certainly have, a rather better idea of the commonest elements of fair dealing ; we have at least a very clear idea of the practical tendencies of criticism, when it is well-founded, and when it is not. The interests of literature are by no means an entirely despicable consideration to men whose very profession and career it constitutes ; and their own solid credit and ultimate position count for something in their eyes, even putting out of view the losses of a more material description which worthless criticism, gradually in some cases but in the most able certainty of retribution in all, entails on its habitual dispensers.

Now, the first remark we have to make of Cardinal Wiseman's present work is not, we trust, so invidious by malignant as to evince the pr[illegible] mind. It is this : that the "Essays" before us, bad or good, or wrong, could not possibly have been written except by a diligent and studious man. Secondly, they show that the diligence and love of study of this writer have not been vain, but have enabled him to master a very extraordinary amount of erudition. If we add that the severer learning which he displays is accompanied by a full share of general and lighter information, we shall not be thought anxious to distort or conceal his acquired endowments. As little do we wish to misrepresent the natural gifts, the talent and the vigour with which he uses the instruments or the weapons, which an orderly ample education, and subsequent research the most unwearied have placed at his disposal. To complete the description of his faculties it will be sufficient to say that whatever intellectual power he possesses, either in the attainments of a man [illegible] habitual days," or as the further of organisation, that power he exerts in no careless manner, but with all the sire wideness, perseverance, and concentration of one who has an intense will, and a resolute and unmoveable purpose. With his capacity, such as it may be in native life, we have nothing to do.

We speak of him only in his literary character. As an orator, we suspect his rank must be extremely inferior to that which, it is [illegible] held as a lecturer, and which we see that he occupies as an essayist [illegible] man reads very closely ; he may state a case clearly ; he may illustrate his position with elegance, fertility, and copiousness— [illegible] but these much light on his argument may send his hearers away, [illegible] ly far better informed respecting the [illegible] which he speaks, but [illegible] ; but [illegible] will [illegible] not be no orator. It would take us too long to articulate what fatal deficiencies might exist conjointly with even these numerous qualifications. But, in an artistic sense, we will specify one which is far more necessary to the orator than to the epistolary poet, or even to the essayist. We mean *unity of effect*. "What shall I say that will per[illegible]ade them ?" is the question which the orator asks himself : the one only question which he cares practically to solve. "How shall I say it so as to make it worthy of my subject ?" is the question which occupies the attention both of the essayist and of the lecturer. It is much in temperament ; and by temperament, as well as by the effect of his studies and his habits, Cardinal Wiseman is a great exponent or essayist. An orator, we venture to surmise, he is not.

The three volumes before us are so arranged that they resemble three separate series of treatises. The first volume is devoted to theology, and to controversy in its more durable phases. It will be found very few, except professed divines, who will, doubtless, find in it much that will excite their astonishment, so lightly and easily are wielded the most ponderous arms. The opening article discusses the question of the genuineness of 1 John i. v. 7 a text proving the doctrine of the Trinity. In the last century this text was impugned with great [illegible] The other essays of the volume are devoted to similar subjects

The second volume is all about the Tractarians, [illegible] though (and this is true of the whole work) in terms [illegible]

General readers, who wish to judge of Cardinal Wiseman's [illegible] in literature, will be chiefly attracted by the third volu[illegible] Of course, even [illegible] much is found which might be expected from the pen of a zealous prelate of the Roman Catholic Church, who can never forget the subject dear to him. But, still, there is abundance of those literary qualities which, on subjects so general, are sure to afford pleasure Whoever, in the matter of "St. Peter's Chair," has read only Lady Morgan's attack upon the Cardinal, will find it well worth his while to look at the other side of the question, and to examine the Cardinal's statement in turn. Mrs. Trollope and Mr Disraeli will also discover something that concerns them in one of the essays of this volume

On the whole, we must admit that it is by no means necessary to be a Roman Catholic in order to feel an interest in the productions of [illegible] pen. First linguist living—an Oriental scholar of extraordinary [illegible] and unquestioned [illegible] and a general author whose thoughts are original, and whose language is [illegible] precise, dignified, and forcible.

CHARACTERISTICS OF THE DUKE OF WELLINGTON, AS PART FROM HIS MILITARY TALENTS. By the EARL DE GREY, K.G. London: Thomas Bosworth, 215, Regent-street.

This work contains selected extracts from the Duke of Wellington's Despatches, with a running commentary on their object, spirit, and tendency. It is designed to show the inner life of the departed hero ; and as the noble author must have been prompted to this task by purely patriotic feelings, his work deserves criticism ; but we must be permitted to observe that it is a continued eulogy founded on ex-parte evidence. The only authority quoted in favour of the Duke of Wellington is the Duke himself, but they who opposed or differed from him in opinion, are unheard. For instance, Earl De Grey imputes blame to Mr. Jonathan Duncan, Governor of Bombay, for opposing the Duke's plan for the general defence of Guzerat ; and then, as a proof that the Duke had no angry feeling on this matter, cites the following passages from a farewell letter addressed by him to the Governor :—" Upon the occasion of relinquishing the command, and consequently giving up the immediate communication which I have held with your Government, allow me once more to return you my thanks for the many instances of your confidence, favour, and kindness. Although at a distance, I shall ever be anxious for the honour and prosperity of your Government ; and I shall be happy to have any opportunity to evince my zeal in your service." Surely there is nothing in this extract worthy of such special laudation as to be classed among the "Characteristics" of the foremost man of the age. It shows no more than courteousness and gentlemanly feeling towards a gentleman whose Indian experience was very much superior to that of Major General Wellesley, and who, on three separate occasions, received the unanimous thanks of both Houses of Parliament, and, as Bishop Heber remarks in a MS. known throughout all Hindostan by the honourable title of "The Son of Justice." The fame of the Duke of Wellington rests on an imperishable foundation ; and nothing is added to its lustre by blaming other public servants, especially when their vindication is altogether unnoticed.

Earl De Grey classifies his illustrations of the Duke of Wellington's personal character under the following heads :—1st, His confidence in himself, and buoyancy under personal responsibility ; 2nd, His forbearance and forgiveness of injuries ; 3rd, His firmness under home and foreign annoyances ; 4th, His natural feelings of sorrow and caution ; 5th, His disinterestedness as to money or rank, and his general candour and simplicity of character ; 6th, His placability as to the faults and failings of others, caused by the feelings connected with subordination and courts martial." Specimens of these characteristics are arranged in distinct chapters, which will interest those who have not consulted the original despatches.

Men who have filled a large space in public life can never be duly appreciated by their contemporaries. None are disposed to dwell on their faults, while all are prone to exaggerate their virtues. We are too near to them, and their true proportions can only be observed from a distance. Earl De Grey has brought within a narrow compass many valuable materials useful to the future historian, who will compare them with other facts and other testimony before he pronounces a final judgment. It is known that six volumes of the Duke's memoirs are still in MS., nor are they to be published till all the parties referred to, or their immediate descendants, are dead. This temporary suppression is attributed to a generous motive, the writer not wishing to unlaurel many who have acquired an unmerited reputation, during the lives of their families. This is only mentioned here in proof of the difficulties which attend contemporaneous history.

THE ROYAL DESCENT OF NELSON AND WELLINGTON FROM EDWARD I., KING OF ENGLAND. By George Russell French. Pickering.

England may be said to owe her continued national existence to the victories of Nelson, yet to none of her heroes has this country dealt out rewards with a hand so niggard and unwilling. The mighty achievements of Wellington exalted, no doubt, the glory of England to the highest pitch ; eclipsing all her previous military renown, and throwing even the deeds of Marlborough into the shade ; but they never could have saved her from invasion, had not Nelson, by the total destruction of the French navy, defeated the well-laid plans of France. Had the sea been open to Napoleon, the immense masses employed against Russia might, and doubtless would, have been thrown upon our shores. India was saved to us at the Battle of the Nile, England herself at Trafalgar. In many points these two illustrious men closely resembled each other. There was in each the same promptitude of spirit, that no emergency, however unexpected, could take by surprise, the same indomitable perseverance, the same clear-sightedness as to an enemy's intentions, the same nice calculation of means to the end, and, were prudent even when most daring. Each (says Mr. French) was distinguished for the same unswerving loyalty to the Sovereign, disinterested love of country, deep absorbing attachment to duty, and active unity [illegible] in their respective services, for which each was so admirably [illegible] by his peculiar temperament. The sentiment contained in Nelson's sub[illegible]

[illegible] and expects every man will do his d[illegible]

was the rule and spring of Wellington's whole life ; and the very last words which he uttered, 'Thank God, I have done my duty,' might have been said with equal truth by him whose prolonged career was one entire and consistent sacrifice of self to duty."

The little work which has given rise to these remarks, is by George Russell French, already known as the author of "The Ancestry of Queen Victoria and Prince Albert," a carefully-arranged volume, forming a concise genealogical history of England. The present book traces up to King Edward I the pedigrees of Wellington and Nelson ; and gives Memoirs of the various ancestors as they occur—men renowned in our English annals, and immortalized in the undying pages of Shakspeare. In fact, this volume, instead of being a dry genealogical detail, may be called a portrait gallery of the illustrious dead. It is to be regretted that a better title had not been found. If called what it really is, "Memorials of the Ancestry of Nelson and Wellington," the work would become one of general demand. But with the present name, it will be considered rather as a "Curiosity of Literature," a whole book seemingly devoted to a subject that might be fully disposed of in half a dozen pages. Mr French refers to the tabular pedigrees of Wellington's Royal Descent, which we published [illegible] showing his Grace's descent from Edward III., through John of Gaunt, time honoured Lancaster," and from Edward I., through his daughter Lady Elizabeth Plantagenet, the wife of Humphrey de Bohun, Earl of Hereford. Singular enough, Nelson's descent from this very same marriage, and thus another point of similarity. It is common kindred are established for both. The annexed summary, which we have compiled from the elaborate pedigrees furnished by Mr. French, will clearly show that Nelson and Wellington were [illegible] sprung from the marriage of De Bohun and Plantagenet.

LADY ELIZABETH PLANTAGENET, [illegible] the first referred to [illegible] Bohun, Earl of Hereford, [illegible] Bohun, Earl of Ormonde, and [illegible] Butler, [illegible] great-grandfather of Thomas, 7th Earl of Ormonde, whose second daughter and co-heir was Lady Margaret Butler, the wife of Sir William Boleyn, Kt., and the mother of Thomas Boleyn, Viscount Rochford, K.G. This Thomas, Viscount (son of Lady Margaret Butler, and great-great-great-great-grandson of Lady Eleanor de Bohun), married Lady Elizabeth Howard, and was father of MARY BOLEYN (Sister of Queen Anne Boleyn), who wedded Sir William Carey, and had a son Henry Cary, Lord Hunsdon, K.G., whose grandaughter, Blanche Cary, became the wife of Sir Thomas Widdrington, and the mother of Anne Widdrington, who married Robert de Saumarez, and was grandmother of Catherine Sackville, the wife of the Rev. Edmund Suckling, and the mother of HORATIO LORD NELSON.

II. Lady Margaret de Bohun, (second daughter and co-heir of Humphrey de Bohun, Earl of Hereford) married, for her second husband, second Earl of Devon, and was mother of Lady Margaret Courtenay, who wedded John, Lord Cobham, and had a daughter, Joan Cobham. This lady became the wife of Sir John de la Pole, and the mother of Joan de la Pole, Lady Cobham, who married Sir Reginald Braybrooke. The only surviving child of this alliance was [illegible] Braybrooke, Lady Cobham, who married Sir Thomas Brooke, Kt ; and their younger son, Reginald Brooke, of Aspal, had a daughter, Elizabeth Brooke, the wife of Francis Peyton, and the grandmother of Sir Christopher Peyton, a General of Ireland, whose only daughter and heir, Anne Peyton, married—first, Sir Richard Cooke ; and, secondly, Sir Henry Colley ; by the latter husband she left a son, Dudley Colley, M.P., who was great-great-grandfather of ARTHUR, DUKE OF WELLINGTON.

Though these two pedigrees, of which we have this, in a very few lines, given an outline, are—together with two or three other similar descents that might be explained with the same brevity—the groundwork of Mr. French's volume, the reader will be agreeably surprised to find that the historical matter introduced, in elucidation of them, forms a most instructive and ably-compiled memoir of the ancestors of England's greatest heroes, through all their various ramifications. The families of Nelson, backing, Woodhouse, Cary, Boleyn, Holland, Shelton, and Walpole ; and those of Wellesley, Peyton, De Bohun, Hill, Courtenay, and Stafford, are all worked out with minute accuracy and much historical interest

This book deserves a more comprehensive title, and ought to find a place in all genealogical libraries.

CHARLES AUCHESTER : a Memorial. Three vols. Hurst and Blackett

This is one of that select class of works of fiction denominated the art-novel. The art intended to be illustrated is music "Were it not for music, we might in these days say, the beautiful is dead." Such is the motto of the book, and the sentiment pervades it, as the spirit of the tale, or "romance," as the title has it. Here, at any rate, is a novel in which the diction is poetical, and the inner life æsthetic. By a refined subtlety, the author calls his work "the life of a life." We must be prepared, therefore, for nice and delicate shadowings of feelings, and of these—scarcely appreciable as they may be for entities at all, even to the all-realizing imagination—to make out a narrative requiring interpretation at every step, by the heart's oracle, and vitality. It is a mere concentric essay, too wild for the sober and merely rationalistic reader. In the author's own language, words here are not so much signs of thought as "sounds born of silence, which indeed are no sounds, but *themselves* silence ;" or, as the poet says—

A voice so fine, that nothing lives
'Twixt it and silence.

We must touch gently such dreams as are enshrined in these eloquent volumes, else they will fade ere we fix them ; even too much daylight would melt them into immediate dissolution. Musicians, violinists, pianoforte-players, and ballet-girls are here represented in most unconventional guise ; which is assumed to be no disguise, but the veritable and fit clothing for such divinities. "To be introduced," writes the memorialist, "to a ballet-girl, or even a dancing lady, at the same table or upon the same carpet will horrify ninety-nine persons, with golden-hearted bankers and coarse tailors!—she certainly has lost caste by her resolute unconventionalism, and my friend Miss Lawrence. But then, as she said, 'What is life does it matter about losing caste with people who have no caste to lose ?'" There is no two sentences, we think, that [illegible] soul of the three volumes. Of the detail we need not make much account ; however little of it there may be, it must be tedious, because it is not the fact, but the feeling, that interests ; and of the latter, analysis permits not much to survive. Enough, perhaps, is done when the essence of [illegible] a book as the present is stated.

WONDER CASTLE, [illegible] SERIES OF SEVEN Stories By A. L. FREER ; with a Frontispiece by E. H. Wehnert. Addey and Co.

This is a work singularly entitled, there being no tale corresponding to the title : but the word "Castle" standing in it is employed, it seems, as a synonym for the word book. The volume before us is, in fact, a juvenile bric-a-brac, containing seven tales of "wonder"—at least, such as Mr. Freer's description, but, in our opinion, there are more than one tale in the collection simply humorous ; and, as such, entitled to be considered as rather eccentric than wonderful. Perhaps, however, the word "wonder," as well as "castle," may be intended to stand for anything else, and this serve as a universal category including any sort of story. However this may be, the most important question to decide is, whether the stories are good, and this inquiry we can fortunately answer in the affirmative. We have read them carefully, and can report conscientiously, that they are excellent in design, in moral, and [illegible] and not beyond the comprehension of an intelligent child [illegible] having, much to her delight, read them to a child of that age. We may particularly mention the tales of "The Magic Needle," and "The Search after Ugliness," as both excellent. Their principal quality is the undeniable good sense which lies at the basis of the various [illegible] supernatural or otherwise, which, together, form this [illegible]

SCULPTURE IN THE NEW YORK EXHIBITION.

We this week present our readers with a few of the plastic productions in the Great Exhibition at New York. In the Italian and German

"THE INDUSTRIOUS GIRL," BY MAGNI.

courts are numerous works in marble and bronze, of more than average talent. "Eve after the Fall," by Peter Pagani, of Milan, is a

"EVE, AFTER THE FALL," BY PAGANI.

beautiful conception. The expression of Eve, her sudden consciousness of having sinned, her remorse, and a new sense of shame, are finely depicted. The figure is partly draped, and a sheepskin forms a covering for the mound on which Eve is seated. The flowing hair is well managed, and falls in profusion down the back. The serpent can be perceived stealing away, after having accomplished his first triumph over human nature. The figure stands near the dome, on the north side of the west nave: it is very attractive.

The bust of "Prayer," by Antonio Galli, of Milan, is of quiet and unobtrusive beauty. The simplicity of the composition, and the pensive expression of the features, combined with a slight tinge of sorrow, all join to render this bust an object of great attraction, though placed at the back of one of the Italian courts. The composition reminds one of those severe though beautiful creations of Delaroche.

"The Minstrel's Curse," by Carl Müller, of New York, is vigorous in composition: it is the work of a German artist residing in New York, and is taken from one of the many legends of Germany relating to the minnesingers, or troubadours. The subjects of the present group arrive at the castle of one of the kings of a small German state; and, to amuse the queen, are admitted into the castle, when the younger one so pleases her majesty that she plucks from her bosom a flower which had previously been presented her by the king, and gives it to the minstrel boy; the king is suddenly affected by jealousy, and mortally wounds the young troubadour, and thrusts him and his companion from his castle. The elder minstrel, overwhelmed with passion and grief, is in the act of cursing the king and queen and all his race, and prophesying the destruction of the castle and total ruin of all its inmates (the moment selected by the sculptor). According to the legend, this prophesy was fulfilled. The figures are life-size, and display an anatomical knowledge, without exaggeration either of form or expression, which many sculptors of our time might imitate with advantage—the muscular development of the elder minstrel contrasts finely with the young and

BUST OF "PRAYER," BY GALLI.

undeveloped form of his companion. It is a pity that so fine a group should have been sculptured out of so bad a specimen of marble.

"The Industrious Girl," by R. Magni, of Milan (life size) is an interesting little Roman girl, in the act of threading her needle—her work-basket by her side, and her work on her knee. All the peculiarities of the Roman costume are naturally and truthfully given; and there is a pleasing expression and a simplicity which rivet the attention.

"The Soldier's Son," by L. Jovini, of Milan, is a quaint and slightly comic piece of sculpture, life-size. It represents the young son of a soldier, sitting on a knapsack, and in the act of putting on his father's military hat, which is a thoroughly German pattern. The figure is exceedingly natural, and tells its own story—saying which is awarding it the highest praise.

ST. ELFIN'S NEW SCHOOLS, WARRINGTON.

These Schools (so called from being erected near to an ancient well of St. Elfin, which gives its name to the adjoining parish church) form a noble pile of buildings, covering a great space of ground, and have cost in their erection nearly £40,000. With all the outward appearance of one large collegiate institution, they comprise two separate and totally independent establishments. One of them is for the Education of Clergymen's Daughters, on a plan somewhat similar to those which have been founded at Marlborough and Rossall for clergymen's sons. The other School is for the training of Schoolmistresses. Extensive gardens and walks surround the building, with a small private park, called "St. Elfin's Park," to which the inmates of this institution have free access at all times. In a part of the grounds there is a neat and convenient separate building (which we shall engrave next week), to be used as an infirmary in case of need.

"THE SOLDIER'S SON," BY JOVINI.

It is impossible to overrate the public utility of such institutions as these, whether they are regarded as rendering aid to the clergy in the

"THE MINSTREL'S CURSE," BY CARL MULLER.

education of their daughters, or as assisting in the work, which may be considered the greatest national undertaking of the age, viz., providing a really sound and good education for the rising generation, and training

ST. ELFIN'S (NEW) SCHOOLS, WARRINGTON.

the young, whilst they can be trained, in moral habits. We rejoice to see two such institutions standing side by side in a district of the country where both are so much needed.

As regards the Clergy School, we are informed that the managers of it are anxious to divest it as much as possible of an eleemosynary character. Of all professional men, few, if any, deserve to have their children cared for more than the working clergy; and little has as yet been done for their daughters, except at St. John's-wood, London; at Brighton, and at Casterton, where schools have been established of a kind which benefits only orphans, or the daughters who are compelled to seek charitable assistance.

The Training School, though contiguous to the Clergy School, is entirely distinct from it in all its educational and domestic arrangements. It is governed by another authority than that which founded the Clergy School, viz., the Diocesan Board of Education. The only connexion between these institutions seems to be that they are under the superintendence of one clerical Principal, whose residence forms a part of the buildings. This Training School is largely assisted by the Privy Council Committee of Education; and its plan of operation is precisely similar to that which is pursued at Whitelands, the Metropolitan Institution for Training Mistresses, established by the National Society. Accommodation is provided in this school for a large number of students, with their teachers, and the requisite servants; also, for a limited number of pupil teachers. The provision made for the education and training of these young persons is very complete; whilst the domestic arrangements for their board and lodging provide ample comfort.

Adjoining to the Training School, and apparently forming one wing of the same building, is a very complete set of model and practising schools, in which the students who are in training as teachers practice the art of teaching. The rooms in which the children of the poorer classes are here instructed, seem to be in every respect suitable to the purposes for which they have been erected; and the spacious playground, with circular swings; and the little flower-gardens, which the pupils evidently take a pride in keeping neat and full of flowers, give this part of the institution a peculiarly interesting character.

MUSIC.

GLOUCESTER MUSICAL FESTIVAL.

(From our own Correspondent.)

GLOUCESTER, Thursday.

The celebration of the 130th meeting of the Three Choirs commenced on Tuesday, and will terminate to-morrow. These festivals are annual in the three cities of Hereford, Worcester, and Gloucester. The triennial term is this year in the "Faire city," and the financial results are expected to be more than an average. Indeed, as all the reserved seats for the "Messiah" and the "Elijah" were disposed of at the beginning of the week, perhaps the agreeable word "surplus" may salute the ears of the stewards, who have come forward to bear the risk of the expenditure. The names of these spirited gentlemen ought always to be recorded, and we annex them with pleasure.—Lord Leigh, the Mayor of Gloucester; the Hon. Ashley Ponsonby, M.P.; Sir W. Russell, Bart.; E. W. Ellingcote, Esq., M.P.; W. P. Price, Esq., M.P.; J. R. Mullings, Esq., M.P.; G. H. Bengough, R. Favin Davis, W. H. H. Hartley, C. C. Monk, R. Potter, J. Lloyd Seyler, T. Turner, and J. Waddington. Honorary stewards: The Rev. J. H. C. Seymour, Bart., the Rev. J. J. Bayly, the Rev. B. S. Lawson, D.D., the Rev. L. B. Clutterbuck, the Rev. T. Evans, D.D., the Rev. H. Barrow Evans, the Rev. H. A. S. Atwood, and the Rev. Canon Hutchinson.

The instrumental forces engaged for this Festival include Blagrove as leader, Willy, Cooper, Cusins, E. Chipp, Clementi, Dando, Griesbach, Marshall, Mori, Thirlwall, Watkins, Watson, Hill, Trust, Thompson, R. Tyrer, Betts, Lucas, Aylward, H. Chipp, Guest, Hatton, Reed, W. H. Phillips, Howell, Pratten, Rowland, Seeon, H. S. Pratten, H. Card, C. Card, and T. Harper, Train, Rae, Cioffi, Healey, Prosper, Andre, Chipp, Williams, Egerton, Baumann, Larkin, &c. The balance of power in the chorus is estimated at 60 trebles, 44 altos, 43 tenors, and 60 basses: the numerical total being 200—these are tremendous.

As usual at these triennial gatherings, the three organists of the three venerable cathedrals are "first fiddles" in the musical arrangements. Mr. Amott is taken from his organ, the capabilities of which he ought assuredly to understand, to be the conductor of a large body of executants, of whose instrumental and physical attributes he can have no special knowledge. Then Mr. Townshend Smith, who is organist at Hereford, assists at the Gloucester instrument; and Mr. Done, who is organist at Worcester, is called into requisition as a pianoforte accompanyist, to the unscored pieces at the concerts. This kind of arrangement—the result of which is to leave the first violin the really responsible conductor, the organists being naturally mere co-ductors—is opposed to the increasing progress of musical execution.

Monday night foreboded ill to the Festival: the rain came down in torrents, but, on Tuesday, the morning was ushered in with sunshine; and Liturgic Service at the Cathedral was attended by a remarkably large congregation. The Bishop of Gloucester and Bristol attended in state: and the Mayor and Corporation were present in their official robes, with mace-bearer, &c. Handel's stately overture, "Esther," was steadily played. The long and imposing "Te Deum," by the same composer: Attwood's Coronation Anthem, "I was glad;" and the Preces and Responses of Tallis, are familiar selections for this day, and—conducted by Mr. Amott—require no special comment. Dr. G. J. Elvey's Festival Anthem was performed for the first time, prior to the sermon. The words are from Psalm xcvii. "The Lord is King." Dr. Elvey's intentions are lofty, and his musical attainments are more than respectable. He is evidently acquainted with many masters in all schools, but, whilst he reproduces with such remarkable closeness the imaginings and workings of his models, he fails to stamp them with the individuality calculated to make for ever a means of very moderate ambushing. Dr. Elvey concocted his own work, and the principals, choristers and instrumentalists, were fully disposed to take pains with the anthem. The solo singers of the morning were Mrs. Wesa (formerly Miss Barrett), who is a native of Gloucester; Mrs. Lockey (late Miss H. Williams), Mr. Lockey, and Mr. Weiss. The execution on the first day is always the least chequered; the chanting is at times magnificent, and the English singers are thoroughly at home in their duties

The sermon was preached by the Rev. Benjamin Saunders Claxson, D.D., whose text was from the Chronicles, 13th chapter, 1st book, and 8th verse; —"And David and all Israel played before God, with all their might, and with singing, and with harps, and with psalteries, and with timbrels, and with cymbals, and with trumpets."

Yesterday Mendelssohn's "Elijah" was the morning's performance in the Cathedral. To Herr Formes was allotted the music of the Prophet. Madame Castellan and Miss Clara Novello divided the soprano portions—the former having the "widow's miracle," and that of the "descending rain;" and the latter the angelic announcement, "Hear ye, Israel." Miss Dolby and Mrs. Lockey divided the contralto pieces, and were associated with Madame Novello in the beautiful trio, "Lift thine eyes." Gardoni and Lockey had the tenor music between them; and Mrs. Weiss, Mr. Hunt, Mr. Wilton, and Mr. Weiss helped in the concerted pieces.

The morning Haydn's "Creation" (Parts I. and II.), the unfinished oratorio of Mendelssohn, "Christus;" and Handel's "Israel in Egypt," formed a combined programme.

To-morrow, according to custom, Handel's "Messiah" will terminate the Festival.

The materials for the three miscellaneous concerts of Tuesday, last night, and this evening, are made up from the stock resources of the chief singers; but the orchestral gleanings are of first-rate interest.

Friday.

Whatever strictures may be passed on the conductorship principle of the Three Choirs, however prevalent we may be of the imperative necessity of—and this was strongly felt the other day by the non-conductor abroad. The so-styled Cathedral style—that is of dragging and drawling—has received its death-blow. The "Creation" yesterday actually went at a rapid pace—perhaps not "express speed"—but, really, with sometimes like the notion that jubilant music is not to be sung at a snail's pace, and that devotional sensations are not necessarily excluded because allegros and prestos are taken in their true time.

The Cathedral yesterday exhibited one of the largest attendances ever known—and this was enough, it is clear that the non-conductor is the one when a combined programme fails least to attract.

The concerts have been the least satisfactory. The programmes seem to have been made up by the conductor with little reference to the capabilities of the vocalists. Many errors were committed; but the massacre of Mendelssohn's part song "Remembrance," by a local choir, must not be passed over without marked reprobation. No parochial set of choristers in the kingdom could have been more uncertain in attack and precision. Mr. F. Mori's "Fridolin" proved that he ought to have a trial in a national opera—if ever we shall have such an establishment. Further comments must be adjourned until our next Number.

POSTSCRIPT.

FRANCE.

The Emperor's journey to the north is said to be finally arranged, as follows:—He will leave Paris on the 22nd inst., and sleep at Compiègne; proceed to Lille on the 23rd, through Douai and Valenciennes, remain at Lille on the 24th; proceed to the Camp of Helfaut on the 25th, and sleep at St. Omer. His Majesty will visit Calais and Calais on the 26th, and sleep at Calais; he will sleep at Boulogne on the 27th; on the 28th the Emperor will sleep at Amiens; and will return to Paris on the 29th.

The warlike tone of a leading article in a semi-official Government journal, together with the receipt of a private telegraphic despatch from Marseilles, announcing a rise of 2f. the hectolitre in the price of wheat, produced a panic amongst the speculators at the Bourse. The Three per Cents, which opened at 70f. 25c., fell to 70f. Large purchases were made at the latter price, and they rose to 70f. 60c., at which they closed for the end of the month

A letter from Paris dated Thursday evening, says:—

The French Government has received accounts from Constantinople of the 5th, which are very unfavourable. According to rumour, the Emperor of Russia had sent a new note to the Porte demanding immediate compliance with the conditions laid down by the Conference at Vienna, and threatening to advance against Constantinople if, within a fortnight, the Sultan should not send an Ambassador to the Emperor to present that note.

The Protectionist system has just received a blow which may be said to be mortal. The French Government have reduced the duties on foreign cattle and meat imported into France; and the reduction is so great that the new duties are almost nominal. By a decree of the 14th inst., it is provided that, "until it shall be otherwise ordered," the duties on the above-mentioned imports shall be fixed "provisionally" as follows:—

Bulls and oxen 3 francs per head, instead of 50. Cows, heifers, &c., 1 franc per head, instead of 25 and 12 francs 50 cents. Calves, sheep, pigs, &c., 25 centimes per head, instead of 3 and 5 francs. Lambs, kids, &c., 10 centimes per head, instead of 30 and 25 centimes. Fresh meat, 60 centimes per 100 kilogrammes, instead of 18 francs. Salted meat, 10 francs, instead of 33 and 30 francs.

The previous duty on salt meat was so high that only hams and other luxuries were imposed for the wealthy classes. The immediate cause of this decree is, without doubt, the high price of corn, and the necessity of keeping down the price of animal food; but it will be the first and most important step towards a general revision of the tariff.

The Paris Money Market improved on Thursday.

ITALY.

The Governor of Terni, who was put to death by the people, was reported to have said that when there was no more flour the people might eat straw. Four persons having tossed him out of the window into the street, the people ill-treated him, and stuffed his mouth with straw. Eight carabinieri, who came to his assistance, were more or less seriously wounded, and obliged to seek safety in flight. A strong detachment of soldiers had been sent from Rome to restore order.

GERMANY.

It appears to be settled that the Emperor Nicholas, accompanied by one or two of his sons and a suite of 30 persons, will meet the Emperor of Austria and the King of Prussia at Olmutz in ten days or a fortnight. In autumn there are always reviews in Germany, but they are on such an unusually grand scale this year that they must be viewed in the light of counter-demonstrations to the recent naval and military displays of England and France.

The Austrian Government is said to be desirous to contract a silver loan of some thirty or forty million florins, but it is evident that the success of M. de Brentano must mainly depend on the turn which the Oriental question may take. A so-called Lottery-Loan is to be made at Vienna.

PRUSSIA.

Among the Englishmen congregated at Berlin to witness the grand military manœuvres, are four officers sent out by the Board of Ordnance, and several amateurs, comprising Colonel Torrens, and Captains Hardinge and Ellice. His Royal Highness the Duke of Cambridge was expected to arrive to assist at the final attack of the Tasdorf ravines; but military duties prevent his Royal Highness from quitting England.

The reception given to English officers has been most kind and flattering. Little constrained to see how the masses assembled and handled with facility, they will no doubt return home with increased knowledge, and not less satisfied with the appearance and high discipline of the Prussian troops than gratified with the attentions shown to them by the King in person. The meeting of the Emperors of Russia and Austria, and the King of Prussia, at Olmutz, is regarded with great anxiety.

INDIA AND CHINA.

The following telegraphic message has been received from Trieste:—

The steamer *Calcutta* arrived here on the 15th.

The Indian Mail has arrived at Alexandria with dates from Calcutta of Aug. 1, Hong Kong, July 23, Bombay, July 26.

There was a great famine in Burmah, and the country was overrun with Decoits.

The East India Company's steam-frigate *Mosquito* was lost off Rangoon river. No lives were lost.

Cholera is committing great ravages in the upper provinces of India.

In China the Patriot army retains its position. The Tartars had attempted to retake Amoy, but without success.

AMERICA.

By the *Baltic* we have dates from New York to the 3rd inst. The Hon. Francis B. Cushing is said to be likely to accept the post of United States Minister in France, which has been declined by Gen. Dix.

The yellow fever was declining at New Orleans, both in the number of cases and in malignity; the weather continued favourable, and confidence in the abatement of the epidemic was increasing daily. The fever was on the increase at Natchez, and on the decline at Mobile.

THE RIVER PLATE.

The *Great Western* has brought news from Buenos Ayres to the 2nd of August. From the River Plate our accounts are of importance. The civil war in Buenos Ayres terminated on the night of the 13th of July. General Urquiza took refuge on board a United States steamer, and a few of the more deeply compromised fled inland; and on the morning of the 14th the Chamber and Senate threw down their arms and dispersed in all directions. The province of Buenos Ayres was tranquil. The *Great Western* brings 100 passengers; among whom are Mr. Cowper, the British Consul at Pernambuco, and General Lopez and suite, from Paraguay. The General comes on a diplomatic mission to the court of St. James and some of the other powers of Europe.

(From our own Correspondent.)

BUENOS AYRES, July 31, 1853.

The siege of Buenos Ayres by Urquiza and his troops having been brought to a termination, some particulars of the recent struggle may not be without interest to your readers. The cause of the siege may be briefly stated. Urquiza having, with the assistance of the Brazilians, overthrown General Rosas, wished to do as Rosas had done before him, and to possess himself of the supreme power. The Liberal, or town, party at once resisted Urquiza's pretensions, who, thereupon (in June, 1852), put on the Chamberlain and usurped the government of the province. On the 8th of September, in the same year, he set out for Santa Fé to open the so-called Congress. The people, however, rose, and threw off his authority. Urquiza employed every means to strengthen his position, and placed himself in communication with all the old officers of General Rosas who were in power in the country, and who, on the 1st of December, surrounded the town of Buenos Ayres. They demanded on the part of Urquiza, who, in March, arrived here to carry on the siege in person. On the above day, the whole squadron blockading the port, chiefly manned by foreigners, having been two months in the service of Urquiza without receiving any pay, quietly submitted to the Buenos Ayres Government. The result of this severe blow was that, after a vigorous *sortie* made from the town on the 11th of this month (July), the besiegers began to disperse. The Foreign Ministers here (Sir Charles Hotham, Mons. St. George, and Mr. Schenk) tried every means to make terms for Urquiza, but all they could obtain after being humiliated by the Government here in every possible way, was the free embarkation of Urquiza and his Rico troops; but even this would have been of no avail, as the besiegers themselves, being disgusted with his tyranny, were on the point, it is stated, of despatching him. However, Mr. Pendleton, the American Chargé d'Affaires, was sent out at the last moment on the evening of the 13th, by his colleagues, to embark Urquiza at once, which he did, on board the American steamer *Water Witch*. The English steamers *Trident* and *Locust*, with the French steamer *Seaotrie*, took on board his troops. The besieging army dispersed during the night of the 14th, and thus ended this protracted siege

THE EASTERN QUESTION.

A courier arrived in Paris on Wednesday, bringing the decision come to the day before by the four Ministers who met on that day—namely, Lord Aberdeen, Lord John Russell, Lord Cowley, and Lord Palmerston. Another courier took his departure for Marseilles, which he intends embark there at once, bearing a despatch for Lord Stratford de Redcliffe, which, it is said, enjoins him to employ every possible means to prevail on the Sultan to accept without delay the note of Vienna without modification. In case the Porte should object that she was no longer able to restrain the Turkish population, his Lordship is authorised to allow the English squadron to enter the Bosphorus, and to disembark troops for the purpose of causing the decision of the Sultan to be respected. A courier also is to be at once despatched to Omar Pacha, forbidding him to commence hostilities in any way.

The Emperor and his Ministers deliberated at St. Cloud, on the decision of the English Cabinet, and decided on adopting the same course.

In Vienna it was still expected by the members of the Conference that the Sultan would consent, in the interest of the peace of Europe, to accept the Vienna note purely and simply, and without modifications.

Omar Pacha, in a despatch to the Porte, speaks highly of the disposition of his troops. He uses these words—"My army, like the Romans of old, do not ask what is the strength of the enemy, but where is he to be found?"

A great concentration of Russian troops is taking place on the frontiers of Moldavia and Wallachia, the army of the Sultan on the Danube being accounted stronger than that of Russia.

THE CHOLERA.

NEWCASTLE, Sept. 14.—Deaths 58. Total of deaths from Aug. 21 to Sept. 14, 294. Gateshead Deaths, 83. The disease is developing itself, though it is believed that the progress would have been much more rapid, as a large amount of diarrhœa is uncovered and arrested by the house to house visitation of the medical inspectors. Handbills are largely circulated, pointing out the great danger of neglecting looseness of the bowels when the epidemic influence is present. The epidemic is of a virulent type, and deaths are in most cases very rapid. It is hoped that as the medical inspection becomes more complete, more and more of disease will be brought under treatment. The Town-council have suspended their by-laws to pass the common lodging-house regulations under the act, which they have allowed to remain a dead letter up to this moment, though there is not a place in the kingdom in which its provisions were more [illegible]

CHRISTIANIA, SWEDEN, Sept. 10.—Death is stalking about [illegible], moving down indiscriminately, whilst all nature appears smiling around, and a perfectly clear and serene sky, with agreeable temperature. Already about have been swept off, and still upwards of sixty a day fall victims. Only one Englishman, yet: Mr. Bradshaw, the veritable Bradshaw, who had come over to collect data for his new "Continental Guide," had only been in the town three days; he was, however, nervous, and had been incessantly taking preventives. From apparently perfect health, six hours' illness was sufficient to usher him into eternity

THE ROYAL VISIT TO DUBLIN.—Her Majesty has been pleased, through Lord Clanricarde, to express to the Lord Mayor of Dublin her entire satisfaction with all the arrangements made during her visit to the city of Dublin, and in which expression his Royal Highness [illegible] Consort most cordially joins.

LORD PALMERSTON.—The Secretary of State for the Home Department left London, on Friday morning, for Balmoral.

THE CAPE PACKETS.—The General Screw Steam-shipping Company's ship *Hydaspes*, Captain R. B. Deacon, arrived at Plymouth on Thursday morning, to take mails for the Cape, Mauritius, Madras, Calcutta, &c

IRISH MIDLAND RAILWAY.—The first turf of the extension of the Midland Railway, from Mullingar to Cavan, was turned by Lord Farnham on Tuesday last

TELEGRAPHIC TIME-BALL AT LIVERPOOL.—A telegraphic time-ball, similar to that in the Strand, has just been erected near the Docks, in Liverpool, and when it falls at one o'clock, indicating the Greenwich time, every ship leaving the Mersey will adjust its chronometer accordingly.

ACCIDENT TO SIR EDWARD COLEBROOKE, BART.—We regret to learn that Sir Edward Colebrooke, Bart., has met with a serious accident last week, his gun having gone off while he was in the act of loading it, shattering his right hand so severely as to render amputation necessary; but his doing well.

ENGLISH AND FRENCH ROWING-MATCH.—The Havre regatta came off on Sunday last. The regatta the most important in France, is always well attended. The English Paris Amateur Rowing Club proved themselves the better men, by winning the first prize given by the Emperor.

GUY'S HOSPITAL.—At a general court held at this hospital, the vacancies in the surgical staff, consequent upon the death of the late Mr. Hennell Cooper, were filled up by the appointment of Mr. John Birkett, as surgeon, and Mr. Thomas Callaway, as assistant-surgeon.

MR. G. P. R. JAMES.—The Philadelphia correspondent of the *Morning Chronicle* writes [illegible] try to learn that two attempts have been made by incendiaries [illegible] residence of Mr. G. P. R. James, Esq., the British Consul in Virginia. It appears that there is a strong prejudice against him on account of a letter addressed by his son [illegible] years since, when there was danger of war between England and the United States, and in which some disaffected Irishmen suggested a liberation of American slaves by British arms. Whether this feeling prompted the cowardly and [illegible] attempts at arson, it is difficult to say.

THE CHOLERA.—THE ORDER IN COUNCIL.—Owing to the rapid increase of cholera at Newcastle and Gateshead, together with its appearances in several other places, an Order in Council appointed by the *Gazette*, putting in force the Nuisances Removal and Diseases Prevention Act of 1848, to be applied to the whole of [illegible]

FUNERAL OF SIR [illegible]

The gallant Brotherton in arms and kindred of the deceased has supplied what the reporters could not catch of the speech over the grave to the soldiery surrounding it on the day of interment, at the Garrison Chapel, Portsmouth. The first person to [illegible] at page 270. The following is what Sir William Napier in vain attempted to give expression to at the time:—"I meant to say, are Sir William's words, "that a great and good commander in his grave is a man who had from his earliest youth been a soldier, looking [illegible] world in [illegible] had also been, for the protracted term before them half a century, a soldier and commander, not called to [illegible] danger open to [illegible] and was not in man's power. Death only could do it. That in his old age he commanded armies, and led them always to victory. Neither in youth, nor in manhood, nor in his aged years, did he ever cease to love, and cherish, and confide in soldiers; and never had he reason to repent, for never did they fail him, or any General who confided in them. And now I see them around his grave to do honour to the dead man whom, when living, they had by their courage, devotion, and discipline, raised to renown. He could not thank them, but I, who knew his most secret feelings, did so. His name, and one of them to pray for him, and I will pray for them."

FALLING BUILDINGS.—On Wednesday the premises 18 and 19, Ludgate-hill, occupied by Mr. Croft and Mr. Bond, were discovered to be in a state of instability. They stood on either side of the thoroughfare called St. Martin's court, leading to the Broadway—the walls fronting which bulged considerably, and presented a threatening appearance. It was deemed advisable to shore up the [illegible] and Hallam, 21, Fleet-street, [illegible] considerable [illegible] portion of the back part of the [illegible] and Hallam, 21, Fleet-street, below. [illegible] considerable [illegible] The police [illegible] once stopped up the footway, and during the night workmen were busily employed [illegible] up the house. The state of the premises [illegible] Long-acre, near St. Martin's lane, were in a dangerous state, and they were also shored up. Since the catastrophe in the Strand the district surveyors are on the *qui vive*.

OFFICIAL APPOINTMENTS.—The Queen has appointed Edmund Hornby, Esq., to be her Majesty's Commissioner, under the Convention between Her Majesty and the United States of America, for the settlement of outstanding claims [illegible] the new commissioners to inquire into the administration of Charitable Trusts are, chief commissioner, Mr. Peter Erle; two paid commissioners, Mr. James Hall and the Rev. R. Jones; secretary, Mr. Henry Vane; two inspectors, Mr. Thomas Hare and Mr. [illegible]

CALENDAR FOR THE WEEK.

SUNDAY, September 18.—17th Sunday after Trinity. Sterne died, 1768.
MONDAY, 19. Battle of Poictiers, 1356
TUESDAY, 20.—Battle of Newbury, 1643.
WEDNESDAY, 21.—Jumper Week. France declared a Republic, 1792.
THURSDAY, 22.—Charles V. died, 1558. New Post-office opened, 1829.
FRIDAY, 23.—Major Cartwright died, 1824.
SATURDAY, 24.—Don Pedro, Emperor of Brazil, died, 1834.

HIGH WATER AT LONDON-BRIDGE,
FOR THE MORNING AND EVENING TIDES.

THE RUSSO-TURKISH QUESTION,

AND THE CONDITION—MORAL, SOCIAL, AND POLITICAL—
OF THE TURKS IN EUROPE.

On SATURDAY, SEPTEMBER 24,
WILL BE PUBLISHED

A GRAND DOUBLE NUMBER
OF THE
ILLUSTRATED LONDON NEWS.
WITH SUPPLEMENT GRATIS.
PROFUSELY ILLUSTRATED

With SPLENDID ENGRAVINGS of SCENES and INCIDENTS in EUROPEAN TURKEY, From Sketches made expressly for the purpose by the Artists of the ILLUSTRATED LONDON NEWS. Among other objects, will appear.

A LARGE PANORAMIC VIEW OF CONSTANTINOPLE
FROM THE
TOWER OF GALATA.

FROM A SKETCH BY S. READ. DRAWN BY BIRKET FOSTER.

Interior of the Greek Church at Bukulli.
The Russian Ambassador.
The Combined British and French Fleets, sketched in Besika Bay, August, 1853.
The Sultan's New Palace.
The Patriarch of the Greek Church.
Group of Dervishes—Turkish Militia.
The Castle of the Seven Towers.
The "Sweet Waters of Europe."
View of Seraskier.
The Mosque of St. Sophia.
The Great Cemetery of Scutari.
The Golden Horn from Eyoub.
The Tower of Galata.
The Arsenal.
The Turkish Fleet in the Bosphorus.
Egyptian Camp on the Bosphorus.
Sketches of Turkish Costume and Character in the Streets of Constantinople.
The Obelisk in the Hippodrome, at Constantinople.
Turkish Police-station in the Maidan.
Hotel of the British Embassy at Therapia.
Encampment on Shore at Besika Bay.
"Miraculous" Spring in the Greek Church of Balukli.
Dancing Dervishes.
Acrianople.
Pass of Trajan's Gate in the Balkan.
Turkish Soldiers.
Turkish Women at Fountain
Jewish Woman.
Turkish Lady.
Armenian Lady.
Turkish Police.
Bazaar in Constantinople.
Street in Constantinople.

And various Panoramic and other Sketches in the Bosphorus, the Dardanelles, and the Black Sea.

The Literary portion will include letters from our Correspondent in Constantinople,—a resumé of Turkish history from the commencement of the decline of Ottoman power in Europe; and a full and authentic statement of all the circumstances connected with the present dispute between the Czar and the Sultan, derived from official and other sources.

Immediate orders for the interesting and splendid historical Number, should be given to any Bookseller or News Agent. Price of the Double Number, with Supplement, gratis, One Shilling. Office, 198, Strand.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, SEPTEMBER 17, 1853.

CAN Russia and Turkey be allowed to fight their own battle, without the interference of Europe? Such is the question that has been generally asked within the last few days. We think the answer of all reflective politicians must be in the negative. Another question, which has been asked with no little solicitude by those who are convinced that it is the interest, no less than the duty, of Great Britain to maintain Turkey against Russia at all hazards, is whether Great Britain, in carrying out this policy, would not be deserted by France and Austria? We think that the answer to this question must also be in the negative. Of course, it is possible that the French and their Emperor may be too mindful of the ancient feuds between the two nations to look with much pleasure upon a war in which the English would be their allies. It is possible, too, that the Emperor of Austria, who owes his crown to the aid which Russia opportunely afforded him, when the Hungarians and Italians threatened, and nearly effected, the dismemberment of his Empire, may not be able to sever the bonds which unite him to the Czar; and may, on other grounds, prefer his alliance to that of Great Britain. But, though such results are possible, they are not probable in the present circumstances of Europe. In the first place, the interest of France and Austria, in the independence of Turkey, or at least in its non-incorporation with the Russian Empire, is as vital as that of Great Britain; while their interest in not opposing this country in the event of a war, in which our support would be given to Turkey, is equally enormous. Not only must these two Governments maintain unimpaired their alliance with us upon the Turkish Question, because if one side they have hitherto taken is the right one, but they must remain members of the anti-Russian alliance, because they dare not, with any regard to their own safety, adopt the contrary policy. Were England engaged in a war with Russia, in defence of a country unjustly attacked, the people throughout every civilised nation would put up prayers for our success. The cause of Great Britain and Turkey would be the cause of independence and of freedom; and every state and government which opposed it would be looked upon as the enemy of justice and of constitutional liberty. Deprived of allies among the Governments of Europe, this country would naturally look for other and better allies among the people. If Austria would not support such a cause, Great Britain would probably have to appeal to the Hungarians to consider whether they might not benefit themselves as well as Turkey by coming to the rescue? We might ask the Italians the same question without any dread of eliciting an unfavourable reply. The Emperor Napoleon knows as well as any man what trouble we might cause him, or what dangers we might invoke around him by putting the same question to the French, and conjuring before their greedy eyes the vision of that constitutional Liberty, for which no nation ever made such mighty and long-continued, but hitherto ineffectual struggles. But there is every ground to believe that there will be no necessity for resorting to such arguments as these, to keep Austria and France in the right course. Great Britain will resist the Czar, if he be still bent upon robbing Turkey of any of her provinces, because a just policy is the only safe one; and France and Austria will unite with her for the same reason. In such a war, should it unfortunately arise, no great power in Europe can remain neutral. It would, while it lasted, be the most fearful war upon record, and would be marked by many incidents more significant than the conflict of armies in the field, or the defence and capture of ports and fortresses. Insurrection and revolution would precede and follow it; and Russia itself might be witness of scenes, recalling to mind the tragical history of more than one of its bygone Emperors. Notwithstanding the ominous appearance of the question at the present time, it is likely for these, and many other reasons, that war will be averted. The day of negotiation has not passed away; and, possibly, the Czar himself is more fully aware of the expediency of further treaty than any other person in Europe.

AFTER an interval of four years, the Asiatic Cholera has reappeared amongst us. The north-east corner of England has, as upon previous occasions, been the first to receive the Pestilence. Nearly two hundred cases have occurred in Newcastle-upon-Tyne and the towns in the immediate vicinity. The mortality has averaged forty per cent. Two fatal cases have been reported by the Registrar-General as having occurred in London. There is but too much reason to fear that the Plague will increase, and run its course as it did in 1849. Having in the interval neglected the fearful warning which they received, the British people are beginning to set their houses in order. Unfortunately, it is too late to prevent, though possibly not to check, the desolator. Shall we never learn wisdom without unnecessary suffering? And is it the fatality of Englishmen never to admit the possibility of a pestilence until it is actually among them? Every one knows that, to bury the dead in crowded cities, is to invite disease; that, to fill a noble tidal river with the nameless abominations of a city of two millions and a half of people is to sow the seeds of fever; that to pour into the atmosphere foul gas, thick smoke, and the stenches of knackers' yards, is to give to the Cholera the pabulum upon which it thrives;—yet the knowledge is practically useless. In 1849 all these facts were not only admitted, but deplored; and yet, in 1853, they exist as virulently as if Cholera and other plagues had never before punished us for permitting them. We must confess, for our part, that when we see the apathy or disinclination of Parliaments; the lethargy, if not the stolidity of the people; and the dense obstructiveness of those who either are, or fancy themselves to be, interested in the continuance of nuisances, we are more than half inclined to envy Russia and France their strong-minded despots, who, in a case of necessity, can act without the permission of Parliaments, and in spite of the prejudices of the people. We long for some sturdy and irresistible authority to fight the pestilence, by the coercion of all—be they individuals or corporations—who, by neglect, or filthiness, or the carrying on of profitable nuisances, do all that human ingenuity can do to provide disease with victims. There is no reason why our large cities and towns should not be rendered as wholesome as the best and most ornamental parts of the most luxurious capitals of Europe, except our own neglect. There is no other reason why the Thames between Battersea and Woolwich should carry a putrid mass of thick and steaming puddle, carried eastward by the current, and then westwards again by the tide, continually augmenting by new supplies, and pouring finally into the sea only a small proportion of its daily increment. Why cattle should be allowed to be slaughtered in cellars and outhouses, in any or every part of the metropolis, or why, in the very thickest part of it—the north of St. Paul's Cathedral—the atmosphere should be positively overladen with the stench of butchers' offal, and the suffocating fumes of the tallow-melters, is a puzzle to every one who does not make allowance for the mighty power of inertia possessed by the British public. We might make the Thames a limpid river, if we pleased, and we might establish, without difficulty, a sufficient number of public *abattoirs* at convenient distances from the streets, with advantage to the public, and to the butchers and cattle-dealers themselves: and yet we do not stir in the matter. If we do, it is but to give a kind of spasmodic cry when danger is near us, and then turn round, when the danger has passed, and forget it as soon as possible. The public are well aware of the fearful consequences of neglect, and has the example of Paris and other Continental cities before it to show how some, if not all, of these things might be done; yet it remains indifferent, till Pestilence comes and carries off the people by hundreds, or perhaps thousands in a day; when it opens its drowsy eyes, and thinks it is time to take such subjects into consideration. So it has ever been—and so, it is to be feared, it will be in this year of 1853, unless the visitation of the Cholera should be more disastrous than it was before, and take its tithe of victims from the rich, the wealthy, and the comfortable, as well as from among the poor and miserable. In such a case, it is probable that our lukewarm sanitary reform will become matters of fact; and not mere theories, as they are now. The privilege of local self-government is one that Englishmen highly prize. Unluckily for their health, it is almost the only privilege which they do not turn to proper account. Every other privilege or right which they possess, they turn to the noblest uses; but this one privilege, for want of a strong central authority, acting not in the narrow interests of small localities, but for the benefit of the whole people, they either neglect or pervert. No doubt a great deal will be done, now that Pestilence has made its periodical re-appearance, to mitigate its intensity; but it is sad to reflect how many lives have to be lost ere even this limited amount of energy can be displayed. We are certainly the foremost people in the world in some things; but in some respects we are not entitled to boast of more wisdom than falls to the share of the filthiest fatalists of the back-slums of Constantinople.

THE COURT.

Her Majesty and the Prince Consort, with the youthful members of the Royal family, are enjoying the seclusion of their Highland home with all the zest which a relief from the excitement of Court life cannot fail to impart. The Prince commenced deer-stalking on the second day after his arrival; devoting the first to a drive to Abergeldie, and inspection of the improvements in progress during the past year at Balmoral—with the whole of which her Majesty and his Royal Highness are understood to have been greatly pleased. On Sunday, her Majesty and his Royal Highness attended Divine service in the parish church of Crathie. During the week, H.R.H. Prince Albert has enjoyed his sporting; and her Majesty and the Royal Princes have taken their usual exercises, and are in the enjoyment of the best of health.

THE QUEEN DOWAGER OF SPAIN.—On Friday, the 9th inst., the Dowager Queen Christina, of Spain, left London, on her return to Paris, after a sojourn of ten days in that metropolis.

The Prince and Princess Edward of Saxe-Weimar, who have lately been visiting the Duke and Duchess of Hamilton, at Hamilton Palace, and the Earl and Countess of Eglinton, at Eglinton Castle, are now visiting Tour in the north of Scotland

The Marquis of Bath has left England on a cruise, in his beautiful yacht the *Lotus*.

Viscount and Viscountess Canning have sailed from Torbay, in the *Fire Rosamond* yacht, on a cruise off the coast of Scotland.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Hon. Canonries:* The Rev. H. Bellairs to Worcester Cathedral; Rev. G. Medan to Bristol Cathedral; Rev. C. H. Morgan to Bristol Cathedral; Rev. C. M. Arnold to Westminster Abbey; Rev. W. Villiers to Worcester Cathedral. *Rectories:* Rev. G. B. Dacosta to Gilberstown; Rev. D. Evans, jun., to Erasewell, Suffolk; Rev. A. Deare to Colborne, near Newport, Isle of Wight; Rev. W. S. Newman to Coryton, Devon; Rev. E. Evans to Eccles, near North Walsham; Rev. Thomas and Rev. J. R. Nelson to Trimley St. Mary, Suffolk; Rev. G. T. Barlow to Buckinge, near Ashford. *Vicarages:* Rev. J. R. Stocks to Finchingfield, Essex; Rev. J. C. Pigott to Gussage All Saints, Dorset; Rev. E. Pobjoie to St. Stephens-by-Saltash, Cornwall; Rev. C. R. Rowlatt to West Thurrock, Romford, Essex; Rev. J. S. Utterton to Farnham; Rev. F. Wheeler to Dunchurch, near Rugby; Rev. S. H. Lee Warner to Kingston-le-dale; Rev. H. B. Bulloke to Mullion, Cornwall. *Incumbencies.* Rev. H. Jones to Shelley, Suffolk; Rev. J. Macnaught to St. Chrysostom, Everton, Lancashire; Ven. Archdeacon Davis, late of Melbourne (Australia), to Christ Church, Ramsgate; Rev. T. Sankey to All Saints' Islington; Rev. J. E. Fenwick to Christchurch, Needwood, Staffordshire; Rev. S. Robins to Trinity Church, Dover.

CONVOCATION.—The Convocation of the prelates and clergy of the province of Canterbury, which stood prorogued to Saturday, September 10, was further prorogued to Friday, October 28, according to the tenor of a Royal writ, by the Vicar-General of the Most Rev. the Archbishop of Canterbury, Primate and Metropolitan, under a special commission from his Grace to that effect. As the formal business of the prorogation only was to be transacted, the attendance of members of Convocation was not expected. At twelve o'clock his Grace's commissary, Dr. Twiss, attended by the registrar, Mr. Francis Hart Dyke, and the other officers of the province of Canterbury, entered the Jerusalem Chamber, when, the commission having been read by the registrar, his Grace's commissioner directed the Royal writ of prorogation to be read at length; after which the schedule of prorogation was read by the registrars and signed by his Grace's commissioner. It is expected that the proceedings on October 28, will be of a like formal character.

NEW CHURCH, WARLEY COMMON, NEAR BRENTWOOD.—The large increase in the neighbourhood has called for more religious accommodation; and for this good purpose a new church is in course of erection at Warley Common. Towards this building, a noble-minded lady in the parish led the van, by most liberally subscribing £1300: the East India Company gave the site and £200; the worthy Rector and Mrs. Robinson, £300. The cost of the church and clergyman's house will be £4200; of which there is a deficiency of £400. The church is expected to be ready by the 1st of November. The style is barly English, with an apse instead of a chancel. The design is by Mr. Teulon, of Lansdowne-place; and Mr. Hammond, of Warley, is the builder.

COUNTRY NEWS.

THE BALMORAL ESTATES.—Great improvements have been made on the Balmoral estates since last year. The arable and pastoral lands, under the able management of Dr. Robertson, have been brought into a highly productive state; and the hunting-grounds and deer forest are in a fair way to become the best in Scotland. The moral and social wants of the tenantry have been especially cared for, the Queen having given orders that the poorest families shall have the blessings of education secured to them, and their domestic wants duly supplied. The new palace begins to make some progress; but the contractor has three years to finish it, and it promises to be a very handsome building.

HOLYROOD PALACE.—We understand that it has been determined to re-floor the whole of the suite of state apartments of the palace, including the picture gallery, and that the work will be commenced immediately after her Majesty's return to England. This, it is hoped, is only the commencement of more important alterations and improvements on the house and grounds.

ENCLOSURE OF HAINAULT FOREST. The Commissioners in charge of her Majesty's land revenue are proceeding to enclose the Crown allotment in Hainault Forest, under the provisions of the act of Parliament passed during the last session. The consequence of this enclosure will be the future prohibition, of holding the celebrated Fairlop Fair, which, for many years, was held on the first Friday in July, on the portion of the forest now to be enclosed

THE CHAIRMANSHIP OF THE NORTH-WESTERN RAILWAY.—There is some misunderstanding about the election of the Marquis of Chandos as chairman of the London and North Western Railway. We are able to rectify all blunders on the subject by saying that the noble Marquis has not been elected to that honourable post, and will be in his official duties on Monday. The Marquis is young, but of great business habits. The railway company could not have chosen a more eligible party, and every one who is at all acquainted with the Marquis will rejoice that he now occupies a position which he will be able to manage with honour and integrity.—*En Ami de Verite.*

REPRESENTATION OF GRAVESEND IN PARLIAMENT.—On Monday evening a meeting was held at the Town Hall, to take into consideration the necessary steps to forward the representation of the inhabitants of this populous town in Parliament. The chair was taken by the Rev. Thomas Saddington, and several gentlemen addressed the meeting, pointing out the importance of the town of Gravesend, its increase of late years, its distance from London, and the wants, &c., of the inhabitants. A petition to the House of Commons, praying for the enfranchisement of buildings during the last two or three years. Various suggestions and resolutions were adopted, and the meeting separated after the usual vote of thanks.

DEMONSTRATION OF COLLIERS.—An important demonstration of colliers took place on Monday at Wakefield. Coal having risen 10d. a ton, they asked that it should be brought down to former rates. Messrs. Charlesworth, who own seven collieries, and employ 1000 hands, gave a dinner, with the object of keeping them from the demonstration. Nevertheless, the number present at the New Market exceeded 3000 working colliers from all parts of the West Riding &c. The proceedings lasted from two o'clock until the hour was terminated by Mr. Joseph Pepper. A procession of the miners to organisation, and a meeting to Lord Palmerston were then made, and the meeting broke up.

THE DOVER PACKETS.—The Admiralty have decided on discontinuing the Dover mail-packet service, and that their ships shall be carried in future by contract steam-vessels. The ships at Dover and Ostend packets are—the *Garland*, the *Gnyo*, the *Widgeon*, the *Lapwing*, the *Teal*, and the *Redpole*—all paddle-wheel steamers, none of the vessels named is even mentioned in the Navy List. The reserve ships, to be considered as the ships on the naval pension list, would still be considered as to be appointed to the command of the Post Office Admiralty packets, and would be commanded by the present commanders of the Dover packets. Lieutenant of the Post Office department, Wakefield, Mr. Peel, has adjusted the terms with the various packet-boat owners.

THE WELLINGTON MONUMENT AT ST. PAUL'S.—On Saturday evening last, the Committee appointed to decide on the temporary room which has been fitted up for the purpose of the exhibition. Several of the most eminent among our British artists have sent in their contributions, some of which are extremely beautiful, most of them being very skilfully designed. On Tuesday the committee met to select six from the whole group. From these one will be chosen by the members of the memorial committee, and will be ordered to be sculptured in the best Carara marble, and for which a sum not exceeding £3000 will be paid. The other five parties will receive each 100 guineas, the models becoming the property of the Corporation of the City of London. After these select six have been made, we believe the public will be permitted, under certain regulations, to view the models.

MEETING OF THE BRITISH ASSOCIATION AT HULL.

(Continued from page 227.)

SATURDAY.

THE grand symposium of the meeting having been fixed for Saturday, the President took the chair of the numerous social party, including ladies, amounting to three hundred, which assembled on the occasion. The entertainment took place in the splendid hall of the Railway Hotel, which was tastefully fitted up with the banners of the principal towns of Yorkshire, and some of the nobility and gentry; the tables handsomely laid out with flowers and gilt vases, &c.; and the *coup d'œil* altogether extremely fine. Over the President's chair was inscribed "Luna Scientiæ," and groups of the Arts and Sciences figured on each side. The dinner and wines were such as to give universal satisfaction, and the whole went off with an éclat rarely found to attend so multitudinous a gastronomical section.

In the evening the saloon was cleared as if by magic, and the Mayor gave a handsome *soirée*, with all sorts of post-prandial refreshments, to the dinner company, and to many other members.

MONDAY

night, after the repose of Sunday, decorously observed in the town, became quite a field-day in the Sections. In Section A, Professor Phillips further developed the magnetic phenomena, declination, dip, and intensity; and Prof. Plucker, of Bonn, a German philosopher, of European celebrity, gave an account of a series of experiments, on New Laws of Magnetic and Diamagnetic Induction. Experiments by Professor Matteucl, on Electrical Currents; by Professor Hodgkinson, on the Elasticity of Crystalline Bodies; and other subjects in physical science, were read and commented upon

In Section B, Mr. Grove stated his conviction—confirmed by Dr. Andrews and Mr. Gassiot—that flame was a conductor of electricity. Mr. Pearsall described some curious changes in wood obtained from forests on the eastern coasts, submerged during the existence of man, and Prof. Hunt mentioned that from an excavation in Cornwall wood, had been dug, in association with a pike-head, a wooden hammer, and spade tipped with iron; also two human skulls of the type thought to be Phœnician—probably belonging to individuals who had made the voyage thither to trade with the natives for tin. Dr. Gladstone read a paper on the Corrosion of Iron-built Ships by Sugar Cargoes, and detailed a number of experiments, made with the view to discover a remedy for this injury. He had not, however, succeeded in learning by what chemical means the corrosion would be prevented

In Section C, Professor Johnston read a paper of practical value to agriculture on the Chemical Changes in the Composition of Rocks, and reamalgamation in the Course of Cultivation.

In Section D, the Rev. F. Statham gave a curious exemplification of instinct in birds; and maintained that the smaller the bird was the greater the instinct, as in the wren, robin, pigeon, and crow, as compared with the goose and ostrich. Some gentlemen present added singular anecdotes of instinct in birds, and Dr. Redfern observed that instinct and intelligence should always be separated. In most cases animals possess both, but in some there is no intelligence. The intelligence is always proportioned to the size of the cerebrum proper, the ganglionic masses at the base of the brain having functions altogether different, and being the organs of instinct. The curious distinction would be to consider instinct as exemplified where there were no difficulties to attain a given object; and intelligence, where a faculty was brought into play to surmount them where they occurred. The bee is pure instinct, as the insect has no brain.

In Section E, *inter alia*, Dr. Scoresby delivered a lecture in refutation of the popular theory of an Arctic Basin round the Pole free from ice. He had no doubt the region was filled with one mass of stupendous blocks of ice, yet he thought the North Pole might be reached by land, though by water utterly unpracticable.

A great discussion was got up on papers connected with Scandinavian Sagas, Legends and Early History, in which the data of Northern antiquities were largely debated by Dr. Latham, Sir Charles Anderson, Mr. Charles Beckett, and others. Much erudition was displayed, and much information exhibited; but no distinct conclusion was arrived at. The ancient geography of the Arctic regions, the influence of early Danish invasions on English localities, and the remains of their dialects in our language, furnished topics of much interest—particularly applicable in a district where the termination "by" in the names of towns—such as Whitby, Selby, Ferriby, Roxby, Grimsby, and Danby—record violent winds, the engines were found to work admirably well; and the result of his observations was that a saving of fuel was effected to the amount of 50 per cent; but, taking the full power of the engines into account, the saving would be not less than 70 per cent; so nearly the same results as by the French Government in the trials.

Section F was distinguished by a comprehensive view of the preparative agencies at work in Ireland to cure the evils of excessive emigration, and some of the other ills that have affected the country. In this paper, founded on a mass of statistical data, Mr. John Locke took a very encouraging view of the improved condition and prospects of Ireland. The decrease of pauperism and of crime, the diffusion of employment, and the effect of the Encumbered Estates Bill in introducing solvent proprietors and agricultural improvers, in the place of ruined absentees, were all cited in proof of the renovation of the land—the produce of the sales amounting to upwards of ten millions of money; and the severe dwelt upon the beneficial effect of things as only a first step towards the great prosperity of the people. The whole was rose-coloured and cheering; and topics of a darker or doubtful nature were not brought within the scope of the picture Mr. F. Bennoch, whose opinion on the subject created so warm a controversy in Belfast last year, stated his suggestions for an improved system of currency and banking. Instead of permitting the Bank of England, at its discretion, to issue notes, he would have all issues of legal tender money under the control of Parliament, and that it should be limited to an amount equal to the annual taxation. Instead of the Government issuing, as now, Exchequer bills, on which were issued Bank of England notes, he would recommend the issue of Exchequer notes, which would circulate as money, inasmuch as it constituted nineteen-twentieths of our present system; but that twentieth part had the power to disturb the whole.

The Rev. Dr. Hume, on the Education of the Poor in Liverpool, pointed out the expediency of an increased supply of School accommodation in that populous place.

In Section G, Colonel Chesney read a paper on a Tubular or Double Life-boat, with which successful experiments had been made at Plymouth, and lamented the great loss of life upon our coasts in consequence of the deficiency both in construction and number of these vessels, by means of which so many brave seamen might be saved. It was stated that one on a new principle was being built on the Humber.

The improvements on machines for farming purposes were brought forward chiefly by Mr. Crosskill and Mr. Samuelson, and considered (Bell's reaping-machine among them) as introducing a new epoch in the art of husbandry, which would produce inestimable advantages to agriculture

Mr. Fairbairn's experimental researches to determine the strength of Locomotive Boilers, and the Causes which lead to Explosion, were described by that eminent engineer; and deemed so important, that he was requested to allow them to be published *in extenso*. They referred to the difference of opinion between Mr. Fairbairn and Mr. Wynn, of the Board of Trade, relative to the late explosion of the locomotive engine at Longside; and Mr. Fairbairn was finally confirmed in his opinion; as he had contended that the [illegible] superior strength of the [illegible] as compared with the top [illegible] which [illegible] of boilers when [illegible] found, on the [illegible] 1625 lb. on the square inch, producing a swelling in the sides of 0.34 inch, was required in order to draw the "stays" through the plate, after sustaining this enormous strain for a minute and a half.

At three o'clock the General Committee meeting took place; when, after some discussion on invitations from Glasgow, Brighton, Liverpool, Leeds, Dublin, and Gloucester, it was moved and carried that the meeting for 1854 should be at Liverpool (for the second time), and that Lord Harrowby should be the President; with Lord Wrottesley, Sir Philip Egerton, &c. &c., as Vice-Presidents. Colonel Sabine accepted the office of General Secretary, in place of Dr. Royle, resigned. The ordinary was capitally presided over by Professor Sedgwick; and Dr. Lindsay, in returning thanks for his health being drunk for his early and continued services to the Association, spoke forcibly in recommending a more enlarged system of instruction to be adopted in the English Universities of Oxford and Cambridge.

In the evening, Professor R. Hunt delivered an excellent lecture on Photography to a crowded audience.

TUESDAY.

Some important communications did honour to the proceedings of the closing day. M. Claudet exhibited some beautiful examples of photographic and stereoscopic portraits, to illustrate an interesting paper on the subject; and Dr. Scoresby, in an able exposition of Oceanic Currents, showed the fallacy of expecting accurate depths to be ascertained by the deep sea soundings, so warmly taken up on the experiments of Lieutenant Maury. No line could descend perpendicularly six or seven miles, or a far shorter distance; for the sea was composed of strata of currents, like the air; and a heated upper current from the Equator was met by a cold under-current from the Polar regions, running in opposite directions with a force of from two to five miles an hour; so that the line would be warped and twisted in various directions, and to a great extent, before it could reach the bottom. As a proof of this, he instanced a whale, of infinitely more weight than could be used in any soundings, and which run out the harpoon line so as almost to destroy the vessel. Against the line in one direction, while, in fact, the whale rose at a distance behind them in an opposite position.

Dr. Bulst read a paper on a Submarine Current Measurer; and other papers concluded the proceedings.

In Section B, Professor Johnston treated on the Causes, Physical and Chemical, of Diversities of Soils; and Professor Hodges gave in a report on the Gases Evolved by Flax in Steeping, and on the Economy of the Flax-plant.

Section D produced nothing new worthy of specialty, and adjourned to the usual meeting of the Ray Society; nor did the proceedings in Section E, though of much general interest, offer any discussions that could be separated for report with necessary brevity.

In Section F, Mr. Nelson took an analytical view of railway accidents in this country, and on the Continent from 1840 to 1850.

Section G, however, displayed perhaps the most important economical novelty of the meeting, in a paper by Mr. George Rennie, on the Combination of Ether with Steam as a Force in Locomotive Engines. The apparatus is difficult to describe, but readers may readily understand the result. Mr. Rennie stated that he had just returned from a voyage made for the purpose of ascertaining the value of this invention. The engine consisted of a steam cylinder, the steam in which caused the usual movement of a piston; and, after having performed this work, the waste steam was conducted into another cylinder, inclosed in some pipes of which was a quantity of liquid ether. The steam caused the liquid ether to boil; and the vapour, upon being given off, was conducted into another cylinder, and caused the piston to move. The vapour then escaped by a valve into a condenser or refrigerator, where, upon being brought in contact with cold water drawn from the sea, the vapour was again condensed into liquid, and was conveyed back to the ether cylinder, to be again heated into vapour and employed in the propulsion of the vessel. The reports of the commissioners appointed by the French Government to inquire into the advantages of the machine showed, in the voyage from Marseilles to Algiers, a saving of 74 per cent in the consumption of fuel. They also reported that, with the precautions adopted, no danger could result from the employment of the ether. Subsequently, Mr. Rennie made a voyage from Marseilles to Algiers in fifty-three hours, the rate of speed being an average of seven knots an hour; the consumption of fuel was only two kilogrammes per horse-power, while in ordinary steam-engines it was four kilogrammes per horse-power. These [illegible] of ether was about half a litre, or a pint per hour, the cost of which was about 1*l*. On the return voyage, notwithstanding contrary and violent winds, the engines were found to work admirably well; and the result of his observations was that a saving of fuel was effected to the amount of 50 per cent; but, taking the full power of the engines into account, the saving would be not less than 70 per cent; so nearly the same results as by the French Government in the trials. The vast importance of the invention was impressed on the Section by Fairbairn; and Mr. Rennie stated that, in consequence of the success of the trials, the patent rights had been purchased of the inventor for 2,500*l*.; and several large engines were, he believed, in course of construction upon his plan, by the French Government.

The business of the Association concluded with a notice of several interesting mechanical improvements in furnaces, steam-boilers, properties of metals in melting, &c; an account of the improved manufacture of rivets; and a paper by Captain F. Wilcox, on a New Wheelbarrow.

During the meeting Lord Londesborough had his handsome [illegible] beside, moored off the shore, and kept open cabin for all visitors, of whom there was no lack; and a continuous supply of what were styled luncheons, from noon to five o'clock, appeared to afford great satisfaction to the scientific in that way. On Thursday the noble Lord threw open [illegible] mansion at Grimston-park, with its magnificent armoury, and fine pictures for the entertainment of 200 to 300 persons, for whom a splendid dinner was provided.

Besides the excursion to Grimston Park, there were other to Beverley and Flamborough Head, to the Spurn, and to Grimsby, by Brocklesby Park and Thornton Abbey; but, with the exception of the first, they were little patronised. The arrangement for them, after the meeting, instead of during its session, does not seem to suit the strangers, many of whom have not the additional time to spend at their command.

WEDNESDAY.

This afternoon the Congress terminated its labours, at a meeting of the General Committee, where grants and recommendations were adopted for the ensuing year. Among these were £200 for New Observatory; £25 to obtain large photographs of the Moon; £50 to continue the experiments on Earthquake Waves; £15 towards providing a large Outline of the World; and £10 to Messrs. J. C. Hine and Dr. Latham were added to the committee. The Association suggest the expediency of co-operating with Lieut. Maury, by encouraging our mercantile marine to make daily meteorological observations at sea; and, after the usual acknowledgments being voted in the customary manner, the majority of the guests bade farewell to the resident members, who had treated them throughout with such cordial hospitality.

ROYAL GLEN AGRICULTURAL ASSOCIATION.

The twenty-first annual [illegible] place [illegible] Mr. on Wednesday. [illegible] about a mile from the town; it, however, excited [illegible] prizes were awarded after the dinner, which took place in the [illegible] Mr. Saunders, in the absence of [illegible] of Inchmartine, occupied the chair; Mr. Ross Fyfe, and the Right Hon. B. Dare [illegible] for the [illegible] of present, and several [illegible] which they were removed. The usual loyal toasts were given and responded to; and the "County Members" being named, Mr Du Pre Bass returned thanks, and "would not enter into any political discussion, because [illegible] political parties were excluded from its [illegible] he, so that [illegible] The Members' healths were [illegible] were distributed—"good behaviour dogs and [illegible] caring large families, &c.

THE HACKNEY CARRIAGE FARE

[illegible] consequence of the [illegible] numerous complaints [illegible] of police issuing peremptory orders to summon the proprietors and drivers of all hackney carriages found plying for hire not provided with the approved fare tables ordered to be adopted so far back as the 22nd of August, they have begun generally to make the [illegible] The plates are eight inches by six, the ground colour [illegible] and the letters of gold. In the Hansom cabs they are placed [illegible] of the vehicle, on the off side, close to the roof, and near the front [illegible] and consist of the same when drawn up; out, on the off side of the [illegible] In Clarence and other cabs, inside, in the centre of the off door, [illegible] under the window; and outside, on the back panel, in the centre, close to the roof. The table gives a concise statement of the charge to be made by distance and by time, for extra passengers, waiting, and luggage. It has received the sanction of the law officers of the Crown, [illegible] be taken as a just interpretation of the provisions of the new Hackney Carriage Act.

Note.—The sign — denotes below the average, and the sign + above the average. The numbers in the seventh column, are calculated on the supposition that the saturation of the air is represented by 100.

The Barometer during the Week has varied by small quantities only. The highest was 30.13 inches on the 14th, and the lowest was 29·78 inches, on the 10th. The mean for the week was 29.922 inches, at the height of 52 feet above the sea.

The Temperature has been nearly that of its average on every day. The mean for the week was 56·9°; being 0·7° below the average of the corresponding week in [illegible] years.

The range on Temperature in the week was 29·7°; being the difference between the highest, on the 11th; and the lowest, on the 14th.

The daily range of Temperature was 9·6° on the 13th; and 31·7° on the 11th. The mean for the week was 18·5°.

Rain fell on five days, to the depth of three-tenths of an inch.

The Humidity during the week has been dull, excepting on Sunday and Monday. A dense fog prevailed during the mornings of the 11th and the 14th; and the sky has been for the most part overcast.

Lewisham, Sept. 16, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending Saturday, September 10, the births of 1669 children were registered to the metropolitan districts. Of these, 843 were boys, and 826 were girls. The average number for the corresponding week in the ten preceding years, is 1337. The number of deaths registered in London during the week was 1015. Of these, 507 are due to zymotic diseases, and are thus particularised:—To small-pox, 4 (its average is 14); to measles, 15 (its average is 25); to scarlatina, 45 (its average is 49); to hooping-cough, 74 (its average is 72); to diarrhœa, 131 (its average is 90); to [illegible] 2 (its average is 3); and 7 to cholera [illegible] to tubercular diseases, 177 (their average is 173): of these, 125 are due to pulmonary consumption (their average is 121). To diseases of the nerves, brain, and senses, 130 (their average is 104) of these, 73 are paralysis (its average is 58); to diseases of the brain, 13 (their average is 10); to diseases of the heart and blood-vessels, 35 (their average is 30). To diseases of the lungs and the other organs of respiration, 96 (their average is 73): of these, 39 are due to bronchitis (its average is 22); to pneumonia, 44 (its average is 34). To diseases of the liver, &c., 48 (which is the same average). The violences, 19 (its average is 25); to drowning, 8 (its average is 3). The deaths in the week from diarrhœa, though less by 21 than were referred to that disease in the previous week, are still more by one-third than the corrected average number (95) of preceding years; and of the 7 deaths by cholera, 6 out of the 7 who died were males, and 5 were children under 15 years of age. The Registrar-General remarks that the number of deaths by cholera in corresponding weeks in the ten preceding years were 4, 1, 2, 8, 7, 6, 1682, 5, 17, and 5; so that the deaths do not exceed the usual number in ordinary years by certain forms of cholera. Two of the persons were, however, registered as having died of Asiatic cholera. Its presence is still confined to the poorer and more thickly populated of the metropolitan districts.

STATUE OF THE LATE SIR ROBERT PEEL IN WESTMINSTER ABBEY.—Gibson's statue of the late Sir R. Peel has been erected in the north transept of Westminster Abbey, under the superintendence of the sculptor. The statue was sculptured at Rome. It is of the life size, in pure white marble, and stands on a pedestal, of blue-veined marble. The likeness is good, and the attitude expressive, representing the late statesman in the act of addressing the Senate, and marking an emphasis by the pressure of the palm of the left hand with a scroll which he holds in the right hand.

REMOVAL OF THE SCHOOL OF DESIGN FROM SOMERSET-HOUSE.—During the last few weeks the School of Design, with its ornamental and various artistic apparatus for teaching, has been gradually removed from Somerset House, where it had been located since its commencement in 1837; and the rooms given up to the Registrar-General of Births, Deaths, and Marriages. The school is removed to Marlborough House, and will form part of the central School of Art, of the Department of science and art. The several district schools already established in the metropolis: at the Mechanics' Institute, Westminster; at Thomas Carter's, and at the Normal School, Finsbury; at the Established Martin's parish and elsewhere, will supply the elementary instruction in art formerly given at Somerset House, whilst the higher branches will be taught at Marlborough House.

PARIS EXHIBITION, 1855.—NOTICE TO ARTISTS.—The Board of Trade has received information from the Secretary for Foreign Affairs, stating that the French Ambassador has communicated to him that a decree for the admission of the Fine Arts is to take place at Paris, in May, 1855, at the same time as the Exhibition of Industry. The French Government is desirous that this Exhibition may be as complete as possible, and that its organisation may be arranged in a manner to give satisfaction to every nation invited to assist in it. The artists' works will be forwarded to the Industrial Department of them will not entail any expense on the artists exhibiting. Informations of further arrangements will be afforded as soon as they are made. Henry Cole and Lyon Playfair, Joint Secretaries. Marlborough House, Sept. 9, 1853.

CHRIST'S HOSPITAL.—On Wednesday next, the 21st inst., being the Feast of St. Matthew, the Lord Mayor, Aldermen, Sheriffs, and the Governors of the several Royal Hospitals, will attend Divine service at Christ Church, New Newgate-street, where a sermon will be preached by the Rev. George Buckle, B.A., late Fellow and Tutor of Oriel College, Oxford; after which they will repair to the Great Hall of Christ's Hospital, where four orations on the Benefits of the Royal Hospitals will be delivered by four of the Senior Scholars, according to annual custom: in Latin, by Henry Ludlow; in English, by John Wilberforce Doran; in French, by Henry Rogers Sevens; in French, by Charles Hubert Taver. And two poems will also be recited: one, in English, on "The Last Days of Edward VI.," by Charles William Watts; and the other, in Latin [illegible] Newsom, which, being the prize composition for the Bowyer Medal, has not yet been adjudged.

THE ISLINGTON AMATEUR DAHLIA SHOW.—The first dahlia show of this enterprising society was held on Monday, at the Albion Farm, Barnsbury-road, and exhibited a very extensive company. The show of hot and green house plants was very good, and included some choice specimens of fuscias, cacuses, verbenas, &c. Prizes were given for the best stand of dahlias (six distinct sorts), and an extra prize was also presented for the best stand of twelve dissimilar flowers, which excited a good deal of competition. The following are the successful competitors for the best stand of dahlias, in sixes:—Flowers, Cooper, Pilling, T. Norris, Rumbach, Howe, Fort, Clare, Laycock, Old, Keil, Green, and Ballantine. The extra prize was awarded to Mr. [illegible] florist, of Edmonton.

MUSIC LICENSES.—The justices acting for the county of Middlesex to grant licenses for music, dancing, &c., under the 25th of Geo. II., have determined not to entertain any application unless [illegible] days' previous notice to the next Michaelmas Sessions be given of the intention to apply. These sessions are appointed to be held on the 3rd of October; all notices must, therefore, be given by Monday, the 19th inst.

DARING FREAK.—On Monday afternoon a respectably-dressed young man mounted upon the lowest part of the [illegible] on the western side of Hungerford-bridge, [illegible] and, [illegible] deliberately sat down the chains on the other end, reaching the structure in safety. The whole act was so sudden, and excited so much surprise that neither the police nor attendants took the slightest notice of it, [illegible] ator of this insane freak until he had got clear of the [illegible] and that he was wholly unconnected with the workmen, [illegible] merely guilty of this foolish temerity for amusement.

THE NEW DECIMAL COINAGE.—During the last week, the employés at the Royal Mint have been at work in striking off the [illegible] specimen coins, which will be issued for circulation at the commencement of the new year, and they are stamped 1854; whether the present old silver coinage will be called in. The sovereigns, half-sovereigns, and florins, or tenth of a sovereign, remain without alteration.

NEW OMNIBUSES AND CABS.—From and after the 1st of next month, a new description of omnibuses and cabs is expected to be prepared for the public. From and after the 1st October, all persons desirous of obtaining a license to keep, use, or let to hire any metropolitan stage or hackney carriage, are to apply in writing to the Police Commissioners, in order that they may cause an inspection to be made of the vehicle; and, if found in a proper condition, are to grant a [illegible] which a license will be granted to grant a like one. No [illegible] granted without such a certificate. The Police Commissioners may cause an inspection to be made of the vehicles and horses; [illegible] on a certificate the licences may be suspended and the [illegible] offices plates recalled. Penalties are to be imposed for disobeying [illegible]

NATIONAL SPORTS.

DONCASTER RACES.

This meeting commenced on the run of four days, as usual, on Tuesday last. The first of the first day's racing always consists in the Champagne Stakes—an exceedingly stirring collision for the two-year-olds, seeing it is straight running down an incline, rolled on either side. Seven entry of thirty-four, it brought to the post a quintet. Domino was backed at evens to beat the other four. Lord Squadbrook's son of Melody and Sylph beat him in a rattling set-to. Beyond the mere return of results, the list contained nothing worth special record. The Leveret, the third, was that which to move the impulse of the "Ring"—the speculators of course excepted.

Wednesday set in as became a mighty social festival. The earth was cool and fragrant, and the turf elastic with the genial moisture of Monday night. From the mid-day, as early as the dawn, groups of pleasure-seekers—destined to find in pleasure that which they sought—thronged the thoroughfares of Doncaster, having breakfasted at home, was there by train, coaching as fashion prizes by the way. The town was alive with whole-or-one excitement. The running ground was green as an emerald. Some new architectural appurtenances had been provided—as a new subscription room, clerks' chambers for the officials, the jockeys, and the literary gentlemen, such was the order of their conditions, and it must be said the arrangements for the *mise en scène* were carried out as well as could be expected. The telegraph machinery was complete—the names of the horses, the riders, the fashion of each race as it was started, and the time it occupied, all duly set forth, *gratis*.

The opening exhibition was a match for a hundred, between Cheddar and Senorita—if such an encounter on the course may to be called wherein one is backed to beat the other with any odds you please to ask. They had it to Cheddar with, and to odds—Lord Glasgow, or rather his trainer, losing as the custom of confederacy is too generally between the peer and his [illegible]—No 1, for Butler, in a canter. Then followed the Municipal Stakes—200 sovereigns each for two-year-olds, seven subscribers, [illegible] forfeit—ran a trio. Being youngsters, there was a bit of a gamble before they went to work. When they did, in a brilliant bit, Mr. Bowes was the winner, as it pleased his jock—No. 2, Butler, in a canter. And now here is the world-wide topic of gossip and speculation—*the Doncaster business* of the racing year—the Doncaster St. Leger. It had ninety-and-more nominations, and "good various ones," half a score started. It would fill pages of this journal merely to epitomise the *on dits*, judges, demonstrations, doubts, despairs, by which it was heralded to the *entrance*. Last let it be remembered how the markets ruled at the eleventh hour. There will, of course, to various quotations of the averages—the safest general price will be the following:—Lord Westminster, for the one he had engaged, 5 to 1 against Satirist, 5 to 1 the Baron, and also battalion, 10 to 1 Canon, and 20 to 1 Bessarabian, the betting was long and the run. Ten Offers were made to back the field, and refused, against the card. The Monk of the ring, however, it was understood, had declared he would not lay another sixpence against him, and trade was very dull. The parade in presence was a little graceful and gracious. It was notorious that "honour" was the watchword—that true and honest the tug of chivalrous zeal would be [illegible] Fair and friendly was the muster at the post—the dog fell—and with the signal away flew the *silks* of England's three-year-olds. The first over the road was Cineas, and the favourite closed and caught him, and raise the running for he holds considerate. He led up the hill, the Leger falling off, Colonist, according to his party's principle, putting in best foot foremost. At this point Australian was sixth. Whatever changes may have occurred while they were out of sight, Sittingbourne led down the hill, and over the flat to the Red House. Now was the eye can descide when horses are rounding a turn at speed, it seemed that Lord John Scott's horse had got to the front, but instantly foreshortened in the straight run for home—it was impossible to [illegible]. Sittingbourne could not answer evident that the race lay but with the Baron, Bessarabian, and West Australian, outside—his position for the Derby. Such he stride—all the field but these two now beaten—Sittingbourne wholly done with all hope—they charged past the Grand Stand—Jem Butler took his horse by the head, shook the sand from right away three lengths clear of everything, and won such a St. Leger as never greeted the green common of Doncaster during the last thirty-five of its annuversaries. His, No. 1, Butler, entered home three by three lengths; Reiver second; beating Hetaplan, third—carrying a re-tribal of dead weight—by four lengths and a Burrowmik fourth; with a long-drawn-out procession behind him. So set with the [illegible] much a race—a meteor that bade the blood rush furiously. Ten years before, Mr. Bowes had won the Leger with Cotherstone, but that Fate—in guise of Job Marson—filched it from his [illegible] with Nutwith, and a passage of horsemanship of unparalleled brilliancy. It may be, the loss was not without desert: sometimes occasion will outspread the wariest *Ferguson*. Boots it not to tell deta[illegible] of all interest which eked out the *carte* that presented so rich a *morceau*.

But a farewell should fain be offered to the [illegible] movement of such account as that from which we are about to part. Those who witnessed the Great Northern Stakes for 1853 in the belief of one whose opportunity and experience may give him claim to [illegible] the [illegible] saw in the winner of them, probably [illegible] in all the characteristic essentials of his kind that the world [illegible] Pitcairn was, without exception, the three great [illegible] Pitcairn was a [illegible] of Pantaloon and Voltaire; Pantaloon was a flying quadruped—Hercules [illegible] Antiochus—a race: Crucifix, a Camilla upon four [illegible] Voltaire [illegible] the thorough blood that England has organised for the combination of grace and perfection of all the finest concentrated [illegible] [illegible] the excellences of [illegible] Herod type of Olympic chivalry, [illegible] the essay were worthwhile—for this tributary mem'or of a memorable St. Leger.

TUESDAY.

Fitzwilliam Handicap Stakes.—Miss Agnes, 1. Mentmore Lass, 2. Stand Plate.—[illegible]. Whalebone, 2.
Champagne Stakes.—Mr. Bowes's Sylph, 1. Domino, 2.
Great Yorkshire Handicap.—Husbandry, 1. Brownhill, 2.
Betting:—5 to 1 agst Haco, 5 to 1 agst Greyshot, 6 to 1 agst Heapy, 8 to 1 agst Hungerford, 1. to 1 against Sally Warfoot colt and Lady Landy, and 20 to 1 each agst Abdallah and Truth)
Royal Plate.—Mistletoe, 1. Mr. Peck's [illegible]
Selling Stakes.—Solyman walked over.

WEDNESDAY.

Match, £100.—Cheddar, 1. Senorita, 2.
Municipal Stakes.—Bordeb, 1. Physalis e, 2.
The St. Leger Stakes.—West Australian, 1. The Reiver, 2. Rataplan, 3.
Doncaster Plate.—Jacqueline, 1. Alfred the Great, 2.
Her Majesty's Plate.—Goorkah, 1. Flexi...
Corporation Plate.—The General, 1. Mr. [illegible] 2.
Sweepstakes.—Eva, 1. Barrel, 2.

THURSDAY.

Scarborough Stakes.—Filbert, 1. Snowdon Dunhill, 2
Ten Pove. Sweepstakes, two miles.—Mr. [illegible] Domino, 2
Cleveland Handicap.—Abdallah, 1. [illegible]
Ten Sovs. Handicap.—Vixen, 1. [illegible]
Fishpond Stakes.—Greyhill, 1. [illegible]
Juvenile Selling Stakes.—Mary, 1. Highlight, 2.

FRIDAY.

Ten Sovs. Stakes.—Cheese, 1. [illegible]
Produce Stakes.—Mayflower, 1. Knight of Schoo[illegible]
Doncaster Stakes.—Bairowne, 1. Sailor Bourne, 2.
Tuesday Cup.—Hungerford, 1. [illegible]
[illegible] Plate.—[illegible]
[illegible] Stakes (£200).—West Australian walked over.
Selling Stakes.—Sally Warfoot colt, 1. Jacqueline, 2.

[illegible] Stakes.—[illegible] Young Knight
[illegible] Stakes.—[illegible] Mo[illegible]
Assembly Plate.—[illegible] Lady Langdale, 2.

THE LATE DUKE OF WELLINGTON.—Wednesday last, the 14th, was the first anniversary of the demise of the lamented Duke. The hitherto warrior died at three o'clock on Tuesday, September 14, 1852. Since the demise of the Duke, Walmer Castle has been a point of great attraction; nearly 200 persons of all ranks visit the fortress and grounds daily. The interior looks almost the same as during the old establishment, and proposes doing so until the return of the new Lord Warden, the Marquis of Lalhousie, from India. It is proper to add that his Grace affords every possible facility to the visitors.

ATHLETIC SPORTS AT ADDISCOMBE.—On Saturday last the beautiful grounds of the College were crowded with a very large attendance of the neighbouring gentry and visitors, to witness a series of athletic sports, in which a company of the prizes were nobly contested. Several interesting feats came off between the races, in which the activity displayed by M'Neill, and the performances of Messrs. Ward and Barnes in gymnastics, excited universal admiration. A very handsome prize, presented by Lieutenant-Colonel Abbott and the military staff of Addiscombe, to the winner of most prizes, was sharply contested for by A. M'Neill and Griffith, both obtained an equality number of prizes but A. M'Neill was declared the successful competitor, on account of the variety of sports in which he excelled.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The rejection of the Emperor of Russia of the modifications contained in the last note from Constantinople, and the probability of open hostilities, have had a most depressing influence upon all public securities, the [illegible] Prices have fallen considerably, and large *bear* operations have been entered into for further decline. The great drain upon the resources of the Bank of England, together with the prospect of further heavy remittances being required to pay for foreign corn, have tended to cause much anxiety, and the demand for money has not been quite so active as of late, and loans have been effected in the Stock Exchange at 2 per cent per annum. In Lombard-street the rates have been from 2½ to 3 per cent.

The movements of Bullion have been rather heavy. From the Continent, nearly £1,000 in silver has been received for the purchase of gold, of which no metal has, therefore, become rather dull, as it declines 1d. to 1s. 4d. per ounce. Dollars have sold at 4s9d.; bars, 5s1d. per ounce. From Australia, £294,138 in gold; and from New York, £50,000 has come in; but there has been forwarded to the Brazils, £39,104; to Lisbon, £20,000; to India, [illegible]; and to St. Petersburgh, £70,000. In Russian Imperials, the returns from the Bank of France for August show a decrease in the stock of bullion of £1,300,000. Since January, the total efflux has been £1,300,000. In the same time, the bank of England has lost £4,037,594. The total stock is very little over £20,000,000.

On Monday, the business doing in Consols was comparatively small. The Three per Cents were 96⅞ to 5/8. Long Annuities marked 6. 13-16; India Bonds, par to 3s 2s. prm.; and Exchequer Bills, 3s. 4s. to par. There was almost a panic on Tuesday and Wednesday. Numerous sellers appeared at 95½ to ¾ for the Three per Cents. On Thursday, owing to the Directors of the Bank of England having advanced the minimum rate of discount to Four-and-a-Half per Cent, the Market was depressed in the extreme. Consols were first done at 95¾ ⅝, but left off at 95⅝. Exchequer Bills were 4s. to 1s. discount; and India Bonds, 1s. to 5s. premium

The Foreign House has been unusually heavy, and most of the securities have suffered a considerable decline. The fall in Russian Stock has been fully 2 per cent. Liquidor Bonds have marked 4½; Grenada Deferred, 45; Peruvian, 2½ to 3; Peruvian, 79 79½ to 80 ex. div.; the Spanish [illegible] Four-and-a-Half per Cents, 100½ to 100; Sardinian, Five per Cents, 94 to 93; Spanish Three per Cents, 45⅞; the New Deferred, 19⅞; Spanish Committee's Certificates, 5⅞ per cent.; and Dutch Four per Cents, 97½ to ⅝.

There has been great inactivity in the market for Miscellaneous Securities, nearly the whole of which, following in the wake of Consols, have ruled lower. Australasian Bank Shares have been done at 68., Chartered Bank of Asia, 3; Provincial of Ireland, 60½; Union of Australia, 61; United Kingdom, 31½; West Australian Agricultural have been at [illegible] Palace, 6⅞; Ditto, New, 2¾; Netherlands Land, 2¾ ex int.; Australian Investment, 2¾; Crystal Palace Land, 7½; Van Diemen's Land, 1½; Hungerford Bridge have marked 12; Waterloo, 8; Vauxhall, 2; Australian Insurance, have sold at 5; County, 12½; Globe, 250 ex. div.; Guardian, 8½; Imperial Fire, 22½; Ditto Life, 20; Law Life, 44; Phœnix, 135; Royal Exchange, 242; Berlin Waterworks Shares, East London, 12½; Southwark and Vauxhall, 83½; West Middlesex, 114; East and West India Docks, 147; and Victoria, [illegible] Six per Cent Bonds, 114½; City Navigation Bonds, 95½ [illegible] Conservancy Interest, 10s.

Although the corn trade has been rather active this week, a full average business has been doing in wheat and flour, at very full prices. We understand that immense quantities of wheat—nearly 200,000 quarters—have been received at Marseilles from the Black Sea, and that from 40,000 to [illegible] quarters have been ordered round to London, owing to the recent decrease in the Imperial Stock, and the probability of any advance in the price of bread during the first fortnight of the present month. It is evident, from the comparatively small quantity of wheat produced in England, this year, that we shall be compelled to import largely to meet consumption.

The Metal Market has been unusually heavy. Here, as well as in Liverpool and Manchester, owing to the enlightened, which has passed heavily. Large parcels of scrap have been carried over. The following [illegible] issued on Thursday, will show the extent of the decline:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 2¼; Caledonian, 5¼; Chester and Holyhead, 16; Eastern Counties, 12⅝; Eastern Union, 5; Great Northern, 24; Great Southern and Western (Ireland), 10¼; Great Western, 53¼; Lancashire and Yorkshire, 66; Ditto, Fifths, 9⅛; Leeds [illegible] London and North-Western, 101½; Ditto Fifths, 12½; Ditto Eighths, 2½; London and South-Western, 78; Manchester, Sheffield and Lincolnshire, 50; Midland, 88; North British, 56¾; North Staffordshire, 12; Oxford Worcester, and Wolverhampton, 39; Shropshire Union, 2⅝; South Devon, [illegible] South Wales, 9¼; York, Newcastle, and Berwick, 64; Ditto Extension, 11⅞; York and North Midland, 48.

LINES LEASED AT FIXED RENTALS. East Lincolnshire, 146; London and Greenwich 16.

PREFERENCE SHARES.—Caledonian, 100; Eastern Counties, No. 1, 1¼ [illegible] Six per Cent, 2¾. Great Northern Five per Cent, 120; Great Western, Four-and-a-Half per Cent, 100; Oxford, Worcester, and Wolverhampton, 105; Ditto, New.

FOREIGN.—Antwerp and Rotterdam, 5⅛; East Indian, 2½; Great Central of France, 8⅝; Luxembourg, 6⅝; Ditto, Railway, 3⅝; Ditto, Canal, 1; Madras, 8; Northern of France, 20½; Paris and Lyons, 15; Paris and Strasbourg, 8½; Rouen and Havre, 20; Sambre and Meuse, 8¾; Southern of France, 2¾; West Flanders, 4.

Nothing fresh has transpired respecting any attention, though offered at a considerable decline. On Thursday, Agua Fria were 1¼; Anglo-Californian, ¾; Australian, 2½; British Iron, 8; Colonial Gold, 1¼; Great Nugget Vein Scrip, 2½; Nouveau Monde, 1¾; Port Phillip, 1 to ⅝; and South Australian, ¾.

Friday Evening.

[illegible] has been rather more doing in the Consol Market to-day. Prices, however, have fluctuated to some extent. The Three per Cents have been done at 95⅞ ⅜ ½ ⅝. The Unfunded Debt has been heavy, at 3s. to 5s. dis. India Bonds, 2s. dis. to 5s. prm. Foreign Bonds and Railway Shares steady.

THE MARKETS.

CORN EXCHANGE, Monday.—A very limited supply of wheat was on sale in to-day's market, and [illegible] and by land carriage, was of [illegible] quality was by no means first-rate. [illegible] fresh [illegible] sound [illegible] steady, and, in some instances, prices were 1s to 2s. per qr. more [illegible] than on Monday. From [illegible] the arrivals of wheat into the port [illegible] from the Baltic moved off steadily, and prices were [illegible] per quarter higher. Flour [illegible] corn were in improved request. The show of barley was [illegible] the currencies had an upward tendency. Oats [illegible] Beans [illegible] which were [illegible]

THE ILLUSTRATED LONDON NEWS

No. 645.—VOL. XXIII.] SATURDAY, SEPTEMBER 24, 1853. [TWO NUMBERS, 1s. { WITH SUPPLEMENT GRATIS.

WHAT LONDON REQUIRES FOR THE PREVENTION OF CHOLERA.

THE Cholera continues its fearful ravages in the north of England. There is not a city or large town in the kingdom which has not been startled out of its usual apathy by the announcement. When danger is visible and tangible, and not to be warded off, authority begins to bestir itself. The house is in flames—and the tenant thinks it desirable that he should be insured. The steed is stolen—and the stable door creaks on its hinges, and will speedily be shut. Now that Cholera is in the land, the warnings of sanitary reformers are found to have been entitled to more respect than they received. Local functionaries think it possible that there may be danger to the public health in dirt, in stenches, and in malaria. Corporations are alarmed: not in their collective capacity—for corporations never catch the Cholera—but individually, in the persons of the members of whom they are composed; they begin to feel that they too are mortal, and liable to the ordinary penalties which punish the rest of mankind for neglect of the laws of nature. It is recognised that the miasmata bred in the purulent and fetid cellars where vice and poverty congregate, may fly on the wings of the wind to luxurious mansions, and seize upon victims who never dreamed of the danger, or heard of it, except to neglect it, in the columns of newspapers, or in the pertinacious reports of sanitary inspectors. The zeal of public functionaries, at length awakened, will no doubt produce good effects in many parts of the country; especially in places where municipalities have sufficient power to act, and well-defined jurisdictions, in which to extend their operations. But in London, where the hand of authority is more urgently needed than anywhere else, the people at the eleventh hour are asking what will be, or can be, done to ward off the evil; or, if that be impossible, what measures can be adopted to lessen its intensity for the present, and to prevent its recurrence for the future?

It is easy to see that all which can now be done will fall very far short of what the circumstances require. There will be a house to house visitation of the densest and most unwholesome parts of the metropolis. Over-crowded lodging-houses will be compelled to disgorge a portion of the superabundant misery, beggary, and vice that crawls into them to rot and fester, like maggots in thick corruption. Reeking alleys will receive a scanty, but a welcome ablution; squalid tenements will be whitewashed, pigsties will be removed from their disgusting contiguity to the sleeping apartments where tramps and vagrants do all they can to imitate the habits of the animal with which they are so often found to associate. A few cesspools will be cleansed, and a few drains will be flushed. The result of these, and similar measures of reform and precaution will, in all likelihood, diminish the ultimate mortality from cholera at the rate of two, three, or even ten and twenty per cent. We would not disparage the value of any such efforts. Not to make them even at the last moment, would be to neglect a sacred duty. But to rely upon such efforts as sufficient, and to cease making them as soon as present danger shall have passed over, will be a neglect of duty equally to be lamented and condemned. The warning of 1849 was severe enough, but it failed to answer its purpose. As strong a warning is, we fear, about to be given in 1853. Let us hope that this time it will not be equally in vain; and that "out of this nettle of danger" we shall yet be enabled to "pluck the flower of safety."

But as regards this great metropolis, the public must not blind itself to the difficulties that lie in the way of effective sanitary government. Any sanitary reform, worthy of the name, is all but hopeless, while the old corporation of London is allowed to preserve its ancient jurisdiction, and while the municipality of the greatest and richest city in the world is restricted to a small nucleus, containing little more than a twelfth or fifteenth part of the population. This is the monster evil that requires to be corrected. London—by which we means the metropolis and all the metropolitan boroughs—ought either to be mapped out into a series of municipalities, each governed by its local Mayor, and each forming a portion of a great federal union, complete in itself, but yielding allegiance to a superior or general Lord Mayor, as is the case in Paris; or it ought to be declared one municipality, with officers and functionaries, possessing powers co-extensive with its vast district. A Parliamentary Commission is at present sitting to inquire into, and report upon, the state of the Corporation, with a view to its reform, and adaptation to the wants of the mighty metropolis that has clustered around the original germ. We do not pretend to anticipate what the report of that commission will be; but of this we are certain, that no mere reform applied to the "City," and leaving the remaining part of the metropolis without a municipal Government, will have any effect in rendering London wholesome. It did not need the Cholera to inform the two millions and a quarter of people that are congregated together on the northern and southern banks of the Thames, that for want of a central and complete authority, the science of public health was practically unknown and almost utterly disregarded. But perhaps the visitation of the pestilence will impress the fact with sufficient distinctness upon the public mind, and enlist public opinion in behalf of the only remedy sufficiently large to cope with evils whose name is "legion." It is, perhaps, too much to hope that any extension of municipal government, or any possible increase of sanitary knowledge, will ever entirely eradicate epidemic diseases from such crowded places as cities must of necessity be. Yet it is not too much to expect that a properly-appointed municipality, with full powers of action and a jurisdiction co-extensive with the congeries of Parliamentary cities and boroughs which are commonly known under the general appellation of "London," might accomplish many reforms which are now next to impossible. London requires an abundant and cheap supply of water, not only to the rich, but to the poorest of the poor; a complete system of drainage; the purification and embankment of the noble stream that now runs through it, bearing miasma on its tide; pub-

CARLISLE FORT. CORK LIGHTHOUSE. DUKE OF WELLINGTON. TRIBUNE. ARROGANT. AGAMEMNON. LONDON (AT ANCHOR.) CAMDEN FORT.

THE CHANNEL FLEET ENTERING CORK HARBOUR.—SALUTING THE PORT ADMIRAL.—(SEE NEXT PAGE.)

lic *abattoirs* at convenient distances beyond its outermost boundaries; the abolition of the barbarous practice of intramural interments: the widening of many hundreds of narrow streets and thoroughfares; and the prohibition of trades and manufactures, that are a public nuisance, and that contaminate the atmosphere by the smoke or the stenches which they belch around them. None of these boons are to be expected except in partial instalments, and at long intervals, from the agencies which at present direct the local affairs of the various parts of London. A vigorous Home Secretary, like Lord Palmerston, may, with much difficulty, succeed in shutting up a few over-stocked graveyards, or in compelling manufacturers to treat smoke like fuel, and consume it in their own furnaces. But no amount of vigour which he can display will cause the widening of old, and the construction of new, thoroughfares, or procure the purification of the Thames, or an abundant supply of wholesome water to the houses of the poor. It would be quite as difficult to obtain one out of the hundred Acts of Parliament that would be necessary under the present system to carry out the reforms which have been thus briefly indicated, as it would be to obtain one general act for the efficient government of the whole metropolis. We, therefore, earnestly hope that the severe lesson of another visitation of Asiatic cholera—if, as seems but too probable, the people be once again fated to undergo it—will have the effect, so urgently needed, of procuring for the metropolis the privilege of municipal government, exercised by scores of minor towns that do not contain the hundredth part of its population. It will be of no use, when the Cholera is amongst us, for the "City" to make itself clean, if Lambeth persist in remaining dirty. It will be in vain that Marylebone or Finsbury should take all proper measures of precaution, if the Tower Hamlets and Southwark should continue to breed disease and spread it over the rest of the metropolis. Large as London is, it is not too large for efficient sanitary and municipal control; and though the old Corporation may at present "stop the way" of improvement, by giving the semblance of local government when the reality of it is wanting, there are no difficulties to be encountered that energy and statesmanship may not surmount. Energy and statesmanship are not always to be had for the asking; but occasions of public peril are generally sufficient to bring them out. The actual existence of such peril at the present moment is not to be denied. Let the people of this great City look for efficient, and not partial, relief; and London may become one city, in fact, as it is in name, and the cleanest and the best-regulated in the world.

THE CHANNEL FLEET AT QUEENSTOWN.

THE arrival of upwards of twenty vessels of the Royal navy in the somewhat secluded naval station (of Queenstown) made great excitement among the inhabitants. Such a spectacle was never before witnessed by the present generation. For once the memory of the "oldest inhabitant" is at fault in seeking for anything approaching to a parallel to the present naval gathering. Neither under its time-honoured but obsolete name of "Cove," nor its more modern designation of Queenstown, has there been such a warlike display in the port as is now to be seen upon its waters.

Queenstown has long been known as a naval station, and seems to have been fashioned by nature expressly for the purpose. Here the river Lee, just before mingling its waters with the ocean, broadens out into a wide and ample estuary, deeply indenting the land towards the south, where, however, finding no outlet, it turns northward, again, and finds a narrow channel seaward through a gap in the hills to the west.

The result of this configuration is, that the estuary is land-locked in the ample embrace of high ground on all sides, except at the entrance to the the westward, which is not more than a mile and a quarter across, from point to point, at the narrowest part of it; while, as if to render safe the security of the shelter, Spike Island lies opposite to, and not more than a mile from, the narrow outlet, as a natural breakwater against any sea that a west or south west wind might send through the mouth of the harbour. Nor must it be forgotten that the entrance is as easy as the harbour is secure. There are no shoals nor sunken rocks in the way; and the largest vessel in the British navy, may enter at all times of the tide and be certain of finding secure anchorage within.

While nature has been thus bountiful to the place, the resources of art have not been neglected to seal it against any hostile approach. At the narrowest point of the channel two batteries have been erected, nearly opposite to each other—Fort Camden and Fort Caroline—each mounted with upwards of thirty heavy guns; while there is a third battery, on the seaward side of Spike Island. So that, supposing a hostile fleet to be rash enough to attempt the passage, they would be exposed to the destructive fire of two forts on each flank; while the guns from Spike Island would pound them in front. It may safely be said that the defences of Queenstown are complete.

Into this beautiful and spacious harbour, then, the Channel Fleet began entering on Saturday; and we take from the *Cork Examiner* the following details:

About twelve o'clock on Saturday (the 17th) the squadron of Admiral Corry steamed into Cove Harbour, the *Prince Regent*, bearing the Admiral's flag, being the first in advance. As she came abreast of Camden Fort she fired a salute of twenty one guns, which was answered from the guard-ship, and the various ships of the squadron took their places in the roads. Then the squadron of Commodore Martin was discerned, steaming in from the direction of Kinsale, and forming a long line as they approached the harbour, the *Duke of Wellington*, bearing the Commodore's flag, taking the lead. As each passed, a salute of fifteen guns, answered from the *Terrible*, announced their arrival, and immediately after the whole of the two squadrons had occupied their places. The following is the Fleet now in the harbour.

The *Queen*, *Prince Regent*, *Duke of Wellington*, *Ajax*, *Impregnable*, *Blenheim*, *Agamemnon*, *Leander*, *Conqueror*, *Edinburgh*, *Monarch*, *Arrogant*, *Hogue*, *Sanspareil*, *Euryalus*, *Amphion*, *Arrogant*, *Highflyer*, *Valorous*, *Sidon*, *Amphion*, *Vulture*, *Desperate*, *Tribune*, *Highflyer*, *Arrogant*, *Terrible*, *Wizard*, *London*, *Blenheim*, and *Impérieuse*—in all, 28 sail. It appears that a portion of one of the squadrons, to the number of six, including two three deckers (the *St. Jean d'Acre* and the *Princess Royal*), parted company off or near Clear Island, and was expected to arrive very soon. Some vessels, too, of considerable force are in company with the *Black Eagle*, in which the Lords of the Admiralty made their tour of inspection, and will be added to to the number of the fleet already in our waters. The sensation which the arrival of this large and powerful fleet—the largest for many years seen here—caused, was amply evidenced by the crowds which flocked from the city from an early hour yesterday morning down to the very last available moment of daylight. Every steamer was crowded, and some had to start earlier, to escape the over-number which was pouring into them. Trains of 10, 11, and 12 carriages were crowded to inconvenience.

The appearance which Queenstown presented was gay and animated in the extreme, being filled by dense crowds of all classes and conditions, added to and taken from every moment; and all in unusual spirits. The day was beautiful in the extreme, bright and cloudless, and the surface of the bay was scarcely ruffled by a breath of wind. The fleet lay in a long and almost direct line stretching from near the shore of Ruskinny right across to Carlisle Fort. Nearest the shore of all the vessels of large force was the *Prince Regent*, bearing the Admiral's flag, and beyond that lay the *Queen*; further on stretched the *London*, the *Blenheim*, the *Agamemnon*, and last of all, at the very extreme of the line, conspicuous even at that distance for her enormous bulk, the *Duke of Wellington*. Among these, and filling up the long line, were grouped the vessels of lesser magnitude.

During the entire day the bay was alive with crowded boats. The large barges of the shipped war were to be seen darting in all directions, proceeding from vessel to vessel, and gay parties filled all the shore-boats, whose course was generally around the fleet. Permission was very kindly given by those in charge to visit and inspect the principal vessels; but this permission was scarcely taken advantage of in the case of any but the *Duke of Wellington*, that appearing to be the grand centre of attraction to which all attention was directed. Accordingly, her decks were for the greater part of the day filled with groups of astonished and admiring visitors, who could scarcely know whether most to admire the vastness of her proportions, so enormous and so just, the number and force of her great armament, the neatness and order with which the vast machine was regulated, or the almost unaccountable power of discipline, which enabled the thousand men who live, breathe, and have their being between her decks, to act with the unity of a single force. So much has been already said and written on the vast powers of this vessel, that it is scarcely needful to enter into any detail upon the subject; but an idea may be formed of her capabilities as a screw from the fact that, the wind having fallen short off Kinsale, she was obliged to get up steam; and, though with only half steam on, came into harbour at the rate of between six and seven knots an hour.

A not unimportant effect of the arrival of the Fleet, has been its influence upon the state of business at Queenstown. There has seldom been a worse season experienced by those who let lodgings, or whose dependence is placed upon the stay of visitors, than the past has been; but since the announcement of the coming of the Fleet, lodgings have been eagerly caught up, provisions have increased in price, boats and boatmen have got into remunerative employment, and altogether a general and increased activity is visible in almost every department of business. The arrival of the Lords of the Admiralty, and that of the remaining portion of Commodore Martin's squadron, will add to the interest of visitors, and will probably swell the crowds of sight-seers even to a greater extent than hitherto, especially as the arrangements made by the railway and river steam companies are such as will probably enable them to view the ships far out at sea.

FOREIGN AND COLONIAL NEWS.

FRANCE

(From our own Correspondent.)

PARIS, Thursday

The revival of the Turkish question, and the measures being and to be adopted to meet the dangers menaced by the dearness and scarcity of provisions for the coming winter—such are the points which seriously occupy public attention at this moment. The diplomatists meet *au courant* in the matter seem to consider a rupture between Turkey and Russia as inevitable. Letters from Vienna, dated the 13th inst., announce that the Prince Menschikoff, who had arrived there, accompanied only by a secretary, had brought a new manifesto from the Emperor, two editions of which were to be published gratis—one for Europe in general, the other for Russia; that this document was couched in pacific terms, regretting the obstinacy of Turkey, which refused to see the dangers to which she was exposing herself; assuring Europe that it might confidently rely on the honourable intentions of the Emperor Nicholas; but concluding with the statement that the resistance of the Ottoman Porte to any arrangement compelled him to retain his present position, and to wait the course of events. It seems certain, at least, that Russia will not commence the attack, or pass the Danube, unless the Turks take the initiative. There is no doubt that the Divan is not in a position to be held responsible for what may occur on the Turkish side; for such is the fermentation of popular feeling, among Christians and infidels alike, that the slightest incident may provoke hostilities, which it had no desire to seek. At Damascus all is ripe for a general movement; and, at Brussa, inflammatory placards have for some time been posted; while the *ulémas*, who have a powerful influence over the population, warmly urge the Mussulmans to a religious war. A shot discharged on the borders of the Danube, and the train is fired. The Prince Menschikoff, expected almost immediately in Paris, from whence, it is said, he is to proceed to the general quarter in Wallachia.

Vast cargoes of grain are daily arriving at Marseilles, and more are yet expected there and at Toulon; while at all sides, magazines are being built to receive these important importations. The Northern Railway has announced a reduction of nearly fifty per cent in its prices for the transport of grain; and the *Moniteur* proclaims a degree of a diminution, until further orders, of the duty on the importation of fresh and salt meat. The speech of M. Dupin *aîné* to the *Comice Agricole* of Clamecy (of which he is president), has excited much attention, and has been cited in the *Moniteur*, and from thence copied into most of the journals.

The continuation of beautiful weather—late though it be—raises the spirits of the vine-growers, and leads to the hope that the grape crops will not have altogether the disastrous fate that was predicted for them; though the harvest must, at best, be but a poor one.

Some fresh arrests have been made in the Faubourg St. Antoine; but these events have become too common to excite much interest at present; more especially as they are seldom maintained for long. It is said that certain false reports, leading to the belief that the *Conseil Municipal* was opposed to the system adopted by Government to hinder the increase of the price of bread, caused the manifestation which led to these measures.

The military fête at Satory, announced to take place on the 16th, for Ste Eugénie, has been deferred till the 16th November, the St. Eugène. The camp, however, meantime presents a series of amusements and gaieties. On Saturday the installation of a Hippodrome took place, with a grand representation, at which the Emperor, the Empress, and a number of distinguished guests were present; and, on Sunday, there was a display of arms and popular games, followed by a ball given by the officers in the Imperial tent.

The works for the embellishment of Paris are being continued with undiminished activity. The lake in the Bois de Boulogne, covering a space of upwards of four *hectares*, will be completed in a few days. In the Rue de la Monnaie has been erected the plan of a magnificent monument, dedicated to *la Concorde*, on the spot which it is proposed it shall occupy when realised. This monument is intended to form one of the decorations of a splendid street, starting from the middle of the colonnade of the Louvre, and ending at the centre of the Hôtel de Ville; to be ornamented by statues of François 1er., Louis XIV., and Napoléon 1er., surrounded by the principal men of their epochs. This project, conceived by M. Marcellin, has been submitted to Louis Napoleon.

The Emperor has accorded, at the request of the Préfet of the Haute-Saône, the sum of £100, for travelling expenses to forty families of that department, about to start for Algeria, with the intention of forming a colony and building a village, to be named Vesoul-Benian. This is one of the largest attempts—if not the largest—that has yet been made towards emigration in this quarter; and it is hoped that its success will be such as to encourage, among a people little disposed to try to benefit their position by change of country, a movement which, if properly directed, can hardly fail to prove advantageous alike to those who go and to those who remain behind.

The dome of the Invalides is about to be raised by the Rusca and Klingston system. This will be the third time that the operation of raising this monument will have been performed: the first occasion was in the time of Louis XIV; the second, in that of Napoleon.

The following is the itinerary to be pursued by the Emperor and Empress in their present tour:—Arras, Douai, Valenciennes, and Lille; on the 24th they are to visit the camp at Helfaut; thence they proceed to St. Omer, Dunkerque, Calais, Boulogne, Amiens, and on the 9th to return to Paris. The Maréchal St. Arnaud is to accompany their Majesties.

The great theatrical event of the day is the appearance of George Sand's comedy, &c., "Le Pressoir," at the Gymnase. It is long since the play-going world has had so great an enjoyment as in witnessing this *chef d'œuvre* of refinement of sentiment, simplicity, purity, truth to nature, and elegance of style and diction. We will endeavour to give our readers as brief a sketch as possible of the main plan of this charming work, which, in the hands of about the best *troupe* in Paris—and that is not saying a little—has a rapturous success. Two young men of the working class—carpenters—one, Valentin, a rustic Crichton; the other, Pierre, a less perfect, but still highly interesting and natural character, entertain for each other a friendship, to the development of which the gifted authoress has given all the interest and excitement of romance. *Rose*, one of those women George Sand loves to paint, and paints so exquisitely, at once proud and tender, reserved and impassioned, resolute and enduring, suffering and uncomplaining, is beloved by both, and loves *Valentin*; who, unconscious of her preference, resolves to sacrifice his passion in favour of his friend, and maintains towards her a coldness she believes to be real; but which *Pierre* knows to be assumed, and which, with the blind jealousy which is the glaring defect of his character, he mistrusts, despite of all the proofs of *Valentin's* noble self-devotion. The working out of this simple plot: the drawing not only of the principal but of the less important personages; the inimitable beauty of language and sentiment, the pure and healthy interest of the work; form a whole to which no description can render justice. We refrain from giving the *dénouement* of this piece; which such of our readers as may be hindered from witnessing its performance should not fail to read, as one of the best specimens of modern French stage literature. The Variétés is giving a rich piece, "Les Enfers de Paris"—the name of which will give our readers a tolerable idea of its nature. It has a good deal of action and effect, and is sufficiently amusing to those Asmodeuses who are curious in scenes of the vice and corruption of a great capital. For ourselves, we prefer leaving the roofs on the houses where such spectacles take place, and are, therefore, but little competent to criticise works of this character. The re-opening of the Odéon took place on Monday, attended by the Emperor and Empress.

A tent for the autumnal exhibition of the Horticultural Society of France is being erected in the Champs Elysées. The show, which is expected to be very fine, is to open on Sunday, and to continue till the 29th of the present month.

The Emperor, on Sunday, gave a private audience at the Palace of St. Cloud to M. Hubner, the Austrian Minister, to deliver a letter from the Emperor of Austria, notifying the marriage of the Archduchess Maria Henrietta, daughter of the late Archduke Joseph, Palatine of Hungary, with Prince Leopold, Duke of Brabant.

It is stated that the English in Boulogne intend to present an address of congratulation to the Emperor and Empress on their visit there.

M. Soulé has left Paris on his way to Madrid. He stops for a day or two at Bordeaux, but then goes on without delay. Time enough having elapsed for the Spanish Government to have expressed, if it felt or dared to express, any repugnance to receive the American Envoy, it may be presumed that the Court of Madrid has not made any objection.

The principles of Free trade continues to make progress through the country, though slowly. The Council-General of the department of the Rhone, struck with the continued increase in the price of coal, has voted the following resolution:—

That, in order to impede as much as possible the incessant rise in the price of coal, the Government be requested to examine if it be not possible to repeal the duties imposed on foreign coal on its importation by sea and land.

Advices from the manufacturing districts speak of the satisfaction felt at the reduction of the import duty on foreign cattle, and add that the measure could no longer be delayed, in consequence of the excessive price of butcher's meat.

It appears that the sum which the municipality of Paris will have to pay the bakers for the artificially low price at which they have been ordered to sell bread, is estimated at the least to amount to £1700 a day. This loss is to be refunded to the municipality by allowing the bakers, at some future time, to extend their charges beyond the scale prescribed by the usual regulations.

The interminable Eastern question still paralyses the manufacturer, and the wholesale as well as the retail dealer. The supply of goods in the principal towns is nearly exhausted. But the tradesmen hesitate to buy until the Emperor of Russia and the Sultan settle their differences, and all alarm shall have passed away relative to the excitement which now undoubtedly prevails among the population of Constantinople.

Whatever may be the result of the Eastern complications, it is pretty generally understood in Paris that Emperor Louis Napoleon will not go to war. He is said to have expressed himself to that effect very recently. The particular reasons for that resolution are the deficiency in the harvest, the probability of a failure in the vintage (an enemy (which is not to be despised or disregarded)—the cholera, and the amount of paper now in the market in consequence of the numerous speculations to which a certain degree of prosperity has given rise. All these, it is said, are with him of first-rate importance, and demand the almost exclusive attention and care of the Government.

A fatal accident occurred upon the Paris and Bordeaux Railway early on Sunday morning. The cause of the accident was between Poitiers and Ligugé. The mail train from Paris ran into violent collision with an extra luggage train coming northwards. Three engines were utterly destroyed, smashed to pieces in fact; and five of the railway servants were killed on the spot—viz., the driver and stoker of the two engines in collision, and the conductor or guard of the mail train, whose place is in the luggage van immediately behind the engine and tender. Besides those three persons who were killed on the spot, numerous others received injuries, more or less severe, of the nature of contusions, lacerations, and lacerations in various parts of the body. Mr. Graham, the Oporto wine merchant, was among the passengers who received slight injuries. M. Pilgrin, the Minister of Public Works, and his Chef de Cabinet, were in the mail train, but escaped unhurt. The traffic was suspended by telegraph until the line could be cleared of the fragments of the engines and carriages. The accident was occasioned mainly by the circumstance that there is as yet but a single line of rails laid between Poitiers and Ardoume, which latter town is some 25 miles from Poitiers. The former Orleans and Bordeaux Company had undertaken not to lay their second line of rails until three years after the opening of the line throughout to Bordeaux, and although, since the amalgamation of the two companies, the laying of the second line of rails is proceeding as rapidly as possible at various points along the entire railway, unfortunately it is not yet complete. Owing to some extraordinary blunder, as yet unexplained, the signalling apparatus at the station-master's office at Poitiers was no uncovered otherwise he would have detained the mail train at the latter place till the other had arrived there. With a remarkably bright moon, and almost broad daylight, as it must have been about five o'clock in the morning, it is impossible that the drivers of the respective trains should not have seen the powerful red lights in front of the engines, so as to avoid a violent collision as must have taken place, to produce such terrible results.

Another serious accident occurred at eight o'clock on Saturday afternoon, on the Paris and Rouen Railway, at Sotteville. In consequence of a train having run into the points two isolated locomotives driving in opposite directions met with a violent collision. One of them was overturned, and the two men who directed it were thrown out. The other was damaged, and severely injured. They were immediately conveyed to the hospital.

HOLLAND.

H. King opened the States General on Monday. His Majesty's speech was delivered at half-past one in the afternoon, was, by means of the Dutch submarine telegraph, placed in the hands of London readers on the same afternoon. The Royal Speech notices the construction of the telegraph as of the highest interest to commerce. The King congratulates the country on the great success of the enterprise of draining the Haarlam Lake, and on the advantageous sale of the land reclaimed. If a progress of the railway system is mentioned, and it is stated that applications for new concessions are encouraged as much as possible. The Government considers that the harvest in Holland as less than an average one. A thing is said by the King on the subject of Papal aggression.

GERMANY.

The Emperor of Russia was to leave St. Petersburg on the 13th inst., for Warsaw, whence he will proceed to Olmütz, so as to arrive there by the 24th. He will not come to Berlin, and there will be no meeting between the Russian and Austrian Emperors at Warsaw. It seems to be as certain also that the King of Prussia will not leave Berlin for Olmütz.

In the proclamation of the Minister of Finance, that, in conformity with the resolution arrived at in the Zollverein Conference, corn and all farinaceous products will for the present be admitted into Prussia duty free, the 1st of January, 1854, was fixed on as the term of this temporary repeal. This date has reference, not to any probable state of supply or market at that time, but to the circumstance that then the Zollverein receives an accession of several new members, formerly the Steuverein, of whom it is known that at least Hanover and Oldenburg are favourable to a total repeal, or at least a very considerable reduction, of the duties on grain. It is competent to any state of the Zollverein to proclaim a prolongation of the above-mentioned term as far as regards its own territory.

The past week has been one of great excitement and display at Berlin. Public attention has been absorbed in the great military manœuvres, which have been on an extensive scale, not less than 40,000 troops having taken part in them. The grand parade of Friday took place between Lichtenberg and Friedrichsfeld, on the same ground where, ten years ago, the two same *armée corps* were reviewed in the presence of the Emperor of Russia. The number of foreign officers present at the reviews was not less that eighty, of whom seventeen were English. According to the opinion of the latter, the management of these large masses of troops at the various manœuvres has been worthy of all admiration. The infantry and artillery not belonging to the garrison of Berlin have returned to their various quarters; but the cavalry remained for a series of field-days, from the 17th up to the 20th inst. The Queen, with various ladies of her Court, was present at most of the manœuvres. On the 17th, the cavalry had the ground almost entirely to themselves —sixty one squadrons in number; but it is an unavoidable consequence of the great space required for the evolutions of such numbers of horse, and of the sandy soil in which these evolutions were executed, that little of anything like connected operations could be perceived," especially by a non-professional observer.

ITALY

It is stated that there are 30,000 political prisoners in the Papal dominions. The principal fortresses in the provinces are continually receiving contributions of political prisoners from the neighbouring towns.

WEST INDIES

Advices from Jamaica to the 27th ult., state that great anxiety was manifested for the arrival of Sir H. Barkly, to assume the government of the island. It is not yet known whether the Assembly will accept the Government compromise, or resolve to maintain their ancient privileges (Sir Charles Grey had already removed from Government House, and retired to his private residence). His Excellency had received an address from the Bishop and the rest of the clergy, on the occasion of his contemplated retirement from the cares of government. Mining speculations were still the order of the day, and engrossed a considerable share of public attention.

From British Guiana, our accounts are to the 25th ult. Two hundred and eleven coolies, who had served their apprenticeship, had departed for India. They carried with them £1000 in money, and a greater sum in ornaments of gold and silver, the result of their five years' industry. The coolies at the village of Mahaica, on the east coast, had broken out into riot, owing to some imaginary interference with their religious ceremonies; thirteen of the ringleaders had been arrested and committed for trial. Efforts were being made by members of the Legislature to induce the Portuguese Government to modify the restrictions which at present oppose themselves to immigration from Madeira.

The accounts from Trinidad refer to the ravages of the yellow fever in that island. Lieutenant-Colonel Paxton and Dr. Cleland, of the 69th regiment, both died on the 25th ult. The epidemic was prevailing to a considerable extent among the troops. The ship *Susquehanna* has put for Calcutta, carrying 282 men, 23 women, and 2 children, returned coolies. These people took with them 20,000 dollars in money, as their earnings in the colony.

Yellow fever was raging with much virulence in some of the Windward Islands, particularly at Montserrat and Trinidad. Several officers of the inter colonial steamers had fallen victims to the epidemic. Captain Booth, the Governor of Montserrat, his wife, the only medical man on the island, and several others, had been carried off by the fever. The purser of the *Derwent* died on the 20th ult.

The insurrection in Tortola had been entirely suppressed; forty persons had been arrested and taken to Roadtown, fifteen of whom were subsequently released as having taken no part in the revolt. The military and police were very active in their search for the rebels, and were scouring the island in all directions. No vessel of war had arrived at Roadtown up to the 20th ult. The sum of 2656 dollars raised by subscription in the island of St Thomas, had been transmitted to Tortola for the relief of the sufferers. The family of Colonel Chads, the officer administering the Government of the colony, together with most of the inhabitants who had taken refuge in St. Thomas, had returned to Tortola, and tranquility was completely restored. The ringleaders of the disturbance were to be severely dealt with.

THE OVERLAND MAIL

By the Overland Mail we have dates from Bombay to the 30th of July, and from Calcutta to the 5th of August.

The Burmese war is said to be over, but the present state of affairs appears to be little more than a suspension of hostilities, and a state of armed neutrality. Staff officers, whom the war had called to their regiments, are not allowed to leave them, and European women are restricted to Rangoon, on the ground that they would not be safe anywhere else.

A Calcutta paper says.

The last mails from Rangoon have brought us lamentable accounts of the misery and destitution of the entire population of Pegu. There is a famine in the land. Rice, the staple production of the country, and upon which its inhabitants are as much dependent for existence as the Irish were upon potatoes before the famine of 1846, is so excessively dear, that it is beyond the means of any but the richest to purchase enough to keep body and soul together. A small basketful, which is here sold for about a shilling, there costs sixteen! A letter from Prome, of the 11th of July, states:—"Some hundreds of families come in from the jungles a week or two ago, in a state of starvat on indescribable. Forty of them died in one night." A most liberal subscription, amount ng up to 600r., was raised among the officers at that station, and many starving people were relieved; though the subscription was a most humane and munificent one, we may ask what are these among the multitudes around? Famine and pestilence are by the last accounts, the scarcity had been only in the most partial manner alleviated by the arrivals of rice from Calcutta; but there were sixteen or twenty vessels loading grain on the 1st inst., of an average tonnage of 500 tons, and of which, we believe, some have already left for Rangoon. In the meanwhile, the country is overrun with bands of dacoits. The river is so infested with them, that no merchant will venture up; and it is said that even the commissariat with a strong guard dreads the passage. The *Rangoon Chronicle* which we last received was full of nothing else but murders, dacoities, starvation, and cholera.

Rangoon and the whole province of Pegu is very damp and unwholesome. The troops suffer much from the climate. 200 officers have been thus disabled. Half the men of two European corps have positively been buried at Burmah. Some 1400 British soldiers have found their graves in that pestilential climate.

The general impression in India regarding the value and capabilities of our new possessions is, however, more favourable than that which will be entertained in England. A Ministerial Journal says:—

We have obtained possession of another of those great Asiatic deltas which teem with the luxuriant fertility of the tropics, and have opened to our traders another river, which may well be compared, in its own size, and the richness of the tracts through which it flows, with the Ganges or the Indus. . . . We still believe, as we have always believed, that a third Burmese war is ultimately inevitable, and that our frontier to the eastward will shortly be Western China. . . . The Ministry did not desire the war, the Court of Directors regretted it, the public were scarcely reconciled to it, and it was denounced, from the first, by the English press as a quarrel about a swamp. Yet, in spite of press, Parliament, and people of the Board of Control, the Court of Directors, and the Government of India, the red line, the mark of British dominion, surrounds Pegu. We have quitted the peninsula, and are fairly embarked in the affairs of Indo-Chinese Asia; and, if any one imagines the red line will remain at the 96th degree of east longitude, he has studied the history of India to exceedingly little purpose.

The table-turning mania had reached India. Nothing else was talked about at Bombay. It was said that at the last meeting of Council the members, having no more important business before them, and being obliged for appearance sake to remain a certain time in the Council Chamber, amused themselves with trying to send the tables round. The Hindoo servants are lost in astonishment at seeing their masters and mistresses standing in circles round hats and tables, and fancy that it is some magical incantation for prolonging the rule of the Company Bahadoor. Among the English here there are more believers than sceptics; many have been converted by successful experiments being made with natives by setting round a table Sepoys and others who have never heard of the process, and who have no idea of what is to happen, and who are beside themselves with fright when the tables begin to move.

Lord Falkland expected to be relieved in the Government of Bombay by Lord Elphinstone, in October.

AUSTRALIA.

Accounts about a fortnight later than those previously received have been brought by the Overland Mail. The dates are—Sydney, the 10th of June; Melbourne, the 19th of June; and Adelaide, the 6th of July. At Sydney importations continued heavy, and far in excess of the demand. The productiveness of the gold fields of New South Wales had considerably increased. The mines at the Ovens were likewise turning out largely, and new deposits were, from time to time, discovered. The prices of stocks and shares at Sydney remained steady. Gold was at 75s. per ounce; wool, 1s. 8d. to 1s. 11d.; oats, 12s. per bushel; hay £24 per ton; and the rate of exchange on England, 2 premium.

THE CHOLERA IN THE NORTH OF EUROPE.—The cholera is still extant at Copenhagen, and continues to spread in every direction in Sweden. Towns which have barricaded themselves against all comers are attacked as rapidly as those which are open. In Stockholm, four criminals in the cell-prison have been attacked, although they had no communication with others, or with each other. In Stockholm, on the 1st, there were 101 new cases, and 68 deaths; total, 960 attacked, and 464 dead. In Carlskrona, the local journal has been stopped, by the death of the compositors, &c. At Christiania, from July 25 to Sept. 4—attacked, 744; deaths, 474.

RUSSIA AND TURKEY.

PUBLIC MEETING AT SHEFFIELD.—The first public meeting relative to the Eastern Question was held on Tuesday evening, in the Town-hall, for the purpose of considering "the present unsettled and unsatisfactory state of the Eastern Question, and the propriety of memorialising the Government, urging them to take prompt and decisive measures to cause the immediate evacuation of the Danubian Principalities, and to prevent Russia from again outraging justice and international law by a forcible and warlike occupation of the Turkish territory." The meeting was called by the Mayor (Mr. Matthews), in pursuance of a requisition signed by about 140 persons, at the head of whom was Mr. Overend, a deputy-lieutenant of the West Riding. The meeting was so largely attended that the large room of the Town-hall was filled. The most entire unanimity appeared to exist in favour of the sentiment embodied in the requisition to the Mayor. In the absence of the Mayor of Sheffield, Mr. Alderman Carr was called on to preside.

On the motion of Mr. I. Ironside, seconded by Mr. S. Bacon, and supported by Mr. Councillor Alcock, it was resolved unanimously—

That the unjustifiable aggressions of Russia upon Turkey, the meanness and base duplicity which the Russian Government has manifested in support of those aggressions, and its long-continued forcible occupation of Turkish territory, without any colourable pretext whatever, imperatively call for every nation having any regard for the principles of justice, honour, and international law to take such prompt and decisive measures as shall cause the rights of Turkey to be respected, give her ample reparation for the outrages to which she has been subjected, and effectually to prevent a recurrence of similar proceedings in future.

He held a strong opinion that if the four powers had not interfered at all, but left Russia and Turkey to themselves, the question would have been settled now, and that the Russians would have been driven out of the Principalities. The motion was seconded by Mr. S. Bacon, supported by Mr. C. Alcock, and carried by acclamation.

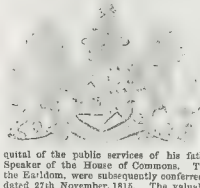
Mr. G. L. Saunders moved the adoption of a memorial to the Earl of Clarendon, the Foreign Secretary, affirming the absence of any colourable pretence on the part of Russia to occupy the Danubian Principalities, and concluding with this passage:—

Your memorialists therefore pray that the British Government will take prompt and decisive measures to cause the immediate evacuation of the Danubian Principalities, and to make Russia bear all the expenses consequent on her lawless proceedings, and to prevent her again outraging justice and international law.

The motion was seconded by Mr. Melling; and, Mr. Ibbitt having spoken in support of it, the memorial was adopted, and signed by the chairman, in behalf of the meeting. Some proceedings then took place with reference to raising a sum of money for presentation to Kossuth; after which the meeting broke up.

OBITUARY OF EMINENT PERSONS.

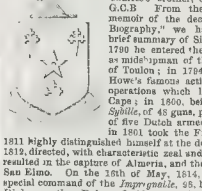
JOHN CUST, EARL BROWNLOW.



THE nobleman died on the 15th inst., at his seat, Belton House, near Grantham, in his seventy-fourth year. His Lordship was Lord-Lieutenant and Custos Rotulorum of the county of Lincoln, Vice-Admiral of the Lincolnshire Coast, a Governor of King's College, London, LL.D., F.R.S., F.S.A., and F.L.S. He succeeded to the Barony of Brownlow, at the decease of his father, Brownlow Cust, First Lord, who had been raised to the Peerage, 20th May, 1776, in requital of the public services of his father, Sir John Cust, Bart., as Speaker of the House of Commons. The Viscountcy of Alford, and the Earldom, were subsequently conferred on his Lordship, by patent, dated 27th November, 1815. The valuable estate of Belton came to the Custs by the marriage of Sir Richard Cust, the second Baronet, (father of the Speaker), with Anne, sister and sole heiress of John Brownlow, Viscount Tyrconnel.

The nobleman, whose death we record, married, first, 24th July, 1810, Sophia, second daughter of Sir Abraham Hume, Bart., by Amelia Egerton, his wife, only sister of John William, seventh Earl of Bridgewater, and by her (who died 21st Feb., 1814) had one daughter, Lady Sophia Frances, the wife of Christopher Tower, Esq., jun., of Huntsmore park, Bucks. He had two sons: the elder, John Hume, Viscount Alford, died, *vitâ patris*, 3rd Jan., 1851, leaving two sons; of whom the elder—John William Spencer Brownlow, who recently took, by Royal license, the surname and arms of Egerton, on inheriting the vast Bridgewater estates—succeeds to the Peerage, and is now second Earl Brownlow. The late Lord's second wife was Caroline, daughter of George Finlayer, Esq., of Ayston. By her (who died 4th July, 1824) he leaves three surviving daughters: the youngest married to Viscount Cranley. And his third and last Countess, who is still alive, was Lady Emma Sophia Edgecumbe, eldest daughter of Richard, 2nd Earl of Mount Edgecumbe.

ADMIRAL SIR CHARLES ADAM, K.C.B., GOVERNOR OF GREENWICH HOSPITAL.



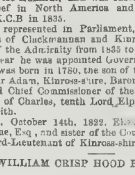
THE death of this gallant officer occurred on the 16th inst., at Greenwich Hospital. It was only a few weeks since we had to record the sudden death of Sir Charles's brother, General Sir Frederick Adam, G.C.B. From the ably-written and elaborate memoir of the deceased in O'Byrne's "Naval Biography," we have compiled the following brief summary of Sir Charles Adam's career. In 1790 he entered the navy; in 1798 was present, as midshipman of the *Robust*, at the investment of Toulon; in 1794 bore a warm part in Lord Howe's famous action; in 1795 assisted in the operations which led to the surrender of the Cape; in 1800, being then in command of *La Sybille*, of 48 guns, participated at the destruction of five Dutch armed vessels in Batavia Roads; in 1801 took the French frigate *La Chiffone*; in 1811 highly distinguished himself at the defence of Tarragona; and, in 1812, directed, with characteristic zeal and ability, the operations which resulted in the capture of Almeria, and the destruction of the Castle of San Elmo. On the 16th of May, 1814, Captain Adam assumed the special command of the *Impregnable*, 98, bearing the flag of his Royal Highness the Duke of Clarence, in which ship he landed the Emperor of Russia and the King of Prussia at Dover; and in 1821, as acting Captain of the *Royal Sovereign* yacht, accompanied King George IV. in his visits to Ireland and Scotland. In 1837, he attained the rank of Vice-Admiral, and was subsequently employed as Commander-in-Chief in North America and the West Indies. He was nominated a K.C.B in 1835.

Sir Charles represented in Parliament, from 1831 to 1841, the conjoined counties of Cluckmannan and Kinross, and held office as First Naval Lord of the Admiralty from 1835 to 1841, and from 1846 to 1847. In the latter year he was appointed Governor of Greenwich Hospital.

Sir Charles was born in 1780, the son of the late right Hon. William Adam, of Blair Adam, Kinross-shire, Baron of the Exchequer in Scotland, and Lord Chief Commissioner of the Jury Court, by Eleanor, his wife, daughter of Charles, tenth Lord Elphinstone, and sister of Admiral Lord Keith.

He married, October 14th, 1822, Elizabeth, daughter of the late Patrick Brydone, Esq., and sister of the Countess of Minto. Sir Charles Adam was Lord-Lieutenant of Kinross-shire.

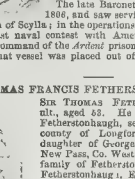
SIR WILLIAM CRISP HOOD BURNABY, BART., COMMANDER, R.N.



THE *Bermuda Herald* announces the death (at his residence, Long House, on the 1st ult.), of this much-respected Baronet, at the age of sixty-three. Sir William was only son of the late Sir William Chaloner Burnaby, second Baronet, by Elizabeth, his wife, second daughter of Crisp Molyneaux, Esq., of Garboldisham, Norfolk. He succeeded to the title in 1794; and married, 2nd May, 1818, Eleanor, relict of Joseph Wood, Esq., of Bermuda. As he had no issue, the family baronetcy (conferred on his grandfather, Sir William Burnaby, a distinguished Admiral) devolves on the deceased's cousin, now Sir William Burnaby, fourth Baronet.

The late Baronet entered the Royal Navy in 1806, and saw service in the Mediterranean, at the evacuation of Scylla; in the operations on the coast of Catalonia; and in the last naval contest with America. In 1814 he was promoted to the command of the Admiral prison-ship at Bermuda; but since 1816, when that vessel was placed out of commission, had not been employed.

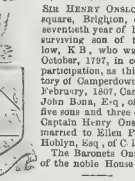
SIR THOMAS FRANCIS FETHERSTONHAUGH, BART.



SIR THOMAS FETHERSTONHAUGH died, 28th ult., aged 68. He was third son of Sir Thomas Fetherstonhaugh, second Baronet, M.P. for the county of Longford, by Elizabeth his wife, daughter of George Bolayn Whitney, Esq., of New Pass, Co. Westmeath. The founder of the family of Fetherston in Ireland was Cuthbert Fetherstonhaugh, Esq., of the ancient stock of the Fetherstons of Hedrigg, Gergrig, Co. Durham, who migrated to Ireland after the battle of Worcester, in which Sir Thomas Fetherstonhaugh was made prisoner, and afterwards beheaded at Chester.

The late Baronet married, first, Miss Adeline Godley, by whom he had three children; and, secondly, Miss L'Estrange, by whom he had seven. The eldest son of the first marriage, the present Sir Thomas Fetherstonhaugh, Bart., is married to Sarah, sister of Harry Alcock, Esq., of Wilton Castle, Co. Wexford.

SIR HENRY ONSLOW, BART., CAPTAIN ROYAL ARTILLERY.



SIR HENRY ONSLOW died at 50, Brunswick-square, Brighton, on the 13th inst., in the seventieth year of his age. He was the elder surviving son of the late Sir Richard Onslow, K.B., who was created a Baronet 30th October, 1797, in consideration of his gallant participation, as third in command, in the victory of Camperdown. Sir Henry married, 7th February, 1807, Caroline, daughter of the late John Bona, Esq., of Mitcham, Surrey, and had five sons and three daughters. The eldest son, Captain Henry Onslow, now third Baronet, is married to Ellen Peter, niece of Deeble Peter Hoblyn, Esq., of Carnglith, Cornwall.

The Baronets Onslow spring from a branch of the noble House of Onslow.

COLONEL JAMES NISBET COLQUHOUN, R.A.

THIS gallant officer, Inspector of the Carriage Department at the Royal Arsenal, since April, 1852, died on Saturday, the 17th inst., at his quarters in the east wing of Woolwich Barracks, of disease of the lungs. The deceased was of very active habits, and introduced many valuable improvements into the department under his superintendence; he also spared no exertion in securing the means of rendering the naval, garrison, and field guns as efficient as the nature of the duty they were constructed for would permit them to be made. Colonel Colquhoun served in Spain from 1812 to the close of the war. He was employed under Lord John Hay during the civil war in Spain, and he served also at the Syrian campaign of 1840-41. J. N. Colquhoun entered the service, as Second Lieutenant, June 1, 1808; was promoted to First Lieutenant, September 8, 1810; Captain, November 6, 1827; Brevet-Major, December 9, 1836; Brevet-Lieutenant-Colonel, November 9, 1841; Regimental-Colonel, November 5, 1846; and Brevet-Colonel, November 13, 1851.

HENRY SKRINE, ESQ., OF WARLEIGH AND STUBBINGS.

THIS gentleman—a considerable landed proprietor in the counties of Somerset and Bucks—died on the 10th inst. The family of Skrine is stated to have been founded in England by Don Eskrino, one of those who followed Philip of Spain when that King came over to marry Queen Mary. Certain it is that the Skrines have possessed lands in this country for some at least particular epoch.

Mr Skrine, whose death we record, was born in 1788, the only son of the late Henry Skrine, Esq., of Warleigh, by Marianne his first wife, daughter of John Chaplin, Esq. He married, on 21 April, 1812, Susannah Anne, daughter of the Rev. Benjamin Spry, Vicar of St. Mary, Redcliffe, Bristol, Prebendary of Sarum, and leaves several children.

HUGH EDWIN STRICKLAND, ESQ., F.R.S.

THE disastrous fate of this amiable and estimable gentleman threw a gloom over the close of the British Association Meeting at Hull; at which he attended as a Vice-President of the Geological Section. Of the ancient Baronet family in Yorkshire, one of whose ancestors was the poet, Lord Strickland, in the Protectorate of Cromwell. From early life Mr. Strickland was a zealous student of natural history, and in consequence of his proficiency in all all its branches, but particularly in ornithology and geology, was chosen from Oriel College, Oxford, where he had taken the degree of M.A., to be Deputy Reader in Geology, on the sad failure of Professor Buckland; and was also President of the Ashmolean Museum. Besides constant and valuable contributions to periodical publications, in which zoology, botany, and other topics of interest to the naturalist, are treated, Mr. Strickland obtained more permanent celebrity by his handsome and elaborate volume on the extinct Dodo, in conjunction with Dr. Melville. In private life we have not met with an individual who combined, in a more graceful style, modesty with intelligence, and the manners of a gentleman with the attainments of a man of science. Respect and affection attended him wherever he was known. He married a daughter of Sir William Jardine, with whom he was associated in the researches which are so assiduously and successfully pursued by that distinguished naturalist; and they were together at the Hull meeting, from which, unfortunately, Mr. Strickland departed alone in order to ascertain some geological strata between Retford and Gainsborough, on the Sheffield, Manchester, and Lincolnshire line of rail. Here, while engrossed in taking a sketch, and imprudently standing on the road, he was run down by the express train, into the tender of which, near a tunnel which shut him from observation, he had stepped to avoid a coal-train passing in the opposite direction, and in an instant was a mangled corpse. The coroner's verdict was "Accidental death;" and few deaths, in the circle Mr. Strickland adorned, could be more sincerely and deeply lamented.

THE WILL of the late Bransby Blake Cooper, Esq., F.R.S., has been proved by the sole executor, Thomas Hanson Pease, Esq., bequeathing his property to his wife and children. It was executed being made in Jan., 1850, previous to the passing of the late Will Act. The personalty was sworn under £6000.

BIRD'S-EYE VIEW OF NEW ORLEANS.

NEW ORLEANS.—THE YELLOW FEVER.

Holding the keys of the whole west, and commanding the products of 20,000 miles of river navigation, the Crescent City, as it is proudly termed, has, during the last forty years, leaped into prodigious life and activity. Founded in the year 1718, New Orleans was little more than a village in 1732; and, planted by the monopoly of Spanish rule, only contained 4000 inhabitants. In 1801 Louisiana was ceded to France, and leave was granted to the United States to use New Orleans as a place of deposit. At the time that Jefferson, with commissioners, purchased the whole state, the population was not more than 8000, and was almost entirely French and Spanish. In 1812 the first steam boat arrived from Pittsburgh, and fortunately the trade of the place fanned by American enterprise increased at a rate unprecedented elsewhere. In twenty years it contained 46,000 souls; in ten years the number was doubled. The cotton and sugar of Arkansas, Mississippi, Louisiana, the grain and flour of the vast and fertile Western States, the lead of Illinois, and the poultry of the Oregon territory, with all their active means of careers and supercargoes, pour into the city for eight months successively in each year.

As the morning sun appears above the low horizon, the long crescent of three miles which rests upon the further river seems to the approaching traveller like a line of burnt bricks. The centre of the crescent is the old Spanish cathedral, with its two towers in front, the rest of the picture is filled up by stores and buildings, with here and there a dome or spire or the tall shaft of a cotton press.

On the water-side, key-boats, a fleet of steam-boats, which the abutments conceal of the crowded mass of the merchant-vessels. New Orleans stands on the alluvial deposits of the river, being upon a low, swampy, and unhealthy, that you cannot dig a foot deep without coming to moisture or coming to water. By a simple contrivance, existing in the breadth of the banks, quays, and laying them on stout [illegible] inhabitants are enabled to construct the most ponderous buildings.

Before the Americans obtained possession of New Orleans, the buildings were of small size, chiefly low cottages, of one or two stories in height. So impracticable was it deemed to erect a stone building, that the foundation of the portico of one of the city banks was laid amidst a large crowd of Creoles looking on, half with wonder and half with contempt.

The street of a vast area of swamp, New Orleans is visited every year by a merciless pestilence, the Yellow Fever. When the intense heats of the summer are over, the breeze which comes from the north sweeps over the poisonous marshes, bearing death on its wings. While the trees and flowers the orange and citron are in their full bloom, and the summer lightning plays through the clear air, and the clear moon shining through the cloudless sky turns night into day, the city is a huge lazar house: the shouts of the dead or dying. The crowded streets deserted, the streets echo no footsteps. In the words of the inhabitants, you may fire a cannon ball through the principal streets without killing any one. In fact, the city is deserted by all Americans who can leave. After the first frost, about the month of November, the city fills once more. Vessels arrive from the sea, steamers from the upper country, and all is busy and life again. The height of the season is from December to April. Enormous fortunes are continually being made in New Orleans during a few years' residence, and the spirit of gain reconciles the inhabitants to the unhealthiness of the site.

Before we proceed to notice the ravages made by the recent dreadful pestilence in the Crescent City, we may remark that the deaths are rapidly increasing among the medical men and sanitary authorities in the United States that Yellow Fever is essentially a local disease, liable to spring up in any hot climate near the sea, where, besides a general heat and dryness of the atmosphere and the presence of noxious effluvia from decayed animal or vegetable matter, there exists a certain change in the atomic condition of the air, which predisposes to epidemics.

Between the 14th of May and the 18th of August, 2836 persons fell victims to the yellow fever in New Orleans. On the 21st of August the deaths were 270 in a single day; the deaths for the week were from yellow fever, 1350; and from other causes, 240. This is a larger proportion of deaths to the number of the living, as we have already stated, than occurred during the Great Plague of London. The reckonings in the streets and cemeteries was hideous; some 200 bodies lying unburied at one time, festering in the hot sun; a guinea a day offered to grave-diggers; negroes and convicts set to work, who, in the polluted atmosphere, could only sustain their courage with copious draughts of brandy; and at the gates and among the dead were heard oaths, jests, and horrid laughter. One writer describes how on one day there were fifty bodies unburied which gradually accumulated to nearly a hundred: the decomposition of which caused the coffins or boxes to burst open. When called upon, the Mayor said he had no authority; the street commissioner had no authority; and the resident citizens of the Fourth District could not find any one who did have any authority.

The Mayor, however took the responsibility to send the chain gang—say about ten negroes, who are chained by the leg, and work in the streets and markets during the day, and at night are locked up in the workhouse. They went to work to dig graves, but being pressed and not having any hope of reward or compensation to inspire them with energy, they worked slow enough. Mr. Kinsbedt, the chairman of the cemetery committee of the Board of Health, went up at seven o'clock in the evening, and that time, he says, there were eighty bodies unburied; that he found the negroes drunk, and that he offered five dollars an hour for men to work, but could not get them. He states to promote the chain-gang of a good supper and plenty of liquor that he induced them to go to work again. They worked all night, and the morning all but fifty had been buried. I visited the ground this afternoon. Some squares distant the odour from the bodies was very offensive. On arriving at the gate of the cemetery, the first thing which attracted my attention was an old negro woman stationed at the very gate of the cemetery, selling apples, peaches, pies, cakes, ice-creams, and beer. I found the chain-gang at work digging trenches, about 18 inches deep, and about 50 feet long; lime was then thrown upon the coffins, and dirt piled upon them. The tops of the coffins were from five to eight inches above the level of the ground. There were about twenty coffins, or, I should say, bodies, to be buried when I left, but, as the trenches were dug, and the chain-gang had only to place the bodies into them, and cover them with earth they would soon get through. The negroes were all drunk; and they would let the coffins fall several times before getting them into the trenches. I will leave it to the imagination of your readers as to the scene presented at this cemetery, without attempting to describe it.

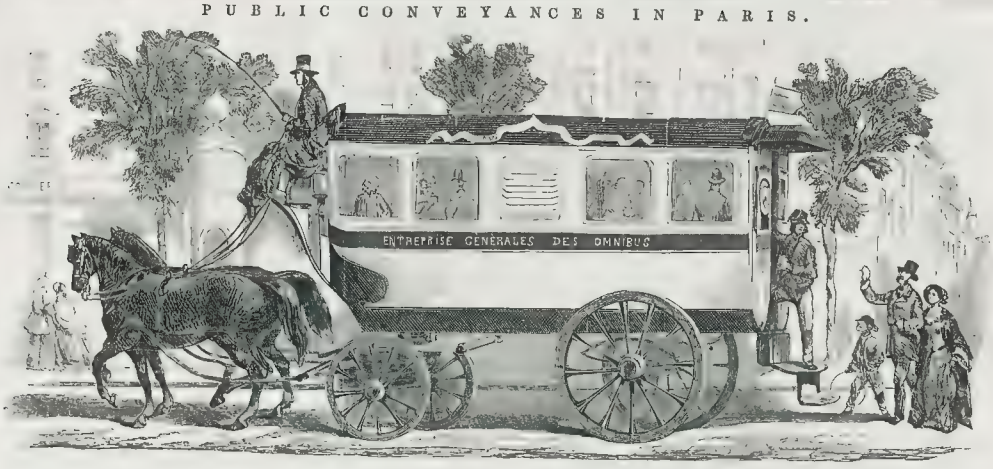
One New Orleans paper does attempt to describe it, but it is too repulsive for quotation. One circumstance frightfully illustrates the moral condition of this city of vice and slavery:—

"No sound was there of sorrow with a hat wide Gehenna. Men used to the scent of dissolution had forgotten all touch of sympathy. I enough labourers, with their hats on their heads, stood under the broiling heat of the sun, digging in the earth; and as anon they would encounter an obstructing root or stump, would swear a hideous oath, remove to another spot, and go on digging as before. The fumes rose up in ghastly exhalations from the accumulating hecatombs of fast-corrupting corpses. Men wear at the mere thought can picture and colour its success, for there are crowds there who have no business but to look on and contemplate the vast congregation of the dead. They don't care if they die themselves; they have become so used to the reek of corruption. They even laugh at the rioting of the skeleton Death, and crack jokes in the horrid atmosphere where scarcely they can draw breath for utterance."

One of the local papers says:—"Deducting our native population and those who have had the fever and become acclimated, we should regard it as a large figure to fix the unacclimated at 20,000 at the breaking out of the fever. Of that number at least [illegible] have already been turned, and every day adds 200 more to the ghastly record. Should it continue in the same ratio, this frightful number will be swelled to 5,000 by the 1st of September, which is usually the date when the epidemic begins its ravages in our city. Unless some sudden and unlooked-for change occurs, the month of August will be held ever memorable in our annals for the largest proportionate mortality which has ever occurred in the history of pestilence."

At the latest dates the yellow fever was on the decrease at New Orleans. The number of deaths on the 3rd were 110; on the 4th, 98; and the total number for the week ending the 4th, 814; being a decrease of upwards of 600 from the returns of the previous week. It was estimated that there were only 6000 or 7000 unacclimated persons remaining in the city. At Mobile the number of deaths on the 3rd were 37, and on the 4th, 22. At Natchez the deaths from yellow fever daily averaged from thirteen to fifteen, although the population of the place was under four hundred.

PUBLIC CONVEYANCES IN PARIS.



PARISIAN OMNIBUS.

THE superiority of the hackney carriages of Paris to those of London, and the well-considered police regulations to which they are subject, having been a topic of general remark during the recent Cab Strike in the English metropolis, some particulars relative to the public conveyances of Paris, will not be ill-timed or unacceptable at the present moment. A few of the best provisions of the new Cab Act have been borrowed

CITADINE.

from the ordinances of the French police; among which may be mentioned the obligation of the cabman to hand to his fare a card with his number printed upon it, and the provision that all omnibuses are to carry lamps inside after dark.

The public conveyances of Paris consist of 5984 *voitures*; namely:—

Cabs, to carry two persons	733	
Ditto, to carry three to five persons	913	
Ditto, supplementary, authorised to ply only on Sundays and fête days	555	
		2001
Omnibuses, carrying seventeen persons	387	
Ditto for railways	617	
Ditto for neighbouring places	478	
		1480
Carriages, called *coucous*, for suburbs	25	
Remises (answering to our glass coaches), for two and three persons	2478	
Total public conveyances	5984	

The number of persons conveyed by these 5980 *voitures* in round numbers amounts to 167,000 passengers per day, or 60,955,000 per annum. The carriages employ rather less than 22,000 horses, 6224 coachmen, 500 conductors, and 1200 ostlers; and give employment to 1400 clerks, superintendents, inspectors, and other salaried officers

REMISE.

The following details will enable the reader to calculate the average expenses of each cab. They are taken from the books of one of the principal cab proprietors of Paris, who owns 80 vehicles and 200 horses.

	Per Day.
Food of 200 horses	480 francs.
Repairs, &c., of 80 carriages and shoeing of horses	210 ,,
Right of station in the streets, and tax at the rate of 5 francs 50 centimes for three months (from this tax the English cab-driver is exempt)	54 ,,
Otficers, &c.	48 ,,
Rent for stables.—Contribution to the city of Paris	50 ,,
Wear and Tear of Horses	66 ,,
Interest at five per cent for purchase money of privilege hereafter described at the rate of 10,000 f. each vehicle, or 800,000 f. for 80 vehicles	109 ,,
Total daily expense	1017 francs.

N.B. The wages of the drivers, ordinarily three francs (half-a-crown) a day, are regulated at the end of the day according to the distance he has traversed.

By the division of the total expense by the number vehicles, we find that the expense of each individual cab amounts to 12 francs 70 centimes (10*s.*) per day. It may be well to remark that this rate of cost is at this moment increased by the rise in the price of fodder, which has raised to 2f. 40c. (2*s.*) the cost of the keep of a horse, which ordinarily does not exceed 2f. 10c. (1*s.* 9½*d.*) It is also necessary to observe that the horses in question are fed within the city, where, in consequence of the duties levied upon the hay, oats, &c., brought into the city, the cost of keep is a little more than in the suburbs. In general, the large establishments of this kind have their stables without the walls of the fortifications, and by this means realise a saving which, however, does not exceed two-fifths of the cost of keep of each horse. 2f. 40c for the keep of a cab-horse will appear very little compared with the usual cost of the food of a horse during hard work; but the cab-horses of Paris, like those of all other capitals, are in general badly fed.

The preceding estimate may be held to apply equally to the *voitures de remise* (glass coaches), with the exception that the horses are a little better fed; the difference in the cost of the keep is compensated by the exemption from the item of the fund for the acquisition of the privilege—the last item of our estimate. Carriages included in this category may be established without restriction, under certain regulations of police which limit their right of exercise, and hinder them from plying for fares in the public highway.

The expense of the omnibuses is much greater, in consequence of the relays of horses necessary, the continuous nature of the work, the weight of the vehicle and passengers (which requires greater strength on the part of the steeds employed), the greater number of *employés*, the multiplicity of stations, &c. We have carefully consulted the books of an omnibus proprietor, and we are assured that during a period of five years the service of a line of omnibus route employing 16 carriages and 160 horses, has varied between a daily

"MY-LORD."

expenditure of 64f. 60c., and 70f. per omnibus; the average being 67f. 30c. each vehicle, or about £2 14*s.* In this estimate is included all the cost of keep, maintenance of vehicles, taxes, superintendence, and even a percentage for accidents consequent upon the carelessness of the driver, which is put down at sixty-five centimes (6½*d.*) each vehicle

It is difficult to state with certainty the amount of capital embarked in this branch of industry. It may, however, be approximatively stated at thirty million francs (£1,200,000), of which half goes to the purchase of horses, at the rate of 700 francs per horse (£28). It is also stated that the capital employed barely yields an average return of 6½ per cent; while the most prosperous of these vehicular undertakings do not realise a greater return upon the capital than 9 per cent.

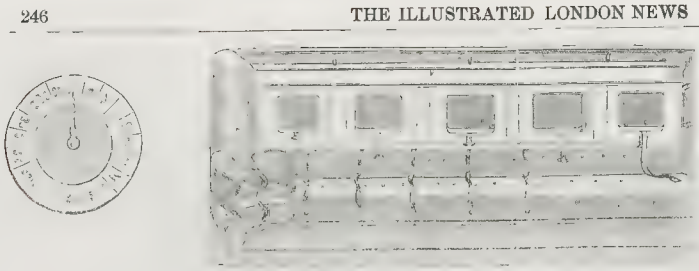
We are informed, upon competent authority, that a revision of the tariff of public conveyances in Paris, is at this moment under the consideration of the authorities. It is believed that the recent coalition of the London cab-owners has contributed in no small degree to this modification; but we believe we may assert that the reduction of the tariff will not have the same effects as in the English capital, be-

FIACRE.

cause the actual state of things in Paris renders the reduction of fares not less desirable for the cab proprietors than for the public. The system of hiring *à la course*, or drive, without reference to distance, is not without its inconveniences. A drive from any part of Paris to any other part without stopping is called a *course*. If a cab be employed for a *course* the charge is only twenty-two sous, from six a.m. to midnight. In some cases the cabman is obliged to traverse a distance of seven or eight miles for this sum: in other cases, where the passenger wants to go less than a mile, he pays the same sum. The intention of the authorities, we are assured, is to remedy this inconvenient and absurd system by establishing a new tariff of payment by the hour and fractions of an hour.

With regard to the omnibuses, experience has shown that the interests of the proprietors of these vehicles are in accord with those of the public; and that they profit from the system of long courses. It may be necessary to explain here, for the benefit of English readers unacquainted with Paris, that there are numerous lines of omnibuses established in Paris, which go to all parts of the town. Their price is fixed at 6 sous (3d.) for all distances; and all of them are in correspondence with similar vehicles crossing their own line, by which persons wishing to deviate from the direct line may do so without any charge by asking for a ticket. Instead of seeking to abridge this privilege, the omnibus management have not only sought to extend as much as possible the line of route, but to give facilities of traversing new and prolonged distances, by means of the tickets *de correspondance*, which give the passenger the right of changing his direction, and of getting into another omnibus, which will convey him

SUMMER RAILWAY OMNIBUS.



PARISIAN OMNIBUS.—INTERIOR AND SECTION.

to his destination without additional payment. If ever a public omnibus company should be established in London with such a system of correspondence, it would give them great advantages over their competitors, and would be extremely advantageous to the public, seeing that it would offer them the means of transporting themselves in every direction, without adding to the price of the drive.

The cabs and omnibuses of Paris are by no means distinguished for the rapidity with which they make their journeys; and it is difficult to understand how a people of a character so lively and restless should be content with public conveyances of so "slow" a description. The *voitures de remise* go rather faster, and are on this account preferred by those whose time is of value. It is calculated that a London omnibus runs sixty miles a day, while the distance traversed by the average of the Paris omnibuses does not exceed forty-eight miles, and the Paris cabs do not make more than twenty miles a day. It is doubtful whether, upon an average, the cabs go much more than two miles an hour, while the omnibuses are driven at the rate of 4·8 miles an hour during ten hours a day

The vigilance of the police is centred upon one sole object—the comfort of the passenger. The regulations, whether relating to cabmen, drivers, conductors, or coachmen of remises, turn only upon the details which concern the public safety and convenience. These regulations establish rules of civility towards the passengers, and any breach of them is visited with extreme severity by the police.

Persons who have not visited Paris for many years, would fail to recognise in the humble, polite, and honest cabman of the present day, the successor of the cabman of former times—arrogant, uncivil, and whose wages were increased by a system of incessant extortion

It is unnecessary to say that the regulation by which the cabman is compelled to present each passenger with a ticket, on which is printed his number, greatly favours this security. On the other hand, the police stimulate the probity of the coachmen by a system of annual rewards, which they distribute to those among them who have given the greatest proof of honesty. In 1851, the number of objects in gold, silver, bank-notes, forgotten by the passengers, and restored by the coachmen, amounted to 40,000f., independently of a great number of articles more or less precious. In this same year twenty coachmen were recompensed for their probity, and thirty-eight coachmen and drivers were honoured by special mention.

The reform of the cab system of Paris is greatly impeded by the "privileges" upon which, indeed, the system of public conveyances of Paris is based. These privileges, amount, in fact, to a monopoly, and when the Government propose to increase the number of public conveyances, to meet the daily increasing wants of the population, they are met by the cry of "injury to vested interests." The permanent population of Paris, according to the census of 1851, amounted to 996,067 inhabitants, or, in round numbers, 1,000,000. Dividing the number of inhabitants by the number of conveyances, we have only one carriage (of all descriptions) for the use of 156 persons. This calculation omits from view the visitors and floating population of Paris, who form so notable a portion of the cabman's *clientèle*. Complaints of the insufficiency of the means of conveyance are frequently made, especially under the influence of some powerful stimulant to the circulation, like the recent August fêtes. But here the system of monopoly comes in, to prevent the requisite increase in the number of public conveyances. The reader will have some difficulty in believing that, notwithstanding the increase of the population, the number of cabs in the city of Paris has not varied for more than a century! The privilege originally conceded to private individuals to establish public conveyances, has not permitted the Government to increase, by a single conveyance, the number for which the privilege was originally accorded. These concessions, which form valuable properties, are divided among a certain number of cab-owners, and may even be transferred to others. Thus, a concession for a single vehicle, or, as it is called, for "a number," is worth at this moment the high price of 10,000 francs!

The introduction of omnibuses was an injury to the profits of the cab-owners, who thereupon formed an association for the defence of their common interests. Among others, a society was formed under the name of *Compagnie Générale*, for working their privileges in common. This association—which comprises the greater number of the cabs now in circulation—is vigorously sustained by the other capitalists embarked in the trade, as well as by its members. It energetically defends its rights, and carries on an implacable opposition with those who offer to interfere with its monopoly.

The omnibuses of Paris are established upon a similar system. The authorities originally conceded to certain companies the right of traversing and taking possession of a given line of route, and of running a fixed number of omnibuses thereon, at the sole charge of paying to the city of Paris a yearly sum of 400 francs for each omnibus, besides the tax due for the right of circulation. This new privilege is found greatly to restrict the possibility of increasing the means of conveyance in the proportion required by the wants of the capital.

We ought to add, that if the Paris cabs leave much to be desired in respect to swiftness, such accidents as often occur in London are very rare in Paris. There can be no doubt that if the monopoly above described did not exist, the authorities would willingly throw open the supply of cabs and omnibuses to all the world under due police regulations. Compensation for vested rights presents no difficulties in Paris as elsewhere, but a long period would elapse without seeing a system in operation better suited to the wants of the vast and increasing population of the French metropolis

Our Illustrations comprise engravings of all the best-known public conveyances of Paris. The "My lord," a cab with four wheels, is supposed to be a favourite vehicle with English visitors. The *voiture de remise* is allowed to charge 1f. 75c. for each course, or 2f. an hour—a charge, as our readers will not fail to observe, much less than that made by the corresponding class of carriages (glass coaches) in London. The *fiacre*, with two horses, is rather more aristocratic in its pretensions, and will, besides, carry a larger party. The *citadine* is a species of four-wheeled cab. The *omnibus à dix* is used in the hot weather to carry passengers to the railways. Our Engraving of the omnibus exterior and sectional view will enable the reader to understand how greatly superior the French omnibuses are to their English rivals in point of space, comfort, and convenience.

THE FUTURE GOVERNMENT OF INDIA.

EVERY one admits that the government of British India is susceptive of considerable improvement; but no one as yet has propounded a scheme winning the suffrages of a commanding majority. Perhaps the ingenuity of the Abbé Sieyes, the prince of constitution-mongers, would have failed to solve this complicated problem—which is the best excuse we can offer for the abortive legislation of Sir Charles Wood. The history of the East India Company is without a precedent or parallel in the annals of nations, and the mind is filled with astonishment in tracing its wonderful progress. We never meditate on its marvellous success without strongly feeling that "truth is stranger than fiction." Who could have believed, even with the utmost stretch of imagination, that a body of incorporated traders, commencing with a small capital, should become lords paramount of so magnificent an empire, and rule over 150,000,000 of people? But it is easier to win power than to use it wisely; and, it must be confessed, the East India Directors have thought more of the emoluments of private patronage than of the upright discharge of their public duty. They have sacrificed the natives to enrich their own families, and are about to pay the penalty of the crime. The sceptre is passing from their hands: who shall wield it in the future? Mr. Buckingham, in a recent pamphlet, which has just reached a second edition, proposes to answer this question. Its author has lived in India, and paid great attention to Indian subjects. He has written and lectured much on Oriental affairs, and is certainly entitled to a fair hearing, but while we assent to some of his propositions, there are others to which we must object.

Mr. Buckingham proposes to rest the sovereignty of British India in the Crown. "As a first step, therefore, let the Queen be declared by the Bill, and proclaimed in every city, town, and district in all India, as the actual Sovereign of that portion of the country now subject to British rule." None could disapprove of such a measure; and it is certainly most ridiculous in the East India Company, whose actual tenure rests on a twenty years' lease, renewable or not at the pleasure of Parliament, to style themselves successors to the Emperors of Delhi. Under the head of "Formation of a Home Government," Mr. Buckingham objects to a Consultative Council, to advise the Secretary for Indian affairs; being of opinion that the permanent staff of intelligent clerks, trained in the service, possess all the requisite knowledge of details. In this decision we do not concur. It appears to us most desirable that the Indian Secretary should have the means of consulting those who have resided in the country, and are well acquainted with the habits and customs of the people. Mr. Buckingham contends that as the Secretary for Foreign Affairs has no Consultative Council, a precisely similar rule should be applied to the Indian Secretary; but the cases are not parallel. The Foreign Secretary has only to attend to points of international law; the province of the Indian Secretary relates to internal administration—involving roads, tanks, canals, the draining of marshes, and the establishment of schools; and surely on such points, so vitally important to the social and material interests of India, the Secretary would be benefited by the counsels of experienced advisers, who had derived their knowledge from residence and personal observation. Mr. Buckingham, indeed, refutes himself in this part of his argument. Looking at the past, he says, "a practical knowledge of Indian affairs has never been deemed necessary for the highest of all offices in its government;" and then he proceeds to tell us, that "Lord Hastings, Lord Amherst, Lord Auckland, and Lord Dalhousie, were all appointed without any practical knowledge of, or acquaintance with India, and all of them engaged in unnecessary and expensive wars." Now surely we want no better evidence of the value of practical and local knowledge; for had those Governors-General possessed it, they would not, according to Mr. Buckingham's own showing, have involved the country in worse than needless hostilities.

A section of the pamphlet is devoted to the subject of the "Representation of India in Parliament." It is proposed that the five presidencies—Bengal, Madras, Bombay, Agra, and the Punjaub—shall send members to the House of Commons, each Presidency returning five; the constituencies to include "the civil and military service, the officers of the army and navy, the British settlers—as merchants or planters, and the professional classes—as clergymen and ministers of religion, legal and medical men, engineers, and others." A similar scheme has often been proposed; but an insuperable objection has always been urged against it, and that is the necessity of imposing Imperial taxation on India, if admitted to a share in Imperial legislation. Moreover, were this privilege conceded, how could it be withheld from Canada, the West Indies, and Australia—nay, from any one of our colonies? If the members had only the right of speaking, the right of voting being withheld, the difficulty involved in Imperial taxation might, perhaps, be overcome; but Mr. Buckingham does not even hint at any such modification of their powers. He says, "It would be impossible to over-rate the benefits which would result from the light to be thrown on Indian affairs by twenty-five such representatives as these, independent alike of the Crown and the Court of Directors, having no patronage of appointments to sway their opinions or votes." But however this may be, the objections already urged remain in full force; and we are decidedly of opinion that a Consultative Council to advise the Indian Minister, constituted in the spirit of the plan proposed by Lord Ellenborough, is very much preferable to the scheme of parliamentary representation.

Mr. Buckingham proposes to change the title of Governor-General into that of Viceroy, and only to select men of the highest qualifications. The absolute choice is not to remain with the Cabinet, who are to nominate this officer. "As a check upon the choice of the Cabinet, it should be required to be ratified by a vote of the House of Commons, a vote of the House of Lords, and the approbation of the Sovereign." As to the approval of the Sovereign, this is quite superfluous, for that is of course given when the Cabinet make their selection, and it would be absurd to place the Crown and its responsible advisers in such direct antagonism. The whole scheme violates all constitutional practice. Moreover, if the Viceroy of India were appointed after this fashion, why not the Viceroy of Ireland, and the Governors of all our colonies? The Viceroy is to be assisted by a Legislative Council—to be formed of ten English and ten native members, "the Viceroy being President of the Council, and having a casting vote." The Council are to be elected by the five Presidencies—two English and two native members from each. This electoral body is to be divided into two sections—Englishmen choosing the English councillors; the natives, the native councillors So far as giving the natives a share in the Government, we approve of the principle involved in this suggestion; but on this part of the scheme our author is not sufficiently explanatory This Council is not to be merely consultative, but legislative. If the hands of the Viceroy are to be tied up by a majority of one vote, or if his own casting vote is to decide his policy, then he would sink very nearly to a cipher, and no high-minded man would hold office on such terms.

We quite approve of the method proposed for educating young Englishmen for the Indian service, and also of that part of the plan which proposes to transfer the Indian army and navy to the Crown, giving to both the title of Royal. Some other general topics pass under review, such as what special duties the Legislative Council in India ought first to undertake—the revision of the revenue system—codification of the laws—proceedings in courts of justice—popular education—railroads and the improvement of the soil, with the culture of flax and cotton; but these we merely indicate as forming portions of the pamphlet, for there is nothing new or striking in these sections. We may dismiss it by saying that it contains many useful hints and some practical advice, but it has not solved the problem of the future government of British India. The field is as open as ever for publicists and statesmen.

BOAR-HUNTING IN THE EAST INDIES.

(From a Correspondent.)

DACCA, July 8, 1853.

I ASSISTED the other day in a stirring scene, the narration of which may amuse the sporting portion of your readers. Three of us sallied forth one fine morning to rouse the wild boar from his lair. We had not beat long before we started a boar, who went away at a spanking rate. I got the lead with my chesnut galloway, and pressed him hard. As I was closing up alongside to receive his charge, two bullocks, tied together by a long rope, ran across my path, and nearly upset me. My friend Mr. Allan W., of Phoolcarrah Factory, Dacca district, now came in for first spear. As Mr. W. speared the animal, it got between his horse's fore legs; and, in a moment, horse, rider, and boy, were rolling over in the grass in a cloud of dust. Before W. could pick himself up, the boar rushed at him, seized him by the coat (which, luckily, was loose), lifted him off the ground, and shook him as a terrier would shake a rat. Mr. W. had the presence of mind to lie still, and pretend to be dead. His horse Rainbow—a beautiful grey Arab—jumped up and ran towards me, as if for protection—shaking and shivering in every limb. He then snorted wildly, and galloped off. Having got free from W.'s horse, I went at the boar, who left W. and rushed at me with bloodshot eye and champing tusks My spear arrested his headlong career, and wheeling my horse off with bit and spur, I got safe away from the infuriated animal, who, giving a savage grunt, dashed at Mr. D., of Sreenuddee factory, a celebrated hog-hunter and daring rider. The pig received a terrific job from Mr. D.'s herculean arm; but this only appeared to madden him. Again he rushed at Mr. D., whose excellent horsemanship enabled him to avoid the onset. The savage brute, foiled in his rush, now stood grimly at bay, his small malignant eye glaring on his foes, and his huge tusks gleaming snow-white from out the blood-covered jaws. After an instant's pause, the boar charged us each of us in our turn—Mr. W., who was unable to help, as his horse was not caught until after the fray, looking on as a spectator. From each of us the boar received many a severe wound, but he still gallantly kept up the fight. A powerful bull mastiff of mine now coming up, seized the pig by the snout, and held him for a short time. He threw the dog off, but after receiving some more spears, fell upon the field. A more gallant pig never walked the jungle plain.

Strange to say, Mr. W. escaped with no further injury than a graze from the boar's tusks along the ribs of the left side; and the evening's festive board found him singing the well-known song —

> Then pledge the boar—the mighty boar!
> Fill high the cup with me;
> Here's luck to all who fear no fall,
> And the next grey boar we see.

You can fancy we joined most heartily in the chorus. And now, Mr. Editor, until you hear from me again, believe me yours, very truly,

SPUR AND SPEAR.

THE IRISH ART UNION.—This Association has just been started in Dublin; and, from the favourable auspices under which it has been commenced, it is fair to assume that it will command success. When such names as William Dargan, Lord Talbot de Malahide, the Governor of Ireland, Sir John Harington, Esq., John Lentaigne, Esq., and George Roe, Esq., are placed upon the Committee of Management, it is sufficient to bear success to an undertaking of this kind, even though it be in the impoverished Sister Island, which it will assuredly succeed. The Committee propose, for the present, to purchase and distribute by ballot among the members of the Society, an extensive selection from among the specimens of modern art now exhibiting in Dublin, in the Fine Arts Court of the Exhibition, and at the Royal Academy. They have also decided that for future years the purchases for distribution should, as a general rule, be selected in the Exhibitions of the year. Its remarkable merit is, but this rule is not to be taken as a direct bar to the Committee of Management to purchase any work of merit of which they may approve. The Committee remark, that experience in the present year has shown that a demand exists in Ireland for paintings of a high class of merit, a Society, therefore, like the Art Union cannot fail to impart a stimulus to that demand, and to have the effect of developing and encouraging native art. Foreign artists are also invited to send their compositions, in order that the highest class of art should be introduced to the Sister Kingdom. The amount of subscription is limited to 1*l.* for each ticket; but for this year there will be no engraving distributed to the subscribers.

THE PEACH SEASON IN AMERICA.—A letter from Boston, September 2nd, says: "We are just now in the height of the peach season. Here, this delicious fruit grows on trees in orchards. Fancy an apple-orchard, with all the apples, peaches, and you will have an idea of hundreds of places round this and other cities. In New York alone, 60,000 bushel baskets a week are sold. They are large, fine, and well-flavoured. What would you in En. land say, if you saw a labouring man carrying to his home great baskets of peaches, just as though they were potatoes? I bought a natful of as fine fruit as I ever saw in Covent-garden for sixpence, English money. And the abundance and cheapness of other fruit is wonderful."

STEAM FIRE ENGINE.—The prevalence and progress of destructive fires in America is, it may not be generally known, diminished very much by the use and application of what is known here as the steam fire-engine. In its form it is somewhat similar to a locomotive, throws upwards of a 200-feet jet, and about 200 barrels in an hour in from one to six streams of water The machine may be put in operation in five minutes, requiring four men and four horses, and is calculated, it is said, to do as much as six of the ordinary hand engines. At a fire in May last, at Cincinnati, of a large brewery, the engine discharged a cataract of 15,000 barrels of water in eight hours, and nothing but this could have saved the entire square in which the brewery was from destruction.

Literature.

BLEAK HOUSE. By CHARLES DICKENS. Bradbury and Evans.

"What do you think of 'Bleak House?'" is a question which everybody has heard propounded within the last few weeks, when this serial was drawing towards its conclusion: and which, when the work was actually closed, formed, for its own season, as regular a portion of miscellaneous chat as "How are you?" One obvious distinction is, that a great number of people who ask you how you do, make a practice of neither waiting for, nor listening to, your reply; they pay no attention to the meaning of their own interrogatory. But, on the contrary, those who inquire for your ideas about "Bleak House," think of "Bleak House;" and, if they do not really want to know your opinion, want you at least to know theirs. The same sort of query resounded at the commencement of this latest of Charles Dickens's labours, and for some little time afterwards. Then there was a silence: people read without comment: and now, when they have read to the close, they once more—only with greater noise make a demand for each other's impressions; volunteering, however, each his own; without much show of heeding what he has to say. In the meantime, a distinct section have reserved their perusal till they could have their whole production in their hands at once. These last persons will probably have taken the best means of judging of the plot, in its separate and distinctive merits. They will speak, like the rest, when they have mastered the case; and, as they have shown less haste, they may perhaps, make be ter speed. They have not felt themselves under the necessity of proving the vividness of their literary intelligence by a hundred contradictory criticisms, and they may say something compact, sensible, something "that will hold water," respecting a work which is likely to last a good while, and to provoke praise or animadversion long after most of its present conversational commentators have ceased to comment upon anything.

Charles Dickens has become a very important character since the publication of his "Sketches of the Pickwick Club;" we are quite certain that if the present book were the first of its author's, it would strike the public with astonishment. But, partly because the world is so familiarised with his manner that people would recognise it in an anonymous work of his, and suspect it even in a work of his professing to be by somebody else: and partly because the extraordinary character of his early performances made impossibilities be expected in the matured powers and richer years of one whose youth produced wonders, and partly, also (it must be allowed), because, in some respects, even that reasonable amount of improvement which ought to have occurred has not shown itself; for these reasons, we say, the effect on the world of "Bleak House" is not what it would indubitably be were "Bleak House" the first startling sample of a new class of fiction, by a young author in a manner the like of which the public had never before seen. The first risings and washings of the gold soil of San Francisco would have assembled, if exhibited in one of our public buildings, a larger crowd than the great nugget from Mount Alexander, or any newer and greater nugget still from the neighbourhood of Geelong, could now collect. This is but an imperfect and wretched illustration, at best. But, though we anticipate that Mr Dickens will never again write a work which will produce the same electrifying effect that attended his entrance into authorship, yet he must "write himself down" by a whole series of books unworthy of his fame, and must disappoint the confirmed partiality of the public for him by more than one or two egregious failures, before he can estrange a very numerous class of habitual admirers and readers, or "say backwards" that enthralling spell with which he has bound them. Still, the progress of time, the enthusiasm of the *minus ipse* (as applied to his literary productions), and the blindness of favour itself, have conspired to alter, by imperceptible gradations, the criterion by which Mr. Dickens is estimated. He was invited, for example, at the last general election by many who had the franchise, to become their representative in Parliament. The demand made upon Mr. Dickens has tacitly changed since the time when he brought his first literary supply to the market. He is expected to be not indeed a writer of greater seriousness than he is, but a writer whose seriousness is of a kind with which Mr. Dickens has never enough to have any connection. Thus, some of our contemporaries (if we can understand them) reproach "Bleak House" with the infrictuousness of what we must consequence call the most artless and beautiful exposure of the methods and proceedings of the Court of Chancery; be that artistic exposure, that new yet true and living drama is, as neither a political invective nor a legislative codification. It is like blaming Newton for not being "Young on Sea," for not telling the errant cavaliers how to dress by self-measurement, instead of deriding their costume—for not writing a new rule of the twenty-four hours, guiding men unto the minding of their proper business, instead of a satire ridiculing their prevalent wearers for not subscribing to what to do, instead of providing that all future ages should laugh at what they did.

We mention the case merely to elucidate a general rule, and to read to mind a moral: but certainly we are not assuming or imagining anything in "Bleak House." Mr. Dickens has produced a work which is either in the same department or of the same genius as the masterpiece of Cervantes. In the first place "Bleak House" belongs to a broader and a nobler species of literary work than mere satire: and, in the next place, "Bleak House" stands by no means so high in the class of works to which it does appertain as the production we have mentioned occupies in its own less important field. As we think very highly of what is meant the novel, which as to private life what history is to public life, and which undertakes to teach as much about individuals and about society as history undertakes to teach about states, principles, and empires. Such ought respectively to be the aim; and if it can be perverted, and is perverted, in the one, so can it be, and so is it, in the other also. It is possible to learn an immense amount of useful and very available information from good novels; and surely not much useful, not much available information can be gained from bad histories. Madame de Staël, who was rather an eminent personage, and who was regarded not without uneasiness even by Napoleon, tells us that she owed almost her entire education to novel-reading. Some less robust intelligences have owed their ruin to the same thing: but the abuse proves nothing against the use. All we want is to show that we do not attach too much importance to that species of literature, which, under fictitious names and imagined incidents, undertakes to represent real characters and probable destinies. The moral ought to be easy, and it ought to be instructive also.

"Bleak House" has one grand defect, while exhibiting every quality of its undoubted genius. People want some story in a work of fiction; and not only is the desire for a story perfectly natural, and perfectly reasonable (as we could prove if we had time for it, indeed, it were necessary), but it is, in an artistic sense, one of the essential elements of all good prose essay of this nature. Now, most unfortunately, Mr. Dickens fails in the construction of a plot. This is very point in which he has generally been weakest. No man, we are confident, can read "Bleak House" to the end, and say to tell. We should be [illegible] of his own discovery of the "Bleak House" might add, in any of his other novels—he [illegible] artifices to excite curiosity; I do I there is nothing about which we need have been curious—there is no explanation by which, when it has been excited, it will be gratified or satisfied. A lawyer is deeply, and almost provokingly, interesting, because he knows a thousand secrets. What are they? We shall see; but we close the book, and have seen nothing. Here comes a man whom it is very exciting to watch: it is the celebrated detective officer, Buckett. Mark him well. He [illegible] anything. See him in the streets, in the day time [illegible] at night. Notice how he behaves to various characters [illegible] Now, he will infallibly reach what he [illegible] We [illegible] nothing—or nothing which [illegible] what [illegible] to be unfolded. And this marked characteristic of Mr. Dickens's story-telling is no slight or trivial blemish. So far as the intrinsic congruities and self-evidences of fictitious writing demand of the narrator a sort of artistic honesty, from which he may depart without being a bad man, but from which he cannot depart without being a thief (or at least) so far, we say, Mr. Dickens violates, to his own injury, one of the obligations which he has undertaken to respect. We are speaking here of an offence which the Germans would call an æsthetic immorality: of course, it is evident that all the immoralities and all the morality of the mimic world of fiction are but shadows; that the writer is in the world bound, not under pain of guilt, but under pain of non- that his culpabilities affect him not as a member of society, in a personal sense, but as a citizen of the lettered republic, and a citizen whose usefulness, instructiveness, and value are to be estimated; and that, while his materials are permitted to be untrue literally, they are required to be both true and suggestive allegorically—faithful in their analogies strict in their proportions, and scrupulously object-like in their tendency and settlement. Now, a story teller professing to offer you a representation of real life, yet unable to construct a good plot, is under a disadvantage which we need not enlarge upon. But this description of Mr. Dickens's case only in part. The plot is invariably his great [illegible] and, like other gentlemen-[illegible] encumbered he [illegible] overcome his embarrassments, he strives, by every artifice at least to hide them, for the sake of his credit. He wants the reader to trust him. He [illegible] of exciting the most lively expectations; he has the art of [illegible] them. Renewal upon renewal he obtains for these literary bills, during the whole progress of the story's existence; and, when it dies, there are no assets found to pay for a crown in twenty shillings. Mr Dickens, the noblest, the most munificent of writers in all other and [illegible] appealing ever to the best sympathies. His readers—elevating, instructing, and charming them throughout; spending the credit which he enjoys at their hands in the most princely and even royal manner—honoured, beloved, and admired while his story lasts, is, when it is wound up, discovered to have been in one point on which he had required and received unwavering faith, a shameful and delightful pretender—a pretender, however, by whom it is pleasant to be taken in. It is some comfort to be even deceived in such a style; and people would sooner be cheated by Mr. Dickens than paid in full by many other writers.

Besides, this is but one small part of the account. Mr. Dickens fulfils his obligations, were they four times told, in the less mechanical duties of his inspired vocation. "Bleak House," like so many of his former works—like all, indeed, of the longer kind—has been written with power enough, and is full of passages which those who read them find reason to be glad they have read; passages which ever exercise a most decisive influence where they are designed to exercise it, and which, while they both warn and delight the unsophisticated majority, expose fraud, unmask and brand hypocrisy, put selfishness out of conceit with itself, show the pampered turpitude of cant in all the truth of its revolting deformity, and confirm, by irresistible impressions, whatever feeling we find in our day towards the reconciliation of estranged interests, towards the promotion of healthy sentiment among the public, and towards the practical amelioration of society. In these respects the influence of Charles Dickens is, and has from the beginning been, pure, beneficial, and elevating. The same could not be said of many writers of equal, or greater, natural genius, and certainly of greater scholarly attainments. If, in fact, every author as gifted as Mr. Dickens exercised his abilities in a spirit as pure and as excellent as his, the good to the world would be greater than all but has been conferred by all the best Kings or Caliphs that ever existed upon the communities under their sway.

As usual, Mr. Dickens has in this book, given to his readers many intellectual daguerréotypes to carry away. These are at once called up by the mere names of the characters, and with those names they will be identified for evermore. Thus, in society, a person might be at some loss to convey his impressions about an individual, whose dispositions, habits, and peculiarities he wanted to describe—but time and power fail. Now, however, a word bears the significance of half a dozen hours' delineations—you mean that the fellow is a sort of Harold Skimpole. Just so—with the exception: and the exceptions are marked off with ease, leaving one of those vivid ideas of the original, which could never have been conveyed but for the help of a great author—in this the most brutal and insignificant of his collateral uses, and, perhaps, collateral abuses. Very few modern writers have furnished, with respect to vulgar life, more of this stenograph—more of this hieroglyphical nomenclature—more of this algebra of conversational portraiture, than Dickens. At present, he has added some new full-length to his dreadful gallery (and may the salutary terror of it increase!)—to his dreaded gallery of the Denounced. Mr. Chadband (though painted with less than the full possible vigour, because undertaken with a vehemence of hate unfavourable to the more delicate parts of art) is a terrific moral sentiment: his false eloquence, and still falser religion, will avail in class no more. Mrs. Jellaby, again, is an admirable [illegible] and forty cases of benevolent [illegible] observers will at once [illegible] out into the clear light, that people may see and feel what is the true value of such a wife mother, and woman. Mrs. Jellaby is not the less, but the more, original in the hands of Mr Dickens, because she had been inadequately, and, therefore, unsuccessfully, sketched already a score of times by less powerful writers. The real success of Dickens's portraits is not after all good a reason for undertaking the subject as an omission or defection the abuse by attempted portrait itself. No theme can entitle a writer to the [illegible] of [illegible] original: his treatment of any theme may; and Mrs Jellaby is one of the most genuinely and really original portraits of "Bleak House." A surveydrop is more of an abstraction; but that, too, is also both humorous and moral. As to Mr. Guppy and his [illegible] we by no means regard them, with a number of [illegible] critics, because they are "detestable;" nor can we agree that Mr Dickens has discarded the character of "low humourist." Mr Dickens never was a "low humourist;" and, therefore, could not discard the character. Mr Guppy is not meant to be "detestable," and [illegible] cannot be failures on that account.

We cannot afford room for extracts, which, indeed, would be new to very few. We have not room ourselves to say all that this work deserves to be said respecting [illegible] Some of the author's productions are a model of honest, powerful English. In certain passages we have writing so exquisite that, without any merit but that alone, they would be worth possessing. Bleak House is, on the whole, one of the worst, of Mr. Dickens's fictions; but when we say that we think it superior to several of them which are in great and just estimation, we give it sufficient praise.

THE PUBLIC AND DOMESTIC LIFE OF THE RIGHT HON. EDMUND BURKE. By PETER BURKE, Esq., of the Inner Temple, and the Northern Circuit. Ingram, Cooke, and Co.

We perfectly agree with Mr. Peter Burke, that a new and better biography of his illustrious namesake was a literary achievement to be undertaken. It was not only possible, but easy; and the necessity for it was urgent as the opportunity was inviting. Able men, and diligent men, have employed themselves upon the subject; and in no part of this great man's career are the materials of his history either missing or scanty. But one or other of two blemishes has invariably spoiled every record hitherto attempted; either the public and political aspect of Burke's fate has been obtruded to so great an extent as almost to obscure from sight the personal and private tenor of his days; or, where it has been the object to present a picture of both, we find that the *colours have run* together, including retains its proper place, and sequence, or proportion: nothing is seen clearly—nothing remembered with distinctness. Here, then, for the first time, we may fairly say, has the public a truly adequate work upon a subject which is of national importance, telephone associated with the history of the country, and which, if ever a subject touched it, the glory of the English name, the renown of the Three Kingdoms. Every one will be satisfied with this simple and lucid account of Edmund Burke—an account in which his acts, from first to last, are compendiously and yet sufficiently and fully narrated. But the [illegible] of the literary character of the present biography, which belongs to the class of publications destined to be diffused in each day throughout the entire extent of the English [illegible] making such libraries as were once the envied monopoly of a few, the easy property of all. The sound literary [illegible] of the work is accompanied by the advantage of several illustrations of remarkable ability. Somehow, it is a certain and undeniable fact that we seem to understand men the better whose likenesses we be old, while we peruse their lives; and that it is not merely agreeable, but practically advantageous to be able to transport ourselves in mind to the very scenes, and into the midst of all the details of the very scenes where some memorable event was transacted, or some signal feat accomplished. The sense of words composed may be evident, the meaning

Words reported may be unmistakeable; but we want more than the sense or the meaning; we want the spirit, temper, air, the exact posture, the whole manner. These constitute the physiognomy of an era. As to individuals about whom we are reading, we will endeavour to picture them to ourselves; no one ever completed a statue, a painting, an algebra is studied, or to think of human beings as of abstractions. Everybody has, in his own mind, the spontaneous creation of an image, such as he cannot, indeed, always well, or, in any instance, completely describe, of every character, with not one exception, though the arbitrary and fancy-born form is more vague and shadowy in some cases than in others—of every character, we say, of whom he ever read, or ever heard, in actual or in fiction, ancient or modern, living or dead. How glad are we to exchange this conjectural portrait for the faithful presentment! How curious and eager to compare the one with the other—our "foregone conclusions" with the true aspects and the actual appearances of person and place—our guess, in fine, with the reality! No detail is too trivial; because who can tell from what detail, appearing trivial to another, he may derive, or from what minute particular effect which he has disregarded or overlooked, another may derive, impressions the most ineffaceable, or new conceptions the most unexpected and yet the most pertinent and the most valuable?

It is a common and a very well-founded remark, that you cannot understand reported conversations, in their full bearing, so well as those to which you have listened yourself, and in which you have watched the speakers. No books can, indeed, give the reader a perfect equivalent for his personal absence from the scene which they record; but it is quite evident that, among books (provided there be no disparity presumed in their literary merits), those which are ably illustrated make at least an approach—and the only possible approach—towards furnishing the equivalent. It may seem to their purpose to know what was the personal appearance, for instance, of Cicero, when his words are before you—the words with which he electrified his audience; and it will not affect the purport of those words, whether he was dark or fair, tall or short: but, nevertheless, these pictorial accessories are nearly as important as they are assuredly interesting and delightful; for though they leave what a man said and what he did in exactly the same condition, there is something which they very sensibly affect and stimulate and sustain—we mean simply the attention of the reader, and attention is the outrider and way-clearer of intelligence. The difference between a cleverer and a stupider person is not *always* in the capacity, but frequently in the temper, the disposition, the more ready and the less easily roused intentness of the two. Independently, then, of its agreeable and attractive nature, we are, for other reasons, the advocates and applaudners of this new and improved class of illustrated books in matters of history and biography. We have not often seen a worthier specimen of that class than the "Life of Burke," which we would now recommend to our readers.

While this book has all the pleasantness of those narratives which treat of personal adventures—of the fate and career, in fact—of an individual, we need not add that, in a far higher sense, it is inexpressibly important. Burke's biography, from the year 1765, when he became a member of the House of Commons, till his death, ought to present us, of course, and does in the present publication, for the first time—present us with a clear, readable, and entertaining story of his own affairs, in continuance of what led to his entrance into the political sphere; but it is a biography which also embraces the whole progress of the most momentous and tempestuous interval, and in truth the history of the world. Such is the skill with which this double narrative is managed by Mr. Peter Burke, and such is the ease with which he keeps the one view abreast of the other, that the reader renews, and possibly in some degree extends, his familiarity with the transactions of an eventful era, while forming a close acquaintance with the foremost intellect who then lived, and certainly one of the most wonderful whom any age or any country ever produced.

Perhaps this admirable execution, this luminous and succeed arrangement, may be imagined to be the only literary qualities in which the present work differs from its less felicitous predecessors on the same theme. It may at least be thought that there is no new matter introduced, and that there can be none. This is not the case. A considerable amount of particulars will be found, which adds to the reader's knowledge of Edmund Burke. Nor is it merely in the contribution of a better measure of information that this production combines clear specific advantages with its general excellence; but in the correction, also, of several popular misconceptions and mistakes. The prevalent version, for example, of the dagger-scene in the House of Commons, and the impression diffused of Burke's supposed passion for false, tasteless, and histrionic effects, even in the midst of the gravest and weightiest deliberations, are really without the slightest foundation. A caricature by Gilray is, in this matter, responsible for a bit of spurious or perverted history: and we may mention, as we pass, that the very caricature is, with one or two other pictorial drolleries of that era, reproduced in the present volume among the more serious illustrations. And, as a humorous fancy-sketch originated and established an erroneous notion of one incident, so a humorous passage of imaginative poetry, written by one who was a dear friend and an enraptured admirer of Burke's, and whose name, less illustrious indeed, still is imperishable in the annals of literature, has for years been intended to give apparent and certainly unintended authentication to an opinion utterly at variance with facts, and with the truth, about the style, the general character, and the customary effects of Burke's parliamentary eloquence. All these and many other matters are set in their proper light—now and for ever. We must add, that we earnestly invite Mr. Macaulay, as well as all the others who have interested themselves in endeavouring to elucidate the Junius-mystery, to compare the present work. We invite them all to examine well what the present publication contains upon that subject. The celebrated arguments urged by Mr. Macaulay in the "Hastings" article will, every one of them support Mr Peter Burke's hypothesis; whereas the considerations which he on his own side here submits in proof of it are far less accommodating: they are "non-transferrable:" they refuse to lend themselves to Mr Macaulay's theory, which, in so far as it would have us believe that Junius was one unassisted individual, they are consequently inconcludable. If Junius was not a corporation [illegible] Mr. Macaulay's is by far the most powerfully enforced opinion that has ever been offered in favour of attributing the letters to any one isolated person. Besides the humour, the feeling, the originality, and the force which [illegible] the author's productions are a model of honest, powerful English. In certain passages we have writing so exquisite that, without any merit but that alone, they would be worth possessing. Bleak House is, on the whole, one of the worst, of Mr. Dickens's fictions; but when we say that we think it superior to several of them which are in great and just estimation, we give it sufficient praise.

INTERNATIONAL STATISTICAL CONGRESS AT BRUSSELS.—On Monday about one hundred delegates from various parts of Europe, and other quarters of the world, representing twenty-six different countries, assembled in the Hall of the Royal Academy of Medicine, Brussels, for the purpose of endeavouring to introduce uniformity into the official statistics published by the respective Governments. It is proposed to adopt as general bases of calculations as well as uniform names and rubrics [illegible] Ducpetiaux, Director of the Royal Observatory of Belgium, and [illegible] President of the Statistical Commission, [illegible] Prussia, Austria, Sardinia, Holland, Spain, Portugal, Switzerland, Turkey, Greece, Austria, Sweden, Norway, Denmark, Russia, Poland, Finland, France, and England, were given by the respective representatives of those countries. The English speaker was Dr. Farr, of the General Register Office; [illegible] Quetelet had, with the approbation of the government, been [illegible] deputed by the Registrar General to attend the congress, and to draw up a report on the proceedings. After several speeches had been delivered, the congress went into three sections, for the examination of the following questions:—Organisation of statistical knowledge; census of the population, taking of the land and other immoveable property; statistics of agriculture, manufactures, and commerce; the working classes, with reference to their social economy; the census of the indigent, classes, statistics of education, crime, and repression of offences.

BOOKS TO THE GOLD COAST.—GENERAL POST-OFFICE, SEPT. 15.—From the 1st October next, printed books, magazines, reviews, and pamphlets may be transmitted by the post between the United Kingdom and the Gold Coast by packet, viâ Plymouth, at the following rates of postage, viz.:—For each packet not exceeding half a pound in weight, sixpence; ditto, not exceeding one pound, one shilling; ditto, not exceeding three pounds, three shillings, and so on, increasing one shilling for every additional pound or fraction of a pound. The following conditions must be carefully observed:—1st. Every such packet must be sent without a cover, or in a cover open at the ends or sides. 2nd. Every packet must contain a single volume only (whether printed book, magazine, review, or pamphlet), the several sheets, or parts thereof, being sewed or bound together. 3rd. It must not exceed two feet in length, breadth, width, or depth. 4th. It must have no writing or marks, except the name and address of the person to whom it may be sent. 5th. The postage must be prepaid in full, by affixing outside the packet the proper number of stamps. If any of the above conditions be violated, the packet must be charged as a letter, and treated as such in all respects.

"UP, GUARDS, AND AT THEM!"—The authority for the Duke of Wellington having used these words at the battle of Waterloo is Captain Batty, of the Grenadier Guards, in a letter, written June 22, 1815. *Notes and Queries*, No. 203.

In a letter from a lady to a friend, descriptive of one of the Queen's visits to the Dublin Exhibition, she says, "Her Majesty was looking quite well; and, I observed, she wore her bonnet on her head."

SANSPAREIL (CAPT. DACRES.) TRAFALGAR (CAPT. GREVILLE) BELLEROPHON (LORD G. PAULET) SANE. ALBION (CAPT. LUSHINGTON.)
FURIOUS (CAPT. LORNY.) NIGER (COMDR. HEATH) TIGER (CAPT. GIFFORD.)

THE BRITISH AND FRENCH FLEETS IN BESIKA BAY.

Our Artist at Constantinople having sent us many more subjects than space would allow us to include in the Supplement devoted to the Condition and Prospects of the Ottoman Empire, published herewith, we give three of these scenes in the present sheet. The long Engraving, a Panoramic View of the British and French Fleets at Besika Bay, is from a careful sketch taken from the shore on the 16th of August. Our artist describes the *coup-d'œil* of this array of splendid first-class shipping to be one of the most imposing he has ever witnessed. We regret to add, that at the time he was there, sickness had begun to prevail on board, and to a considerable extent on board the vessels of both fleets, attributed probably to the noxious odours proceeding from the shore, where offal of all sorts was cast by the native *provédadors*, without the slightest heed of the consequences. Two funerals took place on the day on which the sketch was made. The officers and men were becoming heartily sick of their inactive, lifeless position, and made all sorts of efforts, by private theatricals, and concerts on board, and snipe-shooting on shore, to keep themselves alive.

Besika Bay is very snugly situated at the mouth of the little river Scamander, whose waters are celebrated in the fables of old as a cosmetic, but which are now very scanty in supply, and by no means brilliant in quality. In the distance, beyond the line of the fleets, are seen, on the right, the island of Imbros; on the left, that of Tenedos. The names of the various ships are given at the foot of the Engraving.

THE GOLDEN HORN AND THE FALLS OF THE "SWEET WATERS OF EUROPE."

Our view of the Golden Horn was taken from the Imperial Cemetery of Eyoub, looking towards Constantinople; that of the "Sweet Waters of Europe," from a point of land a little higher up. The "Sweet Waters of Europe," by the way, are not to be confounded with the "Sweet Waters of Asia," which are situated in a valley leading out of the Bosphorus, midway to the Black Sea.

The village of Eyoub, a beautiful and picturesque suburb, is situated on the west shore of the Perami canal, near its extremity, and surrounded by gardens and Turkish cemeteries, thickly planted with the dark cypress. It takes its name from Eyoub, or Job, the standard-bearer and companion-in-arms of the prophet Mahomet, who was killed at the first siege of Constantinople by the Saracens, A.D. 668, and was buried there. His place of sepulture having been revealed to Mahomed II. by a vision, he erected a mausoleum and mosque on the spot. In this mosque the Ottoman Sultans are inaugurated by girding on them the sword of Othman, the founder of the monarchy. The mosque is elegantly constructed, of white marble. In it lies interred the amiable and unfortunate Sultan Selim, whose mausoleum may be viewed through the bars of a window. As a place of sepulture, Eyoub is held in high veneration, and, next to those of Scutari, its cemeteries, mausoleums, &c., are the most remarkable of any near the capital. A fez manufactory was established at Eyoub by the late Sultan, and all the red caps for his army are made there. Formerly they were imported from Tunis.

This is one of the most charming spots in the neighbourhood of Constantinople; and we give a few passages descriptive of its varied attractive features, from the writings of two recent travellers. Aubrey De Vere, in his "Picturesque Sketches of Greece and Turkey," thus describes the excursion up the Golden Horn to Eyoub, and the "Sweet Waters of Europe:"—

There are few things which the sojourner at Constantinople enjoys more than an expedition by boat up the winding haven of the "Golden Horn"—a title which might equally be justified by the glorious light which morning and evening fling upon the mouth of the harbour, and by the matchless provision made there for commerce; which, following its windings for seven miles through the city, might empty her cornucopia on its banks. On one side, as you enter it, extends the Seraglio, and, beyond it, St. Sophia and the Mosque of the Sultan Achmet: on the other, rises the Frank city of Pera, with its suburbs of Tophana and Galata, domineered over by the ambassadors of the great European Powers; who, in the present decrepit condition of the Ottoman Empire—far from being exposed to any chance of an imprisonment in the Seven Towers—are looked up to as so many kings, both by C bitants of Stamboul and by their own countrymen. Your caique shoots along the water, passing the ships of all nations, which lie so close to the shores, that their canvas seems to lean on the projecting roofs. Pursu way beyond a wooden bridge of great length which spans the flood, yo at its farther end, the district of Eyoub, situated at the north-easter mity of Stamboul, and regarded as its most sacred region. Far up the commanding the noblest views from the European side of the water, cemetery—only inferior in sanctity to that of the Asiatic Scutari. A tombs which its multitudinous cypresses shade, is that of the far-fa Pacha of Yanina. The contrast between the two views command this cemetery is striking—one of them extending over the city, the Bosphorus, Scutari, and, behind it, the dark steep of Bulgurlbu, and therefore, eminently marked by the characteristic splendour of Consta litan scenery; while the other reveals to you a quiet and shady European "Valley of Sweet Waters," with its deep green grass and t trees.

The Mosque of Eyoub is one of the largest in Constantinople; and, is the richest. On this subject, however, we have nothing but con guide us; for no Christian, I believe, has ever been admitted into its This temple is the great sanctuary of Stamboul—a sort of domestic M was raised by Mahomed the Second, a few years after the capture of tinople, in memory of a certain warrior of the Faith, and companion of the Prophet himself, who fell a martyr in the estimate of his brother —during the siege by the Saracens, A.D. 668. The exact spot on w Arabian chief perished was revealed in a dream to the Sultan if we ar to his account of the matter. Mahomed the Second set another seal sanctity of this temple, by decreeing that, within its walls, the Sultan be girded with the Sword of Empire, successively and for ever. The ce is ever performed by the Scheik of the Mevlevi Dervishes, entitled Hunkiar, in whose family the right remains, on account of its being d from the race of the Abbassides. The representative of that sacred r be an old man on the verge of the tomb, or he may be an infant; but, hands have bound the girdle of the Sword of Othman, the Sultan h religious consecration which invests him with his twofold dignity of and Commander of the Faithful.

This ceremony does not inappropriately take place in the temple

THE GOLDEN HORN, CONSTANTINOPLE.

CHARLEMAGNE. NAPOLEON VILLE DE PARIS—FLAG (ADMIRAL HAMELIN) JUPITER. BAYARD. HENRI QUATRE VENGEANCE (LORD E. RUSSELL) ARETHUSA (CAPT. SYMONDS.)
CARADOC (LIEUT. DERRIMAN.) BRITANNIA—FLAG (ADM. DUNDAS) INFLEXIBLE (CMR. POPPLEWELL.) RODNEY (CAPT. GRAHAM.) FURY (CMR. TATHAM) TRITON (LIEUT. LOYD.)

memory of Eyoub, or Job. In his youth he had been among those who red Mahomed, when a fugitive. He had fought under the standard of the nt in many an arduous battle: he had been a follower of All, as well as Prophet; and it was in his old age that the Arab chieftain engaged in nterprise against what he, no doubt, considered as the metropolis of endom, which, as Mahomed had announced, assured the forgiveness of ins to all soldiers serving in the holy cause. The followers of the Prophet him with feelings similar to those once entertained among Christians is Godfrey of Bulloigne, or any other great Crusading chief.

nd the district of Eyoub, and the limits of the city, lies a vale, still as a st, and one of my favourite resorts while in Constantinople—the celeb "Valley of the Sweet Waters." It is surrounded on all sides by hills, shield without over-shadowing it; and its smooth expanse is covered with hest and greenest grass (the pasture during spring of the Sultan's Arab , and traversed by the silver current of the Barbyses, winding its way to Golden Horn." Over this shallow but secluded vale, trees of a stately and venerable age are scattered, sometimes single, but more often in . In summer this spot is, even more than the Asiatic valley of sweet , the resort of all who love idleness or gaiety. On these occa- it is not the votaries of pleasure only whom you meet; the merchant re likewise, and not a little of business is transacted There the makes his bargain, and talks his customer out of patience, if not out ntenance.

Sultan retires for a portion of each year to his palace in the "Valley of eet Waters;" and to this quiet region the imperial harem is transferred ne occasions. That transference creates a great confusion in the city, the nding hills being occupied with troops; while a regular *cordon* is esta- round the valley to prevent the public from catching even a distant of the fair Sultanas, whose progress is conducted with as much mystery as ed the ride of Godiva. A more interesting object than the palace is seen remoter end of the glen: a mosque, which, lonely and retired as it is, de- eeper seclusion from the thick plane-trees that cluster around it, through its crowded domes are hardly visible. The whole of this mosque is d red, and its history is implied in its ominous title, "The Mosque of ." During a period of intestine feud at Constantinople it was broken into dy of soldiers, many of whom perished on its pavement; in consequence h desecration it now stands a deserted temple. There is something at once mysterious and touching in the aspect of this forsaken fane, which was the goal of many of my wanderings among the hills around Stamboul.

THE EASTERN QUESTION.

The dispute between Turkey and Russia has not assumed a more pacific phase during the last week. The Sultan has published a manifesto, declaring his determination to abide by the modifications made by his Ministry in the Vienna Note, and stating that he will not disband the Turkish armaments until the note thus modified has been officially guaranteed by the four powers. On the other hand, Count Nesselrode, in a despatch to the Russian Ambassador at Vienna (which will be found below), affirms that the Czar insists upon a pure and simple acceptance of the Vienna note. The note was accepted by Russia as a substitute for that of Prince Menschikoff; and the fact of its acceptance, although it was so little satisfactory to the Emperor, is adduced by Count Nesselrode as proof of his consideration for the other powers. Another despatch has also passed between Count Nesselrode and M. Meyendorff, which is of a nature to afford, to no trifling extent, the prospects of a speedy and satisfactory solution of the Eastern question. The *Globe* gives the following account of this despatch:—

Count Nesselrode, speaking for his Imperial master, places upon the note, proposed for the acceptance of Russia and Turkey by the four powers, an interpretation so materially opposed to that contemplated by its framers, that, so read, it practically becomes a mere paraphrase of the terms which Prince Menschikoff, in his well known ultimatum, placed before the Sultan for his acceptance. This, therefore, must furnish to Turkey a complete justification in the eyes of the Western powers, of the course which she has adopted in refusing to accept the note in its original and unmodified shape, and, consequently, her acceptance of it can be no longer invited by those powers. It follows, therefore, that, Russia having returned to the attitude which she first assumed in the person of Prince Menschikoff, the whole Eastern question may be said to have reverted to the shape which it wore before the negotiations commenced. Notwithstanding, however, this undoubtedly grave aspect of affairs, we will not abandon the hope that the question may be still brought to a pacific conclusion.

Another element in the Eastern question is the report that Austria will not join the other powers in the settlement of the Russo-Turkish dispute. It is affirmed that a message has been sent to M. de Bruck, the Austrian Nuncio at Constantinople, from his Government, instructing him to demand the adhesion of the Porte to the Vienna note, pure and simple; the Austrian Government declaring that "this is the last time it will give advice to the Porte in its discussion with Russia." By this step of Austria it would appear that the other powers will be thrown back upon separate action. Whether this be true or not; whether the Conference at Olmütz have been anticipated by a closer approximation between Russia and Austria, or otherwise, it is not to be concealed that the posture of affairs has become much more menacing than it was a few days back. It is also stated that Louis Napoleon peremptorily refuses to go to war in defence of Turkey. Negotiations are still proceeding, and it is inferred, from the language of Lord John Russell, at Greenock, that the British Government are acting with spirit and vigour in the defence of Turkey against the aggression of the Czar.

The following despatch from Count Nesselrode is a document of so much importance—embodying, as it does, the reasons which have led the Czar to reject the Turkish modifications in the Vienna Note—that we make no apology for presenting it to our readers *in extenso*. Count Nesselrode's despatch is addressed to Baron Meyendorf, the Russian Ambassador at Vienna:—

St. Petersburg, August 26th o.s. (Sept. 7th).

We have just received, together with your Excellency's reports of the 16 28th of August, the alterations which the Ottoman Porte has made in the draft of a note drawn up at Vienna.

Count Buol will only require to recal to mind the expressions of our communication of the 29th of July to form a clear idea of the impression these alterations have made on his Majesty the Emperor.

When I, in his Majesty's name, accepted the draft of a note which Austria, after having previously procured it to be approved and accepted by the Courts of France and England, described to us as an ultimatum

THE SWEET WATERS OF EUROPE

that she intended to lay before the Porte, and on the acceptance of which the continuance of her friendly offices was to depend. I added in a despatch which you, Baron, were instructed to communicate to the Austrian Cabinet, the following remarks and reservations:—

"I consider it to be superfluous to remark to your Excellency that, whilst we, in the spirit of conciliation, accept the proposal of accommodation agreed to at Vienna, and of sending a Turkish Ambassador, we assume that we shall not have still further chances and fresh propositions to examine and to discuss, which happened to be contrived at Constantinople, under the warlike inspiration which seems at present to influence the Sultan and the majority of his Ministers; and that, should the Ottoman Government also reject this last arrangement, we should no longer hold ourselves by the consent which we now give to it."

Expressions so precise as these could leave the Austrian Government no doubt as to our present decision.

I will not at the present moment enter into the alterations of the wording which have been made at Constantinople. I have made them the subject of special remark in another despatch. I will, for the moment, confine myself to asking whether the Emperor, after having for himself renounced the power to change even a word in that draft of a note, which was drawn up without his participation, can allow the Ottoman Porte alone to reserve to itself that power, and whether he can suffer Russia to be thus placed in an inferior position to that Turkey? We hold this to be inconsistent with the dignity of the Emperor. Let us recal the whole series of events, as they took place. In the place of the Menschikoff note, the acceptance of which without alteration we had stipulated as the condition of our resuming our relations with the Porte, a different note was proposed to us. On this ground alone we might have refused to take it into consideration. And even after entering upon it we might have found occasion to raise more than one objection, to propose more than one alteration in the expressions You know, Baron, that, from the moment we consented to give up our *ultimatum*, no note of any form whatever was what we desired, that we should have preferred another plan another form of agreement. We did not insist on this plan; we have said it entirely on our side. Why? Because, as soon as we should have made counter propositions, we should have exposed ourselves to the reproach of protracting matters—of intentionally prolonging the crisis which is disquieting Europe. Instead of this—at we wished to put an end to the crisis as soon as possible we sacrificed our objection both as regards the contents and the form. On the receipt of the first draft of the note, without waiting to see if it had been approved in London or in Paris—we notified our accession to it by telegraph. Subsequently, the draft was forwarded to us in its final form; and, although it had been altered in a manner which we could not understand, we did not retract our consent nor raise the smallest difficulty. Could greater readiness or a more conciliatory spirit be shown? When we thus acted, we did so as a matter of course, on the condition that a draft which the Emperor accepted without discussion, should be accepted by the Porte in a similar manner. We did so under the conviction that Austria looked on it as an ultimatum, to which nothing was to be changed, as the last effort of her friendly mediation, which, should it fail in consequence of the pertinacity of the Porte, would thereby of itself come to an end. We regret that we are not in the Vienna Cabinet will admit that, if we had not to do with an ultimatum, but with a new draft of a note, in which either of the parties concerned was at liberty to make changes, we should thereby recover the right of which we had, of our own accord, deprived ourselves, of proposing variations on our part, of taking the proposal of arrangement into consideration, and not only changing the expressions, but also the form

Could such a result be intended by Austria? Could it be agreeable to the powers, who, by altering and accepting her drafts, have made it their common work? It is their duty to consider the delay which will result from this, or to inquire if it is for the interest of Europe to cut them short We see only one sure means of putting an end to them. It is for Austria and the powers to declare to the Porte, frankly and firmly, that they, after having in vain opened up to it the only road that could lead to an immediate restoration of its relations with us, henceforth leave the task to itself alone. We believe, that as soon as the powers unanimously hold this language to the Porte, the Turks will yield to the advice of Europe, and, instead of reckoning on her assistance in a struggle with Russia will accept the note in its present form, and decide to compromise their position so seriously for the childish satisfaction of having altered a few expressions in a document which we had accepted without discussion For of these two positions only one is possible; either the alterations which the Porte requires are important, in which case it is very simple that we refuse to accede to them; or they are unimportant, and then the question arises, why should the Porte unnecessarily make its acceptance dependent on them?

To sum up succinctly what we have said the ultimatum drawn up at Vienna is not ours. It is the work of Austria and the other powers, who, after having first of all agreed to it, then discussed it, and altered its original text, have recognised it as worthy to be accepted without the least interests or its honour being compromised. We on our part have done everything that depended upon us to shorten unnecessary delays, inasmuch as when the arrangement had been agreed to we announced all counter-propositions. No one will refuse to bear this testimony to the *loyauté* of the Emperor. After our having long exhausted the measure of concessions, without the Porte having yet made a single one, his Majesty can go no further without compromising his own standing and without exposing himself to a resumption of his relations with Turkey under similar auspices, which would deprive them, for the future, of all stability, and must inevitably produce a fresh and signal breach. Even now, further concessions with regard to the expression of the note would be no use, for we see by your despatch of the 5th (17th) that Government is only waiting for our consent to the alterations made in the Vienna note to obtain its signature, as well as its transmission to the Emperor. It is therefore, dependent on fresh conditions, and that it has already made inadmissible proposals with respect to the evacuation of the Principalities. As regards the last point, we refer to the assurances and declarations contained in our despatch of the 10th of August, and repeat, that the arrival of the Turkish Ambassador, bearing the Austrian note without alterations, will suffice at St. Petersburg for the orders to be issued to our troops to retire over the frontier

At Constantinople there is imminent danger of an outbreak. The fanaticism of the Turk has been thoroughly aroused, and threatens not only the downfall of the Ministry, but the dethronement of the Sultan. When the news arrives of the rejection of the Turkish modifications by the Czar, it is to be feared that the popular excitement will be ungovernable, and that the Ottoman Government may accede to the demand for instant war as the least of two evils.

Private letters from Constantinople of the 5th first speak of the excitement which continues to prevail among all classes of the Turkish population in that capital, and of the placards posted up in various parts, of the most irritating and incendiary kind, tending to rouse the fiercest passions of the populace. Mehemet Ali Pacha, Minister of War, and Redschid Pacha, Minister of Foreign Affairs, are now in open opposition; they accuse each other mutually of being the authors or the instigators of the placards posted up in the city; the former of those which call out for war under any circumstances, the latter of the few which demand peace at any cost.

A letter from Constantinople of the 8th inst. represents the state of feeling among the Mussuman population as decidedly more warlike than ever

[illegible] and enlisted part of a community who are disposed to [illegible] and count the cost of hostilities, are now [illegible] selves in the ranks of those who have always called out for war. They have, by the advice of England and France, resisted the demands of Russia; and, consequently, by their advice, they have to [illegible] a large army on their frontiers, in the midst of a Christian population. The fanaticism of the army is aroused to the utmost to fight [illegible] the Infidel foe, who has [illegible] stimulant which the Turkish soldier requires, and which it would [illegible] unsafe to deny. This large force has required several months [illegible] brought together from the most distant corners of the empire. Taking into account the very imperfect means of conveyance in this country, it is not to be supposed that the redif and troops can in a short time be returned to their homes and garrisons. Supposing, then, that news were to arrive that peace was declared, how would that news be received by 80,000 men under arms, who had been promised to be led against the [illegible] foes? How would the disbandment become practicable? [illegible] there are some thousands of irregulars [illegible] be turned [illegible] legalised bandits? The disbandment of these troops would be as bad as an invasion of Cossacks. The present Ministry, then, alive no less to this danger, than to that of an outbreak of the fanatics, party in Constantinople, are becoming daily more determined on [illegible] the invasion of Russia. No one here supposes that the Russians will, in the [illegible] of affairs, attempt to cross the Danube, since they have [illegible] all that a successful campaign could [illegible] but [illegible] it is believed, that [illegible] concentrate [illegible] on the frontier, but in fact, there now will be surrounded by a hostile Mussulman population, and where they will be enabled to raise [illegible] standard of Islamism all the warlike and savage populations of Kurdistan, Daghistan, and Circassia, by which they would speedily [illegible] to work mischief. Meanwhile the army of [illegible] [illegible]

The official organ of the Porte to the nation appeared on the 4th in the official journal of Constantinople. It presents a résumé of the [illegible] between Turkey and Russia, and declares that the note adopted by the conference of Vienna was of a nature not to be accepted by the Porte, inasmuch as its concession was not compatible with the Sultan's dignity, and the independence of his empire

According to accounts from Bucharest of the 6th, Prince Gortschakoff is about to proceed to the frontier, to inspect the corps of the General who is marching into Wallachia from Odessa. It now appears certain that the Russians are preparing to pass the winter in the Principalities

In Bulgaria, the Turks can no longer remain in their open camps on account of the cold; and in the Principalities, too, the Russians will soon have to leave their tents for barracks.

Several Boyards have been arrested for keeping up a secret correspondence with Omer Pacha, whom they informed of the movements of the Russian army.

A letter from the Russian frontier, written on the 12th inst., says:—

In spite of all the reports so favourable to exchange purposes, I can only repeat that, in addition to the two *corps d'armée* now stationed in the Principalities, that of Moscow has already been put in motion. The western military colonies are all ready, and the heavy cavalry destined there is only waiting for orders to march. Even if the war is to be commenced early in the spring, the arrangements must be already commenced in Russia.

LORD JOHN RUSSELL AT GREENOCK.

Lord J. Russell being, for a short time, resident at Roseneath, in Scotland, the corporation of Greenock determined to present an address to his Lordship. This event took place on Monday, in the Mid Church (the Town Hall being too confined in space)—there being present the whole of the magistrates, and the principal inhabitants. After the Provost had addressed the assembly, the address was read; when Lord John Russell (who appeared to be in excellent health and spirits) replied. We give the principal portion of the speech:—

Mr Provost and gentlemen of the Council,—It would be difficult indeed for me to express in words the gratitude which I feel for the honour that you have this day done me. I can only say that I trust, in a more expressive manner than by words—by my public conduct—I may continue to deserve the approbation and good opinion of cities and communities such as this (Cheers.) I cannot but look back at the time when I first entered Scotland, and had the advantage of receiving part of my education under distinguished men in the metropolis of your country. (Cheers.) At that period there was nothing like real representation of the people of this part of the United Kingdom those questions of popular election which prevailed elsewhere, did not find their place in Scotland; and the freedom of the press was a mere name, for I do not remember that there was any newspaper at that time which really conducted public discussion with freedom and with openness. I can but look at that time, to congratulate you, and to congratulate myself, that times are so greatly altered (Cheers).

Your Provost has alluded to institutions in other countries which have failed—to liberties which have flourished for a time and have decayed, or without bringing their fruits to maturity. But the difference between these countries and this is, that there is here such a temperate enjoyment of freedom—such a forbearance in pushing rights to extremity—such a well-considered appreciation of the value of liberty; that the institutions derive all their force and all their grandeur from the character of the people among whom they are introduced (Loud cheers)

Gentlemen, your Provost has alluded to measures which have been under discussion with regard to the extension of the principle of representation and measures with regard to the extension of the freedom of commerce. I am happy, at least, to say, without entering into any argument upon these subjects, that your address confesses the increase—I should not say confesses, but rather gladly proclaims the increase of the prosperity and happiness of the people (Cheers); and thereby, at the same time, proclaims that those measures were not ill advised, and have not been unsuccessful (Cheers). Gentlemen, with regard to the future, although I may take but a short time any further part in the deliberations of Parliament, I trust that much that excited party dissension and heated discussion having passed away (that much which was matter of doubt having been settled, there will be, with regard to future measures, if not an absence of party—and I don't expect any time when there shall be an absence of party in this country, but a honest difference of opinion should not be expressed; yet I trust there will be that agreement that the course of legislation may be still further conducive to the happiness of the people at large (Loud cheers). There is no time—I conclude no time—in which there will not be much for an enlightened and benevolent Legislature to discuss, to arrange, and to establish (Loud cheers).

Very unfortunately, the very increase of civilisation, the very gatherings together of population, which are the fruits of industry, of commerce, of flourishing manufactures, and increased trade, bring with them their attendant evils; and while we are occupied, while many benevolent men are occupied, in extending into remote regions the light of Christianity, there are at our doors, who, through their own imperfection and the deficiency of education in, on the one hand, and from the crowded and ill-ventilated dwellings which they inhabit, on the other, are almost as much in darkness as the benighted heathen. (Hear, hear.) Knowledge, instruction as the heathen in the most distant lands which our several commanders have visited, and where they have been ready to sacrifice their lives in the propagation of the Christian religion. Well, gentlemen, these questions give rise to numerous and important matters, upon which men may differ, but upon which I hope the conclusion at which they arrive may be conducive to the happiness of our country men (Cheers)

In regard to education, what vast matters are opening, upon which men of the greatest ability have pondered, give their opinion to the World? Can we rely upon the voluntary efforts of individuals in order to promote such education for the people at large? Should you interfere, as the Government of America have done, by providing such education? If you do interfere, how far should you go? Is it to be a religious education? Can you, on the other hand, provide a secular education, and leave others, by voluntary efforts, to give religious instruction?

I may only say, that while these matters of internal legislation are of the utmost importance—while they must occupy from day to day the minds and the time of those who are called to represent you in the Commons House of Parliament—while there are other questions of internal legislation, likewise of vast importance, upon which I have already, for my part, given my opinion, that further measures ought to be adopted, it is also to be considered, and I trust we shall none of us forget that the country looks [illegible] but upon [illegible] the nations of the world it is not one, but many, that has stood forward to resist oppression, to maintain the independence of weaker nations, to preserve to the general body of nations that freedom—that power of governing themselves of which others have sought to deprive them (Much and loud cheering). I trust that character will not be forgotten—will not be abandoned by a nation which is now a richer nation, which is more populous, more wealthy, than she has been at any former period

This, then, you will agree with me, is not a period to abandon any of those duties towards the world, towards the whole of mankind, which Great Britain has hitherto performed (Loud cheers). Let us perform them, if possible, by our moral influence—by using peace, if possible, while we maintain the inestimable blessings of peace; but while we endeavour to maintain peace, I certainly should be the last to forget that if that peace cannot be maintained with honour it is no longer peace—(continued applause)—it becomes then but a truce, a precarious truce, to be denounced by others whenever they may think fit—(Cheers)—whenever they think an opportunity has occurred to enforce [illegible] pretensions, and to [illegible] us or upon our allies (Much cheering). I trust, gentlemen, that so long as I can bear any part in the public councils of this freedom, such, [illegible] be my sentiments, and such will be my conduct. Happy I am to find that you have done me the honour to signify your concurrence with me in those sentiments (Cheers).

I shall conclude, therefore, thanking you again for the great honour that you have done me, by saying that I shall remain attached to that cause which has been expressed in plain words in that which used to be the toast at our dinners, which few Englishmen were not, namely—"The cause of Civil and Religious Liberty all over the world!" (Cheers). I trust that wherever the influence of Great Britain extends, that cause will be maintained by her. I feel it is her sacred function; and when she lets fall that standard from her hands, she will no longer deserve to bear her part in the concerns of the world (Loud and continued cheering).

Mr. Dunlop, M.P., moved a vote of thanks from the inhabitants to the Provost and Corporation, for having paid so just a tribute to one so deservedly honoured as the noble Lord, and for having permitted the community to witness the gratifying proceedings. The proposal was carried by acclamation. The Lord Provost having acknowledged the compliment, the meeting separated.

DECIMAL CURRENCY.—The object of the work on "Decimal Coinage and Accountancy," which we announced last week as preparing for publication by Dr. Bowring, will, we understand, be to trace the history of the decimal system in the various realms of the civilised and commercial world. The coinage of the florin, or tenth of a pound sterling, in 1849, in consequence of a motion of Dr. Bowring, in the House of Commons, was the most important practical step towards the introduction of a decimal division into English currency. The report of the Committee of the House of Commons, which recommended the early application of decimal notation to our commerce, is understood to have been unanimously adopted; and Dr. Bowring's experience amongst the trading communities of different countries will give value to his opinions.

THE MOWERS.

(AN ANTICIPATION OF THE CHOLERA.)

THE following lines are extracted from "Town Lyrics," a collection of poems by Charles Mackay, published in January, 1848. They seem quite as applicable to the dreaded approach of the cholera in 1853 as they were to the cholera of 1849. Little or nothing has been done in the interval by the public, or by those who ought to be responsible for the public health, to diminish the nuisances that supply this fearful "mower down of the people" with the instruments with which he works:—

Dense on the stream the vapours lay,
Thick as wool on the cold highway;
Spongy and dim each lonely lamp
Shone o'er the streets so dull and damp;
The moonbeam could not pierce the cloud
That swathed the city like a shroud.
There stood three shapes on the bridge alone,
Three figures by the coping-stone;
Gaunt, and tall, and undefined,
Spectres built of mist and wind;
Changing ever in form and height,
But black and palpable to sight.

"This is a city fair to see,"
Whispered one of the fearful three;
"A mighty tribute it pays to me.
Into its river, winding slow,
I hack and foul from shore to shore,
The vessels come, the vessels go,
And teeming lands their riches pour.
It spreads beneath the murky sky
A wilderness of masonry;
Huge, unshapely, overgrown,
Dingy brick, and blackened stone.
Mammon is its chief and lord,
Monarch slavishly adored,
Mammon, sitting side by side
With Pomp and Luxury, and Pride;
Who call his large dominion theirs,
Nor dream a portion is Despair's.

"Countless thousands bend to me,
In rags and purple, in hovel and hall;
And pay the tax of misery,
With tears and blood and spoken gall.
Whenever they cry
For aid to die,
I give them courage to dare the worst,
And leave their ban on a world accurst:
I show them the river—so black and deep—
They take the plunge—they sink to sleep:
I show them poison—I show them rope—
They rush to death without a hope!
Poison and rope, and pistol ball,
Welcome either, welcome all!
I am the lord of the teeming town,
I mow them down. I mow them down!"

"Ay, thou art great, but greater I,"
The second spectre made reply;
"Thou ruiest with a frown severe,
Thy name is synonym of fear.
But I, despised and hard as thou,
Have a laughing lip and open brow.
I build a temple in every lane,
I have a palace in every street;
And the victims throng to the door amain,
And wallow like swine beneath my feet.
To me the strong man gives his health,
The wise man reason, the rich man wealth,
Maids their virtue, youth its charms,
And mothers the children in their arms.
Thou art a slayer of moral men—
Thou of the unit, of the ten,
Great thou art, but greater I,
To decimate humanity.
'Tis I am the lord of the teeming town,
I mow them down, I mow them down!"

"Vain boasters to exult at death,"
The third replied, "so feebly done;
I ope my jaws, and with a breath,
Say thousands while you think of one.
All the blood that Cæsar spilled,
All that Alexander drew,
All the hosts by glory killed,
From Agincourt to Waterloo,
Compared with those whom I have slain,
Are but a river to the main.
I brew disease in stagnant pools,
And wandering here, disporting there—
Favoured much by knaves and fools—
I poison streams, I taint the air;
I shake from my locks the spreading pest,
I keep the typhus at my behest;
In filth and slime
I crawl, I climb.
I find the workman at his trade;
I blow on his lips, and down he lies.
I look in the face of the ruddiest maid,
And straight the fire forsakes her eyes—
She droops, she sickens, and she dies.
I stint the growth of babes new-born,
Or shear them off like standing corn;
I rob the sunshine of its glow,
I poison all the winds that blow;
Whatever they pass they suck my breath,
And freight their wings with certain death.
'Tis I am the lord of the crowded town,
I mow them down, I mow them down!

But great as we are, there cometh one
Greater than you, greater than I,
To aid the deeds that shall be done,
To end the work that we've begun,
And this thick humanity.
I see his footmarks east and west,
I hear his tread in the silence fall,
He shall not sleep, he shall not rest,
He comes to aid us one and all.
Were men as wise as men might be,
They would not work for you and me,
For him that cometh over the sea;
But they will not heed the warning voice,
The Cholera comes—rejoice! rejoice!
He shall be lord of the swarming town,
And mow them down, and mow them down!"

THE THEATRES.

DRURY-LANE.

On Monday a new play was produced—an American drama, by G. H. Boker, Esq. the author of "Calaynos"—of which the English public had some small knowledge a few seasons since, by its performance at Sadler's Wells. The present work is entitled "The Betrothal," and is not without a certain degree of literary merit; but, like its predecessor, has no purely dramatic claims on attention. It has little or no action or progress, is inartificial to puerility in its structure, and in its catastrophe ludicrously absurd. It is, in fact, the result of a mediocre and imitative mind, brooding on certain models of excellence, and combining certain salient points, but without judgment to form the whole into a judicious harmony, and to crown it with a suitable solution. There was, indeed, no development possible in such a drama as this; there being no subject to be developed, but only a succession of borrowed situations to be artificially woven into an arbitrary chain of events. The main-spring of the story lies in the desire of the *Marchioness de Tibuzzesi* (Mrs Belton), to restore the fortunes of her husband (Mr. Evans) by a marriage of her daughter *Costanza* (Miss Anderton), with *Marsio*, a wealthy merchant (Mr. G. V. Brooke). The mother pretends to the father that this old usurer is her daughter's preference, and thus wrings from him his hard consent to the union of youth and beauty with age and ugliness. There is, certainly, some novelty under the circumstances in this situation for a village father; but, though it absolves the parent from the crime, it does not the child from the infliction it saves the motive, not the act. This refin ment of dramatic treatment is evidently regarded by the author, though most fallaciously, as a great point of art. In the next the heroine and her cousin, *Filippia* (Miss Featherstone) are encountered in a garden by a *Count Jurario* (Mr. Belton), and one *Salvatore* (Mr. Davenport), and are wooed very much in the style in which *Faust* and *Mephistopheles* conduct the same kind of business with poor *Gretchen* and her accommodating neighbour, and with about the same amount of success. *Filippia* yields at once to the *Count*; but *Costanza* has scruples, having been contracted to *Marsio*. Their interviews, however, reach the ears of the bluff usurer, who, takes straightforward means enough to convict the parties, by at once questioning the lady in her father's presence; and, not succeeding in this to his wish, bringing the two cavaliers face to face with the fair coquettes, by special invitation to a festivity. The evidence is complete; and *Marsio* contemplates the fitting manner of avenging his injured honour. Fortunately, *Puiti* (Mr A Younge), ostensible servant to *Marsio*, has clandestinely contracted to serve *Salvatore*, much in the same manner that *Launcelot Gobbo* cheats Shylock, and for much the same reasons. Having no suspicion of his double masterhood, *Marsio* confides in *Puiti* the important task of poisoning the two obnoxious guests; which duty, it is of course, *Puiti* communicates to *Salvatore*, who arranges his plans accordingly. *Marsio*, equal, y, of course, drinks of a drugged cup, instead of his victims; and goes through all the agonies of a dying death. But here, in accordance with the refined method of treatment above noted, the death is only apparent, not real—the dose administered being an opiate, which, after a good night's rest, will leave the patient all the better. This is murder in jest. Its antecedents, however, are sufficiently tragical; it being a point that *Marsio* should play the part of a severe hero, combining the elements of *Sagliok*, *Sir Giles Overreach*, and *Luke*, though destined to escape the extreme punishment awarded by Shakspeare and Massinger to that class of delinquent at a denouement however, we think, more satisfactory than that strangely substituted by Mr. Boker, as an illustration of modern refinements in dramatic art. Of the acting we can speak in terms of praise. Mr Brooke was within bounds as *Marsio*, obtaining but a small measure of applause; Mr. Davenport got somewhat more in *Salvatore*; but Mr. Younge, in his character of *Marrall-Gobbo-Puiti*, secured the loudest and the longest response. The play, in fact, is utterly worthless, dramatically arranged, and has destitute of originality in its idea as of judgment in its attempted embodiment. The house was crowded, and, at the end, sufficiently demonstrative; but during the performance there was no excitement

STANDARD.

The now very popular play of "Dissipation" was performed on Wednesday, to a crowded house. We regret the sudden death of the author, Mr. John Walker; who, after a brief career as an author and actor, has left a widow and family totally destitute. The success of this drama should plead for them trumpet-tongued. Mr. Anderson the original representative of the Huron supported the character on the present occasion; and his success, and that of the play, testify well to the taste for the true and legitimate drama at the east end of the metropolis. That taste merits encouragement. The lessee of this establishment is taking, very judiciously, advantage of the growing disparity of the populace for self-education; and has thought it not imprudent to speculate upon it in regard to the decorations of the theatre, which has been reconstructed, remodelled, and considerably enlarged. It will, we understand, now contain nearly five thousand persons. An entirel new stage has been laid down, and one capable of extraordinary scenic effects. A new proscenium, supported with loosing glass columns, new private boxes, orchestral stalls, and mirrors in and on the front of the box-circle, give a degree of brilliancy to the general appearance of the house, which is further increased by the lustre chandeliers suspended from the ceiling and piers. Nor are the drapery and general upholstery omitted the curtains being rich and the accessories everywhere on a liberal scale. Every attention to comfort seems to have been paid in the pit and saloons; and, for all we can see, the audience are as much cared for in this theatre as in the more fashionable ones at the West-end. The starring system prevails, as we have intimated in the statement of the fact of Mr. Anderson's present engagement; but in these neighbourhoods that system is, no doubt, a positive benefit, the taste derived from the superior theatres being thereby propagated amongst audiences whom, under other circumstances, it would never reach. The interaction which it implies is full of promise for the daily increasing improvement of the stage.

MUSIC.

A NATIONAL OPERA.—Another attempt is to be made for a national opera. In February Mr. G. Case will open Drury-lane Theatre. He is known as a violinist, concertmaist, and concert-speculator. He has entered into engagements with Mdme. Clara Novello, Mr. and Mrs. Sims Reeves, Miss Louisa Pyne, &c.

MADAME JENNY GOLDSMIDT.—Mdme. Jenny Lind, it is reported, will visit England next season for a concert tour. Benedict, the composer, has gone to Dresden on a visit to her, in order to make the necessary arrangements, and to be godfather to her son.

Madame Clara Novello is engaged at the Scala, in Milan, for the Carnival; and Madame Castellan will again visit Lisbon as *prima donna*.

The Grand Opera in Paris has re-opened, after a recess of two months, with Meyerbeer's "Huguenots," being the 235th representation of that great work; Mdlle. Poinsot was *Valentine*; Mdme. Laborde, the *Queen*; Mdlle. Dussy, the *Page*; Gueymard, *Raoul*; Obin, *Marcel*; Massol, *Nevers*; and Merley, *St. Bris*. Last Monday Mdme. Tedesco and M. Roger reappeared in the "Prophete." On Wednesday the new ballet "Elle et Moyse," with Mdlle. Fnora and Mdme. Guy-Stephan, was to be produced.

Scribe and Halevy's new three-act opera "Le Nabab," is exceedingly popular at, and draws great houses to, the Opéra-Comique; the cast includes Mdme. Miolan Carvalho, Mdme. Favel, MM Couders, Hocker, and Bussne. The music is very clever, but the libretto, for an English visitor, is quite absurd, albeit the French amateurs enjoy the presumed picture it presents of British life in India amazingly.

Meyerbeer's new three-act comic opera "L'Etoile du Nord," is in preparation at the Opera-Comique, in Paris

The London Musical Institute in Sackville-street, has been dissolved, as everybody predicted from its organisation, at a general meeting of the members.

The American papers record the triumph of Jullien at New York, at the first concert.

Some good concerts have been recently presented at Brighton, by Mr. Frederick Wright. The last one included the talents of Miss Arabella Goddard (whose pianoforte playing was much admired), Mdme. Doria, Miss Ursula Barclay (a mezzo soprano, who is fast gaining ground in public estimation), Mr. T. H. Wright (the harpist), and Herr Hausmann (the clever violoncellist), Mdlle. Castellan, Mdlle. Bellini, Signor Gardoni, and Signor Tagliafico, will sing at a concert in Brighton on the 26th inst. M. and Mdme. Oury are now in Brighton.

THE LATE MR. BLEWITT.—The late composer was in his 73rd year when he died. He was buried in St. Pancras. It is stated that he composed upwards of 2000 pieces of music, amongst which many popular songs will perpetuate his memory. At various periods of his chequered career he was director of the music at various theatres and Vauxhall Gardens. His "Barney Brallaghan" realised thousands for the musicsellers, but nothing for the composer. Blewitt was an excellent pianist and accompanyist, and he had a quick ear for the burlesque. His compositions and arrangements for the pantomimes for many years displayed no ordinary skill, commixed with the drollest combinations. His last farce, after Scarlatti, was inimitable. His comic singing was first-rate—his effects were peculiarly his own. He was essentially an English melodist; his tunes were fresh, catching, and singable. As a glee writer, he won distinction. At a musical dinner his vivacity was most infectious, and his improvising was most mirth-provoking. A concert was organised on his behalf two years since, to assist him in the decline of life; but it failed to realise for him anything like a permanent fund to fall back upon. Perhaps, those amateurs who have revelled in Blewitt's fertile invention may be enjoined to assist his widow and children in their deep grief and distress, at No. 7, Charlton-crescent, Islington.

THE GLOUCESTER MUSICAL FESTIVAL.

(From our own Correspondent.)

THE 130th meeting of the Three Choirs terminated on Friday night, last week, with a ball at the Shire Hall, which 200 persons attended. The weather was unfavourable on the Tuesday, but it did not affect the attendance at the performance of Handel's "Messiah" in the morning, in the Cathedral. It is calculated that upwards of 3000 persons of the county and neighbourhood have been the greatest financial success ever known as regards the receipts for the performance. It seems certain that the collections at the Cathedral doors should have fallen short of those of 1850, which were £546 6s. 6d. This year, they only amounted to £444 10s. 10d. It is stated that some donations will swell this sum above the average collection—which at Hereford, in 1852, was £487; and at Worcester, in 1851, £567. The Shire Hall Concerts were not so well attended, in proportion; the third and last being, however, by far the best. It is generally understood that £50 towards this meeting will have nothing to contribute to meet the expenses, and this a remarkably great point gained; as it is quite enough for the county not to the gentry to leave their homes, and to pay for a week's residence in Gloucester, besides their tickets, without having them for emergencies which have often, there is the best reason to fear, at former Three Choirs Meetings, been the case, from the mismanagement and jobbing. Next to the leading principle of the administrative department of the Festivals of the Three Choirs being managed with integrity and economy, some of the most important public questions are the antiquity of these interesting gatherings insures for them no little prestige, but, if their permanency is to be looked for if they are to exist with the Birmingham and Norwich advance, and Bradford springs up into life and action—they must the executive keep pace with the improved musical knowledge of the age. It is for the leading amateurs in each county, especially those who accept the office of Stewards—it is for the Dean and Chapter to provide the essential points that the finest rendering of the works of the great masters—sacred as well as secular—is ensured, and, to accomplish this end, the services of a well-trained and experienced conductor, are indispensable. The Choral and Orchestral Committee inquire probably bring about an improvement in the musical service of the Cathedrals. The acoustic properties of which are declaration must indeed be strong, when we find in the *Gloucester Journal* the following satirical notice of the early services at the Cathedral this week:—"Considering that this is the first occasion on which the Three Choirs have sung together, the chanting of Tallis's responses was as effective as could be anticipated—the three choirs having *each their own peculiar system*. We would suggest that these responses be adopted by each choir, and at a future time the effect would be much heightened. The time taken by the organist, Mr. Townsend Smith, of Hereford, was, we thought, much too slow, rendering the Litany heavy and tedious, and destroying the resting portions of the responses altogether." At last, then, the ILLUSTRATED LONDON NEWS, which has so long protested against the "slow" Cathedral system, finds supporters even from the local critics of the Three Choirs Let us hope that the admission may lead to further demonstrations in favour of art progress. That the Music-master is abused, these past performances have assured us. Never within the walls of the Cathedral have the oratorios been taken at the pace as at this meeting. In due course we may expect the pianos to take care of themselves as well as the forte. If the use of the Cathedral be granted by the Dean and Chapter for the noble purpose of charity, then is it worth while to secure the highest perfection in the execution. There are indescribable effects in a cathedral which can be attained in no other building, and an intelligent conductor would take advantage of the acoustic properties of each edifice. The noble nave, in which the performances took place with the orchestra constructed under the organ, has been engraved in our columns. A finer effect than this may scarcely be conceived. The side gallery raised at the west window was filled with ladies, whose tastes were of all hues, whilst the seats in the nave displayed the heavy and flash on of the three counties. As the emotions of the vast auditory were excited in turn by the sublimities of Handel, Haydn, and Mendelssohn, the appearance of the interior was most imposing

The evening performances took place in the Shire Hall, the dimensions of which are 97 feet by 53 feet, and 50 feet high. Mr. Smirke was the architect. Well adapted as it is for public meetings and balls, it is not peculiarly fit for a music hall. Our Engraving shows the organ, erected for the practice of the Choral Society and the orchestra—the charming soprano Madame Castellan, the accomplished contralto Miss Dolby, and the basso profondo Herr Formès, being in the act of singing. To render the Hall good for sound, would require the erection of an independent orchestra, over the present one, which is too steep, elevated, and broad, the instrument intercepting and absorbing the sound

In referring to the individual exertions of the singers at this week's doings, the magnificent singing of Madame Clara Novello must be specially praised. Her delivery of the "Hear ye, Israel," in the "Elijah," of the Mendelssohnian "Lorely" scens (a wonderful effort of powerful vocalisation), and of the "Deh vieni" of Mozart—the latter being encored by Mr. Turner, one of the polite stewards, and accepted with enthusiasm by the company—must be cited as exhibiting her varied powers. Mdme. Castellan was extremely successful in the Italian school. Miss Dolby and Mrs. Lockey may be said to have divided the contralto honours—the former in Lindsay Sloper's clever "Joan of Arc" scena, conducted by the composer, greatly distinguished herself. Mdlle. Bellini (now Mrs. Best, being married to the celebrated organist) won a rapturous encore in Gordigiani's quaint and piquant romance, "Ognuno tiara Pacqua;" it was delightfully sung. Mrs. Weiss, who has a ringing soprano voice, was assigned by some strange vagary contralto music; her talents might have received greater distinction in the programme, not because she was born in Gloucester, but because her abilities deserved a more prominent place. Gardoni revenged himself for his Bradford contrariety by singing admirably; he gave, in addition to the music set down for him Blumenthal's "Chemin du Parades." Mr. Lockey and Mr. Weiss have gained additional glory by this meeting; probably they never sung more effectively. Mr. Weiss has now a splendid career before him as the best English basso. Tagliafico and Formès were quite up to the mark.

Something like an attempt was made to recognise the pretensions of English composers, by giving selections from Mr Frank Mori's "Fridolin," under his baton, and by performing compositions of Mrs Beckett, Mr. W. L. Phillips, Mr. Frank Romer, Mr. Balfe, Mr. J. L. Hatton, Mr. Sloper, and Mr. Macfarren. The roof of the Shire Hall did not fall in on account of this daring interpolation of English writing, with foreign composition; indeed, the Gloucester amateurs were naturally encouraged not only to applaud warmly, but to encore also. We are not so far off a national opera as may be supposed, if the provinces set us the good example. Blagrove's paying of a violin solo by Vieuxtemps, Mr C. Harper's horn obligato, the flute and oboe playing of Pratten and Nicholson, the violoncello and contra-basso accompaniments of Lucas and Howell, the trumpet bits of T. Harper and Irwin, and an impromptu bit of scoring by Cusins, of a quartet by Eckow, stretched our "native talent" claims; but we cannot state that the part singing in Mendelssohn's "Remembrance" eclipsed the recollection of the Cologne Choir, whom we forgot all about at Bradford.

The Bishop, the Dean, the Rev. Dr. Evans, and Mr Turner, kept open house for their friends. Mr. Brown, the Hon. Secretary, was indefatigable in his exertions; to him, the Festival is especially indebted for its success. Public dinners are usual in these out-of-the-way "sorties," but it is to be hoped that the custom may be confined to not a Stewards for the Meeting of the Next year will be the turn of Worcester; and the Rev. Serjeant, the Hon. Secretary, is already in the field. If progress be the watchword of the managers of these Festivals, their annual meetings will live and flourish.

OPENING OF THE NEW SWANSEA GRAMMAR-SCHOOL

THE inauguration of this capacious and elegant structure by the Lord Bishop of the diocese, the civic authorities, the feoffees, masters, scholars, and visitors, took place on Wednesday, the 14th instant—that being the founder's day, and the 171st anniversary.

The buildings were most tastefully decorated. The ground was studded with several handsome flagstaffs. Flags floated gaily from the beautiful tower of the school, the parish church tower, and the principal public buildings. The shipping, too, contributed to the gaiety of the scene, by sporting a profusion of bunting; added to which, the bells rang throughout the day.

The authorities, the clergy, masters, scholars, and visitors met at the Council-chamber of the Guildhall at half past ten o'clock, and walked in procession to the parish church, preceded by the silver and gold maces, the Corporation banner, &c.

After service, the procession re-formed at the west door, and proceeded through St. Mary street, Castle-Bailey-street, Temple-street, to Goat-street, the site of the ancient school, the boundaries of which were marked with flags, while a line of gay streamers hung across the street; and, passing on through College-street, and Bellevue-street, to Trinity-place, the locale of the temporary school, along Grove-place, to Mount Pleasant, and passing the school-house occupied by the two last head masters, and Bellevue-corner, it arrived at the New School Buildings, accompanied by a very large concourse of spectators

On arriving at the School, the Chairman was met by the Bishop, who proceeded on his right hand to the seats on the dais; the choir singing Haydn's hymn, adapted to Bickersteth, 338, "Lord of heaven, and earth, and ocean"

Mr. George Grant Francis, Chairman of the Feoffees, in opening the proceedings of the day, remarked:—This was the 171st Anniversary of the Swansea Grammar-school, that great number of years ago the pious and benevolent founder of this establishment (Hugh Gore, Bishop of Waterford) put his hand and seal to the deeds which founded a school in which so many children had been subsequently educated in virtue and good literature (Hear). Through his original munificence, and the liberality of the donors to the building-fund, they were enabled to unite this day for the purpose of opening a new building, not only proportioned to the increase of the population, but having within it those appliances which were suited to the wants and tastes of the present day (Hear).

The Chairman then gave a brief history of the foundation, and concluded by a congratulatory reference amidst loud cheering, to the appointment of Dr Noon as Head Master

Dr. Noon next addressed the assembly, and concluded by stating the number of scholars admitted in two years and a half, to be seventy eight a fact strongly indicating the want of a grammar-school in the town and neighbourhood.

It was moved by the Mayor, and seconded by the Head Master—

That the best thanks of this meeting be respectfully tendered to the Lord Bishop of the Diocese, not only for his attendance this day, but for the attention and interest he has ever evinced in favour of the Swansea Grammar-school

The Lord Bishop of St. David's, on rising, was received with loud plaudits; and returned thanks in an elaborate and eloquent speech. The right rev. Prelate, in conclusion, observed—the only gratuities, then, they had that the instruction would be really profitable, would be to see that, with the education of the intellectual faculties of the scholars, that of their religious education should be combined (Cheers). He felt convinced, in saying this, he was only giving utterance to the views and principles of the revered founder of this School, for it was impossible for them to suppose, for a moment, that he (the founder) wished that the acquisition of learning should be divorced from the principles of religion (Loud cheers). But, whilst he said this, he was strongly disposed to believe that the idea would never have occurred to the founder's benevolent mind of excluding from the institution the children of any of the inhabitants who were willing and able to avail themselves of its advantages. They saw, from the founder's history, that he never contemplated the restoration of the school on a narrow and sectarian basis (Cheers). Whether he was right or not—on his own behalf, he would say that he felt no such desire (Cheers); and it was a great pleasure to be sure that there would never arise any necessity for an exclusion (Continued applause). That was the natural way of securing the advantages of a sound religious education, with the utmost possible degree of respect for all classes.

At this stage of the proceedings the Choir of St. Mary's Church sung an anthem taken from the 133rd Psalm

A vote of thanks was then carried by acclamation to the Bishop of St. David's, for his very able, excellent, and Christian address.

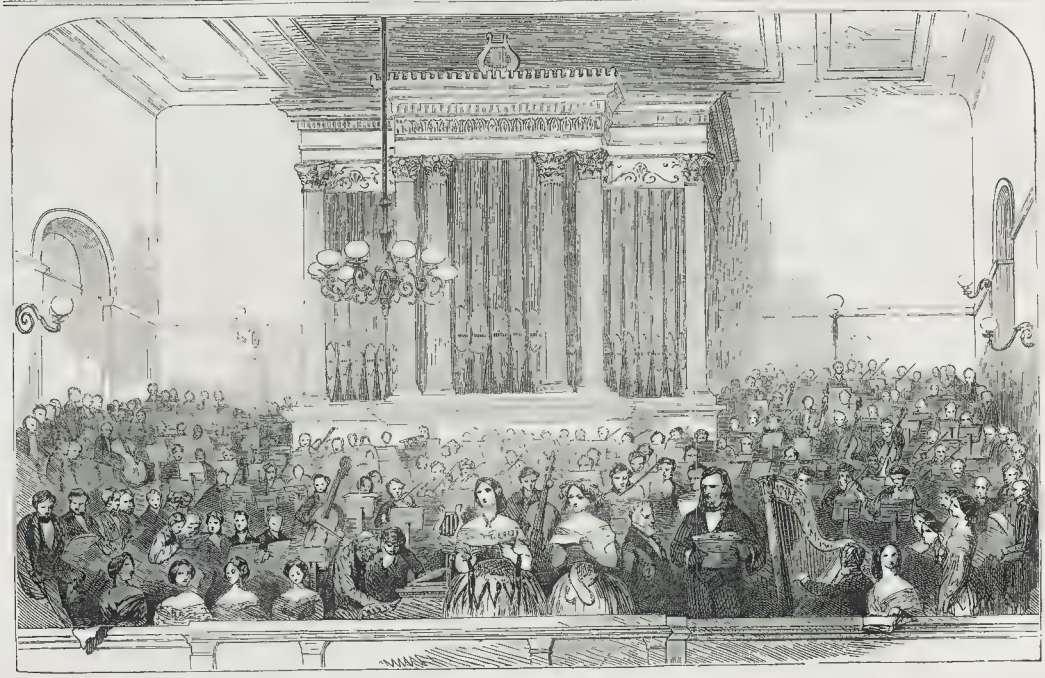
The thanks of the meeting were also voted to the Visitor, Mr. C. R. Talbot, M.P., and Lord-Lieutenant; to the Mayor and Corporation of Swansea, with the other donors to the Building Fund; to the Feoffees, the Building Committee, and their chairman, G. Grant Francis, Esq., F.S.A.

As the Lord Bishop next addressed the meeting, and proposed "That, in honour of the opening of these buildings, the Feoffees be requested to grant the scholars an extraordinary holiday of three days." This proposition was seconded by Dr Howell, and carried unanimously

Other resolutions were carried, including a vote of thanks to Mr. Francis, the Chairman of the Feoffees

The choir then gave, in a most rich style, the National Anthem, the solos of which were creditably executed by Miss Williams, organist, Mr. John Lewis, and Mr. Wm. Bowen.

This concluded the interesting proceedings at the School; and the



THE GLOUCESTER MUSICAL FESTIVAL.—CONCERT IN THE SHIRE-HALL.—(SEE PRECORDING PAGE.)

officials having dispersed, the visitors enjoyed a ramble through the building and grounds, and thence proceeded to the Mackworth Arms Hotel; where sixty ladies and gentlemen dined together, in commemoration of the event of the day.

CONSECRATION OF THE ENGLISH PROTESTANT CHURCH AT GENEVA.

The exertions which have been made at Geneva, for some time past, to supply a spiritual want in that town, by the erection of a church for the British residents and visitors, has at length been crowned with success; and the sacred edifice was consecrated on the 30th of August last by the Lord Bishop of Winchester, to whom the Lord Bishop of London ceded the right of performing the impressive ceremony. At Geneva, a regularly appointed English chaplain is stationary throughout the year, because it became desirable to have there, as is to be found in most cities in Europe, a place of worship entirely under British management.

A committee of gentlemen was formed in 1846, for the purpose of raising the necessary funds for building the Church; and the Government of Geneva has most kindly and liberally aided the object in contemplation by granting an adequate and eligible site for the edifice.

The estimates and expenses to complete the Church (of Gothic design, as shown in the accompanying Illustration) were calculated at £3500. It is gratifying to record these munificent gifts already subscribed towards the completion of the Church. The Lord Bishop of Winchester presented the cover of the communion table, with the cushions and the hangings for the desk and pulpit. Sir Robert Peel, in addition to his other donations, has presented a handsome service of communion-plate. Mrs. Molyneux Williams has given the communion table and two chairs in carved oak. Mr. J. L. Elliot has presented the panels for the Decalogue.

THE CHURCH OF THE HOLY TRINITY, AT GENEVA.

Upon the day of Consecration the Bishop of Winchester preached an eloquent and appropriate discourse. The congregation was very numerous, and consisted of the English residents, and travellers sojourning at Geneva, several influential inhabitants of the town and its environs, and pastors and members of the national church at Geneva.

After the Consecration, a meeting was held of those persons who had assisted at the ceremony. The Bishop of Winchester presided; and Colonel Williams, Chairman of the Church Committee, read the report of the proceedings, from which there appears to be a considerable deficiency in the funds to meet the expense of building the Church. An address of thanks was then voted to the Bishop of Winchester for the services which he had rendered to the English congregation at Geneva as well as for his performance of the ceremony of Consecration.

OPENING OF THE SWANSEA NEW GRAMMAR SCHOOL.

MACE OF THE CORPORATION OF ILCHESTER.

SOMERSETSHIRE ARCHÆOLOGICAL SOCIETY.

The fifth annual meeting of this body was held on Tuesday week, at Yeovil, in the Town-hall, in the upper end of which a most interesting museum was opened to a crowd of visitors. Around the walls were hung a large number of rubbings from monumental brasses; the most admired of which was a very large one taken from King's Lynn Church, in Norfolk, and representing, under three large figures, a banquet which the Mayor had had the honour to give to King Edward III. Dr. Sydenham contributed a large and most valuable collection of illuminated manuscripts; an Ichthyosaurus, recently found at Charlton Adam, &c. Amongst many fine old carvings was a grotesque representation of the offering of Isaac, which was for many years in the kitchen of the old Angel, at Yeovil, and was sent by Mr. H. M. Watts. Mr. Shout sent two old carvings and some carefully-executed drawings, amongst them one of St. Cuthberge, Wimborne Minster. Mr. Dowty sent a very rich collection, including antique silver plate, small bronze Etruscan figures, beautiful Mossics, &c. George Harbin, Esq., contributed a document of considerable historic interest, a "deed of grant out of the Exchequer, under the Broad Seal of England, by Charles II., of annuities of £200 each for the respective lives of Rachael and Frances Wyndham, daughters of Sir Francis Wyndham, of Trent, on the death of his wife, Lady Ann Wyndham, and on the surrender of an annuity for her life of £400, granted by Charles II. to the said Lady Ann Wyndham, in the nineteenth year of his reign, in consideration, as recited in the said deed, of the faithful services performed by the Lady Ann Wyndham in being instrumental to his preservation after the battle of Worcester." An exquisite little bronze figure of Hercules, found in the ruins of the city of Carleil, was presented by Mr. John Pyne. Mr. J. M. Quantock contributed, amongst other things, a bottle of wine from the wreck of the *Aberyaveny*, lost off Portland in 1805. Some fearful spurs, used in Monmouth's army, in 1685, were exhibited. Mr. J. Rawlings and Mr. Babington showed a quantity of ammonites as illustrative of the geology of Sherborne. Mr. G. P. Slade evinced his zeal in the cause by a very early journey to Bradford Church, of the font of which he contributed an excellent drawing; together with sketches of the Old George Inn, Naish Abbey, and the Ilchester Mace, with its inscription, "Jesu de Deu Crie nems dun ci mie." (The accompanying Illustrations are engraved from Mr. Slade's clever sketches.) Mr. Moore, of Ilminster, showed a case of fishes, and a remarkable specimen of the Ichthyosaurus, a species of crocodile found in the upper lias near Ilminster—one of the smallest specimens ever seen. Sometimes these fossils are 20 feet long; this was but 18 inches.

FONT IN MONTACUTE CHURCH.

MONTACUTE PRIORY.

Shortly after twelve o'clock, Mr. W. Finney, M.A., was called to the chair, and briefly addressed the company. The report of the Society was then read. Mr. John Sheppard read a very interesting paper, in opening which he glanced at the natural wonders of Somerset; and then turned to its men, observing that their countrymen had made merry with their dialect, and a certain clownish cast among them (which ill-repute, the noted novelist Fielding, himself one of them, had strengthened); still the native county of Friar Bacon of Bishops Bull, Beckington, and John Hooper; of Admiral Blake

NASH PRIORY, NEAR YEOVIL.

THE OLD GEORGE INN, YEOVIL.

EXTRAORDINARY METEOR SEEN OVER DUBLIN, ON THE NIGHT OF SEPTEMBER 2.—(SEE NEXT PAGE.)

and Rodney; of the historian and laureate Daniel, and the circumnavigator Dampier; of Elizabeth Rose, of Josslyne, of Frome, of Sir John Harrington the poet, and his descendant, Dr. Harrington, of the philosophers Ralph Cudworth and John Locke—need not stir keenly to these commonplace jests, but rather in good humour adopt them. Mr. Sheppard then proceeded to show the connection between archæology and natural science. There was, he observed, one grand point of resemblance even in the most unlike of their pursuits—the student of nature was a student of antiquities, quite as truly as the explorer of ancient art; nay, the inquiries into God's works was still more an antiquary than he who investigates the earliest works of man. When, or example, their naturalists described among the birds of Somerset the peregrine falcon or the road-warbler, they spoke of races which subsisted in their county long before Cæsar set foot in Britain, or the Phœnicians, in an era more distant, made trading voyages to these shores. There was every reason, also, to believe that every feather of their plumage and every note of war or peace, of affection or defiance, of industry or pursuit, instruments of defence, or excursion or foray, continue precisely the same as in the first of those respective races, whose representatives and descendants are now upon the wing or yet unhatched. Thus the natural history of organised life opened us back, by an ascent of thought which seems almost inevitable, to that most wonderful of epochs and antiquities, the first creation of each species; and then again, down through the scarcely less wonderful succession and unvarying reproduction of it, age after age. Mr. Sheppard adduced a variety of other apt illustrations of the subject.

The Rev. J. S. Coles proposed a vote of thanks to Mr. Sheppard, which was seconded by Mr. Harris, who expressed a hope that the paper would be printed among the records of the Society.

The next papers read were—"On Anglo-Saxon and German Romanesque Architecture," by Mr. H. G. Tompkins; "On the Churches of Normandy," by the Rev. W. H. Turner, of Trent; and "Upon the Battle of Llongborth," by the Rev. Wm. Arthur Jones, of Taunton.

At four o'clock a goodly party of ladies and gentlemen sat down to an elegant cold collation, provided by Mr. Frederick Watts, of the Command Hotel; and at seven the company assembled on the invitation of the Portreve of Yeovil, in the Town-hall. Mr. Pinney explained that the sitting was to be devoted to Natural History.

In the course of the evening, Mr. John Batten read a paper of considerable local interest, being an account of Mr. Edward Curll, one of the sequestrators appointed by the Parliament in 1645, to sequester the property of all "delinquents and malignants" within the hundred of Catash in that county, where the clergy were peculiarly obnoxious to the Parliament. Among the offences was the lighting of a bonfire in rejoicing at the overthrow of the Parliament forces at Edgehill. Among the sequestrations were the impropriate parsonages of Lymington, South Barrow, and Barton—part of the temporalities of the Dean of Wells. Dr. Walter Raleigh, also, forfeited for his delinquency. The sufferings of Dr. Raleigh ended only with his life. He endured a long imprisonment, aggravated by constant removal from gaol to gaol, in one of which the plague had broken out; and at length, whilst in custody in his own house at Wells, was murdered by David Purvis, a constable, who had been appointed his keeper. No proper notice appears to have been taken by the authorities of this fatal deed. His widow and son were frustrated in several attempts to bring Barrett to a trial, and the clergyman who performed the burial service at the unfortunate Dean's funeral, according to the Book of Common Prayer, was imprisoned for disobeying the ordinance forbidding its use. After a notice of the Marquis of Hertford, Lord of the manor of Castle Cary, held on lease by Hampden, this very curious and interesting paper closed with a quaint account of a battle fought on Babel Hill, near unto Yerrell between the Parliament forces, under the Earl of Bedford, and those which came from Sherborne, on the 7th of this instant, September, 1642.

The Rev. Mr. Fagan proposed, and Mr. A. B. Sheppard seconded, a vote of thanks to Mr Batten.

Mr. Warre read an able paper on Taunton Castle; and the meeting then adjourned to coffee and other refreshments.

Next morning the chair was taken by Mr. F. H. Dickinson, Esq.; and Mr. Warters read his paper on Hamdon Hill, which was not, as generally supposed, an immense mound of building stone nearly inexhaustible for the greater part of the hill was sand, which largely extended to the eastward, and in which boulder stones of considerable size were embedded. Upon this was a perfectly compact bed, from 20 feet to 50 feet in depth, below which none have been found; so that this valuable bed of stone would, from the demand for it, become in time somewhat scarce.

The Rev. Mr Warre read parts of a paper, by Mr Freeman, on the Archæological Beauties of Bympton, Montacute, &c; and the company then proceeded on a visit to those places.

After inspecting the Old George Inn, at Yeovil (which we have engraved), they proceeded to the Roman tesselated pavement, about two miles on the East Coker-road; and thence passed on to Nash Priory (a Skeptic), which is also engraved. They made a satisfactory examination of these interesting remains, they crossed over to Brimpton-house—a splendid edifice, which, flanked as it is by an old Chantry and a curious Church, presents a most imposing and interesting combination of domestic and ecclesiastical architecture. Having explored the mansion and its adjuncts, the party directed their steps to Odcombe Church, and subsequently reached the celebrated encampment at Hamden Hill. After devoting considerable attention to this interesting spot, as well as to the well-known monument of antiquity—or, rather, daguerreotype of successive antiquities—the Church of Stoke-under-Hamden—the examination of which ultimately reached the Priory of Montacute (likewise engraved). They were much struck with the elegance of the building, which has been recently restored to its original beauty by Wm. Phelps, Esq., to whose celebrated mansion, after inspecting the Church (the font of which is engraved), the whole party adjourned to a sumptuous repast.

On their return to Yeovil, the proceedings of the Society terminated with the reading of a very ably illustrated paper on the Architectural Beauties of the County; accompanied by some interesting remarks by Mr Yates and Mr. Warre, on a few of the contributions to the Museum. We have engraved the Leicester Mace, which, as one of the curiosities of the immediate neighbourhood, attracted much attention. The translation of the inscription is as follows:—

I, Jesus, was of God: notwithstanding the gift was ill received.

EXTRAORDINARY METEOR.

(To the Editor.)

114, Great Britain street, Dublin, Sept. 3rd, 1853.

I send you herewith a hasty Sketch of a curious appearance in the sky, which was first observed directly N.E., at about eight o'clock last night (Sept. 2nd), over Dublin. It was like a vapoury cloud; and I could plainly distinguish the stars through it. The time of its greatest brightness—which I have represented in the sketch—was about nine o'clock; after which it gradually became faint, and disappeared altogether about ten; having changed from N.E. to E. ½ S. The sky was cloudless and starry; and the aurora bore its usual appearance about the same time, the flashes being very bright, and faintly tinged with green.

I am, &c.,
JOHN S. SLOANE, C.E.

York, Monday, Sept 5th.

The following account of a remarkable phenomenon visible here last Friday night, may not be unacceptable to your columns. My attention was arrested that evening, about nine o'clock, by seeing a nebulous band stretching across the firmament, from the south to the N.W. horizon. It resembled a bright white light, and moved slowly from E. to W. The stars shone clearly through the nebula as it passed over them.

Having travelled to a certain extent, it became stationary; and then, slowly assuming the form of an S, it gradually disappeared. What rendered the appearance more remarkable was, that the sky was cloudless, and a fine aurora was playing in the N.

Some persons near me observed how similar the band was to the tail of a comet: it reminded me, indeed, of the great comet of 1843.

I remain, &c.,
ROBERT F. HUTCHINSON, M.D.

Huddersfield College, Sept. 7th, 1853.

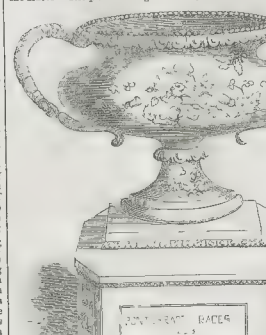
A very strange phenomenon presented itself in the sky here last Friday evening. About nine o'clock, going out of the house, I saw, looking up, I may say, in the centre of it, a broad bright beam of light, ranging from above a cloud in the N.W., close above the horizon, and extending across the sky slightly to the S.W. of the zenith, almost to the horizon near the S.E. My first idea—and that of some others—was that it was the tail of the comet; but a little consideration told us that it was immensely too long for that, though what it was we could not imagine. It cut right across the galaxy, which it greatly exceeded in brightness. Some stars were visible through it. It was brightest about 30° above the N.W. horizon. It was pretty nearly in a straight line, but not of very even breadth; and about 50° or 60° above the horizon there was a very decided bend, which increased gradually in time till it appeared almost in two parts, joined by a waving band of fainter light than the rest. The whole seemed slowly to sink below the horizon till it did not reach further than the galaxy; though soon after this, another narrower short beam, more defined in outline, appeared in the S.E. of the galaxy, where the band part had been. I watched it for about half-an-hour, and when I left it was like it reached only to the galaxy, while the bend had covered about 200 or 250 above the horizon. When I came out again, rather before ten o'clock, it had quite disappeared.

I am, &c.,
TERTIUS.

[NOTE BY THE EDITOR.—The phenomenon witnessed by our correspondent is a species of the aurora borealis, but seldom seen, and still more seldom observed from places so distant as York and Dublin. From the observations made it would appear to have been at the distance of 70 miles nearly from the earth at the time of observation. The magnets were much disturbed on this day.]

PONTEFRACT RACES.—THE GOLD CUP.

THIS elegant Cup was won by Balrownie, on Monday, the first day of the Races. The prize is the gift of Benjamin Oliveira, Esq., one of the members for the borough of Pontefract. The Cup is tastefully ornamented, and is placed upon a pedestal bearing the inscription-plate.



PONTEFRACT RACES, 1853.—THE GOLD CUP, PRESENTED BY B. OLIVEIRA, ESQ., M.P.

HONG-KONG RACES.

A CORRESPONDENT has favoured us with the accompanying Sketch of the Hong-Kong Course, taken during the Races of the present year. The Sketch describes to have been unprecedentedly good. The Sketch shows the Race for the Plenipo Cup (also engraved), with the run in, and the winning-post, opposite the Stand. The sport is thus described in the journal of the colony:—

The Plenipotentiary's Cup, value 200 dollars.—The Corsair, 1, Queen of Cities, 2, Five Barred, 3, Pretender, 0. At the word "off," the Corsair went to the front, and was steered in that position past the Grand Stand; shortly after passing which, the rack began to tell on her, leaving Corsair and Pauline in front. The latter making desperate efforts to make the sea villain retire. But it was not to be done. Shortly after passing the Stand the second time, the Queen began gradually creeping up; and Pauline, finding that she could do no more, went in the rear at the hill. The Queen of Clubs made a rush about half way up the course to get past the horse, but it was no go, and she had to keep in the rear. In the order they ran home, the brave winning the track from the Queen by a head.

Upon the same day the Canton Cup, value 150 dollars, was run for. Next day was contested the Highlander Cup, value 100 dollars; and,

HONG-KONG RACES, 1853.—THE PLENIPO CUP.

on the third day, the Civil Service Cup, 100 dollars; and the Hong-kong Plate, 150 dollars. The sport was wound up with a race for the Native Canoe, value [illegible] dollars. Indian and Chinese riders. This race [illegible] considerable amount of fun. About a dozen canoes came to the [illegible] were manned and horses and riders' names declared, a start was made. One or two of the riders were dismounted before half a [illegible] were over, and above a third [illegible] the ground was got [illegible] by Mr. [illegible] the Prince, ridden artistically by [illegible] a length behind [illegible] the scenery of the island, and [illegible] and on its verge, the Catholic, Protestant, and Parsee burial grounds.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

One of Mr. Brotherton's returns, just printed, tells us that the number of divisions on public bills in the last session was 170 before midnight, and 61 after; and that 17 divisions took place on private bills before midnight. Total number of divisions in the session of 1852-53, 257.

The Common Lodging-houses Act has been taken advantage of by none of the Incl. corporations—the fear of the cholera acting as a powerful agent in favour of clean inness and civilisation.

A dreadful fire broke out on Sept. 5th in Constantinople, in the quarter called Sultan Mehmut. In the course of a couple of hours upwards of 170 houses and shops were burned.

We have the pleasure of announcing the safe arrival in London of Mr. Moffatt, the ex-consul African missionary; but regret that his visit to this country has been rendered necessary by the state of his health.

The grand military manœuvres on the plains of Marengo commenced on the 12th, in the presence of the King of Sardinia. It is stated that the troops executed all the evolutions with the greatest precision.

Mr. Thomas Chapman Harvey is appointed Engineer and Surveyor of Public Works at Honduras. Mr. Charles Girdlestone is appointed a member of the Council of the Virgin Islands.

The *Napoleon* and the *Mouette* announce that the naval division of Cherbourg, by the recent levies, possesses more sailors than are necessary to complete the crews of the vessels that are being fitted out, and that orders have been given not to send any more.

The entire of the gold brought by the *Arabia*, which arrived at Liverpool, on Saturday night, from New York—viz., 210,539 dollars—was for Havre, and was shipped for that port on Monday.

On Friday the Dinmore-hill Tunnel, the main obstacle to be opening of the line of the Shrewsbury and Hereford Railway, was completed amidst great festivities. The line will be open in October.

A letter from Milan states that the rigours of the state of siege continue, notwithstanding the late proclamation purporting to mitigate it.

The Town-council of Glasgow have resolved to present Lord Palmerston with the freedom of that city.

A poor weaver, named Hayton, residing in Carlisle, has just come into possession of a fortune. It is said of £800 a year—by the death of a younger brother, a hop merchant and spirit dealer in Manchester.

The Earl of Carlisle, who has arrived at Bagdad, from Constantinople, intended to make a brief tour in the Persian States previous to his return to Europe.

A colliery explosion occurred on Thursday week, at the Llotty Shenkin Colliery, near Aberdare, by which twenty persons were severely burnt, and two boys killed.

Within these two years, no fewer than twenty-seven sailors' homes have been established in the United Kingdom.

On the 27th ult., the U.S. ship *Decatur* fell in with the British ship *Cleopatra*, twenty-four days from Liverpool, for Quebec, in distress. A crew was put on board, and endeavours were made to take her into Sydney; but on the 30th, she was on her beam-ends, and on fire, and all on board were taken off by the *Decatur*.

Mr. Charles Mathews has been performing in Edinburgh throughout the last week, to excellent houses.

A manufactory of imitation champagne, made from the rhubarb plant, has just been established near Epernay. It is stated that it will manufacture 4,000 to 5000 bottles a week, at 45 centimes a bottle.

The coming of age of the Earl of Carnarvon on the 25th of October next, is to be celebrated at Newbury on that day. A grand dinner will take place in the Mansion-house, under the presidency of the Mayor.

A Genoa paper states that Father Roletti, a Dominican friar, has just invented a machine for musical stenography. It also mentions a M. Rivarola, as the inventor of a contrivance to prevent the shaking and undulation of railway carriages.

The Royal Orthopædic Hospital has just received the handsome bequest of £2000 from the executors of the late Mr. J. R. Durrant, of Newgate-street.

The deliveries of tea in London last week were 573,886 lbs., being rather smaller than those of the preceding week.

The Court of Appeal at Turin has condemned a priest named Nigo, of Scarborough, to six months' imprisonment for speaking disrespectfully of the Government in his church before the congregation.

An Order in Council will forthwith issue for a form of prayer, to be prepared by the Archbishop of Canterbury, against the prevalence of the cholera, to be offered in all churches as soon as possible.

A decree of the King of Holland, dated the 16th, reduces to a moderate duty figure the import duties on corn, potatoes, shelled fruit, and other provisions.

The authorities of Glasgow are proceeding with rigour against parties who keep lodging-houses in a dirty state, or without licences.

The new system of district inspectors of the works and management of the traffic, is being adopted by the York, Newcastle, and Berwick, North Midland, and Leeds Northern Railways.

An English Company has offered to establish a submarine telegraph between the Ionian islands and the Austrian coast; and made propositions to the Austrian Cabinet. Should the telegraph be established, the news from the East will arrive two days sooner.

Mr. Charles Dickens has published a contradiction to the statements current, that he had availed himself of Inspector Field's experience in "Bleak House," and that he had undertaken to write that novel expressly for the purpose.

The *Moniteur* announces that, in consequence of the works about to be executed in the Château of the Tuileries, the apartments cannot at present be visited by the public, even by special orders.

Sir Joseph Thackwell paid a visit to Ledbury last week, in which town he resided some years ago. He was received with demonstrations of joy, and the bells rang merry peals in honour of the occasion.

A Tuscan paper announces the discovery of several precious paintings by Giotti in the Church of Santa Croce. They were partly covered with whitewash, and partly concealed by two cenotaphs.

The East India Company have consented to give up the performance of the packet service between Aden and Bombay; and it will be at an early period put up for public competition.

One little boy has died, and his sister and two other boys lie in a precarious state through eating some of the root of a poisonous plant. They had been out blackberrying in the outskirts of Liverpool.

Three of Kossuth's sisters are in America. Two of them are working as milliners and dressmakers, and another keeps a boarding-house in New York.

The Marquis of Westminster has sold his celebrated horse "Stirling Jack," to the King of Prussia, for upwards of £1000.

The *Great Britain* steamer was off St. Vincent, August 24th. The passengers have forwarded an address of satisfaction.

The Hereditary Grand Duke of Russia arrived in Moscow twelve days ago. The Prince and Princess Frederick of the Netherlands have also arrived in that city.

The capital for the erection of the Free-Trade Hall, Manchester, is £25,000, the applications have amounted to £29,000.

A postal reform measure has been agreed upon between France and England. The reduced postage on letters will be twenty-five cents, which will give a reduction of fifty-five cents on the present postage of a prepaid letter from Paris to London.

Persons who have just returned from Switzerland and Italy state that those countries are as full of American travellers as they used formerly to be of Englishmen.

The works on the Somersetshire Railway are proceeding rapidly; two hundred men are employed near Highbridge, and it is hoped that the line may be opened for traffic in less than a year.

A memoir of General Haynau has been published by an Austrian general, and it is stated that a second edition was rendered necessary on the second day of sale.

Soundings of Cork Harbour were taken on Thursday week, by the harbour-master, and others. The results show that in some parts of the channel deposits have recently occurred to the height of three inches—a matter of serious consequence, and requiring immediate consideration.

It appears from a Parliamentary return that, in 1853, the Emigration Commissioners received 91,094 letters, and despatched 97,483.

A letter from Dantzic states that orders had been received there, from France and England, to ship various cargoes of wheat to England which had been originally destined for France; in other cases, to sell the grain on the spot.

Arrangements are entered into between Mr. John Atwood, of Birmingham, and his creditors, which are likely to be carried out in a manner little anticipated. After discharging all his liabilities, Mr. Atwood will still find he is in possession of a large surplus property.

The Emperor of Russia has just sent his portrait to Prince Metternich, [illegible] the picture, which is 16 feet by 10 feet, represents the Monarch surrounded [illegible] officers of "Nicholas Cuirassiers," of which Austria's regiment he is the "Colonel-proprietor."

A letter from Châteretz (Haute Vienne) states that on the morning of the 5th inst. the inhabitants of that place were surprised to find all the hills around white with snow. The preceding day had been fine, and nothing had led to the belief that the livery of winter would so soon be seen.

NEW BOOKS, &c.

NEW BOOKS ON SUBJECTS OF THE DAY

Ready, with Eight Illustrations, Post 8vo, 5s.,

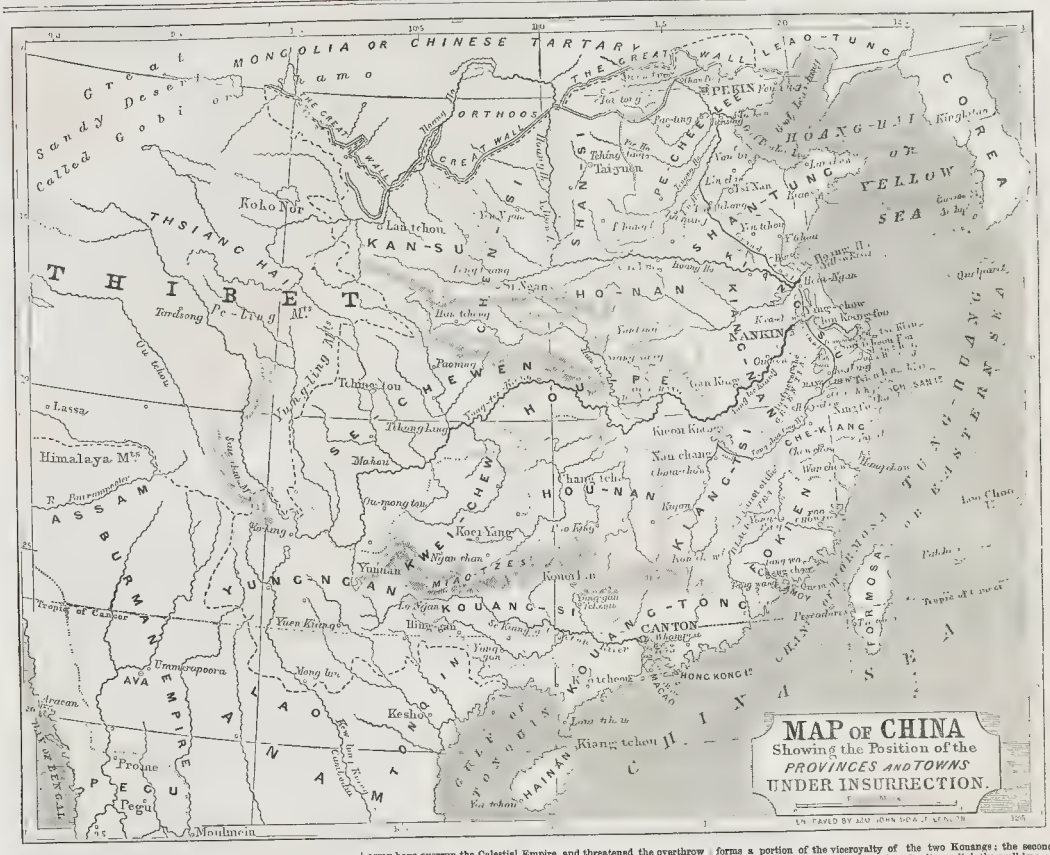
THE CHINESE REVOLUTION. The Sequel; with Abstracts of all the known Publications emanating from the Insurgents.

Ready, Illustrated, 1s.

The CZAR and the SULTAN; or, NICHOLAS and ABDUL MEDJID. Their Private Lives, and Public Actions. Translated from the French of ADRIEN GILSON

Shortly, Illustrated, 1s.

Crown by Constantine; Conspiracy of Rome; Siege of Constantinople; Conspiracy of Rome; Siege of Constantinople; Conspiracy of Rome; Siege of Constantinople



RISE AND PROGRESS OF THE CHINESE REBELLION.

We this week present our readers with a Map of China, which will enable them to trace the origin of the movement by which the insurgent army have overrun the Celestial Empire, and threatened the overthrow of the Mantchoo dynasty.

The province of Kouang-si is situated at the south-western extremity of the empire. Kouang-si is under the rule of a Governor-General, and forms a portion of the viceroyalty of the two Kouangs: the second Kouang, being Kouang-tong, which has for its capital the well-known city of Canton, and joins Kouang-si on the east.

After ages of occupation, the Tartars have failed to bring to submis-

HONG-KONG RACES.—THE RACE FOR THE ELLIOTT CUP.—(SEE PAGE 254.)

sion the remote mountainous districts of Kouang-si, and it was among these hills that the great conspiracy was hatched. In the most distant of these mountains dwell the race of Miao-tze, the aborigines of a chain of mountains which take their rise in the north of Kouang-tong, and extend into the central provinces of the empire. The Tartars have never conquered them, and the Miao-tzes are the horror of the civilised Chinese, who call them wolf men. They have preserved the ancient national costume, and have never shaved their head. Their independence is a recognised fact; and in the map of the country their districts are left blank, in order to show that they have not yet been brought under submission to the Emperor. The insurgents did not fail to avail themselves of the terror inspired by the very name of Miao-tze, proclaimed an alliance with the supposed savages, and induced the latter to take up arms for the recovery of lost rights. It was in August, 1850, that the Pekin journals first announced the breaking out of predatory warfare in Kouang-si. During the earliest months of 1850, the rebels performed divers insignificant military movements until they approached the front-ers of Kouang-tong Here they possessed themselves of one or two important towns, and slew three high-class mandarins. The Viceroy of the two Kouangs—a functionary of the name of Siu—despatched troops against the rebels; but his forces were beaten, and utterly destroyed. Siu—stunned by the unaccountable success of the rebels—hurried off to Pekin, to sound the note of alarm, and the rebels entered Kouang-tong. From this moment the insurgents rarely or never moved or attempted an expedition except when certain of victory. For many months, indeed, it was possible to deceive the Court of Pekin, by the most disgraceful system of lying, and the most ingenious fables of battles which had never been fought, and of victories which had never been won. One Mandarin, in particular, conceived the audacious trick of sending an insignificant rebel in an iron cage to Pekin, and deluding the Court and people with the assertion that he was Tien-Teh himself. The wretched creature was paraded through the streets, and made to confess his origin, and acknowledge the falsehoods which the rebels, in his name, were publishing. Meanwhile the unhappy Generals, whose brave "tigers" were continually worsted in the superior skill of the "district leaders," returned to Pekin, with their lying stories, only to be put to death as soon as the trick was discovered. The demeanour of the insurgents has been studiously that of friendly deliverers, avoiding all unnecessary slaughter. The Imperialists troops, on the contrary, are indiscriminate in their cruelty. The rebels war only against the Tartar troops, and the officials who dispute their progress The lives and worldly goods of the people are uninjured, and the foreigner himself, who has hitherto been honoured with nothing but abuse from constituted authority, is safe from insult when he meets the insurgents.

We hear from Pekin that the Court is in financial difficulties, which will certainly hasten its approaching ruin. Ruinous contributions have already been exacted from the Mandarins and the people; and money has been wrung from the trading population, to be wasted by incompetent Generals, who find it more convenient to fight with gold than swords and muskets. Public offices have been put up for sale. Those who wish to decline the cares of office, or to be raised to a higher rank, may buy off their remaining period of servitude by a liberal donation to the Court. Sons are allowed to purchase promotion for their fathers; and every possible relaxation of the "Law of the Empire" is not only permitted, but enforced—so great are the necessities to which Tien-Teh has reduced his antagonist.

Everything which has come to light with regard to the ultimate designs of Tien-Teh, is held by many to confirm the belief that in its origin and development the rebellion is political rather than religious. It is true that the mysterious individual, whose influence is said to be so great in the rebel camp, is reported to be a disciple of Dr Gutzlaff. But the proclamations from the King Government invariably point to a restoration of the empire to its lawful owners, and certain political arrangements, tending to break up the present system, as the prominent object in view. The "patriot" leader persists in the assertion of his divine right, and heavenly origin, and advances to the possession of his dominions with a confidence almost sufficient, in itself, to ensure success. The most ludicrous circumstance in the whole affair is the cowardice exhibited by the Imperial troops, and the absence of any strategic knowledge on either side.

The patriot army have, by degrees, extended their conquests, until at present they hold Amoy, Chinkiang-foo, Nankin, Yang-Chow, and many other important and populous towns. A rumour was current at Shanghai, that 100,000 insurgents were about to march against Canton; but, when the last mail left, the city and neighbourhood of Canton continued quiet, although the insurgents were known to be in the vicinity. The capture of Nanchang, the capital city in the Kiangsi province, there appears to be no doubt of. The insurgents were moving south, and would pass through the principal tea districts. The southerly movement would soon bring them to Canton.

Trade is daily becoming more depressed and money is scarce; at Shanghai, sales of goods were impracticable, and the accumulation was excessive. An address has been presented by some Shanghai merchants to Sir George Bonham, praying for a suspension of payment of duties during the continuance of the rebellion. They represent in strong terms the stagnation of trade, the insecurity of property, and the existence of circumstances which "were never contemplated, when the treaty of Nankin was framed." Sir G Bonham, of course, refuses to entertain the request, and sees no reason why the Chinese Government should be compelled to remit duties sanctioned by treaties, and whose abolition, under the force of external pressure, would be a gross violation of international law, and constitute an interference with the internal affairs of China, which it is our manifest duty to avoid.

Advices from Shanghai, down to the 11th inst., state that the insurgents were marching a large force to the west and to the north, and have taken one or two cities in those directions, and it was said that it was their intention at once to proceed to Pekin.

The Imperial Governor of Shanghai was hiring and organising a fleet at Canton, with which to attempt the recovery of the mouths of the Grand Canal. The attempt has since been made, but without the smallest success. Mr. Meadows, the interpreter, who was allowed by the Taoutae to go up the Yang-tse-kiang with an officer of her Majesty's steamer *Hermes* in search of deserters, confirms the apparent indifference of the Imperialists, and the energy shown by General Loo and the insurgent force.

Amoy was in a state of considerable alarm. A large Imperialist force, mustering 10,000 strong, had assembled under arms at Tong-wa—a place at a short distance from Amoy and attempted (but in vain) to retake the city on the 13th of June. The rebels were very much pressed for funds; and, besides prohibiting the conveyance of rice to any of the neighbouring towns, had commenced extorting considerable sum from those reported to be wealthy. The alarm and discontent caused by these proceedings on the part of the rebels, added to distrust of each other, rendered the opportunity favourable on the part of the Imperialists to retake the place. Advices of the 9th of July from Amoy give an account of a naval engagement between the Tartar and rebel fleet. No important result took place: and the former retired. The rebels, elated with their success, seem to have a firmer hold of the city. They are reported to number 15,000 men. The shops are closed, and streets deserted; and there is no prospect of any business being done there for some time to come.

The chief of the insurgents in possession of Amoy, issues manifestos as generalissimo in the army of the restored dynasty of Ming. It is confidently stated that Tien-Teh is no myth, and that he only waits for the rising to be more general, to come forward and take his position as a lawful sovereign of the empire.

The Chinese Imperialist Governor of Amoy, for the purpose of managing his fleet, has adopted very active and pressing measures to get men away from the various ships in port. Among others, a marine and eight of the crew of Her Majesty's steamer *Salamander* deserted, and Captain Fishbourne, of the *Hermes*, has given a very efficient caution to the *Sir Herbert Compton*, *Elisa*, and two lorchas, not to move from their anchorage unless these men are brought back. The Taoutae has been much embarrassed by this very stringent measure, which, it is hoped, will also have the good effect of partially, if not entirely, breaking up his fleet, now lying near Chin Kiang.

Accounts from Ning-Po extend to the 13th of June. All was then quiet there, but alarm was felt regarding rumours of rebel movements in the neighbourhood. The opium vessels, which heretofore had never been allowed to go up to the city, were now encouraged by the Mandarins to come as close as possible, and the lowest state of things rendered opium virtually a free article of commerce.

From Foochow advices of the 29th June report the city in a state of riot and confusion, and martial law strictly enforced. A mob collected and commenced pulling down the banking houses, and the Tartar troops were called out; several of the ringle ders were beheaded in the main thoroughfare. A proclamation was out, leaving any person at liberty to kill another found committing theft.

At Yen-pih, 50 there was fighting going on, and all communication was stopped. Two ships, chartered by an eminent American firm at Hong-Kong, were lying at anchor below the city of Foochow waiting for teas from the interior, but the troubles had hitherto prevented any coming down.

No news lately has been received from Nankin. Money is exceedingly scarce, and it is impossible to realise hard cash for bills on London and India.

The following is from a private letter from Hong-Kong:—

News is now coming in of new insurrections in all parts of the empire, and the fall of the old dynasty is become hardly a matter of doubt. With a body of religious enthusiasts at part of whom a good deal was at stake, the Emperor has determined to conquer or perish upon the throne. The ultimate result is a question only to be decided by time; but the superior organisation, poor as it is, of the Christian rebels, and their more determined spirit, may also be hoped in the end they may prevail over their competitors for empire. They still remain in position at Nankin and Chinkiangfoo, and, beyond some skirmishes with the Chinese foreign ships, in which they uniformly succeeded, nothing new has occurred. It is much to be feared that the country is rapidly approaching a state of anarchy, a condition of things most detrimental to trade; and we are public officers, to confess our previous remarks upon the prospects for business. Imports will be to a great extent unsaleable, and the amount of produce brought to market must be largely curtailed.

There is little to report of the United States Japan expedition. Commodore Perry had gone to the eastward of Lewchoo, and touched at an island called Bonisan, on which were some European settlers. It is said the Commodore has made a purchase of a piece of land, containing about 10 acres, for 50 dollars. It is in a good situation on one of the best sites of the harbour, and is intended for a Government depôt. The island is mountainous, and the harbour excellent, having from 18 to 20 fathoms of water at the anchorage. If Commodore Perry has really acquired ten acres of ground which can be made available as a coaling station for the Pacific steamers, though not in the best position, the main object of the expedition may be considered as achieved. The island is said to contain a few European residents, consisting of English, Scotch, Irish, and Spanish, who had left whalers and established themselves there. Among them were about eleven women. The governor of this island is a Scotchman. He claims the island as his own, and has been settled there about twenty years.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, SEPT. 22.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.

Note.—The sign + denotes above the average, and the sign — below the average.

The reading of the Barometer during the week has varied from 29.81 inches on the morning of the 18th, to 30.25 inches on the 22nd. The mean for the week, at the height of 82 feet above the level of the sea, was 30·066 inches.

The Temperature during the week has been generally above the average; it varied from 72·7° on the 17th to 42·0° on the 21st, its range was, therefore 30·7.

The mean temperature for the week was 57·1°, being 1·4° above the average of 58 years.

The mean daily range of temperature was 20.8°; the greatest was 21·3° (on the 19th), and the smallest was 10·9 (on the 16th).

Rain fell on two days to the depth of rather more than four-tenths of an inch.

The Wind during the week has been variable in direction, but the air has frequently been in a calm state; and, when otherwise, it was in gentle motion only.

Fog was dense, on the 16th, in the morning; and a hazy or thick atmosphere has been general.

The Weather was mostly fine, excepting on the 16th, has been fine; the 18th was a fine day, but the atmosphere was stagnant, and even near objects were veiled in mist; the 19th was a fine day; the 22nd was fine, but the atmosphere was stagnant and moist.

Lewisham, Sept. 23, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending September 17, the births of 1506 children were registered in London: of these, 816 were boys, and 690 girls. In the eight corresponding weeks of the years 1845-52, the average number was 1610. The number of deaths registered, during the week, in London, was 949. In the ten corresponding weeks of the ten preceding years, the average number was 1034, and the rate corrected for increase of population, amounts to 1158. The number of deaths recorded, therefore, to the past week, are 209 less than the corrected average, and 85 less than the number recorded to the week ending Sept. 10th. The causes of death are mainly distributed as follows:—To zymotic diseases, 203 (their average is 378): of these, 5 are due to small-pox (its average is 15); 17 to measles (its average is 22); 134 to scarlatina (its average is 56); 32 to hooping-cough (its average is 24). To typhus, 39 (its average is 51). To diarrhœa, 78, which is a decrease of 53 on the return of last week: upon the average of the preceding ten years, it exhibits an increase of 12, if we except the corresponding week ending September 23, 1849, when the number of deaths from diarrhœa amounted to 228: the number of deaths in each week throughout the ten years which supply the average for the above results, are as follows:—In 1843, 59; in 1844, 28; in 1845, 32; in 1846, 29; in 1847, 99; in 1848, 46; in 1849, 228; in 1850, 66; in 1851, 87; in 1852, 106. As connected with the present state of the public health with relation to cholera, these particulars are of more than common interest. To dropsy, cancer, &c., 57 (their average is 46). To tubercular diseases, 170 (their average is 171): of these, 119 are due to consumption (its average is 118). To diseases of the nerves, brain, and senses, 104 (their average is 110). To diseases of the heart and blood-vessels, 38 (their average is 38). To diseases of the lungs and other organs of respiration, 104 (their average is 85): of these 42 are due to bronchitis (its average is 36), to pneumonia, 46 (its average is 40). To violence, privation, &c., 42 (their average is 28); of these, it may be remarked, 15 are due to drowning (its average is 6). Under the head of privation, is specially to be remarked the death of the widow of a labouring man, aged 60 years, "found dying from exhaustion and privation, and the syphilic air of her apartment."—*Inquest.* Cholera during the week has been fatal to 14 persons, of which 9 were males, and 5 females; and shows an increase of 4 upon the return of the previous week. The number of deaths from cholera in corresponding weeks of the ten previous years was respectively 11, 3, 1, 4, 7, 859, 14, 7, 89, 9. From the week ending July 9, in the present year, 3, 6, 9, 4, 19, 10, 18, 16, 7, and 14 fatal cases were registered: 4 out of the 16 deaths are described as Asiatic cholera, varying in the duration of the attack from 7 to 48 hours. As in previous returns, cholera has been confined to the poorer and crowded neighbourhoods.

THE CITY STATUE OF SIR ROBERT PEEL.—The following communication has been received in answer to an application from the committee upon the "Peel Testimonial," to be placed opposite the Bank:—"The Statue Foundry, Pimlico, Sept. 17, 1853.—Sir,—In answer to your inquiry respecting the bronze statue of the late Sir Robert Peel, by Behnes, for the City, which we have in course of execution in our foundry, we beg to say that it is a very advanced state, and that every exertion on our part shall be used to hasten its completion consistent with safety and the proper execution of so important a work. It will be finished in about two months, when we shall have the honour of inviting your and the committee to inspect the work at our establishment. We have the honour to be, sir, your very obedient servants, ROBINSON and COTTAM.—To Alderman Wire, Sheriff."

ST. MATTHEW'S DAY, CHRIST'S HOSPITAL.—On Wednesday being St Matthew's Day, the Right Hon. the Lord Mayor, Thos. Challis, Esq., M.P., the Aldermen, Sheriffs and Governors of St. Bartholomew's Hospital, St. Thomas's, Bridewell, and Christ's Hospital, proceeded from Mansion-house, and attended divine service at Christ Church, Newgate-street, where a sermon was preached by the Rev. George Buckle; at the conclusion of which they proceeded to the Great Hall, in Christ's Hospital, where four orations were delivered: that in Latin, by Mr. H. Ludlow, in French, by C. H. Pares, in English, by J. W. Dorn: in Greek, by H. Fee, etc. Two odes were also recited, one by C. W. P. Watts, and the other, in Latin hexameters, on "Liberia,"—the scholars acquitting themselves in a masterly style, which drew forth the high commendation of the visitors. At the conclusion the organ pealed forth the National Anthem, when the procession again re-formed, and proceeded to the Mansion house.

THE FALLEN HOUSE IN THE STRAND.—The coroner's jury met on Monday, according to adjournment, and, having heard some further evidence, the court was adjourned until next Monday. The Coroner intimated his expectation that the proceedings would be brought to a close on that day.

LAUNCH OF A STEAMER.—The *Donna Maria Segunda*, belonging to the Portuguese and Brazilian Steam Navigation Company, of 1700 tons, 240 feet long, breadth of beam 37 feet, and constructed for engines of 300-horse power, was launched from the yard of Messrs. R. and H. Green, at Blackwall, on Saturday, the ceremony of christening being performed by Miss Lubbock, daughter of Sir J. Lubbock

THE MAYORALTY AND THE SHRIEVALTY.—There is a great deal of talk in the city about a "stir" upon the day of the swearing in of the new Sheriffs, as well as of an "agitation" on the day of the election of a Lord Mayor for the ensuing year.

CITY OF LONDON REGISTRATION.—Mr. T. Y M'Christie, the barrister appointed to revise the list of voters for the city of London, held his court for that purpose on Monday morning, in the Court of Common Pleas, Guildhall. The entire lists of the livery were gone through, but no point whatever arose worthy of special notice. The revising barrister then proceeded to take the householders' lists. The first was that for the ward of Aldersgate; and then followed in alphabetical order the other wards. When the examination is closed, we shall give the results.

NEW OMNIBUS LICENSES.—The metropolitan omnibuses are now in course of inspection, by order of the Police Commissioners, under the new act, as a preliminary proceeding to the granting of new licenses next month. Some improvements have been already ordered; and in a short time a better description of vehicles will appear. It is, however, expected that the number of omnibuses will be diminished. It is rumoured that as many as 200 will be taken off the roads by the proprietors, as the omnibuses business is said to be a losing speculation.

CHELSEA SUSPENSION-BRIDGE.—The Commissioners of Woods and Works have given directions that the works in connection with this new structure shall be accelerated in their progress.

BROMPTON HOSPITAL.—The funds of the Hospital for Consumption at Brompton have just been enriched by a princely legacy under the will of the late John M'Cullom, Esq., of Bedford-place. The amount of the bequest will not fall very short of £16,000. Since the establishment of the hospital the legacies of the benevolent have been a valuable source of income to the charity. Just now its sphere of usefulness is about to be increased by the addition of 140 beds; the approaching completion of the east wing making the total number of beds 230.

EAST GREENWICH FLAX-WORKS AND ROPERY.—Yesterday week the factory operatives of this establishment presented to its proprietor, Mr. John Smith, a handsome silver tea and coffee service, as a testimonial of their grateful regard of his uniform kindness as their employer. An appropriate address was presented to Mr. Smith on the occasion, wherein it is stated that, while the manufacturing operations of many firms have been greatly impeded by misunderstandings between the employers and the employed, there has not been an instance of dissatisfaction among the operatives of the East Greenwich works. Mr. Smith, we understand, takes especial interest in the English flax movement, and is erecting a powerful steam-engine, to render large quantities of the English flax-straw suitable for manufacturing purposes.

NATIONAL SPORTS.

LEICESTER RACES.—WEDNESDAY.

County Cup Stakes.—Sleeping Partner walked over
Selling Stakes.—Prism the Third, 1 Lady in Waiting, 2
Leading Plate.—Rosette, 1 Bruneau, 2
Belvoir Stakes.—Drayton colt 1 Brunmare, 2.
Two-year old Stakes.—Twinkle, 1 Eva, 2
Leicestershire Handicap.—Jacquelina, 1 Audubon, 2.

THURSDAY

Queen's Plate.—Hungerford, 1. Maid of Golborne, 2.
Handicap Sweepstakes.—Tomboy, 1. Maidstone, 2.
Coplow Stakes. C. by Drayton, 1. Birthday, 2

PONTEFRACT RACES.—MONDAY.

Trial Stakes.—Snowdon Dunhill, 1. Bridesmaid, 2.
Gold Cup.—Balrownie, 1. Sally Warfoot colt, 2.
The Jewess won the Park hill Stakes; the Twin, the Stand Plate, and the Selby Stakes, the visitor's Plate.

TUESDAY

Scurry Stakes.—Solyman, 1. The Twin, 2.
Castle Stakes. Hotchpot, 1. Pansy, 2.
Pontefract Handicap.—Grapeshot, 1 Billy Richardson, 2
The Grand Stand Stakes were won in three heats by Vinaigrette, beating Killarney.

BEDFORD RACES.—TUESDAY.

Preparation Stakes.—Captain Flash, 1. Warbler, 2
Two-year-Old Produce Stakes.—Star of Surrey, 1. Br. f. by Ion—Taurina, 2
Two-Year-Old Stakes. B. f. by Ascot 1. F by Ratan, 2.
Bedfordshire Stakes.—Perfidious, 1. Ickton, 2.
The Town Stakes were won by Eccentricity.

WEDNESDAY.

Two-year-old Stakes.—B. f. by Ion, 1. Alabama, 2
Marston-park Stakes. Perfidious, 1. Warbler, 2.
Scurry Handicap. Vaultress, 1. Robinson, 2
Queen's Plate. Ariosto, 1. Lamartine 2
The Hunters' Stakes were won in four heats by Songster, beating Economy, Honesty, and three others

MANCHESTER RACES.—THURSDAY.

Chesterfield Handicap.—Barrel, 1
Welter Cup.—Surveyor, 1.
Wilton Handicap.—Annie Sutherland, 1.
Subscription Stakes.—Barrel, 1. Snowdon Dunhill, 2.
Selling Stakes.—Solyman, 1. Casey, 2

FRIDAY

Metropolitan.—Annie Sutherland, 1. Bandlewick, 2.
Two-Year-Old Selling Stakes.—Magic, 1. Gabriel, 2.
Grand Stand Plate.—Bridesmaid, 1. Italian, 2
Scurry Stakes. Game Tommy, 1 Hotchpot, 2.
Selling Plate.—Taley, 1. Rupture, 2

ABINGDON RACES.—THURSDAY

The Abingdon Stakes were won by Jack Leeming.
Berkshire Stakes.—Sleeping Partner, 1. Waterfall, 2
The old Berkshire Hunt Stakes were won by Songster; and the Ladies' Plate was won by Mr. I. Day's Idas

BETTING AT TATTERSALL'S ON THURSDAY EVENING

6 to 1 agst Hotchpot (t)		30 to 1 agst Rl. of the Shire (t)	
7 to 1 agst Nancy		40 to 1 agst Cockatoo (t)	
20 to 1		40 to 1 — Tadcaster (t)	

CAMBRIDGESHIRE 25 to 1 agst Scahorse

DECIMAL COINAGE.—We are authorised to state that a paragraph which has been going the round of some of the papers, to the effect that a decimal silver coinage is to be issued at the commencement of next year, and bearing the date 1854, is in progress at the Mint, is entirely without foundation. *Times*

STATUE OF "THE DUKE." We understand that Mr. Noble, the sculptor, of Bruton-street, has just received a commission from the East India Directors to execute a statue of the late Duke of Wellington. The statue will be above six feet in height, and will be executed in a fine Sicest Carrara marble, and fixed on an appropriate pedestal. The Duke will be represented in his usual military costume

VACCINATION.—On Tuesday last (20th), the names of all duly qualified medical practitioners throughout the kingdom were to be forwarded by the Superintendent Registrars to the Registrar-General.

BOARDS OF CUSTOMS AND HEALTH.—A deputation from the Commissioners of Customs consisting of the Right Hon. G. R. Dawson, Vice-Chairman of Customs; Dr. M'William, Medical Inspector of Customs; and Mr. William Smart, Inspector of the River, attended the General Board of Health on Tuesday, at their offices, Whitehall, upon an invitation for a conference on the means of protection practicable to be given to crews and passengers on any outbreak of epidemics in the ports.

A COVEY OF ADDERS.—A few days since, as two men were stoat-hunting, near Cuckfield, Sussex, one of the dogs was heard barking at some little distance. The men, after calling the dog in vain, proceeded to the spot, and were surprised to see a number of adders lying together. One of the men discharged both barrels of his gun at them; and, to complete their destruction, they cut them with their sticks. They found they had killed 48; and the men then cut a branch of a tree, making the extraordinary number of

AT Yarmouth jetty, on Thursday week, [illegible] furiously, a ship's boat, endeavouring to land for water, was upset, and the men were engulfed in a wave some thirty feet high, when George Borrow, the well-known author of "Lavengro," and "The Bible in Spain," dashed into the surf and saved one life; and, through his instrumentality, the others were saved. *Daily Post*

THE BIRMINGHAM BOROUGH GAOL.—*Aris's Birmingham Gazette* says:—"We understand that Mr. J. Blount, the surgeon of the borough gaol, has resigned his appointment. Fraer, the chief warder, has been dismissed by the justices; and Cotterill, jun., one of the warders, whose name has been frequently mentioned during the [illegible] quiry, died yesterday se'nnight, after a short illness.

CALENDAR FOR THE WEEK.

SUNDAY, Sept. 25.—13th Sunday after Trinity. Porson died, 1808.
MONDAY, 26.—Constantinople founded, 320.
TUESDAY, 27.—Brindley died, 1772. Battle of Busaco, 1810.
WEDNESDAY, 28.—Sheriffs sworn into office.
THURSDAY, 29.—Michaelmas-day, Lord Nelson born, 1758.
FRIDAY, 30.—St. Jerome. George Whitfield died, 1770.
SATURDAY, Oct. 1.—St. Remigius. Pheasant shooting begins.

TO CORESPONDENTS.

AN AMATEUR PHOTOGRAPHER calls attention to accidents arising from the incautious use of the ammonia nitrate of silver, from the formation of a fulminate by evaporation. This should be guarded against by carefully keeping the bottle stopped.

R. T. E.—*Chobham*, not Cobham, is the correct pronunciation. The Duke of Wellington was never at the Sorienne Military School; but, about the close of the American War, he was sent to school at Angers, in France, at that time under the direction of Pigneril, a celebrated engineer.

M. D.—The question of "Who is an esquire?" was discussed at great length in Mr. Burke's "Patrician." We have not space to enter on it.

TOM OATES. The Crest, named by the French *cimier*, from *cime*, the top, or apex, originated in the necessity of distinguishing one chief from another, and making him known in the battle-field and the tournament: consequently, no crest is ever allowed to a female. As early as the year 1101 a seal of Philip, Count of Flanders, represents him with his crest; but at that period, and for a century and a half after, few of lesser degree than sovereigns and commanders in the wars ventured to carry this mark of distinction. After the institution, however, of the Garter, the knights of that illustrious order adopted crests: and the practice soon became general, that these emblems were assumed indiscriminately by all who considered themselves legally entitled to coat-armour.

A. B. R.—Sir William Belfour bore for *Arms*: "Arg. on a chev. sa. an otter's head erased of the first. *Crest*: A lady standing on a rock, holding in her right hand an otter's head, and in her left a swan's head. *Motto*. Omne solum forti patria."

J. C. N.—*Arms of* COVE. "Gu. a bend arg. cottised or. *Crest*: Out of a ducal coronet or, a dexter arm embowed in armour ppr., holding in the gauntlet a battle-axe gu." There was another family of Cove which bore for *Arms*: "Arg. three piles wavy gu. between twelve martlets sa. *Crest*: A lion's paw holding a palm branch ppr."

A RUPICAN.—The living is worth about £1200 or £1500 a year.

AN INQUIRER.—To have your name entered at an Inn of Court, you must get your entrance paper signed by two Barristers, and approved by the Treasurer or two ancients of the Inn; and you must pay the necessary fees. After serving a certain number of Terms, which can be done in three Years, you can be called to the Bar. At the Middle Temple there is no entrance examination. The cost by admission is about £50, independent of the deposit of £100—in case you are not a University man.

A DESCENDANT.—*Arms of* Julian: "Arg. a cross-crosslet in saltire sa. *Crest*. On a chapeau a salamander in flames ppr." Naunton is a very ancient family; its *Arms*, "Sa. a lion rampt. or, ducally crowned arg. between three cross-crosslets of the second."

EMILY.—A lady is not entitled, under any circumstances, to bear a crest. "An Emperor," says Dr. Johnson, "is a Monarch of title and dignity superior to a King." This definition is not very explicit. An empire seems to us a congregation of states under one ruler, such as the Roman Empire, the German Empire, and the French Empire, under Napoleon I. A Kingdom, on the other hand, is one State governed by a Monarch.

A CONSTANT READER.—There are several coats to the name of Joyner. One granted in 1631 to a family of London and Sussex, is "Az. on a bend arg. an eagle displayed sa." Another, that of Joyner, Norroy King-of-Arms, temp. Henry VIII., is "Arg. on a cross az., four fleurs-de-lis of the first, within a bordure of the second." A third has a very simple bearing, "Arg. a pale az."

AGNES.—The family of Lucas, from which descended the famed cavalier, Commander Sir Charles Lucas, created in the county of Essex and Suffolk; and bore for *Arms*, "Arg. a fesse between six annulets gu." A reference to Manning and Bray's "History of the County of Surrey" might possibly throw some light on the pedigree of the family of Lucas, of Varndell-hill.

DIDO.—*Arms of* Harby: "Gu. a fesse erm. between ten billets arg., four, three, and three. *Crest*: A heron's head erased or, between two wings extended sa."

V. N.—Singular enough, some of our great and richest counties have no *complete* county histories. Shropshire, Yorkshire, Devon, Lincolnshire, and Hampshire, are sadly off in this respect. The best county histories are Ormerod's "Cheshire," Surtees' "Durham," Hunter's "Hallamshire," Baker's "Northamptonshire," Nicholls's "Leicestershire," Lipscomb's "Bucks," and Hutchins' "Dorsetshire:" all splendid works, full of the most valuable information. Blakeway's "Sheriffs of Shropshire" is a book of interest connected with that county, but of but moderate length to be in ancient families and great landed proprietors, no general history exists. Britton's "Beauties of England" may possibly give the information required about Cayuton Hall.

Y. R. S.—The family of the late Sir Thomas Picton was Welsh, and is, we believe, still seated in the principality, in Pembrokeshire.

NAUTICUS.—The cost of a Royal license for a change of name is about fifty guineas. A petition must be addressed to the Queen, setting forth the reasons why the change is required, and leave is given, provided the authorities deem that sufficient cause is shown. In the case submitted, a petition, presented through a member of the Herald's-office, would, we doubt not, obtain the desired object.

ADMIRER.—The Royal license, which authorises the assumption of the name of Samwell, will explain the descent or reason. The *London Gazette* publishes all these licenses.

ARTAXERXES.—A mere device of "a dog or a horse" is not a crest, and would not be liable to the tax on armorial bearings; but, if it be placed on the heraldic "wreath," it would be.

A CONSTANT READER should refer, himself, to a file of our paper, and ascertain the exact date.

STEPMOTHER. The son's children are respectively entitled to the designations of "Master" and "Miss."

AN OLD SUBSCRIBER.—Courtesy still continues to the lady in question—although married again—the title she bore during the lifetime of her first husband.

ENQUIRY.—The eldest daughter of each brother seems, in courtesy, to be called "Miss" simply with the surname annexed.

SNIPE.—Westminster is a city. The definition of what constitutes a city is difficult. We have not space to enter on the subject.

N. Y. Z. When Colonel Berkeley was raised to the Peerage, he adopted the title of Segrave, but the old Barony of that name was in no way affected by the creation. It is now in abeyance.

A CONSTANT SUBSCRIBER.—Apply to Mr. Burke, author of "The Peerage" in Great Marlborough-street.

PHOTOGRAPHY.—The *Times* newspaper has been in existence about seventy-two years.

J. P., Chobham.—The present comet is not a predicted one, but, on the contrary, so far new to astronomers.

B. H., Holmbrook-hall.—The letters described within is one of those sold in the streets at 1d each when her Majesty came to the throne.

A SUBSCRIBER will find the churches of Broadwater, Sompting, and Tarring, described in "Horsefield's History of Sussex," two vols., 4to, 1835.

In our account of the proceedings of the British Association, at Hull, we omitted to mention, as is usual with us, that the illustrative Portraits of Mr Hopkins, and Lord Londesborough, which are excellent likenesses, were engraved from Photographs by Mr. John Worden, of Hull.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, SEPTEMBER 24, 1853.

THE accounts received towards the end of the week, from St. Petersburg and Constantinople, are such as to justify the most grave apprehensions as to the ultimate issue of the question which has been so long pending between the Emperor of Russia and the Ottoman Porte. On the one hand, the Emperor persists in rejecting in an unqualified manner the "Vienna Note," as proposed to be modified by the Sultan of Turkey; on the other, the Sultan, supported by the voice of all his advisers, insists upon adhering to the modifications introduced by him; and, in the alternative of their rejection, has prepared large armaments for the defence of the territory and independence of the Ottoman Empire. We apprehend that the issue thus joined, is too close and too clear to leave room for further pleading or demurring; and that after many months wasted in diplomacy by the advocates of "peace at any price," a peaceful solution of the difficulty is now impossible. With respect to the manifesto of the Porte, describing the actual position of affairs, recently published at Constantinople, we have nothing to say. It speaks plainly enough; and is perfectly consistent with the previous manifesto issued by the same Government, immediately after the invasion of the Principalities by the Russian troops; and, also, perfectly consistent with the view taken of that invasion by Lord Clarendon, in his despatch to our Ambassador at St. Petersburg, which recently, most unintentionally, met the public eye; and further, we may add, most perfectly consistent with the opinion of all men who pretend to any knowledge of the law of nations, so flagrantly violated by that audacious act.

We shall, for the present, confine ourselves to the despatch of Count Nesselrode, addressed to Baron Meyendorff, at Vienna (dated St. Petersburg, Sept. 7), announcing he unqualified rejection, by the Emperor of Russia, of the modifications proposed by the Porte to the Vienna note; and suggesting, rather than explaining, some of the reasons for his so rejecting them. This document contains enough to dispel all doubts which may have been entertained as to the policy which has all along guided that ambitious and unscrupulous Czar in this matter

"Either," writes Count Nesselrode, "*the alterations which the Porte requires are important, in which case it is very simple that we refuse to accede to them*, or they are unimportant; and then the question arises, why should the Porte unnecessarily make its acceptance dependent on them?"

We understand his Excellency's intentions, as we have sufficiently implied by printing part of his observations in italics; but we demur to his logic. The Sultan, being invited to make a concession to another power, which he is perfectly at liberty to make or to refuse (and such is his present position with regard to Russia), has a right to consider and prescribe the terms in which he might do so. This is a circumstance which appears to have been overlooked by the learned diplomatists who undertook to manage affairs at Vienna. It is, as far as their reputation is concerned, certainly unfortunate that they omitted even to apprize the Sultan of Turkey of the terms of the message they proposed he should send to Russia, before that message was submitted for the acceptance of the latter. This is a blunder, however, which is now past remedy. The Turkish ultimatum is now to be considered upon its merits. And certainly—as the powerful organ of the Aberdeen party now admits, after vainly endeavouring to pick a quarrel with the Sultan for cavilling about "words"—there is something essential in principle in the alterations insisted upon by that monarch—something which involves his very honour, and dignity, and the integrity of his Empire.

The passages in the "Vienna note," which the Porte objected to, undoubtedly went to the extent of admitting the existence of a sort of prescriptive right in the Czar to "interest" himself in the affairs of the Christian subjects of the Porte; and misinterpreted the spirit of a treaty in a manner to confirm such prescriptive right. But, indeed, if the Sultan only considered the passages to be capable of such a construction, he was, according to the universal law of nations, in the perfect right to refuse to sign them, being the only judge of what concerns his independence and dignity;—in other words, if it should in reality prove to be the case that the passages so proposed to be omitted or modified are "unimportant," we apprehend (with every respect for the juridical authority of Count Nesselrode) that the Sultan of Turkey—and not the Emperor of Russia—is the party who has a right to decide upon their insertion. The matter of principle in the substance of the note being satisfactory to both parties, that one which makes the concession has the right to regulate the terms of the premises by which it is introduced.

There is no use in mincing matters. There can be no doubt *now* of the policy of Russia in this outrageous case. Besides the note of Count Nesselrode to Baron Meyendorff, which was, no doubt, penned with a view to immediate publication, it appears that the industrious Russian Minister has written another, containing additional and unexpected reasons against not only the modified note, but the original note itself. In this despatch, if we are rightly informed of its contents, it is stated that the Czar "considers that note not—as the Four Powers intended it—as the very extreme opposite, the very antipodes of the Menschikoff note: but as identical in result with that famous document, which conceded to Russia the right of interference between the subjects of the Sultan and their Sovereign, and involved the annihilation of Turkish independence." Hence the "very simple" refusal to alter the terms of the note, announced by Count Nesselrode.

Another very significant intimation in the Nesselrode note is to the effect that the Russian Government do not consider themselves bound to evacuate the Danubian Principalities, notwithstanding the formal "protest" of Lord Clarendon against their unjustifiable invasion of them. If at the time of that invasion we had acted, instead of writing despatches, the affair would now have been over. As it is, he is a wise man who can see the end of the entanglement in which we are involved.

We apprehend that our mistake from the very beginning of this transaction, has been in our not believing that the Emperor of Russia was in earnest. Now we find too plainly that he is so; and we can only hope that we are not too late to recover our lost ground.

FROM a Parliamentary paper just published, under the authority of the Poor-law Board, it appears that the diminution of pauperism, which has been far some years in progress, has been very large in the year ending last July 1. The total decrease of pauperism since July 1, 1852, is 56,538, very nearly as large a number of persons as are found in the whole county of Westmoreland (58,287). The decrease of able-bodied paupers in the year is 17,002—nearly as many as there are persons living in the town of Lincoln. It takes place on a previously diminished number—184,742, less on January 1st of the present year, than on January 1, 1849. In the year which then closed, the diminution of able-bodied paupers was 11,093; in the year closed on July 1st, which includes half that year, the number was 17,002: which shows that the decrease was much more rapid in the last half of the year closed on July 1st than in the first half. Comparing the total number of paupers at present with the number on January 1st, 1849, the following striking result is arrived at:—

Relieved on January 1st, 1849, in 590 Unions,	..	.. 940,851
" July 1st, 1853, in 610 Ditto,	..	.. 676,208
Decrease in 4½ years		. 264,583

or very nearly two-fifths of the whole: the number being a little short of all the persons who dwell in the county of Nottingham (270,427). In the present year every county, both in England and Wales, shows a decrease in its total pauperism, except Montgomery; and in able-bodied pauperism, except Merioneth—both in Wales. The counties which exhibit the largest decrease of able-bodied paupers are—Hereford, 26.1 per cent; Lancashire, 25.4; Yorkshire, West Riding, 25.3; Monmouth, 23; Oxford, 22.8; Worcester, 22.5; Westmoreland, 22.2; Rutland 20.9. The counties which exhibit the smallest decrease, of total pauperism are generally the agricultural counties, which still surpass, we regret to say, the manufacturing counties in the proportionate number of their paupers to their population. For example—in Cambridge, there is 1 pauper to every 14½ persons, in Lancashire 1 to every 34; in Devonshire 1 to every 15½, in the West Riding of Yorkshire 1 to every 33½; in Dorsetshire 1 to every 13½, in Cheshire 1 to every 31; in Norfolk 1 to every 14½, and in Warwickshire 1 to every 23½. A rapid reduction in pauperism is, however, still in progress; and it seems highly probable, owing to the great demand for agricultural produce, that more labour will be employed in the agricultural districts in the next year and the next few years, and that pauperism in them will be still further reduced. Such a regeneration as we infer, from the gradual, but continual, reduction in the number of paupers, to be now taking place in this old and long-civilised country, is, perhaps, unexampled in the history of the world, and is of the happiest augury for its future moral improvement. We must not, however, omit to remind our readers that this regeneration has accompanied a season of low prices and great abundance of food, which seems now to have come to an end. The harvest is unfortunately a very short one throughout the greater part of Europe—Spain and Russia are the exceptions—as it is short in England, France, Italy, and Belgium are already buying corn in the markets where we usually buy it; and in our markets the price of wheat—to take it as the most important example—has risen very rapidly. In the first week of June, its average price was 43s. 4d.; in the second week of September, it was 54s. 9d.: a rise of 11s. 5d., or nearly 27 per cent in 14 weeks. In all the foreign markets whence we draw supplies, the price has risen proportionably; and, as freights are also extraordinarily high—there not being now enough ships to carry on the increasing commerce of the world—the season of abundance and cheapness is, we fear, coming, for a time, to an end. When the present high prices have fulfilled their appropriate task and everywhere stimulated agricultural labour to exert itself and increase production, a season of cheapness and abundance will return. Till then, however, as food cannot be produced at will, and as it is now obviously much scarcer in Europe than during the last four years, it becomes a common duty—a duty alike of Governments and subjects—to be as economical as possible. Neither should waste, or both may come to want. The public ought to remember that, unless labour be well fed, it cannot be either efficient or energetic. To keep the industrious and producing part of the community, therefore, "well in heart," the necessary saving should be made, as much as possible, by the comparatively idle and the comparatively opulent.

THE DAGUERREOTYPE.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

107, Regent-street, 22nd Sept., 1853.

Allow me to correct an error which is contained in your notice of the proceedings of the British Association at Hull, wherein it is stated that "a daguerreotype portrait could be now obtained in the 1000th part of a second." The facts are these: on Friday, the 9th, in the Chemical section, after a lecture I had given on the daguerreotype process an interesting discussion took place on the photogenic power of the moon's rays. I was asked in what time the rays of the moon could operate upon a daguerreotype tablet, and in what time those at the sun could do the same. I answered that I had obtained an image of the full moon in four seconds; and, with the same apparatus, one of the sun in the thousandth part of a second; which very nearly corresponded with the calculation of very several philosophers, who had ascertained before the discovery of photography that the moon reflected only one 250,000th part of the rays of the sun. Photography has, therefore, been not only the means of corroborating the truth of previous experiments; but of proving that the most delicate non-chemical photogenic rays are visual rays.

My statement, as you see, referred only to the taking of an image of the sun, but not of portraits of the human face; and, as your notice, which will be seen by some hundred thousands of readers, in all parts of the world, might convey the idea that I have made some new discovery by which the Photographic artist is rendered considerably more expeditious by the most improved processes known, the insertion of this letter in your next number will disabuse those who might have been misled by the report. I am, &c., A. CLAUDET.

THE CAMP AT HELFAUT.—Colonel the Earl of Lucan, accompanied by Captain the Marquis of Worcester, Captain Dupuis, and Lieutenant Lord Bingham, has left town for France, to represent the British Government during the manœuvres at the Camp of Helfaut.

GROWTH OF COTTON IN AUSTRALIA.—The Governor-General directs it to be notified that, with a view to encourage the cultivation of cotton in New South Wales, the following sums will be given as premiums for the best samples of that article grown in any part of the colony, and exhibited in Sydney on or before the 1st June, 1855—viz.:—1. For the best sample, which shall not be less than 50lb., £30. 2. For the second sample, not being of less than 50lb., £20. The particular qualities required are length of staple, firmness, sikiness of staple, and brightness of colour. Proof will be required that the cotton wool exhibited is the produce of the colony. The rewards will be made by a board to be appointed by the Governor General.—*Australian and New Zealand Gazette*

MAIL FOR AUSTRALIA.—The Postmaster-General has taken up the *Ascot* sailing-vessel for the conveyance of the next mails to West Australia, Victoria, New South Wales, and Van Diemen's Land. She will leave Liverpool the 4th October, on the arrival of the day mail from London. All letters and newspapers reaching Liverpool by the above date, not addressed by any other vessel, will be forwarded by the *Ascot*. Letters charged 3d. the half ounce; newspapers free.

SIR WALTER RALEIGH'S HOUSE AT BLACKWALL.—It may probably be new to most of your readers, as it is to me, that an ancient house in Blackwall (opposite the Artichoke Tavern) is said to have been the residence of Sebastian Cabot at one time, and at another that of Sir Walter Raleigh. Whether the tradition be true or not, the house is very curious, and worth a visit, if not worthy of being sketched and engraved to preserve its memory.—*Notes and Queries.*

STRIKE OF THE CAB-DRIVERS OF GLASGOW.—We learn that the cab-drivers of this city struck on Monday for an advance of wages, and that one employer, at least, granted their demand, and on his case the men resumed work.

LATEST INTELLIGENCE.

THREATENING ASPECT OF THE EASTERN QUESTION.

The intelligence from Paris, Vienna, and Constantinople continues to be unfavourable to a pacific solution of the dispute between Turkey and Russia. Count Nesselrode's two circulars—one to explain the interpretation which the Emperor put upon the Vienna note and the modifications, the other to explain the light in which the Emperor regarded his position in relation to other powers, and the negotiations between them—are held to give an ominous insight into the views that prevail at St. Petersburg. The first circular will be found elsewhere; by the second we learn that the Emperor of Russia has never ceased to reserve to himself the right of dealing directly with Turkey alone, setting aside the mediators whom he affected to acknowledge. Russia now places herself in an attitude which would not only preclude Turkey from taking any exception to the note, but precludes the four powers—the judges in the case—from declaring their own intention.

The news of the withdrawal of Austria from the Western Alliance is confirmed by a private telegraphic despatch from Vienna, dated the 20th inst. According to this despatch, the Conference was already in a state of dissolution, the Austrian Cabinet having rejected a counter-note drawn up by M. Drouyn de Lhuys for adoption by the Conference, and to be sent collectively to the Porte, urging it to adopt the Vienna note as proposed by the Conference. The Austrian Cabinet has also refused to join in a collective guarantee of the four powers to the Porte that Russia shall not again interfere between the Sultan and his subjects. Count Buol, according to the despatch, considered the note of M. Drouyn de Lhuys too feeble by far to the Porte, and spurned the idea of a guarantee, observing that the time was gone by for collective action, but that each Power was free to act as it pleased.

We are further informed by a telegraphic despatch dated Trieste, Wednesday, that, "the Lloyd's steamer has just arrived with news from Constantinople to the 12th September. A deputation from the Ulemas (the united body of lawyers, priests, and men of letters) had waited on the Sultan, and *given him the alternative of declaring war or of resigning his throne*; requiring his answer at the Feast of Bairam."

"The peace party," it adds, "would be satisfied with a demonstration by the fleets, and the dismissal of the Minister of War."

This intelligence is so astounding that it is scarcely necessary to remind our readers that the manufacture of private telegraphic despatches is now carried on to such an extent, that the public cannot be placed too much on their guard against them.

A general feeling prevailed at Constantinople that the Sultan would make no further concessions. Placards continued to be posted on the walls of the city and the mosques, calling upon the Divan to declare war against Russia; and addresses to the Sultan and his Ministers were being signed publicly by the inhabitants, praying the Sultan to lead them against the enemy without waiting longer for the support of England or France, "who," they said, "had clearly proved that Turkey could not depend on them." Those addresses and placards had produced much effect on the lower classes, and it was doubtful at what point the popular effervescence would stop. The *Times*, which makes it was believed that a certain misunderstanding existed between the representatives of the powers at Constantinople; that the French Ministers threw the blame of the delay which has occurred on Lord Stratford de Redcliffe—that Lord Stratford thought M. de Bruck alone blameable—and that M. de Bruck, in turn, maintained that Redschid Pacha was the cause of all. It is also said that a correspondence was going on between M. de la Cour and Lord Stratford, relative to the points in dispute between the two Ambassadors. It was said that the French Minister maintains that if the fleets had entered the Dardanelles, and gone to Constantinople, at the time he proposed it, recent events would not have taken place.

An address to the Ministers was in circulation for the purpose of approval and for signatures. It demanded war, and in unmistakeable terms, or "an honourable peace." The letter concludes with these words:—"If an immediate solution do not take place, there is no knowing what may happen, for the popular excitement is at its height. The people are beginning to see clearly the acts of the Government with attention and judgment, and they know perfectly who are the patriotic Ministers and who are not." The provinces were tranquil.

The Bey of Tunis has informed the Porte that his contingent was ready; that he had no means of expressing the troops to Constantinople. Orders had been given at the Arsenal to prepare a number of steam-vessels to proceed to Tunis for troops.

It appears that the Russian and Turkish sentinels now face each other at twelve points on the Danube.

A telegraphic despatch from Vienna announces that, upon the demand of Lord Stratford de Redcliffe, new conferences had taken place, at which it was decided that the representatives of the powers at Constantinople should declare that the Vienna note does not contain the dangers which the Porte sees in it. No other collective step will be taken.

It appears from Count Nesselrode's second despatch to M. Meyendorff, which has been published, that the objection of Russia turns mainly upon the Turkish modifications in the concessions to "other Christians," a phrase upon which the Porte has put the limitation, "being Ottoman subjects." It is stated at Constantinople that if Turkey undertook to concede to the orthodox Christians advantages enjoyed by all other Christians within her dominions, the Porte might find itself obliged to entrust to the orthodox Greek Christians privileges of a very equivocal and hazardous character, involving relations with foreign powers.

Letters from the banks of the Danube state that Omer Pacha had quitted his head quarters to visit the works erected to defend the banks of the river. The Russians had not appeared at the left bank of the Danube, which was impassable. Omer Pacha was prepared to pass the winter in his cantonments, in case circumstances should require him to do so. His plan appeared to be to act on the defensive, and not to make any hazardous movement.

A letter of the Emperor of Russia, from St. Petersburg, announces the departure of the Emperor of Russia for Moscow.

FRANCE.

The Emperor on Tuesday visited at the camp of Satory, at half-past two o'clock, and put the troops through a variety of manœuvres. The Empress, with her sister, the Duchess of Alba, by her side, attended by the ladies of the Court, was present. The troops afterwards formed into three sides of a square. The Emperor proceeded into the centre of the square, accompanied by a numerous staff, and a considerable number of foreign officers—Austrian, English, Piedmontese, and Dutch; and having on his right Prince Napoleon, and on his left General Prince Jablonowski, of the Austrian service. The Emperor then delivered the following address to the troops:—

Officers, non commissioned officers, and soldiers!—At the moment when the camp of Satory is about to be raised, I desire to testify to you my entire satisfaction. The three divisions which have in succession occupied it have manifested that discipline and confraternity, and that love for the profession of arms which keep up the military spirit so necessary for a great nation. In fact, who is it that in difficult times has supported empires, if not those assemblages of armed men taken from the people, broken into discipline, imbued with the sentiment of duty, and who preserve in the midst of peace, when generally egotism and interest in the end overvate everything, that fruitedness to the country, founded on self-denial, and that love of glory which is founded on a contempt for riches? That it is which has always made armies the sanctuary of honour; and consequently as long as peace continues, there exists a community of sentiments, I may even say a sort of *esprit de corps*, between us and our gallant armies. We love and esteem those persons who in their own countries feel and act as we do, and whose political views do not turn them into enemies. Reading, agreed that we cannot be conquered and as brothers. Receive, my friends, with my compliments for your good conduct, my thanks for the marks of attachment which you have given to myself and to the Empress. Reckon on my affection, and be assured that next to the honour of having been myself elected by a whole nation, nothing can afford me greater pleasure than to command such men as you.

These words were followed by cries of "Vive l'Empereur! vive l'Impératrice!" The Emperor then distributed the cross or the military medal to several whose conduct appeared to merit the distinction. The troops filed off before their Majesties, and the review was terminated. The Emperor gave a collation to all the officers near Marshal Magnan's tent. At six o'clock the Emperor returned to St Cloud.

The Paris journals continue to be occupied by the Eastern question. The intelligence that Austria has deserted England and France has excited great indignation in Paris; and the course taken by that power is regarded as one continued course of duplicity in the interest of Russia.

The *Assemblée Nationale* again expresses its conviction that nothing serious will arise out of the refusal of the Porte to accept the note in the form proposed by the Conference of Vienna. The *Assemblée* believes that the Porte will finally adopt the note under the influence of persuasion or coercion.

On the Paris Bourse, on Thursday, it was said that if England and France be in really good accord, and display decision and energy, the Emperor Nicholas will not venture to set them at defiance. This impression prevented some of the fall at the Bourse which would otherwise have taken place. As it was, however, the market was heavy, and there was a decline in the prices. The Three per Cents closed for cash at 76f. 70c., and the Four-and-a-Half per Cents at 101f. 80c.

Letters from French Guiana of the 13th August state that the Governor had found it necessary to declare the colony in a state of siege, in consequence of disturbances and acts of rebellion committed in the Island of La Mere, one of the places of provisional confinement of the convicts.

The French Legitimists are still plotting and intriguing. The Count de Chambord is to visit the Duchess de Berri at Brunsee, in Styria, on the 29th of this month, being his birthday. The friends who wish to celebrate the Count's birthday are to meet there for that purpose.

TOUR OF THE EMPEROR AND EMPRESS IN THE NORTH OF FRANCE.

The Emperor and Empress of the French left Paris, on Thursday, on a tour through the northern departments of the Empire.

As we shall next week illustrate this Royal tour, we reserve the details for that period. We append, however, our Correspondent's account of the preparations for their reception at Arras:—

ARRAS, Thursday evening.

It would be difficult to describe fully the enthusism of the inhabitants of this ancient town, in their essay to give effect to the preparations for the due reception of the Emperor and Empress.

The scene here may, without exaggeration, be said to be truly magnificent. Every street has its triumphal arches; and even the very pathways have their festoonings of laurel and flowers; while the windows and house-tops have their decorations of garlands. This display is not confined to the principal thoroughfares through which Royalty is to pass; but extends to the by-ways of the town, inhabited by the poorest of the population.

At the railway station is a superb canopy, crowned with evergreens, and decked with the choicest bouquets; and, over all, the golden eagle, with, on either side, the letters "N." and "E." (Napoleon and Eugenie), worked in burnished gold. The national flag floats from various points of this tastefully-arranged erection.

The grandest sight, however, is that of the Prefecture. Two superbly draperied canopies over one platform, richly covered with velvet of green and gold, the bordering studded with golden bees, and the Royal arms emblazoned in varied embroidery. The eagle, surmounted with a crown, capped the canopies and the two splendid throne chairs—the whole a masterpiece of artistic skill.

As early as eight o'clock in the morning the various deputations from the town and communes began to assemble, and at ten o'clock the municipal body were hurrying to the rendezvous for the purpose of assigning places to those bodies.

Shortly after three o'clock, the Prefect, his officers, the Municipal body, &c., took up their positions in the places allotted to them at the railway station; while the élite of the town (some 3000) had taken their seats in an immense amphitheatre, which had been constructed at their own cost. It was stated that there could not have been fewer than 200,000 persons in the town.

At a few minutes to five o'clock their Majesties' arrival was signalled by the booming of heavy guns; and the bells of the Cathedral

The Emperor and Empress were received by the Bishop of Arras, the Prefect, the Mayor, and the Municipal body; and proceeded amidst the most vociferous cheering, and a salute of artillery—on their way to the Prefecture.

Their Majesties were met at the Cathedral by the Bishop of Arras, who, surrounded by the priesthood, had, after the meeting at the audience-hall, of the railway terminus, gained the church in advance of the Royal cortege.

The interior of the Cathedral was gorgeously draperied and brilliantly lighted. The effect was imposing and solemnly grand. Whole rows of acolytes, bearing waxen tapers, with some two hundred young girls, arrayed in white, lined the aisle.

The Bishop having given benediction, the organ and the choir, amidst salvoes of guns from the citadel, chanted a Latin hymn. The ceremony was necessarily a brief one, owing to the advanced period of the evening, and the numerous claims upon the attention of the Sovereign.

The Emperor and Empress, after devoting upwards of an hour to receiving congratulatory addresses, retired to their apartments; and shortly afterwards the towns, upper and lower, were lighted up as though by enchantment, so instantaneously was the darkness of the evening turned into varied tinted lights by the aid of gas, oil lamps, and fancy-coloured shadings, many of the latter bearing well-executed full-length paintings of their Majesties.

After dinner, to which many of the principal citizens had been invited, their Majesties attended the city ball, given in honour of their arrival; but, owing to the fatigue the Empress had sustained, their stay was of short duration. The Empress, however, held a reception at eleven o'clock.

Up to an advanced hour of the morning the city was devoted to the enjoyment of dancing; many of the saloons having been got up for the entertainments so indispensable to the vivacity of the French character on festive occasions.

At eight o'clock this morning (Friday) their Majesties visited the citadel, the esplanade, and the principal attractions of the various divisions of the city; shortly after which a Royal levee was held, where further addresses were presented. Their Majesties again visited the cathedral, and heard short service.

At ten o'clock the Emperor and Empress *en suite* proceeded for Douai, departing from Arras amidst similar demonstrations to those already described. The guns from the citadel also thundered forth; but their reverberation was all but lost in the cheering of the multitude. The Municipality, to some number, accompanied the cortège some distance on the Douai railway. The Royal cortège, about two hours in consequence of the Royal train going slowly by the stations on the route, for the purpose of affording the crowds assembled a passing glance at the Sovereign and his Royal Consort, to bow to the waving of hats and other demonstrations of the rustics congregated at each point.

LILLE, Friday, Five P.M.

The Emperor and Empress arrived a few minutes before five o'clock, and are now surrounded by the municipality under a triumphal canopy, in extent approximating to a temple, and adorned so superbly as to defy description in the few minutes we have prior to the closing of this despatch. The cannons are thundering from the fortifications, and the acclamations of the multitude are most fervid.

There is a vast display of illuminations, and all the houses I have yet witnessed have embroidered silks of the Imperial colour floating from the topmost windows, while the garlands of flowers are splendidly interwoven around the Imperial initials.

The streets are as many flower-gardens, and the crowd is most dense. Municipal officers are engaged most anxiously in guarding against injury to life from the vast pressure on the pathways and the aldings of the avenues leading to the station.

On Saturday (this day) the Emperor and Empress will sojourn at Lille. On Sunday the Emperor will visit the camp at Helfaut, and sleep the same night at St. Omer. On Monday the Emperor will visit Dunkerque, and sleep at Calais. On Tuesday the Emperor will arrive at Boulogne, where he will pass the night. On Wednesday the Emperor will leave Boulogne, and visit Amiens, where his Majesty will pass the night, returning to Paris on Thursday.

SPAIN.

A telegraphic despatch received from Madrid, dated the 19th inst., announces the fall of the Lersundi Cabinet. The new Ministers are Saxtorius, Interior and President of the Cabinet; Blaser, War; Domenech (Progressists), Finance; the Marquis de Molins, Marine, or State (Foreign Affairs).

The question of the Protestant cemeteries was again discussed in the Royal Council, on the 15th, when M. Martinez de la Rosa and several other councillors expressed themselves in favour of the concession.

ATLANTIC AND PACIFIC JUNCTION.—Surveys for the great central railway route destined to unite the Atlantic and Pacific are proceeding. The surveyors have already reached the Great Colorado of the west, to which point the passage is found to be a continuous valley, good for a railway and for settlement. The pass at present selected is curiously ascertained to be the primeval bandit route across these wild regions, this route being adopted by the enterprising surveyors from a knowledge of the fact, that, if they follow it, they will have a line direct "as the crow flies;" the bandits, it appears, having an instinct in finding his way by the nearest, most direct, and richest route. The surveyors and engineers, in this remarkable exploration, experience, it would appear, in the snowy and inhospitable regions they have to traverse, many perilous adventures, unknown to European engineering.

GOVERNOR OF GREENWICH HOSPITAL.—It is said there are three gallant officers named as likely to have the Governorship, vacated by the death of Admiral Sir Charles Adam, namely—Vice-Admiral the Earl of Dundonald, better known as Lord Cochrane; Vice-Admiral Sir William Parker; and the present Lieut.-Governor, Rear-Admiral Sir James A. Gordon.

COMMON COUNCIL OF LONDON.—At the first meeting after the holidays of the Common Council, on Thursday, the Lord Mayor received the congratulations of the Court on his escape from the danger in which he was placed by the accident on the Great Northern Railway. It was also agreed that a report should be given as to the practicability of widening London-bridge, by forming, on each side, a footpath for passengers, leaving the entire width between the present parapets for vehicles. The probable cost of making a new street from Cannon-street to Earl-street, Blackfriars, was likewise referred to the Improvement Committee.

GENERAL POST-OFFICE, SEPTEMBER, 1853.—On and from the 1st October next, the postage upon letters addressed to St. Thomas, or any British colony in the West Indies, may be either paid in advance, or the letters may be posted unpaid, at the option of the senders.

THE COURT of Directors of the East India Company have appointed Mr. Frederick James Halliday a provisional member of the Council of India.

THE PARANA AND URUGUAY.—We understand from private correspondence, derived from the best authority, that Admiral Hotham has obtained, in conjunction with the Ministers of France and the United States, a treaty which opens to the commerce of the world the Parana and Uruguay.—*Morning Herald*.

SELLING POSTAGE STAMPS.—From the 10th of October the Postmaster-General may authorise any person in the employ of the Post-Office to keep about and sell postage-stamps, stamped envelopes, &c., without a license. In country villages and other places this provision will be of great benefit to the public, as letters cannot be posted without being stamped.

PLURALISM AND INCUMBENCY.—On Thursday the election of a perpetual curate to this parish took place. The right of choice rests with the inhabitants. At the election a short time since, the candidates were equal—this day the voting stood as follows:—Hill, 42; Everett, 38. Mr. Hill was consequently declared the successful candidate.

IMPUDENT ROBBERY.—GUILDHALL.—On Thursday John Robinson, a respectably-dressed youth, was placed at the bar, charged with the following impudent robbery at the Post-office kept by Mr. Dean, in Fleet-street. Andrew Varney, the shopman, said, "Yesterday afternoon the prisoner came into the shop, and asked for £5 worth of postage-stamps. I supplied him with them, and he put them in his pocket, and then asked if I had any more. I told him I had about £15 worth. He said he would take them; but I informed him I could not spare so much; whereupon he said he must have them, and immediately grasped the whole £12 worth, and rushed out of the shop. I followed, calling 'Stop thief,' and the prisoner was captured. He did not pay for the first £3 worth." The prisoner, with great coolness, said that he should reserve his defence for this trial.

FIRES.—Three fires broke out early on Friday morning—one at Mr. Hibbs's, ship-joiner, Nelson's Dock, Rotherhithe; a second, on the premises of Mr. Wright, chemist, New King-street, Deptford; and a third, in the house of Mr. Smith, chemical apparatus maker, Princes-street, Lambeth. The greatest damage done was at the first fire.

CHOLERA.—On Thursday, the number of deaths in Newcastle was sixty—being much less than on the preceding days.

THE COURT.

The Queen and the Prince continue to enjoy the domestic privacy of their Highland Home.

On Wednesday evening last her Majesty drove to the Falls of the Garrawalt, accompanied by her Royal Highness the Duchess of Kent and Count Alexander Mensdorff.

On the following day her Majesty and Prince Albert, with the Princess Royal, Princess Alice, Princess Helena, the Prince of Wales, and Prince Alfred, drove to Braemar Castle, and honoured the Braemar Gathering with their presence. Her Majesty was received by the Laird of Invercauld, at the head of the Farquharson Highlanders, Mr. James Duff and the Duff Highlanders, and Sir Charles Forbes with the Forbes Highlanders. In attendance upon the Royal party were the Hon. Mary Bulteel, the Earl Granville, Colonel the Hon. C. B. Phipps, and Lieut.-Colonel the Hon. A. Gordon. Returning to Balmoral the same evening, the Duchess of Kent and Count Alexander Mensdorff joined the Royal circle at dinner.

On Friday se'nnight the Queen and the Prince accompanied by her Royal Highness the Duchess of Kent and Count Alexander Mensdorff, drove to Corrimulzie Cottage to see the encampment of the Forbes Highlanders. Mr. and Lady Agnes Duff received her Majesty and the Prince at the Cottage and conducted them to the encampment, where Sir Charles Forbes had drawn up his men. Her Majesty walked down the line and inspected the men's tents. The Hon. Mary Bulteel was in attendance upon her Majesty.

On Sunday, her Majesty and the Prince Consort, accompanied by the Princess Alice and Count Alexander Mensdorff, ascended to the summit of Lochan-y-gar. The Prince of Wales and Prince Alfred went to the top of Ben-y-Bourd, with the younger sons of Mr. Farquharson, of Invercauld. In the evening, Mr. and Mrs. Farquharson had the honour of dining with her Majesty.

On Sunday, the Queen and the Prince Consort dined at Abergeldie, with her Royal Highness the Duchess of Kent.

On Monday her Majesty rode with Prince Alfred towards Birk Hall. The Prince Consort went out deer stalking. In the evening the Marquis of Abercorn and Sir Edwin Landseer had the honour of joining the Royal dinner circle.

The Earl Granville has left Balmoral. His Lordship is succeeded by Viscount Palmerston, who remains in attendance upon her Majesty.

THE IMPERIAL RUSSIAN FAMILY.

Her Imperial Highness the Grand Duchess Catherine of Russia, and Hereditary Duke George of Mecklenburg-Strelitz, embarked at Dover on Friday, in her Majesty's steam-packet *Fitful*, Captain Scobell, for Ostend, this being the first time they had ever visited Belgium. On Tuesday the Imperial travellers, at Ostend, where she embarked her Imperial Highness the Grand Duchess Olga of Russia, second daughter of the Emperor, and her suite, consisting of Prince Peter Wolkonsky, Count Stenbock, and Madame Schilder, proceeded to Ostend. Her Imperial Highness the Grand Duchess Marie, eldest daughter of the Emperor and widow of the late Duke de Leuchtenberg, will leave Dover in the same vessel on Monday next.

THE EX-ROYAL FAMILY OF FRANCE.

The ex-Queen of the French, accompanied by the Prince and Princess de Joinville, sailed from Southampton to-day (Saturday) in the Peninsular and Oriental Steam Navigation Company's ship *City of London*, for Lisbon, as a visit to the Queen of Portugal. From Lisbon the ex-Queen will proceed to Spain, to visit the Duke and Duchess de Montpensier. The Duke and Duchess de Nemours are at present in Germany. The Duke and Duchess d'Aumale are residing at Orleans House, Twickenham, the former residence of Louis Philippe.

WINDSOR LODGING-HOUSES.—On Monday, the directors of the Windsor Royal Society (of which Prince Albert is the president) opened a lodging house for unmarried workmen and labourers. There is sleeping accommodation for fifty single men. The lodgers are to be admitted by the week on payment at the rate of 2s. per week in advance. Side by side with this new and commodious lodging-house is another house of similar dimensions, licensed under the Public Health Act, and open for the reception of tramps.

THE POLICE AND THEIR WAGES AT OLDHAM.—In consequence of the constables of the borough force having issued an appeal to the public, the watch-committee have given the ten ordinary constables fourteen days' notice to quit the service, unless they consent to remain at their present wages. The committee consider the issuing of the placard as an act of insubordination, and are determined to resist any demands attempted to be enforced by such pressure.

PROVINCIAL INTELLIGENCE.

PROPOSED WELLINGTON MEMORIAL IN LIVERPOOL.—On Monday afternoon a public meeting was held at the Sessions-house, in reference to the proposed memorial to the Duke of Wellington. It appeared from a statement made by the Mayor, that the Memorial Committee had decided to recommend the erection of a column in a suitable part of the town, surmounted by a statue of the illustrious Duke, the cost of which was estimated at £10,000. Of the sum only £5000 had been subscribed, and the object for which the meeting was held was to adopt further measures for the purpose of obtaining the remainder. Resolutions calculated to attain the desired end were proposed and carried.

PRINCELY MUNIFICENCE.—At a meeting of the Liverpool Town-council on Tuesday, the Mayor (Samuel Holme, Esq.) stated that William Brown, Esq., M.P. for South Lancashire, had offered to present the town with a sum of £6000 for the erection of a building for a public library.

HERTS REGISTRATION.—The Barrister's Court was held at Bishop's Stortford on Monday last. The result of the day's revision was as follows: New Liberal claims, 10; Tories struck off, 13: total, 23. New Tory claims, 7; Liberals struck off, 9: total, 16. Liberal gain in all, 43.

FESTIVITIES AT SALTAIRE.—On Tuesday last one of the most extraordinary fêtes was given in the model mill of Mr. T. Salt, alpaca manufacturer, at the above place, near Bradford, Yorkshire. About 3000 persons sat down to dinner, to commemorate the opening of this stupendous mill, the coming of age of his eldest son, and the completion of his 50th year. We shall illustrate the festivities next week.

HASWELL RURAL FETE.—On Friday week, the beautiful grounds of Haswell Park, the seat of Colonel Tyrte, near Bridgewater, were thrown open to the members and friends of the Bridgewater Literary and Scientific Institution, who there assembled to the number of about 2000. There was also an exhibition of the Floral and Horticultural Society. A most agreeable and happy day was spent in various diversions. We shall next week illustrate the scene, and enter more fully into the pleasures and history of this delightful spot.

THE GAOL INQUIRIES.—Mr. Welsby, Dr. Baly, and Captain Williams, the commissioners appointed by Lord Palmerston to inquire into the abuses of the borough gaol of Hertford, have returned to town, after concluding their inquiry, but have not yet sent in their report. They proceeded on Monday to Leicester, to open a similar investigation there.

THE CHOLERA.

THE accounts from the north, and Newcastle and Gateshead in particular, show that this dreaded disease continues its power mostly at those two places often being afflicted by it. In the town of Newcastle and Gateshead the deaths have averaged, from cholera and diarrhœa, about 120 per day. The pestilence has also been found at Liverpool, Edinburgh, &c.; and also in East Smithfield, Bermondsey, Southwark, &c., London. The Board of Health has issued its directions and regulations (consisting of thirty-ons sections), and also a general letter of rules. From the latter we extract a few passages of importance:—

"When the disease has actually broken out in any locality, then the one essential precaution is not to neglect for a single hour any degree of looseness of bowels. This symptom being commonly without pain, and so slight, that it seems of no consequence, leads to neglect, and this has cost the lives of thousands. Were any additional proof of this required, it would be found in the events that are now occurring at Newcastle and Gateshead: all the medical men there have testified that premonitory diarrhœa is all but universal, and that life depends on instant attention to this symptom.

"The surest of precaution next in importance relates to the proper regulation of the diet. Great moderation, both of food and drink, is absolutely essential to safety during the epidemic period. During this it has seldom and fatal effects of the disease immediately on the indulgence of habits of drinking after the receipt of weekly wages.

"The utmost practicable care should be taken age not fatigue, which is a very powerful predisposing cause of the disease. Those who are compelled to be engaged in laborious occupations, should endeavour, as far as possible so to arrange the amount and time of work as to avoid physical exhaustion.

"Warm clothing is of great importance. During the present epidemic in Hamburg, it has been found that incautious exposure to cold and damp has brought on an attack as rapidly as improper food or excess. This precaution against damp is rendered doubly important by the peculiarity of the present season.

"At the present time, the newspapers naturally contain many specifics against cholera. Without attempting to place any value on them, we think it right to print a few. Mr. E. W. Lane (the Eastern traveller and Orientalist), has communicated the following:—

"If the patient have not vomited the peculiar matter which is a characteristic of the disease, and which resembles rice-water, give a table-spoon full of powdered mustard in a tumbler of cold water, as an emetic. After the vomiting (whether produced by the disease or by the above means), within a few minutes, give a wineglass of brandy with ten grains of powdered capsicum (Cayenne pepper) stirred up in it. This generally produces immediate warmth of the stomach, an hour, rest, perspiration, and sleep. In a few cases it was found necessary to give a half-dose of the brandy and capsicum after half an hour or more. A second half-dose was never required; should it be required, it may be given. No other fluid should be drunk before recovery

"To accelerate convalescence, it has been suggested that fifteen drops of a mixture of the spirit of ammonia and camphor ether, in equal parts, may be advantageously given three or four times during the following day.

"The above quantity of brandy and capsicum is for an adult patient suffer ng a severe attack: in other cases, two-thirds or half of that quantity may suffice, as I have proved by experience.

"Mr. George N. Epps, of Grafton-street, Bond-street, recommends the following prescription, which can be kept prepared in every house, as the most valuable at the commencement of the attack, and thus stop its progress from its first appearance:—Place one drachm of solid camphor in a fluid ounce of spirits of wine, in a clean bottle, well corked, and to be occasionally shaken until the camphor is dissolved; or half an ounce of camphor to a gill of the spirits of wine. Children three drops, adults six drops, in a wine-glass of cold water, and to be repeated every five, ten, or fifteen minutes, until relief is obtained, and then to be taken less frequently.

Mr. George Nasmyth, the well-known civil engineer, writing on the subject, says:

"I would propose that, along with the water used for watering our streets, there should be a few pounds of chloride of lime put into each cart full of water, and in addition to this a small quantity of sulphuric acid, so as to combine with the lime and thereby set the chlorine gas free. The purifying properties of this gas are well known where fevers of the worst kind rage.

And Mr. Evans, a medical practitioner in Blackfriar's-road, that attended Hicks, of Bermondsey, who died of cholera last week, strongly advises the exhibition of chloroform, which will allay irritability and quiet the nervous system; to follow this application with stimulants, brandy, warmth, &c., and so give time for nature to rally.

DEATH OF MR. SAMUEL WILLIAMS.—We regret to record the death of this self-taught artist, whose pencil and graver have illustrated many of the most popular works published during the last forty years; and to whose productions the modern school of book illustrations owes much of its force and character. Mr. Samuel Williams was born in 1785, at Colchester, and in early boyhood his self-taught power of sketching in pencil copying was remarkable. He was apprenticed to a printer at Colchester, and while yet a lad he etched on copper a landscape possessing extraordinary performance for one who had never seen the process of etching. About the same time he taught himself engraving on wood, and soon after he was employed by Mr. Cowtan, the London publisher, that soon as his apprenticeship had expired, he should draw and engrave for him a set of illustrations for a natural history; accordingly, Williams executed a series of 300 engravings. He also engraved for Mozley, Darton and Harvey, Arnino, and other publishers; his woodcuts being distinguished by strong natural feeling, and vigorous drawing. In 1819, he removed to the metropolis; in 1821, he engraved for Whittingham's Cabinet Press an edition of "Robinson Crusoe:" and next Mrs. Trimmer's "Natural History." Wilkes's "Garcilasso de la Vega," and other works. In 1826, Mr. Williams selected William

SUPPLEMENT TO THE ILLUSTRATED LONDON NEWS.

No. 646.—VOL. XXIII.] SATURDAY, SEPTEMBER 24, 1853. [TWO NUMBERS, 1s. { WITH SUPPLEMENT GRATIS.

THE EASTERN CRISIS.

THE CONDITION, MORAL, SOCIAL, AND POLITICAL, OF THE TURKS IN EUROPE.

IN pursuance of our promise, we this week publish an extra sheet, containing a great mass of original matter, literary and artistic, illustrative of the History, Present Condition, and Prospects of the Ottoman Empire; from the hands of Special Contributors, who have recently visited Constantinople for the purpose. The artistic portion of this sheet will speak for itself; it comprises a great variety of authentic Views and Scenes in one of the most picturesque cities in the world.

The Literary department consists of—1, Notes of a Visit to Constantinople, &c., in July and August, 1853; 2, a Historical Sketch of the Ottoman Empire from the end of the Seventeenth Century to the present time; 3, Observations upon the Present Condition of the Ottoman Empire, with a statement of the question now pending between the Porte and Russia.

NOTES OF A VISIT TO CONSTANTINOPLE.

THE BOSPHORUS.

THE passage from the Black Sea to Constantinople is through one of the most picturesque and interesting channels it is possible for the imagination to conceive—displaying a sort of double panorama, which no description can overrate. The Bosphorus, which separates the Continents of Europe and Asia, and connects the Black Sea with the Sea of Marmora, is about fifteen miles in length, and varies from three-quarters of a mile to a mile and a half in breadth. The opening between the two light-houses and forts at the entrance of the Black Sea, is about two miles wide; shortly afterwards the mountain ranges on either side close in, somewhat abruptly, till the distance between them becomes less than a mile. Taking a winding course, there are seven principal promontories, and as many bays on either side; the bays stretching out respectively opposite the promontories. In the narrower parts of the channel the pressure of water produces rapid currents—one of which, known as the "Courant du Diable," is about half way to Constantinople, beneath the ancient Castle of Rumili-Hissar. At these parts, when towards the Black Sea, in an ordinary boat, the rowers throw aside their oars, and are towed against the current by a cord thrown by men who station themselves there for the purpose. In the deeper bays there is good anchorage, well protected from the winds which usually prevail, being those from the north or the south; the best spots are at Buyuk-Liman and Buyukdere on the European shore, both within five miles of the Black Sea, and between the promontories of Cum Burnu and Riva-Burnu, on the Asiatic side. It is here that the Turkish fleet, which includes some very fine vessels of the first class, is at present anchored in line along the edge of the current, in a position to defend the entrance to this important passage.

The blue waters of this narrow channel are held in on both sides by continued ranges of undulating hills, which here and there attain a considerable height; and anon are crossed by sloping valleys of delicious verdure, clothed with Oriental trees and flowering plants. Being the pleasant resort of the wealthy classes of Constantinople—both European and Oriental—the sides of the hills are thickly studded with magnificent palaces and kiosks, which, surrounded by their respective gardens and plantations—in which the orange-tree, the plantain, the vine, and the fig-tree, are intermixed with flowers of various hue—rise, overhanging one another, to the very summit. The Ottoman residences are more numerous on the Asiatic than the European shore, which is tenanted in common by Turk and Christian, and is by far the more thickly populated of the two. Here and there, in the midst of these charming and luxurious retreats, frown castellated ruins, which tell of the struggles of the past, and the vicissitudes through which this truly classic ground has passed, even within the last eight hundred years; here, not far from the Black Sea, the ruins of the Genoese castles, mementoes of the brief tenure held in the declining days of the Byzantine empire by that once-powerful republic, itself now numbered with the things of the past—there, half way to Constantinople, the formidable and singular-looking Rumili-Hissar, built by the fierce Mahomed II. in the middle of the fifteenth century, on the eve of his capture of Constantinople. From the Bay of Buyukdere we obtain a glimpse of the famous aqueduct, built by Mahmoud I. (1732) to supply the suburbs of Pera, Galata, and Beschiktash, with water. At the northern extremity of the same bay is the magnificent summer palace of the Russian Embassy; and at the other extremity, in the little village of Therapia, the Palaces of the British and French Embassies, their broad bay-windows overhanging the water's edge, both being surrounded and backed by extensive gardens and terrace walks. Near at hand is a small kiosk, nestling in delicious and variegated foliage, belonging to the Sultan, and to which he sometimes resorts for a pic-nic. Opposite, on the Asiatic shore, is a new and splendid kiosk, built of marble, an surrounded with verandahs, which Abbas Pacha is in course of building, as a present for the Sultan. At this spot, on the slope of the Giant's Mountain, are now (Aug., 1853) to be seen the tents

THE EGYPTIAN CAMP AT UNKIAR SKELESSI, ON THE BOSPHORUS.—THE TURKISH FLEET AT ANCHOR.

put up for the reception of the Egyptian troops—the light green canvas of which gives the camp somewhat the appearance of a large cabbage garden. On this very spot, in 1833, by the way, were encamped the Russians, when they volunteered their aid against the revolted Egyptians; and upon this spot was, at that same critical period, signed the notorious treaty of Unkiar Skelessi, which, if it had been acted upon, would virtually have given Russia the command of the Bosphorus and the Dardanelles, but which, as it happened, never was acted upon, and is now no longer in force.

Between this point of the Bosphorus and the capital, are, at least, a dozen imperial palaces. Four of these are on the European side; of which the two last, facing the bend to the Sea of Marmora, are the most magnificent: the one having been built of wood, by the late Sultan, but in the pseudo-classic style: the latter, in course of building under the present monarch, of marble or stone, and in the Italian style. Nor must we forget the beautiful "Valley of Sweet Waters," on the Asiatic shore, midway between the sea and Constantinople, where the Mahomedan population resort on Fridays (their Sabbath) to enjoy a sort of holiday enlivened by music and simple amusements of various kinds. Meantime, the buildings which, at our first entrance from the Bosphorus, were few and scattered, present a more imposing array, and are at last crowded together as in a thickly-populated city. In a word, we are beneath the walls of Constantinople; its countless minarets and domes surrounding us on all sides. The first *coup d'œil* is as perplexing as it is imposing; for we appear to be in the midst of three cities instead of one, separated by distinct arms of the sea; and it is only by examining the map, and identifying the Seraglio, crowned by the mighty dome of St. Sophia right in front of us, the Tower of Galata on our right, and the Tower of Leander in the midst of the water on our left, that we distinguish the Imperial Istamboul, or Constantinople, from the European suburban quarters of Pera and Galata, and the Asiatic suburb of Scutari.

Turning to the west out of the Bosphorus, we enter the far-famed Golden Horn, one of the most magnificent harbours in Europe. Its surface is crowded with vessels of all sizes and nations, from the small craft of the fisherman to the noble three-decker; besides steam-boats—some from England, France, Austria, Russia; others belonging to the place, and employed in a busy passenger-traffic along the shores of the Bosphorus, to Scutari, Therapia, Buyukdere, and other parts—in amongst all which innumerable light caïques are constantly skimming about—the whole constituting a scene of perpetual motion and excitement. As we have to land in one of these caïques, we may here properly describe them. They are the ordinary passage-boats of Constantinople, and for a few piastres (a piaster is equal to about twopence English) will take you to any part of the city or suburbs. In shape they are somewhat remarkable—without keels, the line of the base from stem to stern is that of a segment of an ellipse, only more rounded towards the stern, so as to sink deeper into, and rise higher above, the water at that point; whilst the prow tapers off to a fine point. They are of extremely light construction, built of thin planks of walnut wood; are polished, carved, and in parts gilt. There are no cross benches, or seats for the passengers, who sit in the bottom upon cushions or carpets. Such is their feeble hold of the water, that considerable adroitness is necessary in getting into them, and even afterwards, in sitting in them, not to overset them. Skimming only upon the surface of the water, they are easily propelled with wonderful rapidity. Their make well adapts them for the short seas which play upon the waters of the Bosphorus; the prow leaping lightly over them, and the stern, with its greater breadth and higher quarters, successfully weathering the broken surf which is thrown up in the passage. Thus they are easily piloted through eddies, covered with sharp-edged miniature billows, which a larger boat of the ordinary European build would labour through tediously, and with some difficulty. The oars or skulls have a large bulb or swelling near the handle, the weight of which assists in lifting them out of the water. They are hung upon a single rullock each, by means of a thong of leather; so that there is no danger of unshipping them; and when they are not wanted they are left to fall with the current along the sides of the caïque. The boatmen, or *caïgees*, are a fine set of fellows, of good stature, well built, and active. Their dress is extremely picturesque. It consists ordinarily of a white calico petticoat, folded in broad plaits, and fastened round the waist with a crimson silk scarf; a light jacket of thin white cotton, or muslin, the material of which is sometimes ribbed, with long hanging sleeves, pointed from the elbows; and, to crown the whole, a red fez.

PERA THE HOTEL FIRST IMPRESSIONS

Landing on the crowded quay at Galata, and hurrying into the narrow court of the Custom-house, the poetic fancies which our first impressions on approaching the city of the Sultan called up begin to vanish: and our nose, eyes, and ears give us a slight foretaste of the abominations which are concealed beneath so splendid and fascinating an exterior. Following our guide, we thread our way through a dirty, narrow, circuitous lane, not above three yards across, bounded on either side by the sheds or shops of all sorts of traders—butchers, tailors, hairdressers, hatters, tobacconists—all emitting various unpleasant fumes; the roadway underneath roughly paved with stones of all sorts, shapes, and sizes, clumsily thrown together, with holes in every direction, and the whole strewed with garbage and refuse too horrible to describe. After awhile we come to a steep hill—about as steep as the dome of St. Paul's, and as narrow as Holywell-street, with a gutter running through the midst, and broken occasionally by steps or landings, to facilitate the ascent, and which continues all the way—up! up! up!—to the top of the district of Pera, the suburb appropriated to the Frank population, and where is situate the Hôtel d'Angleterre, the customary resort of our fellow-countrymen, and of the best-advised travellers from all parts. The little, dirty, zigzag road is crowded throughout with people of all nations—Turks, Greeks, Armenians, and Franks; one-fourth of whom are itinerant venders of fruit, vegetables, sherbet, iced water &c., uttering fearful cries; another fourth, *hammals*, or porters, carrying all sorts of heavy loads, from a house-full of furniture to a cask of wine, on their backs, the surface of which is made level by means of a pad resting on their haunches; and who, as they walk on, their heads thrust horizontally forward, look more like quadrupeds with the fore legs cut off, than human beings. Abundance, too, of donkeys also crowd the path, laden with panniers, blocks of stone, rolls of sheet lead, immense beams of wood, and other building materials. As for the dogs, they are innumerable; they lie about by scores in all directions, and you tread upon them or tumble over them at every step you take.

The dogs of Constantinople are a sort of privileged fraternity, much cherished by the inhabitants, in return, probably, for their valuable services as scavengers. They all have their several districts; and woe to any one of vagrant propensities who should venture to trespass upon his neighbour's territory; the whole *posse comitatus* would at once set upon him, and worry him to death, unless he should succeed in escaping half dead across the frontier. They personally know the shopkeepers and other inhabitants of their respective districts, many of whom are very kind to them, allowing particular individual dogs a certain daily credit at the baker's, in return for which they especially guard their patrons' premises. It is not allowed to kill or injure these animals; nevertheless, I was informed that some time back, when their number had increased to such an extent as to occasion a positive nuisance, an ingenious, but cruel middle course was taken to thin their ranks. Some thousands of them were taken on board a vessel, and conveyed to a barren island in the Sea of Marmora, where they were landed, and two days' provisions landed with them; and there they were left, after a solemn address had been delivered to them by a learned divine, upon the duties of patience and resignation. The scene which ensued, and lasted during several days, must have been fearful. The provisions exhausted, the infuriated animals commenced devouring one another, and their howls were heard for miles around until the last had perished.

The first duty of the new-comer in Constantinople, as in other strange places, is sight-seeing; and rigorously is he kept up to his work. We had hardly landed half an hour, and commenced a slight refreshment at the hotel, when we remarked that we were the object of the sedulous attention of a singularly cunning-looking and active personage, who was continually dropping in, first at one door, then at the opposite one, then peering through the window, watching our movements. Having retired to a private room, a knock shortly afterwards was heard at the door. "Come in!" and in walked Mr. Inspector. "Well! what is it?" I asked, with vague impressions touching passports and police-officers. "When are you going to begin?" was the inquiry, in return. "Begin —what?" "To go round and see the things." The mystery was now out: S——, and I had a duty to perform—till we had done it we were not our own masters; our liberty, our freedom of action and thought, were hypothecated for a term; and the individual at the door, by priority of claim, had a property in us which it were madness to suppose he would abandon. Assuming a blandness of expression very much at variance with my inmost feelings, I admitted the propriety of the intruder's suggestion, but excused myself for the day upon the plea of extreme fatigue. After a pause, he yielded the point with a tolerably good grace, and left the room—promising to "call again to-morrow!"

The Hôtel D'Angleterre is a large straggling wooden building, approached by a long passage, on a slight descent from the "Grande Rue," or principal lane of Pera. It contains a good number of rooms of various sizes; and one *salle-à-manger*, where, according to the regulations posted up, all the guests feed twice a day in common. The time allowed for breakfasting is from nine to eleven; dinner is served at seven. No meals are supplied in private apartments; no smoking allowed there. The charge for bed and board, consisting of the said two repasts, is fixed at sixty piasters per diem; or, with some additions for candles, servants, &c., seventy piasters—being about 12s. English. This sum you pay whether you partake of the meals or not; and, if your appetite or engagements should not serve at the hours specified, you pay in addition for any refreshment taken at intermediate periods. If absent for a day or two, or even a week, the tariff is still enforced. This is obviously unjust, and inconsistent with the freedom of action which one enjoys at home, and in all other parts of the civilised world; where in a hotel the apartment is the only permanent charge, the meals being only paid for when eaten. But the hotel-keepers of Pera, and indeed of all the hotels in the neighbourhood of Constantinople, doubtless know their own business best: they certainly seem to have arrived at an agreement to act upon one and the same principle, and so to make the most out of every one who falls in their way. The scale of charge itself is undoubtedly exorbitant, considering the cheapness of all articles of consumption: meat, 2d. and 3d. per lb.; fowls, 2d. and 3d. a piece; bread, vegetables, &c., proportionably cheap. As for the *cuisine*, it presents nothing to boast of; the most ordinary routine of stewing and baking, without a pretence at flavouring. Moreover, there are many little matters in which the comfort of the guests might be consulted, and at little or no additional expense, but which the worthy host does not think it worth while to attend to. Cold water, for instance, is a great luxury in a hot climate like this, and ice must be cheap, as the itinerant dealers in penny lemonade carry about huge lumps of it to cool their cans; yet the idea of iced water which one drinks for nothing, or even wine which one pays for, is never dreamed of. A moderate application of ice to the butter, also, would make it of a consistency to render it eatable, besides subduing its rancid flavour; as it is, it comes on table in a condition neither exactly eatable nor drinkable, but very sensible to the smell.

There are no bells in Turkey;—"yet," as Don Juan says, "men dine." The servants are generally, or supposed to be, stationed in the ante-room; and they are summoned to the presence by a smart clapping of the hands. This custom reminds one of Oriental stories, where some grim Vizier or blood-thirsty Pacha, strikes his hands together once or twice, as the case may be, when, presto! enters Mr. Gaoler, or Mr. Executioner, with the fatal bowstring. In hotel practice the noise of this *claque*, repeated in a sort of running fire throughout a protracted meal time, becomes rather tiresome.

All the servants, "chambermaids" and all, are men; of various races and various hues—black, brown, and yellow; some with beards, some without; some dressed as Turks, some as Christians, and some hardly at all; all tolerably active and obliging. In short, as also, and in short everywhere, everything is done by men, except occasionally the dangling of a young baby-Turk, as he snifs the air in the Champs des Morts, the favourite promenade, which is performed by a black female slave. The costumes seen in the streets are innumerable in variety, but all more or less picturesque. The women who shop about are of the very common sort, mostly old and ugly, but still with their wizened features smothered up in their white muslin veils, just as jealously as if they were those of a blooming houri of sixteen.

Constantinople is always a dull place; at the time of our visit, what with rumours of war, and rumours of conspiracies, and prevailing uncertainty, and universal poverty, it was especially so. There is a theatre or opera-house in the High-street at Pera, but it was not open; winter is "the season," at which period also subscription balls are given upon a grand scale by Misseri in the "great room" of the Hôtel d'Angleterre.

By way of satire upon a public amusement, a small court-yard, in some back premises near the theatre, has been opened, and falsely styled a "Jardin des Fleurs." There, for a piaster a head, poor devils of strangers who have nothing else to do, resort to promenade upon one another's toes, to the smell of half-a-dozen oil lamps, and the reviving sounds of as many execrable executants upon brass and catgut. S——, very diligent, went there to make a sketch; but came away disgusted But, in truth, as already observed, the summer months are the non-season at Constantinople; when everybody Sultan, Pachas, Ambassadors, bankers, shopkeepers and all—is "out of town:" at Therapia, Buyukdere, the Prince's Islands, or other suburban resort. Being situated along the Bosphorus, steamers ply to all these places; and very gay does the blue-bosomed Bosphorus look, spangled with the revolving wheels, and turbaned as it were with smoke. These boats are crowded to excess throughout the day, and doubtless pay very well. The fares are moderate—four piasters to Buyukdere; but were formerly much higher. The shareholders are chiefly Turks, who are beginning to be more alive to the advantages of commercial enterprise than formerly, when they left everything to the Jews and Armenians. The late Sultana Valide was a large proprietor (if not, indeed, the originator) of this, as she undoubtedly was of many other important industrial speculations. Besides the Turkish boats, there are some belonging to English men; but these run under the disadvantage of not being allowed to touch at the bridge to embark and land their passengers, who are thus compelled to use caïques. What with their share of passenger-traffic, however, and the towing of vessels, they carry on a fair business.

An omnibus, too, runs from Buyukdere to Pera daily in a little under two hours—distance about twelve miles This vehicle is of iron or tin plate: painted yellow, and is drawn by six, eight, or ten horses—more or less according to the state of the roads.

A DAY OF SIGHT-SEEING.

To visit the Seraglio* and Mosques, and other establishments, it is necessary to obtain a firman, which is the *open sesame* to every place worth seeing in Constantinople. The firman is, or is supposed to be, given gratuitously; but its issue and use are attended by an outlay of fees, or *backsheesh*, as they are called, amounting to about £3. The consequence is, that a firman for sight-seeing becomes a matter of speculation a sort of venture in the hands of the commissioner of the hotel, who tries to make up as large a party as possible for the occasion charging the several individuals of the party as much as possible, and doling out as little as possible to the claimants of *backsheesh* at the several places visited. On the occasion when we went the round, there were eighteen of the party; and the firman-contractor, in a subdued but piteous tone, complained that he should make a bad day of it, as he had been disappointed of about as many more—chiefly naval officers, who had set off at short notice for their ships. Yet, at the rate of three Spanish crowns a head, which was what he charged, there would be a sum total of about £12 to set off against a supposed expenditure of about £6.

Our party, having mustered about ten o'clock, sallied forth, preceded by a very grave and important-looking officer of police (*kawass*), armed with sword and pistols, accompanied by a private of the same force, who carried the firman to exhibit where required. The former personage, our contractor stated, received a backsheesh of about 30s., and the latter about 10s. for his day's work.

It is considered sacrilege to tread upon the floor of a mosque or palace with one's ordinary boots or shoes; accordingly, they have to be taken off at each sacred portal, and slippers substituted, or, as an alternative, a large pair of slippers drawn over the former. The Turks generally walk about doubly shod, and take off the outer shoes at the entrance to their mosques. As it was, with our party of eighteen, besides the two policemen and the firman-contractor, the process of shoeing and unshoeing, repeated about twenty times in the course of the day, became a serious business.

Before proceeding to describe the various sights, however, a short sketch of the position and general bearings of the city of Constantinople will be acceptable.

GENERAL DESCRIPTION OF CONSTANTINOPLE

Magnificently situated at the extremity of the European shore of the Bosphorus, at the point where that strait joins the Sea of Marmora, the ancient city of Byzantium is, like Rome, built upon seven tolerably steep hills. When Constantine the Great removed the seat of Government hither in 330, the name was changed to Constantinopolus (the city of Constantine). The Greeks ordinarily spoke of it as Πολις (the city *par excellence*), as the Romans styled Rome *Urbs*; and since the occupation of the Mahomedans, a slight alteration of the words Εις την πολιν produce the name Istamboul, or Stamboul, by which the Turks at present distinguish the city proper from the suburbs.

The form of this city is triangular; the western or land side is about four miles long; that facing the Sea of Marmora is between five and six miles long; and the third side is separated from the main land on the shore of the Bosphorus, by a narrow gulf, diminishing gradually from about a mile in breadth, which is called the Golden Horn, and forms one of the most spacious, convenient, and magnificent harbours in the world. The length of the town on this side is somewhat more than three miles.

On the opposite side of the Golden Horn is the busy quarter of Tophana and Galata, leading to Pera, which crowns the heights, and which is the place of residence of the Christian population. The capital has been of late years connected with this suburb by means of a bridge of boats Higher up the Golden Horn is another bridge of older date.

The city is protected on every side by walls, which were once of considerable strength, but in the lapse of ages have fallen to decay: the wall on the land side is a double one, with a double line of trenches. At the extreme southern extremity of the latter wall, in the sea of Marmora, is the ancient castle of the Seven Towers; the original structure of which was commenced by Zenon in the year 1000, and finished by Emmanuel Comnenus in 1812, when it was called Pentapyrgion, on account of the number of towers (five) of which it consisted. In 1458 Mahmoud the Conqueror rebuilt the greater part of this fortress; and added three towers, octagon in form, and with conical roofs. The so-called castle of the Seven Towers has now only four, three having been destroyed by an earthquake which took place in 1768. This castle, under the Mahomedan sovereigns, has been long used as a sort of Bastille for political offenders. There it was customary to confine the Ambassadors of European states against which war was about to be declared—a barbarous practice, which began to fall into desuetude under Selim III, and was altogether abolished by Mahmoud II. The appearance of this old ruin, whether by sea or land, is very imposing. The towers are supported upon terraces sixty or seventy feet high and sixteen or eighteen feet wide. The walls are surrounded by deep trenches or moats, now dried up, and used for the cultivation of various domestic herbs and vegetables. At the northern extremity of the land fortifications on the Golden Horn was another fortress, called Cynegion, the site of which, in more recent times, was used as the arena for combats between wild beasts. Finally, at the extreme point of the promontory, looking towards the Asiatic shore, stood the Acropolis of the ancient city of Byzantium; and the area of the latter now forms the extensive inclosures of the Seraglio, being nearly three miles in circumference.

The view obtained from the top of the Tower of Galata, looking down upon Constantinople, and the Golden Horn, is one of the most magnificent it is possible to conceive; in its breadth and expanse, it is grandeur itself; while the details of curious architecture afford endless occupation for the eye, and may rivet, without tiring, the attention for hours together. (*See the Large Panoramic View on the middle pages.*)

Immediately beneath the spectator are the quaint house-tops of the narrow streets of Galata and Pera; with glimpses between them, here and there, of the busy life which never tires throughout the day in those close thoroughfares. Close at hand, a little to the right, is one of the innumerable minarets which rear their tall, straight necks in all directions, piercing into the blue sky with their sharp pointed heads; and on its narrow balcony is the *Muezzin* calling the faithful to prayer; this he does five times a day—his well-practised but harsh-toned voice being heard through the air at distances which to the European would seem incredible. Beyond this dark and various-coloured mass of building is the glittering surface of the Golden Horn, covered with innumerable shipping of all countries, and spanned by the floating bridge which connects the quarter of Pera with Constantinople.

Continuing our regards now to the Imperial city, and commencing at the left, we behold the extensive gardens and numerous buildings of the far-famed Seraglio; the trees so thickly planted as to prevent the prying eyes of the curious from lighting upon the Sultanas in their walks. Next, to the right, are Mosques of St. Sophia, of Sultan Achmet (with its six minarets), of Suliman, and of Mahomed II. To the extreme right is the Seraskiers Tower. At the foot of the floating bridge is the Mosque of Sultana Valide. At the extreme left of the

* Seraglio in the Turkish language means Palace. There are several imperial palaces in and about Constantinople; but the term, when used alone, is understood to refer to the ancient Seraglio which is the "Sublime Porte," or gate, by which the Ottoman State is known in diplomacy, and which stands on the site of the palace of the Greek Emperors.

picture on the other side of the narrow channel which separates the point of the Seraglio from the Asiatic shore, and covering the extreme point of the latter is Scutari, the largest of the suburbs of Constantinople, and, like it, built upon seven hills. Beyond, to the right, is the Sea of Marmora, shining like a bright mirror beneath the noontide sun; and in the midst, hugging the Asiatic shore, are the Princes' islands, a favourite resort of the inhabitants of Constantinople.

Proceed we now with our round of sight-seeing:—

THE SERAGLIO.

The various kiosks and apartments within the precincts of this ancient palace have been built at different times, according to the taste or caprice of successive Sultans or Sultanas. They therefore exhibit no attempt at order in their arrangement; but some of them, on the higher ground, have an extremely handsome appearance. The gardens are planted with cypress and evergreens, forming to the eye of the spectator from without a spacious shrubbery, out of which the various buildings rear their heads capriciously in all directions. Marble basins, spouting fountains—the sight and sound of which sooth and charm the sense of the Oriental—abound in all parts of these jealously-guarded premises. Marble bath-rooms are to be found even within, and on the first floor of the buildings themselves

Von Hammer thus rather quaintly describes the general arrangements of the Seraglio; and though his account is, probably, in many particulars, out of date, it is the best general description of the place we know of:-

The principal entrance of the Seraglio is a huge pavilion, with eight openings over the gate, or *porte*. This porte, from which the Ottoman empire took its name, is very high, simple, semicircular in its arch, with no Arabic inscription beneath the band of the arch, and two niches, one on each side, in the wall. It looks rather like a guard-house than the entrance to a palace of one of the greatest princes of the world; and yet it was Mahomed II. who built it. Fifty *capidgis*, or porters, who keep this gate; but they have generally no weapons, but a wand or white rod. At first you enter a large court-yard, not near so broad as long; on the right are infirmaries for the sick, on the left lodges for the *cumacoglans*, that is, persons employed in the most sordid offices of the Seraglio; here the wood is kept that serves for fuel to the palace. There is every year consumed 40,000 cart-loads, each load as much as two buffaloes can well draw.

Anybody may enter the first court of the Seraglio. Here the domestics and slaves of the Pachas and Agas wait for their masters' returning, and look after their horses; but every thing is so still, the motion of a fly might be distinctly heard; and if any one should presume to raise his voice ever so little, or show the least want of respect to the mansion-palace of their Emperor, he would instantly have the bastinado by the officers that go the rounds; nay, the very horses seem to know where they are, and no doubt they are taught to tread more softly here than in the streets

The infirmaries are for the sick that belong to the house; they are carried thither in little close carts drawn by two men. When the Court is at Constantinople, the chief physician and surgeon visit this place every day; and it is asserted they take great care of the sick. It is even said, that many who are in this place are well enough, only they come hither to refresh themselves, and drink their skinful of wine. The use of this liquor, though severely forbidden elsewhere, is tolerated in the infirmaries, provided the eunuch at the door does not catch those that bring it, in which case the wine is spilt on the ground, and the bearers are sentenced to receive 200 or 300 bastinadoes.

From the first court you go on to the second, the entrance whereof is also kept by fifty *capidgis*. This court is square, about 300 paces in diameter, but much handsomer than the first: the pathways are paved, and the alley well kept; the rest consists of very pretty turf, whose verdure is only interrupted by fountains, which help to preserve its freshness. The Grand Signior's treasury and the little stable are on the left: here they show a fountain, where formerly they used to cut off the heads of Pachas condemned to die. The offices and kitchens are on the right, embellished with domes, but without chimneys: they kindle a fire in the middle, and the smoke goes out through the holes made in the domes. The first of these kitchens is for the Grand Signior, the second for the chief Sultanas, the third for the other Sultanas, the fourth for the *capidgi-bas*, or commandant of the gates; in the fifth they dress the meat for the Ministers of the Divan; the sixth belongs to the Grand Signior's pages, called the *Ichoglans*; the seventh to the officers of the Seraglio; the eighth is for the women and maid-servants; the ninth for all such as are obliged to attend the Court of the Divan on days of session.

All round the court runs a low gallery covered with lead, and supported by columns of marble. No one but the Grand Signior himself enters this court on horseback, and therefore the little stable is in this place, but there is not room for above thirty horses: overhead they keep the harness, than which nothing can be richer in jewels and embroidery. The great stable, wherein there are about 1000 horses for the officers of the Grand Signior, is towards the sea, upon the Bosphorus. The hall where the Divan is held, that is, the Justice-hall, is on the left, at the further end of this court; on the right is a door, leading into the inside of the Seraglio, none pass through but such as are sent for. The hall of the Divan is large, but low, covered with lead, wainscoted and gilt after the Moorish manner, plain enough. On the estrade is spread but one carpet for the officers to sit on. Here the Grand Vizier, assisted by his counsellors, determines all causes, civil and criminal, without appeal; the *Kaimakam* officiates for him in his absence; and the ambassadors are here entertained the day of their audience. Thus far may strangers enter the Seraglio; a man's curiosity might cost him dear, should he proceed further.

The outside of this Palace towards the port has nothing worth notice but the kiosk or pavilion right against Galata, which is supported by a dozen pillars of marble; it is wainscoted; richly furnished and painted after the Persian manner. The Grand Signior goes thither to divert himself with viewing what passes in the port, or to take the pleasure of the water when he has a mind to it. The Pavilion, which is towards the Bosphorus, is higher than that of the port, and is built on arches, which support three saloons, terminated by gilded domes. All these quays are covered with artillery without carriages; most of the cannon are planted level with the water; the largest piece is that which, they say, forced Babylon to surrender to Sultan Murad, and, by way of distinction, it has an apartment to itself. This artillery is what the Mahometans rejoice to hear, for, when they are fired it is to notify that Lent (*Ramazan* or *Ramazon*) is at an end; they are likewise fired on public rejoicing days.

The Sultan was absent, enjoying himself at one of his palaces on the Bosphorus, when our firman-party visited the ancient Seraglio. We entered it by a common looking gate near the water; then passing along in front of the barracks, we came to an extremely dusty court, partially planted with trees; and then to an inner court, where was the entrance-hall. A very ordinary staircase led to the audience-chamber, a spacious apartment, perhaps eighty or one hundred feet square, with windows on three sides of it; the walls and ceilings covered with decorations in green and gold, very heavy in effect; the curtains of white cotton, with crimson cotton or worsted fringe. Altogether, the effect was much after the style, and not more imposing than that of an assembly-room at a second-rate watering-place. The same remark applies to the inner reception-room, and the Sultan's private room adjacent to it, only that they are smaller. The views from the windows, however, of the Bosphorus, and the Sea of Marmora, covered with shipping, and Pera and Scutari, with the mountains beyond, were certainly magnificent. The Sultan's bath, consists of two small apartments in white marble, lighted from above by skylights. There is nothing remarkable in their decorations. We next saw the drawing-room appropriated to the ladies, which was more elegant in form than those we had previously seen, with semicircular recesses at two opposite sides. In it was a grand pianoforte

This apartment opened out, on one side, upon a delicious terrace-garden; on another, into a small apartment containing some curious arms belonging to the Sultan, preserved in a glass case; and on a third, into the Sultan's bed-room. This chamber was held sacred by the man who showed us over; and no *backsheesh* could induce him to allow us to proceed beyond the threshold. We saw quite enough of it, however, to remark that it was lofty, and tolerably spacious, but very plain in its arrangements. On the side opposite the door, we saw an ordinary French bedstead, with thin crimson curtains suspended from the ceiling. We were next ushered into a long gallery, with white-washed walls, lighted on one side by a row of very plain windows. This was the picture gallery. Along the wall opposite the windows was a single row of coloured prints, chiefly after modern artists—Horace Vernet, Turner, Stanfield, and others. The larger number of them were the well-known performances representing the exploits of Napoleon Bonaparte, and in the centre was his apotheosis; of the others, many represented sea-fights; and a few were views in Switzerland, Italy, &c. After passing through this and another gallery, we came to the winter-garden—not a very large one, nor in a very high state of cultivation. The flowers and plants were by no means remarkable for beauty or variety; and, as there was no prohibition against picking them, most of the party helped themselves pretty freely to them. On one side of this garden is a marble hall, with an inner recess, also in marble, with a fountain in the midst, playing into a shallow basin full of gold fish; and other fountains along the walls. These hydraulics were set agoing for our edification; but the effect was by no means imposing, the streams of water being thin and feeble, and common place in their arrangement. We were not tempted to inspect the Royal stables, as there were only two horses in them, and they were evidently not show places in themselves. Near to them, on an elevated spot, stands the column erected by Theodosius, to commemorate his victory over the Goths. It is fifty feet high, of the Corinthian order, the capital of porphyry, or *verde antique*, and on a tablet opposite it is the following inscription: "Fortuna Reduvi ob devictos Gothos." The Imperial library is in a small detached building, approached by a flight of marble steps. The principal curiosity here is a painted family tree, on canvas, rolling up like the sign of an itinerant show, and containing the portraits of all the Sultans from the time of Mahomed II. down to Mahmoud II., in small oval medallions. This was opened out upon the floor for our inspection; and seemed to be held in little reverence by the honest Mussulmans present, for they actually walked across it as they would a carpet. By constant rolling and unrolling, the part near the top has been worn into a large hole, endangering the features of the head of the family.

Our egress from the Seraglio buildings was by the ancient hall used for the reception of Ambassadors—a dingy-looking room, with what appeared to be a large four-post bedstead in one corner; the posts studded with turquoises, rubies, amethysts, and other precious stones; but which, in reality, is the throne, which was formerly used on state occasions of the kind mentioned. Opposite the throne is a grated window; and outside this window in the good old days when the Turk really imagined himself to be the greatest personage in the whole world—the poor Ambassadors from European states used to make their first obeisances, announcing themselves "the slave of your slave of England or France," as the case might be. His Highness, with a majestic wave of the hand, would then give orders: "Take away this infidel dog; feed him, and clothe him decently, and then bring him before us." Upon this the Ambassador, and his secretary and suite, withdrew; and, after having been regaled with some barbarous mess, were clothed in long pelisses of various colours—some red, some yellow, some blue—and fashioned according to their respective grades; and, so attired, were permitted to enter the Imperial throne-room, where his Excellency delivered his credentials.

The armoury, the building appropriated to which was once a Greek church, is well worth visiting. When we were there, we found a number of men busily employed arranging many the muskets recently sent by France, in place of the old lot, which were ill-fashioned and covered with rust. Here, besides the arms for actual use, there is a curious collection of ancient arms of all dates; also the gorgeous and singular costumes worn by the various dignitaries of the empire, previous to the introduction of the blue frock-coat and fez. Along the galleries are hung the colours taken from Persian and other foes in days of yore. Finally, in the east gallery, in a glass case, are preserved the keys of all the cities in the empire.

THE MOSQUE OF ST. SOPHIA

is situated close to the Seraglio, at the other end of the court-yard in front of the Palace. The appearance of the outside, with its depressed dome, and various projecting walls, is imposing, but announces at once that the architectural arrangements were made more with a view to internal than external effect

This superb basilica, the most celebrated of all the edifices consecrated to the service of Islamism, was originally built by Constantine (A.D. 325), and dedicated to St. Sophia, or the Divine Wisdom. It was burned down in 404, and rebuilt in 415. Having been again burned down in the reign of Justinian, the present building was erected, upon a more splendid scale than the former one, and completed in the year 538.

The following historical and descriptive details are abridged from Von Hammer's valuable work, already cited:—

The architects employed by Justinian in this masterpiece of architecture were Athenius of Tralles, and Isidorus of Miletus. The roof of the building weighed heavily on the people and all classes of the public functionaries through the newly-imposed taxes, insomuch that the salaries even of the professors were applied to the building. The walls and arches were constructed of bricks, but the magnificence and variety of the marble columns surpassed all bounds. Every species of marble, granite, and porphyry, Phrygian, white marble, with rose-coloured stripes, which imitated the blood of Atys, slain at Lynada; green marble from Laconia; blue from Libya; black Celtic marble, with white veins; Bosphorus marble, white with black veins; Thessalian, Molossian, Proconnesian marble; Egyptian starred granite, and Saitic porphyry, were all employed.

A hundred architects superintended it, under whom were placed a hundred masons: 5000 of the latter worked on the right side, and 5000 on the left side, according (so says the legend) to the plan laid down by an angel who appeared to the Emperor in a dream. The mortar was made with barley water, and the stones of the foundations were cemented with a mastic made of lime and barley water. By the time that the walls had been raised two yards above ground, 452 cwt. of gold had been already expended. The columns were bound as well on the outside as within with iron clamps, and covered within with lime and oil, and a stucco of many-coloured marble. The tiles on the arch of the cupolas, which astonished every eye by their extraordinary lightness and boldness, were prepared at Rhodes of a particularly light clay, so that twelve of them did not weigh more than the weight of one ordinary tile. These chalk-white tiles bore the inscription—"God has founded it, and it will not be overthrown: God will support it in the blush of the dawn." When the building of the cupolas at length began, the tiles were laid by twelves, and after each layer of twelve tiles relics were built in, whilst the priests sang hymns and prayers for the durability of the edifice, and the prosperity of the church.

The bringing together and preparation of the building materials occupied seven-and-a-half years. The building lasted eight-and-a-half years, and the finishing of the whole, therefore, took up sixteen years. When it was finished, and furnished with all the sacred vessels, the Emperor, on Christmas eve in the year 538; drove, with four horses, from the palace above the Augusteon to the church; slaughtered 1000 oxen, 1000 sheep, 600 deer, 1000 pigs, 10,000 cocks and hens; and during three hours 30,000 measures of corn were distributed among the poor. Accompanied by the patriarch Eutychius, he entered the church, and then ran alone from the entrance of the halls to the pulpit, where, with outstretched arms, he cried: "I God be praised, who hath esteemed me worthy to complete such a work. Solomon! I have surpassed thee!"

The church of Santa Sophia is in the form of a Greek cross, of which the upper end, where stood the altar, is turned towards the east, the lower end towards the west, and the two sides towards the north and south. On both the eastern and western side of the square is a semicircular recess, roofed with segments of domes, which rest against the main arches, and assist in resisting the lateral thrust. To these, again, are joined on either side, three small cupolas; so that the roof of the temple, rising by steps, consists of nine cupolas, of which the great dome forms the highest summit, from which the eye descends to the two half domes, and from thence to the three small cupolas

The walls of the interior are of polished stone—the floor paved with large flagstones, and furnished with ten gates—three to the west, through which people entered from the forecourt; one to the north; and one to the south, leading to the two minarets; and five, whence people entered from the first, or outer forecourt, into the second, or interior. This second inner forecourt, longer, broader, and more ornamented than the first, has sixteen gates, five of which lead into the outer court, opposite to which there are nine others immediately leading into the church; and finally, two side doors—one to the north, and the other to the south. All these doors are of bronze, adorned with crosses, which the Turks have mutilated. The space between the doors is covered with beautiful watered marble; and above them are still to be seen the remains of the Mosaic pictures which formerly served as paintings to the doors.

The great cupola is so finely vaulted, that its height is only a sixth of its diameter (which measures 115 feet). The centre of the dome is elevated 180 feet above the ground. The length of the interior of the church is 243 feet, the breadth 269 feet; the former measured from north to south, the latter from east to west. But as the length of the church ought properly to be measured from the altar to the opposite choir, the temple of Sophia is, in reality, broader than it is long.

Near the four great columns which support the dome are four others—two towards the east, and two towards the west—which, placed in a half circle with the larger ones, support the three semicircular cupolas on either side. In the four intervening spaces of the great and small columns stand, two and two, porphyry pillars with capitals and pedestals of the most exquisitely beautiful white marble. These are the eight porphyry columns from the Roman Temple of the Sun, of Aurelian, which the Roman Patrician, Marina, received as her dowry, and made over to Justinian. On the north and south sides between the great columns, on either hand, four pillars of the most beautiful green granite support the gallery of the female choir. These were brought by the Prator, Constantine, from the Temple of Diana at Epheseus, for the building of the church, for they are much larger and more beautiful than any other columns. The other four-and-twenty columns of Egyptian granite, which support the galleries on both sides, are arranged four and four in the six four-corner divisions which are formed by the large columns and ascents to the choir on the north and south sides of the church. These four-and-twenty pillars of Egyptian granite, the former eight of serpentine or green marble, and the eight of porphyry, make together the number forty—so beloved amongst Easterns—which is generally received in buildings of pomp as a number of grandeur and splendour, so that the ruins of Persepolis are to this day called *Tschehelmiun*, *i.e.*, the forty columns. On these forty columns of the basement rest sixty of the gallery. Finally, there are four middle-sized and three small columns above the doors, so that the whole number of all the columns is 107—the mystic number of columns supposed to support the House of Wisdom. The sixty-seven columns above are all also of granite or many coloured marble, fluted in the most beautiful manner, but surmounted with the most fantastic capitals, which neither belong to any of the five orders, nor are like each other.

Of the four great arches which rest on the four great columns, those only on the north and south sides are, as it were, closed by means of a wall through the columns of the lower female choir, and through the windows of the upper one. But through the arches of the west and east sides the view extends uninterruptedly from the gate of the entrance as far as the semicircle of the altar, or as far as the sanctuary. In the four corners of the great dome vault four seraphim are introduced in mosaic; and on the four vaulted arches there are still to be recognised the sketches of madonnas and pictures of saints. Several of them also adorned the walls, but they are now replaced by colossal inscriptions truly gigantic patterns of Turkish calligraphy, the standing letters being ten yards in length. The names of the four companions of the prophet, Abubeker, Omar, Osman, and Ali, figure as the side pieces of the four six-winged seraphim which the Moslem faith acknowledges under the names of the four archangels, Gabriel, Michael, Raphael, and Israel. In the cupola itself is written, introduced by Jakut, the well-known Arabian verse of the Koran: "God is the Light of the Heavens and the Earth"

This verse is illuminated during the nights of the Ramazan by a sea of rays from some thousands of lamps, which, suspended in a triple circle above each other, trace out the vault of the dome. This string of lamps, on which lights are alternately suspended, with ostrich eggs, artificial flowers, and bunches of tinsel, are found in all the mosques, richly adorned in proportion to their size, and producing, when lighted, a singularly magic effect.

When our party arrived at the side door of the south front, that at which Europeans are generally admitted, it was not much after twelve o'clock, and the *mawas*, or mid-day service had not yet concluded. So we were forced to wait, sitting upon the steps leading to the floor of the corridor, outside the basement of the Mosque. There we sipped sherbet, which was brought to us in a bowl from a neighbouring *kaffergee*, and listened in silence to the strange sounds of chanting, which echoed through the building. After a time the congregation began to drop out, by ones and twos, putting on their outer shoes upon a wooden platform placed for this purpose at the limit of the sacred precincts; and soon after they poured out in crowds; when a good-looking priest approached, and conducted us by a side door on the left to a passage, by which ascent was to be obtained to the gallery appropriated to women. This passage is on a gentle ascent, and wide enough to drive a carriage up it; it takes a zig-zag course, and is nearly dark, being lighted only at the points which touch upon the external wall, through narrow casements. Upon emerging from these gloomy recesses to the broad-stone gallery, which, of course, was empty, into the broad light which pervaded the interior of the edifice, the effect was truly magical. The wide-spread dome, lighted up by four-and-twenty windows round its base, just lofty enough to give the full idea of grandeur, yet not high enough to carry the eye away from contemplation of the lateral spaciousness of the building; this dome, whose curve very much resembles that of the firmament itself, seemed absolutely to float between heaven and earth; the solid nature of the materials of which it is composed being for the moment forgotten. Below, the plan adopted, that of the Greek Cross, throws the whole vast scope of the building at once open to the view, saving only the ambulatories beyond the stupendous pillars supporting the dome, which were necessarily partially concealed; just enough to allow one to imagine them more extensive than they actually are. The floor was covered with matting; and scattered about in various directions were devout Mussulmans still at their prayers, whilst some dozen young children, boys and girls, in long light robes and loose trousers, were playing at hide-and seek, chasing one another round and in between the stupendous columns, scudding along with the fleetness of the doe; their faint sounds of laughter mingling strangely with the solemn dirge-like chanting which issued from various unseen recesses. Having surveyed the building from all parts of the gallery, which extends round three sides of the building, we descended to the floor; and here the effect was one of increased grandeur. At the west side are two large marble urns, or vases, from

INTERIOR OF THE GREEK CHURCH OF BALUKLI, NEAR CONSTANTINOPLE.

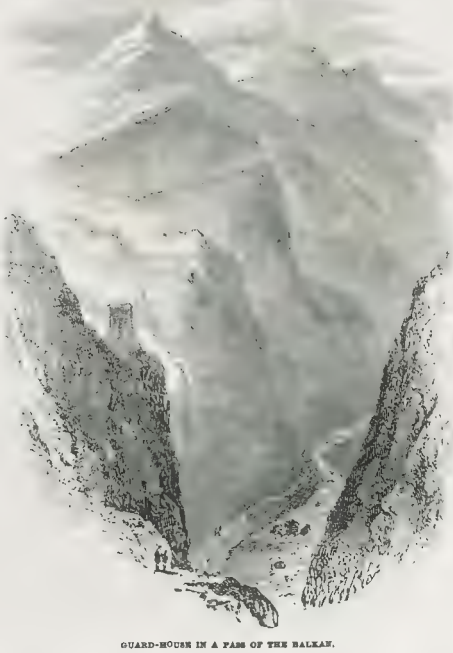
which issue streams of water for the washing, cooling, and refreshing of those who come to prayer. Innumerable small lamps, some of them formed of ostrich egg-shells, are arranged in order all through the building, being suspended from the various domes by wires at a level of about ten or a dozen feet from the ground. This temple having originally been built for the purposes of Christian worship, the altar was at the extremity of the Eastern arm of the cross. On appropriating it to the observance of the religion of Mahomed, it became necessary to alter this arrangement, placing the *mahrab* in the direction of Mecca, which, in regard to Constantinople, lies in a south-easterly direction. The consequence is, that the believers pray towards, running diagonally across the floor, from the north-eastern to the south-western column. The effect of this, which only occurs in the case of the Mosque of St. Sophia, is very singular.

As the siege of Constantinople under Mahomed II., when the Gate of Adrianople was taken, the terrified Greeks fled from all parts to the Temple of Sophia, expecting miraculous intervention in their favour; but the gates did not long resist the terrible axe-blows of the conquerors, and the carnage which followed was dreadful. During three whole days the city was given up to pillage; on the third, so it is said, Mahomed II. entered the splendid Temple of St. Sophia, now a reeking charnel-house, the floor covered with dead to the depth of many feet; and having plunged his hand into the midst of the gory pile, he then placed it against one of the pillars to the south of the high altar, and exclaimed, "So far! It is enough!" after which the massacre was stayed. The guides pointed out to our party a mark on the wall, about thirteen feet from the ground, which they said was that left by the conqueror on the occasion in question, and which certainly perfectly resembles the form of a human hand, though on rather a gigantic scale.

OTHER MOSQUES, FOUNTAINS, &c.

After seeing St. Sophia, the other mosques strike one with disappointment and something akin to annoyance. Large and small, they are but servile imitations of the Sophia; and, like all imitations, want that character of grandeur which originality alone displays. We only visited two—that of Sultan Achmet, and that of Suliman. The Achmet is in the Hippodrome, not far from the St. Sophia. It ranks as the principal of all the mosques, and is the only one in the whole Ottoman Empire

MIRACULOUS SPRING AT THE GREEK CHURCH OF BALUKLI



GUARD-HOUSE IN A PASS OF THE BALKAN.

THE MOSQUE OF ST. SOPHIA.

which has six minarets: the St. Sophia and the Suliman, and even that at Mecca, having only four. The principal dome is supported by four pillars of immense thickness, measuring 36 feet in circumference. It is very spacious; but, after the Sophia, has a bare and heavy appearance.

The Sulimanye was built by Sultan Suliman, in 1550 55, and was professedly designed to eclipse the masterpiece of Justinian; which it closely imitates, both in the ground plan and the number and arrangement of the cupolas. The principal dome is seven yards higher than that of the Sophia, but of the same circumference; the effect of lightness and spaciousness so marvellously realised by the latter, is therefore not attained. The galleries of this mosque we observed to be closely packed with bales of merchandise, trunks, carpet-bags, and all sorts of goods. Upon enquiry we learned that these were the property of those who had left their homes on a pilgrimage to Mecca; that they were kept for them, without charge, till their return; the only condition being that the goods of all who died on the way, or who did not make their existence known in due time, should become the property of the mosque, or of the priests belonging to it.

Three of the mosques—the Sultana Valide (now called Yeni Jamesi), the Achmet, and the Roumanie—have covered galleries on a gentle ascent leading to them, and through which the Sultan, when he visits them, rides into the building on horseback.

The feast of Bairam, unfortunately, was just over when we arrived at Constantinople, but we heard much of the gay and noisy doings with which the time of rejoicing is celebrated. The whole population, from the Grand Signior down to the humble caïque, look forward anxiously to the moment of the new moon, which terminates the long fast of the Ramazan, and commences the festive season of Bairam. The mode of ascertaining the precise moment of the advent of the new moon is droll enough. Certain sage and very credible priests ascend to the high mountain of Bulgurlu, behind Scutari; and there they stand looking into pails full of water, pretending that on the surface of the latter they can see reflected the moon at the moment of its coming between the earth and the sun—a thing absurd and impossible, as we need hardly observe. Nevertheless, upon the fortunate priest making this remarkable discovery, an express is sent off to the Grand Vizier, who forthwith proclaims the commencement of Bairam, amidst the firing of innumerable cannons. In the evening the Imperial mosques are lighted up and thronged with the faithful; the streets and houses along the Bosphorus are illuminated; sounds of festive music load the air: all is wild excitement and pleasure. It need hardly be added that the lucky priest who sets all this train of festivity agoing, receives a handsome *backsheesh* for his trouble.

Not far from the Sultan Achmet Mosque is the tomb-house of the late Sultan Mahmoud, a neat irregular-shaped structure, containing the coffins of that Sultan, his wife, and three or four of their children. The coffins, which are large, and with angular tops, like the roofs of houses, are covered with rich cashmere shawls; and round the room are several chests of jewels and treasure, left by the defunct. Prayers are said here (as in other mausoleums) five times a day, by priests paid for the purpose.

Next to the mosques and the minarets, the fountains are decidedly the most beautiful features in Constantinople. They are very numerous, water being an object of the first importance with a people who drink, or are supposed to drink, no other beverage, and who are, moreover, perpetually washing themselves from morning to night. Many of them, particularly those attached to the Seraglio and the mosques, are stately covered structures, with curious gratings at the sides, and wide-spreading roofs, to keep the sun off. Collected around these fountains, all day long, are to be seen picturesque groups of people, male and female, drawing water, or performing their ablutions previous to entering the mosques.

THE SULTAN'S ATTENDANCE AT MOSQUE.

Every Friday (the Mahomedan Sabbath) the Sultan attends the *namaz*, or noontide prayer, at one of the mosques, in public state. This is a religious duty imposed upon the Sovereign for the time being, from which under no pretence, even of illness (unless it be very imminent in character) can he be exempt. History tells how this custom came to be confirmed. The Sultans, some five centuries ago, had become very lax as regarded the observance of their religious duties, and excused themselves from attendance at public prayer (to which, by the Koran, every good Mussulman is bound) under pretence of urgent state affairs. It was in the reign of the conqueror Amurat I. that Mewla Fenari, who then occupied the post of Mufti, or head-expounder of the law, resolved to oblige the Sovereign to fulfil this important duty,

THE MARINE ARSENAL, CONSTANTINOPLE.

and thus to give an example to his subjects of religious zeal. It happened one day that the Sultan having occasion to appear as a witness before the Mufti (for the Sultan in Turkey is, by the constitution, amenable to the law), the latter refused to hear his evidence upon his oath. Observing the surprise of the Monarch, the stout-hearted functionary added: "Highness! let not my conduct appear strange to you; your word as Emperor is sacred; who could venture to hold it in doubt? But here it is of no validity. A man who has not joined the bands of the faithful in public prayer may not give testimony before a court of justice." This wholesome lesson, so far from displeasing the Sultan, touched him sensibly; he acknowledged his error, and, in expiation of it, built at Adrianople, opposite the Imperial Palace, a superb cathedral, which is called after him.

The particular Mosque which the Sultan is about to visit becomes known every Friday about ten o'clock; and along the road which leads to it crowd great quantities of the faithful, and of strangers who may happen to be in the town, to see the procession. The show by water is very gay, something like that on Father Thames on Lord Mayor's-day—barring the fog; the state caïques of the Pachas, and of the Grand Eunuchs of the Palace, and of the Sultan, all skimming at tremendous speed the surface of the Bosphorus, which seems to dance with pride and delight whilst military bands play strange Oriental music, and the artillery at the Arsenal fire a hundred and one guns. On landing, the fat Pachas mount their state horses, which are richly caparisoned, and led by grooms, who also help to support their unwieldy masters; then come four or five led horses: and then the Sultan alone, on horseback, with numerous attendants on foot—all moving so slowly and amid such stillness that the very foot-fall of each horse and man is distinguishable. I was much struck with the heavy impassable aspect of his Highness, who is by no means naturally handsome, and who scarcely looked like a thing of life. He turned his eyes neither to the right nor to the left, and appeared as if he saw no one—nothing; that is, no one individually—nothing distinctly. As he sat enveloped in his black cloak (made in imitation of the black camel-hair cloak of the Prophet), which reached to the tail of his horse, he seemed scarcely able to hold on his seat, and was balanced in it as by habit or a miracle;—so weak and shattered in *physique*, so prematurely "used up." The road near the Mosque was lined with troops, who presented arms, an honour which the Sultan did not acknowledge; but when the band suddenly struck up a noisy tune, he gave a slight start in his seat and a slight twitch of the head, as a mummy would upon being galvanised; and then resumed his wonted wax-figure-like repose.

Rumour runs that the Sultan is more than half a Christian—at least, more Christian than Mahomedan. This, however, can only be matter of surmise and scandal, for the proof of the fact would be fatal to his Highness's crown—perhaps to his head. A story, however, which I heard from a very trustworthy person, and which I believe to be true, may be worth mentioning. Some time ago, when the Mosque of St. Sophia was being repaired, under the superintendence of an Armenian artist, a large quantity of the old plastering fell from the walls, and discovered the pictures of saints and Christian emblems which had been concealed for ages. The Sultan, who happened to be present, having come to see the progress of the works, remarked to the artist in French, "Il faut couvrir tout cela—le temps n'est pas encore venu!" (You must cover over all that—the time is not yet arrived.)

STREETS, BAZAARS, AND SHOPS OF CONSTANTINOPLE.

The streets of Constantinople are, if possible, more narrow, steep, dirty, and tortuous than those of Pera; the dogs therein certainly more numerous, and the shops strike one as the wildest "properties" in a pantomime. There are no window-frames, no windows; the whole shop front is open like a shed; and in this shed, or shell, which ordinarily varies from eight to twelve feet square, sits perched cross-legged upon a little couch, smoking a long pipe, the master of the little store. If not asleep—which is frequently the case—he twinkles his little eyes at you as you pass, and seems to invite you to enter. But your *laquais-de-place*, or Dragoman, as the *commissionaire* gentleman styles himself—and a stranger would never think of going out shopping without one of these gentry to speak the language, bargain for him, and so forth—knows his man, him with whom he is accustomed to have dealings, and in whose business he probably has a share; and, regardless of invitation s to the right or left, he takes you straight to where dwells the dealer in the very best cherry-stick pipes, amber mouth-pieces, embroidered tobacco-bags, yellow slippers, &c., in all Stamboul. There arrived, you are besought to enter; you squat down upon the couch beside the proprietor of the establishment, a *chibouk* (so the long pipes are called) is handed to you, and you smoke away, exchanging in silence looks of exceeding good-will and complacency with the said proprietor, whilst his slave and your dragoman fight and squabble at the door about the price of every individual article in the shop. A nod of the head to the latter is sufficient to complete a purchase, which he declares with a significant wink to be a bargain, protesting that all the shopkeepers are robbers, but that he knows how to beat the vagabonds down; and then you rise and walk out with mutual *salaams*, leaving five or six dirty hundred piaster notes behind you on the little counter (half of which Mr. Dragoman goes back for on his own account in the course of the evening); and then on to another shop and another, becoming in the course of the day the owner of a vast collection of miscellaneous rubbish intended for presents at home, but two-thirds of which, upon after examination, you find not to be worth the trouble of carrying—to say nothing of the Custom House, &c.

But we speak feelingly; we must return to the matter of fact. The Grand Bazaar, or town of Bazaars at Constantinople, is indeed a wonderful place—a perfect maze of little streets, all covered over, and sodark, that, till you get used to it, it is difficult to distinguish the various goods displayed, or intended to be displayed, to view. The shops in the Bazaars are smaller than the generality of those in the streets—few above six feet in depth; and along the front of all of them runs a sort of bench about two feet from the ground, which serves the double purpose of counter and settee. Here you sit down alongside of the dealer in slippers, or embroidery, or pistols, swords, pipes, tobacco, or whatever his *specialité* may be, and here you count out your money when your purchases are made. In candour, it must be stated of these tradesfolk that though they doubtless make as much as they can out of a customer, and are not nice about putting on the price a little to a stranger; they do not pester by pressing you to buy their goods. They show you what you point out, name their price, and if you do not make an offer in return, or shake your head, away they put the article back into its place with an air of passive indifference, which is at first a little provoking. One likes to be persuaded into a bargain sometimes, particularly when it is a foolish one. Another circumstance I remarked, and one attributable doubtless to the same point of character; there appears to be no rivalry amongst traders in the same commodity. Whilst you are bargaining with one shopkeeper, his neighbour takes no notice of your proceedings, and even when he sees you leave without being "suited," he does not care to ask you to see whether his goods (in the same line, for the Bazaars are all allotted to particular trades) are more to your taste than his neighbour's.

THE CISTERN OF THE THOUSAND AND ONE COLUMNS.

Among the curious remains of antiquity in the neighbourhood of the Hippodrome is the Cistern of Bin-Bir-Direk, or a Thousand and One Columns, built in the time of the Greek Empire. It is now used as a cistern no longer; but presents the appearance of an immense dark cavern, about two hundred feet square, or nearly square; the roof of which is supported by massive and lofty pillars. These pillars, which are of white marble, are 334 in number; but being only the pillars of the upper story, beneath which two other stories once existed, each with ranges of similar columns equal in number, this curious relic still goes by the name of the Cistern of the Thousand and One Columns. These two lower stories have long been filled up with earth, being, as I was informed, that dug out in the formation of the foundation of the Mosque of Suliman. This vast underground compartment is no longer a reservoir, but is made use of, by some Armenian, as a factory for spinning silk. The little urchins employed in this business are a noisy, impudent lot; their voices, shouting and laughing, are heard above as you pass over the gratings; and when you descend the ricketty wooden steps which lead to the bottom, they assail you—like veritable banditti—for *Backsheesh!* The best plan, touching the question of black mail, is to come quickly to terms with one of the biggest boys, who will then defend you from the rest. In default of this you will be mercilessly pelted.

There is another ancient subterranean cistern in Constantinople, which is still full of water, and which was not discovered by the Mahomedans for more than three centuries after the conquest of Constantinople. The roof is supported by three hundred and thirty-six marble columns, of various orders of architecture. It used until recently to be open to view, but is now shut up, in consequence of a tragical occurrence which is said to have taken place some years ago. An adventurous Englishman, who wished to explore the recesses of the cavern, proceeded into it alone in a boat, and with only a single torch to light him. He never returned, and no vestige has been seen of him since. Such is the story as I heard it; but I could not ascertain the name of the unhappy Englishman, nor the precise date of the occurrence. I should add, however, that the Turks have long been in the habit of telling wonderful stories of the tragical fate of persons who have been imprudent enough to venture into this subterranean expedition.

THE CEMETERIES.—FUNERAL CEREMONIES OF THE MAHOMEDANS.

What most strikes the stranger on wandering about the neighbourhood of Constantinople, is the number, extent, and beauty of the cemeteries attached to it. With the Musaulman, as with the Christian, the cypress is the tree appropriated to the resting-place of the dead; but the number in which they are displayed in the Turkish cemeteries would almost surpass belief, until actually seen. The effect is that of large forests, all clothed in the thickest verdure of sombre hue. The vastness of the burial-grounds, and the multitude of cypress-trees which grow in them, are due to two very simple causes: first, that every tomb is planted with a cypress; and secondly, that, as a general rule, two bodies are never placed in the same tomb.

The largest of the cemeteries in the neighbourhood of Constantinople is that Scutari, on the Asiatic shore of the Bosphorus. It is a favourite resting-place of the true believer, being on the spot which was his father's before the conquest of European Turkey; added to which consideration, some suggest the apprehension to be lurking in the good Mahomedan's mind of the Crescent being one day driven out of the latter territory; on which event occurring, the true believer, by having taken the precaution of being buried "across the water," will have secured his bones from being disturbed by the hand of infidels. The cemetery at Scutari is indeed a magnificent forest slanting towards the sea; the cypress-trees in it have grown to extraordinary size. It is divided in various parts by alleys running through it, which at every turn present the most picturesque views of sea and land. The grave-stones are all of white marble, which is procured in abundance from the Isle of Marmora; and very quaint and significant are these little memorials in their form and decoration. They are generally truncated pillars; those of the men being crowned with turbans, whose indicates the rank of the deceased; those of the women, if married, being crowned with a rose; if unmarried, with a plain ornament, in shape something like a mushroom. Since the rule abolishing the use of turbans, and establishing the fez as the universal head-dress (except in the case of men past the age of bearing arms), a representation of the fez, by no means so picturesque in form as the turban, now covers the graves of men who have died in the prime and vigour of life. Upon the stone itself is an inscription, in Arabic letters, generally richly gilt, setting forth the name, titles, and merits of the departed—with the addition, very often, of the manner of his death. It is a remarkable feature in the character of the Oriental that punishment brings no disgrace with it—and least of all, capital punishment. We find, therefore, amongst the tombs in and about Constantinople, not a few instances in which the occupant, "of blessed memory," is represented, in rude relief, with his head cut off, or perhaps dangling in the air by a rope. Amongst the Greek and Armenian tombs, such devices are frequent. To return to more agreeable associations: the tomb-stones generally have a little cavity cut in them, destined to receive flowers which the relatives of the deceased from time to time bring as a tribute of affection and respect.

The funeral ceremonies of the Musulmans are marked with great simplicity, but with a gravity which cannot fail of exciting the most solemn emotions. The body having been carefully washed, camphor is sprinkled over the forehead, the knees, the hands, and the feet. It is then wrapped in a white cloth, on which are worked passages from the Koran, and so prepared is deposited at the door of the house, during three or four hours, at the end of which the Imaum (or priest) arrives, sprinkles the corpse with holy water, and prepares to conduct it to the place of sepulture. Thither it is borne by the friends of the family, assisted sometimes by hired bearers, sometimes by strangers, who look upon this pious duty as an act of expiation of great virtue. The funeral cortège is composed only of men; but sometimes women, who are paid for the purpose, attend at the grave to weep for the deceased—a practice evidently adopted by the Musulmans from the ancient Greeks and Romans. The body being thus brought to the grave, the Imaum places it upon its side, with the face turned towards Mecca, and then, standing at a little distance from it, recites the following articles of belief in a sonorous voice:—

I believe in one only all-powerful God, and I adore him only. I believe that Mahomet is the messenger of Allah upon earth, and the prophet of prophets. I believe, also, that Ali is the true chief of the Faithful; that this earth belongs to him, and that all true believers owe obedience to him, &c.

Then addressing the defunct, he says:—

Know well that Allah, whom we adore, is great and glorious; that he alone is the most high and powerful God that exists; and that there is nothing that is above him. Know well, also, that Mahomet is the greatest of all the prophets, and the best-beloved of all the messengers of God; that Ali and his successors are the sole and veritable guides of all good believers, and that all that comes from him, as also from the prophets, is the truth; that death is truth; and that the visits which the Mouiker and Nékir—the two angels of darkness and the messengers of Allah—are about to make to you are truth also; that the heaven and the earth exist; that hell and the day of judgment are truth also. Have thou the most implicit belief in all these things, for they are all true. And now may Allah thy master—Allah, great and glorious, who will come one day to raise all the dead from their graves—be good and merciful to you; may he listen favourably to your prayers, and lead you into the way of salvation. May he grant to thee the blessing of drawing near unto his Divine presence, and to the prophets; and may his grace be ever with thee. Amen.

The Imaum then withdraws some paces from the grave, and exclaims with a loud voice, "Approach, Mounkir and Nekir, approach! Here is a true believer. Come! He waits for you." Again approaching the side of the grave, he concludes with a short prayer:—"Great and glorious God, we humbly pray thee that the earth may press lightly upon thy servant; and may he find grace and mercy at thy hands. Amen."

Amongst the cemeteries on the European side, that of the Champs des Morts, at Pera, is appropriated to Greeks, Armenians, and Franks. It is very prettily situated, on a declivity, with the Golden Horn and its gay shipping forming a glittering vista underneath, and is, consequently, the favourite promenade of the fashionable world of the district.

THE GREEK CHURCH OF BALUKLI.—SPRING OF THE MIRACULOUS FISHES.

About half a mile beyond the walls on the side of the Castle of the Seven Towers, is the Greek church of Baluk li, a very handsome specimen of Byzantine architecture. It is remarkable, also, as having in connection with it a spring of holy water, which is said to effect miraculous cures of all sorts of diseases, mental and bodily. It is called the Spring of the Miraculous Fishes; and whether it be the water or the fishes that effect the cure is not quite clear. Curiosity it is that when we visited the chapel (S—— being anxious to make a drawing of the interior), the curative process was in full play. The first thing that startled us was the wild screaming and laughter of a female, which echoed through the Chapel, and attracted us to the spot whence the sound issued, which we found to proceed from a young female lunatic, who was being exorcised. The well is approached by means of steps. Here come the lame, the blind, the deaf; those afflicted with disease, of almost every kind, who, for the payment of a few paras, test the virtues of the Miraculous Spring. We drank of the water, which, thirsty as we were after a long ride, tasted very cool and agreeable.

POLICE STATION IN A PASS ON THE BALKAN RANGE.

Through the kindness of a gentleman who has recently returned from exploring the Balkan Range, I am enabled to give an interesting Sketch in one of the grandest defiles of those mountains, and which will well serve to illustrate the wild character of that country.

The Police Station, or in Turkish *Zaptiéh*, of Gabrova, is picturesquely situated on a precipitous rock, overhanging the deep gorge in the Balkan Mountains, through which the ample waters of the Maritza force their way, in tempestuous torrents, to the great plains of Thrace, which commence at a short distance from this place. In a military view, this pass is of much importance, being the only course by which the great plains of Thrace can be approached by an army from the north-west. There are no military works on any of the numerous heights which command this gorge; but with very little trouble indeed, the engineer could render the passage of any army, however strong, quite impracticable.

SLAVERY IN TURKEY.—THE SLAVE-MARKET—THE PALACE. A DISCURSIVE CHAPTER.

Nobody goes to Constantinople without thinking about slavery, and inquiring for the slave market, a subject which has afforded opportunity for so much fine writing—descriptive, moral, and sentimental—to Oriental travellers in all time. Slavery still exists, in high and low places, as of yore; but the slave-market has been abolished; so that the prying eye of European tourists will no longer be shocked and edified with the open trafficing in human flesh. An Imperial ordinance, issued about the close of the year 1846, put the final stop to the system, which, however, had long previously been falling into comparative desuetude, from the very deficiency of the material dealt in. The number of slaves in Turkey has been falling off for a long time past. One principal cause of this is, that the supplies which used in early times to be obtained as the fruit of wars, are wanting. Moreover, the contributions in the way of private commerce are more rare, owing, as we are led to hope, to a change for the better, in manners and feeling; but more probably to the increasing poverty of the mass of the community, which renders a slave a luxury beyond their means. Slaves, however, are still bought and sold by private contract in Constantinople. The "houses of call" for the Nubian domestic slaves are somewhere near the Hippodrome, and the Mosque of Sultan Achmet; the fair Circassians are to be purchased in the neighborhood of Egripian at Tophana. The price of slaves varies, according to age and other circumstances, from 3000 to 5000 piasters (say £25 to £40) for a male child, and from 30 00 to 100,000 piasters (£25 to £800) for a female.

The condition of the Turkish slave is very different to that which one ordinarily attaches to the notion of a state of slavery—a state in which one human being is entirely and unreservedly given up to the will and caprice of another; very different from the slavery of ancient Rome and Greece, where life and limb were at the master's bidding—very different from the slavery now existing in America—very, very different from the serfdom of Christian and civilising Russia. From the earliest time he has enjoyed certain constitutional rights, varying according to circumstances, and the class of slavery to which he belonged. The slave's life is sacred; he is even protected from corporal punishment, except in moderation and under rare circumstances; finally, he may not be worked beyond his strength, and he may not be starved nor tortured to death, so that, even when misbehaving himself, he is not so badly treated as the unfortunate misdemeanants in our Birmingham gaol—to say nothing of the union-houses.

The domestic slave, in a word, is on an equal footing with the other servants in a family, and is often a great favourite with his master, and the whole family. The master generally employs the best-looking and most amusing or intelligent of his slaves about his person, in some confidential or ornamental office—as secretary, or pipe-bearer; and sometimes, if the slave have a talent for making himself amusing by his singing or dancing, he rises high in estimation, and grows rich with *backsheesh* thrown to him by his master and his master's guests. In many cases, the master, finding the slave more faithful, more zealous, and generally more enterprising than Hirelings, entrusts him with the keys of his counting house to carry on business on his account; in others, he will lend him money to traffic in a sort of joint speculation. In all such cases—and they are of frequent occurrence—the slave arises with his master's fortunes; and, if the latter be a Pacha, or a man of note and advancement, comes himself at last into posts of dignity and profit—for the plunder in high places is enormous. All these circumstances tend to the spoiling of slaves; and, indeed, from all accounts, high and low, they are much more impudent than any other class of persons. Turkish gentlemen themselves have told me that this is their character; and one, pointing after his pipe-bearer, who had just left the room, said that he was the proudest rascal in existence; so much so, that though he condescended to carry his master's pipe and smoking apparatus amongst Mahomedans, he considered himself humiliated in having to do so before a Christian. Both male and female, these saucy Nubian slaves are much more vindictive against Christians than their masters.

It may seem a strange leap to take from the slave-market and the seclusion of the palace and the council of State; but it is a very straight and very plain road. Under the good old system, the Sultan always conducted the affairs of State through the medium of his own slaves—elevating those whom he found to be of ability sufficient to the posts of Grand Visier, Capitan Pacha, Mushir this, Bey t'other, &c. One very convenient consequence of this arrangement was, that his Highness could, upon occasions of political trouble, propitiate the popular favour by cutting off a few of the "heads of the State" (under the pretence, doubtless, of their having been guilty of treason) appropriating, at the same time, half their property to the uses of the Imperial treasury, which he could not so easily do with free Turks. These very awkward privileges have, however, by a recent ordounance, been taken away from the Sovereign; and deceased Pachas are allowed to wear their heads after they have ceased to be of use to any one but their owners: and also to enjoy the fruits of their plunder after quitting office. Another use to which the Sultans put their slaves (the good-looking ones, I presume) is to marry them to their daughters—the Sultanas, as they are all called; by which process the fortunate slave-Mushir or Pacha becomes entitled to the style and dignity of Highness. The four daughters of the late Sultan Mahmoud were thus disposed of; though one only survives—Adlif-Sultana, married, in 1845, to Mehemet Ali Pacha, formerly favourite of his late father-in-law, Mahmoud, and now Minister of War. But "all is not gold that glitters." The position of the favourite Pacha, who becomes the consort of a daughter of the Imperial house of Othman, is a very anomalous one. Though entrusted with the dest nies of millions, and having thousands of underlings at his beck and call, his own fate is not altered—he is still a slave—the slave of a woman, and that woman his own wife. He is by no means master of his own house, nor of his own acts: his wife (herself the daughter of a slave) never cedes her Imperial dignity; and in all respects is the head of the establishment. The miserable Pacha who has been bound to her by the ties of wedlock treats her on all occasions as his superior; never presumes to enter her presence without permission, and then bobs and bows with all the ceremonious respect due to her rank, as any lord in waiting would do. His conduct is subject to her will; and through her, to that of his Imperial master: his secrets are in her hands, to be retailed, either against or for him when and where it may be found convenient. So that the Pacha-Consort is always in a sort of false position, and leads,

* Halil Pacha, the brother-in-law of the present Sultan, was born as a slave by Khosrei Pacha (ex-Serasikier), who was himself a Georgian slave.

from beginning to end, an artificial life—a life of restraint and appearances. And such as this miserable domestic position is, he must contemplate himself with it "for the term of his natural life" he can look forward to no change "for better or worse," except widowhood, which with him however, must be perpetual. The marital law—so lax and easy with regard to others in Turkey—is stringent with him: once married to a Sultana, he may have no other wife, even after she is taken from him—he can never marry a second time. This is actually the case with three distinguished and worthy Pachas at the present moment.

Whilst jotting off the foregoing observations, I happened to take up a recent number of the *Courrier de Constantinople* (Aug. 10, 1853), where is a paragraph, the terms of which strikingly illustrate the sort of position a Pacha-Consort occupies as a member of the Sultana's court in the public estimation. It is an announcement of a celebration which takes place in the families of the great on the occasion of the juvenile members commencing their studies: what the nature or extent of those studies may be is not explained, but they probably are chiefly limited to the contents of the Koran, and the religious duties enjoined by it.

The "Court newsman" of the *Constantinople Courrier* writes a follows:—"On Monday the children of her Imperial Highness the Sultana, wife of his Highness Mahomed Ali Pacha, Minister of War, commenced their studies. His Majesty the Sultan deigned to honour with his presence this touching ceremony, and to join his prayers with those numerous other assistants for the happiness of the new pupils." He then goes on to speak of the crowd which thronged the apartments and the neighbouring streets, and how "several ladies of all religions had the honour of being presented to her Imperial Highness the Sultana, who received them, as well as the company generally, in the most gracious and flattering manner;" but says not one word of poor Mahomed Ali Pacha, the father of these interesting children, who probably was not even invited to the ceremonials and rejoicings, of which they were the heroines—heroines I say; for, though it is not so stated, the new pupils were doubtless females only. The Pacha-Consort has no *son* to bless his name!

This brings me to consider of graver evils than that of mere domestic disorganisation and discomfort, which are to be charged against the fatal policy which regulates the relations of the Imperial family. The horrible system of infanticide and assassination, as regards the male descendants of the Sultan, which has prevailed at all times, with the object of confining the heritable blood to a single stock, and which positively left the late Sultan Mahmoud (after he had murdered his brother) with no male male representative of the family; this cruel and disgusting practice is not yet extinct, though arbitrary blood-shedding, under all other circumstances, is strictly prohibited by the new code of laws; and blood-shedding generally is said to be very distasteful to the reigning Sultan. The Imperial Cemetery of Eyoub, if the stones could speak, would reveal many a dark deed of blood, which the whole of the criminal annals of Europe could not surpass in atrocity; but one of such stories shall suffice:—

One of the Sultanas—one of the daughters of the late, and sisters of the present, Sultan, was early in life married to Halil Pacha, and became the mother of a son, which, contrary to the usual practice, was suffered to live, and to remain in the house of his birth till he grew up to an age when children became most interesting, repaying with their smiles and intelligent conduct the cares of maternity. The poor little creature was beloved, admired by all; and was, of course, the pride and darling of his mother, who looked forward with something of the exulting feelings of the Roman matron at the privilege accorded to her of rearing a man-child to the service of the state. But her hopes were doomed to disappointment! The weakness of her womanly nature had been encouraged for awhile, only to be bitterly betrayed. One dismal day her only son was removed from her, under pretence of being taken elsewhere, for his education. He was heard of no more alive! He had fallen a sacrifice to the necessities of the state! The mother, distracted with grief, declared that she would live for ever apart from her husband; that she might run no chance of bringing more children into the world for the hand of the butcher. In this resolve she persisted for some time with firmness, in spite of all remonstrance; but, at length, upon the solemn assurance that her future offspring, even though males, should be spared to her, she consented to return to her husband; and, in course of time, became again the mother—of a son. Still confiding and trusting to the promise which had been made to her, but more than doubting the fidelity of the myrmidons by whom she was surrounded, she had already determined never to let that child out of her sight, even for an instant; and, at the very moment of its birth, received it into her arms—which yet encircled it when, worn out with agitation and fatigue, she fell asleep. Can a more hallowed—a more touching picture be imagined than that of this unhappy woman, battling in the midst of all her pain against the horrid destiny of her race? One would have thought that it might have moved even the slavish assassins of the Seraglio from their purpose. But no: when she awoke, the child was gone; and no her passionate appeals—her wild inquiries as to his fate—all was gloomy silence. Very shortly afterwards, this hapless daughter of the Osmanli died also—of a broken heart! Three tombs in the Imperial cemetery of Eyoub commemorate, in gilded mockery, this dark and hideous story; which, no doubt, is but one of many similar, if history cared to tell them.

The Sultan's brother lives; but leads a life of seclusion and restraint. Surrounded by spies, without a single individual bold enough to treat him as a friend (for to be seen speaking to him would be ground of sufficient whereon with the ill-disposed to raise suspicion)—indulged freely in all the enervating and debasing pleasures of the harem his condition is one of moral death. Although the times, probably, are past away, and for ever, when a prince in his position might be made the pivot and the puppet-hero of a dynastic revolution; the malicious habit of thought, which gave origin to such occurrences in former days, is not altogether extinct; and there have been occasions of discontent in which, if no conspiracy has existed for a revolutionary movement in his favour, the notion of the possibility of some such movement has been darkly suggested by the lovers of the marvellous and the mischievous. Indeed, whilst these very lines are passing through the press, there appears a leader in the *Times* suggesting this very idea, as being rife in Constantinople; reckless of the horrible consequences which might follow upon such an announcement, if believed.

What a melancholy picture does all this present of the fate of Royalty in a despotic state, demoralised and enfeebled in all its functions by habitual abuse and mismanagement. The Sultan himself, living in a splendid solitude, debarred the common sympathies of humanity even with a brother; and the author of a numerous family, upon whom nothing is entailed but the old family heritage of mutual strife, suspicion, common misery, and disquiet. How can such a state of things last? How can a Government continue strong; much less how can, a weakened Government move with its lost strength, when the head of the state constantly breathes an atmosphere of falsehood, and acts through agents whose integrity and motives he more than suspects, but whose power he cannot control? There is no doubt that the present Sultan is, as Sultans go, a very amiable, well-disposed man; who has a great horror of bloodshed—a great love of peace and quietness; and, above all, has, in some and refined ideas touching the promotion of the happiness of his people sincerely at heart. But the honest emotions of his heart are effectually smothered beneath the trammels of a selfish Court with which he is bound to the earth as with bonds of iron. Every European Monarch, except the Sultan of Turkey, knows some trustworthy, or supposed trustworthy, individual, to whose sympathy and counsel he may have recourse in time of trouble and of difficulty. The Sultan has none. He is the centre of a Court, the several members of which live neither for him nor for his people, but for themselves, and at the expense of both. With him, in the various departments of state, one Pacha succeeds another; each Pacha in his day making the most of the hour of sunshine—appointing hungry dependants to place here, and there, and laying up store for the day of tribulation and disgrace, which is sure to come upon him sooner or later; and every Pachas, as he comes into office, discovers that the Pacha whom he has displaced was the very arrantest rogue that ever gave employment to bow-string. Formerly these denunciations used to be enforced by the summary bow-stringing or decapitation of the peccant ex-minister; whilst a large portion of his property, the fruit of his plunder, was restored to the public treasury; and so the country was rid of one at least of its tormentors and blood-suckers for ever. But this stern justice has, by universal consent of the whole fraternity of Pachas, of late been abolished, as inconvenient and an extravagant and unprofitable waste of life; and the consequence is, that the circle of Pachas is more numerous, and goes round more merrily than ever—the cost of their entertainment in and out of office being proportionately increased.

The foregoing observations are no exaggeration of the actual state of things they refer to in this unhappy country, under its well-meaning, but, unfortunately, powerless ruler. The constitutional and financial reforms which have been effected (theoretically) are numerous, and of the highest importance and merit; but hitherto the attempt to carry them out has proved vain and hopeless.

SKETCH OF THE HISTORY OF THE OTTOMAN EMPIRE,

FROM THE END OF THE SEVENTEENTH CENTURY TO THE PRESENT TIME.

GENERAL REVIEW OF THE SUBJECT

The Ottoman Empire—whose position in Europe was asserted and secured by the conquest of Constantinople, in 1453, by Mahomed II.—arrived at its utmost pitch of greatness and splendour under his great grandson, Suliman the Great, who died in 1566. A little more than one century sufficed for the mature growth of this power, which, in its advances, had excited so much terror and hostility amongst the whole family of Christian Princes. An idea may be formed of the consideration in which, politically, it was then held—in that day even, when the memory of the Crusades was rife, and religious wars amongst themselves was a sort of mania with the Christian nations of Europe—from the fact that Francis I., the "Most Catholic" entered into a treaty of amity with Suliman the Great; and that one of the articles of this treaty contained a special provision for the admission of the Pope to the league. The object of this alliance was to oppose the growing power of Austria, under Charles V.; and one of the first fruits of it was the co-operation of the Turkish and French fleets against Nice.

The acquisitions of territory made to the Turkish Empire under Suliman the Great included the island of Rhodes—taken from the Knights of St. John; a large portion of Hungary; and the Provinces of Moldavia and Wallachia, whose princes became vassals and tributaries to the Porte. Suliman falled, however, in his attempt against Malta—thanks to the brave resistance of the Knights of St. John, and the timely arrival of the Sicilian fleet. This defeat occurred in 1565. In the following year Suliman died; and from that period dates the commencement of the decline of the Ottoman power, which has ever since continued, with hardly an incident of reaction.

The secret of this decline, whatever be the conflicting sentiments with which it may be viewed on grounds of policy, may be well understood. A power formed only by the sword—fed only by plunder—cannot last for ever; there must be a limit to conquest when all the world is arrayed against the common enemy; and, consequently, a stoppage of the supplies derived by such means. And if, in the interval, no care has been taken to improve the internal resources of the acquired states, by the encouragement of industry and the inculcation of principles of sound morality; if no steps have been made to reconcile the animosities of surrounding states—holding out inducements to commerce in place of the wasteful excitement of war, that state must gradually fall from internal weakness—its outworks sinking beneath the resistless tide of public enterprise and national ambition. And has not all this been the case with Turkey under the successive representatives of the house of Othman for now nearly three centuries? The descendants of Amurat, the conqueror of Adrianople (1363); of Bajazet, surnamed the Thunderbolt; of Mahomed II., the conqueror of Constantinople (1453); of Suliman, surnamed the Great, and who raised the naval force of Turkey to a scale of greatness, the admiration of Europe—have laid aside the sword of their barbarian ancestors; but, having so done, have done nothing else worthy of note, or serviceable to their country. Abandoning themselves to pleasure, enclosing themselves within the walls of the harem, they consigned the destinies of the state, the whole conduct of their armies, to the Grand Vizier of the day—the internal government of the several provinces of the Empire being assigned as legitimate means of plunder to Pachas, and a whole host of inferior officials. Under this selfish and flagitious system, the whole Mussulman population continued to groan and waste from generation to generation. Denied the fruit of their labours, ground down with taxation, which barely left them the means of subsistence; the miserable inhabitants of Roumelia and Anatolia found little occasion for self-gratulation in the remembrance of the splendid conquests of Amurat, of Mahomed II., and of Suliman; little occasion, also, had they to thank the wisdom of their successors; and would probably have revolted against them long ago, but for the fanatic creed in which they are educated, which teaches them to venerate the person of their Sultan, or Padishah, as the "shadow of God," and the representative of the Prophet on earth. Bigoted, ignorant, helpless as children, the Turkish populace, wrapped in absurd and insolent conviction of their superiority over all other people on earth; believing that their Sultan is the impersonation of all mundane power and goodness, have suffered much and long, patiently, to supply the inexorable demands of successive task-masters, parasites of their supreme ruler upon earth. And when at length their sufferings or their discontent have exceeded the bounds of endurance, they have been quite satisfied with wreaking their vengeance upon whoever might happen to be the minion of the day, without the slightest regard to the secret causes of his misdoing, or the smallest attempt to provide securities against similar abuses for the future; whilst the Sultan has generally been too ready to accept this solution of all difficulties, which not only served to dissipate the popular wrath for the time being, but made him always appear as the divine exponent of public vengeance.

Whilst effeminate luxury reigned within the palace, and endless abuses sapped the vital principle in the domestic concerns of the Empire, its military character and institutions, by which the conquests and the redoubtable name of the Crescent had been achieved, were debased in common with the rest. The military feudatories, spoiled by habitual genius, shared the slothful character of their supreme head, and no longer, as of old, attended in person, with their stipulated contingents, under their respective flags—paying a small indemnity, at the rate of fifty piasters a head, in lieu. It was in vain that, after the disastrous war which was terminated by the treaty of Kainardje (1776), Sultan Abdul Hamed issued a severe edict for the re-organisation of the *dyhelis* upon the original footing; the clamours of the proprietors of the military fiefs against the fulfilment of the condition upon which they held their properties was so great, that the Government were obliged to give way, and to submit for all time to what was no other than a wholesale public robbery.

In connection with these preliminary observations it, becomes necessary to take a review of the origin and history of that remarkable body of men, who, in the time of the ascendancy of the Ottoman empire, formed its greatness and its right arm of strength, but in the time of its weakness became only an internal enemy—we mean the Janissaries. Gibbon thus succinctly describes the first proud creation and subsequent degeneracy of this corps:—

Amurath the First marched against the Sclavonian nations between the Danube and the Adriatic, the Bulgarians, Servians, Bosnians, and Albanians; and these warlike tribes, who had so often insulted the majesty of the empire, were repeatedly broken by his destructive inroads. Their countries did not abound either in gold or silver; nor were their rustic hamlets and townships enriched by commerce, or decorated by the arts of luxury. But the natives of the soil have been distinguished in every age by their hardiness of mind and body; and they were converted by a prudent institution into the firmest and most faithful supporters of the Ottoman greatness. The Vizier of Amurath reminded his Sovereign, that, according to the Mahometan law, he was entitled to a fifth part of the spoil and captives: and that the fifth might easily be levied if vigilant officers were stationed at Gallipoli, to watch the passage, and to select for his use the stoutest and most beautiful of the Christian youth. The advice was followed; the edict was proclaimed, many thousands of the European captives were educated in religion and arms; and the new militia was consecrated and named by a celebrated dervish (Hadji-Bektash, so frequently mentioned). Standing in the front of their ranks, he stretched the sleeve of his gown over the head of the foremost soldier, and his blessing was delivered in these words: "Let them be called Janissaries (*yenghi cheri*, or new soldiers); may their countenances be ever bright! their hand ever victorious! their sword keen! may their spears always hang over the heads of their enemies; and wheresoever they go, may they return with a *white face!*" Such was the origin of these haughty troops, the terror of the nations, and sometimes of the Sultans themselves. Their valour has declined, their discipline is relaxed, and their tumultuary array is incapable of contending with the order and weapons of modern tactics; but at the time of their institution they possessed a decisive superiority in war, since a regular body of infantry, in constant exercise and pay, was not maintained by any of the princes of Christendom

FROM THE TREATY OF CARLOWITZ TO THE TIME OF CATHARINE II.

To resume the current of history, Turkey, under the descendants of Suliman, received its first severe check from the brave John Sobieski, who, for his brilliant victory at Choczim, was elected to the throne of Poland. The first act of his reign was to relieve (by the treaty of Zurano, 1676) his new subjects from the tribute which they had hitherto paid to the Porte; and, shortly afterwards, he entered into an alliance with Austria against that troublesome state. And nobly he fulfilled the intentions of this alliance by coming to the rescue, and routing the Ottoman army before Vienna (Sept. 12, 1683), when that city, after a siege of two months, was at the point of surrendering to the implacable enemies of Christendom. The Porte never recovered from the effects of this terrible defeat. In 1685-6 it was driven out of Hungary—Buda, the capital, being taken by assault in the latter year; and in 1687 occurred the important victory of Mohawks, which placed Transylvania and Slavonia under the dominion of the house of Austria. Other and important reverses to the Turkish arms quickly followed, and in 1699 the treaty of Carlowitz was signed, by which the Marosch, Theiss, the Save, and the Unna, were fixed as the boundary between the Austrian and Turkish empires. From the date of this treaty the star of Osmanli, heretofore so redoubtable in the field, continued on one rapid course of decline, though with occasional periods of reaction of brief duration.

In a word, the star of the Osmanli, heretofore so redoubtable in the field, was already on the decline. It may be interesting to note some of the fluctuations which marked its subsequent downward progress. In 1718, after the defeat of the Turkish army at Belgrade, came the treaty of Passarowitz, by which Austria obtained Temeswar, Orsova, and Belgrade, with the part of Wallachia situated on this side of the river Aluta, as well as the principality of Servia, according to certain defined limits, and the two banks of the Save, between the Dwina and the Unna. These cessions, however, together with all of those stipulated in the treaty of Passarowitz with the exception of the branch of Temeswar, were subsequently lost by the treaty of Belgrade (1739), which ignominiously closed a campaign which Austria had the imprudence to engage in against the Turks in concert with Russia.

It becomes necessary to take especial notice, meantime, of a new power, which had already begun to develop itself in Europe. Peter the Great succeeding to the throne of Russia at the age of ten, and assuming the reins of government seven years afterwards, began to cast his eyes to the south for new acquisitions which should give vitality to his huge territory, hitherto cramped in its external relations, and entitle it to a distinguished rank amongst the states of Europe. The town and port of Azoff was his first conquest, in 1696; a conquest confirmed by treaty, in 1700; and although, in consequence of subsequent reverses, he had to give it up again in 1711, it was only resigned for a period, and may therefore be pointed to as marking the scene of the first manifestation of Russian policy against the territories of the Porte. In 1739, the Russians, under the Empress Anne, again took Azoff, and penetrated into the Crimea; but, owing, as alleged, to sickness breaking out amongst them, were unable to maintain their position. By the treaty of Belgrade, already mentioned, Russia restored all her conquests; Azoff was ordered to be dismantled; the boundaries of the two states were more precisely defined; Russia was interdicted from constructing a fleet or vessels of any kind on the Black Sea. Further, by this treaty—which, as regarded the Porte and Russia, was declared to be perpetual—the former acknowledged the title of Emperor assumed by the ruler of the latter state.

The treaty of Belgrade had but just given promise of repose to the states of Europe, when the death of the Emperor Charles VI., in 1740, led to the War of Succession, through which Maria Theresa struggled against such fearful odds for her rights to the throne of her ancestors. In this struggle she was nobly supported by her brave Hungarians; whilst the Sultan of the Turks not only maintained a strict neutrality, but, at the onset of the difficulty, addressed a letter to the Sovereigns of Europe, in which he exhorted them to the maintenance of peace, and offered to mediate between the contending parties—an offer which was not accepted. There is something so touching, however, in the simple eloquence of this unhappily unsuccessful appeal, written by the Grand Vizier in the name of the Sultan, that some passages are worthy of being preserved to all time. It happens also that they are remarkably applicable to the present moment.

"What feeling heart, what child of humanity," exclaims the Mahomedan peace-monitor, "does not tremble at thought of all the woes which accompany war? Rivulets of blood flow through the fields; the victors are not spared any more than the conquered by the Angel of Death. Hideous contagious maladies follow the footsteps of the combatants: attack them, overthrow them, devour them, even in the arms of victory, and consign them at length to the ignoble pit, where death confounds them and levels them with the beasts of the field; and it is thus that she punishes degraded man for having, in his ungovernable fury, imitated the ferocity of the brute creation.

"The frightful Genius of Evil, in sending forth the cry of war, dissevers with its flaming sword the bonds of nations. Commerce between brothers is now at an end. The right of the strongest has again become the code of the children of Adam: upon whose brazen tablet the blood or the tears of its victims attest, that every virtue has experienced outrage; that weakness has met with its destroyer, innocence its oppressor, and modesty its sacrilege. It is in order to prevent the recurrence of so many crimes and miseries, it is towards the fulfilment of the commands of heaven, that my sublime Emperor, who is no other than the shadow of Allah upon the earth, invites the Christian Princes to become reconciled amongst themselves, and offers his powerful mediation."

THE CONQUESTS OF CATHARINE II.—ASSASSINATION OF SELIM III.

After the lapse of a century from the signing of the treaty of Belgrade, during which period Turkey, in the enjoyment of the blessings of peace, had attempted some internal reforms, new symptoms of disquiet occurred, which were shortly afterwards followed up by actual

PANORAMIC VIEW OF CONSTANTINOPLE, FROM THE TOWER OF GAL

DRAWN BY BIRKET FOSTER, FROM A SKETCH BY S. READ.

hostilities on the part of her old enemy, Russia. Catharine II. had ascended the throne of the Czars, and inaugurated her reign by invading Poland, under pretence of repressing the Protestant party known as the *dissidents*; and shortly afterwards (1764) placed her favourite Poniatowski upon the throne of that kingdom. The Sultan Mustapha, though irritated and alarmed at these proceedings, was prevented from declaring war by the counsels of the Divan and of the French Ambassador, who were aware of the falling off which had taken place in the martial character of the Janissaries and Sipahis, which rendered them unfit for the duties of a severe campaign. Apart from this consideration, the agitated state of Egypt, and the progress making by the new sect of the Wahabees, who already threatened Mecca, inclined the Sultan to the maintenance of peace if possible. But he was not long left in the indulgence of his pacific views. An invasion of his territory by the Russian Cossacks, in pursuit of a party of Poles, and the indiscriminate massacre of Poles and Mussulmans in the town of Balta, left him without alternative but to unfold the *Sandjak-chérif*, or sacred standard—displayed only when the Sultan himself, or his Grand Vizier, marches at the head of an army. The war which immediately ensued was most disastrous to the Ottoman power. Catharine not only sent her armies to ravage the country along both banks of the Dniester, and along the south bank of the Danube, where (in the campaigns of 1769-70) they took possession of several important places, including Cuczim, Bendar, Kilia, and Ismail—the latter two commanding the mouth of the Danube, and penetrated into the provinces of Moldavia and Wallachia; but sent a powerful fleet also to attack the Turks in the Archipelago, and upon the shores of Greece and the Morea. In the latter expedition she was aided by the English fleet under Admiral Elphinston, and the result of their combined efforts was the total destruction of the Ottoman fleet in the narrow bay of Tchesme—where, after some slight reverses, it had unwisely taken refuge. In the campaign of 1771, the victorious Russians became masters of the Crimea, and of the Island of Taman; and they would, probably, have pushed their conquests further but for two circumstances which fortunately came to the rescue of the Turks, in the first place, the plague had broken out amongst the Russians, and had already penetrated into the interior as far as Moscow; and in the second place, Austria and Prussia viewed with jealousy the movements of the ambitious Czarina, and protested against them; the former Court even signing a convention at Constantinople for the restitution of affairs upon the basis of the treaty of Belgrade.

After fruitless negotiations towards a treaty of peace, Turkey, resisting the terms proposed to her (which included the recognition of the independence of the Cossacks of the Crimea, the cession to Russia of the ports of Jenikale and Kertsch, accompanied by the unlimited right of navigation in all the Turkish waters), hostilities were recommenced in 1774, under Sultan Abdul-Hamed, who had just succeeded to the throne on the death of his brother Mustapha III. The new Sultan was ambitious of military glory, and with an army of 300,000 men looked confidently to wiping out the disgrace of former campaigns. But he was speedily and signally disappointed; the Russians, under Romanzoff crossed the Danube unopposed, the Grand Vizier having established his army as far off as Schumla; and shortly afterwards attacked and routed an army of 28,000 men, who were in charge of a convoy of between 4000 and 5000 waggons destined for the Turkish camp. Confounded by this reverse, the Ottomans were too glad to accept of peace upon almost any terms, and eventually signed the treaty of Kaynardgi (July 21, 1774), so glorious for Russia, and so fatal to the power and independence of the Porte. By this treaty the Porte recognised the independence of the Tartars of the Crimea, of Budjak, and of Kuban; accorded to the Russians the free navigation for merchant vessels of all the Turkish water, and ceded Azof, with its adjacent territory, Kibouran, and other fortresses; and recognised the partition of Poland. On the other hand, Catharine restored Bessarabia, Moldavia, and Wallachia, and the islands in the Archipelago, which her fleets had taken.

Still inexorable in her designs against the Ottoman States, Catharine took every opportunity to foment discontent in the Crimea against the Khan Dewlet-Gherai; and in 1783 seized both upon that province and that of Kuban—a seizure which the Porte was afterwards obliged to recognise. In 1786 the Sultan, yielding to the pressing demands of his subjects, declared war against Russia and Austria, who had entered into an offensive alliance against him; but the reverses which he sustained in the succeeding campaigns were sufficient to break his spirit, and he died of grief in 1789.

Sultan Selim III. renewed the war against his united enemies, but with ill success. In 1790 the important fortress of Ismael was taken by assault, and its defenders cruelly massacred. The spoil was immense, comprising 280 cannons, a large quantity of munitions of war, and treasure of all kinds, which had been removed from Bender, Ackerman, and Kelia-Nova, at the time of the attack upon those towns. The Russians pursued their victorious career; and at length (January, 1792), by the treaty of Yassi, obtained the Crimea, the Isle of Taman, part of Kuban and Bessarabia, and the territory lying between the Bug and the Dniester; which latter river became the boundary between the two empires.

Sultan Selim was busily engaged in amending the condition of his army, and putting it upon a footing of better discipline, when the descent of Bonaparte upon Egypt for a moment turned the tide of affairs, and brought about an alliance between the Porte and the Government of Great Britain and Russia. Amongst the results of this alliance was the taking of Cerigo, Corfu, and other islands and places, from France, and the constitution (March, 1800) of the Ionian Islands into an independent republic under the protection of the Porte, to whom they were to pay a tribute.

Nevertheless, the Ottoman Empire was not in a prosperous or happy condition. Bulgaria and Thrace were overrun by brigands. In Belgrade, the janissaries, irritated at the reforms in course of introduction by the Sultan, had murdered their Pacha, and possessed themselves of the city and citadel. Ali Pacha of Yanina was in open revolt. In Egypt the Mamelukes had assumed unlimited and uncontrolled power, leaving but a nominal authority to the supreme Government; and, in addition to this, the Wahabees, who were now multiplied throughout Arabia, threatened the very existence of the Ottoman possessions in the East, having taken successively Mecca and Medina, which they profaned by murder and pillage. To aggravate these distresses, the Russians, in spite of their friendly alliance, committed many acts of hostility on the frontiers, and supported the Servians, who, under George Petrowitz, had recently declared their independence.

Under these painful circumstances, upon the renewal of hostilities between England and France, upon the rupture of the Treaty of Amiens, the Sultan resolved to maintain a strict neutrality; and in 1804, when the accession of Napoleon Bonaparte to the Imperial title was announced, he hesitated to acknowledge it, and did not, in fact, do so until after the brilliant campaign of the following year, when the recognition was accompanied by presents of unusual richness. In 1806 the Sultan was incited by the French to acts of hostility against the Russians, and proceeded so far as to dismiss the Princes Ipsilanto and Morousi, who were protegés of the latter. He hesitated, however, to declare war. Shortly afterwards England sent an expedition, under Admiral Duckworth, with the intention of compelling the Porte to join in the league against the French; but this expedition was unsuccessful, and retired from the Dardanelles, assailed by a running fire from the batteries, and the execrations of the populace. The result of this attempt to coerce the Sultan in his foreign policy, followed by an abortive attack upon Egypt, was to drive the former to declare war against England, at the same time entering into an alliance with France.

The close of the reign of Selim III., which quickly followed upon the last-named event, was attended with circumstances of horrible atrocity. The Janissaries, breaking out into open revolt against the new military system, and other reforms which this enlightened sovereign had attempted to introduce, surrounded the Seraglio, and cruelly massacred the whole of the Ministers who had taken part in promoting them, as well as the men belonging to the *Nizam-djedid*—the name of the new military corps. This butchery continued during two whole days, and at length the Sultan was induced to consent to the disbanding of what remained of the *Nizam-djedid*. But even this did not satisfy the rebels; the unhappy Selim was deposed and imprisoned by his cousin, Mustapha, who succeeded to the throne. The reign of the latter, however, was but a short and stormy one—barely a twelvemonth in duration. A new revolt being made in favour of the deposed Selim, Mustapha caused him to be strangled in the room where he was confined in the Seraglio; and in a few hours afterwards, being himself deposed, he found himself a prisoner in the very same apartment (July 20th, 1808), his brother, Mahoud II., succeeding to the throne.

MAHMOUD THE SECOND.

Having thus briefly sketched the progress of events from the latter part of the seventeenth down to the commencement of the nineteenth century, and incidentally referred to the causes of the evils internal and external which so long have threatened the integrity of the Ottoman Empire, we shall treat in more detail of the occurrences and policy which marked the long reign of Mahmoud II., the brother of Mustapha, and father of the present Sultan; one of the most remarkable and important in the whole history of this state.

The accession of the new monarch, as had hitherto been but too common on similar occasions in this distracted land, was marked with numerous executions of the partisans in the recent disturbances. Baïraktar-Mustapha-Pacha, who had been the stanch supporter of Selim, and had been the means of inducting Mahmoud II. to the throne, had for a time all the power in his hands, and used it mercilessly. He was a zealous supporter of the reforms attempted to be introduced by the former unhappy monarch, and now about to be resolutely carried out by his successor, who in youth had imbibed his cousin's enlightened ideas. But this proud minister soon aroused the animosity of the Janissaries to a pitch which he was unable to withstand. His house being surrounded at night, and set fire to by his implacable foes—all means of egress debarred to him—he retired to a lofty tower on the premises, accompanied by one of his wives and a faithful eunuch, and there they perished miserably of suffocation. Horrible massacres occurred contemporaneously with this fearful tragedy; and in the end the Janissaries were triumphant, and the leaders of the hated faction exiled. In order to avert future occasion for disturbances of a like kind, and to ensure his possession of the throne, Mahmoud, after some hesitation, yielded to the clamours of the populace, and gave the order for putting to death his brother Mustapha, whose fate excited little sympathy even amongst his own partizans. Sultan Mahmoud, being now the sole representative of the race of Othman, had nothing to fear from the Janissaries, or from the intrigues of traitors; and he immediately set about measures for healing the miseries under which his country had so long groaned. To the brilliant qualities of Selim, however, he added great firmness of character, combined with remarkable wariness, by which he succeeded always in concealing his purpose until the moment came for putting it successfully in execution.

But the state of his foreign relations first engaged his attention. He attempted negotiations for peace with Russia; which, however, were for a long time frustrated by intrigue. In regard to England he was more successful; a treaty of peace was signed with that power 5th January, 1809, in spite of the endeavours of France and Russia to prevent it. The latter circumstance probably hastened the renewal of hostilities on the part of Russia, who commenced the campaign by taking the fortress of Ibrail, and defeating an Ottoman corps near Silistria. On the other hand, the troops of the Porte obtained some advantages over the Servians, who had raised the standard of revolt; and Suliman Pacha, the Governor of Bagdad, who had refused to furnish his contingent of money for the support of the army, and who was, moreover, suspected of being allied with the Wahabees, was declared a rebel, and put to death by the poignard, in spite of the earnest exertions of the English Ambassador to the contrary.

Meantime, in Egypt, a sanguinary scene took place, which foreshadowed an event somewhat similar in its character and consequences to be enacted some time later in European Turkey—namely, the massacre of the ancient military corps of the Mamelukes. This body had frequently made itself troublesome to the government, by whom it was always looked upon with more or less suspicion. Mehemet Ali Pacha resolved to free himself from them, and by an act of treachery (early in 1811), after inviting them to Alexandria to make arrangements for a war against the Wahabees, caused them all to be slaughtered; those who hesitated to obey the summons being despatched by the governors of the various provinces in which they happened to be. The Sultan approved of this cruel step, and probably had already made up his mind to imitate it in regard to his own troublesome militia, the Janissaries.

At length, the declaration of war by Napoleon against Russia, induced the latter power to desire peace with Turkey; and on the 28th May, 1812, the treaty of Bucharest was signed, which again advanced the Russian frontier at the expense of the territory of the Porte: the Pruth was henceforth to be the boundary of the former empire in the East, whilst to the south she was to have the mouths of the Danube, with part of Moldavia and Bessarabia. The Servians, under Czerni-George, a chief equally renowned for his courage and his cruelty, were still in revolt against the Sultan, who, taking advantage of the comparative leisure afforded him by the peace concluded with his ancient enemy to the north, and some signal successes obtained over the Wahabees in Upper Egypt, resolved upon reducing his rebellious subjects to obedience. Belgrade, and other principal towns, were speedily taken, and the Servian army put to flight. Czerni-George took refuge in Russia, where the Emperor Alexander conferred upon him the rank of general, and the order of Saint Anne. Some years afterwards, venturing to return incognito into Servia, doubtless with the view of organizing some new revolt, he was discovered and put to death.

THE GREEK REVOLUTION.

On the restoration of the Bourbons, in 1814-15, Mahmoud, who had all along resisted the advances of Napoleon Bonaparte towards an alliance, hastened to offer his congratulations to the legitimate dynasty. The expedition under Lord Exmouth against the Algerines occasioned some little anxiety to the Porte, who, however, upon being informed of the merits of the case, refused to protect his vassal against a well-merited chastisement. In 1819 the Porte recognised the independence of the Ionian Islands under the protectorate of England, receiving in exchange Parga, which was delivered over to the government of Ali Pacha of Yanina. The Parganites, however, dreading the rule of the terrible Ali, almost to a soul abandoned their homes, and took refuge in the islands of Corfu and Paxo. Ali, shortly afterwards throwing off the mask, declared himself independent, and prepared to resist the arms of the Porte,* at the same time inducing the Greeks, who had long groaned under the yoke of the Turks, to revolt. It was in March, 1821, that the proclamations of Alexander Ipsilanti, son of a famous Hospodar, of Moldavia, acting in conjunction with Prince Michel Sazzo, appeared, calling upon the Hellenic population to fight for their liberties, and promising them the support of the Emperor of Russia; and in a few weeks the insurrection broke out simultaneously in various parts, from Wallachia to the Morea.

It is not our purpose now to go into the particulars of the protracted war which ensued between the Greeks and the Turks, and which for eight years engaged the almost undivided attention of Europe, and enlisted the sympathies and active co-operation of some of the most distinguished men of the age. We willingly abstain from withdrawing the curtain from the terrible incidents which marked almost every step of that fierce struggle, content to consider them as things entirely of the past, now that the cause in which they were enacted has been happily settled in the acknowledgment of the independence of the Greek nation, under the protectorate of the three allied powers—England, France, and Russia (Sept. 1829). The struggle itself, however, was attended by two events, directly attributable to it, too important in their consequences to the fortunes and policy of the Ottoman empire to be passed over unnoticed: namely, to the massacre of the Janissaries by order of the Sultan (June, 1826), and the destruction of the Turko-Egyptian fleet at Navarino (Sept. 1827).

We shall treat of the latter event first, and slightly, because it was single in its conduct, and because men's minds are almost unanimous as to the light in which they view the policy, or fatuity, which led to it. It is but too true that, in our generous enthusiasm on behalf of a people of historic fame, struggling for redemption from the chains of an heretic oppressor, we were on that occasion led to commit an unnecessary—not to say ruthless—act against an essential arm of a power in all general matters in amity with us, and whose integrity as an empire we had the strongest reasons to wish to see maintained. This was so strongly felt at the time of the occurrence, that even in the midst of the empty and delusive triumphs which attended a so-called victory, that victory was significantly spoken of in the highest quarters as an "untoward event."

The particulars of this event are briefly as follows:—In September, 1827, in pursuance of a treaty signed in the July preceding between the three powers for settling the affairs of Greece, the combined fleets of England (under Admiral Codrington) and France (under Admiral de Rigny) appeared before Navarino, where the Turko-Egyptian fleet was at anchor, and informed Ibrahim Pacha that they had orders to prevent the sailing of the latter to take part in the operations against the Greeks. A provisional convention was thereupon concluded, by which the Egyptian commander pledged his honour not to attempt to sail until he had communicated with the Sultan, his master, and received his instructions. Satisfied with this assurance, the English and French fleets quitted their position with a view of procuring provisions—the English at Zante, the French at Milo; but they had hardly got out of sight, when two divisions of the Egyptian fleet were perceived emerging from the port. Being informed of this proceeding, the two Admirals returned under press of canvas, and were immediately joined by the Russian fleet under Vice-Admiral de Heyden. Then it was that the blunder was committed; which we, have never ceased to regret; and the consequences of which, to this day, Turkey, assisted by English and American talent, has been labouring to repair. Instead of continuing to blockade the port of Navarino from the outside, which the combined fleet were quite in sufficient force to do, and which was all that was required to be done in aid of the purposes of the treaty of July—since it was not a war of aggression or retaliation that we were engaged in, but simply a measure of inducement or coercion towards a certain line of policy—instead of acting with the moderation befitting the occasion, it was decided that the combined fleet should take up a position within the harbour of Navarino, "in order," to use the words of a contemporary historian, "to renew to Ibrahim Pacha the propositions which had been already made to him." The result is well known: the combined fleets, led by Admiral Codrington, entered the harbour, and being resisted by the Musulman fleet consisting of upwards of sixty sail, utterly destroyed the latter, with the exception of about twenty brigs and corvettes, which were abandoned by their respective crews.

MASSACRE OF THE JANISSARIES, 1826.

It was after the dearly-bought capture of Missolonghi (April 22, 1826), while yet the heads and ears of its conquered defenders were being paraded through the streets of Constantinople amidst the frenzied delight of the whole populace, that Sultan Mahmoud warned by the terrible resistance which had been offered by the Greeks, could not conceal from himself the superiority of their disciplined valour over the brute force of his own troops. He resolved at once to put into execution a plan which he had long cherished, and which he had imbibed from the counsels of his unfortunate cousin Selim, to remedy this inherent evil in his state—the secret of so many disasters, and, at the same time, to rid himself of a force which, next to useless in the field, was a constant source of terror at home—he resolved upon nothing less than a complete alteration of the military system, and the adoption in his army, and more especially amongst the Janissaries, of the European school of tactics and discipline. After consulting the highest functionaries of the state, and securing the concurrence of the principal officers of the Janissaries, he convoked a general assembly of the Muftis. Here the Grand Vizier pronounced a discourse in which he deplored the state of insubordination, moral weakness, and ignorance into which the Janissaries had fallen; and called for the counsels of those assembled towards the amelioration of an evil which threatened the very ruin of the Empire of Othman. In reply, the opinion was unanimous as to the necessity for reform; and the chiefs of the Janissaries who were present were prominent in enforcing the urgency of the case. The Secretary of the Grand Vizier then read an ordonnance, which had been previously prepared, for the forming of a corps of regular *eleindyis* (active soldiers) to be drawn from fifty-one *ortous* of Janissaries, and for their military organisation and instruction. This document, which was signed by all present, was afterwards read to the officers and non-commissioned officers of the Janissaries, who approved of it, and affixed their seals to it. The formation of the new corps was immediately set about; and they commenced their training in the Et-Meidani, in front of the barracks of the Janissaries. Much jealousy, however, was excited by these movements; and many of the chiefs who had signed the decree of which they were the result, opposed them in secret, and concerted for the restoration of the old state of things. On the night of the

* This extraordinary man was eventually defeated and put to death, February 5, 1822.

15th of June the conspirators repaired to the Et-Meidani, where they sought for the Aga of the Janissaries; but, as he was absent, broke his windows, and set fire to his hotel. Emissaries were then sent to the Aga to induce him to join the revolters, but he dismissed them with an evasive answer, and remained within his house "resting his back against a pillar, in a state of stupefaction."

Next morning the non-commissioned officers of the infatuated corps were sent out in all directions, but particularly to the neighbourhood of the Seven Towers, beating up for recruits and accomplices from amongst the veriest dregs of the city. With these reinforcements they sallied forth, pillaged the palace of the Grand Vizier (who happened, fortunately for his neck, to be absent); and then spread over the town, uttering threats of death against the Ulemas and the Ministers.

Meantime the Grand Vizier hastened to the Sultan, and apprized him of the danger which threatened the capital and the state. The well-disposed troops were immediately concentrated within the Seraglio, and a messenger was sent to the mutineers to inquire what were their demands and their intentions. They replied by demanding (as they had often heretofore done, and with too fatal success) the heads of those who had counselled the obnoxious measures of which they complained. This demand was formally rejected, and the insurgents were duly warned that force would be used to reduce them to order and submission. Immediately upon the position of affairs being known, whole crowds of the better and more influential sort, including ulemas, doctors, professors, students, marines, engineers and officers of the artillery, repaired to the Seraglio, bringing cannon and other arms—who rallied around the Grand Vizier, and awaited impatiently the arrival of the Sultan. His Highness shortly after came amongst them, from the Palace of Bechik-Tak, where he happened to be residing, having hastily thrown himself into his private caique (used only when he travelled incognito), upon hearing of the threatened disturbance. On arriving at the Seraglio, he addressed the loyal subjects whom he found surrounding him, and who replied by swearing aloud to conquer or die in his defence. They then called upon his Highness to bring forth the Sacred Standard of the Prophet—displayed only on the most momentous occasions; which having done, the Sultan was with difficulty dissuaded from marching with it at the head of his defenders. Public criers and the officers of the tribunals then hurried forth through the streets, summoning all good Musselmans to the defence of their Sovereign, and of the *Sandjak-cherif*. Great were the crowds which answered to this appeal; the population flocked in from all parts, and filled the square in front of the Seraglio, and all the neighbouring parts. The Sultan then caused arms to be distributed amongst them; handed over to the Mufti the "Majestic Cypresses of the Garden of Victory," and the "Green Standard of the Prince of the Prophets," after which he ascended to a small kiosk over the Imperial gate, whence he could view the court of the Palace, and the crowds rushing out to the defence of the Standard of Mahomet.

Whilst these preparations were making, the Grand Vizier, accompanied by the Muftis, the ulemas, doctors, and others, had established his head-quarters in the mosque of Sultan Achmet, near the Hippodrome. Thence he sent out a small party to meet the mutineers; and then the vast assembly joined in prayer, repeating the first chapter of the Koran; their heads all bent to the ground. This act of devotion over, an humble appeal for mercy was made by the *kahia-teri* (vice-intendant of the Janissaries), and some other officers of that corps, on behalf their misguided comrades;—but in vain. The order to march was given, and the whole armed multitude set forth shouting aloud *Allah ekbar!* (God is above all.)

The mutineers were disconcerted at the appearance of the *Sandjak-cherif*, and strove vainly to prevent the people from assembling around that trophy, so revered by all true Mussulmans. Seeing the hopelessness of all appeals, except one to arms, they then proceeded to the Et-Meidani, of which they barricaded all the approaches with huge stones. This place was speedily surrounded, on all sides, by the troops of the Sultan. Before allowing them to attack, however, Ibrahim-Aga made repeated attempts to induce the Janissaries to return to their duty, promising them pardon if they did so; but these appeals were only received with shouts of derision and execration. The troops were then ordered to fire; and a ball shortly afterwards breaking the hinge of one of the doors, the besieging party forced their way into the place. The insurgents now only thought of seeking safety in flight; but the barracks, and the butchers' sheds which surrounded the Et-Meidani, were set on fire by the assailants, and as they burned consumed thousands of the unfortunate mutineers; grape-shot being employed to secure the destruction of those who were spared by the flames. Such few of the Janissaries who had escaped from this horrible scene of carnage, were afterwards captured and thrown into prison, and some of them were put to death. The total number slain is said to be about 6000; and 1500 were afterwards exiled to Asia. Orders for the extermination of all belonging to this body were sent to all the Governors of Provinces; so that their extinction was complete.

The inhabitants of the capital witnessed, not only without a murmur, but with satisfaction, this wholesale destruction of a tyrannical and oppressive corps, who had long been a terror, rather than a protection to them. On the next day the Sultan issued a hatti-scheriff, formally declaring the abolition of the ancient body, and their reformation in a new form.

A Mussulman historian, who relates at length the events more briefly recorded above, draws a terrible picture of the degraded and infamous character of the Janissaries of modern days, and the enormities which they were in the habit of committing. According to his account, they were no longer a brave and glorious national militia, as of yore, but, as a body, men drawn from the very lowest classes of society—boatmen, porters, and others, who only enrolled themselves in the ranks in order to have an opportunity to gratify without fear of punishment all their evil propensities, and to make free use of the property of others. Some of them took shops near the sea-shore, near the places where the gardeners from the country landed their fruit and vegetables, and there they compelled these unfortunate peasants to give their produce into their hands, selling it at a high price, and returning only a small part of the proceeds, and sometimes none at all; carrying very often their effrontery so far as to demand money in addition, for commission, rent of stores, expenses of weighing, &c. Another class, under pretence of defending them from their comrades, took under their protection the vessels which arrived in the harbour, laden with timber, fire-wood, coals, and other articles of consumption, attaching to the prow the distinctive badge of their *orta*, or regiment; and then, pretending to a sort of partnership with the owners of the cargo, often demanded the lion's share of it. This right of protection, which was much coveted, often led to sanguinary struggles between various *ortous*, to the disturbance of the public peace. Sometimes Janissaries, who happened to belong to such callings as those of bricklayers, stonehewers, carpenters, &c., would take forcible possession of a house in course of building, driving away the workmen employed upon it, and then complete it after their own notions. Finally, to complete the picture of their wickedness, instead of watching over the safety of the inhabitants, the Janissaries would themselves set fire to houses, and prefiding by the alarm which ensued, would pillage the place, besides updulging in atrocious excesses.

Warm and hearty were the thanks and congratulations with which Sultan Mahmoud was welcomed from all quarters, high and low, for thus accomplishing a victory over the enemies of order, a victory denied to his ancestors. In order to complete this useful work, he ordered the removal from the capital of all persons without ostensible employ, or means of subsistence;—and, in accordance with this order, upwards of twenty thousand of the vagabond class were sent into the provinces.

It has been questioned whether, although the destruction of the Janissaries was undoubtedly a boon in one sense, and more particularly as regarded the social relations of the community, it was a politic step as regarded the integrity of the Imperial power, and its external relations. Although, in the end, there can hardly be a doubt of the infinite superiority of a regular and a well-trained force over a lawless and undisciplined body, there can be no doubt that in the interval, whilst the new system was yet in its infancy, the Porte was at a considerable disadvantage when contending with the experienced armies of other states; and the multiplied reverses which Turkey experienced in the course of the very war then in progress, offered a signal evidence of the past.

WAR WITH RUSSIA—1828-9.

Immediately upon the arrival of the news of the affair of Navarino reaching Constantinople, the Ambassadors of England and France endeavoured to persuade the Sultan to acknowledge the independence of the Greeks, but all in vain;—on the contrary, he was only the more exasperated against them and the whole Christian race; whom, in a proclamation addressed to his subjects, he denounced as meditating the entire overthrow of Islamism and the destruction of the Ottoman nation. A general levy of arms was called for, to carry on a war at once national and religious, and more particularly directed against the Russians. The latter wished no better excuse to prosecute, with renewed eagerness, their cherished policy of extending their dominion over the Turkish empire. In May, 1828, the Grand Duke Michael invested Ibrail, which he took on the 11th June, after a vigorous resistance. In the course of the same month General Roudzewitch crossed the Danube at Isbaktche, which was soon obliged to capitulate. Toutscha, Matchin, Hirsowa, and Kustendji, in succession opened their gates. Meanwhile, Admiral Greig and Prince Mentschikoff defeated the Turks near Anapa; which town they took on the 11th June. On the 11th July the Cossacks entered Bazardjik, which had been deserted by its garrison without firing a shot.

The Divan at Constantinople were much taken aback by these reverses; and counsels were equally divided, whether to continue the war, or to treat with the Russians. The Sultan closed the discussion by exclaiming, "When the bridle is removed from the horse, he will soon run himself out of wind." This decided the question, and no thoughts of peace remained amongst the advisers of the Porte. The Grand Vizier, Mahomed Selim Pacha, prepared himself to proceed to the seat of war; and the Sultan announced his intention to join the army himself, with the sacred standard, and not to return to Constantinople till the war was brought to a close. Accordingly, on the 15th of September his Highness repaired to the camp of the reserved forces at Ramich-Tchifflik in splendid state, and surrounded by an imposing military force.

The Russians, however, still continued their course, achieving success upon success. On the 20th of July they had advanced to Schumla; whilst on the Danube, Silistria, Roustchouk, and Girugova were invested, and Lesser Wallachia occupied; and on the Black Sea, Varna was besieged. After some little reverses—occasioned partly by want of provisions, partly by disease in the Russian ranks, and partly by some successes on the part of the Turkish forces—Yousouf Pacha, the Commander of Varna, basely surrendered that important post, on the 10th October, on the eve of a meditated assault.

Astounded, but not subdued, by the intelligence of this serious loss, the Sultan ordered new levies, and sent 20,000 men to the defence of the Balkan; and, bad weather setting in, the Russians raised the sieges of Schumla and Silistria, and repassed the Danube, leaving behind them an immense quantity of munitions of war. During this campaign, the arms of Russia were also successful in Asia, taking successively Kars, Poti, Akhaltzikhe, Baiezid, Diadin, and Toprak-Kale.

In February, 1829, the Russians, under General Diebitch, renewed the war, and commenced the campaign by taking Sizeboli, an important military post; Silistria was again besieged; the operations against which were, however, interrupted by some attacks from the Turkish troops, which, on the 11th of June, sustained a total defeat in the pass of Kulewtcha. Proposals of peace were then made, but rejected. On the 1st of July, after an explosion of a mine, which effected a breach in the walls, Silistria surrendered. Diebitch, having thus obtained the command of a second position (Varna being one) which opened the way to the Balkan, resolved upon taking advantage of it; and whilst the Turks, under the Grand Vizier, concentrated their forces on Schumla, expecting that place to be attacked, the Russians pressed forward, crossing the Balkan in three different directions—under Generals Rudiger, de Pahlen, and Roth. The first-named took Aidos and Karnabat by assault, whilst the last successively obtained possession of Missivria, Anchiola, and Bourgas. Diebitch then issued a proclamation to the inhabitants, warning them not to leave their homes, and promising them protection of life and property, and the free exercise of their religion, upon condition of their laying down their arms. This proclamation had some effect in reassuring the population of the invaded provinces.

On the 11th August, Slivno was taken by assault; and a week afterwards the Russians arrived under the walls of Adrianople; when such was the consternation of the inhabitants, and the weakness of the military provision, that the gates were thrown open, and the victorious army welcomed with demonstrations of friendship—more as allies than conquerors. Advanced troops were then sent out to Keurk-Kilisa, Loule-Bourgas, and Enos, with a view of opening a communication with Vice-Admiral Heyden, who commanded a fleet destined for the blockade of the Dardanelles. In the meantime Admiral Greig, with his fleet in the Black Sea, took possession of Midia, and advanced as far as Kara-Bournow, a place not thirty miles from the mouth of the Bosphorus. Finally, it remains to be stated that, concurrently with these conquests in European Turkey, the Russians, under General Paskewitsch, took possession of Erzoum and Balbourd, and obtained a victory over the Pacha of Trebizond, in the Giaour-Daghy.

A casual survey of the map will show the terrible importance of these conquests, and the peril in which the very integrity of the Ottoman Empire was placed, supposing the conquerors to have been able to maintain their position. It must be remarked, also, that Diebitch, in leaving Schumla in his rear, was, according to the general principles of strategy, guilty of an act of rashness—not to say imprudence—which nothing but a strong conviction of the existence of peculiar circumstances warranting an exceptional policy, could justify. In truth, if the Ottoman arms had been of adequate force, and properly directed it would have been no very difficult matter at this juncture to have cut off the retreat of their enemies, if not to have assumed the offensive in their rear, and to have utterly annihilated them—either by failure of their resources, or by actual force of arms. And if this fate was averted from the Russian eagle, there can be no question that Diebitch was well aware of his critical position, and gladly availed himself of the offers of peace which were now tendered with the hearty assent of the Sultan himself.

TREATY OF ADRIANOPLE.

By the treaty of Adrianople, which soon followed (September 14th 1829). Russia restored to the Porte the Principalities of Moldavia and Wallachia, and all her other conquests in Europe, the Pruth again becoming the boundary of the two empires. The sovereignty of the Sultan in Moldavia, Wallachia, and Servia, was reduced to the right of investiture of their Hospodars, accompanied by a small tribute, and Russia "guaranteed their prosperity;" words which have been understood to constitute a sort of protectorate in that Power. The Bosphorus and the Dardanelles were opened to the commerce of all nations. In Asia the Czar restored the greater part of the territory which he had conquered; reserving, however, Anapa, Pati, Akhaltzike, Atzkour, and Akhalkali, as a compensation for the expenses of the war. The Porte, moreover, undertook to pay to the Czar an indemnity of ten millions of Dutch ducats, and a million and a half more for losses experienced by Russian subjects since the year 1806.

With respect to Greece, the Porte gave his adhesion to the treaty of London of July, 1827, and the protocol of March, 1829; though the limits of the enfranchised territory were for the present left undecided.

A separate treaty between the Porte and Russia was annexed to the above, relative to the affairs of Moldavia and Wallachia. By this treaty the Hospodars, on being elected, were to hold office for life, and not for seven years, as heretofore, and subject only to removal by abdication, or on account of misconduct—proof thereof being established to the satisfaction of the two contracting powers.

The independence of Servia was not practically effected till after a further struggle; but at length, in May, 1834, the Porte, finding all measures of coercion unavailing, and having, besides, enough on its hands in other quarters, yielded all the concessions required—recognising Prince Milosch as Hospodar, and exempting the principality from all imposts, excepting an annual tribute of 32,000 ducats.

In 1830, the territories of the Porte were further abridged by the capture of Algiers by the French. The disagreements which led to this event it is not now necessary to enter upon at any length. Suffice it to state that the Porte, on hearing of the misunderstanding existing between the French Government and Hussein Pacha, deputed the Capitan Pacha, Tahir, to the latter, with instructions to urge him to make proper satisfaction. Upon arriving before Algiers, however, he found the French fleet already there, and he was not permitted to land. He then made his way to Toulon, where he was kept several days in quarantine; and, in the meantime, Algiers had fallen. The occupation by the French was, in the first instance, declared to be only intended to be continued temporarily, as a guarantee for the satisfaction of demands already preferred; but this announcement, diplomatically made to the courts of Europe, has not been acted upon.

TROUBLED CLOSE OF MAHMOUD'S REIGN.

Meantime, other troubles of a more serious kind occurred to agitate the counsels of the Porte. The treasury, already deeply drawn upon, was exhausted by the payment of a portion only of the indemnity agreed to be given to Russia for the expenses of the late war; and the Pacha of Egypt was pressed for eighteen months' arrears of his stipulated contribution to the sovereign state, and was at the same time called upon to give an account of his stewardship. Mehemet Ali, however, who had some time meditated throwing off his allegiance, declined obedience to these behests, under the pretence that the expenses which he had incurred in the recent war against Russia were fully equal to the amount of tribute demanded of him. This reply confirmed the apprehensions which he already entertained of the designs of his ambitious and powerful vassal. A series of successes under Ibrahim Pacha, son of Mehemet Ali, ended in the conquest of the whole of Syria; and negotiations for peace were opened upon the terms of ceding to the Viceroy of Egypt the four Pashalics of Syria and the district of Adana; the latter giving it to be understood that he wished to be recognised in a position somewhat analagous to that long occupied by the Dey of Algiers, which was one, all but in terms, of complete independence.

In the midst of these unpalateable discussions, Russia again came forward to mix herself up in the affairs of a neighbour, whose territories she seemed determined never to leave, for long, out of her sight. General Mouraviefl arrived at Constantinople to offer the aid of Russian troops, and also announcing that he was charged to proceed to Alexandria in order to urge the Pacha to submission. The negotiations towards a peace were then abruptly suspended; the war proceeded with vigour and continued success on the part of the Egyptians; and on April 3rd, 1833, the promised Russian troops arrived, and were camped upon the Asiatic shore of the Bosphorus, opposite Therapia and Buyukdere. This proceeding was warmly protested against by the British and French Governments, but in vain; and although, eventually, the Russian legions were never brought into action, Russian diplomacy was employed to obtain the signature of a treaty of offensive and defensive alliance between the Czar and the Porte, which, when its provisions came to be known, justly excited the liveliest apprehensions on the part of the two Western powers. The treaty of Unkiar-Skelessi (such is the name of the locality above indicated, where were stationed the Russian troops) was signed 8th July, 1833, and after reciting "the sincere desire of the Emperor of Russia to maintain the entire independence of the Porte," covenanted mutually for the furnishing of armed assistance both by sea and land, when required by either party of the other. But "an additional and secret article signed on the same day," stated that the Emperor of Russia gave up the right to demand such armed aid of the Porte; the latter, in lieu of such liability, undertaking to close the Dardanelles against ships of war of all other nations, in the case of Russia being at war. The practical effect of this treaty would be, to give Russia the command of Constantinople, and of all European Turkey, whenever she chose to declare herself at war. When this monstrous document came to be known, two months afterwards, it was formally protested against by the Courts of England and France, the Minister of the former declaring that, in the case of its ever being called into operation, it would be deemed and considered by the British Government as if it had not been made; to which Count Nesselrode, the Russian Foreign Minister, replied that, in the case so supposed, he should look upon the communication of the British Minister as if it had never been written.

The Russian Government, having achieved this stroke of policy, withdrew their troops two days afterwards—namely, on the 10th July; leaving the Porte not much the better for their disinterested sympathy.*

* This treaty was stipulated to last for eight years; with a suggestion of an intention to renew it in perpetuity. It was not renewed; and its principle was reversed by the treaty of 1841, which declared that the Dardanelles should be closed against vessels of war of all countries, except when the Porte should be at war.

THE TURKISH FLEET AT ANCHOR IN THE BOSPHORUS.—SKETCHED FROM A HILL NEAR BUYUKDERE.—THE BLACK SEA IN THE DISTANCE.

Meantime, Mehemet Ali had been induced to withdraw his forces from Asia Minor (June, 1833), and a temporary calm was secured. But still, notwithstanding the indefatigable exertions of the Ministers of the Western Powers, the Egyptian question was not settled. Armaments were kept up both in Turkey and Egypt; and the Porte, in particular, commenced the construction of a formidable fleet, destined, it was apprehended to coerce his rebellious vassal. At length Mehemet Ali (who had gradually increased his pretensions upon every occasion of treaty) threw off his allegiance altogether, by a note addressed (June, 1838) to the Consuls of England, France, Austria, and Prussia at Cairo, in which he declared that he would, henceforth, not pay any tribute whatever to the Porte, and that he considered himself the independent Sovereign of Egypt, Arabia, and Syria. It was not, however, till the following year that the renewal of hostilities, so long threatened, actually took place; the initiative being taken by the Ottoman Government, but with a great all success. In June, the troops of Ibrahim Pacha, which had hitherto maintained a defensive attitude, attacked and completely routed the Ottoman forces at Nezib. The news of this defeat arrived at Constantinople on the 8th of July; but Sultan Mahmoud was spared the pain of hearing it; a week previously he had ceased to breathe, having died suddenly in the night of an internal disease, the symptoms of which he had concealed from his physicians, lest they would make it a ground for restricting his personal attention to affairs of state.

The disaster of Nezib was, a few days afterwards, followed up by an extraordinary act of treason on the part of the Capitan Pacha, who in command of the fleet, which the late Sultan had been at such cost and pains to collect, instead of using it against the enemy as he had been instructed, actually sailed into the port of Alexandria (14th July), and placed the ships at the disposal of Mehemet Ali. The latter sent immediately to Constantinople to declare that he would not give up the fleet, which had so fallen into his hands, until he was acknowledged as hereditary sovereign of the states which he ruled. This event, however, belongs more properly to the reign of the present Sultan, Abdul-Medjid; before proceeding to treat of which, we propose to make some observations upon the character and domestic policy of the deceased monarch.

CASTLE OF THE SEVEN TOWERS, CONSTANTINOPLE.

MAHMOUD.—HIS REFORMS.

Mahmoud II. was a reformer, worthy to be classed at least upon an equal footing with Peter the Great, who, by a little more than a century his predecessor, endeavoured to assimilate his rude subjects with the civilised nations of Western Europe, and to consolidate the Imperial power in the place of rival intestine factions. But the Turkish Monarch had a more difficult task to perform than the Russian—he had to contend against religious fanaticism, which rendered it repugnant to his subjects in any way to imitate or associate with the peoples of the rest of Europe. It has been suggested by some writers, that if he had proceeded more gradually, and in a conciliatory manner, in his reforms, he might perhaps have been more successful with them. But this is much to be doubted. There is a certain point of fanaticism and moral degradation, where the sagest and most persuasive arguments are utterly unavailing, where coercion is absolutely necessary as a preliminary to persuasion. Mahmoud has been charged with unnecessary cruelty. Undoubtedly, his reign was one of the most bloodstained in history; but we do not think he took pleasure in acts of cruelty, or adopted a single measure of severity which he did not consider to be essential to the attainment of that order of things which would ensure peace for the future. And certainly it is a fact, which we remark with satisfaction, that when he died he left an inheritance to his son which, during fifteen years since elapsed, it has been possible to govern almost without recourse to the sword. Not only have there been no revolutions during this comparatively happy period, but capital penalties have been virtually abolished. It now remains to mention some of the principal measures of reform adopted or attempted by the remarkable man of whose reign we have just been treating.

The substitution of a regular army, under proper discipline, for the undisciplined and turbulent Janissaries, has been already spoken of at length. It was upon the occasion of the fall of Sizaboli, that Sultan Mahmoud determined upon a still further reform of his military forces, in accordance with European habits, and issued a hatti-sheriff, enjoining all Mussulmans in a condition to carry arms to discontinue the use of the loose robes, turbans, &c., constituting the ancient Ottoman costume, and to adopt Cossack trousers, and the red cap, or fez. This change caused a great deal of discontent; but it was not the only approach

which Mahmoud made to European usages: he endeavoured to carry the influence of modern civilisation into the circles of domestic life He gave fêtes and concerts, after the manner of the Franks.* He also established the passport system, and that of a quarantine, which hitherto had been unknown in Turkey.

In 1836 Mahmoud was bold enough to go in the teeth of one of the most stringent laws of the Prophet, and to order his portrait to be set up in all the barracks, requiring that it should be treated with the same marks of respect as his own sacred person. The ulemas protested loudly against this act of impiety, and it was not until several of the malcontents had been consigned to the Bosphorus that they were reduced to submission. The outcry against the attempt to stamp the effigy of the Sultan on the coinage, which was made in the next year, was so great, and threatened such serious consequences, that the hateful coinage was withdrawn, and even the Imperial portraits were removed from the barracks.

Great, also, was the scandal excited amongst the faithful Mussulmans, when the Sultanas were brought forth, handsomely attired, and riding in magnificent carriages, drawn by richly-caparisoned oxen, to assist at the ceremony of opening the new bridge between Constantinople and Galata; and greater still their horror when he returned from an excursion to inspect some new barracks and a new mosque at Nicomedia, in an Austrian steam-boat. Never before had the Padishah degraded himself by entrusting his sacred person to a vessel belonging to a Giaour.

GROUP AT A FOUNTAIN, CONSTANTINOPLE.

A STREET IN CONSTANTINOPLE.

But it was not only in trifling incidents that Mahmoud endeavoured to show his respect for the civilising example of the Western States and to instil their principles into his own subjects. He established a newspaper press, both in the Turkish language and in French. He contributed out of the Imperial chest funds for the maintenance and education of a certain number of youths in Paris and London; and, with the aid of four German doctors, he founded a School of Medicine, with courses of instruction and examinations, conducted upon the European system. He also, towards the end of his reign, appointed a commission to inquire into the means proper to be adopted for the encouragement and improvement of commerce, industry, and agriculture. Finally, convinced that the Koran, which hitherto had been the only guide of the conduct of man, and of jurisprudence throughout the Ottoman Empire, was insufficient to meet all the requirements of social government, he ordered the preparation of a more complete code of laws, in harmony with modern habits and institutions. The insolent and stupid disdain with which it had hitherto been the habit to treat Christian nations, was given up in this reign; and diplomatic relations established and maintained upon the usual footing with the great powers of Europe. Crippled in his internal resources by the defection of several of his Pachas, and the loss of much of his territory, this Monarch wisely sought to improve his position, and the wealth of his subjects, by forming commercial treaties with England, France, the United States, and other large industrial communities. By that of 1838, with the first-named country, complete liberty of trade was conferred on British subjects, whether in native or foreign products upon an equal footing with the most favoured Ottoman subjects; many obnoxious internal dues were compounded in their favour, and monopolies of agricultural produce abolished.

Finally, Mahmoud was as tolerant of the religious feelings as of the commercial rights of Christians, and sought to impress that feeling upon his subjects. When, in 1837, he made a *tournée* through some of the provinces of his empire, after inspecting the troops, and rewarding their officers, he held himself accessible to all his subjects, without distinction of rank or race; he informed himself of their condition, and listened with attention to their complaints. Moreover

* In 1838, an Italian obtained permission to build a theatre, or opera-house, at Pera, and it was remarked that a great proportion of the shares were taken by Musulmans.

GROUP OF REDIFS, OR TURKISH MILITARY RESERVE.

in every place he visited, he caused to be read to the spiritual and temporal authorities, a firman, the substance of which was to the effect that his sole desire was to see tranquillity re-established throughout his empire, and the most complete harmony subsisting between all classes of his subjects without distinction of origin or religion; and then called upon all authorities to co-operate in the maintenance of public order—the true foundation of the happiness of nations.

ACCESSION OF ABDUL-MEDJID.

Abdul-Medjid was but sixteen years of age when he succeeded to the throne. The first act of his reign was one which worthily followed up the enlightened policy dictated by his father. On the 3rd November, 1839, a solemn ceremonial was held in the gardens of the Imperial Palace of Gulhane. Numerous tents were there erected; and there from eight o'clock in the morning a dense crowd assembled, anxious to hear read the hatti-sherif, or constitution, which the young Monarch, with the advice of his Ministers, freely gave to his subjects. At this interesting ceremony, all the dignitaries of State, and the Ministers of the European powers, were present, as well as many other distinguished foreigners, amongst whom was the Prince de Joinville, who happened to be at Constantinople at the time.

This document, which was read in a loud voice by Redschid Pacha, commenced by setting forth very candidly, that within the last hundred and fifty years the Ottoman Empire had declined in power, that "its former strength and prosperity were changed for weakness and poverty," and it attributed this disastrous state of things to the want of a due observance of the sacred laws of the Koran. Reference was then made to the fertility of the soil, and other natural gifts, and "the aptitude and intelligence of the people," which it was confidently asserted would, with the adoption of proper measures, restore the national greatness. The institutions which were required, and which the hatti-sherif promised should be provided, were of three classes. First, guarantees which should ensure to the subjects of the Ottoman Empire perfect security of life, honour, and property. Secondly, a regular system for the fixing and levying of taxes. Thirdly, a system regulating the levying of troops and the duration of their service. The evils of the existing system of farming the taxes were dwelt upon, and also the injustice and pernicious effects of monopolies, which were to be abolished. Special laws were to be passed, to fix and limit the expense of armaments, both by sea and land; and the period of service was to be limited to five years. A penal code was to be framed, and new laws to be established with the sanction of the Imperial sign-manual, and justice was henceforward to be administered in public tribunals. Property was to be held sacred, even as regarded the innocent heirs of a criminal. These concessions were equally accorded to the subjects of the Porte of whatever religion or sect they might happen to be. The document concluded by declaring:—"May those who do any act contrary to the present institutions be the objects of divine malediction, and be deprived for ever of all happiness!"

This solemn act was affirmed by the Sultan, by oath, in presence of all the ulemas and grandees of the nation. A copy of it was afterwards officially communicated to all the ministers of foreign powers.

In 1841, the Egyptian troops having been compelled to evacuate the provinces of Asia Minor, through the vigorous operations of the British fleet (under Commodore Napier), peace was effected between the Porte and Mehemet Ali, the latter being confirmed in the hereditary Pachalic of Egypt.

GENERAL VIEW OF THE PRESENT STATE OF THE OTTOMAN EMPIRE.

THE CIVIL GOVERNMENT.

It is but just to say that Abdul-Medjid and his Ministers have not allowed the hatti-sherif of Gulhane to remain a dead letter, at least theoretically speaking. As far as legislation could go to remedy the monstrous abuses that document was intended to meet, the Government have not been the last two that, practically speaking, all their wise and humane ordonnances have been powerless, owing to the incurable viciousness of the executive machinery. We restrict our observations at present to the civil government.

A new penal code was issued in 1840, which presented many admirable features, very much in consonance with the principles of justice prevailing in constitutional countries. Its stated object was "to define the punishments which were in future to be inflicted for offences specified in the code itself, without regard to the rank or condition of the delinquents," and to regulate the manner of administering justice. The power of inflicting the punishment of death—so terribly abused by every petty Pacha and Cadi—was altogether abolished; no capital sentence could be executed in any part of the empire without the sanction of the Sultan. No capital offences could be tried, nor capital sentences executed, except in public.

In 1846, ordonnances were issued for regulating the duties and the powers of the various functionaries of the empire, their salaries, &c. These ordonnances were classed under three distinct heads: the first relating to matters of general administration—the second, to the officers employed in the revenue department—the third, to the police of the empire: the whole composing a mass of admirable regulations; but which, unfortunately, there is too much reason to believe, have hitherto remained a dead letter.

Pachas went on plundering and persecuting as heretofore; the various branches of revenue continued to be farmed as heretofore, even by Pachas and other public functionaries—very slight and shallow pretences being made to conceal the true nature of these transactions—the poor man continued to be oppressed and robbed of his last para, the fruit of his hard labours; the revenue plundered to the extent of, to speak within bounds, the half of what ought to have gone into it, having been collected in its name. Is it any wonder that, under such circumstances, the governed should remain discontented, and the head of the state powerless to redress their wrongs?

At the same time we really believe that the state would faithfully execute the laws against delinquents, high and low, whenever they fell into its hands. One or two notable cases indeed are on record which justify this remark. In 1841 the ex-Grand-Vizier, Khosrew Pacha, was accused by the supreme council of justice, of corruption and malversation of the public revenue. Being found guilty, he was condemned to banishment, and to reimburse the state—besides being deprived of his titles and dignities; and, it is said, only escaped a more severe sentence on account of the crimes of which he was guilty having been committed anterior to the promulgation of the new penal code. What is the more curious in the matter is, that this culprit was the very man who, in his capacity of Grand Vizier of the Empire, had himself signed that very penal code only three months before his conviction. Another case is that of Hussein Pacha, governor of Koniah, who about three years ago being convicted before the supreme council, of having, in a moment of passion, and for some trivial cause, killed a servant of the *mal-mudir* (a district officer), and was condemned for life to the galleys in the very town in which he had resided as governor for many years.

In his passage down the Bosphorus, amongst other objects which attract the stranger's attention, is a fine marble structure, of truly palatial proportions, but in an unfinished state. This palace was commenced some little time back by an eminent public *employé*—one Dgésairy Oglou—the same who established the late Bank, and who also farmed the Customs. He lived in a very magnificent style—his wife blazing with diamonds; gave splendid parties; and, like all great patrons, lent money freely to his friends—amongst others notably, to Redschid Pacha; in short was, in all respects, a very estimable private and very admirable public character. The only complaint against him was that he never paid any money into the Treasury; was in arrears Heaven knows how many thousand million piasters; and one fine day, when Redschid Pacha was turned out of his office of Vizier, Dgésairly Oglou was thrown into prison, where he has remained ever since; his fine marble palace on the Bosphorus, and his wife's diamonds—neither of which, it is said, had been altogether paid for—being confiscated to the state.

Of the wrongs to which the poor and humble are subject from those in high places, we believe that the Mahomedan and Christian subjects of the Porte come in for an equal share. All the exaggerated statements of the persecutions to which the latter are subject (as for religion's sake), we believe to be false, and maliciously propagated by Russian emissaries, for the purpose of exciting discontent against a Government which sincerely means to deal even-handed justice between all its subjects, without regard to race or creed. "Let us only recognise the Mussulman at the Mosque, the Christian at the Church, and the Jew at the Synagogue," was the wise and tolerant maxim constantly inculcated by the late Sultan Mahmoud; and we believe his son desires to act up to it in its full spirit.

In 1837 an edict was issued forbidding, under severe penalties, the use of the opprobrious epithet of *giaour* or "dog," as applied to Christians; and, although amongst the fanatic multitude there is still the same inclination as ever to maltreat the latter, whom they look upon in the light of slaves, the law is very prompt to repress and punish any outrages of the kind. Of course this remark applies more particularly to the capital and the neighbouring districts, where the police is better organised, and more upon the alert; and one or two cases in point occurred within the knowledge of the writer during his late visit to Constantinople. One was that of a Turk who had abused, and slightly assaulted, a Greek tradesman at the door of his shop: he was arrested, and after trial sentenced to transportation. Another case was still more curious, though it was marked with a singular perversion, upon the stretching principle of the rules of police law as observed in old England. A Turk, who had himself once been a *hamass*—that is, in the police force—accosted a shopkeeper in Pera, and demanded the price of some article in his store. Displeased at the sum named, and determined to beat the honest tradesman down according to the literal meaning of the word, he threw down coin amounting to about a third of the price required, and was about to snatch up the goods. The tradesman dissenting from this mode of proceeding, the customer—a "rough" one certainly!—struck him, and broke his arm. The offender was brought before a Cadi, who commenced by sending for a surgeon, in order to ascertain the extent of the damage done. The surgeon having deposed to the nature of the injury, the probable cost of cure, and the number of days the curative process would take; the Cadi, addressing the prisoner, told him he must pay down the amount of the surgeon's bill, and compensation at the rate of so many piasters a day for the patient's maintenance and loss of time. The latter, pretending astonishment, protested he had not the sum, nor anything like it; whereupon he was informed that he would be sent to the galleys till he produced it. At length the Court consented to let him depart on bail till the next day, in order to "procure the money of a friend." This, with us, would seem a lenient sentence—not even a forty-shillings penalty for the offence itself. But wait a minute, good reader: the Cadi has not yet done. When, on the following day, the offender presented himself, and duly counted over the price of the Greek shopkeeper's broken arm, doubtless, thinking the sport he had enjoyed over-paid at the figure it was estimated at, the Cadi told him that, now he had repaired, so far as lay in his power, the private injury done, he must atone to the laws of the country for his offence against the public peace, and forthwith remitted him to serve for five years on board his Imperial Majesty's fleet. And there he is now, afloat on the Bosphorus, wishing he had never meddled with the shopkeeper of Pera.

One of the most important and salutary measures of reform introduced, under the present order of things, is that establishing the mixed Courts of Judicature for the trial of causes, both civil and criminal, between subjects of the Porte and foreigners residing in that country. These were created in 1847; and, we believe, we are mainly indebted for them to the exertions of our own Ambassador, Lord Stratford de Redcliffe. These Courts are composed of Ottoman and Christian Judges in equal number; and the dragoman of the Embassy or Consulate of the nation to which the Christian party in the cause belongs is always present, to assist in the proceedings. Evidence is taken orally, upon oath (with the penalties for perjury attaching), in presence of the parties, and very much according to the rules which are observed in England. The infliction of torture upon witnesses is prohibited in these courts. But the most remarkable concession to public justice made under this new institution is that of receiving the testimony of Christians, even as against that of a Mussulman, a thing which was never heard of before. The first experiment was tried at Constantinople, in the year already named; and the admirable effect of it in curing numberless abuses which had heretofore prevailed in the administration of justice, soon became so obvious, that similar courts were very shortly afterwards established at Adrianople, Salonica, Smyrna, Beyrout, and other places; and, in March, 1850, a firman was issued for establishing them in Egypt.]

With such a fact before us, and the knowledge of the salutary impression which the experience of a new and juster system of judicature has created, may we not hope for the extension of a similar system amongst the Ottoman subjects themselves, and thus form an important step towards the internal regeneration of the empire. At present, the principal cause of the failure of justice rests with those who have to administer it; the venality of the judges—who being paid by the parties in the cause, instead of by the state—must necessarily have a leaning in favour of the client who pays best. What adds tenfold viciousness to this inherent vice, is that the judge is removed annually; in short, has only one year to make his fortune in, which he labours at with unscrupulous voracity.

FINANCES, &c.

The precise amount of the public revenue of the empire, owing to the imperfect nature of the system by which it is collected, is a matter of much uncertainty. Even after passing through all the pilfering hands of numberless functionaries, however, it amounts generally to about 650,000,000 or 750,000,000 piasters (between six and seven millions sterling); and there is little room to doubt that if it were honestly collected, and directly by the state, it would, even under the present "budget," amount to three times as much. A judicious revision of the scheme of taxation—including a new arrangement in respect to the *vacoufs*, or church lands, which are now subject to shameful misapplication (*anglice*, plunder), and other matters, the details of which it would be premature here to enter upon, it is estimated by well-informed authorities that the gross revenue might be very considerably increased, without adding one fraction to the burthens already borne by the tax-payer.

The accounts of the state have not been audited, it is said, for the last twelve years; and as the Pacha who officiated as Chancellor of the Exchequer during that period is dead, the mysteries of the state ledger probably died with him. It appears, however, from such general statements as are published from time to time, that the ordinary revenue and expenditure are pretty evenly balanced. The civil list of the Sultan is 75,000,000 piasters—a full tenth of the whole revenue. The salaries of public functionaries, also, are enormous—(we mean the higher officers of state; the lower officials being miserably paid, if they can be said to be paid at all, being generally left to the chance of *backsheesh* and peculation)—the Grand Vizier and the Cheik-ul-Islam (the Prime Minister of the State and the supreme interpreter of the law) receive each 1,200,000 piasters (about £11,000) a year; ministers with the rank of *mushir*, 840,000 piasters (about £7500) a year; and other dignitaries of superior rank, 600,000 piasters (about £5000) a year: all this, to say nothing of official patronage and plunder.

Meanwhile, for the want of the commonest incentives to industry, or security of property, and public roads for the transmission of produce, added to the universal ignorance of the principles of agriculture, and the resources of mechanical skill, the springs of the state are sapped and undermined, and a vast territory, most bounteously endowed by nature, in fertility, in vegetable produce, in mineral wealth, lies unimproved; its miserable inhabitants starving in the midst of plenty.

THE ARMY

The present system of organization of the army dates from the year 1843, when an ordonnance for the purpose was issued by the Council of War. The service consists of two distinct branches—the effective army, or *nizam*, and the reserve, or *redif*. The army consists of six divisions, or camps (called *ordou*), there being a general (*mushir*) at the head of each. Each *ordou* is divided into two divisions (*ferik*), and each division into three brigades (*livas*). Each *ordou* is composed of eleven regiments: six infantry, four cavalry, and one artillery. The effective number of each *ordou* is as follows:—

Infantry—6	Regiments of	2800	men	16,800 men
Cavalry—4	"	720	"	2,880 "
Artillery—1	"	1300	"	1,300 "
			Total	20,980

The grades in the service are arranged very much after the model of the French army. The men of six *ordous* are recruited from amongst the population of as many districts into which the empire is divided, and after which they are respectively named. Each *ordou* has its *redif*, or reserve body, equal in number to the effective force; the men of which are called out for one month in every year, for the purpose of instruction and exercise in military duties. The full complement of officers are kept in pay attached to the *redif* of each *ordou*, and reside in the towns and villages to which the men belong; and the men themselves receive pay and rations during the month they are encamped for exercise.

The period of active service is five years; after which term the men go back to their homes, to form the *redif*, in which they remain for seven years, during which time they are liable to be called into active service when the exigencies of the state require it. At the present moment, in the expectation of war with Russia, the whole *redif* force is being called out, and are daily assembling at head-quarters.

To conclude. The Ottoman army contains an effective force of about 150,000 men, which may be almost instantaneously doubled, by mustering to its ranks the reserve militia. To this available force should be added the irregular troops, which could be, at a given time, put on the war footing; as well as the incidental reinforcements which the tributary provinces and certain districts not hitherto subjected to the law of recruitment, are bound to supply to the Porte in case of war. But, on the occasion of the present threatened war, not much is to be expected in this way from the tributary provinces, with the exception of Egypt, which has sent a large contingent.

The Turkish troops are well found, and well treated in every respect. A writer in the *United Service Magazine* of 1845, says:—"Taking into consideration the relative value of money in the different countries of Europe, no army is better fed or clothed than the Turkish." [This was—although not military authorities—may add (having seen a great number of the Turkish soldiers of all arms, both active and *redifs*, during our recent trip), that we never saw a finer body of men, both as respects equipment, bearing, and general appearance. An English general officer of distinction, who has but just returned from the head-quarters at Schumla, speaks highly of their discipline and military efficiency.

The uniform of the Turkish troops is comfortable in appearance With the exception of the head-dress—the eternal fez, a red cap, with a black silk tassel at the top: it is fashioned after the European style. In the infantry the colour is dark blue, with red facings. In the cavalry and artillery the colour is different for the different *ordous*—dark blue, red, purple, brown, fawn-colour, and light blue, for the six respectively. The facings are the same in all. The various ranks in the service are indicated by *nichan*—a sort of *décoration* (as the French would call it), which is suspended from the neck, and from the sword-handle, varying in the design according to the occasion; but all have *nichan*—whether of copper, silver, or gold—from the *mushir* to the private soldier. The *nichan* is returned and exchanged for another appropriate one, upon each change of rank in the service.

This *nichan*, by the way, is not solely appropriated to the military service. It is also worn by every civil functionary of the state; and up to very recently they used to be supplied by the state; but recently, in 1851, the treasury being in extraordinary straits, it resolved to have recourse to extraordinary means to replenish it; and, accordingly, in the autumn of 1851, a firman was issued, calling upon all its servants, high and low, to pay up the value of their *nichans*—by which means a gross sum of some 40,000,000 of piasters was produced.*

THE MARINE FORCE.†

The re-establishment of the Ottoman Navy was the work of three Turkish Admirals, all of whom (the first more especially) were among the most remarkable men of their day.

The first was the famous Hassan, surnamed "Ghazi," whose life and active career seem more like a legend than a history. He commanded the *Kapoudana*, or Admiral's ship, on that day, or rather on that fatal night, which saw the annihilation of the Turkish fleet in the Gulf of Tchesmé (7th July, 1770). Escaping almost alone from his burning vessel and his shipwrecked companions, Hassan returned to Constantinople, where he was promoted to the rank of Admiral by the Sultan Moustafa, and commenced almost immediately that series of exploits which have gained him the nickname among Turkish historians of "The Crocodile of the sea of battles." At the same time he undertook the re-organisation of the navy. Up to that period the Turkish squadrons, which hardly ever quitted the port of Constantinople but during the three summer months, to gather the tributes from the islands, or to make cruising expeditions against the pirates in

* This public service *nichan* must not be confounded with the decoration of the order of the *Nichan Iftikhar* (decoration of glory), founded by Sultan Mahmoud in 1844, and since replaced by the present Sultan, by the Imperial order of Medjidie which is an order of merit, something after the nature of our order of the Bath.

† Translated from Ubicini's "Lettres sur la Turquie," 2nd edition, 1853.

the Archipelago, or on the shores of Syria, were composed of vessels of the line (*alai guemileri*) and large frigates (called *caravelles*), with immense poops, whose bulk and weight retarded all progress. This circumstance was, to a great extent, the cause of the disaster of Tchesmé. If the Turkish vessels had been more manageable, they would have been enabled to escape the Russian fleet. From this period the Turks ceased to build *caravelles*, and vessels were made in quite another fashion, more approaching the form of European ships; but their armament and crew remained on the same footing as before. Hassan was raised to the post of Grand Vizier. Incessant wars kept him away from Constantinople, and his work remained unfinished.

Two years after his death, the task was resumed by Kutchuk Hussein Pacha. His fortune was not less extraordinary than that of his predecessor. Born in Georgia, and a slave from the day of his birth, he was presented, when still a child, to the Sultan, who was then of the same age as himself. they grew together in common captivity and mutual attachment up to the day when Selim became Emperor (1789). He then nominated Hussein Admiral, and shortly afterwards gave him his sister in marriage. Hardy, indefatigable, of a firm, decided character, but at the same time just and generous; sure of the favour of his master, of whose ideas and plans of reform he also partook, Hussein resolved to bring about a revolution in the department confided to him, and he succeeded.

He commenced by inviting civil engineers from France and Sweden. The French Directory sent him MM. Roi, Brun, and Benoit; Sweden on her part dispatched many, of whom only one rendered himself valuable by the construction of a basin, and several other hydraulic works. In less than six years, nearly twenty vessels of the line constructed according to the model of those built in the port of Toulon, were launched from the dockyards of Constantinople, Sinope, and Rhodes. The Ottomans adopted the words and phrases made use of in the French Navy; the mathematical school (*mutfadis khiad*), founded towards the year 1770 by the Baron de Tott, was completely re-organised, and received henceforth not less than two hundred students, who prepared themselves to fill the positions of officers and engineers in the naval service. The crews of the fleet, as well as the *levends* (marines) were thoroughly drilled and subjected to an inflexible discipline. At stated periods the superb forests of the southern chain of the Taurus were cut down; and more than 20,000 quintals of copper were drawn from the mines of Iskat, to sheathe the bottoms of their ships.

The death of Hussein followed soon after the deposition of Selim, and brought this progressive state of things to a premature close; and the Ottoman navy again sank deeper and deeper towards its former condition, up to the moment when Sultan Mahmoud nominated Tahir Pacha to the post of High Admiral. The circumstances of the country were most critical. It was shortly after this period that Russia declared war against the Porte, still bleeding from the wounds of Navarino. The naval forces of Turkey—which, in 1827, comprised twenty vessels of the line, fifteen frigates, and thirty-two smaller sail—had been reduced to about thirty vessels, half disabled; which Tahir Pacha, who commanded the Ottoman division on that unhappy day, had brought back to Constantinople. Soon afterwards, the formation of the new kingdom of Greece (by the protocol of 22nd March, 1829), in taking from Turkey the islands of Hydra, Ipsara, and Spezzia—which furnished her with the greater part of the crews for her fleet—seemed to be the finishing blow for the Ottoman navy. What was to become of this navy without the Greeks? Would the Government ever succeed in making sailors and pilots of the Turks—devoted almost exclusively, until that time, to artillery and the land service. At this time there was a new navy to be created—not only as regarded ships and armaments, but as regarded men; and all this had to be done with a Budget which never exceeded 400,000,000 piasters (9,200,000 francs). The ability and energy of Tahir Pacha sufficed for everything. An experienced sailor—a sincere patriot, although an enemy of reform—he appealed to all the resources of the country; and, powerfully seconded by France, and more especially by England, he succeeded, during the ten years of his administration (from 1829 to 1839), not only in repairing the disaster of Navarino, but in organising the fleet in such a manner as to place Turkey in an honourable position among maritime powers of the second class. The Ottoman navy, which was surrendered to Mehemet Ali by the treason of Ahmed Feozi in 1840, did not amount to less than twenty-two vessels, of which eighteen were ships of the line. The years between 1840 and 1853 were signalised by a considerable increase in the effective power of the navy, and principally of its steam navy. In 1849 the force amounted to seventy-four vessels, of which sixteen were of the first and second-class, and ranged from 74 to 130 guns each. The greater part of these vessels must at the present day be considered as non-effective, some of them being under repair, and others completely disabled. The fleet may now be said to consist of the following:—

2	Three-deckers	.. ..	of 130 and	120 guns
4	Two-deckers	.. ..	.. 80 to	74
16	Sailing frigates	.. ..	.. 60 to	50
6	Corvettes	.. ..	.. 26 to	22
14	Brigs	.. ..	.. 20 to	12
16	Cutters and schooners	.. ..	.. 12 to	8
6	Steam frigates	.. ..	.. 800 to	450-horse power.
12	Corvettes and smaller vessels			
		Total, 76 vessels		

The department of the navy is confided to the Capitan Pacha or Grand Admiral, assisted by the Council of the Admiralty (*medjis i bahrie*). The Admiralty staff comprises five Admirals (*feriki bahrie*), of whom three are in active service, the Commander-in-Chief of the Fleet, Ahmed Pacha (the *capondama*, or chief of the squadron); Moustafa Pacha; and the Porte-Admiral Leman (*liman reusi*) Mehmed Pacha; the fourth, Rhaghib Pacha, is president of the Council of the Admiralty: the fifth, Djemaleddin Pacha, is member of the same council. The three Vice-Admirals (*bahrie-liuasi*), the Vice-Admiral of the Fleet (*patrona*) Osman Pacha, the director of the naval workshops (*tophane nazeri*), Hassan Pacha, the director of the naval school, and Salih Pacha. There are seven Rear-Admirals (*bahrie mir-alai*), three of whom bear the ancient title of *viola* or *reala*, and command the stations of the Danube and the Black Sea, of the Archipelago, and the Persian Gulf; the four others have places in the Council of the Admiralty, one of them is the *mimarbachi* or chief naval architect

The *personnel* of a ship-of-the-line is composed of: the captain, *suvari*, having the title of Bey and the rank of lieutenant-colonel; of the first-lieutenant—*kiaiali nemeri*; of the *khodjia*, corresponding in rank and in function to the *alai-emini*, or major of the land army; of officers, to the number of sixteen, specially charged with the command of the crew, and corresponding in rank to the captains and lieutenants of the army; of a medical officer (*hekim*), of two surgeons (*sferrah*), of a chaplain (*iman*), and of a crew of from 800 to 900 seamen (*ghemidji*).

The crews on board Ottoman vessels are divided into companies, whose formation is precisely the same as that of the companies of a regiment. Each has its captain (*onbachis*), its lieutenant (*onikiadji*), its sergeants (*tchaous*), corporals (*on-bachis*), and soldiers. The pay is the same as in the army. The number of companies varies according to the class of a ship. It comprises eight for a vessel of the line.

The crews form, altogether, a total of 34,000 sailors, some of whom are employed in the working of the vessels, others in the management of the guns, and the whole of whom are principally recruits in the sandjaks of Radosto and Gallipoli, Batoum, Trebisonde, Djanik, and Ordou, upon the Black Sea; Ordek and Bigha, on the Sea of Marmora, and the seven sandjaks of Dizain.

Besides these 34,000, there exists a corps of marines (*bahrie alai*) of 4000 men, under the special command of a general of brigade (*bahrie ester feozi*), and lodged in barracks at the arsenal, when not under engagement.

The crews are then numerous—and the discipline is tolerable. In point of nautical instruction, the reports furnished by the naval officers sent to Turkey, or by the commanders of the French stations in the Levant, unanimously agree that there has been constant progress for some years. The artillery exercises, and the use of arms, are executed with great precision.

The construction of the Ottoman vessels is excellent, even on the confession of the officers of the British navy, whose testimony, in such a case cannot be suspected.

The machinery of their steam-vessels is constructed in England, and generally according to the best principles.

The Marine Arsenal (*tersané*) of Constantinople (residence of the Capitan Pacha), constructed in the year 864 of the Hegira (1576) at one mile from the entrance of the Golden Horn, is one of the finest in the world. Embanked by a magnificent stone quay, about a mile and a half long, and of a depth sufficient to allow the largest vessels of the line to lie along side of the wharves, it comprises, in its vast circumference, a prison and two barracks for the marines, four docks and building yards, two graving docks, several forges, a rope-yard, and everything that is necessary for the building and repair of ships, and their preparation for sea. A new iron-foundry was established last year by Mehemet Ali Pacha. The annual consumption of the *tersane* (or arsenal) is estimated at 20,000 quintals of iron, mostly derived from England, Russia, and the mines of Samsoun, and 12,000 quintals of copper from the mines of Toket. The timber is procured from the mountains of Asia Minor, and arrives at Ismid (Nicomedia), from which place from fifteen to twenty vessels are constantly occupied in transporting it to Galata and Wallachia—are embarked upon the Danube, in rafts, with masts and sails, that descend to Constantinople by the Black Sea during the fine season. The ropes and sails are principally derived from Russia which annually furnishes from 12,000 to 15,000 quintals. Turkey possesses other dockyards, less important, at Sinope, and at Iregli, on the Black Sea, and in the islands of Rhodes and Metelin

We must not omit to mention among the number of the maritime establishments of Turkey the Naval School (*Mekthi bahrie*), which was transferred last year to Khalki, one of the Prince's Islands. This school is under the direction of the Vice-Admiral Salih Pacha. There are in it from 120 to 130 scholars.

BRIEF STATEMENT OF THE PRESENT DISPUTE BETWEEN RUSSIA AND THE PORTE.

Having completed our Sketch of the History of the Ottoman Empire down to the period of the accession of the present Sultan, and also of the Sketch of the internal reforms attempted by him, and the present condition and prospects of the country, it remains to explain the question now in dispute between the Porte and the Emperor of Russia—a question upon the solution of which depends the peace of Europe, and the very existence of the Ottoman Empire.

The dispute first originated in regard to what are called "the Holy Places," being certain chapels and sanctuaries in Jerusalem, to which, by consent of the Porte, Christian pilgrims, both of the Romish and of the Greek Church, have for ages been accustomed to resort. The safe keeping of these Holy Places, and the safe conduct of the pilgrims resorting to them, have always been a matter of solicitude on the part of the French and Russian Governments: the King of the French claiming the protection of the pilgrims of the Romish faith, by virtue of the rank and title long ago accorded to him by the Pontiff of Rome, of "most Christian King;" the Emperor of Russia claiming the protection of the pilgrims of the Greek faith, by virtue of the rank and title arbitrarily assumed to himself by his ancestor, Peter the Great, of Patriarch of the Greek Church. The adjustment of the respective claims of these two protectorates, in all that relates to the management of the Holy Places, has, from time to time, led to no little jealousy and squabbling between the partizans of the two Churches; but there had been nothing else to deal with as between these parties and the Porte, the latter probably would have succeeded in satisfying them both, by the equity with which he has divided his concessions between them. The question between Russia and the Porte, however, does not end with the Holy Places, nor with the safe conduct of the pilgrims resorting thereto; it involves, on the part of Russia, the demand of a right of protection over the whole of the members of the Greek Church, being subjects of the Porte, and residing within the dominions of the Porte; in short, a right to interference between the Porte and twelve millions of his subjects at any time the Emperor of Russia may consider the latter aggrieved. This right, it is existed, would be clearly inconsistent to all pretense at independent Sovereign authority for England or the Porte; and it would be so, not only in theory and principle, but in actual practice. For seeing how Russia has made the very slender and dubious "protectorate" of the Danubian Provinces, conceded by the treaty of Adrianople the pretence three times occupying and ravaging those provinces, as if they were her own, there can be little doubt that if her protection were extended over the whole Greek population of the Turkish Empire, she would not hesitate, upon the first pretence, to send her troops across the Danube, to occupy and ravage Bulgaria, and to menace Constantinople at the first moment of "protection," of course; and, being all done by virtue of treaties, neither Turkey nor the European allies would have a right to complain or resist.

This is the position which the Emperor of Russia demands to occupy in the Ottoman dominions, and demands it as a right. It seems strange that he should claim from the Porte a new piece of paper, acknowledging a right which, if it did already exist, even in the faintest outline, he would certainly not be scrupulous of enforcing without further recognition. It would seem, then, because the Porte will not sign a note acknowledging a right of protection of all its subjects of the Greek religion to exist in the Russian Czar, that the latter has occupied the Principalities as a measure of material coercion. It would have been well, indeed, for his case, if the Emperor Nicholas had left his claim to rest upon mere assertion, or upon some vague appeal to general principles of natural equity—upon some fancied divine authority arising out of his usurped title of Patriarch of the Greek Church—in fine, upon the terror of his bullets and the law of the highway—upon anything rather than pretended documentary authority, the very existence of which, as we have stated, would show additional documentary authority to be unnecessary. He has not done so, however; and by seeking to "make out a title" for his "right," shows that he has no title at all—any the pretence at, a shadow of, a title to what he claims; but rather the very reverse, inasmuch as when a man knowing of a small and exceptional concession already made to him by a solemn document, sees that document in evidence against the party making it, he cannot put it in for more than it is worth;—certainly he cannot base upon it a large general claim, for *exceptio probat regulam*. Further, by citing it in evidence at all, and joining issue upon it, he admits that he has nothing else whereon to rest his claim. This may savour of special pleading, perhaps; but it is logical and just reasoning; and even the paltriest resources of special pleading would be justifiable when a man comes into Court, as the Emperor Nicholas now does, brandishing an old meaningless parchment, which, trusting to the ignorance of his hearers, he presumes to be a title to an estate.

The Emperor Nicholas cites "the glorious treaty of Kainardje" as the basis of his claim against the Porte. Now what does this treaty say?—

Article VII. runs thus:—

The Sublime Porte promises constantly to protect the Christian religion, and the churches belonging to it; and also it *permits* the Ministers of the Imperial Court of Russia *to make on all occasions representations, as well in respect of the new church at Constantinople* (of which mention will be made in Article XIV.) *as of those who belong to it* -promising to take them into consideration, as coming from a person in the confidence of a neighbouring and sincerely friendly power.

Article XIV. states that—

After the example of the other powers *it is permitted* to the high Court of Russia, besides the chapel erected in its house of Embassy, to construct in the quarter of Galata, in the street named Bey-Oglu, a public church of the Greek religion, which shall be always under the protection of the Ministers of that Empire, and held free from all interruption or annoyance.

These two articles together "permit" Russia to build a certain church at Galata, a suburb of Constantinople, and place that church under its protection. It also "permits" Russia on all occasions "to make representations" on behalf of the said church at Galata, and those who have to do with it, "promising to take them into consideration as coming, &c."

This is the slender basis upon which Russia now claims a right of protecting the whole Christian population of the Ottoman Empire—a right to be supported by armed intervention, if considered necessary. This is the trumpery pretence upon which Russia has invaded and is ravaging with its troops extensive provinces in the Turkish dominions; and threatens even to carry the sword to Constantinople. Was anything more flagitious ever attempted—and in the sacred name of religion too? Upon the head of Nicholas of Russia lie the fearful responsibility of all the horrors which may result from an aggression so unjustifiable.

VISCOUNT STRATFORD-DE-REDCLIFFE, G.C.B., AMBASSADOR EXTRAORDINARY, AND MINISTER PLENIPOTENTIARY TO THE OTTOMAN PORTE.

VISCOUNT STRATFORD-DE-REDCLIFFE—better known throughout the old and new worlds as Stratford Canning—is the son of the late Stratford Canning, Esq., an eminent London merchant. George Canning, the celebrated statesman, being his first cousin probably determined the career in which he was afterwards to distinguish himself.

Stratford Canning was sent to Eton in 1796; he arrived at the highest honours at that venerable college, going out as "captain;" and finished his education at King's College, Cambridge.

In the interval, however, he had already entered the diplomatic service. In 1807 he was appointed précis writer to his cousin George; who was then Foreign Secretary; and, in the same year (conjointly with the present Earl of Mornington) accompanied Mr. Merry's special mission to Denmark and Sweden, as secretary. In 1808 he was despatched as secretary to Mr. Adair's special mission to the Dardanelles, for the purpose of negotiating terms of peace between this country and the Porte, which had been interrupted by the impolitic expedition for forcing the Dardanelles (1807); an object which was eventually accomplished, by the treaty signed January 5, 1809. These negotiations were secretly but strongly opposed, both by France and by Russia; but the machinations and representations of these powers had no influence with Sultan Mahmoud, who had become intuitively convinced that his true interests lay in the friendly relations of Great Britain; and he accordingly announced this conviction by receiving the representative of his new ally with the highest honours. Mr. Stratford Canning was appointed secretary to the Embassy at Constantinople in the April following; and on the recall of Mr. Adair, in 1810, was accredited Minister Plenipotentiary at that Court. In this important post he remained till 1812, when, after successfully mediating on the part of the British Government towards the peace of Bucharest between the Porte and Russia, he returned home. In the brief interval of repose from public duties which he now enjoyed, he took the degrees of B.A. and M.A. at Cambridge.

In 1814 the young diplomatist was appointed Envoy to Switzerland, and assisted in the formation of the Treaty of Alliance of the Nineteen Cantons, which became the basis of their Federal compact. He also attended, by order, at the Congress of Vienna, with a view to assisting at the settlement of this important question. In 1820, having been created a Privy Councillor, he was accredited Envoy Extraordinary and Minister Plenipotentiary to the United States of America, where he remained three years, during which time he had an opportunity of obtaining a personal knowledge of the details of the various questions which had been left for future adjustment between the two Governments by the Treaty of Ghent. In November, 1823, having in the meantime returned to England, he was appointed Plenipotentiary for negotiating with the United States; and, as the result of his labours a treaty was drawn up, comprising all the questions in dispute, including that of the North-Western Boundary; but which was not eventually ratified.

At the end of 1824 Mr. S. Canning was sent to St. Petersburg on a special mission, having reference to the Greek troubles; having a mission also, to the Emperor of Austria, on his way. After accomplishing the duties of these missions he proceeded to Constantinople, having been appointed Ambassador Extraordinary and Plenipotentiary to that court, on the 10th of October, 1825. Here he lost no occasion of negotiating with the Sultan in favour of the Greek nation, whose heroic exertions and horrible sufferings had engaged alike the admiration and the sympathy of men of all nations and all parties; but his appeals (which, unlike those which usually proceed from official quarters, in this case, we know, came warm from the heart) were unfortunately without avail, the obdurate Sultan could pardon, but would not treat with men whom he looked upon as his slaves. Under these circumstances, the three powers, England, France, and Russia, determined upon concerting more effectually for the terminating of a condition of things which had become a scandal to all Europe. In 1827 Mr. S. Canning returned temporarily to England; and, in the month of July in that year, was signed the treaty of London, by which the three powers agreed to tender to the Porte their mediating offices towards putting an end to the internal war, and establishing the relations which ought to exist between the Sultan and the Greek people; and, in the event of such tender of mediation being rejected, to interfere by force in the matter. The reply of the Porte was one of refusal, and the most active measures of coercion followed—the battle of Navarino—the policy of which so much conflict of opinion arose—took place (September, 1827) and the allied powers resolved to take the Greek nation under their protection, and consulted upon the propriety and means of establishing it as an independent state. Mr. S. Canning, on the part of his Government, took an active part in the inquiries and deliberations necessary towards this result. In 1828 he went on a special mission to Greece; and, in 1828-9, took part in the special conferences which led to the formation of the Greek Monarchy. Upon this occasion he reported upon a scheme of boundary, which he recommended, for the new Kingdom, and which was more extensive than that suggested in other quarters, accompanying his recommendation with the tender of his resignation, as Ambassador to the Porte, in case his views should not meet with approval. His recommendations were not approved of, and his resignation was accepted; the King, at the same time, marking his appreciation of his Excellency's distinguished merit, by conferring upon him the order of Grand Cross of the Bath.

In October, 1831 (having in the meantime sat in Parliament for the borough of Old Sarum), Sir Stratford Canning was despatched on a special mission to the Ottoman Porte, for the purpose of treating upon the question of the boundary of the future kingdom of Greece, which eventually was settled in accordance with the recommendations made by him in 1829. The result was the treaty of London of the 7th May, 1832, between the three Powers, ratified by Bavaria on the 27th of the same month, and upon the basis of which Prince Otho, of Bavaria, accepted and ascended the Greek Throne.

In 1832 Sir Stratford Canning was deputed upon a special mission to the Courts of Madrid and Lisbon, the latter of which, however, he did not visit. In 1833 he was elected to Parliament for Stockbridge, and in 1835 for Lyme Regis. In 1836, and again in 1841, he was offered the Governorship of Canada, but on both occasions declined it.

In the latter year (1841) he was appointed Ambassador (for the third time) to the Porte: a post which, under successive Ministries, he has held ever since.

In the winter of 1847, being on his return from a temporary leave of absence in England, Sir Stratford Canning was accredited on a special mission to Switzerland, with a view to the adjustment of the differences which had arisen between the Federal Government at Berne and the province containing the Jesuit College at Sonderbund. The expressions of pride and satisfaction with which the announcement of this appointment was greeted by men of all parties in Switzerland, offered the best evidence of the respect in which the diplomatic character of the sponsor of their constitution was held by them; and showed that the very appointment was considered a guarantee against the united hostility of some of the principal powers in Europe, which, there can be no doubt, were bent upon the destruction of the Swiss independence. Sir Stratford arrived at Berne in the depth of winter, painfully impeded by the malicious and false rumours of the conspirator-courts of Austria, France and Russia, (falsehoods wittingly and slavishly repeated and exaggerated in the "leaders" of a leading journal of this country,) expecting to find the whole territory a scene of anarchy and carnage, and his Federal compact a thing of the past. He was agreeably disappointed, however, to find his apprehensions ill founded; and in the course of a few days, in a note addressed to the Helvetic Diet, he laid down terms for a final settlement of the disputes between the two parties, which were at once accepted and acted upon; together with suggestions as to future policy, which, if they had also been acted upon, would have prevented all the internal troubles which have since taken place in Switzerland—sometimes to the endangerment of its independence.

The policy of Sir Stratford Canning, in Turkey, has been manly and consistent. Viewing the integrity of the Ottoman power to be essential to the permanent relations of Europe; having learned, also, to respect that power, in consideration of the strenuous efforts towards reform and regeneration, which during a course of years it has been making with more or less success, he has given a firm support to the independent policy of the Porte, against the attacks and combinations of its avowed enemy, Russia. Shrewd to detect the crooked schemes of our northern rival, he has met them, when discovered, with the bold straightforward front which becomes an Englishman and a gentleman. Can it be wondered at, therefore, that his name is unsavoury at St. Petersburg, and that the slavish emissaries of St. Petersburg, when they come in contact with him, quail and writhe before him?

There appears, indeed, to be an old grudge between the Russian Government and the name and policy of Canning. In a secret despatch from Count Pozzo de Borgo, written from Paris (October, 1825) to Count Nesselrode, stating confidentially the prospects which then appeared of Russia being suffered by the powers of Europe to carry on a "war *à Poutrance*" against Turkey, occurs the following remarkable pas-

sage:—"The introduction of Mr. Canning into the Ministry, and the influence which he exercises in it, in his character as a popular leader, have weakened the ancient relations between Russia and the British Cabinet; indeed, the change of doctrines which results has almost destroyed them. *His conduct in the affairs of Turkey proves that neither the most perfect confidence displayed on our part, nor sacrifices the most evident, have been able to change his sentiments in regard to us. It has been full of suspicion and jealousy; that which proves that it may one day become hostile!*"

It is not for us in the scope of this brief biographical sketch, to enter at any length into an examination of our recent policy in the East as conducted by Sir Stratford Canning; in some of the most important particulars, indeed, this would not be possible, in consequence of the (as we think) absurd and mistaken policy, which renders the whole course of our diplomacy a matter of official secrecy until some after time, when the interest is over, and public comment becomes of no avail. There are one or two points, however, which cannot be overlooked, even by the most superficial observer: as, for instance, Sir Stratford's strenuous objection to the interdiction of the neutrality of the Porte by the Russians in crossing the Danubian provinces towards the close of the Hungarian war in 1849; and, again, his gallant support of the Porte in its refusal to deliver up the unfortunate Hungarians who had taken refuge in the Turkish territory, after being betrayed by the treason of the infamous Georgey. Two passages from his despatches to the Foreign-office will be sufficient to show the correct and feeling view which his Excellency took upon the latter question. On the 3rd of September he writes as follows:—

On grounds of humanity, not unmixed with considerations affecting the Porte's character and future policy, I have not hesitated to advise a decided resistance to the demand of extradition. I have further endeavoured to dissuade the Turkish Ministers from pledging themselves to any measure of restraint not clearly prescribed by the terms of the treaties, and from contracting any engagement not leaving a certain latitude of action for the future.

On the 17th December he writes:—

Allow me to add, my Lord, that, in proportion as I admire the courageous firmness with which the Sultan and his Government have determined to make this stand in the cause of humanity, and of the fair rights of honour and dignity, against a demand alike objectionable in substance and in form, I feel a deepening anxiety for the result of their resistance, and for the degree of support which her Majesty's Government and that of France may find themselves at liberty to afford—not only in the first instance, but in still graver circumstances, should the present partial rupture unfortunately assume a more serious and menacing character.
